United Nations Commission on International Trade Law

YEARBOOK

Volume XXXI: 2000

UNITED NATIONS
New York, 2001

NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The footnote numbering follows that used in the original documents on which this *Yearbook* is based. Any footnotes added subsequently are indicated by lower-case letters.

Changes of and additions to wording that appeared in earlier drafts of conventions, model laws and other legal texts are in italics, except in the case of headings to articles, which are in italics as a matter of style.

CONTENTS

INTRODUCTION

This is the thirtieth volume in the series of *Yearbooks* of the United Nations Commission on International Trade Law (UNCITRAL).[1]

The present volume consists of three parts. Part one contains the Commission's report on the work of its thirty-first session, which was held in New York from 12 June to 7 July 2000, and the action thereon by the United Nations Conference on Trade and Development (UNCTAD) and by the General Assembly.

In part two most of the documents considered at the thirtieth session of the Commission are reproduced. These documents include reports of the Commission's Working Groups as well as studies, reports and notes by the Secretary-General and the Secretariat. Also included in this part are selected working papers that were prepared for the Working Groups.

Part three contains the UNCITRAL *Legislative Guide on Privately Financed Infrastructure Projects*, the Summary Records of the United Nations Commission on International Trade Law for meetings devoted to the preparation of the draft Convention on Assignment of Receivables, the bibliography of recent writings related to the Commission's work, a list of documents before the thirty-third session and a list of documents relating to the work of the Commission reproduced in the previous volumes of the *Yearbook*.

REPORT OF THE COMMISSION ON ITS ANNUAL SESSION; COMMENTS AND ACTION THEREON

THE THIRTY-THIRD SESSION (2000)

A. Report of the United Nations Commission on International Trade Law on the work of its thirty-third session

(New York, 12 June-7 July 2000) (A/55/17) [Original: English]

CONTENTS

I. INTRODUCTION

1. The present report of the United Nations Commission on International Trade Law covers the Commission's thirty-third session, held in New York from 12 June to 7 July 2000.

2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, this report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development.

II. ORGANIZATION OF THE SESSION

A. Opening of the session

3. The United Nations Commission on International Trade Law (UNCITRAL) commenced its thirty-third session on 12 June 2000. The Under-Secretary-General for Legal Affairs, the Legal Counsel, opened the session.

B. Membership and attendance

4. The General Assembly, by its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. The current members of the Commission, elected on 28 November 1994 and on 24 November 1997, are the following States, whose term of office expires on the last day prior to the beginning of the annual session of the Commission in the year indicated:[1]

Algeria (2001), Argentina (2004—alternating annually with Uruguay, starting 1998), Australia (2001), Austria (2004), Botswana (2001), Brazil (2001), Bulgaria (2001), Burkina Faso (2004), Cameroon (2001), China (2001), Colombia (2004), Egypt (2001), Fiji (2004), Finland (2001), France (2001), Germany (2001), Honduras (2004), Hungary (2004), India (2004), Iran (Islamic Republic of) (2004), Italy (2004), Japan (2001), Kenya (2004), Lithuania (2004), Mexico (2001), Nigeria (2001), Paraguay (2004), Romania (2004), Russian Federation (2001), Singapore (2001), Spain (2004), Sudan (2004), Thailand (2004), Uganda (2004), United Kingdom of Great Britain and Northern Ireland (2001) and United States of America (2004).

5. With the exception of Kenya and Uganda, all the members of the Commission were represented at the session.

6. The session was attended by observers from the following States: Angola, Bangladesh, Belarus, Bolivia, Canada, Costa Rica, Côte d'Ivoire, Croatia, Cuba, Czech Republic, Holy See, Indonesia, Ireland, Israel, Kuwait, Morocco, Myanmar, Peru, Philippines, Poland, Portugal, Republic of Korea, Saudi Arabia, Sweden, Switzerland and Venezuela.

7. The session was also attended by observers from the following international organizations:

(a) United Nations system: Economic Commission for Europe; World Bank; International Monetary Fund.

(b) Intergovernmental organizations: Asian Clearing Union; Asian Development Bank; East African Cooperation Secretariat; European Union; Hague Conference on Private International Law; Inter-American Development Bank; International Institute for the Unification of Private Law.

(c) International non-governmental organizations invited by the Commission: Arab Association for International Arbitration; Arab Society of Certified Accountants; Association of the Bar of the City of New York; Cairo Regional Centre for International Commercial Arbitration;

[1] Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 17 were elected by the General Assembly at its forty-ninth session, on 28 November 1994 (decision 49/315), and 19 at its fifty-second session, on 24 November 1997 (decision 52/314). Pursuant to resolution 31/99 of 15 December 1976, the term of those members elected by the Assembly at its forty-ninth session will expire on the last day prior to the opening of the thirty-fourth session of the Commission, in 2001, while the term of those members elected at the fifty-second session will expire on the last day prior to the opening of the thirty-seventh session of the Commission, in 2004.

Chartered Institute of Arbitrators; Commercial Finance Association; Council of Legal Education; Europafactoring; European Banking Federation; European Lawyers' Union; Factors Chain International; Financial Markets Lawyers Group; Group of Thirty; International Association of Lawyers; International Association of Ports and Harbours; International Bar Association; International Chamber of Commerce; International Council for Commercial Arbitration; International Federation of Commercial Arbitration Institutions; International Federation of Insolvency Professionals (INSOL International); International Maritime Committee; International Swaps and Derivatives Association; International Women's Insolvency and Restructuring Confederation; Latin American Group of Lawyers for International Trade Law; University of the West Indies; World Association of Former United Nations Interns and Fellows.

8. The Commission was appreciative of the fact that international non-governmental organizations that had expertise regarding the major items on the agenda of the current session had accepted the invitation to take part in the meetings. Being aware that it was crucial for the quality of texts formulated by the Commission that relevant non-governmental organizations should participate in the sessions of the Commission and its working groups, the Commission requested the secretariat to continue to invite such organizations to its sessions based on their particular qualifications.

C. Election of officers[2]

9. The Commission elected the following officers:

Chairman:	Mr. Jeffrey CHAN WAH TECK (Singapore)
Vice-Chairmen:	Mr. Aly GAMLEDIN Awad (Egypt) Mr. Jorge ROBERTO MARADIAGA (Honduras) Ms. Victoria GAVRILESCU (Romania)
Rapporteur:	Mr. David MORÁN BOVIO (Spain)

D. Agenda

10. The agenda of the session, as adopted by the Commission at its 676th meeting, on 12 June 2000, was as follows:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Draft convention on assignment of receivables.
5. Draft legislative guide on privately financed infrastructure projects.
6. Electronic commerce.
7. Insolvency.
8. Settlement of commercial disputes.
9. Monitoring implementation of the 1958 New York Convention.
10. Case law on UNCITRAL texts (CLOUT).
11. Transport law: progress report on the gathering of information.
12. Endorsement of texts of other organizations: Incoterms 2000, ISP98, URCB.
13. Training and technical assistance.
14. Status and promotion of UNCITRAL legal texts.
15. General Assembly resolutions on the work of the Commission.
16. Coordination and cooperation.
17. Other business.
18. Date and place of future meetings.
19. Adoption of the report of the Commission.

E. Adoption of the report

11. At its 710th meeting, on 7 July 2000, the Commission adopted the present report by consensus.

III. DRAFT CONVENTION ON ASSIGNMENT OF RECEIVABLES

A. Title and preamble

12. The Commission decided to postpone discussion of the title and the preamble until it had had a chance to consider the scope of the draft convention (see paras. 181-183).

B. Consideration of draft articles

CHAPTER I. SCOPE OF APPLICATION

Article 1. Scope of application

13. The text of draft article 1 as considered by the Commission was as follows:

"1. This Convention applies to:

"*(a)* Assignments of international receivables and to international assignments of receivables as defined in this chapter, if, at the time of the conclusion of the contract of assignment, the assignor is located in a Contracting State;

"*(b)* Subsequent assignments provided that any prior assignment is governed by this Convention; and

[2]The election of the Chairman took place at the 676th meeting, on 12 June 2000, the election of the Vice-Chairmen at the 694th and 697th meetings, on 23 and 26 June 2000, respectively, and the election of the Rapporteur at the 687th meeting, on 19 June 2000. In accordance with a decision taken by the Commission at its first session, the Commission has three Vice-Chairmen, so that, together with the Chairman and the Rapporteur, each of the five groups of States listed in General Assembly resolution 2205 (XXI), sect. II, para. 1, will be represented on the bureau of the Commission (see the report of the United Nations Commission on International Trade Law on the work of its first session, *Official Records of the General Assembly, Twenty-third Session, Supplement No. 16* (A/72/16), para. 14 *(Yearbook of the United Nations Commission on International Trade Law*, vol. I: 1968-1970 (United Nations publication, Sales No. E.71.V.1), part two, chap. I, sect. A)).

"*(c)* Subsequent assignments that are governed by this Convention under subparagraph *(a)* of this paragraph, notwithstanding that any prior assignment is not governed by this Convention.

"2. This Convention does not affect the rights and obligations of the debtor unless the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

"[3. The provisions of chapter V apply to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs 1 and 2 of this article. However, those provisions do not apply if a State makes a declaration under article 37.]

"4. The annex to this Convention applies in a Contracting State which has made a declaration under article 40."

Paragraph 1

14. The suggestion was made that subparagraph *(b)* should be revised to require for a subsequent assignment, as subparagraph *(a)* did for an initial assignment, that the assignor be located in a contracting State. It was stated that, unless the assignor in a subsequent assignment was located in a contracting State, the rules of the convention could not apply to a dispute with a third party arising in the assignor's location; and the convention could inadvertently apply to an assignment even if the assignor, the assignee and the debtor were located in a non-contracting State. The suggestion was objected to. It was observed that such an approach would be inconsistent with the principle of continuatio juris, which was reflected in subparagraph *(a)* and under which, if the initial assignment was covered by the convention, any subsequent assignment would also be covered.

15. While some concern was expressed that subparagraph *(c)* might be inconsistent with the principle of continuatio juris reflected in subparagraph *(b)*, it was widely felt that it appropriately provided that the convention applied to a subsequent assignment, which met the conditions of subparagraph *(a)*. In that connection, the view was expressed that the assignment addressed in subparagraph *(c)* was not really a third type of assignment, as suggested by the present wording, but rather a negation of a possible limitation that might otherwise apply with respect to assignments meeting the requirements of subparagraph *(a)*. It was, therefore, suggested that subparagraph *(c)* should be recast as a new paragraph 2 to read: "This Convention applies to a subsequent assignment that is described in paragraph 1 *(a)* of this article notwithstanding that this Convention did not apply to any prior assignment of the same receivable". Subject to that change, the Commission approved the substance of paragraph 1 and referred it to the drafting group.

Paragraph 2

16. It was noted that, in order to enhance certainty with respect to the application of the convention, paragraph 2 should specify the time when the debtor needed to be located in a contracting State or a receivable needed to be governed by the law of a contracting State for the debtor-related provisions of the convention to apply. It was also noted that reference to the time of the conclusion of the original contract would be preferable from a debtor protection point of view, since the debtor could determine at the time it undertook the original obligation whether the convention would affect its legal position. It was also noted, however, that such an approach would inadvertently result in the assignor, the assignee and other third parties being unable to determine at the time of the assignment of a future receivable whether the convention would apply to the rights and obligations of the debtor. Despite that difficulty, which also arose in article 3 with respect to the determination of the internationality of a future receivable, the Commission decided that paragraph 2 should be revised to provide that the debtor should be located in a contracting State or the receivable should be governed by the law of a contracting State at the time of the conclusion of the original contract. The Commission approved the substance of paragraph 2 and referred the matter to the drafting group.

Paragraphs 3 and 4

17. The Commission decided to defer discussion of paragraph 3, which dealt with the scope of the private international law provisions contained in chapter V, until it had had a chance to consider chapter V. The Commission also decided that paragraph 4, which dealt with the application of the annex, should be considered at a later stage in the context of the discussion of article 40 and the annex.

Article 2. Assignment of receivables

18. The text of draft article 2 as considered by the Commission was as follows:

"For the purposes of this Convention:

"*(a)* 'Assignment' means the transfer by agreement from one person ('assignor') to another person ('assignee') of the assignor's contractual right to payment of a monetary sum ('receivable') from a third person ('the debtor'). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

"*(b)* In the case of an assignment by the initial or any other assignee ('subsequent assignment'), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee."

Non-contractual receivables

19. Concern was expressed that, by referring to contractual receivables, subparagraph *(a)* was unnecessarily restrictive. It was pointed out that the assignment of non-contractual receivables, such as payment rights under tax reimbursement claims, was part of important financing practices that the draft convention should cover. Furthermore, it was said that a broader definition of receivables might avoid the difficulties that resulted from the varying interpretation given in different legal systems to the term

"contractual rights". In order to address that concern, the suggestion was made that subparagraph *(a)* should be revised to refer to non-contractual receivables or that, at least, States should be given an option to apply the convention to assignments of non-contractual receivables. The suggestion was objected to. It was pointed out that the draft convention had been prepared with contractual receivables in mind and that some of its provisions (e.g. provisions as to the defences and rights of set-off and as to the location of the debtor) might be ill-suited for non-contractual receivables. An effort to cover the assignment of non-contractual receivables would, therefore, require a careful review and adjustment of a number of provisions of the draft convention, which was considered non-productive at that late stage of the deliberations. After discussion, the Commission confirmed the decision of the Working Group on International Contract Practices to limit the scope of application of the convention to contractual receivables.

Parts of and undivided interests in receivables

20. The Commission noted that, while article 9 expressly validated partial assignments, partial assignments were not explicitly referred to in subparagraph *(a)* and that, as a result, uncertainty might arise as to whether the convention as a whole applied to partial assignments. In particular, it was noted that uncertainty might arise with regard to the legal position of the debtor in the case of a partial assignment (e.g. whether the debtor would be obliged to pay the assignee or the assignor). In view of the fact that partial assignments were involved in significant financing practices, the Commission decided that the matter should be explicitly addressed in subparagraph *(a)* and referred the matter to the drafting group. In the discussion, it was suggested that another possible approach to the problem might be to confine article 11 to assignments of whole receivables. The Commission postponed discussion of the legal position of the debtor in the case of a partial assignment until it had a chance to consider the debtor-related provisions of the draft convention (see paras. 173, 180 and 185).

21. The Commission noted that article 9 validated not only partial assignments of receivables, but also assignments of undivided interests in receivables. It was generally agreed that appropriate reference to assignments of undivided interests in receivables should also be made in article 2 so as to make it clear that the convention as a whole was also applicable to such assignments.

Non-monetary performance rights

22. The Commission decided that the assignment of non-monetary performance rights arising out of the original contract (such as the right to performance, the right to declare the contract avoided) should not be covered by the convention. It was agreed that assignments of such non-monetary performance rights were not frequent in practice and that, therefore, their inclusion in the scope of the convention was not necessary. It was also pointed out that the draft convention had been prepared essentially with assignment of monetary rights in mind and that the inclusion of other performance rights might require adjustments in various provisions. Furthermore, it was felt that, while the transfer of security or supporting rights related to the receivable was appropriately addressed in the draft convention (see article 12), other rights, such as the right to terminate a contract, might be regarded as eminently personal rights that should not be automatically transferred to the assignee with the receivable.

Statutory assignability

23. The Commission noted that assignments of receivables that were not assignable by law (other than those addressed in article 9) were not intended to be covered by the draft convention and considered the question whether that understanding should be explicitly expressed in article 2. Noting that the matter related to the effectiveness of the assignment, rather than to the scope of the convention, the Commission decided that it should be considered in connection with article 9 (see para. 131).

Unilateral assignments

24. The Commission decided that unilateral assignments (i.e. assignments made but not yet accepted by the assignee) should not be addressed in the draft convention. It was widely felt that such assignments were rare in practice and that, therefore, there was no need to address them in the draft convention.

Article 3. Internationality

25. The text of draft article 3 as considered by the Commission was as follows:

> "A receivable is international if, at the time of the conclusion of the original contract, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States."

26. The Commission approved the substance of article 3 and referred it to the drafting group.

Article 4. Exclusions

27. The text of draft article 4 as considered by the Commission was as follows:

"1. This Convention does not apply to assignments:

"*(a)* Made to an individual for his or her personal, family or household purposes;

"*(b)* To the extent made by the delivery of a negotiable instrument, with any necessary endorsement;

"*(c)* Made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

"[2. This Convention does not apply to assignments listed in a declaration made under article 39 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]"

Paragraph 1 (a)

28. It was noted that the convention was intendgd to cover assignments of commercial or consumer receivables for commercial purposes, but not assignments for consumer purposes (irrespective of whether the receivables were commercial or non-commercial). With that understanding, the Commission approved the substance of subparagraph *(a)* and referred it to the drafting group.

Paragraph 1 (b)

29. It was noted that subparagraph *(b)* was intended to exclude from the scope of the convention transfers of negotiable instruments, whether made by mere delivery or by delivery and endorsement. It was also noted that, when a receivable served as a basis for issuing a negotiable instrument and then both the negotiable instrument and the claim were transferred, the transfer of the negotiable instrument was not covered by the draft convention while the transfer of the receivable by way of an assignment was to be covered. In that connection, a suggestion was made to delete in subparagraph *(b)* the expression "with any necessary endorsement" as it might lead to a misunderstanding that a transfer of a negotiable instrument by mere delivery was not excluded. The Commission approved the substance of subparagraph *(b)* and referred it to the drafting group.

30. The question was raised whether subparagraph *(b)* should exclude from the scope of application of the convention also transfers of dematerialized (i.e. electronic) securities held by an intermediary. The Commission took note of the question and decided to discuss it subsequently in the context of the broader discussion of the types of transaction to be included in or excluded from the scope of the convention (see para. 72). In addition, it was noted that dematerialized securities might call for special treatment as regards the law applicable to competing rights (article 24). It was also noted that the matter might be considered by the Hague Conference on Private International Law and, therefore, coordination and cooperation with the Hague Conference might become necessary (see paras. 177, 178 and 460).

Paragraph 1 (c)

31. The Commission approved the substance of subparagraph *(c)* and referred it to the drafting group.

Paragraph 2

32. It was noted that paragraph 2, allowing States to exclude further practices, appeared within square brackets pending final determination of the scope of the convention. The Commission postponed consideration of paragraph 2 until it had reached a final decision on the scope of the convention (see paras. 109 and 152).

Article 5. Limitations on [assignments of] receivables other than trade receivables

33. The text of draft article 5 as considered by the Commission was as follows:

"[*Variant A*

"1. Articles 17, 18, 19, 20 and 22 do not affect the rights and obligations of the debtor in respect of a receivable other than a trade receivable except to the extent the debtor consents.

"2. Notwithstanding articles 11, paragraph 2, and 12, paragraph 3, an assignor who assigns a receivable other than a trade receivable is not liable to the debtor for breach of a limitation on assignment described in articles 11, paragraph 1, and 12, paragraph 2, and the breach shall have no effect.

"*Variant B*

"Articles 11 and 12 and section II of chapter IV apply only to assignments of trade receivables. With respect to assignments of receivables other than trade receivables, the matters addressed by these articles are to be settled in conformity with the law applicable by virtue of the rules of private international law.]"

34. While some support was expressed in favour of variant A, it was widely felt that an approach along the lines of variant B would be preferable since it would result in protecting the debtor more fully than variant A. It was stated that, if the assignment were to be effective as between the assignor and the assignee, as provided under variant A, the legal position of the debtor could, in certain legal systems, be negatively affected. The discussion focused on a revised version of variant B, as follows (see A/CN.9/472/Add.1, page 11):

"Unless the debtor consents, articles 11 and 12 apply only to assignments of trade receivables. With respect to assignments of receivables other than trade receivables, the matters addressed by these articles are to be settled in conformity with the law applicable by virtue of the rules of private international law."

35. This revised version of variant B was supplemented by the following definitions (see A/CN.9/472/Add.1, page 12):

"'Trade receivable' means a receivable arising under an original contract for the sale or lease of goods or the provision of services other than receivables arising under payments or securities settlement systems and receivables arising under financial contracts governed by netting agreements or used as collateral.

"'Payment or securities settlement system' means any contractual arrangement between three or more participants with common rules for the settlement of payment or security transfer orders, and of any related collateral, between the participants, whether or not supported by a central counter-party, settlement agent or clearing house.

"'Financial contract' means any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities

lending transaction, any deposit transaction and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above, and any collateral or credit support related to any transaction referred to above.

"'Netting agreement' means an agreement which provides for one or more of the following:

"*(a)* The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

"*(b)* Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; and

"*(c)* The set-off of amounts calculated as contemplated by the preceding phrase *(b)* under two or more netting agreements."

36. Comparing the original and the revised version of variant B, general preference was expressed for the revised version. It was observed that the original version of variant B was unnecessarily broad in that it would inadvertently result in excluding from the scope of the convention the assignment of all receivables other than trade receivables. Unlike the original version of variant B, the revised version called for a more limited exclusion, since it referred only to articles 11 and 12, only for receivables from payment systems or financial netting agreements and only if the debtor did not consent to the assignment.

37. With regard to the particular formulation of the revised version of variant B, a number of views were expressed. One view was that the reference to consent by the debtor was meaningless, since anti-assignment clauses were routinely included in netting arrangements. Another view was that the reference to private international law might create uncertainty and should be deleted. In response, it was pointed out that, even if that reference were to be deleted, the result would be the same. As regards the definition of "trade receivable", it was observed that receivables from construction works should also be treated as trade receivables. It was also stated that it might be better to avoid defining "trade receivable" since the term was not universally understood in the same way (for remarks on the other definitions, see paras. 49-51).

38. While it was agreed that the revised version of variant B was more appropriate than variant A and the original version of variant B, the view was expressed that even the revised version of variant B did not go far enough in protecting the rights of debtors, for example, in financial netting agreements, since it relied on the existence of an anti-assignment clause and on the effect given to that clause by the law applicable outside the draft convention. It was stated that, if the applicable law recognized the validity of an assignment made in violation of an anti-assignment clause, the assignment would be effective and could fall within the ambit of the convention. As a result, for example, netting arrangements might be disrupted (e.g. because netting could be exercised by means other than set-off and, therefore, article 19 might not be sufficient in preserving netting rights). To the extent that the debtor would have a right of set-off and would be considered to be also a creditor, in the case of a conflict of priority, article 24 could apply and refer priority issues to the law of the assignor's location rather than, for example, to the more appropriate law of the location of the investment securities account. It was stated that consultation with the industry had led to the result that certain financial practices should be excluded from the scope of application of the convention altogether. In the place of article 5, language along the following lines was proposed for inclusion in articles 6 and 4:

"*Article 6 "Definitions and rules of interpretation*

"(x) (i) Except as provided in subparagraph (ii), a receivable is a contractual right to payment of a monetary sum, owed by a person (debtor) to an assignor, as:

"*(a)* Payment for goods sold or leased or for the provision of services [other than financial services];

"*(b)* Payment for industrial or other intellectual property sold or licensed;

"*(c)* Payment for a credit card transaction;

"*(d)* Repayment of a loan of money, regardless of the currency in which denominated; or

"*(e)* Reimbursement for the payment, pursuant to a guaranty, suretyship obligation [or other secondary obligation] of the debtor's obligation to a third party.

"(x) (ii) The following are not 'receivables':

"*(a)* Rights to payment arising from transactions on a regulated futures exchange;

"*(b)* Rights to payment arising from the sale, lease or loan of gold or other precious metals;

"*(c)* Rights to payment under a financial netting agreement;

"*(d)* Rights to payment under bank deposit relationships, including those arising under inter-bank payment systems;

"*(e)* Rights to payment from an insurer under an insurance contract, or from a reinsurer under a reinsurance contract;

"*(f)* Rights to payment for goods sold or leased to the extent that under the law of the State where the goods are located the goods are considered to be part of the real estate on which the goods are situated;

"*(g)* Drawing rights or rights to payment under a letter of credit or independent bank guarantee;

"*(h)* Rights to payment arising from foreign exchange contracts; or

"*(i)* Rights to payment arising from the sale or lending of investment securities, including repurchase agreements and rights to payment arising under investment securities settlement systems."

"*Article 4 "Exclusions and limitations on application of certain provisions*

"3. In the case of receivables described in subparagraphs *(d)* and *(e)* of article 6 (x) (i), articles 11 and 12 do not affect the rights and obligations of the debtor [or any guarantor, surety or other secondary obligor for the debtor] unless the debtor [or such guarantor, surety, or secondary obligor] otherwise consents."

39. The purpose of the proposal, it was explained, was essentially to refine the scope of application of the convention with a view to ensuring that it did not inadvertently disrupt certain financial practices for which not all provisions of the convention were well suited. It was observed that the proposal was based on a distinction between three categories of receivables, those to which all of the provisions of the convention would apply, those to which only some provisions would apply and those which would be excluded from the scope of application of the convention altogether. Moreover, it was explained that the list of exclusions was necessary since, even with an enumeration of practices covered, the convention could inadvertently apply to practices that were well regulated and that could even be disrupted if the convention were to apply.

40. There was general agreement in the Commission that certain practices needed to be treated differently. Differing views were expressed, however, as to whether those practices should be excluded from the scope of the convention as a whole or from the scope of articles 11 and 12 only. One view was that, if articles 11 and 12 did not apply, the effectiveness of assignments made despite anti-assignment clauses would be left to law applicable outside the convention. As a result, in most cases, the assignment would be ineffective and the convention would not apply. It was also stated that, while an approach based on lists would have the same result, it could not be preferred because it raised a number of problems. One problem was that an approach based on lists, rather than on a general rule, would run the risk of being incomplete or inconsistent and thus raise questions of interpretation. Another problem was that a list could soon become outdated, since international practice evolved rapidly and new types of receivables might develop that might not fit well into any of the categories listed in the proposal. In that event, questions would arise as to whether those new types of receivables would fall within or outside the scope of the convention. Yet another problem was that any list might inadvertently exclude new practices with regard to trade receivables, thus hampering their further development. Still another problem was that the lateness of the proposal did not allow delegates time for consultations with representatives of the relevant sectors of the industry, which became necessary as a result of the radical nature of the proposal.

41. Another view was that a qualified approach, such as the one mentioned above (see paras. 38 and 39), should be followed. Such an approach would enhance certainty in the application of the convention and increase the level of its acceptability to States and the relevant industry. It was stated that, for the reasons mentioned above (see para. 38), excluding certain practices from the scope of articles 11 and 12 only would not be sufficient to avoid undue interference with well-regulated and efficiently functioning practices. That result was said to be contrary to the main goal of the convention, which was to increase the availability of lower-cost credit. In addition, it was stated that the proposal did not raise a new issue, since the exact scope of the convention had been left open by the Working Group.

42. After discussion, the Commission postponed reaching a decision as to the proposed approach until it had completed its consideration of the practices listed in the proposal (see paras. 97-100). In order to accommodate some of the concerns expressed, the Commission agreed that the definition of "receivable" by way of a list of practices could, for the time being, be left aside. The Commission went on to consider in more detail the practices suggested to be excluded.

Subparagraph (a) *(Payment rights from regulated futures exchanges)*

43. It was stated that the reference to rights to payment arising from transactions on a regulated futures exchange was essentially intended to cover exchange trading of derivatives and commodities, which was well regulated and functioning under national law. In addition, it was observed that application of the convention to such practices could frustrate the legitimate expectations of parties and seriously disrupt existing markets. The suggestion was made that, for the same reasons, all exchange trading should be excluded. It was stated that such an approach would render any specific reference to exchange trading in precious metals and to foreign currency exchange trading unnecessary. In order to address the points made in the discussion, the proposal was reformulated as follows: "[rights to payment] [receivables] arising from transactions on a regulated exchange". It was observed that the bracketed language was being used pending determination by the Commission whether such an exclusionary approach would be followed and, if so, whether the list of exclusions would be made part of article 2 or article 4. In response to a question, it was stated that the reference to "exchange" was intended to encompass transactions made under the auspices of a regulated exchange (e.g. stock exchange, securities and commodities exchange) and not every regulated market.

Subparagraph (b) *(Rights to payment from the sale, lease or loan of gold or other precious metals and from foreign currency exchange transactions)*

44. It was explained that the proposed exclusions were based on considerations similar to those underlying the proposed exclusion of rights to payment arising from transactions on a regulated futures exchange. They were needed because the rules of the convention (e.g. articles 11 and 12) might not be entirely compatible or might even interfere with the functioning of regulated markets. It was also explained that, while precious metals and foreign currency were traded in exchanges, trading between individuals was also a practice that should be excluded, in particular in view of the need to control the transfer of such assets to off-shore parties.

45. Various objections were raised to the proposed exclusion, which it was felt would lead to an unnecessary and unjustified limitation of the scope of application of the convention. It was considered that the essential criterion for the exclusion should be the technique used for settlement and not the nature of the assets being traded. It was added that, as currently formulated, the proposed exclusion would encompass transactions involving the factoring of proceeds of the sale of gold and other metals that took place outside any regulated exchange, such as the sale of jewellery. After deliberation, it was tentatively agreed that the proposed exclusions should be reformulated and possibly combined with trading in a regulated exchange. As a result, subparagraph *(b)* of the proposed text (see para. 38) could be deleted and subparagraph *(h)* would relate only to foreign exchange contracts negotiated off a regulated exchange (see paras. 66-68).

Subparagraph (c) *(Rights to payment under financial netting agreements)*

46. The Commission generally agreed that the assignment of rights to payment under financial netting agreements should be excluded from the scope of application of the convention or of articles 11 and 12. It was widely felt that such practices functioned well under standard master agreements prevailing in practice (e.g. master netting agreements prepared by the International Swaps and Derivatives Association) and currently applicable law. In addition, it was stated that bringing the assignment of financial netting receivables into the scope of the convention would inadvertently result in disrupting such financial netting practices, since certain provisions of the draft convention would not work well for those practices (e.g. articles 11, 12, 19 and 24-26). Such a result was said to be contrary to the overall goal of the convention, which was to increase the availability of lower-cost credit with a view to facilitating the movement of goods and services across national borders. Moreover, it was observed that the exclusion of the application of articles 11 and 12 only would not be sufficient to protect parties to financial netting agreements, since it was based on the assumption that there would always be an anti-assignment clause and that that clause would be validated under law applicable outside the convention. In that connection, it was observed that, if an assignment was effective despite the fact that it was made in violation of an anti-assignment clause, the assignment could fall under the convention. As a result, the debtor's right to netting might be affected (article 19 referring to set-off might not cover all types of netting) and priority would be referred to the law of the assignor's location (instead of the more appropriate law of the location of the securities account).

47. With regard to the particular formulation of the exclusion of netting in financial agreements, a number of questions were raised. One question was whether payment rights arising both before and after close-out (i.e. termination) of the netting agreement were meant to be covered by the exclusion. In response, it was stated that all such rights to payment were intended to be covered. Another question was whether netting in non-financial agreements (e.g. in the airline or farming business) should also be excluded. While there was some support for the exclusion of such netting agreements, the prevailing view was that they should not be excluded, since such an approach might inadvertently result in excluding the assignment of certain trade receivables. It was suggested, however, that the application of articles 11 and 12, dealing with anti-assignment clauses, might be excluded with respect to such non-financial netting agreements. There was no sufficient support for that suggestion (for the continuation of the discussion, see para. 149).

48. The view was expressed that rights arising under inter-bank payment systems (referred to in subparagraph *(d)*) and rights arising from the sale or lending of investment securities or under investment securities settlement systems (referred to in subparagraph (i)) were closely related to netting agreements and should be listed together. In order to address the concerns expressed, subparagraph *(c)* of the proposed text (see para. 38) was reformulated as follows: "[Rights to payment] [Receivables] arising under financial contracts governed by netting agreements, except a [receivable] [right to payment] owed on the termination of all outstanding transactions". It was explained that only financial netting arrangements would be covered, while netting between industry participants would not be excluded (but might need to be treated differently in the context of article 20 so as to ensure that rights of set-off arising from transactions governed by netting arrangements would be preserved; see, however, para. 149). It was also stated that the assignment of receivables payable upon termination of a netting arrangement was not intended to be excluded, since in such a case there was no risk that the mutuality of netting arrangements would be disturbed.

