PRELIMINARY REMARKS

The following document is published by the Board in accordance with the provisions of article 18 of the Convention of 1971 on Psychotropic Substances. The annexed tables contain the statistics furnished to the Board by Governments under the 1971 Convention, and in accordance with Resolution I of the United Nations Conference for the Adoption of a Protocol on Psychotropic Substances and with Resolution 1576 (L) of the Economic and Social Council.

Exceptionally, due to the limited resources available, this publication contains only the English version of the statistical tables (preceded by the French and Spanish translations of titles, headings and explanatory note). Commentaries and information likely to complement the statistical tables and facilitate the consultation thereof are presented in English, French and Spanish.

In referring to political entities, the Board is guided by the rules governing the practice of the United Nations. The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Board concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

REMARQUES PRÉLIMINAIRES

Le présent document est publié par l'Organe conformément à l'article 18 de la Convention de 1971 sur les substances psychotropes. Les tableaux ci-après contiennent les statistiques fournies par les gouvernements en vertu de ladite convention, et en application de la résolution I de la Conférence des Nations Unies pour l'adoption d'un Protocole sur les substances psychotropes et de la résolution 1576 (L) du Conseil économique et social.

Compte tenu des ressources disponibles, et à titre exceptionnel, seule la version anglaise des tableaux statistiques contenus dans cette publication a pu être établie (elle est précédée des traductions française et espagnole des titres, des en-têtes et de la note explicative). En revanche, les commentaires et les informations susceptibles de compléter et de faciliter l'examen des tableaux statistiques sont présentés en anglais, français et espagnol.

Pour la désignation des entités politiques, l'Organe s'inspire de la pratique de l'Organisation des Nations Unies. Les appellations employées dans la présente publication et la présentation des données qui y figurent n'impliquent de la part de l'Organe aucune prise de position quant au statut juridique des pays, territoires, villes ou zones, ou de leurs autorités, ni quant au tracé de leurs frontières ou limites.

OBSERVACIONES PRELIMINARES

La Junta publica el siguiente documento de conformidad con las disposiciones del artículo 18 del Convenio de 1971 sobre sustancias sicotrópicas. Los cuadros adjuntos contienen las estadísticas facilitadas a la Junta por los gobiernos según lo dispuesto en el Convenio de 1971 y de conformidad con la resolución I de la Conferencia de las Naciones Unidas para la adopción de un protocolo sobre sustancias sicotrópicas y con la resolución 1576 (L) del Consejo Económico y Social.

Excepcionalmente, debido a los limitados recursos disponibles, esta publicación contiene únicamente la versión inglesa de los cuadros estadísticos (seguida de las traducciones española y francesa de los títulos, epígrafes y la nota explicativa). Los comentarios y la información que pueden servir para complementar los cuadros estadísticos y facilitar la consulta de los mismos figuran en inglés, francés y español.

Cuando menciona entidades políticas, la Junta sigue las normas que rigen la práctica de las Naciones Unidas. Las designaciones utilizadas y la forma en que aparecen presentados los datos en esta publicación no implican, por parte de la Junta, juicio alguno acerca de la situación jurídica de ningún país, territorio, ciudad o zona, o de sus autoridades, ni respecto a la delimitación de sus fronteras.

| | Paraguay (3.2.1972) | Zaire (12.10.1977) |

LIST OF PSYCHOTROPIC SUBSTANCES UNDER INTERNATIONAL CONTROL

incorporating changes decided by the Commission on Narcotic Drugs

Under article 2, paragraph 7 of the 1971 Convention on Psychotropic Substances, such decisions become fully effective with respect to each Party 180 days after the date of the relevant notification, which is indicated in a foot-note.

List of substances in Schedule I

| INN ¹ | Other nonproprietary or trivial names | Chemical name |
|------------------|--|---|
| 1. | DET | <i>N,N</i> -diethyltryptamine |
| 2. | DMHP | 3-(1,2-dimethylheptyl)-1-hydroxy-7,8,9,10-tetrahydro-6,6,9-trimethyl-6 <i>H</i> -dibenzo[<i>b,d</i>]pyran |
| 3. | DMT | <i>N,N</i> -dimethyltryptamine |
| 4. (+)-LYSERGIDE | LSD, LSD-25 | (+)- <i>N,N</i> -diethyllysergamide (<i>d</i> -lysergic acid diethylamide) |
| 5. | mescaline | 3,4,5-trimethoxyphenethylamine |
| 6. | parahexyl | 3-hexyl-1-hydroxy-7,8,9,10-tetrahydro-6,6,9-trimethyl-6 <i>H</i> -dibenzo[<i>b,d</i>]pyran |

List of substances in Schedule I (continued)

| INN ¹ | Other nonproprietary or trivial names | Chemical name |
|------------------|---|--|
| 7. | psilocine, psilotsin | 3-(2-dimethylaminoethy)-4-hydroxyindole |
| 8. PSILOCYBINE | | 3-(2 dimethylaminoethyl)-indol-4-yl dihydrogen phosphate |
| 9. | STP, DOM | 2-amino-1-(2,5-dimethoxy-4-methyl)phenylpropane |
| 10. | tetrahydrocannabinol, the following isomers: $\Delta^{6a(10a)}$, $\Delta^{6a(7)}$, Δ^7 , Δ^8 , Δ^9 , Δ^{10} , $\Delta^{9(11)}$, and their stereochemical variants ² | |

The salts of the substances listed in this Schedule whenever the existence of such salts is possible.³

List of substances in Schedule II

| | |
|---------------------------|---|
| 1. AMPHETAMINE | (\pm)-2-amino-1-phenylpropane |
| 2. DEXAMPHEMATINE | (+)-2-amino-1-phenylpropane |
| 3. METHAMPHETAMINE | (+)-2-methylamino-1-phenylpropane |
| METHAQUALONE ⁴ | 2-methyl-3- <i>o</i> -tolyl-4(<i>H</i>)-quinazolinone |
| 4. METHYLPHENIDATE | 2-phenyl-2-(2-piperidyl)acetic acid, methyl ester |
| 5. PHENCYCLIDINE | 1-(1-phenylcyclohexyl)piperidine |
| 6. PHENMETRAZINE | 3-methyl-2-phenylmorpholine |

The salts of the substances listed in this Schedule whenever the existence of such salts is possible.³

List of substances in Schedule III

| | |
|------------------|--|
| 1. AMOBARBITAL | 5-ethyl-5-(3-methylbutyl)barbituric acid |
| 2. CYCLOBARBITAL | 5-(1-cyclohexen-1-yl)-5-ethylbarbituric acid |
| 3. GLUTETHIMIDE | 2-ethyl-2-phenylglutarimide |
| 4. PENTOBARBITAL | 5-ethyl-5-(1-methylbutyl)barbituric acid |
| 5. SECOBARBITAL | 5-allyl-5-(1-methylbutyl)barbituric acid |

The salts of the substances listed in this Schedule whenever the existence of such salts is possible.³

List of substances in Schedule IV

| | |
|-------------------------------|---|
| 1. AMFEPRAMONE | 2-(diethylamino)propiophenone |
| 2. BARBITAL | 5,5-diethylbarbituric acid |
| 3. ETHCHLORVYNOL ⁵ | ethyl-2-chlorovinylethynylcarbinol |
| 4. ETHINAMATE | 1-ethynylcyclohexanol-carbamate |
| 5. MEPROBAMATE | 2-methyl-2-propyl-1,3-propanediol dicarbamate |

List of substances in Schedule IV (continued)

| INN ¹ | Other nonproprietary or trivial names | Chemical name |
|-----------------------------|--|---|
| 6. | | |
| 7. METHYLPHENOBARBITAL | | 5-ethyl-1-methyl-5-phenyl- barbituric acid |
| 8. METHYPRYLON | | 3,3-diethyl-5-methyl-2,4- piperidine-dione |
| 9. PHENOBARBITAL | | 5-ethyl-5-phenylbarbituric acid |
| 10. PIPRADROL | | 1,1-diphenyl-1-(2-piperidyl)- methanol |
| 11. LEFETAMINE ⁶ | SPA | (-)-1-dimethylamino-1,2- diphenylethane |

The salts of the substances listed in this Schedule whenever the existence of such salts is possible.³

¹ The names printed in capitals in the left-hand column are the International Nonproprietary Names (INN). With two exceptions ((+)-LYSERGIDE and LEFETAMINE), other nonproprietary or trivial names are given only where no INN has yet been proposed.

² Amendment notified by the Secretary-General on 20 June 1978 (NAR/CL.4/1978).

³ Inclusion notified by the Secretary-General on 6 September 1977 (NAR/CL.5/1977).

⁴ Transfer from Schedule IV notified by the Secretary-General on 28 March 1979 (NAR/CL.3/1979).

⁵ List 18 of Recommended International Nonproprietary Names, published by the World Health Organization.

⁶ List 14 of Recommended International Nonproprietary Names, published by the World Health Organization.

**PROVISIONAL APPLICATION OF THE 1971 CONVENTION
ON PSYCHOTROPIC SUBSTANCES BEFORE ITS ENTRY INTO FORCE**

1. The 1971 Convention entered into force on 16 August 1976. Well before that date, however, the United Nations Conference for the adoption of a Protocol on Psychotropic Substances, the Economic and Social Council and the World Health Assembly had adopted resolutions inviting States to apply provisionally, to the extent they were able to do so, the provisions of the Convention pending its entry into force. In application of these resolutions and in accordance with article 16, paragraph 6, the Board drew up a questionnaire (Form P) in 1971 and invited Governments to furnish the annual statistical information called for under paragraph 4 of article 16.

2. Eighty-three countries and regions responded favourably to the Board's first request for data in 1971, the year in which the Convention was adopted. This number increased steadily in subsequent years, reaching 112 in 1978.

3. The statistics furnished at the beginning of this period were admittedly very incomplete but the provisional application of the 1971 Convention, pending its entry into force, did have certain advantages: it allowed countries to implement the control measures progressively, both on the national and the international levels, and it provided statistical data covering several years which can now be examined retrospectively.

RECEIPT OF STATISTICS FOR 1978

Countries and regions that have furnished statistical data for 1978

4. Pursuant to the provisions of article 16, paragraph 4, Parties are required to furnish to the Board annual statistical reports relating to the substances listed in Schedules I to IV annexed to the 1971 Convention. The names of the countries and regions that have furnished statistical reports to the Board for 1978 are shown in the following table. The symbols used in this table are explained below:

- × signifies that the substances listed in the relevant Schedule are under national control and that the competent administration has furnished for 1978 at least part of the required statistical information.
- signifies that the substances listed in the relevant Schedule are under national control but no actual movement of the substances has been recorded by the competent administration during 1978.
- .. signifies that, for reasons which vary from country to country, but in most cases lie in the

fact that legislative and administrative measures enabling the data to be collected have not yet been taken, the administration of the country in question was not able to furnish data for 1978 on the substances in the relevant Schedule. In a number of cases, however, the competent administrations control some of the substances listed in the Schedule. Such cases are mentioned in foot-notes.

5. An examination of the following table reveals that while practically all the countries and regions mentioned have placed substances listed in Schedule I under national control, very few of them have recorded actual movement of these substances. The substances in Schedule II are also under control in the majority of these countries and regions, almost half of which have reported movement of these substances.

6. As regards the substances in Schedules III and IV, the situation is different. In many cases, the competent authorities do not control all the substances in these two Schedules. On the other hand, when the authorities apply measures of control that enable them to supervise the movement of at least some of the substances, it may be seen that actual movement took place in 1978 in the great majority of cases.

7. The information furnished by Governments thus confirms that the substances in Schedule I are the most widely controlled at the national level, but also the least utilized. At the other extreme the substances in Schedule IV appear to be the most widely used, but at the same time they have not been brought under control in a large number of countries and regions.