Definitions

49. Support was expressed in favour of the definition of "netting agreement" (see para. 35). At the same time, a number of concerns were expressed. One concern was that the definition was too broad and might inadvertently result in excluding bilateral agreements between traders pooling credits and debits and settling mutual obligations by way of net payments, a result that was considered inappropriate. In response, it was observed that financial netting arrangements, whether multilateral or bilateral, should be excluded from the scope of the draft Convention. Another concern was that the reference to "set-off" might be inappropriate, since there was no universal understanding of that notion. Yet another concern was that the situation described in subparagraph *(b)* of the definition of "netting agreement" did not involve a genuine netting arrangement and should be deleted.

50. Support was also expressed in favour of the definition of "financial contract" (see para. 35). It was suggested, however, that the reference to payment rights from deposit accounts should be deleted, since specific reference was made in the proposed list of exclusions to payment rights from deposit accounts (see para. 38 and para. (x) (ii) *(d)* of the proposed text). It was also suggested that the reference to collateral or credit support arrangements should be deleted, since such arrangements did not constitute a necessary element for the definition of "financial contract". It was stated, however, that collateral and credit support arrangements were an important part of financial contracts,

which affected the overall cost of the financing made available and should, therefore, be explicitly mentioned either in the definition of "financial contract" or in the definition of "netting agreement". In response, it was observed that, while the importance of collateral and credit support arrangements could not be denied, they did not form part of the definition of either "netting agreement" or "financial contract". It was also stated that referring to collateral arrangements in the definitions of "financial contract" or "netting agreement" could inadvertently result in the exclusion of an assignment of receivables made by a business to secure a bank loan. It was tentatively agreed that the reference to collateral and credit support arrangements in the definition of "financial contract" should be deleted (see also para. 74).

51. The Commission also considered the definition of "payment or securities settlement system" (see para. 35). It was stated that it was important to clarify that three or more participants were required for an inter-bank payment or securities settlement arrangement to qualify as a "system" and be excluded from the scope of the convention. The view was expressed that that matter could be clarified in a commentary to the convention. It was observed, however, that in some countries such payment systems could be established by two correspondent banks. After discussion, the Commission tentatively decided that a definition of payment and securities settlement systems was not necessary (for the continuation of the discussion, see para. 71).

Subparagraph (d) *(Rights to payment under bank deposit relationships, including those arising under inter-bank payment systems)*

52. It was stated that, with respect to the assignment of receivables arising from deposit accounts and inter-bank payment systems, the convention would not always lead to desirable results and that, in any case, those receivables were regulated by law and by contract in the light of the specific needs of the relevant practices. Some support was expressed in favour of leaving assignments of such receivables within the ambit of the convention (as had been the view in the Working Group), since they were frequent and it was desirable that they should benefit from the harmonized regime of the draft convention. It was observed that, if any special treatment of those receivables was needed (e.g. as regards priority and location), that should be addressed in the context of the relevant draft articles. However, the prevailing view was that those receivables should be excluded, since it was preferable to leave the issue of their assignability and the effects of assignment to the regulation outside the convention. It was stated that interference by the convention in non-assignment clauses in bank deposits might cause misgivings in that industry and might have a negative effect on the acceptability of the convention.

53. There was support in the Commission for excluding the assignment of receivables arising from inter-bank payment systems (whether from the draft convention as a whole or only from articles 11 and 12 remained an open question; see paras. 97-100). However, since those relationships, whether multilateral or bilateral, contained elements of netting, it was suggested that that exclusion should be incorporated into and consolidated with the exclusion of rights to payment under a financial netting agreement (see paras. 46-48). In order to meet some of the concerns expressed, the second part of subparagraph *(d)* of the proposed exclusion (see para. 38 and para. (x) (ii) *(d)* of the proposed text) was reformulated thus: "[Rights to payment] [Receivables] arising under inter-bank payment systems or securities settlement systems". In response to the query as to a possible inconsistency with the reformulated version of the exclusion of financial netting arrangements (see para. 48), it was observed that inter-bank payment or securities settlement systems operated within or outside netting arrangements. It was also stated that, in the case of inter-bank payment and securities settlement systems, the assignment of the payment obligation outstanding on the termination of a netting arrangement should be excluded, since there was no market in financing such close-out payment rights.

54. In the discussion, the question was raised as to whether the facilitation by the convention of assignments of financial deposits might run counter to the provisions of law designed to prevent money-laundering. It was noted in response that that was not the case, because any assignments of receivables under the convention would remain subject to any mandatory provisions concerning money-laundering.

Subparagraph (e) *(Rights to payment from an insurer under an insurance contract, or from a reinsurer under a reinsurance contract)*

55. It was pointed out that the insurance market was regulated in great detail (by contract and statute) and that the draft convention introduced provisions that might not produce the desired results or might even interfere with the contractual and statutory provisions governing those contracts. In addition, there existed many forms of insurance that were subject to different policy considerations and expectations of the parties and it was difficult to make sure that provisions of the draft convention would not present an undesirable interference with them.

56. The proposal to exclude insurance practices was objected to on the ground that it was desirable to place receivables from insurance contracts on a certain and internationally harmonized legal footing. Such receivables (from different types of insurance contract such as casualty, health, pension, credit or liability insurance) were frequently assigned and were also frequently part of cross-border financing operations, such as factoring. Those operations were developing and it was desirable to facilitate them and reduce their costs and risks by means of the convention. After discussion, the proposal to exclude the assignment of insurance receivables did not obtain sufficient support and the Commission decided not to single out insurance or reinsurance receivables as receivables to be excluded from the scope of the convention as a whole.

Subparagraph (f) *(Rights to payment for goods sold or leased that become part of real estate)*

57. It was widely felt that the assignment of receivables arising from the sale or lease of goods should not be excluded, even if the goods had temporarily become part of

real estate. It was stated that the exclusion of the assignment of such trade receivables from the scope of the convention would significantly reduce its usefulness and undermine its chances for wide adoption. It was also observed that such an exclusion would create uncertainty with regard to the application of the draft convention in view of the divergent approaches taken in various legal systems as to the conditions required for movable goods to become part of real estate.

58. The discussion focused on a reformulated version of subparagraph *(f)*, which was aimed at excluding the assignment of: "[Rights to payment] [Receivables] arising from the sale or lease of real estate". Support was expressed for the reformulated version of subparagraph *(f)*, which would result in avoiding the exclusion of the assignment of trade receivables, without creating undue interference with national law on real estate rights.

59. It was pointed out, however, that the assignment of receivables arising from the lease of real estate should not be excluded. In response, it was observed that it would be counter-productive to attempt to draw a distinction between sales and leases, since leases often had attributes of a sale (e.g. long-term leases with an option to buy) and, in many legal systems, were treated in the same way as sales.

60. On the other hand, it was observed that, while the assignment of receivables arising from leases of real estate could be included in the scope of the convention, it was most important to exclude receivables secured by a mortgage in real estate so as to avoid interfering with national law on the transfer of mortgages in general and on securitization of mortgages in particular. In that connection, a note of caution was struck that the usefulness of the convention would be severely reduced if the assignment of trade receivables (arising from the supply of goods, construction or services) were to be excluded on the sole ground that they happened to be secured by real estate. It was pointed out that commercial and, in particular, construction companies regularly relied on the assignment of receivables secured by a mortgage in real estate or construction sites for obtaining financing. It was also stated that it would be a strange result for the convention not to cover a global assignment of receivables by a commercial entity merely because that entity (assignor) or the debtor or a third party gave a mortgage as an additional security. It was pointed out that excluding such a global assignment would create uncertainty as to the application of the convention and might lead to inconsistent results (e.g. a conflict arising before a mortgage was given would be covered but not a conflict arising after the mortgage was given).

61. In addition, it was stated that the concern expressed with regard to the effect an assignment of receivables could have on security rights in real estate could be addressed by means of a private international law rule that would refer conflicts of priority between an assignee under the convention and a holder of an interest in real estate with a right in the assigned receivable to the law of the location of the real estate. The following wording was proposed:

> "If the assigned receivable arises from the sale or lease of an interest in land or is secured by such an interest, the rights of the assignee are subject to any competing rights of a person who holds an interest in the land under the law of the State in which the land is situated".

Support was expressed for that proposal. It was stated that the legal analysis underlying the proposal was sound and addressed all relevant issues. In particular, it was pointed out that, if no conflict arose with a holder of a right in real estate under national law and there was no statutory limitation on the assignment of real estate receivables (a matter that might be explicitly addressed in article 9; see para. 131), national real estate markets would not be affected by the convention. In addition, it was observed that the draft convention dealt with the assignment of receivables and did not include any rules that could undermine national real estate markets. It was pointed out, in particular, that article 12 was sufficient in referring to national law issues, such as the distinction between an accessory and an independent right, rights of the debtor as against the assignor and the form of transfer of a security right, whether in real estate or in movable property.

62. However, the view was expressed that the proposed text might not be sufficient to ensure that national real estate markets would not be disrupted. Under such an approach, matters other than priority (and form, which was left to national law by virtue of article 12, para. 5) might fall within the ambit of the convention. It was, therefore, suggested that a broader private international law rule would be necessary. The following language was proposed for inclusion in article 25: "Where the assignment would transfer or create an interest in land or a receivable arising from such an interest, the law of the State in which the land is located will govern the matters specified in article 24". After deliberation, the proposal was modified to read as follows:

> "Where a receivable arises from an interest in land, or where the assignment of a receivable, or any associated transaction, would create or transfer an interest in land, all matters pertaining to that interest in land will be governed by the law of the State in which that land is located for the purposes of this Convention".

Support was expressed for the proposed text. It was stated that an approach based on a special regime to be incorporated in draft article 25 would better address all the concerns expressed. It was observed, however, that there was no real difference between that proposal and the proposal mentioned above (see para. 61), since, under the latter proposal, the law of the assignor's location applied only if its application would not result in any interference with the law of the State in which the real estate was located.

63. As an alternative to the above-mentioned proposals to deal with the matter by way of a limited exclusion in article 24 or in article 25, it was proposed that, in order to avoid interfering with national mortgage markets, an outright exclusion in article 4, paragraph 1, could relate only to "receivables arising from the sale or lease of real estate that are secured by a mortgage in such real estate". In addition, it was stated that, if the Commission were not able to reach agreement on such an exclusion, an approach based on article 4, paragraph 2, could be considered. Concern was expressed, however, that article 4, paragraph 2, allowing States to exclude an unlimited number of practices, would not be conducive to the uniformity sought to be achieved through the convention.

64. After deliberation, the Commission suspended consideration of the matter to allow time for consultations (for the continuation of the discussion, see paras. 75-87).

Subparagraph (g) *(Drawing rights or rights to payment under a letter of credit or independent bank guarantee)*

65. The Commission agreed that the assignment of receivables arising from letters of credit or independent guarantees (either as rights to claim payment or rights to receive payment after a valid claim had been made) should not be governed by the convention. It was widely felt that the assignment of such receivables gave rise to special considerations that were dealt with by special non-legislative and legislative texts, including the Uniform Customs and Practices (UCP500), the International Standby Practices (ISP98) and the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (General Assembly resolution 50/48, annex, "the Guarantees and Stand-by Convention").

Subparagraph (h) *(Rights to payment arising from foreign exchange contracts)*

66. The Commission recalled that foreign exchange contracts would be excluded by the convention insofar as they took place under the auspices of a regulated exchange (see subpara. *(a)* and para. 43) or involved netting arrangements (see subpara. *(c)* and paras. 46-48). The discussion focused on foreign exchange contracts that would not fall under subparagraph *(a)* or subparagraph *(c)* of the proposed list of exclusions.

67. The view was expressed that the exclusions under subparagraphs *(a)* and *(c)* were not sufficient since there were significant practices relating to foreign exchange contracts that took place outside a regulated exchange and were not subject to master netting agreements. It was also stated that, in such situations, financing institutions would rely on statutory rights of set-off, the preservation of which was crucial for controlling the credit risk and thus the cost of a transaction. It was also stated that it was equally essential for financial institutions to be able to rely on non-assignment clauses against possible assignees of the proceeds of foreign exchange transactions. The application of articles 11 and 12 could thus inadvertently result in an increased exposure of the financial institutions to the risk of default by their clients, which would lead to an increase in the financial cost of those transactions. Another argument put forward in support of the proposed exclusion was that foreign exchange transactions were in many countries subject to special regulation by domestic monetary authorities and that the exercise of those regulatory functions should not be hindered by the convention. Monetary regulations sometimes included restrictions on the assignability of the proceeds of foreign exchange transactions for the purpose of controlling cross-border currency flows.

68. The Commission took note of those concerns. Nevertheless, it considered that there was no compelling reason to exclude those residual foreign exchange transactions from the scope of application of the convention. Financial institutions that wished to avoid the application of the convention to their foreign exchange transactions remained free to use netting agreements for those transactions, thereby qualifying for exclusion under the appropriate provision. In addition, it was widely felt that, to the extent that statutory regulations restricted the assignability of receivables arising under foreign exchange contracts, they would remain unaffected by the convention as a whole and articles 11 and 12 in particular. Moreover, it was generally felt that article 20 was sufficient to preserve the debtor's rights of set-off. After discussion, the Commission decided that subparagraph *(h)* should be deleted.

Subparagraph (i) *(Rights to payment arising from the sale or lending of investment securities, including repurchase agreements and rights to payment arising under investment securities settlement systems)*

69. It was recalled that rights to payment arising under investment securities settlement systems would be covered under subparagraph *(d)* as revised (see para. 53), while the sale or lending of investment securities would not be covered by the exclusions with respect to netting arrangements and transactions on a regulated exchange. Support was expressed for the exclusion. It was stated that investment securities were sold, lent or traded pursuant to repurchase agreements in well-established and regulated markets and that the convention (e.g. the rules on representations, set-off and priority) might have a disruptive effect on those markets. In response, it was argued that the fact that those transactions were subject to regulation by national law was not sufficient to justify their exclusion from the scope of the convention, since the convention would not affect any statutory limitations on assignment. It was therefore suggested that, if necessary, States could make use of the right recognized in article 4, paragraph 2, to exclude certain practices by making a declaration under article 39. It was said in reply that, to the extent any practices should be excluded from the convention, it would be preferable to exclude them explicitly in article 4, paragraph 1, and not by a unilateral declaration by a State pursuant to articles 4, paragraph 2, and 39, since such an approach would not advance uniformity and might create uncertainty as to the application of the convention. After discussion, pending final determination of the question whether exclusions should relate to the convention as a whole or to articles 11 and 12 only, the Commission tentatively decided that sales and loans of investment securities should be excluded (see also para. 72).

Revised consolidated list of exclusions

70. Subsequently, the Commission reviewed the results of its consideration of the types of receivables that should be excluded from the convention. The Commission did so on the basis of a draft prepared by an informal ad hoc group for inclusion in article 4, paragraph 1, which read as follows:

"[The Convention does not apply to]:

"*(a)* Receivables arising from transactions on a regulated exchange;

"*(b)* Receivables arising under financial contracts governed by netting arrangements, except a receivable owed on the termination of all outstanding transactions;

"*(c)* Receivables arising from bank deposits;

"*(d)* Receivables arising under inter-bank payment systems or investment securities settlement systems;

"*(e)* Receivables under a letter of credit or independent bank guarantee;

"*(f)* Receivables arising from the sale or loan of investment securities."

71. Recalling its earlier discussion on the definition of "payment and securities settlement systems" (see para. 51), the Commission decided that, in subparagraph *(d)*, reference should also be made to inter-bank payment agreements. It was widely felt that, in addition to payment and securities settlement systems, payment arrangements between two correspondent banks should be excluded from the scope of the convention.

72. With respect to subparagraph *(f)*, the suggestion was made that it should be revised to refer also to the holding of investment securities. In response to a question, it was stated that the direct or indirect holding of investment securities, whether they were in paper or in electronic form ("dematerialized securities"), could generate receivables, such as the balance in a securities account, dividends from securities or the price from the sale of securities. It was generally agreed that the assignment of such receivables should be excluded from the draft convention, for the same reasons that the assignment of receivables arising from the sale or loan of investment securities was to be excluded (see para. 69).

73. The Commission also considered the definitions of "financial contract" and "netting agreement" that were referred to in subparagraph *(b)* of the above-mentioned list of exclusions (see para. 70) and should be included in article 6. The draft definitions (modelled closely on the text suggested by the European Banking Federation in document A/CN.9/472/Add.1) were as follows:

"*(n)* 'Financial contract' means any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities lending transaction, any deposit transaction and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above;

"*(o)* 'Netting agreement' means an agreement which provides for one or more of the following:

(i) The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

(ii) Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; and

(iii)The set-off of amounts calculated as contemplated by the preceding subparagraph (ii) under two or more netting agreements."

74. It was noted that, in view of the Commission's earlier discussion of those definitions (see paras. 49-51), the reference to deposit accounts and to collateral and credit support systems in the definition of "financial contract" had been deleted. Wide support was expressed for those definitions as revised. It was agreed that deposit accounts were excluded by virtue of subparagraph *(c)* of the revised list of exclusions (see para. 70). A suggestion was made to remove receivables arising from deposit accounts from the lisv of excluded practices, but that suggestion did not receive sufficient support. The Commission also agreed that collateral and credit support systems did not fit into a definition of "financial contract". After discussion, the Commission adopted the above-mentioned list of exclusions and definitions and referred them to the drafting group.

Real estate receivables

75. The Commission resumed its deliberations on real estate receivables (see paras. 57-64). The discussion focused on a proposal that read as follows:

"Where a receivable is connected with an interest in land, the law of the State in which the land is situated governs all matters pertaining to that interest and the priority of the right of the assignee with respect to the competing right of a person who holds an interest in the land."

76. It was stated that the proposed text was intended to apply in all cases, irrespective of the connection of the receivable to land (e.g. whether the receivable arose from the sale or lease of land, or was simply secured by an interest in land), and to preserve the application of the law of the land on all matters relating to an interest in land. It was also observed that the second part of the proposed text was intended to address a more limited issue, namely, the issue of the law applicable to a conflict of priority between an assignee under the convention and the holder of an interest in land under the law of the land. Strong support was expressed for that proposal. It was stated that the proposed text would address the concerns expressed with regard to statutory limitations on assignments that could have an impact on interests in land, as well as any other public policy concerns in that regard. As a matter of drafting, it was suggested that the first and the second part of the proposed text should be connected with the word "including". That suggestion was objected to, since the second part of the proposed text contained a limited rule dealing with the law applicable to priority with respect to the receivable, while the first part dealt with the law applicable to all matters relating to an interest in land.

77. At the same time, a number of concerns were expressed. One was that the proposed text was overly broad and could inadvertently result in excluding from the scope of the convention transactions that were intended to be covered (e.g. an assignment of a receivable embodied in a promissory note and secured by a mortgage or the assignment of the income flow from an amusement park or a golf course). In particular, the words "connected" and "all matters pertaining" were considered to open up the scope of the proposed text too broadly and to be introducing an unacceptable degree of uncertainty. It was observed that

commercial loans were often secured by personal property and real property. In such situations, it was pointed out, priority with respect to the land-related receivable could be referred to the law of the land only if, under the law of the land, priority were to be subject to registration in a public registry and if a conflict with a holder of an interest in land were to arise. In that connection, it was stated that, if the assignee had not registered its interest in the land and the assignor were to become insolvent, the assignee's priority with respect to the insolvency administrator should be subject to the law of the assignor's location. It was also stated that, even if the assignor had assigned the same receivable to another assignee who had not registered either, priority should again be determined under the law of the assignor's location. Furthermore, it was observed that the only situation in which the law of the land could apply and the assignee could be defeated would be where a subsequent assignee had registered its interest under the law of the land. The second part of the proposed text was intended to cover that limited conflict situation.

78. Another concern was that the mere fact that a receivable had some connection to real estate, irrespective of the value of the real estate compared to the value of the receivable, was not sufficient to justify a change in the law governing priority. It was stated that, if the convention were to include a rule on the law governing conflicts of priority with respect to real estate receivables, that rule should be appropriately cast so as to avoid any undue interference with financing practices involving such receivables. Doubt was expressed as to whether the rule contained in the proposed text would be suitable for real estate financing and for financing on the basis of receivables secured by a mortgage. In any case, it was stated that a rule that would make it necessary for any receivables financier to investigate whether the relevant receivables were secured by a mortgage so as to establish whether the convention applied would be unacceptable. In order to address the concerns expressed, it was suggested that the convention should deal only with a conflict between an assignee who acquired, under article 12, an interest in the land securing payment of the assigned receivable and a holder of an interest in land, which by virtue of the law of the land extended to the receivable. Such a rule should preserve the application of the law of the land either by excluding that type of conflict from the scope of the priority rules of the convention or by giving priority to the holder of an interest in land, if that person would have priority under the law of the land.

79. The following language was proposed:

> "If a receivable is associated with the land such that under the law of the State in which the land is situated a person with an interest in the land has rights in that receivable, then the rights of the assignee with respect to the receivable are subordinate to the rights of any person to whom under the law of the State in which the land is situated the assignee's rights would be subordinate."

It was explained that the proposed rule was designed to have a narrow scope of application, since it required that a receivable be associated with land and that, under the law of the land, a person with an interest in land acquired an interest in the land-related receivable. It was explained that the proposed rule did not address conflicts with respect to interests in land, since article 12 was thought to be sufficient to ensure that any conflict with respect to interests in land would be resolved by the law of the land. It was also understood that the proposed rule would have no application if, as a result of debtor default, the assignee of a receivable secured by a mortgage were to foreclose and sell the land, as long as the assignee had met all the requirements existing under the law of the land for the acquisition of interests in land.

80. Some support was expressed for the proposal mentioned above. In order to ensure that the proposed text would cover not only rental payments but also receivables secured by real estate, the suggestion was made that it should be amended as follows: "Where a receivable is secured by land or arises from a lease of land …". At the same time, a number of concerns were expressed. One was that the proposed text failed to address all situations in which the convention might affect rights in land under the law of the land. In response to a question as to whether article 9 (in particular, as reformulated; see para. 131) would not cover any concern relating to statutory limitations relating to land-related receivables, it was observed that article 9 would address most but not all public policy concerns. In response to a further question as to whether article 25 would address those remaining public policy concerns, it was stated that the article might not be sufficient in that regard.

81. In order to bridge the gap between the two diverging proposals (see paras. 75 and 79), the following language was proposed: "No provision in this Convention shall affect the application of the law of the real estate when the assignment of a receivable is linked to that real estate". While the proposal was met with interest, it was stated that it might inadvertently result in creating uncertainty as to the application of the convention. The mere fact that, for example, a mortgage in real estate of a minor value was given could result in removing the assignment of receivables of considerable value from the scope of the convention. It was also pointed out that the only issue that needed to be covered was the conflict between an assignee under the convention and the holder of an interest in land linked to the receivable assigned. Statutory limitations with respect to the assignment of land-related receivables would be sufficiently covered by revised article 9 (see para. 131), while article 12 would be sufficient to ensure that any conflicts with respect to competing interests in land would be subject to the law governing interests in land by virtue of the rules of private international law outside the convention.

82. However, the concern was expressed that addressing only issues of priority would not be sufficient to preserve the application of the law of the land on all matters pertaining to an interest in land. For that reason, support was expressed for the proposal mentioned above (see para. 80) or for allowing States to exclude the assignment of land-related receivables from the scope of the draft convention (see articles 4, paragraph 2, and 39). It was widely felt that every effort should be made to define clearly the scope of the convention so that no further exclusions would need to be made by States, since such an approach would reduce certainty with respect to the application of the convention and result in its having a different scope from State to State.

83. In an effort to reach consensus, the following language was proposed:

"In the case of a receivable secured by or arising from the sale or lease of an interest in real estate, nothing in this Convention:

"*(a)* Affects the rights of a person entitled to priority in the receivable pursuant to the real estate law of the State in which the real estate is located; or

"*(b)* Authorizes an interest in the real estate that is not permitted under that law."

84. It was explained that the proposed text was intended to ensure that the convention would not affect the priority of a holder of an interest under the real estate law of the land and would not create an interest in land not permitted by the law of the land. While the proposal attracted support, with regard to subparagraph *(a)*, concern was expressed that the reference to the real estate law of the land was insufficiently clear and overly restrictive, since priorities were normally governed by other law, including insolvency law. In response, it was stated that referring to the law of the land in general would remove from the scope of the convention any conflicts of priority with respect to receivables linked to land, no matter how remote or artificial that link might be. Such a result would undermine the certainty sought through articles 24-27 and was said to be unacceptable, since it would fail to cover significant conflicts of priority with respect to receivables. The example was given of a conflict between two assignees in country A of a receivable secured by a mortgage in country B.

85. It was stated, however, that, as long as the convention made it clear that it was not intended to prejudice rights under real estate law, there would not be a need to address the specific issue of priority dealt with in subparagraph *(a)* of the proposed text. In response it was observed that, in the absence of subparagraph *(a)*, the law of the assignor's location would inadvertently apply by virtue of article 24 to a conflict between an assignee under the convention and a holder of a right in land that, under national law, was extended to the receivable.

86. As to subparagraph *(b)*, the suggestion was made that it should refer to "interference" with the law of the land. That suggestion was objected to, since the term "interference" might be excessively broad and was in any case unclear. As a matter of drafting, the suggestion was made that subparagraph *(b)* should refer to authorization with respect to the acquisition of a right in land, a suggestion that received wide support.

87. Subject to preserving the priority of interests in land arising from law governing interests in land, the Commission approved the text reflected in paragraph 83 and referred it to the drafting group. The Commission continued its discussion with respect to receivables arising from real estate transactions on the basis of a text to be added in article 4, which read as follows:

"[3.] This Convention does not:

"*(a)* Affect the question whether a property right in real estate is a right in a receivable related to that real estate;

"*(b)* Affect the priority of the right in real estate with respect to the right of an assignee of the receivable; or

"*(c)* Make lawful the acquisition of property rights in real estate not permitted under the law of the State where the real estate is situated."

The concern was expressed that subparagraph *(a)* departed from the policy approved by the Commission (see paras. 83-87) and was incomprehensible, since an interest in real estate could not be an interest in a related receivable. In response, it was stated that subparagraph *(a)* was a logical prerequisite for a conflict of priority as described in subparagraph *(b)* to arise. As to whether the holder of an interest in land could have an interest in land-related receivables and thus find itself in a conflict of priority with an assignee of those receivables, by way of an example, it was stated that in many jurisdictions the buyer of a building acquired an interest in rents from the lease of the building. As a matter of drafting, it was suggested that the word "confers", "contains" or "includes" should be substituted for the word "is" in subparagraph *(a)*. After discussion, the Commission approved the proposed text and referred it to the drafting group.

Further practices to be excluded (assignments of receivables from sales or leases of aircraft, space equipment and railway rolling stock)

88. The suggestion was made that, for the same reasons mentioned above (i.e. highly regulated, special markets that did not need to be covered by the convention), the assignment of receivables arising from leases of or secured by certain types of high-value mobile equipment should be excluded from the convention. In favour of that proposal, it was stated that an outright exclusion of such practices would avoid introducing rules that might not be appropriate (e.g. articles 11, 12 or 24). It was also observed that such an approach would result in avoiding creating conflicts with a draft convention currently being prepared by the International Institute for the Unification of Private Law (Unidroit) ("the draft Unidroit convention") and other organizations. In that connection, it was explained that further to the decision of the relevant bodies preparing those texts to limit the scope of their work to aircraft, space equipment and railway rolling stock (instead of to any "uniquely identifiable object"), an outright exclusion would be a limited one and would not risk excessively limiting the scope of the draft convention being prepared by UNCITRAL. Furthermore, it was explained that the draft Unidroit convention and the protocols thereto dealt in an industry-specific way with remedies upon default of the debtor and introduced a priority regime based on international, equipment-specific registries.

89. In order to implement that proposal, language along the following lines was suggested for inclusion in the list of excluded practices in draft article 4, paragraph 1: "The assignment of rights [to payment] arising from transactions in which mobile equipment is leased or is the primary real security for obligations incurred". That language would be supplemented by the following definition: "'Mobile equipment' means airframes, aircraft engines, helicopters, railway rolling stock and space property." In response to a

question, it was stated that, while there was not yet a definition of the term "space property", that term was used to reflect not only equipment in outer space (e.g. satellites), but also any associated rights (e.g. any telemetry, tracking and command facility; satellite command and control software, as well as access codes; and governmental authorizations for use of the assigned orbital location and associated radio frequencies). It was observed that, as a practical matter, the right of a secured creditor to take possession of a satellite could not be assured without the associated rights. As a result, exclusion of associated rights from a security interest in the relevant satellite itself would erode the commercial value of the satellite as collateral and thus undermine the ability of satellite manufacturers, launch service providers and satellite operators to obtain financing offering non-possessory security interests in their satellites. It was also stated that it was important for the draft convention to avoid any interference with the draft space protocol being prepared, since that draft protocol would be the first international text dealing in a comprehensive way with security interests in space equipment (although other international texts, such as the Unidroit Convention on International Leasing (1988), could be considered applicable to the lease of space equipment).

90. Strong support was expressed initially for the proposed exclusion. It was stated that those categories of mobile equipment were of a kind traditionally regarded as enjoying special status, which was recognized in the proposed new international regime provided in the draft Unidroit convention and protocols. In addition, it was pointed out that the highly specialized nature of financing techniques of such mobile equipment required that assignments of receivables taken as security be dealt with in equipment-specific instruments. Moreover, it was said that the proposed exclusion was needed in order to preserve the concept of indivisibility of the asset and the associated rights, a concept enshrined in articles 8, paragraph 1, and 10 of the draft Unidroit convention. That concept could be undermined if the debtor could assign receivables derived from such high-value mobile equipment under a system different from that applicable to that mobile equipment. In order to avoid such a result, the assignment of receivables arising from the following transactions, in particular, should be excluded from the scope of the convention: the financing of sales by sellers retaining title until full payment of the price; the financing of sales by third-party financiers obtaining a security right in the relevant mobile equipment; the financing of leases in which rental payments were fused with the mobile equipment; and the financing of companies owning mobile equipment by financiers obtaining a security right through loans primarily secured by the mobile equipment.

91. The view was expressed that a conflict between two texts that had not yet been finalized could not be addressed by means of an outright exclusion of certain practices. Such an approach would result in a legal vacuum until the more specialized text had been finalized and had entered into force. It was therefore suggested that the matter should be left to article 36 and to the draft Unidroit convention and protocols that could supersede the draft convention being prepared by UNICITRAL. In response, it was pointed out that the main issue was not one of conflicts between two international texts, but the need to avoid interference with a well-functioning and highly specialized practice. The issue of conflicts between international texts was a secondary one and related not only to a future international text but also to currently existing international conventions. In any case, an approach based on article 36 or on general treaty law would fail to provide the certainty necessary for credit to be made available at affordable rates. In that connection, it was explained that, in order to determine which text applied, parties would need to establish the location of the relevant parties in a State having made a declaration, as well as the effect of such a declaration.

92. The view was also expressed that an outright exclusion would be inappropriate, since the draft convention appropriately dealt with financing on the basis of receivables in a broad way and had a different objective from the draft Unidroit convention and protocols on international interests in mobile equipment. In addition, it was observed that the proposed language might be excessively broad in that it would inadvertently result in excluding an assignment of a receivable from the scope of the convention, even if the owner of the mobile equipment had paid the price secured by the security in the mobile equipment. It was considered that such a result would be inappropriate. It was, therefore, suggested that it would be better to leave the matter to parties to choose by opting into the draft convention being prepared by UNCITRAL or the draft Unidroit convention and protocols on international interests in mobile equipment. In response, it was stated that rights associated with security interests in high-value mobile equipment were, in some important practices, inextricably linked with that equipment and those transactions could not be subject to a different law on assignment of receivables. It was also stated that leaving the matter to parties would create uncertainty as to the application of both conventions.

93. The concern was expressed that the proposed language left open the question whether the assignment of receivables in transactions in which the types of equipment to be excluded were not the primary security would be covered by the draft UNCITRAL convention or by the draft Unidroit convention and protocols on international interests in mobile equipment. It was stated that, in such situations, a conflict could arise between the relevant texts and the problem should be addressed in the draft UNCITRAL convention. In response, it was stated that in situations in which the security in the types of mobile equipment proposed to be excluded would be only a secondary security the assignment of receivables would not be excluded from the scope of the convention.

94. The concern was also expressed that, unless the scope of the exclusion was carefully delimited, a general financier might be able to change the regime applicable to assignments by including in a receivables financing transaction an aircraft receivable. In addition, it was stated that an exclusion of assignments of receivables from railway rolling stock and space equipment was not possible at the current stage, especially as the scope of the relevant draft protocols was still unclear and in any case they had yet to be considered and approved in an intergovernmental context. It was also observed that chapter IX of the draft Unidroit convention (dealing with assignments of interna-

tional interests and "associated rights", including receivables) had not been finally adopted and that alternative provisions had been annexed to that chapter on the understanding that that matter would be re-examined by a small expert group before the diplomatic conference planned so as to conclude the draft convention. Furthermore, it was pointed out that an approach based on an exclusion would inadvertently result in an exclusion of a wide range of practices from the scope of the convention, whether or not a country was a party to the draft Unidroit convention or had legislation dealing with such matters. Moreover, even an approach based on article 36 would need to be deferred until the draft UNIDROIT convention and protocols had been finalized. Furthermore, including the assignment of aircraft and similar receivables within the ambit of the UNCITRAL convention would not risk disrupting any markets. In that connection, the attention of the Commission was drawn to the fact that recent studies had shown that the exclusions sought would create special regimes where none currently existed and might unduly affect significant practices, such as those involving the securitization of aircraft receivables.

95. In response, it was pointed out that, while the Commission might benefit from further consultations on the matter, it was clearly essential to resolve it in a reasonable way and to the satisfaction of the relevant industry so as to avoid raising opposition to the draft convention. It was also stated that an approach based on a limited exclusion of receivables that were inextricably linked with a high-value type of equipment and a priority rule referring to the State of registration might work well, at least for aircraft financing practices. In addition, a solution based on article 36, dealing with conflicts with other international texts, could not fully address the problems under discussion. In opposition to that view, it was observed that article 36 would be sufficient to settle the matter. In addition, the fact that receivables were inextricably linked with the equipment did not justify an exclusionary approach. The key issue was that under the draft Unidroit convention and protocols an equipment financier would always have priority over a receivables financier.

96. Noting the strong views expressed both in favour of and against an exclusion of assignments of receivables arising from transactions relating to high-value, highly mobile assets, the Commission decided to defer a decision on the matter until the draft Unidroit convention was closer to completion, which would allow Governments to undertake the necessary consultations with the relevant industries.

Placement of the list of receivables to be excluded

97. The Commission considered the question whether the receivables in the list were to be excluded from the draft convention in toto or whether the identified receivables should receive special treatment only in certain provisions. Some support was expressed for a selective approach, according to which each receivable would be excluded (or dealt with in a special way) only to the extent necessary to avoid problems in a particular area, while preserving the applicability of other provisions of the draft convention. That approach was said to be in line with the desire to obtain as broad as possible a scope of application of the convention and to facilitate, to the extent possible, assignment-related financing operations. Nevertheless, the widely prevailing view was that it was preferable to exclude the identified receivables completely from the sphere of application of the convention. That view was a result of the assessment according to which tailor-made exclusions would cause difficulties of interpretation and would complicate the application of the convention. It was stated, in particular, that variant B of article 5 would have to be expanded and tailored so as to adapt the convention to the needs of particular types of practices. Such adjustments, it was observed, might be necessary as regards, for example, priority issues, rights of set-off, representations and the meaning of the term "location". Furthermore, total exclusions would reduce the need for (or make superfluous) articles 4, paragraph 2, and 39, which by allowing States to exclude further practices might create complications in the application of the Convention.

98. After having suspended consideration of the matter to allow some time for consultation among delegates, the Commission continued its discussion, focusing on the question whether the list of practices to be excluded from the scope of the convention should be placed in article 5 and incorporated into variant B or articles 11 and 12. Some support was expressed in favour of placing the list in article 5, variant B. It was stated that excluding the practices mentioned in that list only from the scope of articles 11 and 12 would be in line with the overall policy, approved by the Commission, that the scope of the convention should be as broad as possible. It was also observed that such an approach would enhance predictability with regard to the application of the convention. At the same time, it was recognized that the definition of "trade receivable" in variant B of article 5 introduced an unacceptable degree of uncertainty and should therefore be deleted, while direct reference to specific practices should be made. The following language was proposed for inclusion in draft article 5:

> "Articles 11 and 12 [and section II of chapter V] do not apply to assignments of receivables [list of practices to be excluded]. With respect to the assignment of such receivables, the matters addressed by these articles are to be settled in conformity with the law applicable by virtue of the rules of private international law."

99. The prevailing view, however, was that the list of practices to be excluded should be placed in article 4. It was stated that, if those practices were to be excluded only from the scope of articles 11 and 12, the convention might still apply, depending on whether the law applicable outside the convention would give effect to anti-assignment clauses. In such a case, it was stated, the Commission would need to adjust a number of provisions of the draft convention (e.g. the rules on "location", representations, debtor's rights of set-off and priority issues) to the particular needs of the practices proposed to be excluded. In the discussion, the suggestion was made that in subparagraph *(d)* of the proposed list of exclusions (see para. 70), language might need to be added to ensure that inter-bank payment systems and securities settlement systems were excluded "whether or not they are governed by netting agreements". It was also suggested that subparagraph *(f)* should indicate clearly that it included repurchase agreements.

100. After discussion, the Commission decided that the list of practices to be excluded should be appropriately incorporated into article 4 and referred the matter to the drafting group (as to whether articles 5 and 6, paragraph 1, should be retained, see paras. 104-108 and 151).

Specific list of receivables to be included

101. The Commission subsequently turned to a discussion of the advisability of including in the draft convention a list of receivables, the assignment of which would be covered by the convention. In support of such a list, it was stated that it would provide immediate and express assurance and clarification to the interested industries benefiting most from the convention that those practices were covered by it. Those practices included, in particular, the supply of goods, works and services, the sale or licence of intellectual property, credit card transactions, as well as the lending of money and payments on guarantees or surety obligations. Such an approach was said to be a practical one that would foster the acceptability of the convention and facilitate its interpretation. However, there was considerable opposition to including such a list of practices. The opinion was expressed that such a list would unnecessarily limit the scope of application of the convention and thus run counter to the generally approved policy for the convention to have as broad a field of application as possible. In addition, a juxtaposition of a list of exclusions and a list of inclusions might cause difficulties of interpretation with respect to practices for which it was not entirely clear where they belonged or practices that might develop in the future. Moreover, it was observed that the list would be superfluous, since it would be merely restating, by using the most typical examples, the transactions that were covered by the convention by virtue of article 2. Furthermore, it was stated that if the list of practices to be excluded were to be added in article 4, paragraph 1, article 5 would not be necessary and, as a result, a distinction between financial and trade receivables would be superfluous and could inadvertently result in excluding trade receivables.

102. The Commission adopted the view that the convention should not set out a list of transactions to be included in the scope of the convention, but that a clarification to that effect should be made in a commentary or in the preamble to the convention.

103. After having suspended consideration of the matter to allow time for consultation among delegates, the Commission resumed its deliberations on the list of practices proposed to be included in the scope of the convention. While the view was expressed that such a list might usefully further clarify the scope of application of the convention, it was widely felt that such a list was not necessary. It was stated that article 2, which defined "assignment" and "receivable" in sufficiently broad terms, was sufficient to cover all the practices included in the list. It was also observed that a list of practices to be included might inadvertently limit the scope of application of the convention even further than intended. In the discussion, it was suggested that the list of practices to be included might be usefully mentioned in a commentary or in the preamble to the convention. After discussion, the Commission decided that no reference should be made to such a specific list of practices for the purposes of defining the scope of application of the convention.

Practices to be excluded from the scope of articles 11 and 12

104. The Commission next considered the related question whether certain practices should be excluded from the scope of articles 11 and 12 (see para. 38). It was proposed that variant B of article 5 be retained and supplemented by a definition of "trade receivable", which would read as follows:

"'Trade receivable' means a receivable:

"(i) Arising under an original contract for the sale or lease of goods or the provision of services other than financial services;

"(ii) Arising under an original contract from the sale, lease or licence of industrial or other intellectual property or other information;

"(iii) Representing the payment obligation for a credit card transaction."

105. In support of that proposal, it was stated that there were other practices beyond those to be excluded in article 4 for which articles 11 and 12 would not be suitable. The example was given of loan syndication, as well as factoring and invoice discounting agreements, in which anti-assignment clauses were normally given effect. It was observed that, if those practices were excluded from the scope of articles 11 and 12, by virtue of the second part of article 8, paragraph 2, the effectiveness and the legal consequences of anti-assignment clauses would be left to law applicable outside the convention. As a result, if the applicable law were to give effect to an anti-assignment clause, an assignment would not be effective and the convention would not come into play. If, on the other hand, the applicable law gave no effect to the anti-assignment clause, the assignment would be effective and the convention would apply. For that reason, the preservation of the application of the debtor protection provisions, contained in section II of chapter IV (through a deletion of their exclusion in article 5, variant B), was considered most important. In response to a question, it was clarified that those provisions of the convention could apply to practices to be excluded from the scope of articles 11 and 12 without risking disrupting those practices.

106. At the same time, the proposal raised a number of concerns. One concern was that the distinction between trade and financial receivables would create uncertainty. It was stated that the reference to financial services in the above-mentioned definition (see para. 104) left open whether it included only services by banks or also by other finance service providers. A suggestion to refer only to banks was objected to on the ground that such an approach would fail to address practices involving, for example, insurance companies. Another concern was that the proposed exclusion might inadvertently result in excluding the assignment of a trade receivable merely because, subsequent

to the original assignment by a trader to a bank, it was assigned by that bank to another bank. In response, it was stated that, once a receivable was a trade receivable, it would always be a trade receivable (and, as a result, its subsequent assignment by a bank would not be excluded by the proposed text). Yet another concern was that the distinction could lead to inconsistent results (e.g. an assignment of trade receivables backed by a letter of credit would not be covered, while an assignment of receivables without any credit guarantee would fall within the ambit of the convention).

107. In order to address those concerns, the suggestion was made that the scope of articles 11 and 12 could be limited by way of a specific list of exclusions without any reference to a definition of "trade receivable". The above-mentioned proposal (see para. 104) was amended to read: "Draft articles 11 and 12 apply only to assignments of receivables [list (i)-(iii) from para. 6]." A query was raised as to the meaning of the term "financial services" and in particular as to whether the term would include services offered by an institution other than a financial institution. The Commission decided to postpone consideration of the proposal until it became available in versions in all six official languages of the United Nations (for the continuation of the discussion, see paras. 145-151).

108. During the discussion, it was suggested that receivables arising from bank deposits should be excluded from the scope of articles 11 and 12, but not from the scope of the convention as a whole. While some support was expressed for that suggestion, it was widely felt that it could not be adopted, since, in particular, the definition of the term "location" would not be appropriate for banks. It was stated that, if the anti-assignment clause were not given effect by the law applicable, the assignment could be effective, the convention could apply and, as a result, priority issues with respect to a conflict with a branch of a bank would be referred to the law of the State in which the head office of that bank was located, a result that was said to be inappropriate. For that reason, the Commission decided to retain the assignment of receivables arising under deposit accounts in the list of practices to be excluded from the scope of the convention as a whole (see para. 70).

Further exclusions by States through declarations (articles, 4, paragraph 2, and 39)

109. It was noted that articles 4, paragraph 2, and 39 were intended to enhance the acceptability of the draft convention to States by allowing them to exclude further practices from the scope of the convention as a whole. It was widely felt, however, that those provisions should be deleted. It was stated that an approach along the lines of articles 4, paragraph 2, and 39 would result in uncertainty, since the scope of the convention might become difficult to determine and, in any case, might end up being different from State to State. Pending final determination of the scope of articles 11 and 12, the Commission decided to defer a final decision on articles 4, paragraph 2, and 39 to a later stage (for the continuation of the discussion, see para. 152; see also para. 32).

CHAPTER II. GENERAL PROVISIONS

Article 6. Definitions and rules of interpretation

110. The text of draft article 6 as considered by the Commission was as follows:

"For the purposes of this Convention:

"*(a)* 'Original contract' means the contract between the assignor and the debtor from which the assigned receivable arises;

"*(b)* 'Existing receivable' means a receivable that arises upon or before the conclusion of the contract of assignment; 'future receivable' means a receivable that arises after the conclusion of the contract of assignment;

"[*(c)* 'Receivables financing' means any transaction in which value, credit or related services are provided for value in the form of receivables. Receivables financing includes factoring, forfeiting, securitization, project financing and refinancing;]

"*(d)* 'Writing' means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

"*(e)* 'Notification of the assignment' means a communication in writing which reasonably identifies the assigned receivables and the assignee;

"*(f)* 'Insolvency administrator' means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

"*(g)* 'Insolvency proceeding' means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

"*(h)* 'Priority' means the right of a party in preference to another party;

"*(i)* A person is located in the State in which it has its place of business. If the assignor or the assignee has more than one place of business, the place of business is that place where its central administration is exercised. If the debtor has more than one place of business, the place of business is that which has the closest relationship to the original contract. If a person does not have a place of business, reference is to be made to the habitual residence of that person;

"*(j)* 'Law' means the law in force in a State other than its rules of private international law;

"*(k)* 'Proceeds' means whatever is received in respect of an assigned receivable, whether in total or partial payment or other satisfaction of the receivable. The term includes whatever is received in respect of proceeds. The term does not include returned goods;

"[*(l)* 'Trade receivable' means a receivable arising under an original contract for the sale or lease of goods or the provision of services other than financial services.]"

111. The Commission decided to postpone the discussion of subparagraphs *(c)*, *(h)* and *(j)* until it had had a chance to consider the title and the preamble, the priority rules and the federal state issues in the final provisions (for the discussion of subparagraph l, see paras. 104-107 and 145-151; with regard to subparagraph *(c)*, see para. 184).

112. Discussion focused on subparagraph *(i)* (definition of "location"). It was generally agreed that the subparagraph was one of the most important provisions of the convention, since it was relevant for the determination of the scope of application and the priority rules of the convention. Differing views were expressed.

113. One view was that subparagraph *(i)* was in principle an appropriate rule that would work well in the majority of cases. According to that view, the subparagraph would not work as well for those industries which operated with branch offices (in particular, the banking and insurance industry). In support of that view, it was observed that it would not be appropriate to refer priority issues with respect to transactions of a company made through a branch office in one country to the law of another country where that company happened to have its central administration. In addition, it was stated that failing to address that matter might result in reducing the acceptability of the convention. In order to address those special cases in which a place-of-central-administration rule might not work, a number of suggestions were made. One suggestion was to refer to the location of the branch in whose books the receivables appeared immediately before the assignment (see A/CN.9/466, paras. 98 and 99). That suggestion was objected to on the grounds that such an approach would not enhance certainty and transparency, since third parties would not know in whose books the receivables appeared and, in any case, books (in a paper or electronic form) could be kept in a jurisdiction that was irrelevant to the assignment contract. Another suggestion was that the exception could be formulated along the lines of article 1, paragraph 3, of the UNCITRAL Model Law on International Credit Transfers ("branches and separate offices of a bank in different States are separate banks"). That suggestion was objected to on the grounds that such an approach would not resolve the problems arising in the case of a conflict between an assignment of the same receivables by two different branch offices of the same bank, while it would be very difficult to reach agreement on a uniform definition of the term "bank". Those objections were cited against another suggestion made to refer to the branch of a banking or insurance company with which the assignment had the closest relationship.

114. Another view was that the location of branch offices needed to be addressed in a consistent manner for all industries that operated throughout the world through branch offices rather than through independent subsidiaries. Accordingly, instead of introducing a narrow exception for banks and insurance companies, a different location rule should be introduced that would deal with the location of the assignor, the assignee and the debtor on the basis of the place of business with the closest relationship with the relevant contract. Various suggestions were made, including a suggestion that subparagraph *(i)* should read:

"If the assignor or the debtor has more than one place of business, the relevant place of business is the one which has the closest relationship to the original contract. If the application of this rule designates more than one place of business of the assignor or the assignee [, located in different States], the relevant place of business is that where its central administration is exercised."

Support was expressed for that suggestion, in particular in view of the fact that it would solve the problem of determining the location of the assignor in the case of multiple assignments by branch offices of the same entity.

115. However, the suggestion was objected to on the grounds that reference to a closest-connection test would significantly reduce the certainty aimed to be achieved through the convention and would have a negative impact on the cost and the availability of credit. It was pointed out that, in the case of future receivables, the place with the closest connection to the original contract could not be determined at the time of assignment and, in the case of bulk assignments, there might be various places with closest connection to the original contracts as there were several original contracts. It was also observed that, in many practices, the considerations applicable to the determination of the location of the assignor (borrower) and the assignee would normally differ from the relevant considerations in the determination of the location of the debtor. It was also stated that the suggestion failed to take into account the need to link the location of the assignor with the assignment contract, which in that context was more important than the original contract. In view of the wide divergence of views, the suggestion was made that a place-of-business approach should be followed to define the location for the application of the convention and a central-administration rule should be adopted for the purposes of the priority provisions of the convention. That suggestion was objected to as it would fail to enhance certainty with regard to the application of the convention and would lead to inconsistent results, without resolving the problems arising with regard to branch offices.

116. During the discussion, a number of additional suggestions were made with regard to other issues. One suggestion was that, in cases where the location of the debtor could not be determined, reference should be made to the place of the central administration or the place from which payment emanated. There was insufficient support in the Commission for that suggestion. Another suggestion was that subparagraph *(i)* should be revised to deal with multiple places of business only if they were located in different countries. While it was noted that that matter was already implicit in subparagraph *(i)*, it was agreed that it could usefully be clarified further. Another suggestion was that, for the sake of clarity, reference should be made to the "ordinary" rather than to the "habitual" residence of the debtor. There was no support for that suggestion.

117. Subject to the reference to more than one place of business in different countries, the Commission approved the substance of subparagraph *(i)* and referred it to the drafting group.

118. With regard to subparagraph *(k)*, concern was expressed that, by excluding from the definition of "proceeds" goods returned by the buyer to the seller (e.g. because they were defective, because the sales contract was cancelled or because the buyer did not wish to retain them after the expiry of a trial period), it could inadvertently undermine certain practices. It was explained that in such practices the assignee, having paid the assignor/seller, acquired a property right in any goods returned by the buyer to the assignor/seller. The suggestion was made that the last sentence of subparagraph *(k)* should be deleted, since in any event, under subparagraph *(k)*, "proceeds" would not encompass "returned goods". The Commission noted that the issue of "returned goods" arose in the context of articles 16 and 24 and deferred consideration of the matter until it had discussed those articles (see para. 167).

Article 7. Party autonomy

119. The text of draft article 7 as considered by the Commission was as follows:

> "The assignor, the assignee and the debtor may derogate from or vary by agreement provisions of this Convention relating to their respective rights and obligations. Such an agreement does not affect the rights of any person who is not a party to the agreement."

120. The Commission noted that the draft article was modelled on article 6 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980; "the United Nations Sales Convention"). It was also noted, however, that, unlike article 6 of the United Nations Sales Convention, article 7 of the draft UNCITRAL convention did not allow parties to vary or derogate from provisions that affected the legal position of third parties or to exclude the Convention as a whole. The reason for that different approach was said to be that, while the United Nations Sales Convention dealt with the mutual rights and obligations of the seller and the buyer, the draft UNCITRAL convention dealt mainly with the proprietary effects of assignment and could, therefore, have an impact on the legal position of the debtor and other third parties. The Commission proceeded to consider article 7 on the understanding that agreements between the assignee and the debtor would not be covered by the convention (see A/CN.9/470, para. 150). A suggestion to revise article 7 so as to allow the parties to exclude the application of the convention altogether did not receive support. In the discussion, some doubt was expressed as to whether a choice by the parties of the law of a non-contracting State would always result in excluding the application of the convention.

121. The Commission decided that language should be added to the article to clarify that it did not empower the parties to derogate from the provisions of article 21, which limited the scope of waivers of defences that might be agreed by the debtor and the assignor. It was stated that a similar reference might need to be made to other provisions of the draft convention so as to ensure that consumer-protection legislation would not be interfered with (as regards consumer protection, see paras. 170-172). Deferring a final decision on the matter to a later stage and subject to inclusion of a reference to article 21 in article 7, the Commission approved the substance of article 7 and referred it to the drafting group.

Article 8. Principles of interpretation

122. The text of draft article 8 as considered by the Commission was as follows:

> "1. In the interpretation of this Convention, regard is to be had to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.
>
> "2. Questions concerning matters governed by this Convention which are not expressly settled in it are to be settled in conformity with the general principles on which it is based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law."

123. It was proposed that paragraph 1 expressly mention the preamble to the convention among the elements that should be taken into account in the interpretation of the convention. The formulation "[regard is to be had] to its object and purpose as set forth in the preamble" was proposed (see article 4, paragraph 1, of the Unidroit Convention on International Factoring, Ottawa, 1988; "the Ottawa Convention"). Subject to that change, the Commission approved the substance of paragraph 1 and referred it to the drafting group.

124. With regard to paragraph 2, the suggestion was made that it might need to be revised to ensure that the law applicable by virtue of the private international law rules of the convention was to be applied first and then, only as necessary, the law applicable by virtue of the rules of private international law of the forum. It was also generally considered that the possibility of applying general principles or the law applicable by virtue of the rules of private international law extended only to the substantive law part of the convention and not to chapter V. Noting that the interplay between article 7 and chapter V would depend on the scope and purpose of chapter V, a matter that would need to be considered by the Commission, the Commission postponed a decision on the matter until it had finalized chapter V.

CHAPTER III. EFFECTS OF ASSIGNMENT

Form of assignment

125. The Commission noted that the draft convention did not settle the issue of the form of assignment. It was noted that failure to address the matter could create difficulties or uncertainty as to the validity of an assignment. An assignee under the convention would need to establish the formal validity of an assignment under law outside the convention (without having a clear indication as to which law might apply), the material validity of an assignment partly under

the convention and partly under other law outside the convention and priority under the law of the assignor's location. Such a result could have a negative impact on the cost of credit. It was also noted that failing to address the issue of form in the convention would raise uncertainty as to whether the convention intended the matter to be referred to law applicable outside the convention or to be settled in favour of the principle that no form was required (favor cessionis), a result that was said to be inconsistent with the policy underlying the decision of the Working Group not to address the issue of form. Furthermore, it was noted that identifying the law applicable to the form of assignment might be difficult. In that connection, the example was given of article 9 of the Convention on the Law Applicable to Contractual Obligations (Rome, 1980), where it was not clear whether it provided a solution also for the form of assignment as a transfer (at least for those jurisdictions where a clear distinction was drawn between the contract to assign and the assignment itself).

126. Some support was expressed for the position that no provision on form requirement should be included in the draft convention. It was stated that a number of issues regarding the contract of assignment had been left out of the draft convention and that, in view of the difficulties in finding an agreed solution on form requirements, it was preferable not to deal with the issue at all. It was also observed that, to the extent that it was not clear that the form of assignment was outside the scope of the convention, the matter should be clarified in a commentary.

127. The prevailing view, however, was that, in order to avoid difficulties (noted above in para. 125), it was advisable to resolve the issue of form (of the contract of the assignment and the assignment itself). It was considered that it would not be possible to reach consensus on a uniform form requirement or on a uniform private international law rule that would determine the law governing form requirements. However, there was broad support for providing a "safe-harbour" type of rule that would give the parties the certainty that, if they complied with the form requirement of the law of the assignor's location, the assignment would not be invalidated for failing to meet the form requirements of the law that would otherwise apply. Such a safe-harbour rule would refer form to a single and easily identifiable jurisdiction without necessarily restricting the parties to the form requirements of one law, but would leave them the choice of following the form requirements of either the law that (according to the rules of private international law) governed form or of the law specified in the convention.

128. A suggestion was made to define what was meant by "form". According to one view, the concept should be understood broadly and should cover not only the narrow issue of whether the assignment should be recorded in a written or electronic form, but also issues such as whether the assignment should be registered and whether and how the debtor should be notified of the assignment. The prevailing view, however, was that the draft convention should not attempt to define the requirements that fell within the notion of form and that, in any case, for a safe-harbour rule it was not necessary to define in a uniform manner the notion of form.

129. The Commission considered several proposals for the formulation of a safe-harbour rule. One proposal read as follows: "An assignment shall be considered formally valid if it meets, at least, the formal requirements of the law of the State in which the assignor is located" (see A/CN.9/470, para. 82). That proposal did not attract sufficient support, since it could be misunderstood as providing a uniform rule on the form requirement. Another proposal read: "Without prejudice to the formal validity of the assignment on the grounds of any other applicable law, an assignment is [effective] [formally valid] if it meets the form requirement of the law of the State in which the assignor is located." There was no support for that proposal either, since the requirements referred to might be applicable "subject to" (i.e. cumulatively with) the form requirements of the law applicable by virtue of the rules of private international law. Having reiterated its intention to provide a safe-harbour rule (which should pursue the principle in favorem negotii to the extent possible), the Commission decided that a safe-harbour rule should be included in the draft convention, referring form either to the law applicable by virtue of the rules of private international law or to the law of the assignor's location. The precise formulation of that rule was referred to the drafting group.

Article 9. Effectiveness of bulk assignments, assignments of future receivables and partial assignments

130. The text of draft article 9 as considered by the Commission was as follows:

"1. An assignment of existing or future, one or more, receivables and parts of, or undivided interests in, receivables is effective, whether the receivables are described:

"*(a)* Individually as receivables to which the assignment relates; or

"*(b)* In any other manner, provided that they can, at the time of the assignment, or, in the case of future receivables, at the time of the conclusion of the original contract, be identified as receivables to which the assignment relates.

"2. Unless otherwise agreed, an assignment of one or more future receivables is effective at the time of the conclusion of the original contract without a new act of transfer being required to assign each receivable."

Paragraph 1

131. It was noted that article 9 was not intended to override statutory limitations other than those referred to in paragraph 1. The Commission agreed that that understanding needed to be reflected explicitly in article 9. The following language was proposed: "This Convention does not affect any statutory limitations on assignment other than those referred to in article 9" (see A/CN.9/470, para. 85). It was stated that the proposed language should be expanded to cover statutory limitations giving effect to contractual limitations on assignment of receivables and of rights securing receivables. The following text was proposed:

"This article is subject to any applicable statute, other than a statute of the type described in paragraph 4 [*of the text proposed in A/CN.9/472/Add.3, p. 12*], that prohibits or limits the assignment of a receivable for a reason other than the existence of a contractual prohibition or limitation of such assignment."

132. It was also noted that article 9 dealt with the effectiveness of an assignment as between the assignor and the assignee and as against the debtor, while the effectiveness as against third parties other than the debtor (i.e. priority) was governed by the law applicable under article 24. It was agreed that article 9 should be appropriately amended to reflect that distinction between effectiveness and priority, in particular for the sake of clarity in the application of the convention in those jurisdictions in which such a distinction was not known. It was also agreed that article 9 should make it clear that it was not intended to supplant the rules of priority of the law applicable or to allow prohibitions on bulk assignments or on assignments of future receivables to come through the back door through the use of a priority rule applicable under articles 24-27. In order to reflect that agreement, it was proposed that the wording of paragraph 1 make it clear that it applied to effectiveness as between the assignor and the assignee and as against the debtor. Similarly, the proposal was made that a new paragraph be inserted in article 9 to read: "A transfer of a receivable is effective, as between the assignor and the assignee, at the time of transfer" (see A/CN.9/472/Add.3, p. 12). It was agreed that the wording should make it clear that the assignment was effective as against the debtor as well.

133. In addition, it was proposed (see A/CN.9/470, para. 88) that a new paragraph be added to article 9 to read:

"The effectiveness of an assignment of receivables referred to in paragraphs 1 and 2 of this article as against third parties other than the debtor is governed by the law applicable under article 24. However, such an assignment is not ineffective as against such third parties on the sole ground that the law of the assignor's location does not recognize its effectiveness."

While there was general agreement on the principle embodied in the proposed text, it was stated that the first sentence might not be necessary since it repeated the rule reflected in article 24, while the second sentence might go too far in that it might affect rules of insolvency law as to the effectiveness of an assignment of receivables arising after the commencement of an insolvency proceeding with respect to the assets and the affairs of the assignor. In order to address that matter as well, the following text was proposed:

"A transfer of a receivable is not ineffective against, and may not be subordinated to, a person described in subparagraph *(a)* of article 24, solely because law other than this Convention does not *generally* recognize an assignment described in paragraph 1 or 2."

It was also proposed (see A/CN.9/472/Add.3, p. 12) that one more additional paragraph be added to article 9 to read: "*Except as otherwise provided in this article*, whether a transfer of a receivable affects the rights of a person described in subparagraph *(a)* of article 24 is determined in accordance with section III of chapter IV."

134. Subject to the changes mentioned in the preceding paragraphs, the exact formulation of which was referred to the drafting group, the Commission approved the substance of paragraph 1.

Paragraph 2

135. It was noted that, as a result of the substitution of the words "at the time of the conclusion of the original contract" for the word "arises", made by the Working Group at its thirty-first session, paragraph 2 appeared to address the issue of the time of assignment in a way that was inconsistent with article 10. It was noted that paragraph 2 was not intended to deal with that matter but only with the validity of master agreements covering a multiplicity of present and future receivables. It was therefore agreed that the words "at the time of the conclusion of the original contract" should be deleted. Subject to that change, the Commission approved the substance of paragraph 2 and referred it to the drafting group.

Article 10. Time of assignment

136. The text of draft article 10 as considered by the Commission was as follows:

"An existing receivable is transferred, and a future receivable is deemed to be transferred, at the time of the conclusion of the contract of assignment, unless the assignor and the assignee have specified a later time."

137. The concern was expressed that articles 9 and 10 could be read as overriding the domestic insolvency law of the assignor's jurisdiction regarding priorities with respect to receivables arising after the commencement of the insolvency proceeding or earned after the commencement of the insolvency proceeding by the use of unencumbered assets of the insolvency estate. Such an interpretation could arise from the fact that article 24 explicitly stated that it did not cover "matters which are settled elsewhere in this Convention" and article 10 contained no explicit wording as to whether it was intended to affect the rights of third parties.

138. There was general agreement that the question of the extent to which an assigned receivable arising or being earned after the commencement of the insolvency proceeding should be subject to the applicable insolvency law (on this matter, see also para. 133). Subject to that change, the exact formulation of which was referred to the drafting group, the Commission approved the substance of article 10.

Article 11. Contractual limitations on assignment

139. The text of draft article 11 as discussed by the Commission was as follows:

"1. An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent assignee limiting in any way the assignor's right to assign its receivables.

"2. Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement. A person who is not party to such an agreement is not liable on the sole ground that it had knowledge of the agreement."