INTRODUCTION

8. The statistical data which Parties to the 1971 Convention are required to furnish to the Board differ according to the Schedule in which a given substance is included. The table below summarizes these data:

| <i>Reports required by the 1971 Convention</i> | <i>Schedules annexed to the 1971 Convention</i> | | | |
|--|---|-----------|------------|-----------|
| | <i>I</i> | <i>II</i> | <i>III</i> | <i>IV</i> |
| Manufacturers' stocks at 31 December | x | x | | |
| Quantity manufactured | x | x | x | x |
| Quantity utilized for the manufacture of preparations exempted under article 3, paragraphs 2 and 3 | The 1971 Convention does not authorize such utilization | x | x | |
| Quantity utilized for the manufacture of non-psychotropic substances or products | x | x | x | x |
| Total imports | x | x | x | x |
| Details of imports by country of origin | x | x | | |
| Total exports | x | x | x | x |
| Details of exports by country of destination | x | x | | |

9. In view of these differences, the statistical tables have been presented in such a way as to give the most information in a manner which is economical and easy to consult. Thus, with regard to each substance, countries which are exclusively importers or exporters have been separated from those countries which have reported an activity relating to manufacture (manufacture proper, transformation of a psychotropic substance into a non-psychotropic substance or maintenance of manufacturers' stocks). This presentation allows for a comprehensive view of all the activities connected with manufacture in a given country and permits those countries which engage in such activities to be listed together. Besides, this presentation is required for the substances in Schedules I and II for which imports by country of origin and exports by country of destination have to be reported.

10. In their statistical returns a number of countries have reported that certain quantities of substances listed in Schedules II and/or III of the 1971 Convention have been utilized for the manufacture of exempted preparations.

11. The inclusion of such information in the annual statistics furnished to the Board does not, however,

constitute the official notification required by Article 3, paragraph 3 of the 1971 Convention, to be sent to the Secretary-General of the United Nations. Consequently, these statistical data have not been included in the present publication.

12. Due to the fact that no figures are available for a certain number of countries, these statistics present only a partial picture of the manufacture, stocks and trade in psychotropic substances. One must, therefore, be cautious in basing any firm conclusions on them. Moreover, since countries report their statistics on an annual basis, there may be a considerable time lag between import and export figures. For instance an export at the end of 1976 may be entered as an import by the country of destination in 1977; while the export will be reported to the Board in 1977, the import will not be reported until 1978. As the number of countries parties to the 1971 Convention increases and as a growing number of countries, not yet parties, decides to report on a voluntary basis, the statistical material will show a clearer picture.

SUBSTANCES LISTED IN SCHEDULE I

13. The statistics seem to show that the manufacture of hallucinogens is definitely on the wane. Moreover, the stocks appear to be dwindling, except for mescaline, of which the Federal Republic of Germany continues to maintain relatively large stocks. Trade in mescaline reached its height in 1975, while trade in psilocine and psilocybine was largest in 1977. Finally, it would seem that trade in DMT and THC is once more on the rise.

duction of 4 grams. Belgium no longer seemed to be stocking this substance after 1975, when it reported a stock of 10 grams.

DMHP

15. Only 1 gram was reported manufactured by Japan in the period 1974-1978.

DMT

16. Belgian stocks of 25 grams which still existed in 1975 were no longer reported after that year. The United States manufactures of DMT were reported as

DET

14. The last reported manufacture of DET was in 1976, when the United States informed the Board of its pro-

40 grams and 5 grams in 1976 and 1977 respectively. United States exports of DMT varied considerably, peaking in 1975. They seemed to be on the rise again, since the figure for 1978 is 30 grams, 10 grams destined for Canada, 5 grams each for Australia and the United Kingdom and the rest for other countries.

(+)-Lysergide

17. France maintained constant stocks of 10 grams of LSD and it seems reasonable to assume that these stocks remained intact at the end of the period in question. While 8 grams were manufactured in 1974 (7 by Czechoslovakia and 1 by Japan), only 2 were produced in 1975 and 1977, both by Czechoslovakia; these latter 4 grams seem to have been exported. The United States imported 4 grams from Switzerland in 1975 and exported 1 gram to India in 1978. On the whole it appears that trade in LSD was on the wane throughout the period.

Mescaline

18. The Federal Republic of Germany maintained relatively large but gradually dwindling stocks of mescaline (3606 grams in 1974, 3228 grams in 1978). French stocks seemed to be depleted; although it reported stocks of 63 grams in 1976, no stocks were reported in 1977. While the United States manufactured 25 grams in 1974, it only produced 5 grams in 1976. The United States reported imports of 500 grams in 1975 from Switzerland; its exports were variable throughout the 5-year period, amounting to 8 grams in 1976 and 7 grams in 1978 with Italy and the United Kingdom as its most important customers.

19. Exports of the Federal Republic of Germany show a receding tendency: 44 grams in 1974, 11 grams in 1975 and 5 grams in 1977. In general, the importance of the traffic in mescaline seemed to be declining.

Parahexyl

20. The only movement of parahexyl declared to the Board since 1971 was 1 gram exported by the United States to Canada in 1973.

Psilocine, psilotsin

21. The Netherlands had a stock of 6 grams in 1977 and the same year imported 5 grams from Switzerland. The United States reported no stocks after 1974 (7 grams) but imported 5 grams and 20 grams in 1975 and 1977 respectively, originating in Switzerland too.

Psilocybine

22. From 1974 to 1978 the total stocks reported have apparently slipped from 153 grams (152 of which were held by the United States) to 0. The United States has not exported any psilocybine since 1974 (1 gram). The Netherlands imported 3 grams in 1975 and the same quantity in 1976, while the United States imported 5 grams in 1975 and 20 grams in 1977; the substances were shipped from Switzerland.

STP, DOM

23. Only the United States reported any activity in STP, DOM; a stock of 88 grams was no longer reported after 1974. Its manufacture of this hallucinogen fell from a high of 76 grams in 1974 to 16 grams in 1977, while no manufacture was reported in 1978.

Tetrahydrocannabinols

24. The United States is by far the largest manufacturer of THC (9 300 grams in 1976, 7 403 grams in 1977), although Israel indicated manufacture of varying smaller amounts throughout the 5-year period in question, for example 159 grams in 1978. Israel reported an export of 156 grams in 1978. The Federal Republic of Germany and the United Kingdom reported imports of 3 and 2 grams respectively from Israel for that year. However, trade in THC was at its highest in 1977 when the United States reported imports of 325 grams from Israel.

25. Reported stocks have plunged from a high of 6 854 grams in 1974 (almost wholly in the United States) to 271 grams reported in 1977, divided almost equally between France (146 grams) and Israel (125 grams).

SUBSTANCES LISTED IN SCHEDULE II

26. The manufacture of these substances, seen as a group, seems to be falling, and this is also the case as far as stocks are concerned. There has been, however, a sharp increase in phenmetrazine and a lesser increase in methylphenidate. The trade in these substances is seemingly also decreasing, but the figures for methamphetamine and phenmetrazine present less clear tendencies.

Amphetamine

27. The manufacture and stocks of amphetamine and quantities of the substance utilized for the manufacture of non-psychotropic products peaked in 1975; reported

trade in this substance was at its peak in the period 1974/1975. Large amounts of amphetamine were shipped from Argentina to Uruguay and from France to Finland; Bulgaria reported considerable quantities exported with Liberia as destination in 1974/75 (1.3 tons) and with Libya as importer in 1977 (1.5 tons); in 1978 Bulgaria exported 2.2 tons with Togo and Liberia as the main importers¹. Spain received important shipments from France and Italy. France and the German Democratic

¹ The amphetamine in question was exported in a preparation composed, per dosage unit, of 10 mg of amphetamine sulphate compounded with 500 mg of acetylsalicylic acid (aspirin).

Republic are the largest manufacturers, followed by the United States. The German Democratic Republic utilized 27 tons of amphetamine for the manufacture of non-psychotropic substances, while France used 10 tons between 1974 and 1977. India showed a production of 31 kilograms in 1978, the first reported manufacture in that country. Bulgaria was by far the largest importer (14 tons) and a large exporter (5.8 tons) during the period. Other large exporters were France, Switzerland and the United States.

Dexamphetamine

28. By 1978 only the United States continued to indicate the manufacture of dexamphetamine (2 tons), although it may be surmised that France also produced a similar amount in 1978. Only France reported the utilization of this stimulant for the manufacture of non-psychotropic substances or products during the period in question. The United States possessed approximately 85% of the total reported stocks of 1.3 tons. Italy seemed to have increased her stocks in 1978. Trade in dexamphetamine is at its nadir.

Methamphetamine

29. The United States is by far the largest manufacturer of methamphetamine and the only country which produced more than one ton in certain years. Only Colombia and the Federal Republic of Germany have utilized this substance for the manufacture of non-psychotropic substances or products. In 1978 the United States maintained more than 50% of reported stocks, while the Federal Republic of Germany accounted for about 30%. The United States and Switzerland accounted for a large percentage of the export market throughout the period, while Spain was the largest importer.

SUBSTANCES LISTED IN SCHEDULE III

33. The figures for the manufacture of these substances seem to have indicated rising tendencies between 1977 and 1978, even when the large figures from Denmark, for which no data were available for earlier years, are discounted. On the other hand, trade in these substances seems to be more or less stable, again when the Danish statistics are disregarded.

Amobarbital

34. Denmark accounted for about 70% (23.6 tons) of the total manufacture in 1978 (33 tons). Only Czechoslovakia and Romania reported utilizing amobarbital for the manufacture of non-psychotropic substances or products during the period. Danish exports of 32 tons in 1978 represented the quasi-total; in the same year Denmark also imported 6.9 tons, which it probably re-exported. Other main importers were Hungary, Italy, Japan, Spain, Australia and Canada.

Methylphenidate

30. No quantities of methylphenidate were reported utilized for the manufacture of non-psychotropic substances or products during the period under review, but manufacture of, stocks of and trade in this substance seems to be on the increase. The United States is the largest manufacturer of methylphenidate, having produced 1.7 tons out of a total of 1.9 tons in 1978; the remaining 220 kilograms were manufactured in Hungary which reported manufacture for the first time in that year, most of the quantity intended for export. As of 1978 approximately 95% of total reported manufacturers' stocks were to be found in the United States, while Chile and Hungary accounted for most of the remaining 5%. Switzerland, the United Kingdom, Hungary and Finland were the largest exporters in the five years period.

Phencyclidine

31. United States manufacture of phencyclidine was reported as 0 throughout the period; its stocks fell from 62 kilograms to 0 from 1974 to 1978. The only trade in this substance reported in the 5-year period was an export of 2 kilograms in 1977/78 to South Africa.

Phenmetrazine

32. The only countries which reported manufacture of phenmetrazine throughout the 5-year period were the United States, the Federal Republic of Germany and Czechoslovakia; the United States production in 1978 amounted to 5.3 tons, almost 2 tons more than in 1977, while the German production was 247 kilograms, about 100 kilograms less than in the previous year. In 1978 Czechoslovakian production reached 0, while Hungary reported manufacture for the first time (11 kilograms). The trade in this substance seems to have been slightly decreasing, except for the last year when there appears to have been a minor upturn.

Cyclobarbital

35. Manufacture seemingly showed cyclical variations during this 5-year period (4.8 tons; 3 tons; 4.7 tons; 3.7 tons; 4.5 tons), almost the total being produced by the German Democratic Republic and Poland mostly for their domestic needs; however, in 1978 the Soviet Union reported manufacture of 1 ton of this substance, while the German Democratic Republic did not report any production. Romania was the largest importer, followed by the Republic of Korea, Bulgaria, Czechoslovakia and Hungary.

Glutethimide

36. Manufactures have fallen from 84 tons in 1974 to 4.2 tons in 1978; although the United States accounted for much the greater part of the production until 1977, in 1978 Pakistan produced as large a quantity as the United States (1.2 tons). The quantity utilized for the

manufacture of non-psychotropic substances or products during the period was reported as 0. The United States seemed to some extent to make up for the quantities which it no longer produced by imports, probably from Hungary which emerged as a large exporter in 1978 although in no way reaching the considerable exports by the United States between 1974 and 1977. Notable imports were made during the period by Australia, Czechoslovakia, Japan, New Zealand and Poland.

Pentobarbital

37. Manufacturers of pentobarbital indicated a certain cyclical tendency during the 5-year period. In 1978 the United States and Denmark were by far the largest manufacturers of this substance, producing 17.7 and 8 tons respectively, while the Soviet Union indicated a production of 3 tons, reporting for the first time. Czechoslovakia was the most important user of pentobarbital for the manufacture of non-psychotropic products

during the period, while Denmark emerged as by far the largest exporter of this substance in 1977 and 1978. The three most important importers from 1974 to 1978 were Australia, Sweden and Canada.

Secobarbital

38. Denmark accounted for approximately 60% of the manufacture of secobarbital in 1978 (total: 43.6 tons). Only Costa Rica utilized some secobarbital for the manufacture of non-psychotropic substances or products throughout the period (25 kilograms in 1978). Denmark also accounted for almost all the exports in 1977 and 1978 with 18.8 and 27.2 tons respectively, while the United States had been by far the largest exporter in the previous three years. Canada was a large importer of secobarbital throughout the period, while in 1978 Denmark, which was otherwise the biggest exporter, imported 5 tons of the substance and almost certainly re-exported them.

SUBSTANCES LISTED IN SCHEDULE IV

39. If the general figures for the manufacture of these substances indicate a steep rise, this increase is due to the fact that Danish data for meprobamate were not available before 1977, and Soviet figures for meprobamate and phenobarbital were reported for the first time in 1978. Utilization of these substances for the manufacture of non-psychotropic substances or products reached a peak in 1976. The trade is increasing, particularly as the result of large shipments of meprobamate and phenobarbital.

Amfepramone

40. The United States accounted for approximately 85% of the production of amfepramone in 1978 which totalled 14.7 tons. Italy was the only country which engaged in the conversion to non-psychotropic substances or products (502 kilograms in 1978). Italian exports accounted for almost all the exports in 1978 (2.1 tons), while in 1976 and 1977 Italy and the United States had shared between them 80%-90% of the export market. The chief importers were Argentina, Australia and Mexico and, in 1978, Brazil.

Barbital

41. The figures for manufacture have fluctuated in the 5-year period under review, but in 1978 manufacturers seemed again to be approaching their peak reached in 1974, with the inclusion of newly reported Soviet production data which accounted for close to 70% of totals in 1978 (29 tons); Soviet exports likewise accounted for approximately 70% of the total for that year (23 tons). The quantities utilized for the manufacture of non-psychotropic substances or products peaked in 1976 at 26.6 tons, of which Italy accounted for 18.6 tons. Imports reported for 1978 were about 75% higher than at the beginning of the period. In 1978 Bulgaria

accounted for approximately 40% of the imports, followed by Italy and Poland.

Ethchlorvynol

42. The United States is the only manufacturing and exporting country; its production varied between 33 and 52 tons annually during the 5-year period under review, and it exported an annual average of 2.4 tons. Only in 1976 did it utilize a quantity, 28.3 tons, for the manufacture of non-psychotropic substances or products. The reported figures of imports are spotty and show no clear pattern.

Ethinamate

43. The United States is the sole reported manufacturer and exporter, having produced 8 tons in 1974 and 3.8 tons in 1977, and having exported 205 kilograms during the 5-year period. No production of non-psychotropic substances or products from ethinamate was reported. The main importer has been Japan, which has imported approximately 1 ton of the substance both in 1976, 1977 and 1978.

Meprobamate

44. There has been a large increase in the manufacture of meprobamate from 1976 to 1978. In 1977-1978 Denmark was the main producer, followed by the Soviet Union and the United States; these three countries accounted for between 80% and 90% of reported production. 150 tons of the substance were used for the manufacture of non-psychotropic products in 1976, mainly by the United States, but this production declined in subsequent years. Exports, after falling in 1975 and 1976, rose again in the following two years, Denmark accounting for 80% (522 tons) and Sweden for almost

18% (121 tons) of totals in 1978. The Soviet Union was the largest importer in 1978, followed by the United States and Sweden.

Methaqualone

45. Between 1977 and 1978 the reported manufacture of methaqualone fell from 94 tons to 31 tons, of which the United States produced 16 tons. In 1976 approximately 30 tons, mostly in the United States, were used for the manufacture of non-psychotropic substances or products, but this production decreased substantially in 1977 and was reported as 0 in 1978. The United Kingdom had large imports, but its considerable exports indicate that most of the substance was re-exported. Canada also imported significant amounts throughout the period.

Methylphenobarbital

46. After reaching an all time low in 1976 production again seemed on the rise in the United States, which is the only producer of the substance together with the German Democratic Republic; in the United States manufacture amounted to 4.2 tons and in the German Democratic Republic to 180 kilograms in 1978. The utilization of methylphenobarbital for the manufacture of non-psychotropic substances or products reached its peak of 11.6 tons in 1976 for which the United States accounted for 6.2 tons and Brazil for 5.4 tons. Its use for the above mentioned conversion halved in the next two years. Chief importers throughout the period were Australia, Brazil and Italy.

Methyprylon

47. Reported quantities manufactured, solely in the United States, fell from 20.2 tons in 1974 to 6.6 tons in

1978. The only quantity declared as utilized for the manufacture of non-psychotropic substances or products was 9.4 tons in 1976 by the United States. Denmark and Japan were the chief importers in 1978.

Phenobarbital

48. The quantity manufactured seemed to be rising and reached 225-275 tons annually at the end of the period, with Czechoslovakia, Hungary, the Soviet Union and the United States producing some 90% of the total declared; the first three countries also had the greatest reported exports. Quantities used for the manufacture of non-psychotropic substances or products peaked in 1976 with more than 130 tons utilized, mainly in Brazil and the United States; in 1978 only 43 tons were used. The chief importing countries in 1978 were Denmark and Hungary (largely for re-export), Brazil, the United States, the German Democratic Republic, Japan, Spain and Italy. Trade in phenobarbital seemed in general on the rise.

Pipradrol

49. The only country to report manufacture of pipradrol was Italy, which produced 156 kilograms in 1977, of which 101 kilograms were exported; in comparison, Italian exports in 1976 and 1978 were minimal. Thailand was the main importer during the period, having imported 60, 120, and 42 kilograms during the last three years.

Lefetamine (SPA)

50. The quantity reported manufactured, solely by Japan, fell from 323 kilograms in 1974 to 96 kilograms in 1978. Japanese exports also showed a declining tendency.

ÉTAT DE LA CONVENTION DE 1971 SUR LES SUBSTANCES PSYCHOTROPES

Parties classées par ordre alphabétique

(La date du dépôt des instruments de ratification ou d'adhésion est indiquée entre parenthèses)

**APPLICATION PROVISOIRE DE LA CONVENTION DE 1971
SUR LES SUBSTANCES PSYCHOTROPES
AVANT SON ENTRÉE EN VIGUEUR**

1. La Convention de 1971 est entrée en vigueur le 16 août 1976. Cependant, bien avant cette date, la Conférence des Nations Unies pour l'adoption d'un protocole sur les substances psychotropes, le Conseil économique et social et l'Assemblée mondiale de la santé avaient tour à tour adopté une résolution invitant les Etats à appliquer provisoirement, dans la mesure où ils le pouvaient, les dispositions de la Convention en attendant son entrée en vigueur. En application de ces résolutions, et conformément au paragraphe 6 de l'article 16, l'Organe avait établi dès 1971 un questionnaire (formulaire P) et avait invité les gouvernements à lui fournir les renseignements statistiques annuels prévus au paragraphe 4 de l'article 16.
2. De nombreux pays et régions ont répondu favorablement à l'appel de l'Organe dès 1971, l'année même pendant laquelle la Convention a été élaborée. Leur nombre, qui s'élevait à 83 pour l'année 1971, n'a cessé de croître pour atteindre 112 en 1978.
3. Certes, les statistiques fournies au début de cette période étaient très incomplètes, mais l'application provisoire de la Convention de 1971 en attendant son entrée en vigueur a néanmoins rendu possible la mise en œuvre progressive de ses dispositions, aussi bien sur le plan national qu'international, et permet actuellement d'examiner les données statistiques avec un certain recul.

RÉCEPTION DES STATISTIQUES POUR 1978

Pays et régions ayant fourni des données statistiques relatives à 1978

4. Conformément aux dispositions du paragraphe 4 de l'article 16, les Parties sont tenues de fournir à l'Organe des rapports statistiques annuels relatifs aux substances inscrites aux Tableaux I à IV annexés à la Convention de 1971. Les noms des pays et régions qui ont fourni à l'Organe des rapports statistiques pour 1978 figurent dans le tableau ci-après, dans lequel les symboles suivants ont été employés:

× = les substances inscrites à un tableau donné sont sous contrôle national et l'administration compétente a fourni au moins une partie des données statistiques requises pour 1978

— = les substances inscrites à un tableau donné sont sous contrôle national, mais aucun mouvement réel n'a été enregistré par l'administration compétente au cours de l'année 1978

.. = pour des raisons variables selon le pays, mais tenant dans la plupart des cas au fait que les mesures législatives ou administratives visant à recueillir les informations requises n'ont pas encore été prises, l'administration du pays en question n'a pas été en mesure de fournir pour 1978 les statistiques relatives aux substances inscrites à ce tableau. Il s'avère toutefois, dans un certain nombre de cas qui sont signalés par une note, que les administrations compétentes contrôlent une partie des substances inscrites à un tableau.

5. L'examen du tableau ci-après révèle que la quasi-totalité des pays et régions qui y figurent soumettent au contrôle national toutes les substances inscrites au Tableau I de la Convention de 1971, mais très peu nombreux sont ceux qui ont enregistré un mouvement réel de ces substances. Les substances du Tableau II sont également sous contrôle dans la majorité des pays et régions, dont près de la moitié ont par ailleurs enregistré un mouvement de ces substances.

6. Pour ce qui est des substances des Tableaux III et IV, la situation se présente différemment. En effet, dans de nombreux cas, les autorités compétentes ne contrôlent pas la totalité des substances inscrites dans ces deux tableaux. En revanche, lorsque les mesures de contrôle appliquées permettent de surveiller le mouvement d'au moins une partie de ces substances, il apparaît alors que dans la très grande majorité des cas un mouvement réel a eu lieu au cours de l'année 1978.

7. Il se confirme donc, au vu des données fournies par les gouvernements, que les substances du Tableau I sont les plus contrôlées à l'échelon national, mais également les moins utilisées. A l'autre extrême, les substances du Tableau IV apparaissent comme les plus couramment employées, mais en même temps elles échappent au contrôle dans un grand nombre de pays et régions.

INTRODUCTION

8. Les informations statistiques que les Parties à la Convention de 1971 ont l'obligation de fournir à l'Organe sont différentes selon le tableau auquel appartient une substance donnée. Le schéma suivant résume ces informations:

| <i>Renseignements requis par la Convention de 1971</i> | <i>Tableaux annexés à la Convention de 1971</i> | | | |
|--|---|-----------|------------|-----------|
| | <i>I</i> | <i>II</i> | <i>III</i> | <i>IV</i> |
| Stocks des fabricants au 31 décembre | × | × | | |
| Quantité fabriquée | × | × | × | × |
| Quantité utilisée pour la fabrication de préparations exemptées conformément à l'article 3, paragraphes 2 et 3 | La Convention n'autorise pas ces utilisations | × | × | |
| Quantité utilisée pour la fabrication de substances ou produits non psychotropes | | × | × | × |
| Importations totales | × | × | × | × |
| Détails des importations par pays de provenance | × | × | | |
| Exportations totales | × | × | × | × |
| Détails des exportations par pays de destination | × | × | | |

9. Compte tenu de ces différences, on a choisi une présentation qui donne le maximum d'informations sous une forme facile à consulter et économique. C'est ainsi que, pour chaque substance, on a séparé les pays exclusivement importateurs ou exportateurs des pays qui déclarent une activité se rattachant à la fabrication (fabrication proprement dite, transformations d'une substance psychotrope en substance non psychotrope ou maintien d'un stock de fabricant). Cette présentation permet d'appréhender dans leur ensemble les activités relatives à la fabrication dans un pays donné; elle permet également de grouper les pays qui se livrent à ces activités. Cette présentation s'impose d'ailleurs pour les substances des Tableaux I ou II pour lesquelles les pays de provenance (importations) et les pays de destination (exportations) sont déclarés.

10. Dans leurs relevés statistiques, plusieurs pays ont déclaré que certaines quantités de substances des Tableaux II ou III de la Convention de 1971 ont été utilisées pour la fabrication de préparations exemptées.

11. Toutefois, l'inclusion de tels renseignements dans les statistiques annuelles fournies à l'Organe ne constitue

pas la notification officielle exigée par le paragraphe 3 de l'article 3 de la Convention de 1971, qui doit être envoyée au Secrétaire général de l'Organisation des Nations Unies. En conséquence, lesdites données statistiques n'ont pas été incluses dans la présente publication.