General policy

140. The view was expressed that article 11 ran counter to the principle of party autonomy and should therefore be deleted or made subject to a reservation by States. There was not sufficient support for that view in the Commission. It was widely felt that the underlying policy of article 11 should be approved. Article 11 was an essential provision agreed upon by the Working Group after a long debate. In addition, it was observed that it was more beneficial for everyone to facilitate the assignment of receivables and to reduce transaction costs rather than to ensure that the debtor would not have to pay a person other than the original creditor. It was also stated that the goal of the draft convention, which was to increase the availability of credit at more affordable rates, could not be achieved without some adjustments in national legislation that would be aimed at accommodating modern commercial practices. After discussion, the Commission approved the overall policy underlying article 11 and decided that it should be retained (subject to the changes described in paras. 144 and 151).

Avoidance of contract on the sole ground of breach of anti-assignment agreement

141. Differing views were expressed as to whether the debtor should be able to declare the original contract avoided on the sole ground of breach of the agreement limiting the assignment of receivables in any way ("anti-assignment agreement"), if the debtor had such a right under law applicable outside the convention. One view was that the convention should not interfere with the debtor's right to avoid the original contract for breach of any anti-assignment agreement. It was stated that such an approach was not necessary since avoidance of the original contract could not affect any rights acquired under that contract. In addition, it was observed that such an approach would inadvertently result in overprotecting, without any reason, not only the assignee but also the assignor, despite the fact that the assignor would have committed a breach of contract.

142. The prevailing view, however, was that, unless the debtor was precluded from declaring the original contract avoided on the sole ground that the assignor had violated an anti-assignment agreement, articles 11 and 20, paragraph 3, would be deprived of any meaning (those provisions validated an assignment made in breach of an anti-assignment agreement and precluded the debtor from raising against the assignee any right the debtor might have as against the assignor as a result of the breach of the anti-assignment agreement). In addition it was stated that if after notification the debtor could not do the minimum, namely modify the original contract without the actual or constructive consent of the assignee, the debtor should not be entitled to do the maximum, namely to avoid the original contract. Moreover, it was pointed out that, if the original contract were to be avoided, the assignee could find itself in a position of having advanced financing to the assignor while being unable to rely on payment by the debtor.

143. For that reason, the suggestions to exclude the debtor's avoidance rights with respect to all contracts except long-term contracts and future receivables or to leave paragraph 2 unchanged and to include an explanation of the matter in a commentary were not supported. Another suggestion to include in the text of article 11 or in a commentary to the convention the clarification that the avoidance of the original contract did not affect the debtor's acquired rights did not attract sufficient support either. It was widely felt that if the debtor avoided the original contract, the assignee's rights were bound to be affected. Another suggestion to limit the debtor's right to avoid the original contract for breach of an anti-assignment agreement to cases in which a material breach was involved also did not attract sufficient support. It was widely felt that such an approach would introduce uncertainty, since it might not always be clear what types of conduct constituted a material breach of contract. In any case, such an approach would not be sufficient to protect the assignee, since any type of breach could be defined in the original contract as being a material breach. It was generally agreed that any uncertainty with regard to that matter could inadvertently result in failing to cover the risk of contract avoidance and thus in defeating a transaction or in raising the cost of credit for the assignor and the debtor. Yet another suggestion to preclude the debtor from avoiding the original contract, unless the assignment "materially impaired the debtor's ability to obtain performance", was met with interest. It was proposed that language be included in paragraph 2 to implement that suggestion and to preclude the parties from defining the breach of an anti-assignment clause as a material impairment of the debtor's ability to obtain performance. An objection was raised with regard to the inclusion of the proposed text in article 11 on the ground that it might inadvertently be interpreted as implying that the convention affected non-monetary performance rights. It was agreed, however, that a commentary to the convention could clarify that an assignment under the convention could not affect any non-monetary performance rights of the debtor.

144. After discussion, the Commission agreed that paragraph 2 should be revised to preclude the debtor from avoiding the original contract on the sole ground that the assignor had made an assignment in violation of an anti-assignment agreement. It was also agreed that the same rule should apply with respect to anti-assignment agreements in assignments or subsequent assignments. Furthermore, it was agreed that the debtor's right to compensation should not be limited in any way. Subject to that change, the Commission approved the substance of paragraph 2 and referred it to the drafting group.

Scope of articles 11 and 12

145. Recalling its earlier discussion on the scope of articles 11 and 12 (see paras. 104-107), the Commission con-

sidered a suggestion to limit the scope of application of article 11 to those practices for which articles 11 and 12, paragraphs 2 and 3, would be suitable. Language along the following lines was proposed for inclusion in a new paragraph 3 of article 11 and after paragraph 3 of article 12:

"This article applies only to receivables:

"*(a)* Arising under an original contract for the sale or lease of goods or the provision of services other than financial services;

"*(b)* Arising under an original contract for the sale, lease or licence of industrial or other intellectual property or other information; or

"*(c)* Representing the payment obligation for a credit card transaction."

146. It was stated that under the proposed approach the effect of an anti-assignment agreement with respect to practices not mentioned in the proposed list would be left to law outside the convention. If that law gave effect to anti-assignment agreements, the assignment would be ineffective and thus the convention would not apply. It was observed that such an approach would make a restrictive definition of "receivable" in article 2 unnecessary and it would also make article 5 superfluous.

147. While broad support was voiced in the Commission for the proposed limitation of the scope of articles 11 and 12, paragraphs 2 and 3 (and thus of the convention), concern was expressed that the proposed approach would overly limit the scope of the convention.

148. A question was also raised as to whether "goods" would include immovable property. In response, it was observed that "goods" was meant to denote only movable tangible property and would therefore not include land or buildings or goods permanently fixed into land or buildings. The suggestion was therefore made that in subparagraph *(a)* of the proposed text reference should also be made to receivables arising from the sale or lease of real estate. In support, it was stated that there was no reason to exclude from the scope of application of articles 11 and 12, paragraphs 2 and 3, assignments of receivables arising from real estate transactions. Such an exclusion was not necessary, in particular, after the addition of a provision in article 4 aimed at protecting interests held under the law of the country in which the real estate was located. A note of caution was struck, however, that such an approach might have a negative effect on the acceptability of the convention. In response, it was pointed out that the inclusion of the proposed addition would highlight the matter and facilitate consultation with the relevant industry. After discussion, the Commission approved the proposed addition.

149. Recalling its earlier decision to exclude financial netting agreements from the scope of the draft convention as a whole (see paras. 46-48), the Commission resumed its discussion on whether industrial netting agreements should be excluded from the scope of articles 11 and 12. The suggestion was made that the assignment of receivables arising from non-financial contracts governed by netting agreements should be excluded from the scope of the two articles. Objections were raised with regard to that suggestion on the ground that such an approach could inadvertently result in excluding the assignment of a wide range of receivables merely because the assignor and the debtor had included in their original contract a clause about payment by way of set-off. It was considered that the convention should not sanction such set-off agreements, which were routinely made and were aimed at defrauding assignees. It was stated that such an approach was not necessary, since receivables from industrial netting arrangements between chambers of commerce were normally not assigned. The suggestion was made that the matter could be addressed in article 20, dealing with rights of set-off. However, it was stated that industrial netting arrangements could be preserved, without excluding from the convention important trade practices, if the application of articles 11 and 12 were to be limited to the net debt owed after the settlement of mutual debts governed by a netting agreement contained in an original contract. It was also observed that the net balance owed after the settlement of mutual obligations to the parties to a netting agreement was a new receivable arising by novation. It was pointed out that a netting agreement, under the definition adopted by the Commission, should be understood as an arrangement among, at least, three or more parties (see paras. 73 and 74). Some doubt was expressed as to whether the definition of "netting agreement" made it sufficiently clear that at least three parties were required. However, it was widely felt that the definition was sufficiently clear and should not be changed, in particular, since in some jurisdictions netting arrangements could involve only two parties. The following text was proposed for addition either in articles 11 and 12 or in article 4:

"In the case of receivables arising under contracts governed by netting agreements, articles 11 and 12, paragraphs 2 and 3, apply only to the assignment of a receivable owed to the assignor upon net settlement of payments due pursuant to the netting agreement."

There was broad support for that suggestion.

150. The suggestion was also made that articles 11 and 12, paragraphs 2 and 3, should apply "to other similar practices". That suggestion encountered an objection on the ground that it might create uncertainty as to the scope of application of the convention. Another suggestion was that in subparagraph *(a)* of the proposed text reference should be made also to construction, since in some jurisdictions the term "services" was not sufficient to include construction. Broad support was expressed in the Commission for that suggestion. Yet another suggestion was that a commentary to the convention should explain that "financial services" included factoring and invoice discounting, even if those practices involved services that were not financial in a strict sense, such as insurance, book-keeping or debt-collection services. That suggestion also attracted sufficient support.

151. After discussion, the Commission approved the substance of the proposed addition to articles 11 and 12, as revised to refer to real estate receivables, industrial netting and construction (see paras. 148-150) and referred it to the drafting group. In line with that decision, the Commission decided that articles 5 and 6, subparagraph *(l)*, should be deleted.

Further practices to be excluded

152. After completing its discussion on the scope of articles 11 and 12, the Commission reverted to the question whether States should be allowed to exclude further practices from the scope of the convention (see articles 4, para. 2, and 39, as well as paras. 32 and 109). There was strong support for the deletion of articles 4, paragraph 2, and 39. It was widely felt that, once the scope of the convention had been defined in a detailed and restrictive way, all scope-related concerns would have been addressed and therefore there was no need to allow further exclusions. It was also widely felt that allowing further exclusions on a State-by-State basis would run counter to the goal of the convention to achieve uniformity and certainty. However, the concern was expressed that deletion of articles 4, paragraph 2, and 39 might reduce the acceptability of the convention. It was also stated that it would be premature to delete article 4, paragraph 2, before the Commission had made a final decision with respect to all scope-related issues and the final provisions in their entirety. For that reason, the Commission deferred final decision on draft articles 4, paragraph 2, and 39 until it had finalized the draft convention as a whole.

Article 12. Transfer of security rights

153. The text of draft article 12 as considered by the Commission was as follows:

"1. A personal or property right securing payment of the assigned receivable is transferred to the assignee without a new act of transfer, unless, under the law governing the right, it is transferable only with a new act of transfer. If such a right, under the law governing it, is transferable only with a new act of transfer, the assignor is obliged to transfer this right and any proceeds to the assignee.

"2. A right securing payment of the assigned receivable is transferred under paragraph 1 of this article notwithstanding an agreement between the assignor and the debtor or other person granting the right, limiting in any way the assignor's right to assign the receivable or the right securing payment of the assigned receivable.

"3. Nothing in this article affects any obligation or liability of the assignor for breach of an agreement under paragraph 2 of this article. A person who is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

"4. The transfer of a possessory property right under paragraph 1 of this article does not affect any obligations of the assignor to the debtor or the person granting the property right with respect to the property transferred existing under the law governing that property right.

"5. Paragraph 1 of this article does not affect any requirement under rules of law other than this Convention relating to the form or registration of the transfer of any rights securing payment of the assigned receivable."

Paragraph 1

154. The Commission noted that the second part of the first sentence of paragraph 1 repeated in effect the second sentence of paragraph 1 and should therefore be deleted. Subject to that change, the Commission approved the substance of paragraph 1 and referred it to the drafting group.

Paragraphs 2 and 3

155. Recalling its decision that the debtor should not be able to declare the original contract avoided on the sole ground that the assignor violated an anti-assignment clause (see para. 144), the Commission decided that the same rule should apply with respect to a breach of an agreement to assign a right securing payment of a receivable. Subject to that change in paragraph 2, the Commission approved the substance of paragraphs 2 and 3 and referred them to the drafting group.

156. The Commission also recalled its decision with respect to the scope of article 11 (see para. 151) and decided that paragraphs 2 and 3, which followed the language of article 11, should have the same scope as article 11. It was therefore decided that a new paragraph dealing with the scope of paragraphs 2 and 3 along the lines of the scope provision in article 11 should be inserted as paragraph 4 of article 12.

Paragraphs 4 and 5

157. The Commission approved the substance of paragraphs 4 and 5 unchanged. It was noted that paragraph 5 was consistent, and did not need to be aligned, with the new safe-haven rule on the form of assignment. As a result of a combined application of the new rule and article 12, paragraph 5, the form of assignment would be subject to the law of the assignor's location (or any other applicable law), while the form of the transfer of a right securing payment of the assigned receivable would be subject to the law governing that right.

CHAPTER IV. RIGHTS, OBLIGATIONS AND DEFENCES

Section I. Assignor and assignee

Article 13. Rights and obligations of the assignor and the assignee

158. The text of draft article 13 as considered by the Commission was as follows:

"1. The rights and obligations of the assignor and the assignee as between them arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein.

"2. The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices which they have established between themselves.

"3. In an international assignment, the assignor and the assignee are considered, unless otherwise agreed, to have

impliedly made applicable to the assignment a usage which in international trade is widely known to, and regularly observed by, parties to the particular [receivables financing] practice."

159. It was noted that, in view of the fact that party autonomy was broadly recognized in paragraph 1, parties would always have the right to agree otherwise as to the binding nature of practices established between themselves. As a result, it was noted, the words "unless otherwise agreed" in paragraph 2 were not necessary. It was also noted that those words might raise questions of interpretation, since the equivalent provision in article 9, paragraph 1, of the United Nations Sales Convention did not contain such wording. The Commission agreed, however, that the matter was sufficiently clear and decided to retain the words "unless otherwise agreed", since the reference to practices might otherwise create uncertainty.

160. It was noted that, after the limitation of article 13 to the mutual rights and obligations of the parties, the reason for departing in paragraph 5 from the wording of the equivalent provision of the United Nations Sales Convention (article 9, paragraph 2) had ceased to exist and therefore reference to what the parties knew or ought to have known would not create any problems for third parties. However, the Commission agreed that paragraph 5 was satisfactory in its current formulation.

161. After discussion, the Commission approved the substance of article 13 unchanged and referred it to the drafting group. Pending final determination of the title, the preamble and article 6 *(c)*, the Commission deferred a decision with regard to the words "receivables financing" in paragraph 3 (see para. 184).

Article 14. Representations of the assignor

162. The text of draft article 14 as considered by the Commission was as follows:

"1. Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of the conclusion of the contract of assignment that:

"*(a)* The assignor has the right to assign the receivable;

"*(b)* The assignor has not previously assigned the receivable to another assignee; and

"*(c)* The debtor does not and will not have any defences or rights of set-off.

"2. Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor has, or will have, the financial ability to pay."

163. The Commission approved the substance of article 14 unchanged and referred it to the drafting group. It was widely felt that paragraph 1 *(a)* was sufficient to cover all representations relating to the existence of the receivable, since, if the receivable did not exist or was subject to a statutory limitation, the assignor would not have the right to assign it. It was also generally agreed that it was not necessary to add representations as to the non-modification of the original contract after notification, without the actual or constructive consent of the assignee, or to the transfer of any independent security or other supporting rights by the assignor to the assignee, since those matters were sufficiently covered by party autonomy and draft articles 12, paragraph 1, and 22, paragraph 2.

Article 15. Right to notify the debtor

164. The text of draft article 15 as considered by the Commission was as follows:

"1. Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

"2. A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph 1 of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach."

165. The Commission approved the substance of article 15 unchanged and referred it to the drafting group.

Article 16. Right to payment

166. The text of draft article 16 as considered by the Commission was as follows:

"1. As between the assignor and the assignee, unless otherwise agreed, and whether or not a notification of the assignment has been sent:

"*(a)* If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;

"*(b)* If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to the assignor in respect of the assigned receivable; and

"*(c)* If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to such person in respect of the assigned receivable.

"2. The assignee may not retain more than the value of its right in the receivable."

167. The Commission approved the substance of article 16 unchanged. It was agreed that the draft article properly covered proceeds, including returned goods, and that the definition of proceeds should be reviewed in the context of articles 24 and 26.

Section II. Debtor

Article 17. Principle of debtor protection

168. The text of draft article 17 as considered by the Commission was as follows:

"1. Except as otherwise provided in this Convention, an assignment does not, without the consent of the debtor, affect the rights and obligations of the debtor, including the payment terms contained in the original contract.

"2. A payment instruction may change the person, address or account to which the debtor is required to make payment, but may not:

"*(a)* Change the currency of payment specified in the original contract; or

"*(b)* Change the State specified in the original contract, in which payment is to be made, to a State other than that in which the debtor is located."

Change of country of payment

169. The Commission considered whether any change of the country of payment, even to the country in which the debtor was located, should be subject to the debtor's consent. It was stated that paragraph 2 *(b)* was sufficient to cover the vast majority of cases, in which payment in the debtor's country, instead of in the country of a foreign assignor, would be agreeable to the debtor. It was also observed that such an approach appropriately reflected a good practice, in particular, in international factoring contracts, and the convention should avoid casting any doubt on that practice. In addition, it was observed that the convention did not need to address the very special cases in which a debtor might prefer to pay in a foreign country. On the other hand, it was stated that any change to the country of payment should be subject to the debtor's consent, since the debtor might have good reasons for agreeing in the original contract to pay in a foreign country. In addition, it was stated that, if the assignee and the debtor were to be able to change by agreement the country of payment, they should also be able to change the currency of payment. On the understanding that agreements between assignees and debtors fell outside the scope of the convention, the Commission decided that no change was necessary in paragraph 2.

Consumer protection

170. It was noted that a principle flowing from article 17 was that the convention was not intended to affect adversely the legal position of consumer debtors. It was also noted that that general principle was also reflected in articles 1, paragraph 2 (which provided that the convention would not affect the debtor's legal position unless the debtor was located in a contracting State or the law governing the receivable was the law of a contracting State), 9 as revised (which made clear that the convention was not intended to affect limitations on assignment imposed by law, other than those referred to in article 9), 19 (which allowed the debtor to discharge its obligation under law outside the convention), 20 (which preserved the debtor's defences and rights of set-off, with the exception of rights of set-off arising from unrelated contracts and not available at the time of notification), 21 and 23 (which made explicit reference to consumer protection law) and 22 (which allowed a modification of the original contract, even after notification, with the constructive consent of the assignee).

171. The view was expressed that, in order to avoid any doubt, the above-mentioned understanding should be explicitly mentioned in article 17. It was stated that consumer protection legislation reflected public policy, at both the national level and the supranational level, with which the convention could not and should not interfere. It was stated that such legislation was aimed at protecting consumer debtors, in view of the fact that they normally did not have the bargaining power to protect their interests, and it could not be derogated from by agreement of the parties since it was of a mandatory nature. In addition, clauses involving implicit consent by the consumer could be interpreted as abusive clauses prohibited by rules of law enacted under international agreements on regional integration. The following language was proposed for addition to article 17 (see A/CN.9/472, p. 10). "This Convention does not prejudice the laws of the State in which the debtor is located governing the protection of the debtor in transactions made for personal, family or household purposes."

172. Objections were raised with regard to the above-mentioned suggestion. It was stated that the proposed wording was unnecessary, since the draft convention already contained appropriate provisions protecting the interests of consumer debtors. It was also observed that the proposed wording might raise questions of interpretation or even invite courts to invalidate assignments on obscure or artificial grounds, a result that could undermine the availability or the cost of consumer credit. On the other hand, it was pointed out that the difference between the positions reflected above might not be so significant. In that vein, it was suggested that the wording of article 17 should make it clear that the draft convention would not permit a consumer debtor to vary or derogate from the original contract if the derogation or variation was not permitted by consumer-protection legislation in the State in which the debtor was located. While some support was expressed for that suggestion, the Commission approved the substance of article 17 unchanged and referred it to the drafting group, on the understanding that it might have to reconsider the matter.

Legal position of the debtor in the case of a partial assignment

173. It was recalled that the Commission had decided to postpone discussion of the legal position of the debtor in the case of one or more notifications with respect to a partial assignment until it had a chance to consider the debtor-related provisions (see para. 20). The view was expressed that the matter should be dealt with in article 17. However, the Commission did not have sufficient time to consider the matter (see paras. 180 and 185).

CHAPTER V. CONFLICT OF LAWS

174. The Commission heard a statement on behalf of the Permanent Bureau of the Hague Conference on Private International Law, which was aimed at ensuring close cooperation with UNCITRAL. It was recalled that a joint group of UNCITRAL and Hague Conference experts had met in The Hague from 18 to 20 May 1998 and that subsequently the Permanent Bureau of the Hague Conference had submitted a report dated 10 July 1998 containing several recommendations to the relevant UNCITRAL Working Group (A/CN.9/WG.II/WP.99). It was observed that, while articles 24-27 did not fully implement the recommendations contained in the report by the Permanent Bureau, they were in principle entirely satisfactory.

175. With regard to chapter V, it was pointed out that, if adopted with a broader scope than that of the convention (i.e. as a "mini-convention"), it might be in conflict with regional texts, such as the European Union Convention on the Law Applicable to Contractual Obligations (Rome, 1980; "the Rome Convention"). In that connection, it was pointed out that draft article 28 departed from article 12 of the Rome Convention in two respects: it required an explicit choice of law and created a rebuttable presumption in favour of the law of the assignor's location as the law most closely connected to the contract of assignment. It was also observed that, in principle, it would not be appropriate to subject the application of chapter V to the notion of internationality of the substantive law part of the draft convention. However, if that approach were to be confirmed by the Commission, draft article 28, paragraph 3 (precluding the application of a foreign law chosen by the parties to a domestic assignment of domestic receivables), might not be necessary, since, if an assignment were not international under draft article 3, chapter V would not apply. With regard to draft articles 30-32, some doubt was expressed as to whether they were necessary. It was also observed that draft article 30, paragraph 2, appeared to repeat the rule contained in draft article 32. In addition, it was stated that the issue of the scope of chapter V and the hierarchy between chapter V and the rest of the draft convention would need to be resolved in a separate article, as suggested by the UNCITRAL secretariat (see A/CN.9/470, para. 22). Moreover, the issue of renvoi would need to be resolved by way of a provision in chapter V, since, if chapter V were to have a broader scope of application than the rest of the draft convention, draft article 6 *(j)* (which was intended to address the issue of renvoi) would not apply.

176. In response, it was stated that chapter V might not be a "mini-convention" and, if it were to become one, articles 28 and 29 might need to be redrafted and a provision on renvoi might need to be included in chapter V. It was also observed that, if chapter V applied to assignments with an international element as defined in article 3, article 28, paragraph 3, would not be necessary.

177. The Commission was also informed of a proposal presented to the Special Commission on general affairs and policy of the Conference at its meeting held in The Hague from 8 to 12 May 2000, for the Hague Conference to prepare a draft convention on the law applicable to security interests in investment securities. It was stated that close cooperation with UNCITRAL would be particularly welcome, in view of the Commission's work on assignment of receivables and the possibility of UNCITRAL undertaking further work in the future in the field of secured credit law.

178. The Commission expressed its appreciation to the observer for the Permanent Bureau of the Hague Conference and deferred discussion on chapter V until it had finalized the substantive law part of the draft convention. Discussion on possible future work in the field of secured credit law was postponed until the Commission had considered agenda item 16, "Coordination and cooperation" (see paras. 455–463).

C. Report of the drafting group

179. The Commission requested a drafting group established by the secretariat to review articles 1-17 of the draft convention, with a view to ensuring consistency between the various language versions.

180. At the close of its deliberations on the draft convention, the Commission considered the report of the drafting group and adopted articles 1-17 of the draft convention, as revised by the drafting group, with the exception of the bracketed language in those provisions and of article 1, paragraph 5, which was left to be considered in the context of a discussion on draft article 40 and the annex to the draft convention. Article 7, paragraph 2 (article 8 in the text of the draft convention considered by the Commission), was adopted subject to consideration of the question of its relationship with chapter V. Article 17 was adopted subject to consideration of whether the issue of the legal position of the debtor in the case of a partial assignment should be explicitly addressed in article 17, a question which the Commission did not have sufficient time to consider (see paras. 20, 173 and 185).

181. In the context of the discussion of the report of the drafting group, the Commission decided that the title of the convention should read: "Convention on Assignment of Receivables in International Trade". It was widely felt that any reference to "receivables financing" would be inconsistent with the scope of the convention, which went beyond purely financing transactions. In the discussion, the suggestion was made that the words "in International Trade" should be deleted, since they were not necessary and might be misleading to the extent that they suggested that only the assignment of trade receivables was covered. It was agreed that those words could be retained, while a commentary to the convention could explain that the term "international trade" was used in the widest possible sense and that in any case it was intended to include trade, financial and consumer transactions.

182. Following up on its decision to delete the reference to "receivables financing" in the title of the convention, the Commission decided to delete any reference to financing in the preamble. With regard to the second preambular paragraph, it was decided that reference should be made to uncertainties constituting an obstacle to international trade. As to the third preambular paragraph, while some support was expressed for the retention of the indicative list of

practices, it was decided that the list should be deleted, since it was bound to be incomplete and could soon become outdated. It was also agreed that the main practices to be covered by the convention should be highlighted at the beginning of a commentary to the convention. With regard to the fourth preambular paragraph, the suggestion was made that it should include a reference to the preservation of national law, in particular with regard to preferential rights and rights in real estate. It was agreed that the reference to the preservation of the debtor's rights was sufficient in that respect and that a commentary could further explain the types of debtor's rights and the kind of laws intended to be preserved. It was noted that such an approach would be consistent with the approach taken in the preamble to the UNCITRAL Model Law on Cross-Border Insolvency. As to the fifth preambular paragraph, it was agreed that the reference to "capital and credit" should be retained so as to clarify that the convention was intended to cover both outright assignments (in which capital was made available) and assignments by way of security (in which credit was made available). It was also agreed that reference should be made first to the availability of capital and credit and then to international trade.

183. After discussion, the Commission decided that the preamble should read as follows:

"*The Contracting States*,

"*Reaffirming their conviction* that international trade on the basis of equality and mutual benefit is an important element in the promotion of friendly relations among States,

"*Considering* that problems created by the uncertainties as to the content and the choice of legal regime applicable to assignments of receivables constitute an obstacle to international trade,

"*Desiring* to establish principles and adopt rules relating to the assignment of receivables that would create certainty and transparency and promote modernization of law relating to assignments of receivables, while protecting existing assignment practices and facilitating the development of new practices,

"*Desiring also* to ensure the adequate protection of the interests of the debtor in the case of an assignment of receivables,

"*Being of the opinion* that the adoption of uniform rules governing assignments of receivables would promote the availability of capital and credit at more affordable rates and thus facilitate the development of international trade,

"*Have agreed* as follows:"

184. In line with its decision to delete any references to "receivables financing" in the title and the preamble to the convention, the Commission decided that article 6, subparagraph *(c)*, and the reference to "receivables financing" in article 13, paragraph 3, should also be deleted.

185. In view of the fact that, under article 2, the scope of the convention would be limited to contractual receivables, it was stated that the question whether States should be given a right to apply the convention to additional practices (e.g. to assignments of non-contractual receivables) should be reconsidered in the context of the final provisions. With respect to draft article 4, paragraph 1 *(b)*, it was agreed that the words "to the extent" should be deleted. As to draft article 4, paragraph 3 *(a)* and *(b)*, it was agreed that the subparagraphs should be merged, reference should be made to competing rights and the word "or" after subparagraph *(b)* should be deleted. As to draft article 4, paragraph 2 *(f)*, it was suggested that the French version should refer to "*valeurs mobiliers*". With respect to draft articles 11, paragraph 3 *(a)*, and 12, paragraph 4 *(a)*, it was agreed that the word "goods" should be placed in square brackets, pending a decision as to whether the word "goods" included intangible movable property. With respect to article 17, it was agreed that the question of the legal position of the debtor in the case of notifications relating to partial assignments remained to be addressed in the future (see also paras. 20, 173 and 180).

D. Future work on the draft convention

186. Having adopted the report of the drafting group, the Commission considered the steps to be taken for the completion of its work on the draft convention. A proposal was made and supported by several delegations that a resumed session of the Commission should be convened for that purpose before the end of the year or early in 2001. This would have the advantage of allowing the Commission to complete its work in a timely fashion while avoiding sending the draft convention back to a working group and risking the reopening of matters already settled by the Commission. The prevailing view, however, was that the draft convention should be referred back to a working group. It was widely felt that such an approach would ensure the optimal use of the resources available to the Commission and allow it to complete its work on the draft convention in 2001 without having to change radically its schedule of meetings or general programme of work. It was stated that the changes made in articles 1-17 created a new situation, which would need to be reviewed by the Working Group on International Contract Practices. It was also observed that, in view of the Working Group's familiarity with the text, its expertise and efficiency, the draft convention could be advanced to a point where it could be swiftly adopted by the Commission at its 2001 session. In that connection, the Commission reaffirmed its confidence in the Working Group and expressed its appreciation for the remarkable work it had accomplished during the eight sessions devoted to the draft convention from November 1995 to October 1999.

187. As to the terms of reference of the Working Group, the Commission considered a proposal that read as follows:

"1. Beginning with draft article 18, the Working Group should review those parts of the draft convention that the Commission has not had the opportunity to examine and text that remained within square brackets in draft articles 1-17.

"2. In the light of modifications to draft articles 1-17, the Working Group should ensure that the coherence and consistency of the text are maintained.

"3. If, as a result of its consideration of draft articles 18 of the draft convention to draft article 7 of the annex, the Working Group identifies issues in draft articles 1-17, it

should bring those issues to the attention of the Commission with an appropriate explanation and recommendation, if possible.

"4. As to its working methods, the Working Group should adopt the same approach as the Commission, that is, it should make only those changes that meet with substantial support."

188. Strong support was expressed for the proposal. It was widely felt that the proposed terms of reference would ensure that the mandate of the Working Group was both firm, ensuring that the Working Group would not change policy decisions made by the Commission, and flexible, allowing the Working Group to consider all issues not settled by the Commission and effect purely drafting changes in draft articles 1-17. In order to clarify the point that the Working Group should not reopen discussion on policy issues settled by the Commission, it was suggested that paragraphs 2 and 4 of the above-mentioned terms of reference should be prefaced by the words "In reviewing draft articles 18 of the draft convention to draft article 7 of the annex". However, it was agreed that that change was not necessary, since the current wording made it sufficiently clear that the Working Group did not have the mandate to effect any change in the policy decisions made by the Commission. If the Working Group identified any new policy issues relating to articles 1-17, it could only bring them to the attention of the Commission, making recommendations for their resolution by the Commission. On that basis, the Commission approved the terms of reference mentioned above and referred the draft convention to a working group to be convened before the end of the year, with the request that the working group proceed with its work expeditiously so as to finalize the draft convention and submit it for adoption by the Commission at its next session, in 2001.

189. The Commission next considered the procedure for final adoption of the draft convention and opening for signature by States. The view was expressed that it would be premature for the Commission to consider the matter at the current session. The prevailing view, however, was that the Commission should inform the General Assembly of the possibility of the final adoption of the draft convention by the Assembly at its fifty-sixth session, in 2001, or by a diplomatic conference to be convened as soon as possible after the adoption of the draft convention by the Commission at its thirty-fourth session. Such a recommendation would allow the Sixth Committee of the General Assembly to consider the matter and take any necessary action. It would also allow the Fifth Committee to consider whether a diplomatic conference could be held within existing resources and thus keep open for the Commission the option of deciding at its thirty-fourth session to refer the draft convention to a diplomatic conference. It was understood that authorization of a diplomatic conference by the General Assembly would be subject, in addition to approval by the Fifth and Sixth Committees, to an offer by a Government to host the conference, accepting to bear the costs of changing the venue of the conference from Vienna, the seat of the secretariat of UNCITRAL, to a city in the host country. The Commission deferred a decision on the matter until it had considered a draft recommendation to the General Assembly (see para. 192).