12. Etant donné que l'on ne dispose d'aucun chiffre pour un certain nombre de pays, ces statistiques ne donnent qu'une image partielle de la fabrication, des stocks et du commerce international des substances psychotropes. Il importe par conséquent de faire preuve de prudence avant d'en tirer des conclusions fermes. De plus, comme les pays soumettent leurs statistiques chaque année, il peut y avoir un décalage considérable entre les chiffres relatifs aux importations et aux exportations. Ainsi, il arrive qu'une exportation à la fin de l'année 1976 soit enregistrée comme importation par le pays de destination en 1977; alors que l'exportation sera signalée à l'Organe en 1977, l'importation ne le sera pas avant 1978. Au fur et à mesure que le nombre des pays parties à la Convention de 1971 augmentera et qu'un nombre croissant de pays non encore parties décideront de leur propre initiative de fournir des rapports, une image plus claire se dégagera des données statistiques reçues.

SUBSTANCES INSCRITES AU TABLEAU I

13. Les statistiques semblent indiquer que la fabrication des hallucinogènes est clairement en baisse. Les stocks semblent également se réduire, sauf dans le cas de la mescaline, substance qui continue d'être maintenue en stock de manière relativement importante en République fédérale d'Allemagne. Le commerce de la mescaline a atteint une pointe en 1975, tandis que celui de la psilocine et de la psilocybine l'a atteinte en 1977. Enfin, il semble que le commerce du DMT et du THC connaît un regain.

DET

14. C'est en 1976 qu'a été déclarée pour la dernière fois une fabrication de DET: les Etats-Unis d'Amérique informaient alors l'organe de la production de 4 grammes. La Belgique ne semble plus avoir de stocks de cette substance depuis 1975, date à laquelle elle déclarait un stock de 10 grammes.

DMHP

15. Durant la période 1974-1978, seule a été déclarée une fabrication d'un seul gramme par le Japon.

DMT

16. Les stocks belges de 25 grammes qui existaient encore en 1975 n'ont plus été déclarés par la suite. Les Etats-Unis ont déclaré une fabrication de DMT de 40 grammes et de 5 grammes en 1976 et 1977 respectivement. Les exportations de DMT en provenance des Etats-Unis ont considérablement varié, un chiffre record ayant été atteint en 1975. Elles semblent à nouveau s'élever, le chiffre pour 1978 étant de 30 grammes: 10 grammes exportés à destination du Canada, 5 grammes vers l'Australie et le Royaume-Uni, et le reste à destination d'autres pays.

(+)-Lysergide

17. La France a conservé des stocks constants de 10 grammes de LSD, et on peut raisonnablement penser que ces stocks sont restés intacts à la fin de la période considérée. Alors que 8 grammes de LSD étaient fabriqués en 1974 (7 par la Tchécoslovaquie et 1 par le Japon), 2 seulement étaient produits en 1975 et en 1977, les deux fois par la Tchécoslovaquie; ces 4 derniers grammes semblent avoir été exportés. Les Etats-Unis ont importé 4 grammes en provenance de la Suisse en 1975 et ont exporté 1 gramme à destination de l'Inde en 1978. Dans l'ensemble, les échanges de LSD paraissent avoir progressivement diminué durant toute cette période.

Mescaline

18. La République fédérale d'Allemagne a conservé des stocks de mescaline relativement importants même s'ils ont tendance à diminuer progressivement (3 606 grammes en 1974, 3 228 grammes en 1978). Les stocks français semblent avoir été épousés; bien que ce pays ait déclaré

des stocks de 63 grammes en 1976, aucun stock n'a été déclaré en 1977. Bien que les Etats-Unis aient fabriqué 25 grammes en 1974, ils n'ont produit que 5 grammes en 1976. Les Etats-Unis ont déclaré en 1975 des importations de 500 grammes en provenance de la Suisse; leurs exportations ont varié au cours de cette période de cinq ans, s'élevant à 8 grammes en 1976 et à 7 grammes en 1978, alors que l'Italie et le Royaume-Uni ont été les clients les plus importants.

19. Les exportations de la République fédérale d'Allemagne accusent une tendance à la baisse: 44 grammes en 1974, 11 grammes en 1975 et 5 grammes en 1977. Dans l'ensemble, l'importance des échanges de mescaline semble avoir diminué.

Parahexyl

20. Le seul mouvement de parahexyl déclaré à l'Organe depuis 1971 consiste en 1 gramme exporté en 1973 par les Etats-Unis à destination du Canada.

Psilocine, psilotsin

21. Les Pays-Bas avaient un stock de 6 grammes en 1977 et, la même année, ont importé 5 grammes en provenance de la Suisse. Les Etats-Unis n'ont déclaré aucun stock après 1974 (7 grammes), mais ont importé 5 grammes et 20 grammes en 1975 et 1977 respectivement, en provenance de la Suisse également.

Psilocybine

22. De 1974 à 1978, la totalité des stocks déclarés semble être passée de 153 grammes (dont 152 étaient détenus par les Etats-Unis) à 0. Les Etats-Unis n'ont pas exporté de psilocybine depuis 1974 (1 gramme). Les Pays-Bas ont importé 3 grammes en 1975 et à nouveau la même quantité en 1976, alors que les Etats-Unis importaient 5 grammes en 1975 et 20 grammes en 1977; ces substances ont été expédiées de la Suisse.

STP, DOM

23. Les Etats-Unis ont été les seuls à signaler des mouvements de STP, DOM; un stock de 88 grammes n'a plus été déclaré après 1974. La fabrication de cet hallucinogène aux Etats-Unis est tombée du chiffre maximal de 76 grammes en 1974 à 16 grammes en 1977, aucune fabrication n'ayant été déclarée en 1978.

Tétrahydrocannabinols

24. Les Etats-Unis sont de loin le fabricant le plus important de THC (9 300 grammes en 1976, 7 403 grammes en 1977), bien qu'Israël ait signalé la fabrication de diverses quantités moindres au cours de la période de cinq ans considérée, par exemple 159 grammes en 1978. Israël a déclaré une exportation de 156 grammes en 1978. La même année, la République fédérale d'Allemagne et

le Royaume-Uni ont déclaré des importations en provenance d'Israël de 3 et 2 grammes respectivement. Toutefois, les échanges de THC ont atteint leur point maximal en 1977 lorsque les Etats-Unis déclaraient des importations de 325 grammes en provenance d'Israël.

SUBSTANCES INSCRITES AU TABLEAU II

26. La fabrication de ces substances, considérées en tant que groupe, semble être en diminution; il en va de même pour les stocks. On a toutefois noté une forte augmentation de phenmétrazine et une moindre augmentation de méthylphénidate. Le commerce international de ces substances semble aussi être en diminution, bien que les chiffres relatifs à la méthamphétamine et la phenmétrazine présentent des tendances moins nettes.

Amphétamine

27. La fabrication et les stocks d'amphétamine, de même que les quantités de cette substance utilisées pour la fabrication de produits non psychotropes ont atteint des chiffres records en 1975; les échanges déclarés de cette substance ont été les plus importants durant la période 1974/1975. De grandes quantités d'amphétamine ont été expédiées d'Argentine en Uruguay et de France en Finlande; la Bulgarie a déclaré avoir exporté des quantités considérables à destination du Libéria (1,3 tonne en 1974/1975) et à destination de la Libye (1,5 tonne en 1977); en 1978, la Bulgarie a effectué des exportations de 2,2 tonnes, le Togo et le Libéria étant les deux importateurs les plus importants¹. L'Espagne a reçu de grosses quantités en provenance de la France et de l'Italie. La France et la République démocratique allemande sont les fabricants les plus importants, suivies par les Etats-Unis. La République démocratique allemande a utilisé 27 tonnes d'amphétamine pour la fabrication de substances non psychotropes, tandis que la France utilisait 10 tonnes entre 1974 et 1977. L'Inde a déclaré une production de 31 kg en 1978, celle-ci étant déclarée pour la première fois dans ce pays. La Bulgarie a été de loin le plus grand importateur (14 tonnes) et un exportateur important (5,8 tonnes) durant cette période. Parmi les autres grands exportateurs, il y a la France, la Suisse et les Etats-Unis.

Dexamphétamine

28. En 1978, seuls les Etats-Unis continuaient à signaler la fabrication de dexamphétamine (2 tonnes), bien qu'il soit permis de penser que la France a produit une quantité analogue en 1978. Seule la France a déclaré avoir utilisé ce stimulant pour la fabrication de substances ou produits non psychotropes durant la période considérée. Les Etats-Unis détenaient environ 85% de la totalité des stocks déclarés (1,3 tonne). L'Italie semble avoir augmenté ses stocks en 1978. Les échanges de dexamphétamine sont à leur point le plus bas.

¹ L'amphétamine en question a été exportée sous forme de préparation composée, par unité de prise, de 10 mg d'amphétamine sulfate mélangée avec 500 mg d'acide acétylsalicylique (aspirine).

25. Les stocks déclarés sont passés du chiffre élevé de 6 854 grammes en 1974 (presque entièrement détenus aux Etats-Unis) à 271 grammes en 1977, répartis presque également entre la France (146 grammes) et Israël (125 grammes).

Méthamphétamine

29. Les Etats-Unis sont de loin le fabricant le plus important de méthamphétamine et sont le seul pays à en avoir produit plus d'une tonne certaines années. Seules la Colombie et la République fédérale d'Allemagne ont utilisé cette substance pour la fabrication de substances ou produits non psychotropes. En 1978, les Etats-Unis détenaient plus de 50% des stocks déclarés, environ 30% de ceux-ci se trouvant en République fédérale d'Allemagne. Durant cette période, les exportations ont, dans une large part, été effectuées par les Etats-Unis et la Suisse, alors que l'Espagne était le plus grand importateur.

Méthylphénidate

30. Aucun pays n'a déclaré de quantités de méthylphénidate utilisées pour la confection de substances ou produits non psychotropes durant la période examinée, mais la fabrication, les stocks et les échanges de cette substance semblent être en hausse. Les Etats-Unis sont le fabricant le plus important de méthylphénidate: ils ont produit 1,7 tonne sur un total de 1,9 tonne en 1978; les 220 kg restants ont été fabriqués en Hongrie, qui, pour la première fois cette année-là, déclarait une fabrication, dont la majeure partie était destinée à l'exportation. En 1978, environ 95% de la totalité des stocks déclarés de fabricants se trouvaient aux Etats-Unis, tandis que le Chili et la Hongrie détenaient la plus grosse partie des derniers 5%. La Suisse, le Royaume-Uni, la Hongrie et la Finlande ont été les exportateurs les plus importants durant ces cinq ans.

Phencyclidine

31. La fabrication de phencyclidine aux Etats-Unis a été déclarée nulle tout au long de la période considérée; les stocks sont tombés de 62 kg en 1974 à 0 en 1978. Le seul échange de cette substance qui ait été déclaré au cours de cette période de cinq ans a été l'exportation de 2 kg en 1977/78 à destination de l'Afrique du Sud.

Phenmétrazine

32. Les seuls pays à avoir déclaré une fabrication de phenmétrazine ont été les Etats-Unis, la République fédérale d'Allemagne et la Tchécoslovaquie; la production des Etats-Unis en 1978 s'est élevée à 5,3 tonnes, près de 2 tonnes de plus qu'en 1977, alors que la production allemande était de 247 kg, soit environ 100 kg de moins que l'année précédente. En 1978, la production tchécoslovaque a été nulle, alors que la Hongrie signalait pour la première fois une fabrication (11 kg). Les échanges de cette substance semblent avoir un peu diminué, à l'exception de la dernière année de la période considérée, où ce mouvement paraît s'être légèrement inversé.

SUBSTANCES INSCRITES AU TABLEAU III

33. Les chiffres relatifs à la fabrication de ces substances semblent indiquer une tendance à la hausse entre 1977 et 1978, même sans tenir compte des chiffres importants du Danemark, dont on ne possède pas de données pour les années précédentes. Par ailleurs, le commerce international de ces substances semble être plus ou moins stable, là aussi sans tenir compte des statistiques danoises.