190. The Commission next turned to the question whether a commentary should be prepared on the convention. It was noted that a commentary could be official, in which case it would need to be reviewed in detail and approved by the Commission, or unofficial, in which case it could be prepared by the secretariat on the basis of general instructions given by the Commission. It was also noted that, regardless of whether the commentary were to be official or unofficial, the Commission would need to consider whether the purpose of the commentary would be to assist legislators in their consideration of the draft convention for adoption or users of the convention in the application and interpretation of it, or whether the commentary should be cast as both a legislative guide and a tool for interpretation. It was generally agreed that a commentary should be prepared by the secretariat in order to assist legislators in considering the draft convention for adoption and users of the convention in interpreting and applying it. It was stated that the analytical commentary contained in the note by the secretariat of 23 May 2000 (A/CN.9/470) could serve as an excellent basis for such a commentary, which, however, should be more concise and succinct. In response to a question, it was noted that it would be more efficient if the revised version of the commentary were to be prepared after the Working Group had completed its consideration of the draft convention, since otherwise the first part of the commentary, on articles 1-17, would probably need to be revised again after the Working Group had completed its work. In any case, it was widely felt that the Working Group would not have time to consider the commentary. It was agreed, however, that, if necessary, the secretariat could prepare a note bringing to the attention of the Working Group any issues to be addressed by the Group.

191. After discussion, the Commission requested the secretariat to prepare and distribute a revised version of the commentary on the convention after the Working Group had completed its work on the draft convention (for the dates of the next session of the Working Group on International Contract Practices, see para. 469). It was agreed that the commentary should be concise and serve as an unofficial legislative guide and a tool for the interpretation of the convention. The Commission also requested the secretariat to distribute for comments the text of the draft convention after the completion of the work of the Working Group to all States and interested international organizations, including non-governmental organizations that were normally invited to attend meetings of the Commission and its working groups as observers, and to prepare an analytical compilation of those comments.

192. At the close of its deliberations on the draft convention, the Commission adopted the following recommendation to the General Assembly:

"*The United Nations Commission on International Trade Law*,

"*Noting* that it is expected to adopt the draft Convention on Assignment of Receivables in International Trade at its thirty-fourth session, in 2001,

"*Bearing in mind* that, at that session, it will have to submit a recommendation to the General Assembly as to the procedure for the conclusion of the draft Convention,

"*Recognizing* the importance of concluding the work on the draft Convention in a timely manner,

"1. *Recommends* that the General Assembly include an item entitled 'Conclusion of the draft Convention on Assignment of Receivables in International Trade' in the agenda of its fifty-sixth session, in 2001, with a view to concluding the draft Convention itself or referring it to a conference of plenipotentiaries to be convened in 2002;

"2. *Also recommends* that, if the Commission decides to recommend the holding of a Conference, the General Assembly request the Secretary-General to distribute the draft Convention, as early as possible after its finalization by the Commission at its thirty-fourth session, in 2001, for comments by States and international organizations, including non-governmental organizations normally invited to attend meetings of the Commission as observers."

IV. PRIVATELY FINANCED INFRASTRUCTURE PROJECTS

A. General remarks

193. At the outset of its consideration of the draft chapters of a legislative guide on privately financed infrastructure projects, the Commission noted that earlier drafts of all chapters of the legislative guide had been considered by the Commission at its thirty-second session, in 1999 (A/CN.9/458/Add.1-9). Some of the chapters had also been considered at the Commission's thirtieth session, in 1997 (A/CN.9/438/ Add.1-3), and at its thirty-first session, in 1998 (A/CN.9/444/Add.1-5).

194. Given the advanced stage of preparation of the draft chapters and the extensive deliberations that had taken place at the earlier sessions, it was decided that at the current session the Commission should focus its attention on the legislative recommendations (as contained in the consolidated list of legislative recommendations in A/CN.9/471/Add.9). The Commission was invited to turn to the notes on the legislative recommendations only when that would be necessary to establish whether the notes accurately reflected the deliberations in the Commission at its thirty-second session (and reflected in the relevant part of its report on the session)[3] or when a modification to the notes would be necessary as a result of decisions regarding the draft legislative recommendations. (For the subsequent discussions regarding the finalization of the guide and possible future work in the area of privately financed infrastructure projects, see paras. 375-379 below.)

B. Consideration of draft legislative recommendations

Suggestion for addition of a general legislative recommendation

195. A suggestion was made to introduce, at the beginning of the list of legislative recommendations or at another appropriate place, a note of caution to legislators not to restrict overly the freedom of the parties to shape the project agreement since that would make it more difficult to negotiate or implement privately financed infrastructure projects. While it was agreed that the suggestion was based on valid reasoning, the general opinion was that such a note of caution or recommendation should not be added. One reason given was that the legislative recommendations in their totality had to reflect the appropriate balance between freedom of the parties and restrictions needed to protect the public interest. Another reason was that such general advice was by nature not precise and therefore of limited utility, and might even cause difficulty or confusion if it were to be used in interpreting legislative recommendations in the guide.

196. The Commission adopted the *chapeau* to the legislative recommendations, which appeared before recommendation 1, and read as follows:

"For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles be implemented by the law:"

CHAPTER I. GENERAL LEGISLATIVE AND INSTITUTIONAL FRAMEWORK

Constitutional and legislative framework

197. The Commission postponed its decision on a suggestion to incorporate chapter VII. "Other relevant areas of law", into chapter I, "General legislative and institutional framework" (see para. 369).

Recommendation 1

198. The text of the draft recommendation was as follows:

"The legislative and institutional framework for the implementation of privately financed infrastructure projects should ensure transparency, fairness and the long-term sustainability of projects. Undesirable restrictions on private sector participation in infrastructure development and operation should be eliminated."

199. In order to reflect the breadth of the recommendation and to align the title with the content of the recommendation, it was decided to expand the title to read "Constitutional, legislative and institutional framework" and the opening words of the recommendation to read "The constitutional, legislative and institutional framework". Subject to those changes, the Commission adopted recommendation 1.

Scope of authority to award concessions

Recommendation 2

200. The text of the draft recommendation was as follows:

"The law should identify the public authorities of the host country (including, as appropriate, national, provin-

[3] *Official Records of the General Assembly, Fifty-fourth Session, Supplement No. 17* (A/54/17), paras. 12-307.

cial and local authorities) that are empowered to enter into agreements for the implementation of privately financed infrastructure projects."

201. The Commission adopted recommendation 2 to insert the words "to award the concession and" between the words "that are empowered" and the words "to enter into agreements".

Recommendation 3

202. The text of the draft recommendation was as follows:

"Privately financed infrastructure projects may include concessions for the construction and operation of new infrastructure facilities and systems or the maintenance, modernization, expansion and operation of existing infrastructure facilities and systems."

203. Proposals were made to expand the recommendation by adding references to "ownership" of the infrastructure facility and "financing". The proposals did not receive sufficient support on the ground that adding those details might require the addition of other details. Furthermore, whether and to what extent a concession involved ownership of the infrastructure concerned was a matter related to the various policy options available to the host country, which were discussed in the notes. The Commission adopted recommendation 3.

Recommendation 4

204. The text of the draft recommendation was as follows:

"The law should identify the sectors or types of infrastructure in respect of which concessions may be granted."

205. The opinion was expressed that the recommendation envisioned an exhaustive list of sectors or types of infrastructure where concessions might be granted. In that light, a proposal was made to reformulate the recommendation to express the idea that the legislator should set out only a priority list of such sectors or types of infrastructure. In support of the proposal, it was stated that governmental priorities as to the sectors in which concessions might be granted might change over time and that, by having an exhaustive list of sectors in the law, the Government would unnecessarily limit itself in fostering the development of infrastructure.

206. The Commission did not adopt the proposal and noted that it was indicated in paragraph 18 of the accompanying notes that there was more than one possible way of indicating sectors or types of infrastructure in respect of which concessions might be granted. The Commission adopted recommendation 4.

Recommendation 5

207. The text of the draft recommendation was as follows:

"The law should specify the extent to which a concession might extend to the entire region under the jurisdiction of the respective contracting authority, to a geographical subdivision thereof or to a discrete project, and whether it might be awarded with or without exclusivity, as appropriate, in accordance with rules and principles of law, statutory provisions, regulations and policies applying to the sector concerned. Contracting authorities might be jointly empowered to award concessions beyond a single jurisdiction."

208. The Commission adopted recommendation 5.

Recommendation 6

209. The text of the draft recommendation was as follows:

"Institutional mechanisms should be established to coordinate the activities of the public authorities responsible for issuing approvals, licences, permits or authorizations required for the implementation of privately financed infrastructure projects in accordance with statutory or regulatory provisions on the construction and operation of infrastructure facilities of the type concerned."

210. The Commission adopted recommendation 6.

Recommendation 7

211. The text of the draft recommendation was as follows:

"The authority to regulate infrastructure services should not be entrusted to entities that directly or indirectly provide infrastructure services."

212. The Commission adopted recommendation 7.

Recommendation 8

213. The text of the draft recommendation was as follows:

"Regulatory competence should be entrusted to functionally independent bodies with a level of autonomy sufficient to ensure that their decisions are taken without political interference or inappropriate pressures from infrastructure operators and public service providers."

214. The Commission adopted recommendation 8.

Recommendation 9

215. The text of the draft recommendation was as follows:

"The rules governing regulatory procedures should be made public. Regulatory decisions should state the reasons on which they are based and should be accessible to interested parties through publication or other means."

216. The Commission adopted recommendation 9.

Recommendation 10

217. The text of the draft recommendation was as follows:

"The law should establish transparent procedures whereby the concessionaire may request a review of regulatory decisions by an independent and impartial body and should set forth the grounds on which a request for review may be based and the availability of court review."

218. The Commission adopted recommendation 10 subject to editorial review of its wording.

Recommendation 11

219. The text of the draft recommendation was as follows:

"Where appropriate, special procedures should be established for handling disputes among public service providers concerning alleged violations of laws and regulations governing the relevant sector."

220. The Commission adopted recommendation 11.

CHAPTER II. PROJECT RISKS AND GOVERNMENT SUPPORT

Recommendation 12

221. The text of the draft recommendation was as follows:

"No unnecessary statutory or regulatory limitations should be placed upon the contracting authority's ability to agree on an allocation of risks that is suited to the needs of the project."

222. The Commission adopted recommendation 12.

Recommendation 13

223. The text of the draft recommendation was as follows:

"The law should clearly state which public authorities of the host country may provide financial or economic support to the implementation of privately financed infrastructure projects and which types of support they are authorized to provide."

224. The suggestion was made to add after the words "types of support" the words "including public loans and guarantees, equity participation, subsidies and sovereign guarantees and assurances" to reflect better and more completely the legislative advice that was discussed in the notes. Furthermore, it was stated that it should be made clearer that various authorities in a State might grant public support to a given privately financed infrastructure project. The Commission adopted recommendation 13 without the suggested additions since it was generally felt that both points were sufficiently covered in the notes (A/CN.9/471/Add.3, paras. 30-60).

CHAPTER III. SELECTION OF THE CONCESSIONAIRE

General considerations

Recommendation 14

225. The text of the draft recommendation was as follows:

"The law should provide for the selection of the concessionaire through transparent and efficient competitive procedures adapted to the particular needs of privately financed infrastructure projects."

226. By way of a general comment, it was pointed out that chapter III contained an extensive set of legislative recommendations and detailed notes thereon. In that connection, the question was raised as to whether it was recommended that the host country should adopt specific legislation dealing with the procedures for selecting the concessionaire.

227. In response, it was noted that the purpose of the legislative recommendations was to assist the host country in developing rules specially suited for the selection of the concessionaire. The recommendations were concerned with the particular needs of privately financed infrastructure projects and differed in many respects from general rules on government procurement, such as those contained in the UNCITRAL Model Law on Procurement of Goods, Construction and Services. However, the recommendations were not intended to replace or reproduce such general rules on government procurement and it was for each host country to decide in which manner they could best be implemented. For example, a State might wish to enact special regulations dealing only with the selection of the concessionaire or might incorporate some of them into general legislation on privately financed infrastructure projects, with cross-references, as appropriate, to other legislation dealing with matters not covered in the recommendations (such as administrative and practical arrangements for conducting the selection proceedings).

228. Besides terminological suggestions accepted by the Commission to ensure consistency among the language versions (i.e. using the term "*procédure de mise en compétition*" instead of "*procédure ouverte*" in the French text), no further comments were made and the Commission adopted recommendation 14.

Pre-selection of bidders

Recommendation 15

229. The text of the draft recommendation was as follows:

"The bidders should demonstrate that they meet the pre-selection criteria the contracting authority considers appropriate for the particular project, including:

"*(a)* Adequate professional and technical qualifications, human resources, equipment and other physical facilities as necessary to carry out all the phases of the

project, namely, engineering, construction, operation and maintenance;

"*(b)* Sufficient ability to manage the financial aspects of the project and capability to sustain the financing requirements for the engineering, construction and operational phases of the project;

"*(c)* Appropriate managerial and organizational capability, reliability and experience, including previous experience in operating public infrastructure."

230. The Commission adopted recommendation 15.

Recommendation 16

231. The text of the draft recommendation was as follows:

"The bidders should be allowed to form consortia to submit proposals, provided that each member of a pre-selected consortium may participate, either directly or through subsidiary companies, in only one bidding consortium."

232. It was suggested that recommendation 16 should state that the bidders should be authorized to form consortia both for the purpose of submitting proposals and for execution of the project. However, noting that the provision dealt only with issues related to the selection process, the Commission adopted recommendation 16 without the proposed amendment.

Recommendation 17

233. The text of the draft recommendation was as follows:

"The contracting authority should draw up a shortlist of the pre-selected bidders which will subsequently be invited to submit proposals upon completion of the pre-selection phase."

234. The Commission adopted recommendation 17.

Procedure for requesting proposals

Recommendation 18

235. The text of the draft recommendation was as follows:

"Upon completion of the pre-selection proceedings, the contracting authority should invite the pre-selected bidders to submit final proposals."

236. Subject to substituting the word "request" for the word "invite", the Commission adopted recommendation 18.

Recommendation 19

237. The text of the draft recommendation was as follows:

"Notwithstanding the above, the contracting authority may use a two-stage procedure to request proposals from pre-selected bidders when it is not feasible for the contracting authority to formulate project specifications or performance indicators and contractual terms in a manner sufficiently detailed and precise to permit final proposals to be formulated. Where a two-stage procedure is used, the following provisions apply:

"*(a)* The contracting authority should first call upon the pre-selected bidders to submit proposals relating to output specifications and other characteristics of the project as well as to the proposed contractual terms;

"*(b)* The contracting authority may convene a meeting of bidders to clarify questions concerning the initial request for proposals;

"*(c)* Following examination of the proposals received, the contracting authority may review and, as appropriate, revise the initial project specifications and contractual terms prior to issuing a final request for proposals."

238. The suggestion was made that the recommendation should refer to the contracting authority's obligation to keep minutes of meetings with bidders. The Commission felt, however, that the matter would best be left to the notes on the legislative recommendation and adopted recommendation 19 unchanged.

Recommendation 20

239. The text of the draft recommendation was as follows:

"The final request for proposals should include at least the following:

"*(a)* General information as may be required by the bidders in order to prepare and submit their proposals;

"*(b)* Project specifications and performance indicators, as appropriate, including the contracting authority's requirements regarding safety and security standards and environmental protection;

"*(c)* The contractual terms proposed by the contracting authority;

"*(d)* The criteria for evaluating the proposals, the relative weight to be accorded to each such criterion and the manner in which criteria are to be applied in the evaluation of proposals."

240. The Commission adopted recommendation 20.

Recommendation 21

241. The text of the draft recommendation was as follows:

"The contracting authority may, whether on its own initiative or as a result of a request for clarification by a bidder, modify the final request for proposals by issuing addenda at a reasonable time prior to the deadline for submission of proposals."

242. The Commission adopted recommendation 21.

Recommendation 22

243. The text of the draft recommendation was as follows:

"The criteria for the evaluation and comparison of the technical proposals should concern the effectiveness of the proposal submitted by the bidder in meeting the needs of the contracting authority, including the following:

"*(a)* Technical soundness;

"*(b)* Operational feasibility;

"*(c)* Quality of services and measures to ensure their continuity;

"*(d)* Social and economic development potential offered by the proposals."

244. After having considered various proposals made in connection with recommendation 23 (see paras. 248-250), the Commission adopted recommendation 22.

Recommendation .23

245. The text of the draft recommendation was as follows:

"The criteria for the evaluation and comparison of the financial and commercial proposals may include, as appropriate:

"*(a)* The present value of the proposed tolls, fees and other charges over the concession period;

"*(b)* The present value of the proposed direct payments by the contracting authority, if any;

"*(c)* The costs for design and construction activities, annual operation and maintenance costs, present value of capital costs and operating and maintenance costs;

"*(d)* The extent of financial support, if any, expected from the Government;

"*(e)* Soundness of the proposed financial arrangements;

"*(f)* The extent of acceptance of the proposed contractual terms."

246. The Commission agreed to insert the words ", unit prices" before the words "and other charges" in subparagraph *(a)*.

247. In response to a query as to the difference between subparagraphs *(b)* and *(d)*, it was explained that subparagraph *(b)* was concerned with direct payments expected from the contracting authority for goods or services actually provided or made available by the concessionaire. Subparagraph *(d)*, in turn, was concerned with financial support, such as loans, subsidies or guarantees provided by the Government, and not necessarily the contracting authority.

248. The Commission considered proposals for rearranging items listed in the recommendations. It was pointed out that assessing the soundness of the proposed financial arrangements was the very purpose of the evaluation of the financial proposals, rather than an evaluation criterion, and that therefore the substance of subparagraph *(e)* should be incorporated into the *chapeau* of the recommendation. It was further suggested that a distinction should be made between criteria used to evaluate the soundness of the financing proposed for each phase of the project (i.e. construction and operation). Lastly, it was proposed that subparagraph *(f)* should be deleted because it would not be appropriate to evaluate proposals in terms of their responsiveness to the contractual terms proposed by the contracting authority. It would be preferable to incorporate the notion of responsiveness in the *chapeau* of recommendation 23, and possibly in the *chapeau* of recommendation 22 as well, by inserting words such as "[I]n conformity with the proposed contractual terms".

249. The Commission heard expressions of strong support for those proposals, in particular to the deletion of subparagraph *(f)*, since in some legal systems the acceptance of the contractual terms circulated with the request for proposals was a mandatory requirement. The prevailing view, however, was that the current text of the recommendation should be retained. It was sufficiently clear that the items listed in subparagraphs *(a)-(e)* were intended to apply, as appropriate, in the evaluation of the soundness of financial proposals in respect of the various phases of the project. As regards subparagraph *(f)*, it was generally felt that the provision was useful and should not be deleted. The complexity of privately financed infrastructure projects made it unlikely that the contracting authority and the selected bidder could agree on the terms of a draft project agreement without negotiations and adjustments to adapt those terms to the particular needs of the project. It was therefore appropriate to include an assessment of the responsiveness of bidders to the proposed contractual terms among the criteria for the evaluation of the financial and commercial proposals.

250. After deliberation, the Commission adopted recommendation 23.

Recommendation 24

251. The text of the draft recommendation was as follows:

"The contracting authority may establish thresholds with respect to quality, technical and commercial aspects to be reflected in the proposals in accordance with the criteria set out in the request for proposals. Proposals that fail to achieve the thresholds should be regarded as non-responsive."

252. Subject to inserting the word "financial" before the words "and commercial" in the first sentence, the Commission adopted recommendation 24.

Recommendation 25

253. The text of the draft recommendation was as follows:

"Whether or not it has followed a pre-selection process, the contracting authority may retain the right to require the bidders to demonstrate their qualifications again in accordance with criteria and procedures set forth

in the request for proposals or the pre-selection documents, as appropriate. Where a pre-selection process has been followed, the criteria shall be the same as those used in the pre-selection process."

254. The Commission adopted recommendation 25.

Recommendation 26

255. The text of the draft recommendation was as follows:

"The contracting authority should rank all responsive proposals on the basis of the evaluation criteria set forth in the request for proposals and invite for final negotiation of the project agreement the bidder that has attained the best rating. Final negotiations may not concern those terms of the contract which were stated as non-negotiable in the final request for proposals."

256. The question was raised as to how the contracting authority should proceed if, after evaluation of the proposals, two or more proposals obtained the highest rating or if there was only an insignificant difference in the rating of two or more proposals. In response, it was stated that under such circumstances it would be appropriate for the contracting authority to invite for negotiations all the bidders that had obtained essentially the same rating. It was generally felt, however, that an appropriate comment to that effect should be included in the relevant notes, rather than in the recommendation.

257. The suggestion was made that the recommendation should include advice as to how contracting authorities should handle requests by prospective lenders for changes in the proposed contractual arrangements. In response, it was stated that the issue, although of great concern in practice, was not necessarily a matter for legislative action and had already been adequately dealt with in paragraphs 56, 70 and 82 of the notes to chapter III (A/CN.9/471/Add.4).

258. After deliberation, the Commission adopted recommendation 26.

Recommendation 27

259. The text of the draft recommendation was as follows:

"If it becomes apparent to the contracting authority that the negotiations with the bidder invited will not result in a project agreement, the contracting authority should inform that bidder that it is terminating the negotiations and then invite for negotiations the other bidders on the basis of their ranking until it arrives at a project agreement or rejects all remaining proposals."

260. The Commission adopted recommendation 27.

Direct negotiations

Recommendation 28

261. The text of the draft recommendation was as follows:

"The law should set forth the exceptional circumstances under which the contracting authority may be authorized by a higher authority to select the concessionaire through direct negotiations, such as:

"*(a)* When there is an urgent need for ensuring continuity in the provision of the service and engaging in a competitive selection procedure would therefore be impractical;

"*(b)* In case of projects of short duration and with an anticipated initial investment value not exceeding a specified low amount;

"*(c)* Reasons of national defence or national security;

"*(d)* Cases where there is only one source capable of providing the required service (for example, because it requires the use of patented technology or unique know-how);

"*(e)* When an invitation to the pre-selection proceedings or a request for proposals has been issued but no applications or proposals were submitted or all proposals failed to meet the evaluation criteria set forth in the request for proposals and if, in the judgement of the contracting authority, issuing a new request for proposals would be unlikely to result in a project award;

"*(f)* Other cases where the higher authority authorizes such an exception for compelling reasons of public interest."

262. By way of a general comment, it was stated that the expression "direct negotiations", which appeared in recommendations 28 and 29, as well as in the corresponding notes, although adopted by the Commission at its thirty-second session,[4] did not adequately reflect the nature of the procedures described in those recommendations. It was pointed out that recommendations 28 and 29 contemplated the use, under exceptional circumstances, of a procedure different from those described in recommendations 14-27. That difference consisted essentially of the absence of a structured competition among bidders, as was otherwise called for under recommendations 14-27. Negotiations with bidders, however, were not exclusive to recommendations 28 and 29, since a certain degree of negotiation was already provided at various stages of the selection procedure under recommendations 14-27, in particular under recommendations 26 and 27.

263. After deliberation, the Commission decided that the phrase "concession award without competitive procedures" should be used instead of the words "direct negotiations" in the title of section D of chapter III (see A/CN.9/471/Add.4) and that the *chapeau* of recommendation 28 should be amended to read:

"The law should set forth the exceptional circumstances under which the contracting authority may be authorized to award a concession without using competitive procedures, such as:"

264. The Commission noted that, as a result of the adoption of the new wording, a series of consequential amend-

[4] Ibid., paras. 127 and 128.

ments might be required in the relevant notes in chapter III (see A/CN.9/471/Add.4) and possibly in other legislative recommendations and parts of the draft legislative guide. The Commission requested the secretariat to ensure that the necessary changes were made.

265. The Commission agreed that recommendation 28 should also refer to unsolicited proposals, which under certain circumstances might justify the award of a concession without competitive procedures (see paras. 277 and 279).

Recommendation 29

266. The text of the draft recommendation was as follows:

"The law may require that the following procedures be observed in direct negotiations:

"*(a)* The contracting authority should publish a notice of the negotiation proceedings and engage in negotiations with as many companies judged capable of carrying out the project as circumstances permit;

"*(b)* The contracting authority should establish and make known to bidders the qualification criteria and the criteria for evaluating the proposals and should determine the relative weight to be accorded to each such criterion and the manner in which criteria are to be applied in the evaluation of the proposals;

"*(c)* The contracting authority should treat proposals in a manner that avoids the disclosure of their contents to competing bidders;

"*(d)* Any such negotiations between the contracting authority and bidders should be confidential and one party to the negotiations should not reveal to any other person any technical, price or other commercial information relating to the negotiations without the consent of the other party;

"*(e)* Following completion of negotiations, the contracting authority should request all bidders remaining in the proceedings to submit, by a specified date, a best and final offer with respect to all aspects of their proposals;

"*(f)* Proposals should be evaluated and ranked according to the criteria for the evaluation of proposals established by the contracting authority."

267. The view was expressed that recommendation 29 was unnecessarily detailed on procedural matters of limited practical relevance, since a contracting authority faced with the exceptional circumstances referred to in recommendation 28 might often have no choice but to negotiate with only one company. For the conceivably rare cases where the contracting authority had more choices, it would be sufficient if the notes referred to measures to introduce competitiveness into such negotiations, such as those referred to in subparagraphs *(b)*, *(c)* and *(e)*, which, however, in their current form, were not needed. More important than those provisions was the disclosure of the reasons for awarding a concession without competitive procedures, a requirement that should be expressly made in recommendation 29. As for subparagraph *(d)*, which was said to be relevant for the final negotiations under recommendations 26 and 27 as well, it was proposed that it should become a separate recommendation and be placed before recommendation 36.

268. Strong support was expressed for those proposals, which were generally felt to enhance transparency in the award of concessions without the use of competitive procedures. It was pointed out, however, that the requirement of publicity concerning the reasons for awarding a concession without competitive procedures should be weighted against other reasons of public interest, in particular the need for confidentiality of decisions on matters of national defence or security.

269. After deliberation, the Commission agreed that recommendation 29 should be redrafted along the following lines:

"The law may require that the following procedures be observed for the award of a concession without competitive procedures:

"*(a)* The contracting authority should publish a notice of its intention to award a concession for the implementation of the proposed project and should engage in negotiations with as many companies judged capable of carrying out the project as circumstances permit;

"*(b)* Offers should be evaluated and ranked according to the criteria for the evaluation of proposals established by the contracting authority;

"*(c)* Except for the situation referred to in recommendation 28 *(c)*, the contracting authority should cause a public notice of the concession award to be published, disclosing the specific circumstances and reasons for the award of the concession without competitive procedures."

270. The Commission noted that, as a result of the adoption of the new text for recommendation 29, a series of consequential amendments might be required in the relevant notes in chapter III (A/CN.9/471/Add.4) and possibly in other legislative recommendations and parts of the draft legislative guide. The Commission requested the secretariat to ensure that the necessary changes were made.

Unsolicited proposals

Recommendation 30

271. The text of the draft recommendation was as follows:

"By way of exception to the selection procedures described in legislative recommendations 14-27, the contracting authority may be authorized to handle unsolicited proposals pursuant to specific procedures established by the law for handling unsolicited proposals, provided that such proposals do not relate to a project for which selection procedures have been initiated or announced by the contracting authority."

272. The Commission adopted recommendation 30.

Recommendation 31

273. The text of the draft recommendation was as follows:

"Following receipt and preliminary examination of an unsolicited proposal, the contracting authority should inform the proponent, within a reasonably short period, whether or not there is a potential public interest in the project. If the project is found to be in the public interest, the contracting authority should invite the proponent to submit a formal proposal in sufficient detail to allow the contracting authority to make a proper evaluation of the concept or technology and determine whether the proposal meets the conditions set forth in the law and is likely to be successfully implemented on the scale of the proposed project."

274. The Commission adopted recommendation 31.

Recommendation 32

275. The text of the draft recommendation was as follows:

"The proponent should retain title to all documents submitted throughout the procedure and those documents should be returned to it in the event the proposal is rejected."

276. The Commission adopted recommendation 32.

Recommendation 33

277. The text of the draft recommendation was as follows:

"The contracting authority should initiate competitive selection procedures under recommendations 14-27 above if it is found that the envisaged output of the project can be achieved without the use of a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights or if the proposed concept or technology is not truly unique or new. The author of the unsolicited proposal should be invited to participate in such proceedings and might be given a premium for submitting the proposal."

278. The Commission adopted recommendation 33.

Recommendation 34

279. The text of the draft recommendation was as follows:

"If it appears that the envisaged output of the project cannot be achieved without using a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights, the contracting authority should seek to obtain elements of comparison for the unsolicited proposal. For that purpose, the contracting authority should publish a description of the essential output elements of the proposal with an invitation for other interested parties to submit alternative or comparable proposals within a certain reasonable period."

280. The Commission adopted recommendation 34.

Recommendation 35

281. The text of the draft recommendation was as follows:

"The contracting authority may engage in negotiations with the author of the unsolicited proposal if no alternative proposals are received, subject to approval by a higher authority. If alternative proposals are submitted, the contracting authority should invite all the proponents to negotiations in accordance with the provisions of legislative recommendation 29 *(b)-(f)*."

282. The Commission adopted recommendation 35 (but see paras. 269 and 270).

Review procedures

Recommendation 36

283. The text of the draft recommendation was as follows:

"Bidders who claim to have suffered, or who may suffer, loss or injury owing to a breach of a duty imposed on the contracting authority by the law may seek review of the contracting authority's acts in accordance with the laws of the host country."

284. The Commission agreed that recommendation 36 should be the final recommendation on the selection of the concessionaire and that its accompanying notes should be moved to the end of chapter III (A/CN.9/471/Add.4). Subject to those changes, the Commission adopted recommendation 36.

Notice of project award

Recommendation 37

285. The text of the draft recommendation was as follows:

"The contracting authority should cause a notice of the award of the project to be published. The notice should identify the concessionaire and include a summary of the essential terms of the project agreement."

286. The Commission adopted recommendation 37.

Record of selection and award proceedings

Recommendation 38

287. The text of the draft recommendation was as follows:

"The contracting authority should keep an appropriate record of key information pertaining to the selection and award proceedings. The law should set forth the requirements for public access."

288. Subject to restoring the second sentence of the recommendation in the French version, where it did not appear, the Commission adopted recommendation 38.

CHAPTER IV. CONSTRUCTION AND OPERATION OF INFRASTRUCTURE

289. The Commission requested the secretariat to revise the title of the chapter so as to reflect more clearly the issues discussed therein, which were largely concerned with the contents of the project agreement and its relation to the construction and operation of infrastructure. Subsequently the secretariat proposed the following title, which was approved by the Commission: "Construction and operation: legislative framework and project agreement".

General provisions on the project agreement

Recommendation 39

290. The text of the draft recommendation was as follows:

> "The law might identify the core terms to be provided in the project agreement, which may include those terms referred to in recommendations 39-65 below."

291. Subject to changing the cross-reference to legislative recommendations 40-67, the Commission adopted recommendation 39.

Recommendation 40

292. The text of the draft recommendation was as follows:

> "Unless otherwise provided, the project agreement is governed by the law of the host country."

293. In response to a question as to the meaning of the opening phrase of the recommendation, it was pointed out that the issue of the law governing the project agreement had been the subject of extensive debate at the thirty-second session of the Commission. The flexible wording eventually agreed upon by the Commission was intended to take into account the fact that, under some legal systems, provisions allowing for the application of a law other than the law of the host country could only be of a statutory nature, whereas in other legal systems the contracting authority might have the power to agree on the applicable law. The Commission adopted recommendation 40.

Organization of the concessionaire

Recommendation 41

294. The text of the draft recommendation was as follows:

> "The contracting authority should have the option to require that the selected bidders establish an independent legal entity with a seat in the country."

295. The Commission adopted recommendation 41.

Recommendation 42

296. The text of the draft recommendation was as follows:

> "The project agreement should specify the minimum capital of the project company and the procedures for obtaining the approval of the contracting authority to its statutes and by-laws of the project company and fundamental changes therein."

297. The Commission adopted recommendation 42.

The project site and easements

Recommendation 43

298. The text of the draft recommendation was as follows:

> "The project agreement should specify, as appropriate, which assets will be public property and which assets will be the private property of the concessionaire. The project agreement should identify which assets the concessionaire is required to transfer to the contracting authority or to a new concessionaire upon expiry or termination of the project agreement; which assets the contracting authority, at its option, may purchase from the concessionaire; and which assets the concessionaire may freely remove or dispose of upon expiry or termination of the project agreement."

299. The Commission adopted recommendation 43, subject to amending the heading to read "project site, assets and easements".

Recommendation 44

300. The text of the draft recommendation was as follows:

> "The contracting authority should assist the concessionaire in the acquisition of easements needed for the operation, construction and maintenance of the facility. The law might empower the concessionaire to enter upon, transit through, do work or fix installations upon property of third parties, as required for the construction and operation of the facility."

301. The view was expressed that the reference in the first sentence of the recommendation to assistance by the contracting authority in connection with the acquisition of easements was unclear and possibly in conflict with the second sentence of the recommendation. It was proposed that the first sentence of the recommendation be expanded to reflect the idea that the contracting authority should assist in securing the land and other property required by the concessionaire to carry out the project. The Commission heard expressions of strong support for that proposal. It was pointed out that, in practice, considerable problems in the implementation of infrastructure projects might be caused by delay in acquiring the land for the project site. That problem, it was pointed out, had been identified in paragraphs 20-22 of chapter IV, "Construction and opera-

tion of infrastructure" (see A/CN.9/471/Add.5), but no legislative recommendation reflected the discussion in those notes. The legislative guide, it was stated, had an important role to play in reminding contracting authorities, by a legislative recommendation, of their responsibility for providing the concessionaire with the assistance required to secure an appropriate site for the project.

302. The countervailing view, which also met with strong support, was that issues related to acquisition and ownership of land were foreign to recommendation 44, which was only concerned with easements that might be needed by the concessionaire in connection with the construction, operation or maintenance of the infrastructure facility. The perceived lack of clarity of the sentence was attributable to the use of the phrase "acquisition of easements", which was said to create difficulties of interpretation in some legal systems. If the Commission felt that the first sentence of the recommendation was unclear, it would be preferable to delete the sentence rather than to expand it as had been proposed.

303. The Commission considered various proposals made to address the concerns that had been expressed. It was pointed out that, in paragraphs 30-32 of chapter IV, "Construction and operation of infrastructure" (see A/CN.9/471/Add.5), two alternative ways were identified for the concessionaire to obtain the easements it required: either by appropriate arrangements between the concessionaire and the owners of the property concerned or by legislation that empowered the concessionaire to enter, pass through or do work or fix installations upon the property of third parties. It was thus proposed that the connection between the two sentences of the recommendation be clarified by adding words such as "[A]nother solution might be for the law to empower" at the beginning of the second sentence. In response, it was stated that the proposal might indeed be useful to clarify the way in which the legislative recommendation reflected the discussion of legal problems related to easements in the notes. However, by dealing only with easements, the proposal did not provide an adequate answer to questions related to the project site itself, which had been identified in the notes to the legislative recommendations.

304. After consideration of the different views and proposals heard by the Commission, the prevailing view was that the first sentence of the legislative recommendation should be redrafted to read: "The contracting authority should assist the concessionaire in obtaining such rights related to the project site as necessary for the operation, construction and maintenance of the facility." Subject to that amendment and to the addition of the word "maintenance" in the second sentence, the Commission adopted recommendation 44. The Commission requested the secretariat to make the necessary adjustments to the notes in order to align them with the new text of the recommendation. It was generally understood that the recommendation did not affect the property regime in the host country.

Financial arrangements

Recommendation 45

305. The text of the draft recommendation was as follows:

"The law should enable the concessionaire to collect tariffs or user fees for the use of the facility or the services it provides. The project agreement should provide for methods and formulas for the adjustment of those tariffs or user fees."

306. The Commission adopted recommendation 45.

Recommendation 46

307. The text of the draft recommendation was as follows:

"Where the tariffs or fees charged by the concessionaire are subject to external control by a regulatory body, the law should set forth the mechanisms for periodic and extraordinary revisions of the tariff adjustment formulas."

308. The Commission adopted recommendation 46.

Recommendation 47

309. The text of the draft recommendation was as follows:

"The contracting authority should have the power, where appropriate, to agree to make direct payments to the concessionaire as a substitute for, or in addition to, service charges to be paid by the users or to enter into commitments for the purchase of fixed quantities of goods or services."

310. The Commission adopted recommendation 47.

Security interests

Recommendation 48

311. The text of the draft recommendation was as follows:

"The concessionaire should be responsible for raising the funds required to construct and operate the infrastructure facility and, for that purpose, should have the right to secure any financing required for the project with a security interest in any of its property, with a pledge of shares of the project company, with a pledge of the proceeds and receivables arising out of the concession or with other suitable security, without prejudice to any rule of law that might prohibit the creation of security interests in public property in the possession of the concessionaire."

312. Subject to the deletion of the words "in the possession of the concessionaire", the Commission adopted recommendation 48.

Assignment of the concession

Recommendation 49

313. The text of the draft recommendation was as follows:

"The project agreement should set forth the conditions under which the contracting authority might give its con-

sent to an assignment of the concession, including the acceptance by the new concessionaire of all obligations under the project agreement and evidence of the new concessionaire's technical and financial capability as necessary for providing the service. The concession should not be assigned to third parties without the consent of the contracting authority."

314. The view was expressed that the second sentence of the recommendation was overly restrictive and might hinder the contracting authority's ability to enter into a direct agreement with lenders for the substitution of the concessionaire by another entity selected in agreement with the lenders in case of default by the concessionaire. In response, it was pointed out that infrastructure concessions, as generally understood by the Commission, were awarded in the light of the concessionaire's technical and financial capabilities and, as such, were not freely transferable, a principle that was reflected in the second sentence. The possibility given to lenders to appoint a substitute concessionaire, in agreement with the contracting authority (a situation covered by the first sentence of the recommendation), constituted an exception accepted by the Commission to the general rule stated in the second sentence.

315. Subject to reversing the order of the two sentences, in order to clarify the way they related to one another, the Commission adopted recommendation 49.

Transfer of controlling interest in the project company

Recommendation 50

316. The text of the draft recommendation was as follows:

"The transfer of a controlling interest in the capital of a concessionaire company may require the consent of the contracting authority."

317. The view was expressed that the recommendation was overly restrictive, since there were circumstances where restrictions on the transfer of a controlling interest in a concessionaire company might not be reasonable. In response, it was noted that recommendation 50 shared the same rationale as recommendation 49. Nevertheless, with a view to making it clear that there might be exceptions to such a rule, it was agreed that words such as "unless otherwise provided" should be added at the end of the recommendation.

318. Subject to that amendment and the deletion of the words "the capital of", which were deemed unnecessary, the Commission adopted recommendation 50.

Construction works

Recommendation 51

319. The text of the draft recommendation was as follows:

"The project agreement should set forth the procedures for the review and approval of construction plans and specifications by the contracting authority, the contracting authority's right to monitor the construction of, or improvements to, the infrastructure facility, the conditions under which the contracting authority may order variations in respect of construction specifications and the procedures for testing and final inspection, approval and acceptance of the facility, its equipment and appurtenances."

320. The Commission adopted recommendation 51.

Operation of infrastructure

Recommendation 52

321. The text of the draft recommendation was as follows:

"The project agreement should set forth, as appropriate, the extent of the concessionaire's obligations to ensure:

"*(a)* The adaptation of the service so as to meet the actual demand for the service;

"*(b)* The continuity of the service;

"*(c)* The availability of the service under essentially the same conditions to all users;

"*(d)* The non-discriminatory access, as appropriate, of other service providers to any public infrastructure network operated by the concessionaire."

322. It was suggested that the words "evolution of demand" should be substituted for the words "actual demand" in subparagraph *(a)*, so as to express more clearly the idea that the concessionaire was under an obligation to ensure the adaptation of the service to both quantitative and qualitative changes of demand. It was also suggested that subparagraph *(c)* should refer to the concessionaire's obligation to "ensure equal access" of users to the service. Lastly, it was suggested that subparagraph *(d)* should refer to the need to ensure interconnection between infrastructure networks under objective, transparent and non-discriminatory conditions.

323. Noting that the issues discussed in the recommendation had been extensively debated at its previous sessions, the Commission adopted recommendation 52 without the proposed amendments.[5]

Recommendation 53

324. The text of the draft recommendation was as follows:

"The project agreement should set forth:

"*(a)* The extent of the concessionaire's obligation to provide the contracting authority or a regulatory body, as appropriate, with reports and other information on its operations;

[5]Ibid., *Fifty-third Session, Supplement No. 17* (A/53/17), paras. 96-114, and ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), paras. 185-187.

"*(b)* The procedures for monitoring the concessionaire's performance and for taking such reasonable actions as the contracting authority or a regulatory body may find appropriate, to ensure that the infrastructure facility is properly operated and the services are provided in accordance with the applicable legal and contractual requirements."

325. The Commission adopted recommendation 53.

Recommendation 54

326. The text of the draft recommendation was as follows:

"The concessionaire should have the right to issue and enforce rules governing the use of this facility, subject to the approval of the contracting authority or a regulatory body."

327. The Commission adopted recommendation 54.

General contractual arrangements

Recommendation 55

328. The text of the draft recommendation was as follows:

"The contracting authority may reserve the right to review and approve major contracts to be entered into by the concessionaire, in particular contracts with the concessionaire's own shareholders or related persons. The contracting authority's approval should not normally be withheld except where the contracts contain provisions inconsistent with the project agreement or manifestly contrary to the public interest or to mandatory rules of a public law nature."

329. The Commission adopted recommendation 55.

Recommendation 56

330. The text of the draft recommendation was as follows:

"The concessionaire and its lenders, insurers and other contracting partners should be free to choose the law applicable to govern their contractual relations, except where such a choice would violate the host country's public policy."

331. The Commission adopted recommendation 56.

Recommendation 57

332. The text of the draft recommendation was as follows:

"The project agreement should set forth:

"*(a)* The forms, duration and amounts of the guarantees of performance that the concessionaire may be required to provide in connection with the construction and the operation of the facility;

"*(b)* The insurance policies that the concessionaire may be required to maintain;

"*(c)* The compensation to which the concessionaire may be entitled following the occurrence of legislative changes or other changes in the economic or financial conditions that render the performance of the obligation substantially more onerous than originally foreseen. The project agreement should further provide mechanisms for revising the terms of the project agreement following the occurrence of any such changes;

"*(d)* The extent to which either party may be exempt from liability for failure or delay in complying with any obligation under the project agreement owing to circumstances beyond their reasonable control;

"*(e)* Remedies available to the contracting authority and the concessionaire in the event of default by the other party."

333. The Commission adopted recommendation 57.

Recommendation 58

334. The text of the draft recommendation was as follows:

"The project agreement should set forth the circumstances under which the contracting authority may temporarily take over the operation of the facility for the purpose of ensuring the effective and uninterrupted delivery of the service in the event of serious failure by the concessionaire to perform its obligations."

335. The Commission adopted recommendation 58.

Recommendation 59

336. The text of the draft recommendation was as follows:

"The contracting authority should be authorized to enter into agreements with the lenders providing for the appointment, with the consent of the contracting authority, of a new concessionaire to perform under the existing project agreement if the concessionaire seriously fails to deliver the service required or if other specified events occur that could justify the termination of the project agreement."

337. The Commission adopted recommendation 59.

CHAPTER V. DURATION, EXTENSION AND TERMINATION OF THE PROJECT AGREEMENT

Duration and extension of the project agreement

Recommendation 60

338. The text of the draft recommendation was as follows:

"The duration of the concession should be specified in the project agreement."

339. The Commission adopted recommendation 60.

Recommendation 61

340. The text of the draft recommendation was as follows:

"The term of the concession should not be extended, except under those circumstances specified in the law, such as:

"*(a)* Completion delay or interruption of operation due to the occurrence of circumstances beyond either party's reasonable control;

"*(b)* Project suspension brought about by acts of the contracting authority or other public authorities;

"*(c)* To allow the concessionaire to recover additional costs arising from requirements of the contracting authority not originally foreseen in the project agreement that the concessionaire would not be able to recover during the normal term of the project agreement."

341. A suggestion was made to replace in subparagraph *(a)* the concept of "circumstances beyond either party's reasonable control" by the expression "force majeure" (and to use the equivalent expression in the other language versions). This was suggested because the proposed term was widely known and understood in the context of various national laws. The Commission preferred to retain the current text, however, because it used an expression that conveyed the intended meaning but was less likely to be subject to possible different interpretations and meanings in national legal systems than the term "force majeure". It was noted that the current wording had been modelled on article 79 of the United Nations Sales Convention, which had also been used as a model in other international texts such as the UNCITRAL Legal Guide on Drawing Up International Contracts for the Construction of Industrial Works (chap. XXI, "Exemption clauses", para. 6). In order not to depart from those models, the Commission also did not accept the suggestion to delete the word "reasonable" from subparagraph *(a)*.

342. The Commission adopted recommendation 61.

Termination of the project agreement

Recommendation 62

343. The text of the draft recommendation was as follows:

"The contracting authority should have the right to terminate the project agreement:

"*(a)* In the event that it can no longer be reasonably expected that the concessionaire will be able or willing to perform its obligations, owing to insolvency, serious breach or otherwise;

"*(b)* For reasons of public interest, subject to payment of compensation to the concessionaire."

344. A proposal was made to replace in subparagraph *(a)* the words "it can no longer be reasonably expected that the concessionaire will be able" with the words "the concessionaire is unable". The proposal was not adopted because the suggested words would have implied that termination would be available only after it was established that the concessionaire was unable to perform its obligations. The policy underlying the subparagraph, in turn, was to allow termination already when it was reasonably certain that the concessionaire would be unable to perform its obligations. It was important to maintain the current wording in order to allow the contracting authority to terminate the concession soon enough to be able to find an alternative way of providing the public service.

345. The Commission adopted recommendation 62.

Recommendation 63

346. The text of the draft recommendation was as follows:

"The concessionaire should have the right to terminate the project agreement under exceptional circumstances specified in the law, such as:

"*(a)* In the event of serious breach by the contracting authority or other public authority as regards the fulfilment of their obligations under the project agreement;

"*(b)* In the event that the concessionaire's performance is rendered substantially more onerous as a result of variation orders or other acts of the contracting authority, unforeseen changes in conditions or acts of other public authorities and that the parties have failed to agree on an appropriate revision of the project agreement."

347. It was suggested that the recommendation should be reformulated so as to reflect the idea that, at least in some legal systems, the concessionaire's right to terminate the project agreement was based on grounds that were different from and were more restricted than the contracting authority's right to terminate the concession. The Commission did not accept the suggestion because it considered that the extent of the right of the concessionaire to terminate the project agreement (as compared to such a right of the contracting authority) was appropriately explained in the notes on the legislative recommendation (A/CN.9/471/Add.6, para. 28).

348. The Commission adopted recommendation 63.

Recommendation 64

349. The text of the draft recommendation was as follows:

"Either party should have the right to terminate the project agreement in the event that the performance of its obligations is rendered impossible by the occurrence of circumstances beyond either party's reasonable control. The parties should also have the right to terminate the project agreement by mutual consent."

350. The Commission adopted recommendation 64.

Consequences of expiry or termination of the project agreement

Recommendation 65

351. The text of the draft recommendation was as follows:

"The project agreement should lay down the criteria for establishing, as appropriate, the compensation to which the concessionaire may be entitled in respect of assets transferred to the contracting authority or to a new concessionaire or purchased by the contracting authority upon expiry or termination of the project agreement."

352. The Commission adopted recommendation 65.

Recommendation 66

353. The text of the draft recommendation was as follows:

"The project agreement should stipulate how compensation due to either party in the event of termination of the project agreement is to be calculated, providing, where appropriate, for compensation for the fair value of works performed under the project agreement and for losses, including lost profits."

354. The Commission adopted recommendation 66.

Recommendation 67

355. The text of the draft recommendation was as follows:

"The project agreement should set out, as appropriate, the rights and obligations of the parties with respect to:

"*(a)* The transfer of technology required for the operation of the facility;

"*(b)* The training of the contracting authority's personnel or of a successor concessionaire in the operation and maintenance of the facility;

"*(c)* The provision, by the concessionaire, of operation and maintenance services and the supply of spare parts, if required, for a reasonable period after the transfer of the facility to the contracting authority or to a successor concessionaire."

356. The Commission adopted recommendation 67.

CHAPTER VI. SETTLEMENT OF DISPUTES

Disputes between the contracting authority and the concessionaire

Recommendation 68

357. The text of the draft recommendation was as follows:

"The contracting authority should be free to agree to dispute settlement mechanisms regarded by the parties as suited to the needs of the project, including arbitration."

358. The suggestion was made to delete the words "including arbitration", as arbitration was one of the methods of settling disputes and it should not be singled out in the recommendation to the exclusion of others. Considerable support was expressed for that suggestion and reasoning. However, there was also wide support for retaining the words in the recommendation, since arbitration, which was crucial for the settlement of international disputes, was the only binding non-judicial method that was typically required by investors in international privately financed infrastructure projects. The recommendation was also deemed necessary in view of the fact that a number of countries were modifying their laws to allow contracting authorities to use arbitration in privately financed infrastructure projects. A further suggestion was to clarify that the freedom to agree to arbitrate included the freedom to agree to arbitration in a country other than the host country.

359. After weighing the various arguments and wishing to present a balanced text reflecting the differing views and also taking into consideration the explanations given in the notes (A/CN.9/471/Add.7, paras. 30-38), the Commission decided to delete the words "including arbitration". However, in order to reflect the importance of arbitration in international privately financed infrastructure projects, it decided to reformulate the third sentence of paragraph 30 of the notes to the effect that "[A]rbitration, often in a country other than the host country, was preferred and in many cases required by private investors and lenders". The Commission also reformulated the expression in the recommendation "regarded by the parties as suited" to read "regarded by the parties as best suited".

360. The Commission decided to add in paragraph 27 of the notes (A/CN.9/471/Add.7) the words "or arbitrate" after the words "to accept the recommendations voluntarily rather than litigate" and to add the words "or arbitration" after the words "[A]part from avoiding potentially protracted litigation".

361. Subject to those modifications, the Commission adopted recommendation 68.

*Recommendation 68*bis

362. The text of the draft recommendation was as follows:

"[The law should indicate whether and, if so, to what extent the contracting authority may raise a plea of sovereign immunity, both as a bar to the commencement of arbitral or judicial proceedings and as a defence against enforcement of the award or judgement.]"

363. Wide support was expressed for the deletion of the recommendation. It was noted that the recommendation raised controversial issues that had not yet been settled in international law; that the recommendation did not and could not deal with the issue of whether sovereign immunity was a matter requiring general treatment in legislation

or was to be left to the discretion of the executive branch of the Government; and that sovereign immunity was currently expected to be considered by the Sixth Committee of the General Assembly and the outcome of that consideration was not yet known. Objections were also raised with regard to the proposal on the ground that the recommendation and the accompanying notes did not call for a unified or harmonized legislative approach to the matter and did not suggest any particular solution to be adopted. The recommendation was merely calling upon States to clarify whether and, if so, to what extent the contracting authority might raise a plea of sovereign immunity. Nevertheless, the prevailing view was that recommendation 68*bis* should be deleted.

364. The Commission turned its attention to the notes accompanying the recommendation and accepted the suggestion to replace in paragraph 36 the words "may not plead sovereign immunity" with the words "may or may not plead sovereign immunity" and to transpose the amended paragraph 36 to precede paragraph 33. The Commission did not accept a suggestion to delete the last sentence of paragraph 33.

Disputes between the concessionaire and its lenders, contractors and suppliers

Recommendation 69

365. The text of the draft recommendation was as follows:

> "The concessionaire should be free to choose the appropriate mechanisms for settling commercial disputes among the project promoters, or disputes between the concessionaire and its lenders, contractors, suppliers and other business partners."

366. The Commission adopted recommendation 69 subject to the addition of the words "and the project promoters" before the words "should be free".

Disputes between the concessionaire and its customers

Recommendation 70

367. The text of the draft recommendation was as follows:

> "The concessionaire may be required to make available simplified and efficient mechanisms for handling claims submitted by its customers or users of the infrastructure facility."

368. The Commission adopted recommendation 70. As regards the accompanying notes (A/CN.9/471/Add.7, para. 43, in particular the second and third sentences), it was observed that, while lenders frequently preferred that arbitration be used for solving disputes arising out of the project agreement and increasingly also for disputes between different lenders, judicial proceedings were often the preferred method for disputes arising out of loan agreements between the lenders and the concessionaire. The Commission requested the secretariat to reformulate the paragraph to reflect that circumstance.

C. Finalization of the legislative guide

369. The Commission heard expressions of strong support for proposals for rearranging the chapters of the legislative guide, in particular a proposal to combine chapter VII, "Other relevant areas of law" (A/CN.9/471/Add.8), with chapter I, "General legislative and institutional framework" (A/CN.9/471/Add.2). Nevertheless, the Commission decided to retain the current structure of the guide.

370. The Commission decided that all legislative recommendations should appear together before the notes thereto, rather than at the beginning of the chapters to which each block of recommendations pertained.

371. The Commission requested the secretariat to review and revise, as appropriate, the text of the notes to the legislative recommendations in order to ensure consistency with the recommendations, as adopted by the Commission, as well as terminological accuracy and consistency in the various language versions. The Commission invited its members and observers participating at the current session to submit their linguistic observations or suggestions directly to the secretariat.

D. Adoption of the legislative guide

372. At its 703rd meeting, on 29 June 2000, the Commission adopted the *Legislative Guide*, consisting of the legislative recommendations (A/CN.9/471/Add.9), with the amendments adopted by the Commission at the current session (see paras. 195-368 above) and the notes to the legislative recommendations (A/CN.9/471/Add.1-8), which the secretariat was authorized to finalize in the light of the deliberations of the Commission. The Commission mandated the publication of the *Guide* under the title "UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects" and requested the secretariat to transmit the text of the *Guide* to Governments and other interested bodies. The Commission also recommended that all States give favourable consideration to the *Legislative Guide* when revising or adopting legislation relevant to privately financed infrastructure projects. It furthermore requested the secretariat to ensure the widest possible dissemination of the *Guide*.

373. Upon the adoption of the Legislative Guide, the Commission heard a statement by the representative of the Economic Commission for Europe (ECE), who congratulated the Commission on the completion of the *Guide*, which was expected to become a useful instrument for domestic legislators and policy makers. While domestic policies for infrastructure in the early 1990s had given preference to ad hoc contractual solutions, there was growing awareness of the importance of an adequate legislative and regulatory framework for privately financed infrastructure projects. ECE had developed considerable expertise in various areas related to those projects, in particular economic, financial and contractual aspects, and was preparing guidelines to assist domestic public authorities in negotiating project agreements. ECE stood ready to assist the secretariat of the Commission in disseminating the *Legislative Guide* and to cooperate in other areas of common interest.

374. The Commission took note with appreciation of the statement of the representative of ECE and expressed its gratitude to ECE for its interest in cooperating with the UNCITRAL secretariat.

E. Possible future work in the area of privately financed infrastructure projects

375. The view was expressed that the *Legislative Guide*, as it stood, would be a useful reference for domestic legislators in establishing a legal framework favourable to private investment in public infrastructure. Nevertheless, it would be desirable for the Commission to formulate more concrete guidance in the form of model legislative provisions or even in the form of a model law dealing with specific issues. Such a proposal had been made at the early stages of the preparation of the *Legislative Guide* and had since been reiterated on various occasions. The preference that the Commission had expressed for the preparation of a *Legislative Guide* had been mainly attributable to a lack of consensus as to which of the various issues dealt with in the Guide might be suitable subjects of model legislative provisions. However, in the course of that work, a clearer understanding had developed within the Commission with regard to the issues involved and the options available. The legislative recommendations adopted by the Commission at the current session reflected that common understanding and represented a good starting point for future work aimed at providing more concrete guidance, for which there was a pressing need, in particular in countries with economies in transition and in developing countries.

376. Strong support was expressed for the above proposals. It was stated that concrete legislative guidance in the form of a model law or model legislative provisions would be especially useful for legislators and policy makers in countries that lacked the expertise or the human resources to analyse in depth the various issues discussed in the *Legislative Guide*. It was also said that, in its current form, the *Guide* was rather lengthy and some of the legislative recommendations were not easy to translate into legislative language. As to the appropriate time for starting such future work, views differed as to whether the Commission should take a decision at its current session or should await the completion of other ongoing projects.

377. Strong objections were voiced to the above proposals. As a matter of principle, the proposals were objected to in the light of the potential difficulty and undesirability of formulating model legislative provisions on privately financed infrastructure projects in view of the diversity of national legal traditions and administrative practices. Furthermore, those projects typically raised highly complex legal issues, some of which concerned matters of public policy. The legislative recommendations had been carefully drafted by the Commission to take into account that diversity. They represented the widest possible consensus that could have been achieved on the issues dealt with. The Commission was reminded of its overall workload and of the limited resources available to its secretariat and was urged not to embark upon a potentially time-consuming exercise of doubtful feasibility.

378. Other reservations, while not questioning in principle the desirability or the feasibility of preparing a model law or model legislative provisions, were based on the need to allow the *Legislative Guide* to be first tested in practice before future work was undertaken in the same field. Concern was expressed that an immediate decision to prepare a model law or model legislative provisions might be interpreted as a sign of dissatisfaction by the Commission with the work that had just been accomplished. The Commission should give itself sufficient time to follow up on the use made of the *Legislative Guide* by domestic legislators and policy makers, to whom the Guide was addressed, so as to be in a better position to make a decision on the desirability of preparing a new instrument.

379. After consideration of the various views expressed, it was decided that the question of the desirability and feasibility of preparing a model law or model legislative provisions on selected issues covered by the *Legislative Guide* should be considered by the Commission at its thirty-fourth session, in 2001. In order to assist the Commission in making an informed decision on the matter, it was agreed that it would be desirable for the secretariat, in cooperation with other interested international organizations or international financial institutions, to organize a colloquium to disseminate knowledge about the *Legislative Guide*. The participants in the colloquium, who should include, to the extent possible, experts from the various legal traditions and economic systems represented at the Commission, should be invited to make recommendations on the desirability and, especially, the feasibility of a model law or model legislative provisions in the area of privately financed infrastructure projects for consideration by the Commission at its thirty-fourth session. Alternatively, should such a colloquium not be feasible, the secretariat was requested to seek the views of outside experts representing, to the widest extent possible, the various legal traditions and economic systems represented at the Commission on the matter and to prepare a report on the conclusions of its consultations with experts for consideration by the Commission at its thirty-fourth session.

V. ELECTRONIC COMMERCE

A. Draft uniform rules on electronic signatures

380. It was recalled that the Commission, at its thirtieth session, in 1997, had endorsed the conclusions reached by the Working Group on Electronic Commerce at its thirty-first session with respect to the desirability and feasibility of preparing uniform rules on issues of digital signatures and certification authorities and possibly on related matters (see A/CN.9/437, paras. 156 and 157). The Commission entrusted the Working Group with the preparation of uniform rules on the legal issues of digital signatures and certification authorities.[6] The Working Group began the preparation of uniform rules for electronic signatures at its thirty-second session (January 1998) on the basis of a note prepared by the secretariat (A/CN.9/WG.IV/WP.73). At its thirty-first session, in 1998, the Commission had before it the report of the Working Group (A/CN.9/446). The Com-

[6]Ibid., *Fifty-second Session, Supplement No. 17* (A/52/17), paras. 249-251.

mission noted that the Working Group, throughout its thirty-first and thirty-second sessions, had experienced manifest difficulties in reaching a common understanding of the new legal issues that had arisen from the increased use of digital and other electronic signatures. However, it was generally felt that the progress achieved so far indicated that the draft uniform rules on electronic signatures were progressively being shaped into a workable structure. The Commission reaffirmed the decision it had taken at its thirtieth session as to the feasibility of preparing such uniform rules and noted with satisfaction that the Working Group had become generally recognized as a particularly important international forum for the exchange of views regarding the legal issues of electronic commerce and for the preparation of solutions to those issues.[7]

381. The Working Group continued its work at its thirty-third (July 1998) and thirty-fourth (February 1999) sessions on the basis of notes prepared by the secretariat (A/CN.9/WG.IV/WP.76, 79 and 80). At its thirty-second session, in 1999, the Commission had before it the reports of the Working Group on the work of those two sessions (A/CN.9/454 and A/CN.9/457, respectively). While the Commission generally agreed that significant progress had been made in the understanding of the legal issues of electronic signatures, it was also felt that the Working Group had been faced with difficulties in building a consensus as to the legislative policy on which the uniform rules should be based. After discussion, the Commission reaffirmed its earlier decisions as to the feasibility of preparing such uniform rules and expressed its confidence that more progress could be accomplished by the Working Group at its forthcoming sessions. While it did not set a specific time-frame for the Working Group to fulfil its mandate, the Commission urged the Group to proceed expeditiously with the completion of the draft uniform rules. An appeal was made to all delegations to renew their commitment to active participation in the building of a consensus with respect to the scope and content of the draft uniform rules.[8]

382. The Working Group continued its work at its thirty-fifth (September 1999) and thirty-sixth (February 2000) sessions on the basis of notes prepared by the secretariat (A/CN.9/WG.IV/WP. 82 and 84). At the current session, the Commission had before it the report of the Working Group on the work of those two sessions (A/CN.9/465 and 467, respectively). It was noted that the Working Group, at its thirty-sixth session, had adopted the text of articles 1 and 3-12 of the uniform rules. Some issues remained to be clarified as a result of the decision by the Working Group to delete the notion of enhanced electronic signature from the draft uniform rules. A concern was expressed that, depending on the decisions to be made by the Working Group with respect to articles 2 and 13, the remainder of the draft provisions might need to be re-examined to avoid creating a situation where the standard set by the uniform rules would apply equally to electronic signatures that ensured a high level of security and to low-value certificates that might be used in the context of electronic communications that were not intended to carry significant legal effect.

383. After discussion, the Commission expressed its appreciation for the efforts made by the Working Group and the progress achieved in the preparation of the draft uniform rules on electronic signatures. The Working Group was urged to complete its work with respect to the draft uniform rules at its thirty-seventh session and to review the draft guide to enactment to be prepared by the secretariat.

B. Future work in the field of electronic commerce

384. The Commission held a preliminary exchange of views regarding future work in the field of electronic commerce. Three topics were suggested as indicating possible areas where work by the Commission would be desirable and feasible. The first dealt with electronic contracting, considered from the perspective of the United Nations Sales Convention, which was generally felt to constitute a readily acceptable framework for on-line contracts dealing with the sale of goods. It was pointed out that, for example, additional studies might need to be undertaken to determine the extent to which uniform rules could be extrapolated from the United Nations Sales Convention to govern dealings in services or "virtual goods", that is, items (such as software) that might be purchased and delivered in cyberspace. It was widely felt that, in undertaking such studies, careful attention would need to be given to the work of other international organizations such as the World Intellectual Property Organization (WIPO) and the World Trade Organization.

385. The second topic was dispute settlement. It was noted that the Working Group on Arbitration had already begun discussing ways in which current legal instruments of a statutory nature might need to be amended or interpreted to authorize the use of electronic documentation and, in particular, to do away with existing requirements regarding the written form of arbitration agreements. It was generally agreed that further work might be undertaken to determine whether specific rules were needed to facilitate the increased use of on-line dispute settlement mechanisms. In that context, it was suggested that special attention might be given to the ways in which dispute settlement techniques such as arbitration and conciliation might be made available to both commercial parties and consumers. It was widely felt that the increased use of electronic commerce tended to blur the distinction between consumers and commercial parties. However, it was recalled that, in a number of countries, the use of arbitration for the settlement of consumer disputes was restricted for reasons involving public policy considerations and might not easily lend itself to harmonization by international organizations. It was also felt that attention should be paid to the work undertaken in that area by other organizations, such as the International Chamber of Commerce (ICC), the Hague Conference on Private International Law and WIPO, which was heavily involved in dispute settlement regarding domain names on the Internet.