Amobarbital

34. Le Danemark a produit environ 70% (23,6 tonnes) de la fabrication totale en 1978 (33 tonnes). Seules la Tchécoslovaquie et la Roumanie ont déclaré avoir utilisé l'amobarbital pour la fabrication de substances ou produits non psychotropes durant cette période. Les exportations danoises de 32 tonnes en 1978 représentaient la quasi-totalité de celles-ci; cette même année, le Danemark a également importé 6,9 tonnes, qui ont probablement été réexportées. Les autres principaux importateurs ont été la Hongrie, l'Italie, le Japon, l'Espagne, l'Australie et le Canada.

Cyclobarbital

35. La fabrication semble avoir subi des variations cycliques durant cette période de cinq ans (4,8 tonnes ; 3 tonnes ; 4,7 tonnes ; 3,7 tonnes ; 4,5 tonnes); ces quantités ont été presque entièrement produites par la République démocratique allemande et la Pologne, avant tout pour leurs besoins intérieurs; en 1978, toutefois, l'Union des Républiques socialistes soviétiques a déclaré la fabrication de 1 tonne de cette substance, alors que la République démocratique allemande ne déclarait aucune production. La Roumanie a été le plus grand importateur, suivie par la République de Corée, la Bulgarie, la Tchécoslovaquie et la Hongrie.

Glutéthimide

36. La fabrication totale est passée de 84 tonnes en 1974 à 4,2 tonnes en 1978; bien que, jusqu'en 1977, les Etats-Unis aient été de loin le plus grand producteur, en 1978 le Pakistan a produit une quantité égale à celle des Etats-Unis (1,2 tonne). Il n'y en a aucune quantité déclarée

comme ayant été utilisée pour la fabrication de substances ou produits non psychotropes durant cette période. Les Etats-Unis semblent avoir dans une certaine mesure compensé par des importations les quantités qu'ils ne produisaient plus, ces importations provenant vraisemblablement de la Hongrie, devenue un grand exportateur en 1978, sans toutefois, en aucune façon, atteindre les importantes exportations des Etats-Unis entre 1974 et 1977. Des importations considérables ont été effectuées durant cette période par l'Australie, la Tchécoslovaquie, le Japon, la Nouvelle-Zélande et la Pologne.

Pentobarbital

37. La fabrication de pentobarbital a révélé une certaine tendance cyclique durant cette période de cinq ans. En 1978, les Etats-Unis et le Danemark étaient de loin les plus gros fabricants de cette substance, avec des productions respectives de 17,7 et 8 tonnes, alors que l'Union soviétique, qui fournissait des données pour la première fois, signalait une production de 3 tonnes. La Tchécoslovaquie a été le plus gros utilisateur de pentobarbital pour la fabrication de produits non psychotropes durant cette période, alors que le Danemark devenait de loin le plus grand exportateur de cette substance en 1977 et 1978. De 1974 à 1978, les trois principaux importateurs ont été l'Australie, la Suède et le Canada.

Sécobarbital

38. En 1978, la fabrication de sécobarbital au Danemark représentait 60% environ de la fabrication totale (43,6 tonnes). Le Costa Rica est le seul pays à avoir utilisé du sécobarbital pour la fabrication de substances ou produits non psychotropes au cours de cette période (25 kg en 1978). Le Danemark a également effectué la quasi-totalité des exportations en 1977 et 1978 (soit 18,8 et 27,2 tonnes respectivement), alors que les Etats-Unis étaient de loin le plus grand exportateur les trois années précédentes. Le Canada a fait de grosses importations de sécobarbital durant cette période, tandis qu'en 1978 le Danemark, qui était en outre l'exportateur le plus important, importait 5 tonnes de cette substance et les réexportait presque certainement.

SUBSTANCES INSCRITES AU TABLEAU IV

39. Si les chiffres globaux relatifs à la fabrication de ces substances révèlent une forte hausse, cette augmentation s'explique par le fait qu'on ne disposait pas de données danoises pour le méprobamate avant 1977 et que les chiffres soviétiques pour le méprobamate et le phénobarbital ont été déclarés pour la première fois en 1978. L'utilisation de ces substances pour la fabrication de substances ou produits non psychotropes a atteint un chiffre record en 1976. Le commerce international est en augmentation, notamment en raison de grosses expéditions de méprobamate et de phénobarbital.

Anfépramone

40. La fabrication d'amfépramone aux Etats-Unis représentait en 1978 environ 85% de la production totale (14,7 tonnes). L'Italie a été le seul pays à effectuer des transformations en substances ou produits non psychotropes (502 kg en 1978). Les exportations en provenance de l'Italie représentaient la quasi-totalité des exportations en 1978 (2,1 tonnes), alors qu'en 1976 et 1977 l'Italie et les Etats-Unis s'étaient partagé à eux deux 80 à 90% du marché des exportations. Les principaux importateurs ont été l'Argentine, l'Australie et le Mexique et, en 1978, le Brésil.

Barbital

41. Les chiffres relatifs à la fabrication ont fluctué au cours de la période de cinq ans considérée, mais, en 1978, les fabrications semblaient à nouveau s'approcher du chiffre record de 1974 à la suite de l'inclusion des données portant sur la production soviétique — déclarée peu de temps avant pour la première fois —, qui représentait près de 70% de la production totale en 1978 (29 tonnes); les exportations en provenance de l'Union soviétique représentaient également 70% de la totalité des exportations cette même année (23 tonnes). Les quantités utilisées pour la fabrication de substances ou produits non psychotropes ont atteint un maximum en 1976 avec 26,6 tonnes, dont 18,6 pour l'Italie seule. Les importations déclarées en 1978 étaient supérieures d'environ 75% à ce qu'elles étaient au début de la période. En 1978, la Bulgarie a effectué environ 40% des importations, suivie par l'Italie et la Pologne.

Ethchlorvynol

42. Les Etats-Unis sont le seul pays à fabriquer et exporter cette substance, avec une production variant entre 33 et 52 tonnes par an au cours de la période considérée et des exportations d'une moyenne annuelle de 2,4 tonnes. En 1976 seulement, les Etats-Unis ont utilisé une quantité de 28,3 tonnes pour la fabrication de substances ou produits non psychotropes. Les chiffres relatifs aux importations qui ont été déclarés sont trop irréguliers pour révéler des tendances nettes.

Ethinamate

43. Les Etats-Unis sont le seul pays à avoir déclaré une fabrication et des exportations d'éthinamate, avec une production de 8 tonnes en 1974 et de 3,4 tonnes en 1977 et des exportations de 205 kg au cours de cette période de cinq ans. La confection de substances ou produits non psychotropes à partir de l'éthinamate n'a été déclarée par aucun pays. Le principal importateur a été le Japon, qui a importé environ 1 tonne de cette substance en 1976, puis en 1977 et en 1978.

Méprobamate

44. La fabrication de méprobamate a fortement augmenté de 1976 à 1978. En 1977-1978, le Danemark était le principal producteur, suivi par l'Union soviétique et les Etats-Unis; à eux trois, ces pays ont produit 80 à 90% de la fabrication déclarée. En 1976, 150 tonnes de cette substance ont été utilisées pour la fabrication de produits non psychotropes, principalement aux Etats-Unis, mais cette production a diminué les années suivantes. Après être tombées en 1975 et 1976, les exportations sont à nouveau remontées au cours des deux années suivantes; en 1978, 80% de la totalité de celles-ci (522 tonnes) ont été effectuées par le Danemark et près de 18% (121 tonnes) par la Suède. L'Union soviétique a été le plus grand importateur en 1978, suivie par les Etats-Unis et la Suède.

Méthaqualone

45. De 1977 à 1978, la fabrication déclarée de méthqualone est tombée de 94 à 31 tonnes, dont les Etats-Unis ont produit 16 tonnes. En 1976, environ 30 tonnes, principalement aux Etats-Unis, ont été utilisées pour la fabrication de substances ou produits non psychotropes, mais cette production a fortement diminué en 1977 et a

cessé d'être déclarée en 1978. Le Royaume-Uni a effectué de grosses importations, mais le volume considérable de ses exportations semble indiquer que cette substance a pour la plupart été réexportée. Le Canada a également effectué de grosses importations durant toute cette période.

Méthylphénobarbital

46. Après être tombée à son niveau le plus bas en 1976, la production semble à nouveau être en hausse aux Etats-Unis, qui, avec la République démocratique allemande, sont le seul producteur de cette substance; en 1978, la fabrication aux Etats-Unis s'est élevée à 4,2 tonnes et en République démocratique allemande à 180 kg. L'utilisation de méthylphénobarbital pour la fabrication de substances ou produits non psychotropes a atteint le chiffre record de 11,6 tonnes en 1976, soit 6,2 tonnes aux Etats-Unis et 5,4 tonnes au Brésil. Cette utilisation en vue des transformations mentionnées ci-dessus a diminué de moitié au cours des deux années suivantes. Les principaux importateurs durant cette période ont été l'Australie, le Brésil et l'Italie.

Méthyprylone

47. La fabrication de cette substance, que les Etats-Unis sont le seul pays à avoir déclarée, est tombée de 20,2 tonnes en 1974 à 6,6 tonnes en 1978. La seule quantité déclarée comme ayant été utilisée pour la fabrication de substances ou produits non psychotropes a été une quantité de 9,4 tonnes aux Etats-Unis en 1976. Le Danemark et le Japon ont été les principaux importateurs en 1978.

Phénobarbital

48. La fabrication semble être en hausse et a atteint 225-275 tonnes par an à la fin de la période considérée, la Tchécoslovaquie, la Hongrie, l'Union soviétique et les Etats-Unis produisant quelque 90% de la totalité déclarée; les trois premiers pays ont également déclaré les plus grosses exportations. Les quantités utilisées pour la fabrication de substances ou produits non psychotropes ont atteint un chiffre record en 1976 avec plus de 130 tonnes utilisées à cette fin, principalement au Brésil et aux Etats-Unis; en 1978, seules 43 tonnes ont été utilisées. Les principaux pays importateurs en 1978 ont été le Danemark et la Hongrie (essentiellement en vue d'une réexportation), le Brésil, les Etats-Unis, la République démocratique allemande, le Japon, l'Espagne et l'Italie. Les échanges de phénobarbital semblent en général avoir augmenté.

Pipradrol

49. Le seul pays à avoir déclaré une fabrication de pipradrol a été l'Italie, avec une production de 156 kg en 1977, dont 101 kg étaient destinés à l'exportation; les exportations effectuées par l'Italie en 1976 et en 1978 ont été minimes par rapport à celles de 1977. La Thaïlande a été le principal pays importateur durant cette période, avec des importations de 60, 120 et 42 kg au cours des trois dernières années.

Léfétamine (SPA)

50. La fabrication de cette substance, que le Japon est le seul pays à avoir déclarée, est tombée de 323 kg en 1974 à 96 kg en 1978. Les exportations en provenance du Japon ont également accusé une tendance à la baisse.

ESTADO DEL CONVENIO DE 1971 SOBRE SUSTANCIAS SICOTRÓPICAS

Partes clasificadas en orden alfabético

(La fecha de depósito de los instrumentos de ratificación o de adhesión se indica entre paréntesis)

LISTA DE SUSTANCIAS SICOTRÓPICAS SOMETIDAS A FISCALIZACIÓN INTERNACIONAL

**a la cual han sido incorporados los cambios decididos
por la Comisión de Estupefacientes**

Según lo dispuesto en el párrafo 7 del artículo 2 de la Convención de 1971 sobre sustancias siccotrópicas, tales decisiones surtirán pleno efecto respecto de cada una de las Partes 180 días después de la fecha de la notificación pertinente, indicada en una nota al pie del cuadro.