386. The third topic was dematerialization of documents of title, in particular in the transport industry. It was suggested that work might be undertaken to assess the desirability and feasibility of establishing a uniform statutory framework to support the development of contractual

[7]Ibid., *Fifty-third Session, Supplement No. 17* (A/53/17), paras. 207-211.

[8]Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), paras. 308-314.

schemes currently being set up to replace traditional paper-based bills of lading by electronic messages. It was widely felt that such work should not be restricted to maritime bills of lading, but should also envisage other modes of transportation. In addition, outside the sphere of transport law, such a study might also deal with issues of dematerialized securities. It was pointed out that the work of other international organizations on those topics should also be monitored.

387. After discussion, the Commission welcomed the proposal to undertake studies on the three topics. While no decision as to the scope of future work could be made until further discussion had taken place in the Working Group on Electronic Commerce, the Commission generally agreed that, upon completing its current task, namely, the preparation of draft uniform rules on electronic signatures, the Working Group would be expected, in the context of its general advisory function regarding the issues of electronic commerce, to examine, at its first meeting in 2001, some or all of the above-mentioned topics, as well as any additional topic, with a view to making more specific proposals for future work by the Commission at its subsequent meeting. It was agreed that work to be carried out by the Working Group could involve consideration of several topics in parallel as well as preliminary discussion of the contents of possible uniform rules on certain aspects of the above-mentioned topics.

388. Particular emphasis was placed by the Commission on the need to ensure coordination of work among the various international organizations concerned. In view of the rapid development of electronic commerce, a considerable number of projects with possible impact on electronic commerce were being planned or undertaken. The secretariat was requested to carry out appropriate monitoring and to report to the Commission as to how the function of coordination was fulfilled to avoid duplication of work and ensure harmony in the development of the various projects. The area of electronic commerce was generally regarded as one in which the coordination mandate given to UNCITRAL by the General Assembly could be exercised with particular benefit to the global community and deserved corresponding attention from the Working Group and the secretariat.

VI. SETTLEMENT OF COMMERCIAL DISPUTES

389. At its thirty-first session, the Commission held a special commemorative New York Convention Day on 10 June 1998 to celebrate the fortieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 10 June 1958). In addition to representatives of States members of the Commission and observers, some 300 invited persons participated in the event. The Secretary-General made the opening speech. In addition to speeches by participants in the diplomatic conference that had adopted the Convention, leading arbitration experts presented reports on matters such as the promotion of the Convention, its enactment and application. Reports were also made on matters beyond the Convention itself, such as the interplay between the Convention and other international legal texts on international commercial arbitration and on difficulties encountered in practice but addressed in existing legislative or non-legislative texts on arbitration.[9]

390. In reports presented at the commemorative conference, various suggestions were made for presenting to the Commission some of the problems identified in practice so as to enable it to consider whether any related work by the Commission would be desirable and feasible. At its thirty-first session, in 1998, with reference to the discussions at the New York Convention Day, the Commission had considered that it would be useful to engage in a discussion of possible future work in the area of arbitration at its thirty-second session, in 1999 and had requested the secretariat to prepare a note that would serve as a basis for the considerations of the Commission.[10]

391. At its thirty-second session, in 1999, the Commission had had before it the note it had requested, entitled "Possible future work in the area of international commercial arbitration" (A/CN.9/460).[11] Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission had generally considered that the time had arrived to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (1985), as well as the use of the UNCITRAL Arbitration Rules and the UNCITRAL Conciliation Rules, and to evaluate in the universal forum of the Commission the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.[12]

392. When the Commission discussed the topic, it left open the question of what form its future work might take. It was agreed that decisions on the matter should be taken later as the substance of proposed solutions became clearer. Uniform provisions might, for example, take the form of a legislative text (such as model legislative provisions or a treaty) or a non-legislative text (such as a model contractual rule or a practice guide). It was stressed that, even if an international treaty were to be considered, it was not intended to be a modification of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958).[13]

393. The Commission entrusted the work to one of its three working groups, which it named Working Group on

---

[10] *Official Records of the General Assembly, Fifty-third Session, Supplement No. 17* (A/53/17), para. 235.

[11] The note drew on ideas, suggestions and considerations expressed in different contexts, such as the New York Convention Day (*Enforcing Arbitration Awards under the New York Convention*, op. cit.); the Congress of the International Council for Commercial Arbitration, Paris, 3-6 May 1998 (*Improving the Efficiency of Arbitration Agreements and Awards: 40 Years of Application of the New York Convention, International Council for Commercial Arbitration Congress Series No. 9*, Kluwer Law International, 1999); and other international conferences and forums, such as the 1998 Freshfields lecture by Gerold Herrmann, "Does the world need additional uniform legislation on arbitration?" (*Arbitration International*, vol. 15 (1999), No. 3, p. 211).

[12] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 337.

[13] Ibid., paras. 337-376 and 380.

Arbitration, and decided that the priority items for the Working Group should be conciliation,[14] requirement of written form for the arbitration agreement,[15] enforceability of interim measures of protection[16] and possible enforceability of an award that had been set aside in the State of origin.[17]

394. At its current session, the Commission had before it the report of the Working Group on Arbitration, which had held its thirty-second session in Vienna from 20 to 31 March 2000 (A/CN.9/468).

395. The Commission took note of the report with satisfaction and commended the work accomplished so far. Various observations were made to the effect that the work on the items on the agenda of the Working Group was timely and necessary in order to foster the legal certainty and predictability in the use of arbitration and conciliation in international trade. The Working Group, in addition to the topics referred to it as a matter of priority, had identified a number of other topics, with various levels of priority, that had been suggested for possible future work (A/CN.9/468, paras. 107-109). The Commission reaffirmed the mandate of the Working Group to decide on the time and manner of dealing with those topics.

396. Several statements were made to the effect that, in general, the Working Group, in deciding the priorities of the future items on its agenda, should pay particular attention to what was feasible and practical and to issues where court decisions left the legal situation uncertain or unsatisfactory. Topics that were mentioned in the Commission as potentially worthy of consideration, in addition to those which the Working Group might identify as such, were the meaning and effect of the more-favourable-right provision of article VII of the 1958 New York Convention (A/CN.9/468, para. 109 *(k)*); raising claims in arbitral proceedings for the purpose of set-off and the jurisdiction of the arbitral tribunal with respect to such claims (para. 107 *(g)*); freedom of parties to be represented in arbitral proceedings by persons of their choice (para. 108 *(c)*); residual discretionary power to grant enforcement of an award notwithstanding the existence of a ground for refusal listed in article V of the 1958 New York Convention (para. 109 *(i)*); and the power by the arbitral tribunal to award interest (para. 107 *(j)*). It was noted with approval that, with respect to "on-line" arbitrations (i.e. arbitrations in which significant parts or even all of arbitral proceedings were conducted by using electronic means of communication) (para. 113), the Working Group on Arbitration would cooperate with the Working Group on Electronic Commerce. With respect to the possible enforceability of awards that had been set aside in the State of origin (para. 107 *(m)*), the view was expressed that the issue was not expected to raise many problems and that the case law that gave rise to the issue should not be regarded as a trend.

397. The Commission heard statements by observers on behalf of the Chartered Institute of Arbitrators and the International Union of Lawyers. In addition to expressing appreciation for the work on arbitration and conciliation by the Commission and commenting on various items considered by the Working Group, they offered to assist in that work. The Commission took note of those statements with appreciation.

398. The Commission took note of paragraph 115 of the report of the Working Group referring to the considerations of the ECE Advisory Group on the European Convention on International Commercial Arbitration. The Advisory Group had concluded, inter alia, that the European Convention (Geneva, 1961) *(a)* remained useful; *(b)* had utility beyond that of existing conventions (in particular, as a common set of minimum standards to be observed in international arbitration); and *(c)* could be made even more useful to both existing and potential new contracting States if it were updated. The Commission also noted the recommendation of the Advisory Group to modify article IV of the Convention and the Agreement relating to Application of the European Convention on International Commercial Arbitration and that no consensus had been reached as to whether any additional changes to the Convention should be made.

399. The Commission called for coordination between the Working Group on Arbitration and the ECE Advisory Group. It was of the view that the ECE work should not overlap the work undertaken at the global level by the Commission. It was also of the view that issues arising from the European Convention beyond those in article IV were of universal interest and that, if it was found that they required work at the international level, the Commission, because of its universal representation and tradition in working in the area of international commercial arbitration, was the proper forum to undertake such work, in cooperation with ECE. The Commission appealed to States members of the Commission and observer States to coordinate within their respective Governments the work of their delegates in the two organizations considering international commercial arbitration.

VII. INSOLVENCY LAW

400. At its thirty-second session, in 1999, the Commission had had before it a proposal by Australia (A/CN.9/462/Add.1) on possible future work in the area of insolvency law. The proposal referred to recent regional and global financial crises and the work undertaken in international forums in response to those crises. Reports from those forums stressed the need to strengthen the international financial system in three areas: transparency, accountability and management of international financial crises by domestic legal systems. According to those reports, strong insolvency and debtor-creditor regimes were important means of preventing or limiting financial crises and of facilitating rapid and orderly workouts from excessive indebtedness. The proposal before the Commission recommended that, in view of its universal membership, its previous successful work on cross-border insolvency and its established working relations with international organizations that had expertise and interest in the law of insol-

[14]Ibid., paras. 340-343.

[15]Ibid., paras. 344-350.

[16]Ibid., paras. 371-373.

[17]Ibid., paras. 374 and 375.

vency, the Commission was an appropriate forum for insolvency to be included in its agenda. The proposal urged that the Commission consider entrusting a working group with the development of a model law on corporate insolvency to foster and encourage the adoption of effective national corporate insolvency regimes.

401. The Commission had expressed its appreciation for the proposal. It noted that different work projects had been undertaken by other international organizations such as the International Monetary Fund (IMF), the World Bank and the International Bar Association on the development of standards and principles for insolvency regimes. The broad objective of those organizations, while differing in scope and working methods as a consequence of their respective mandates and membership, was to modernize insolvency practices and laws. The initiatives taken in those organizations demonstrated the need to assist States in reassessing their insolvency laws and practices. Those various initiatives, however, also needed strengthened coordination, where appropriate, so as to avoid inefficient duplication of work and to achieve consistent results.

402. Recognition was expressed in the Commission for the importance to all countries of strong insolvency regimes. It was felt that the type of insolvency regime that a country had adopted had become a "front-line" factor in international credit ratings. Concern was expressed, however, about the difficulties associated with work at the international level on insolvency legislation, which involved sensitive and potentially diverging socio-political choices. In view of those difficulties, it was feared that the work might not be brought to a successful conclusion. A universally acceptable model law was in all likelihood not feasible and any work to be done needed to take a flexible approach that would leave options and policy choices open to States. While the Commission heard expressions of support for such flexibility, it was generally agreed that the Commission could not take a final decision on committing itself to establishing a working group to develop model legislation or another text without further study of the work already being undertaken by other organizations and consideration of the relevant issues.

403. To facilitate that further study, the Commission had decided that one session of a working group should be held to ascertain what, in the current landscape of efforts, would be an appropriate product (such as a model law, model provisions, a set of principles or other type of text) and to define the scope of the issues to be included in that product. It was pointed out that the importance and urgency of work on insolvency law had been identified in a number of international organizations and there was wide agreement that more work was required in order to foster the development and adoption of effective national corporate insolvency regimes.[18] Pursuant to that decision, the Working Group on Insolvency Law had held an exploratory session in Vienna from 6 to 17 December 1999.

404. At its thirty-third session, the Commission had before it the report of the Working Group on the work of its twenty-second session (A/CN.9/469).

405. It was noted that the Working Group had considered key objectives of an insolvency regime and a number of core features of a national insolvency regime. The Working Group had then reviewed various possible forms that an instrument that the Commission might decide to prepare might take, such as a comparative study, a guide that outlined practices and policy choices, a legislative guide with a similar approach as the legislative guide on privately financed infrastructure projects and model statutory provisions. It was also noted that the Working Group had agreed that a universal, one-size-fits-all solution would not be feasible or desirable. However, there was agreement in the Working Group that a legislative approach should be followed (A/CN.9/469, paras. 125-134).

406. The Commission welcomed the report of the Working Group on Insolvency Law. There was general agreement in the Commission that a single model law on insolvency was neither feasible nor necessary. It was not feasible because national laws took different approaches and were making different policy choices in the area of insolvency law; it was therefore unrealistic to expect that a single universal model might be agreed upon. It was also not necessary to promote a single model, since it was more important for the facilitation of international trade to have a consistent and predictably applied insolvency regime than a uniform regime.

407. The Commission took note of the discussions in the Working Group concerning the possible need for a statutory text governing informal insolvency procedures including out-of-court restructuring, which would also include the possibility of binding dissenting creditors (A/CN.9/469, paras. 105–121). Reservations were expressed in the Commission regarding the proposition of developing such a regime. It was argued that informality and flexibility were important hallmarks of negotiations aiming at out-of-court restructuring and that subjecting such an informal process to scrutiny by a court or another body might disturb the process in an undesirable manner. It was also said that the best way to foster out-of-court restructuring procedures was to set up an effectively functioning regime governing formal, court-supervised insolvency proceedings. It was therefore suggested that any work on out-of-court restructuring should be considered together with, and in the broader context of, work towards a modern national insolvency regime.

408. Several references were made to the fact that various international organizations were considering (from different perspectives and aiming at not necessarily the same issues) the modernization of national insolvency regimes. Those organizations included, in particular, the World Bank, IMF, the Asian Development Bank, the International Federation of Insolvency Professionals (INSOL International) and Committee J of the International Bar Association. If the Working Group were to be given a mandate to continue its work, the views and results of work of those organizations should be taken into account in preparing the documentation for the Working Group. It was therefore suggested that a colloquium should be held (similar to the UNCITRAL/INSOL Colloquium held in Vienna in 1994, which had preceded the work leading to the subsequent adoption of the UNCITRAL Model Law on Cross-Border Insolvency (see A/CN.9/398). On behalf of INSOL International and Com-

[18]Ibid., paras. 381-385.

mittee J of the International Bar Association, an offer was made to cooperate with the secretariat in organizing such a colloquium before the next session of the Working Group so as to facilitate considerations in the Group.

409. The Commission noted the recommendation that the Working Group had made in its report (A/CN.9/398, para. 140) and fully accepted it by giving the Group the mandate to prepare a comprehensive statement of key objectives and core features for a strong insolvency, debtor-creditor regime, including consideration of out-of-court restructuring, and a legislative guide containing flexible approaches to the implementation of such objectives and features, including a discussion of the alternative approaches possible and the perceived benefits and detriments of such approaches. A legislative guide similar to that adopted by the Commission for privately financed infrastructure projects would be useful and could contain model legislative provisions, where appropriate. It was agreed that in carrying out its task the Working Group should be mindful of the work under way or already completed by other organizations, including IMF, the World Bank, the Asian Development Bank, INSOL International and the International Bar Association. It was noted that, in order to obtain the views and benefit from the expertise of those organizations, the secretariat would organize a colloquium before the next session of the Working Group, in cooperation with INSOL International and the International Bar Association, as had been offered by those organizations.

VIII. MONITORING THE IMPLEMENTATION OF THE 1958 NEW YORK CONVENTION

410. It was recalled that the Commission, at its twenty-eighth session, in 1995, had approved the project, undertaken jointly with Committee D of the International Bar Association, aimed at monitoring the legislative implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958).[19] It was stressed that the purpose of the project, as approved by the Commission, was limited to that aim and, in particular, that its purpose was not to monitor individual court decisions applying the Convention. In order to be able to prepare a report on the subject, the secretariat had sent to the States parties to the Convention a questionnaire relating to the legal regime in those States governing the recognition and enforcement of foreign awards.

411. As at the beginning of the thirty-third session of the Commission, the secretariat had received 59 replies to the questionnaire (out of a current total of 121 States parties).

412. The Commission repeated its appeal to States parties to the Convention that had not yet replied to the questionnaire to do so as soon as possible or, to the extent necessary, to inform the secretariat about any new developments since their previous replies to the questionnaire. The secretariat was requested to prepare, for a future session of the Commission, a note presenting the findings based on an analysis of the information gathered.

[19]Ibid., *Fiftieth Session, Supplement No. 17* (A/50/17), paras. 401-404, and ibid., *Fifty-first Session, Supplement No. 17* (A/51/17), paras. 238-243.

IX. CASE LAW ON UNCITRAL TEXTS

413. The Commission noted with appreciation the ongoing work under the system that had been established for the collection and dissemination of case law on UNCITRAL texts (CLOUT). It was noted that CLOUT was a most important means of promoting the uniform interpretation and application of UNCITRAL texts by enabling interested persons, such as judges, arbitrators, lawyers or parties to commercial transactions to take into account decisions and awards of other jurisdictions when rendering their own judgements or opinions or adjusting their actions to the prevailing interpretation of those texts.

414. The Commission expressed appreciation to the national correspondents for their valuable work in the collection of relevant decisions and arbitral awards and their preparation of case abstracts. It also expressed its appreciation to the secretariat for compiling, editing, issuing and distributing case abstracts. It was noted that, whereas 62 jurisdictions had appointed national correspondents, there were another 26 jurisdictions that had not yet done so. Those jurisdictions would be entitled to make such an appointment either by virtue of their being party to an UNCITRAL convention currently in force or by having adopted legislation based on an UNCITRAL model law. Noting the importance of uniform reporting from all jurisdictions, the Commission urged States that had not yet done so to appoint a national correspondent. It also urged Governments to assist their national correspondents to the extent possible in their work.

415. It was also noted that the number of States adhering to conventions or enacting legislation based on model laws drawn up by the Commission had increased significantly. The concern was expressed that, with the resultant increase in the caseload, the continuation of CLOUT would be at risk without a significant increase in the human and financial resources available to the secretariat of the Commission.

X. TRANSPORT LAW

416. It was recalled that at its twenty-ninth session, in 1996, the Commission had requested the secretariat to be the focal point for gathering information, ideas and opinions as to problems in transport law that arose in practice and possible solutions to those problems. Such information-gathering should be broadly based and should include among its sources, in addition to Governments, international organizations representing the commercial sectors involved in the carriage of goods by sea, such as the International Maritime Committee (CMI), ICC, the International Union of Marine Insurance, the International Federation of Freight Forwarders' Associations, the International Chamber of Shipping and the International Association of Ports and Harbours.[20]

[20]Ibid., *Fifty-first Session, Supplement No. 17* (A/51/17), paras. 210-215.

417. At its thirty-first session, in 1998, the Commission heard a statement on behalf of CMI to the effect that it welcomed the invitation to cooperate with the secretariat in soliciting views of the sectors involved in the international carriage of goods and in preparing an analysis of that information. That analysis would allow the Commission to take an informed decision as to the desirable course of action.[21] Strong support had been expressed at that session by the Commission for the exploratory work being undertaken by CMI and the secretariat of the Commission. The Commission expressed its appreciation to CMI for its willingness to embark on that important and far-reaching project, for which few or no precedents existed at the international level; the Commission was looking forward to being apprised of the progress of the work and to considering the opinions and suggestions resulting from it.[22]

418. At the thirty-second session of the Commission, in 1999, it was reported on behalf of CMI that the Assembly and the Executive Council of CMI had welcomed the initiative to collect data on issues related to international transport law that had so far not been internationally harmonized and that a CMI working group had been instructed to prepare a study on a broad area of issues in international transport law with the aim of identifying the areas where unification or harmonization were needed by the industries involved. In undertaking the study, it had been realized that the industries involved were extremely interested in pursuing the project and had offered their technical and legal knowledge to assist in that endeavour. Based on that favourable reaction and the preliminary findings of the CMI working group, it appeared that further harmonization in the field of transport law would greatly benefit international trade. The working group had found a number of issues that had not been covered by the current unifying instruments. Some of the issues were regulated by national laws, which, however, were not internationally harmonized. Evaluated in the context of electronic commerce, that lack of harmonization became even more significant. It was also reported that the working group had identified numerous interfaces between the different types of contracts involved in international trade and transport of goods (such as sales contracts, contracts of carriage, insurance contracts, letters of credit, freight forwarding contracts, as well as a number of other ancillary contracts). The working group intended to clarify the nature and function of those interfaces and to collect and analyse the rules currently governing them. That exercise would at a later stage include a re-evaluation of principles of liability as to their compatibility with a broader area of rules on the carriage of goods.

419. At the same session, the Commission had expressed its appreciation to CMI for having acted upon its request for cooperation and had requested the secretariat to continue to cooperate with CMI in gathering and analysing information. The Commission was looking forward to receiving a report at a future session presenting the results of the study and proposals for future work.[23]

420. At the current session, the Commission had before it a report of the Secretary-General on possible future work in transport law (A/CN.9/476), which described the progress of the work carried out by CMI in cooperation with the secretariat of the Commission. It also heard an oral report on behalf of CMI. In cooperation with the secretariat of the Commission, the CMI working group had launched an investigation based on a questionnaire covering different legal systems addressed to the CMI member organizations. At the same time, a number of round-table meetings had been held in order to discuss features of the future work with international organizations representing various industries. Those meetings showed the continued support and interest of the industry in the project.

421. Pursuant to the receipt of replies to the questionnaire, CMI had created an international subcommittee with a view to analysing the information and finding a basis for further work towards harmonizing the law in the area of international transport of goods. It was reported that the enthusiasm encountered so far in the industry and the provisional findings about the areas of law that needed further harmonization made it likely that the project would be eventually transformed into a universally acceptable harmonizing instrument.

422. In the course of the discussions in the CMI subcommittee, it had been noted that although bills of lading were still used, especially where a negotiable document was required, the actual carriage of goods by sea sometimes represented only a fragment of an international transport of goods. In the container trade, even a port-to-port bill of lading would involve receipt and delivery at some point not directly connected with the loading on to, or discharge from, the ocean vessel. Moreover, in most situations it was not possible to take delivery alongside the vessel. Furthermore, where different modes of transport were used, there were often gaps between mandatory regimes applying to the various transport modes involved. It had been proposed, therefore, that in developing an internationally harmonized regime covering the relationships between the parties to the contract of carriage for the full duration of the carrier's custody of the cargo, issues that arose in connection with activities that were integral to the carriage agreed to by the parties and that took place before loading and after discharge should also be considered, as well as issues that arose under shipments where more than one mode of transport was contemplated. Furthermore, while the emphasis of the work, as originally conceived, had been on the review of areas of law governing the transport of goods that had not previously been covered by international agreement, it had been increasingly felt that the current broadly based project should be extended to include an updated liability regime that would complement the terms of the proposed harmonizing instrument.

423. The Commission took note with satisfaction of the report of the Secretary-General (A/CN.9/476) and heard with pleasure the oral report on behalf of CMI of the preliminary work accomplished thus far.

424. Several statements were made in the Commission to the effect that the time had come to pursue actively harmonization in the area of the carriage of goods by sea, that

[21] Ibid., *Fifty-third Session, Supplement No. 17* (A/53/17), para. 264.

[22] Ibid., para. 266.

[23] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 418.

increasing disharmony in the area of international carriage of goods was a source of concern and that it was necessary to provide a certain legal basis to modern contract and transport practices. The carriage of goods by sea was increasingly part of a warehouse-to-warehouse operation and that factor should be borne in mind in conceiving future solutions. Approval was expressed for a concept of work that went beyond liability issues and dealt with the contract of carriage in such a way that it would facilitate the export-import operation, which included the relationship between the seller and the buyer (and possible subsequent buyers) as well as the relationship between the parties to the commercial transaction and providers of financing. It was recognized that such a broad approach would involve some re-examination of the rules governing the liability for loss of or damage to goods.

425. It was observed that the work of some regional organizations, such as the Organization of American States and ECE, were currently considering transport law issues. It was considered that the texts already formulated in those organizations would be useful in the work of the Commission and also that the work in those organizations would be facilitated by universally applicable texts to be developed in the Commission. It was observed that ECE was currently considering whether to undertake work on uniform rules for the multimodal transport of goods. Concern was expressed that, if any such work were to be undertaken by an organization in which not all regions of the world were represented, it would interfere with efforts to prepare a universally applicable regime. Hope was expressed that the organizations concerned would coordinate their work so as to avoid duplication and that States would be mindful of the need for coordination within their own administrations of the work of their delegates in those organizations.

426. The Commission took note of the fact that the secretariat was organizing in cooperation with CMI a Transport Law Colloquium to be held on 6 July 2000 in the context of the current session of the Commission. The purpose of the Colloquium was to gather ideas and expert opinions on problems that arose in the international carriage of goods, in particular the carriage of goods by sea, and to incorporate that information into the report to be presented to the Commission at its thirty-fourth session, in 2001.

427. The Commission was pleased with the progress made since its thirty-second session. It welcomed the fruitful cooperation between CMI and the secretariat. Several statements were made to the effect that it was necessary throughout the preparatory work to involve the other interested organizations, including those representing the interests of cargo owners. It was stressed that only by ensuring the cooperation of all interested industries at all stages of the preparatory work was there hope to develop a regime that would be both broadly acceptable and capable of being implemented within a short span of time. The Commission requested the secretariat to continue to cooperate actively with CMI with a view to presenting, at the next session of the Commission, a report identifying issues in transport law in respect of which the Commission might undertake future work and, to the extent possible, also presenting possible solutions.

XI. ENDORSEMENT OF TEXTS OF OTHER ORGANIZATIONS: INCOTERMS 2000, ISP98 AND URCB

428. The Commission had before it three reports of the Secretary-General requesting the Commission's endorsement of *(a)* the International Standby Practices (ISP98), *(b)* the Uniform Rules for Contract Bonds (URCB) and *(c)* Incoterms 2000 (A/CN.9/477, A/CN.9/478 and A/CN.9/479, respectively).

429. It was recalled that at its thirty-second session the Commission had been requested by the Institute of International Banking Law and Practice to consider recommending for worldwide use the Rules on International Standby Practices (ISP98), as endorsed by the Commission on Banking Technique and Practice of ICC. The Commission had also been notified of a request from the Secretary-General of ICC that the Commission consider giving its formal recognition and endorsement of URCB. In order to allow consideration of those requests, the Commission had before it the text of ISP98 (A/CN.9/459) and of URCB (A/CN.9/459/Add.1). However, while several delegations had indicated their desire to endorse the texts of ISP98 and URCB at that session, some delegations had indicated that, owing to the fact that late publication of the documents containing the latter text had prevented them from carrying out the consultations required prior to endorsement, they were not prepared to endorse the texts of ISP98 and URCB at that session. The Commission had regretfully felt obliged to postpone consideration of endorsement until the thirty-third session.[24]

430. At the thirty-third session, as had already been the case at the thirty-second session, reference was made to the importance of ISP98 as private rules of practice intended to apply to standby letters of credit. It was pointed out that the idea of preparing such rules had been conceived during the deliberations of the UNCITRAL Working Group on International Contract Practices, which had resulted in the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit. The ISP98 Rules had been formulated to complement the Convention. The ISP98 drafting process itself had been undertaken in regular consultation with the UNCITRAL secretariat and had also been used as an opportunity to promote adoption of the Convention. In that context, the Commission recalled with particular appreciation that adoption of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit had been recommended to Governments by the Banking Commission of ICC. Reference was also made to the importance of URCB as a commendable practical tool and to the need for wider awareness of that instrument.

431. The Commission welcomed the opportunity to foster its cooperation with ICC. It was recalled that the Commission had endorsed Incoterms 1990 at its twenty-fifth session, in 1992,[25] and the Uniform Customs and Practice for Documentary Credits (UCP 500) at its twenty-seventh session, in 1994.[26] while it was generally felt that the technical

[24]Ibid., paras. 422-425.

[25]Ibid., *Forty-seventh Session, Supplement No. 17* (A/47/17), para. 161.

[26]Ibid., *Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), para. 230.

quality of ISP98 and URCB made those instruments worthy of wider dissemination and use in international trade, a question was raised as to the meaning of an endorsement of those instruments by the Commission. It was pointed out that, in a number of countries, not all provisions of ISP98 would be in conformity with existing legal rules, which might not fully recognize, for example, the role of stand-by letters of credit as independent guarantees. In that connection, concern was expressed that the notion of "endorsement" (which in a number of language versions was a synonym for "approval") should not be misinterpreted as indicating that, once they had been "endorsed", the instruments in their totality would necessarily become applicable in any country.

432. In response to that concern, it was generally agreed that, in the context of legal instruments emanating from other international organizations, "endorsement" should be interpreted as an indication by the Commission that those instruments were commended for use by the parties as a record of good international commercial practices. However, such an "endorsement" should carry no implication as to the conformity of those instruments with existing law. In addition, it was pointed out that the text of ISP98 itself made it clear that it was not intended to displace any provision of applicable law, since article 1.02.a indicated that the rules contained in ISP98 were intended to "supplement the applicable law to the extent not prohibited by that law".

433. With respect to Incoterms 2000, consistent with its previous endorsement of the text of Incoterms 1990 at its twenty-fifth session, in 1992,[25] the Commission expressed its appreciation for the efforts that had led to the development of those rules of practice and welcomed the request for their endorsement.

434. After discussion, the Commission adopted the following decision, endorsing the text of Incoterms 2000, ISP98 and URCB:

The United Nations Commission on International Trade Law,

Expressing its appreciation to the International Chamber of Commerce for having transmitted to it the revised text of Incoterms 2000, the Rules on International Standby Practices (ISP98) and the Uniform Rules for Contract Bonds (URCB),

Congratulating the International Chamber of Commerce on having made a further contribution to the facilitation of international trade by revising Incoterms to adapt them to contemporary commercial practice, by adopting the Rules on International Standby Practices (ISP98), as prepared by the Institute of International Banking Law and Practice, and by elaborating the Uniform Rules for Contract Bonds (URCB),

Noting that Incoterms 2000, the Rules on International Standby Practices (ISP98) and the Uniform Rules for Contract Bonds (URCB) constitute a valuable contribution to the facilitation of international trade,

Commends the use of Incoterms 2000, the Rules on International Standby Practices (ISP98) and the Uniform Rules for Contract Bonds (URCB) by the parties in international trade and financing transactions.

XII. TRAINING AND TECHNICAL ASSISTANCE

435. The Commission had before it a note by the secretariat (A/CN.9/473) setting forth the activities undertaken since its thirty-second session and indicating the direction of future activities being planned, in particular in view of the increase in the requests received by the secretariat. It was noted that training and technical assistance activities were typically carried out through seminars and briefing missions, which were designed to explain the salient features of UNCITRAL texts and the benefits to be derived from their adoption by States.

436. It was reported that, since the previous session, the following seminars and briefing missions had been organized: Johannesburg, South Africa (6 and 7 May 1999); Stellenbosch, South Africa (9 and 10 May 1999); Pretoria (11 and 12 May 1999); Yaoundé (10-12 May 1999); Abidjan (13 and 14 May 1999); Rio de Janeiro, Brazil (12 and 13 August 1999); Lima (19 and 20 August 1999); Cuzco, Peru (23-25 August 1999); Brasilia (30 and 31 August 1999); São Paulo, Brazil (2 and 3 September 1999); Moscow (2-4 November 1999); and Antananarivo (6-8 March 2000). The secretariat of the Commission reported that a number of requests had had to be turned down for lack of sufficient resources and that for the remainder of 2000 only some of the requests made by countries in Africa, Asia, Latin America and Eastern Europe could be met.

437. The Commission expressed its appreciation to the secretariat for the activities undertaken since its previous session and emphasized the importance of the training and technical assistance programme for promoting awareness and the wider adoption of the legal texts it had produced. Training and technical assistance were particularly useful for developing countries lacking expertise in the areas of trade and commercial law covered by the work of UNCITRAL and the training and technical assistance activities of the secretariat could play an important role in the economic integration efforts being undertaken by many countries.