Sustancias de la Lista I

| DCI 1 | Otras denominaciones comunes o triviales | Denominación química |
|------------------|--|--|
| 1. | DET | <i>N,N</i> -dietiltriptamina |
| 2. | DMHP | 3-(1,2-dimetilheptil)-1-hidroxi-7,8,9,10-tetrahidro-6,6,9-trimetil-6 <i>H</i> -dibenzo[<i>b,d</i>]pirano |
| 3. | DMT | <i>N,N</i> -dimetiltriptamina |
| 4. (+)-LISÉRGIDA | LSD, LSD-25 | (+)- <i>N,N</i> -dietfisergamida (dietilamida del ácido <i>d</i> -lisérgico) |

Sustancias de la Lista I (continuación)

| <i>DCI 1</i> | <i>Otras denominaciones comunes o triviales</i> | <i>Denominación química</i> |
|----------------|--|--|
| 5. | mescalina | 3,4,5-trimetoxifenetilamina |
| 6. | parahexilo | 3-hexil-1-hidroxi-7,8,9,10-tetrahidro-6,6,9-trimetil-6 <i>H</i> -dibenzo[<i>b,d</i>]pirano |
| 7. | psilocina, psilotsina | 3-(2-dimetilaminoetil)-4-hidroxi-indol |
| 8. PSILOCIBINA | | fosfato dihidrogenado de 3-(2-dimetil-aminoethyl)-indol-4-ilo |
| 9. | STP, DOM | 2-amino-1-(2,5-dimetoxy-4-metil)-fenilpropano |
| 10. | tetrahidrocannabinol, los siguientes isómeros: $\Delta^{6a}(10a)$, $\Delta^{6a}(7)$, Δ^7 , Δ^8 , Δ^9 , Δ^{10} , $\Delta^{9(11)}$ y sus variantes stereoquímicas ² | |

Las sales de las sustancias enumeradas en esta Lista siempre que la existencia de esas sales sea posible ³.

Sustancias de la Lista II

| | |
|--------------------------|--|
| 1. ANFETAMINA | (\pm)-2-amino-1-fenilpropano |
| 2. DEXANFETAMINA | (+)-2-amino-1-fenilpropano |
| 3. METANFETAMINA | (+)-2-metilamino-1-fenilpropano |
| METACUALONA ⁴ | 2-metil-3- <i>o</i> -tolil-4(<i>3H</i>)-quinazolinona |
| 4. METILFENIDATO | éster metílico del ácido 2-fenil-2-(2-piperidil) acético |
| 5. FENCICLIDINA | 1-(1-fenilciclohexil)-piperidina |
| 6. FENMETRACINA | 3-metil-2-fenilmorfolina |

Las sales de las sustancias enumeradas en esta Lista siempre que la existencia de esas sales sea posible ³.

Sustancias de la Lista III

| | |
|------------------|---|
| 1. AMOBARBITAL | ácido 5-etil-5-(3-metilbutil)-barbitúrico |
| 2. CICLOBARBITAL | ácido 5-(1-ciclohexen-1-il)-5-etilbarbitúrico |
| 3. GLUTETIMIDA | 2-etil-2-fenilglutarimida |
| 4. PENTOBARBITAL | ácido 5-etil-5-(1-metilbutil)-barbitúrico |
| 5. SECOBARBITAL | ácido 5-alil-5-(1-metilbutil)-barbitúrico |

Las sales de las sustancias enumeradas en esta Lista siempre que la existencia de esas sales sea posible ³.

Sustancias de la Lista IV

| | |
|-----------------------------|---------------------------------|
| 1. ANFEPRAMONA | 2-(diethylamino)-propiofenona |
| 2. BARBITAL | ácido 5,5-diethylbarbitúrico |
| 3. ETCLORVINOL ⁵ | etil-2-cloroviniletinilcarbinol |

Sustancias de la Lista IV (*continuación*)

| DCI ¹ | <i>Otras denominaciones comunes o triviales</i> | <i>Denominación química</i> |
|-----------------------------|---|---|
| 4. ETINAMATO | | carbamato de 1-etinilciclohexanol |
| 5. MEPROBAMATO | | dicarbamato de 2-metil-2-propil-1,3-propanodiol |
| 6. | | |
| 7. METILFENOBARBITAL | | ácido 5-etil-1-metil-5-fenilbarbitúrico |
| 8. METIPRILONA | | 3,3-dietil-5-metil-2,4-piperidinodiona |
| 9. FENOBARBITAL | | ácido 5-etil-5-fenilbarbitúrico |
| 10. PIPRADROL | | 1,1-difenil-1-(2-piperidil)-metanol |
| 11. LEFETAMINA ⁶ | SPA | (-)-1-dimetilamino-1,2-difeniletano |

Las sales de las sustancias enumeradas en esta Lista siempre que la existencia de esas sales sea posible³.

¹ Las denominaciones que aparecen en mayúsculas en la columna de la izquierda son las Denominaciones Comunes Internacionales (DCI). Con dos excepciones [(+)-LISÉRGIDA y LEFETAMINA], únicamente se indican otras denominaciones comunes o triviales cuando aún no se ha propuesto ninguna DCI.

² Modificación notificada por el Secretario General el 20 de junio de 1978 (NAR/CL.4/1978).

³ Inclusión notificada por el Secretario General el 6 de septiembre de 1977 (NAR/CL.5/1977).

⁴ Transferencia de la Lista IV notificada por el Secretario General el 28 de marzo de 1979 (NAR/CL.3/1979).

⁵ Lista 18 de Denominaciones Comunes Internacionales recomendadas, publicada por la Organización Mundial de la Salud.

⁶ Lista 14 de Denominaciones Comunes Internacionales recomendadas, publicada por la Organización Mundial de la Salud.

**APLICACIÓN PROVISIONAL DEL CONVENIO DE 1971
SOBRE SUSTANCIAS SICOTRÓPICAS ANTES DE SU ENTRADA EN VIGOR**

1. El Convenio de 1971 entró en vigor el 16 de agosto de 1976. Sin embargo, mucho antes de esa fecha, la Conferencia de las Naciones Unidas para la Adopción de un Protocolo sobre Sustancias Sicotrópicas, el Consejo Económico y Social y la Asamblea Mundial de la Salud habían aprobado resoluciones en las que se invitaba a los Estados a que aplicaran provisionalmente, en la medida en que estuvieran en condiciones de hacerlo, las disposiciones del Convenio en espera de su entrada en vigor. En aplicación de estas resoluciones y de conformidad con el párrafo 6 del artículo 16, la Junta preparó un cuestionario (Formulario P) en 1971 e invitó a los gobiernos a que facilitaran la información estadística anual solicitada en el párrafo 4 del artículo 16.

2. Ochenta y tres países y regiones respondieron favorablemente a la primera petición de datos hecha por la Junta en 1971, el mismo año en que se aprobó el Convenio. Esta cifra aumentó constantemente en los años siguientes, llegando a 112 en 1978.

3. Aunque es cierto que las estadísticas facilitadas al comienzo de este período eran muy incompletas, la aplicación provisional del Convenio de 1971 en espera de su entrada en vigor ofrecía algunas ventajas: permitió que los países aplicaran gradualmente las medidas de fiscalización, tanto en el plano nacional como en el internacional, y ha facilitado los datos estadísticos sobre un período de varios años que ahora es posible examinar retrospectivamente.

ENVÍO DE ESTADÍSTICAS PARA 1978

Países y regiones que han facilitado datos estadísticos

4. En cumplimiento de lo dispuesto en el párrafo 4 del artículo 16, se pide a las Partes que faciliten a la Junta informes estadísticos anuales en relación con las sustancias incluidas en las Listas I a IV que figuran como anexo al Convenio de 1971. En el cuadro siguiente figuran los nombres de los países y regiones que han facilitado a la Junta informes estadísticos para 1978. A continuación se explican los símbolos utilizados en este cuadro:

- × significa que las sustancias incluidas en la Lista pertinente están sometidas a fiscalización nacional y que la administración competente ha facilitado para 1978, por lo menos, una parte de la información estadística requerida.
- significa que las sustancias incluidas en la Lista pertinente están sometidas a fiscalización nacional pero que la administración competente no registró ningún movimiento de sustancias durante 1978.
- .. significa que por motivos que varían de un país a otro, pero que en la mayoría de los casos se deben al hecho de que aún no se han adoptado medidas legislativas y administrativas que permitan reunir los datos, la administración del país de que se trate no pudo facilitar datos para 1978 acerca de las sustancias incluidas en la Lista pertinente. No obstante, en diversos casos, las administraciones competentes fiscalizan algunas de las sustancias enumeradas en la Lista. Esos casos se mencionan en notas de pie de página.

5. Examinando el cuadro siguiente se puede ver que si bien casi todos los países y regiones mencionados han sometido a fiscalización nacional las sustancias incluidas en la Lista I, son muy pocos los que han registrado movimientos de esas sustancias. Las sustancias incluidas en la Lista II también están sometidas a fiscalización en la mayoría de estos países y regiones, de los cuales casi la mitad ha comunicado movimientos de estas sustancias.

6. La situación es distinta por lo que respecta a las sustancias incluidas en las Listas III y IV. En muchos casos, las autoridades competentes no fiscalizan todas las sustancias de estas dos Listas. Por otra parte, cuando las autoridades aplican medidas de fiscalización que les permiten supervisar el movimiento de algunas de las sustancias, por lo menos, se observa que en la mayoría de los casos hubo movimientos en 1978.

7. Así pues, la información facilitada por los gobiernos confirma que aunque las sustancias incluidas en la Lista I son las que están sometidas a una fiscalización más amplia, en el plano nacional son también las que menos se utilizan. En el extremo opuesto, parece que las sustancias incluidas en la Lista IV son las que se utilizan más ampliamente, pero al mismo tiempo aún no han sido sometidas a fiscalización en muchos países y regiones.

INTRODUCCIÓN

8. Los datos estadísticos que las Partes en el Convenio de 1971 deben suministrar a la Junta varían según la Lista en que esté incluida la sustancia de que se trate. En el cuadro siguiente se resumen estos datos.

| <i>Informes exigidos por el Convenio de 1971</i> | <i>Listas anexas al Convenio de 1971</i> | | | |
|---|--|-----------|------------|-----------|
| | <i>I</i> | <i>II</i> | <i>III</i> | <i>IV</i> |
| Existencias de los fabricantes al 31 de diciembre | x | x | | |
| Cantidad fabricada | x | x | x | x |
| Cantidad utilizada para la fabricación de preparados exentos en virtud de los párrafos 2 y 3 del artículo 3 | El Convenio de 1971 no autoriza esta utilización | x | x | |
| Cantidad utilizada para la fabricación de sustancias o productos no sicotrópicos | x | x | x | x |
| Total de importaciones | x | x | x | x |
| Detalles sobre las importaciones por país de origen | x | x | | |
| Total de exportaciones | x | x | x | x |
| Detalles sobre las exportaciones por país de destino | x | x | | |

9. En vista de estas diferencias los cuadros estadísticos han sido presentados en forma tal que ofrezcan la mayor información en forma económica y fácil de consultar. Así pues, con respecto a cada sustancia, se ha separado a los países que son exclusivamente importadores o exportadores de los países que han comunicado alguna actividad relativa a la fabricación (fabricación propiamente dicha, transformación de una sustancia sicotrópica en una sustancia no sicotrópica o mantenimiento de existencias de fabricante). Esta presentación ofrece una idea general de todas las actividades relacionadas con la fabricación en un determinado país y permite enumerar juntos a los países que se dedican a esas actividades. Además, esta presentación es necesaria para las sustancias incluidas en las Listas I y II, en relación con las cuales hay que comunicar las importaciones por país de origen y las exportaciones por país de destino.

10. En sus informes estadísticos, diversos países han comunicado que se han utilizado algunas cantidades de sustancias incluidas en las Listas II o III del Convenio de 1971 para la fabricación de preparados exentos.

11. Sin embargo, la inclusión de esa información en las estadísticas anuales suministradas a la Junta no es la

notificación oficial que se pide en el párrafo 3 del artículo 3 del Convenio de 1971 para ser enviada al Secretario General de las Naciones Unidas. Por consiguiente, estos datos estadísticos no han sido incluidos en la presente publicación.

12. Como no se dispone de las cifras relativas a varios países, las estadísticas aquí incluidas ofrecen sólo un cuadro parcial de la fabricación, las existencias y el comercio de sustancias sicotrópicas. Por consiguiente, se deben tratar con sumo cuidado, ya que no se prestan a conclusiones definitivas. Además, como los países comunican sus estadísticas anualmente, puede existir un desfase considerable entre las cifras de importación y de exportación. Por ejemplo, una exportación realizada a finales de 1976 puede figurar como una importación en el país de destino en 1977; y en tanto que la exportación se comunicará a la Junta en 1977, la importación no se comunicará hasta 1978. A medida que aumente el número de países partes en el Convenio de 1971 y que un número creciente de países, que todavía no son partes, decida informar con carácter voluntario, los datos estadísticos ofrecerán un cuadro más claro.

SUSTANCIAS INCLUIDAS EN LA LISTA I

13. Las estadísticas parecen indicar que la fabricación de alucinógenos disminuye definitivamente. Además, las existencias parecen reducirse, excepto las de mescalina, de las que la República Federal de Alemania continúa manteniendo existencias relativamente amplias. El comercio de mescalina llegó a su punto máximo en 1975, mientras que el de psilocina y psilocibina lo hizo en 1977. Por último, parece que el comercio de DMT y THC vuelve a aumentar.

DET

14. La última vez que se comunicó la fabricación de DET fue en 1976, cuando los Estados Unidos informaron a la Junta que habían producido cuatro gramos. Parece que Bélgica no mantiene existencias de esta sustancia desde 1975, fecha en que comunicó existencias de 10 gramos.

DMHP

15. En el período de 1974-1978 sólo el Japón comunicó la fabricación de un gramo de esta sustancia.

DMT

16. Las existencias de 25 gramos que mantenía Bélgica en 1975 ya no se volvieron a comunicar a partir de ese año. Se comunicó que la fabricación de DMT en los Estados Unidos era de 40 gramos y de 5 gramos en 1976 y 1977, respectivamente. Las exportaciones estadounidenses de DMT variaron considerablemente, alcanzando su cifra máxima en 1975. Parece que vuelven a aumentar, puesto que la cifra de 1978 es de 30 gramos, 10 de los cuales con destino al Canadá, 5 a Australia, 5 gramos al Reino Unido y el resto a otros países.

(+)-Lisérgida

17. Francia mantenía existencias constantes de 10 gramos de LSD y parece razonable suponer que esas existencias seguían intactas al final del período considerado. En tanto que en 1974 se fabricaron 8 gramos (7 en Checoslovaquia y 1 en el Japón), en 1975 sólo se produjeron 2 gramos y otros 2 en 1977, en ambos casos en Checoslovaquia; estos últimos 4 gramos parece que no se exportaron. Los Estados Unidos importaron 4 gramos de Suiza en 1975 y exportaron 1 gramo a la India en 1978. En general, todo parece indicar que el comercio de LSD declinó durante todo el período.

Mescalina

18. La República Federal de Alemania mantuvo existencias relativamente importantes de mescalina que fueron disminuyendo gradualmente (3.606 gramos en 1974, 3.228 gramos en 1978). Las existencias parecían agotadas en Francia; aunque ese país informó que disponía de 63 gramos en 1976, no comunicó existencias en 1977. Aun cuando los Estados Unidos fabricaron 25 gramos en 1974, sólo produjeron 5 gramos en 1976. Los Estados Unidos comunicaron importaciones de 500 gramos en 1975 procedentes de Suiza; sus exportaciones

oscilaron durante el período de cinco años, y ascendieron a 8 gramos en 1976, y a 7 gramos en 1978, siendo sus clientes más importantes Italia y el Reino Unido.

19. Las exportaciones de la República Federal de Alemania muestran una tendencia regresiva: 44 gramos en 1974, 11 gramos en 1975 y 5 gramos en 1977. En general, la importancia del tráfico de mescalina parecía disminuir.

Parahexilo

20. El único movimiento de parahexilo declarado a la Junta desde 1971 fue 1 gramo que exportaron los Estados Unidos al Canadá en 1973.

Psilocina, psilotsina

21. Las existencias de los Países Bajos en 1977 eran de 6 gramos y en el mismo año importaron 5 gramos de Suiza. Los Estados Unidos no comunicaron existencia alguna a partir de 1974 (7 gramos), pero importaron 5 gramos y 20 gramos en 1975 y 1977, respectivamente, también de Suiza.

Psilocibina

22. De 1974 a 1978 las existencias totales comunicadas parecen que disminuyeron de 153 gramos (152 de los cuales estaban en posesión de los Estados Unidos) a cero. Los Estados Unidos no han exportado cantidad alguna de psilocibina desde 1974 (1 gramo). Los Países Bajos importaron 3 gramos en 1975 y otro tanto en 1976, mientras que los Estados Unidos importaron 5 gramos en 1975 y 20 gramos en 1977; los envíos procedían de Suiza.

STP, DOM

23. Sólo los Estados Unidos comunicaron algún movimiento de STP, DOM; la cifra de 88 gramos de existencias ya no se volvió a comunicar a partir de 1974. La fabricación de este alucinógeno disminuyó en el país de una cifra máxima de 76 gramos en 1974 a 16 gramos en 1977, en tanto que no se comunicó fabricación alguna en 1978.

Tetrahidrocannabinolos

24. Los Estados Unidos son, con mucho, el mayor fabricante de THC (9.300 gramos en 1976, 7.403 gramos en 1977), aunque Israel indicó la fabricación de diversas cantidades más pequeñas durante el período de cinco años en estudio, por ejemplo 159 gramos en 1978. Israel comunicó una exportación de 156 gramos en 1978. La República Federal de Alemania y el Reino Unido comunicaron en ese año importaciones de 3 y 2 gramos, respectivamente, procedentes de Israel. Sin embargo, el comercio de THC alcanzó su punto máximo en 1977, cuando los Estados Unidos comunicaron que habían importado 325 gramos de Israel.

25. Las existencias comunicadas han disminuido de la elevada cifra de 6.854 gramos alcanzada en 1974 (en su mayoría en los Estados Unidos) a los 271 gramos que se comunicaron en 1977, repartidos casi por igual entre Francia (146 gramos) e Israel (125 gramos).

SUSTANCIAS INCLUIDAS EN LA LISTA II

26. La fabricación de estas sustancias, consideradas como grupo, parece disminuir y otro tanto ocurre con las existencias. Sin embargo, se ha producido un brusco aumento en lo que hace a la fenmetracina y en menor cantidad al metilfenidato. También el comercio de esas sustancias parece disminuir, pero las cifras relativas a la anfetamina y a la fenmetracina muestran tendencias menos claras.

Anfetamina

27. Tanto la fabricación y las existencias de anfetamina como las cantidades de esas sustancias utilizadas para la fabricación de productos no sicotrópicos llegaron al máximo en 1975; el comercio de esta sustancia, según se informó, alcanzó su nivel máximo en el período de 1974/1975. Se enviaron grandes cantidades de anfetamina de la Argentina al Uruguay y de Francia a Finlandia; Bulgaria comunicó la exportación de cantidades considerables a Liberia en 1974/75 y a Libia en 1977 (1,3 toneladas); en 1978 Bulgaria exportó 2,2 toneladas principalmente a Togo y a Liberia¹. España recibió cantidades importantes de Francia e Italia. Francia y la República Democrática Alemana son los mayores fabricantes, a los que siguen los Estados Unidos. La República Democrática Alemana utilizó 27 toneladas de anfetamina para la fabricación de sustancias no sicotrópicas, mientras que Francia utilizó 10 toneladas entre 1974 y 1977. La India declaró una producción de 31 kilogramos en 1978, la primera vez que comunicaba una fabricación ese país. Bulgaria fue con mucho el mayor importador (14 toneladas) y un gran exportador (5,8 toneladas) durante el período. Otros grandes exportadores fueron Francia, Suiza y los Estados Unidos.

Dexanfetamina

28. En 1978 sólo los Estados Unidos continuaban indicando la fabricación de dexanfetamina (2 toneladas), aunque cabe suponer que Francia también produjo una cantidad similar en 1978. Sólo Francia comunicó que utilizaba ese estimulante para la fabricación de sustancias o productos no sicotrópicos durante el período objeto de examen. Los Estados Unidos poseían aproximadamente el 85% del total de las existencias comunicadas, que fueron de 1,3 toneladas. Italia parecía haber aumentado sus existencias en 1978. El comercio en dexanfetamina está en su punto más bajo.

Metanfetamina

29. Los Estados Unidos son con mucho los mayores fabricantes de metanfetamina y el único país que produjo

¹ Esas cantidades de anfetamina se exportaron en un preparado compuesto, por unidad de dosis, de 10 mg de sulfato de anfetamina combinado con 500 mg de ácido acetilsalicílico (aspirina).

más de una tonelada algunos años. Sólo Colombia y la República Federal de Alemania han utilizado esta sustancia para fabricar sustancias o productos no sicotrópicos. En 1978, los Estados Unidos mantenían más de un 50% de las existencias comunicadas, en tanto que la República Federal de Alemania tenía un 30% aproximadamente de esas reservas. Los Estados Unidos y Suiza representaron un porcentaje importante del mercado de exportación durante este período, en tanto que España fue el mayor importador.

Metilfenidato

30. No se comunicó la utilización de cantidad alguna de metilfenidato para fabricar sustancias o productos no sicotrópicos durante el período que se examina, pero la fabricación, las existencias y el comercio de esa sustancia parecen ir en aumento. Los Estados Unidos son el principal fabricante de metilfenidato, con una producción de 1,7 toneladas de un total de 1,9 toneladas en 1978; los 220 kilogramos restantes fueron fabricados en Hungría, que comunicó la fabricación por primera vez en ese año, con intención de exportar la mayor parte. En 1978, aproximadamente el 95% de las existencias totales comunicadas por los fabricantes se encontraban en los Estados Unidos, en tanto que la mayor parte del 5% restante se encontraba en Chile y Hungría. Suiza, el Reino Unido, Hungría y Finlandia fueron los mayores exportadores durante el período de cinco años considerado.

Fenciclidina

31. Los Estados Unidos no comunicaron fabricación alguna de fenciclidina durante todo el período; sus existencias disminuyeron de 62 kilogramos a cero entre 1974 y 1978. El único comercio de esta sustancia comunicado en el quinquenio fue una exportación de 2 kilogramos a Sudáfrica en 1977/78.

Fenmetracina

32. Los únicos países que comunicaron fabricación de fenmetracina durante el período de cinco años fueron los Estados Unidos, la República Federal de Alemania y Checoslovaquia; la producción de los Estados Unidos en 1978 fue de 5,3 toneladas, casi dos toneladas más que en 1977, mientras que la producción alemana fue de 247 kilogramos, unos 100 kilogramos menos que el año anterior. En 1978 la producción de Checoslovaquia fue nula, en tanto que Hungría comunicó una cifra de fabricación por primera vez (11 kilogramos). El comercio de esta substancia parece haber ido disminuyendo ligeramente, excepto en el último año, en que parece haberse recuperado algo.

SUSTANCIAS INCLUIDAS EN LA LISTA III

33. Las cifras de fabricación de esas substancias parecen indicar tendencias al alza entre 1977 y 1978, aun sin tener en cuenta las importantes cifras de Dinamarca, país respecto al cual no se disponía de datos en años anteriores. Por otra parte, el comercio de esas substancias parece permanecer más o menos estable, a condición, nuevamente, de que no se tengan en cuenta las cifras de Dinamarca.

Amobarbital

34. A Dinamarca correspondió el 70% aproximadamente (23,6 toneladas), del total de fabricación en 1968 (33 toneladas). Sólo Checoslovaquia y Rumania comunicaron la utilización de amobarbital para fabricar substancias o productos no sictotrópicos durante este período. La exportación de 32 toneladas por Dinamarca en 1978 representó casi el total; en el mismo año, Dinamarca importó además 6,9 toneladas, que probablemente reexportó. Otros importadores importantes fueron Hungría, Italia, Japón, España, Australia y Canadá.

Ciclobarbital

35. La fabricación parece haber mostrado variaciones cíclicas durante este período de cinco años (4,8 toneladas; 3 toneladas; 4,7 toneladas; 3,7 toneladas; 4,5 toneladas) en que casi la totalidad de la producción correspondió a la República Democrática Alemana y a Polonia, para atender sobre todo sus necesidades internas; sin embargo, en 1978 la Unión Soviética comunicó la fabricación de una tonelada de esa sustancia, mientras que la República Democrática Alemana no comunicó producción alguna. Rumania fue el mayor importador, seguido de la República de Corea, Bulgaria, Checoslovaquia y Hungría.

Glutetimida

36. La fabricación disminuyó de 84 toneladas en 1974 a 4,2 toneladas en 1978; aunque correspondió a los Estados Unidos la mayor parte de la producción hasta 1977, el Pakistán produjo en 1978 una cantidad tan

elevada como los Estados Unidos (1,2 toneladas). No se comunicó cantidad alguna utilizada para la fabricación de sustancias o productos no sictotrópicos durante el período. Los Estados Unidos parecieron compensar las cantidades que ya no producían mediante la importación, probablemente de Hungría, país que apareció como gran exportador en 1978, aunque no alcanzó en modo alguno el considerable nivel de exportación a que llegaron los Estados Unidos entre 1974 y 1977. Efectuaron importaciones considerables durante ese período Australia, Checoslovaquia, Japón, Nueva Zelandia y Polonia.

Pentobarbital

37. La fabricación de pentobarbital mostró cierta tendencia cíclica durante el período quinquenal. En 1978, los Estados Unidos y Dinamarca fueron con mucho los mayores fabricantes de esta sustancia, produciendo 17,7 y 8 toneladas, respectivamente, mientras que la Unión Soviética comunicó, por primera vez, una producción de 3 toneladas. Checoslovaquia fue el mayor consumidor de pentobarbital para la fabricación de productos no sictotrópicos durante el período, mientras que Dinamarca se destacó como el mayor exportador de esta sustancia en 1977 y 1978. Los tres importadores más importantes entre 1974 y 1978 fueron Australia, Suecia y el Canadá.

Secobarbital

38. Dinamarca fabricó aproximadamente el 60% del secobarbital producido en 1978 (total: 43,6 toneladas). Sólo Costa Rica utilizó algún secobarbital para la fabricación de sustancias o productos no sictotrópicos durante todo el período (25 kilogramos en 1978). Dinamarca también realizó la mayor parte de las exportaciones de 1977 y 1978, con 18,8 y 27,2 toneladas, respectivamente, mientras que los Estados Unidos habían sido con mucho el mayor exportador en los tres años anteriores. El Canadá figuró como un gran importador de secobarbital durante todo el período, en tanto que en 1978, Dinamarca, por otra parte el mayor exportador, importó 5 toneladas de la sustancia, que es casi seguro que fueron reexportadas en su totalidad.

SUSTANCIAS INCLUIDAS EN LA LISTA IV

39. Las cifras generales de fabricación de esas sustancias indican un brusco aumento debido a que los datos correspondientes a la fabricación de meprobamato en Dinamarca no estuvieron disponibles hasta 1977, y a que las cifras soviéticas relativas al meprobamato y al fenobarbital se comunicaron por primera vez en 1978. La utilización de esas sustancias para la fabricación de sustancias o productos no sictotrópicos llegó al máximo en 1976. El comercio está aumentando, sobre todo como resultado de las amplias exportaciones de meprobamato y fenobarbital.

Anfepramona

40. Los Estados Unidos produjeron aproximadamente el 85% del total de 14,7 toneladas de anfepramona fabri-

cada en 1977. Italia fue el único país que se dedicó a la transformación en sustancias o productos no sictotrópicos (502 kilogramos en 1978). Ese año casi todas las exportaciones del producto las realizó Italia (2,1 toneladas), mientras que en 1976 y 1977 Italia y los Estados Unidos se habían repartido el 80 y el 90% del mercado de exportación. Los principales importadores fueron la Argentina, Australia y México y, en 1978, el Brasil.

Barbital

41. Las cifras de fabricación han fluctuado en el período de cinco años que se examina pero, en 1978, la fabricación pareció aproximarse nuevamente al punto máximo alcanzado en 1974, con la inclusión de los nuevos datos

de producción comunicados por la Unión Soviética, que representaron casi el 75% de los totales de 1978 (29 toneladas); asimismo, las exportaciones soviéticas representaron aproximadamente el 70% del total de ese año (23 toneladas). Las cantidades utilizadas para la fabricación de sustancias o productos no sictotrópicos llegó al máximo en 1976, con 26,6 toneladas, de las cuales 18,6 toneladas correspondieron a Italia. Las importaciones comunicadas en 1978 fueron un 75% más elevadas que al principio del período. En 1978 Bulgaria realizó aproximadamente el 40% de las importaciones, seguida de Italia y Polonia.

Etclorvinol

42. Estados Unidos es el único país que fabrica y exporta etclorvinol; su producción osciló entre 33 y 52 toneladas al año durante el período de cinco años que se examina y exportó un promedio anual de 2,4 toneladas. Sólo en 1976 utilizó 28,3 toneladas para la fabricación de sustancias o productos no sictotrópicos. Las cifras comunicadas relativas a las importaciones tienen un carácter irregular y no muestran una tendencia definida.

Etinamato

43. Los Estados Unidos son el único fabricante y exportador que ha comunicado datos, con una producción de 8 toneladas en 1974 y 3,8 toneladas en 1977, y una exportación de 205 kilogramos durante el período quinquenal. No se comunicó producción alguna de sustancias o productos no sictotrópicos a partir del etinamato. El principal importador fue el Japón, que en 1976, 1977 y 1978 importó aproximadamente una tonelada de esa sustancia.

Meprobamato

44. De 1976 a 1978 hubo un amplio aumento en la fabricación de meprobamato. En 1977-1978 Dinamarca fue el principal productor, seguido de la Unión Soviética y de los Estados Unidos; esos tres países fabricaron entre el 80 y el 90% de la producción comunicada. Se utilizaron 150 toneladas de la sustancia para fabricar productos no sictotrópicos en 1976, sobre todo en los Estados Unidos, pero esa producción disminuyó en los años siguientes. Después de disminuir en 1975 y 1976, las exportaciones volvieron a aumentar en los dos años siguientes; Dinamarca exportó el 80% (522 toneladas) y Suecia casi el 18% (121 toneladas) del total de 1978. La Unión Soviética fue el mayor importador en 1978, seguida de los Estados Unidos y Suecia.

Metacualona

45. Entre 1977 y 1978 la fabricación notificada de metacualona disminuyó de 94 a 31 toneladas, 16 de las cuales se produjeron en los Estados Unidos. En 1976 se utilizaron aproximadamente 30 toneladas, en su mayoría en los Estados Unidos, para la fabricación de sustancias o productos no sictotrópicos, pero esta producción disminuyó considerablemente en 1977 y se comunicó que era nula en 1978. El Reino Unido efectuó importaciones considerables, pero sus grandes exportaciones indican que la mayor parte de la sustancia fue reexportada. Tam-

bién el Canadá importó cantidades importantes durante todo el período.

Metilfenobarbital

46. Despues de alcanzar en 1976 la cifra más baja registrada, la producción pareció aumentar de nuevo en los Estados Unidos, el único productor de la sustancia junto con la República Democrática Alemana; en los Estados Unidos la fabricación fue de 4,2 toneladas y en la República Democrática Alemana, de 180 kilogramos en 1978. La utilización de metilfenobarbital para la fabricación de sustancias o productos no sictotrópicos llegó a su punto máximo de 11,6 toneladas en 1976, de las que 6,2 toneladas correspondieron a los Estados Unidos y 5,4 toneladas al Brasil. Su utilización para la conversión mencionada se redujo a la mitad en los dos años siguientes. Los principales importadores durante el período fueron Australia, el Brasil e Italia.

Metiprilona

47. Las cantidades manufacturadas notificadas, sólo en los Estados Unidos, disminuyeron de 20,2 toneladas en 1974 a 6,6 toneladas en 1978. La única cantidad declarada que se utilizó para la fabricación de sustancias o productos no sictotrópicos fue de 9,4 toneladas en 1976, en los Estados Unidos. Dinamarca y el Japón fueron los principales exportadores en 1978.

Fenobarbital

48. La cantidad fabricada tendió a aumentar y llegó a 225-275 toneladas anuales al final del período, cuando Checoslovaquia, Hungría, la Unión Soviética y los Estados Unidos produjeron el 90% aproximadamente del total declarado; los tres primeros países comunicaron asimismo las exportaciones más importantes. Las cantidades utilizadas para la fabricación de sustancias o productos no sictotrópicos alcanzaron un nivel sin precedentes en 1976, en que se utilizaron más de 130 toneladas, sobre todo en el Brasil y en los Estados Unidos; en 1978 sólo se utilizaron 43 toneladas. Los principales países importadores en 1978 fueron Dinamarca y Hungría (sobre todo para la reexportación), el Brasil, los Estados Unidos, la República Democrática Alemana, el Japón, España e Italia. El comercio de fenobarbital parecía estar en alza, en general.

Pipradrol

49. El único país que comunicó la fabricación de pipradrol fue Italia, que produjo 156 kilogramos en 1977, de los cuales 101 se exportaron; por comparación, las exportaciones de Italia en 1976 y 1978 fueron mínimas. Tailandia fue el principal importador durante ese período, con importaciones de 60, 120 y 42 kilogramos durante los tres años últimos.

Lefetamina (SPA)

50. La cantidad fabricada comunicada, sólo por el Japón, disminuyó de 323 kilogramos en 1974 a 96 kilogramos en 1978. Las exportaciones japonesas también mostraron una tendencia descendente.

| PART FOUR — SUBSTANCES LISTED IN SCHEDULE IV. | 63 |

EXPLANATORY NOTE

1. The following tables contain the statistical information on psychotropic substances furnished to the Board by Governments for the years 1974 to 1978. Since statistics from many countries are still lacking or incomplete, the totals given in these tables represent the sum of the figures furnished to the Board and do not necessarily constitute complete world totals.

2. *Unit of weight*: The unit of weight used is:

One gram for substances included in Schedule I;

One kilogram for substances included in Schedules II, III and IV.

3. *Symbols used*:

— = nil or less than the unit used

? = statistical report not furnished

.. = statistical report furnished but no data available for the substance in question

4. *In the tables on international trade (export-import)*:

(a) both the exporting and the importing countries appear in alphabetical order in the tables;

(b) “*other countries*”: the figures indicated under this heading comprise the sum of quantities of less than the unit of weight used or, in some cases, amounts exported to unspecified countries of destination.

NOTES EXPLICATIVES

1. Les tableaux suivants contiennent les renseignements statistiques sur les substances psychotropes communiqués à l'Organe par les gouvernements et relatifs aux années 1974 à 1978. Du fait que les statistiques de nombreux pays font défaut ou sont incomplètes, les totaux contenus dans ces tableaux représentent la somme des chiffres communiqués à l'Organe et pas nécessairement les totaux mondiaux.

2. Unité de poids :

L'unité de poids utilisée est la suivante:

- 1 gramme pour les substances inscrites au Tableau I;
- 1 kilogramme pour les substances inscrites aux Tableaux II, III et IV.

3. Signes utilisés :

- = quantité nulle ou inférieure à l'unité utilisée
- ? = le rapport statistique n'a pas été reçu
- .. = le rapport statistique a été reçu, mais les données ne sont pas disponibles pour la substance en question.

4. Dans les tableaux sur le commerce international (exports-importations) :

a) Aussi bien les pays exportateurs que les pays importateurs sont présentés dans ces tableaux dans l'ordre alphabétique anglais;

b) «Autres pays» : les chiffres indiqués dans cette colonne comprennent la somme des quantités inférieures à l'unité de poids utilisée ou, dans certains cas, les quantités exportées vers des destinations inconnues.

NOTA EXPLICATIVA

1. Los cuadros siguientes contienen la información estadística sobre sustancias sicotrópicas facilitada a la Junta por los gobiernos para los años 1974 a 1978. Toda vez que todavía faltan o son incompletas las estadísticas de muchos países, los totales que aparecen en estos cuadros representan la suma de las cifras facilitadas a la Junta y no constituyen necesariamente totales mundiales completos.

2. *Unidad de peso* : la unidad de peso utilizada es:

Un gramo para las sustancias incluidas en la Lista I;

Un kilogramo para las sustancias incluidas en las Listas II, III y IV.

3. *Símbolos utilizados* :

— = nada o cantidad inferior a la unidad utilizada;

? = informe estadístico no suministrado;

.. = informe estadístico suministrado pero no se dispone de datos para la sustancia en cuestión.

4. *En los cuadros sobre comercio internacional (exportación-importación)* :

a) tanto los países exportadores como importadores aparecen en los cuadros por orden alfabético;

b) « otros países » : las cifras indicadas bajo este epígrafe incluyen la suma de las cantidades inferiores a la unidad utilizada o, en algunos casos, las cantidades exportadas a países de destino no especificados.