438. The Commission noted the various forms of technical assistance that might be provided to States preparing legislation based on UNCITRAL texts, such as review of preparatory drafts of legislation from the point of view of UNCITRAL texts, preparation of regulations implementing such legislation and comments on reports of law reform commissions, as well as briefings for legislators, judges, arbitrators, procurement officials and other users of UNCITRAL texts as embodied in national legislation. The upsurge in commercial law reform represented a crucial opportunity for the Commission to further significantly the objectives of substantial coordination and acceleration of the process of harmonization and unification of international trade law, as envisaged by the General Assembly in its resolution 2205 (XXI) of 17 December 1966.

439. The Commission took note with appreciation of the contributions made by Canada, Cyprus, Greece, Mexico, Switzerland and the United Kingdom of Great Britain and Northern Ireland towards the seminar programme. It also expressed its appreciation to Singapore for its contribution

to the Trust Fund for Granting Travel Assistance to Developing States members of UNCITRAL. The Commission furthermore expressed its appreciation to those other States and organizations which had contributed to its programme of training and assistance by providing funds or staff or by hosting seminars. Stressing the importance of extrabudgetary funding for carrying out training and technical assistance activities, the Commission appealed once again to all States, international organizations and other interested entities to consider making contributions to the UNCITRAL trust funds so as to enable the secretariat of the Commission to meet the increasing demands in developing countries and newly independent States for training and assistance and to enable delegates from developing countries to attend UNCITRAL meetings. It was also suggested that, in order to resolve the resource difficulties facing the Commission, an attempt should be made to encourage the private sector to contribute to the financing of the UNCITRAL assistance and training programme, in particular since the private sector benefited a great deal from the overall work of the Commission in the area of international trade law.

440. In view of the limited resources available to the secretariat of the Commission, whether from budgetary or extrabudgetary resources, strong concern was expressed that the Commission could not fully implement its mandate with regard to training and technical assistance. Concern was also expressed that, without effective cooperation and coordination between the secretariat and development assistance agencies providing or financing technical assistance, international assistance might lead to the adoption of national laws that did not represent internationally agreed standards, including UNCITRAL conventions and model laws.

441. As regards the internship programme of the secretariat of the Commission, concern was expressed that the majority of the participants were nationals of developed countries. An appeal was made to all States to consider supporting programmes that sponsored the participation of nationals of developing countries in the internship programme.

442. In order to ensure the effective implementation of its training and assistance programme and the timely publication and dissemination of its work, the Commission decided to recommend to the General Assembly that it request the Secretary-General to increase substantially both the human and the financial resources available to its secretariat.

XIII. STATUS AND PROMOTION OF UNCITRAL TEXTS

443. On the basis of a note by the secretariat (A/CN.9/462), the Commission considered the status of the conventions and model laws emanating from its work, as well as the status of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958). The Commission noted with pleasure the new action of States and jurisdictions subsequent to 4 June 1999 (date of the conclusion of the thirty-second session of the Commission) regarding the following instruments:

(a) Convention on the Limitation Period in the International Sale of Goods, concluded at New York on 14 June 1974, as amended by the Protocol of 11 April 1980. Number of States parties: 17;

(b) [Unamended] Convention on the Limitation Period in the International Sale of Goods (New York, 1974). Number of States parties: 24;

(c) United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg Rules). Number of States parties: 26;

(d) United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980). Number of States parties: 56;

(e) United Nations Convention on International Bills of Exchange and International Promissory Notes (New York, 1988). The Convention has two States parties; it requires eight additional adherences for entry into force;

(f) United Nations Convention on the Liability of Operators of Transport Terminals in International Trade (Vienna, 1991). The Convention has two States parties; it requires three additional adherences for entry into force;

(g) United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995). The Convention has five States parties;

(h) Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958). Number of States parties: 121;

(i) UNCITRAL Model Law on International Commercial Arbitration, 1985. New jurisdiction that has enacted legislation based on the Model Law: Macau Special Administrative Region of China;

(j) UNCITRAL Model Law on International Credit Transfers, 1992;

(k) UNCITRAL Model Law on Procurement of Goods, Construction and Services, 1994;

(l) UNCITRAL Model Law on Electronic Commerce, 1996. New jurisdictions that have enacted legislation based on the Model Law: Australia, Bermuda, France and Hong Kong Special Administrative Region of China. Uniform legislation influenced by the Model Law and the principles on which it is based has been prepared in Canada and in the United States of America;

(m) UNCITRAL Model Law on Cross-Border Insolvency, 1997. New jurisdictions that have enacted legislation based on the Model Law: Eritrea and Mexico.

444. Appreciation was expressed for those legislative actions on the texts of the Commission. A request was directed to States that had enacted or were about to enact a model law prepared by the Commission, or were considering legislative action regarding a convention resulting from the work of the Commission, to inform the secretariat of the Commission thereof. Such information would be useful to other States in their consideration of similar legislative action.

445. Representatives and observers of a number of States reported that official action was being considered with a view to adherence to various conventions and to the adop-

tion of legislation based on various model laws prepared by UNCITRAL. It was noted that the UNCITRAL Model Law on Electronic Commerce had become the single common source often cited by many countries.

446. It was noted that, despite the universal relevance and usefulness of those texts, a number of States had not yet enacted any of them. An appeal was directed to the representatives and observers who had been participating in the meetings of the Commission and its working groups to contribute, to the extent that they in their discretion deemed appropriate, to facilitating consideration by legislative organs in their countries of texts of the Commission.

XIV. GENERAL ASSEMBLY RESOLUTION ON THE WORK OF THE COMMISSION

447. The United Nations Commission on International Trade Law took note with appreciation of General Assembly resolution 54/103 of 9 December 1999 on the report of the Commission on the work of its thirty-second session. In particular, the Commission noted with appreciation that, in paragraph 2 of that resolution, the Assembly had commended the Commission for the progress made in its work on receivables financing, electronic commerce, privately financed infrastructure projects and the legislative implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, adopted in New York on 10 June 1958.

448. The Commission also noted with appreciation that, in paragraph 3 of resolution 54/103, the General Assembly had appealed to Governments that had not yet done so to reply to the questionnaire circulated by the secretariat in relation to the legal regime governing the recognition and enforcement of foreign arbitral awards.

449. The Commission further noted with appreciation that, in paragraph 5 of resolution 54/103, the Assembly had reaffirmed the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in that field, and in that connection had called upon all bodies of the United Nations system and invited other international organizations to bear in mind the mandate of the Commission and the need to avoid duplication of effort and to promote efficiency, consistency and coherence in the unification and harmonization of international trade law, and had recommended that the Commission, through its secretariat, continue to maintain close cooperation with the other international organs and organizations, including regional organizations, active in the field of international trade law.

450. The Commission noted with appreciation the decision of the General Assembly, in paragraph 6 of resolution 54/103, to reaffirm the importance, in particular for developing countries, of the work of the Commission concerned with training and technical assistance in the field of international trade law, such as assistance in the preparation of national legislation based on legal texts of the Commission, and that, in paragraph 7, the Assembly had expressed the desirability for increased efforts by the Commission, in sponsoring seminars and symposia, to provide such training and assistance.

451. The Commission also noted with appreciation the appeal by the General Assembly, in paragraph 7 *(b)* of the resolution, to Governments, the relevant United Nations organs, organizations, institutions and individuals to make voluntary contributions to the UNCITRAL Trust Fund for Symposia and, where appropriate, to the financing of special projects. Furthermore, it was noted that the Assembly had appealed, in paragraph 8, to the United Nations Development Programme and other bodies responsible for development assistance, such as the International Bank for Reconstruction and Development and the European Bank for Reconstruction and Development, as well as to Governments in their bilateral aid programmes, to support the training and technical assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission.

452. It was also appreciated that the General Assembly, in paragraph 9 of the resolution, had appealed to Governments, the relevant United Nations organs, organizations, institutions and individuals, in order to ensure full participation by all member States in the sessions of the Commission and its working groups, to make voluntary contributions to the trust fund for travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General. (The trust fund was established pursuant to Assembly resolution 48/32 of 9 December 1993.) The Commission further noted with appreciation the decision of the General Assembly, in paragraph 10 of resolution 54/103, to continue, in the competent Main Committee during the fifty-fourth session of the Assembly, its consideration of granting travel assistance, within existing resources, to the least developed countries that were members of the Commission, at their request and in consultation with the Secretary-General.

453. The Commission welcomed the request by the General Assembly, in paragraph 11 of the resolution, to the Secretary-General to ensure and enhance the effective implementation of the programme of the Commission. The Commission noted, however, that the resources available to its secretariat were not sufficient for it to implement its mandate. The Commission noted, in particular, that its secretariat had fewer Professional staff than it had had when the Commission was established. It therefore recommended to the Assembly that it request the Secretary-General to strengthen the secretariat of the Commission, within the resources available to the secretariat as a whole, so as to enable it to meet the need for increased efforts in trade law unification and harmonization and in trade law reform assistance so as to assist countries in sharing in the benefits of international trade in a global economy.

454. The Commission also noted with appreciation that the General Assembly, in paragraph 12, had stressed the importance of bringing into effect the conventions emanating from the work of the Commission and that to that end it had urged States that had not yet done so to consider signing, ratifying or acceding to those conventions.

XV. COORDINATION AND COOPERATION: SECURITY INTERESTS

455. The Commission considered work undertaken by other organizations in the field of security interests on the basis of a report of the Secretary-General (A/CN.9/475). It was noted that the subject of security interests was becoming increasingly important, at both the international level and the national level, in particular in view of the potential of modern secured credit laws to increase the availability of lower-cost credit and thus enhance the cross-border movement of goods and services. It was also noted that a number of texts had been or were currently being prepared that, while indicating certain common trends, left a number of issues unaddressed. The following problems were identified: inadequacy of domestic laws, in particular with regard to international transactions and in view of the fact that mandatory law and public policy issues were involved in secured transactions; the friction resulting from the possibility that more than one country's law might govern a security interest; and the loss of security if the collateral crossed national borders. A wide variety of possible solutions were mentioned, ranging from a model law dealing with security interests in all types of asset, to a statement of principles with a guide, a model law for priority systems based on registration or a convention or model law dealing with particular types of asset (e.g. investment securities or intellectual property).

456. The observer from the secretariat of Unidroit stated that in 1980, after UNCITRAL had assigned low priority to the subject of security interests by discontinuing work for the time being, Unidroit, having invested significant resources, had become the premier organization to undertake and coordinate work in the field of secured credit law. Unidroit's efforts were reflected in two conventions completed and one draft convention being prepared. Furthermore, in 1993, Unidroit had started work on the preparation of a model law on security interests. While the Governing Council of Unidroit had in 1995 assigned low priority to that project in view of the need for Unidroit to complete its work on mobile equipment, once that work was completed, Unidroit could be expected to resume its work on the model law. As a result, it was suggested that UNCITRAL should not undertake overlapping work in the field of security interests, thus avoiding any duplication of efforts. It was also observed that the report of the Secretary-General might have been based on a misunderstanding of the plans of Unidroit in that regard (A/CN.9/475, paras. 8 and 9).

457. In response, it was noted that coordination of the work of other organizations in the field of international trade law was at the heart of the mandate of UNCITRAL as a body in the work of which all States could participate on an equal footing and in all six official languages of the United Nations. It was also noted that the report by the secretariat accurately reflected the fact that no action had been taken since 1995, since the matter was not on the priority list of Unidroit, as indicated in Unidroit papers, including the Unidroit work programme for the triennium 1999-2001, and confirmed by the observer from the Unidroit secretariat at both the thirty-second and thirty-third sessions of the Commission.[27]

458. The Commission, as the core legal body in the United Nations system in the field of the unification and harmonization of international trade law, reaffirmed its mandate to monitor work carried out in other organizations in the field of international trade law, issuing recommendations, when necessary, and to take any other action to carry out its mandate. With regard to the concern expressed as to the risk that any work by UNCITRAL in the field of secured credit law might duplicate work carried out in other organizations, the Commission agreed that such a duplication could be avoided with a cautious, measured approach that would focus on particular types of asset. It was widely felt that the topic of security interests was so broad and the issues involved so complex that it would take work by several organizations to address all problems (as to the particular suggestions made, see paras. 460-462 below). It was agreed that it would be the responsibility of all relevant organizations to cooperate with a view to ensuring consistency between the various texts and efficiency in the utilization of resources.

459. Expressing its appreciation for the report of the Secretary-General, the Commission went on to consider the substance of that report. It was generally agreed that security interests was an important subject and had been brought to the attention of the Commission at the right time, in particular in view of the close link of security interests with the work of the Commission on insolvency law. It was widely felt that modern secured credit laws could have a significant impact on the availability and the cost of credit and thus on international trade. Modern secured credit laws could alleviate the inequalities in the access to lower-cost credit between parties in developed countries and parties in developing countries, and in the share such parties had in the benefits of international trade. A note of caution was struck in that regard to the effect that such laws needed to strike an appropriate balance in the treatment of privileged, secured and unsecured creditors so as to become acceptable to States. It was also stated that, in view of the divergent policies of States, a flexible approach aimed at the preparation of a set of principles with a guide, rather than a model law, would be advisable. Furthermore, in order to ensure the optimal benefits from law reform, including financial-crisis prevention, poverty reduction and facilitation of debt financing as an engine for economic growth, any effort on security interests would need to be coordinated with efforts on insolvency law.

460. As to the focus of any work to be undertaken, a number of suggestions were made. One suggestion was that a uniform law should be prepared to deal with security interests in investment property (e.g. stocks, bonds, swaps and derivatives). Such securities, which were held, as entries in a register, by an intermediary and, physically, by a depositary institution, were important instruments on the basis of which vast amounts of credit were extended not only by commercial banks to their clients but also by central banks to commercial banks. It was also observed that, in view of the globalization of financial markets, a number of jurisdictions were normally involved, the laws of which were often incompatible with each other or even inadequate to address the relevant problems. As a result, a great deal of uncertainty existed as to whether investors owning securities and financiers extending credit and taking a pledge in

[27] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 420.

the securities had a right in rem and were protected, in particular, in the case of the insolvency of an intermediary. It was also pointed out that a great deal of uncertainty arose even as to the law applicable to security interests in investment property held by an intermediary and that the fact that the Hague Conference on Private International Law planned to address that matter indicated both its importance and its urgency. In that regard, it was observed that work by UNCITRAL could be perfectly compatible with and could usefully supplement any work undertaken by the Hague Conference, in particular in view of the inherent limitations of private international law rules in matters of mandatory law and public policy.

461. Another suggestion was that a uniform law should be prepared to deal with security interests in inventory (i.e. a constantly changing pool of tangible assets). It was stated that the use of a changing pool of assets, whether tangible or intangible, was an important feature of modern secured financing law. It was also observed that any work on inventory could usefully draw on the Commission's work on receivables and on practices that would be likely to draw a positive response from international financial markets. The following matters were mentioned as matters that would need to be addressed in such a uniform law: the creation and scope of a security interest (which should include property acquired, and secure debts arising, even after the creation of the interest); remedies upon default of the debtor; clear priority rules; and mechanisms ensuring the transparency of any interest.

462. Yet another suggestion was that a uniform law should be prepared to deal with an international register of security rights. Such a register would enhance certainty and transparency and, as a result, have a positive impact on the availability and the cost of credit, which was badly needed for the development of the world economy. To achieve that result, the register should encompass all types of security interest in all types of asset. In the discussion, the suggestion was made that a colloquium might be held by the secretariat in cooperation with organizations representing the relevant practice and industry as well as with international development institutions.

463. After discussion, the Commission requested the secretariat to prepare a study that would discuss in detail the relevant problems in the field of secured credit law and the possible solutions for consideration by the Commission at its thirty-fourth session, in 2001. It was agreed that, after considering the study, the Commission could decide at that session whether further work could be undertaken, on which topic and in which context. It was also agreed that the study could examine, in particular, whether current trends established sufficient common ground among legal systems to make the preparation of a uniform law within a reasonable period of time feasible. It was further agreed that the study could discuss the advantages and disadvantages of the various solutions (i.e. a uniform law on all types of asset as compared with a set of principles with a guide or a uniform law on specific types of asset). Moreover, it was agreed that the study should draw upon and build on work carried out by other organizations and that any suggestions should take into account the need to avoid duplication of efforts.

XVI. OTHER BUSINESS

A. Bibliography

464. The Commission noted with appreciation the bibliography of recent writings related to the work of the Commission (A/CN.9/481).

465. The Commission stressed that it was important for it to have information that was as complete as possible with regard to publications, including academic theses, commenting on the results of its work. It therefore requested Governments, academic institutions and other relevant organizations to send copies of such publications to the secretariat.

B. Willem C. Vis International Commercial Arbitration Moot

466. It was reported to the Commission that the Institute of International Commercial Law at Pace University School of Law, New York, had organized the seventh Willem C. Vis International Commercial Arbitration Moot in Vienna from 15 to 20 April 2000. Legal issues dealt with by the teams of students participating in the Moot had been based on the United Nations Convention on Contracts for the International Sale of Goods, the UNCITRAL Model Law on International Commercial Arbitration and the Arbitration Rules of the London Court of International Arbitration. In the 2000 Moot, some 79 teams had participated from law schools in some 28 countries, involving about 600 students and tutors and about 150 arbitrators. The eighth Moot is to be held at Vienna from 6 to 12 April 2001.

467. The Commission heard the report with interest. Special appreciation was expressed to the Institute of International Commercial Law at Pace University School of Law for organizing the Moot and to the secretariat for sponsoring it. The Commission regarded the Moot, with its broad international participation, as an excellent method of disseminating information about uniform law texts and teaching international trade law.

C. Date and place of the thirty-fourth session of the Commission

468. It was decided that the Commission would hold its thirty-fourth session in Vienna from 25 June to 13 July 2001.

D. Sessions of working groups

469. The Commission approved the following schedule of meetings for its working groups:

(a) The Working Group on Electronic Commerce is to hold its thirty-seventh session in Vienna from 18 to 29 September 2000 and its thirty-eighth session in New York from 26 February to 9 March 2001;

(b) The Working Group on Arbitration is to hold its thirty-third session in Vienna from 20 November to 1 December 2000 and its thirty-fourth session in New York from 21 May to 1 June 2001;

(c) The Working Group on International Contract Practices is to hold its twenty-third session in Vienna from 11 to 22 December 2000 and its twenty-fourth session, as the Working Group on Insolvency Law, in New York from 26 March to 6 April 2001.

E. Retirement of the Secretary of the Commission

470. The Commission noted that its Secretary, Mr. Gerold Herrmann, was to retire on 31 January 2001. Mr. Herrmann had served as a member of the secretariat since 1975 and as Secretary of the Commission since 1991. It was widely recognized that the time during which Mr. Herrmann had served as Secretary of the Commission had been a most productive one and that the secretariat of the Commission under the leadership of Mr. Herrmann had made an excellent contribution to that work despite the limited resources available to it. The Commission expressed its appreciation to Mr. Herrmann for his outstanding contribution to the process of unification and harmonization of international trade law in general and to UNCITRAL in particular.

ANNEX I

Draft Convention on Assignment of Receivables in International Trade

*(Title, preamble and draft articles 1-17 as adopted by the Commission)**

PREAMBLE

The Contracting States,

Reaffirming their conviction that international trade on the basis of equality and mutual benefit is an important element in the promotion of friendly relations among States,

Considering that problems created by the uncertainties as to the content and the choice of legal regime applicable to the assignment of receivables constitute an obstacle to international trade,

Desiring to establish principles and adopt rules relating to the assignment of receivables that would create certainty and transparency and promote modernization of law relating to assignments of receivables, while protecting existing assignment practices and facilitating the development of new practices,

Desiring also to ensure the adequate protection of the interests of the debtor in the case of an assignment of receivables,

Being of the opinion that the adoption of uniform rules governing the assignment of receivables would promote the availability of capital and credit at more affordable rates and thus facilitate the development of international trade,

Have agreed as follows:

*Articles 18-44 of the draft convention and articles 1-7 of the annex to the draft convention, not yet considered by the Commission, appear in annex I to document A/CN.9/466, with an analytical commentary by the secretariat in document A/CN.9/470 and comments by Governments and international organizations in documents A/CN.9/472 and Add.1-4.

CHAPTER I

Scope of application

Article 1
Scope of application

1. This Convention applies to:

(a) Assignments of international receivables and to international assignments of receivables as defined in this chapter, if, at the time of the conclusion of the contract of assignment, the assignor is located in a Contracting State; and

(b) Subsequent assignments provided that any prior assignment is governed by this Convention.

2. This Convention applies to a subsequent assignment that satisfies the criteria of paragraph 1 *(a)* of this article, notwithstanding that it did not apply to any prior assignment of the same receivable.

3. This Convention does not affect the rights and obligations of the debtor unless, at the time of the conclusion of the original contract, the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

[4. The provisions of chapter V apply to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs 1 and 2 of this article. However, those provisions do not apply if a State makes a declaration under article 37.]

5. The annex to this Convention applies in a Contracting State which has made a declaration under article 40.

Article 2
Assignment of receivables

For the purposes of this Convention:

(a) "Assignment" means the transfer by agreement from one person ("assignor") to another person ("assignee") of all or part of, or an undivided interest in, the assignor's contractual right to payment of a monetary sum ("receivable") from a third person ("the debtor"). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

(b) In the case of an assignment by the initial or any other assignee ("subsequent assignment"), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee.

Article 3
Internationality

A receivable is international if, at the time of the conclusion of the original contract, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States.

Article 4
Exclusions

1. This Convention does not apply to assignments:

(a) Made to an individual for his or her personal, family or household purposes;

(b) Made by the delivery of a negotiable instrument, with an endorsement, if necessary;

(c) Made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

2. This Convention does not apply to assignments of receivables arising under or from:

(a) Transactions on a regulated exchange;

(b) Financial contracts governed by netting agreements, except a receivable owed on the termination of all outstanding transactions;

(c) Bank deposits;

(d) Inter-bank payment systems or inter-bank payment agreements, or investment securities settlement systems;

(e) A letter of credit or independent guarantee;

(f) The sale, loan or holding of, or agreement to repurchase, investment securities.

3. This Convention does not:

(a) Affect whether a property right in real estate confers a right in a receivable related to that real estate or determine the priority of such a right in the receivable with respect to the competing right of an assignee of the receivable;

(b) Make lawful the acquisition of property rights in real estate not permitted under the law of the State where the real estate is situated.

[4. This Convention does not apply to assignments listed in a declaration made under article 39 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]

CHAPTER II

General provisions

Article 5
Definitions and rules of interpretation

For the purposes of this Convention:

(a) "Original contract" means the contract between the assignor and the debtor from which the assigned receivable arises;

(b) "Existing receivable" means a receivable that arises upon or before the conclusion of the contract of assignment; "future receivable" means a receivable that arises after the conclusion of the contract of assignment;

(c) "Writing" means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

(d) "Notification of the assignment" means a communication in writing which reasonably identifies the assigned receivables and the assignee;

(e) "Insolvency administrator" means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

(f) "Insolvency proceeding" means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(g) "Priority" means the right of a party in preference to another party;

(h) A person is located in the State in which it has its place of business. If the assignor or the assignee has places of business in more than one State, the place of business is that place where the central administration of the assignor or the assignee is exercised. If the debtor has places of business in more than one State, the place of business is that which has the closest relationship to the original contract. If a person does not have a place of business, reference is to be made to the habitual residence of that person;

(i) "Law" means the law in force in a State other than its rules of private international law;

(j) "Proceeds" means whatever is received in respect of an assigned receivable, whether in total or partial payment or other satisfaction of the receivable. The term includes whatever is received in respect of proceeds. The term does not include returned goods;

(k) "Financial contract" means any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities lending transaction, and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above;

(l) "Netting agreement" means an agreement which provides for one or more of the following:

(i) The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

(ii) Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; and

(iii) The set-off of amounts calculated as contemplated by the preceding subparagraph *(l)* (ii) under two or more netting agreements.

Article 6
Party autonomy

Subject to article 21, the assignor, the assignee and the debtor may derogate from or vary by agreement provisions of this Convention relating to their respective rights and obligations. Such an agreement does not affect the rights of any person who is not a party to the agreement.

Article 7
Principles of interpretation

1. In the interpretation of this Convention, regard is to be had to its object and purpose as set forth in the preamble, to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.

2. Questions concerning matters governed by this Convention which are not expressly settled in it are to be settled in conformity with the general principles on which it is based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law.

CHAPTER III

Effects of assignment

Article 8
Form of assignment

An assignment is valid as to form if it meets the form requirements, if any form requirements exist, of either the law of the State in which the assignor is located or any other law applicable by virtue of the rules of private international law.

Article 9
Effectiveness of bulk assignments, assignments of future receivables and partial assignments

1. An assignment of existing or future, one or more, receivables, and parts of, or undivided interests in, receivables is effective as between the assignor and the assignee, as well as against the debtor, whether the receivables are described:

(a) Individually as receivables to which the assignment relates; or

(b) In any other manner, provided that they can, at the time of the assignment or, in the case of future receivables, at the time of the conclusion of the original contract, be identified as receivables to which the assignment relates.

2. Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable.

3. Except as provided in paragraph 1 of this article, article 11 and paragraphs 2 and 3 of article 12, this Convention does not affect any limitations on assignment arising from law.

4. An assignment of a receivable is not ineffective against, and the right of an assignee may not be denied priority with respect to the competing rights of, a person described in subparagraph *(a)* of article 24, solely because law other than this Convention does not generally recognize an assignment described in paragraph 1 of this article.

Article 10
Time of assignment

Without prejudice to the rights of a person described in subparagraph *(a)* of article 24, an existing receivable is transferred, and a future receivable is deemed to be transferred, at the time of the conclusion of the contract of assignment, unless the assignor and the assignee have specified a later time.

Article 11
Contractual limitations on assignments

1. An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent assignee limiting in any way the assignor's right to assign its receivables.

2. Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement, but the other party to that agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person who is not party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

3. This article applies only to assignments of receivables:

(a) Arising under an original contract for the supply or lease of [goods], construction or services other than financial services, or for the sale or lease of real estate;

(b) Arising under an original contract for the sale, lease or licence of industrial or other intellectual property or other information;

(c) Representing the payment obligation for a credit card transaction; or

(d) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

Article 12
Transfer of security rights

1. A personal or property right securing payment of the assigned receivable is transferred to the assignee without a new act of transfer. If such a right, under the law governing it, is transferable only with a new act of transfer, the assignor is obliged to transfer this right and any proceeds to the assignee.

2. A right securing payment of the assigned receivable is transferred under paragraph 1 of this article notwithstanding an agreement between the assignor and the debtor or other person granting the right, limiting in any way the assignor's right to assign the receivable or the right securing payment of the assigned receivable.

3. Nothing in this article affects any obligation or liability of the assignor for breach of an agreement under paragraph 2 of this article, but the other party to that agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person who is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

4. Paragraphs 2 and 3 of this article apply only to assignments of receivables:

(a) Arising under an original contract for the supply or lease of [goods], construction or services other than financial services, or for the sale or lease of real estate;

(b) Arising under an original contract for the sale, lease or licence of industrial or other intellectual property or other information;

(c) Representing the payment obligation for a credit card transaction; or

(d) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

5. The transfer of a possessory property right under paragraph 1 of this article does not affect any obligations of the assignor to the debtor or the person granting the property right with respect to the property transferred existing under the law governing that property right.

6. Paragraph 1 of this article does not affect any requirement under rules of law other than this Convention relating to the form or registration of the transfer of any rights securing payment of the assigned receivable.

CHAPTER IV

Rights, obligations and defences

Section I
Assignor and assignee

Article 13
Rights and obligations of the assignor and the assignee

1. The rights and obligations of the assignor and the assignee as between them arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein.

2. The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices which they have established between themselves.

3. In an international assignment, the assignor and the assignee are considered, unless otherwise agreed, to have implicitly made applicable to the assignment a usage that in international trade is widely known to, and regularly observed by, parties to the particular practice.

Article 14
Representations of the assignor

1. Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of the conclusion of the contract of assignment that:

(a) The assignor has the right to assign the receivable;

(b) The assignor has not previously assigned the receivable to another assignee; and

(c) The debtor does not and will not have any defences or rights of set-off.

2. Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor has, or will have, the financial ability to pay.

Article 15
Right to notify the debtor

1. Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

2. A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph 1 of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Article 16
Right to payment

1. As between the assignor and the assignee, unless otherwise agreed, and whether or not a notification of the assignment has been sent:

(a) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;

(b) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to the assignor in respect of the assigned receivable; and

(c) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to such person in respect of the assigned receivable.

2. The assignee may not retain more than the value of its right in the receivable.

Section II
Debtor

Article 17
Principle of debtor protection

1. Except as otherwise provided in this Convention, an assignment does not, without the consent of the debtor, affect the rights and obligations of the debtor, including the payment terms contained in the original contract.

2. A payment instruction may change the person, address or account to which the debtor is required to make payment, but may not:

(a) Change the currency of payment specified in the original contract; or

(b) Change the State specified in the original contract, in which payment is to be made, to a State other than that in which the debtor is located.

ANNEX II

List of documents before the Commission at its thirty-third session

[Annex II is reproduced in part three, III of this *Yearbook*]

B. United Nations Conference on Trade and Development (UNCTAD): extract from the report of the Trade and Development Board (forty-seventh session) (TD/B/47/11 (Vol. I)

I. F. 2 Progressive development of the law of international trade: thirty-third annual report of the United Nations Commission on International Trade Law

2. At its 917th plenary meeting, on 20 October 2000, the Board took note of the report of UNCITRAL on its thirty-third session (A/55/17).

C. General Assembly: report of the United Nations Commission on International Trade Law on the work of its thirty-third session: report of the Sixth Committee (A/55/608)

I. INTRODUCTION

1. At its 9th plenary meeting, on 11 September 2000, the General Assembly, on the recommendation of the General Committee, decided to include in the agenda of its fifty-fifth session the item entitled "Report of the United Nations Commission on International Trade Law on the work of its thirty-third session" and to allocate it to the Sixth Committee.

2. The Sixth Committee considered the item at its 3rd, 4th, 24th and 25th meetings, on 9 and 10 October and on 3 and 8 November 2000. The views of the representatives who spoke during the Committee's consideration of the item are reflected in the relevant summary records (A/C.6/55/SR.3, 4, 24 and 25).

3. For its consideration of the item, the Committee had before it the report of the United Nations Commission on International Trade Law on the work of its thirty-third session.[1]

4. At the 3rd meeting, on 9 October, the Chairman of the United Nations Commission on International Trade Law at its thirty-third session introduced the report of the Commission on the work of that session (see A/C.6/55/SR.3).

5. At the 4th meeting, on 10 October, the Chairman of the Commission made a statement in the light of the debate (see A/C.6/55/SR.4).

[1] *Official Records of the General Assembly, Fifty-fifth Session, Supplement No. 17* (A/55/17).

II. CONSIDERATION OF DRAFT RESOLUTION A/C.6/55/L.5

6. At the 24th meeting, on 3 November, the representative of Austria, on behalf of *Algeria, Angola, Argentina, Armenia, Australia, Austria, Azerbaijan, Bahrain, Belgium, Bosnia and Herzegovina, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Croatia, Cyprus, the Czech Republic, Denmark, Ecuador, Egypt, Finland, France, Germany, Greece, Guatemala, Haiti, Hungary, India, Indonesia, the Islamic Republic of Iran, Ireland, Israel, Italy, Japan, Lesotho, Liechtenstein, Lithuania, Luxembourg, Madagascar, Malta, Mexico, the Netherlands, New Zealand, Nigeria, Norway, Peru, the Philippines, Poland, Portugal, Romania, the Russian Federation, Rwanda, San Marino, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Thailand, the former Yugoslav Republic of Macedonia, Turkey, Uganda, Ukraine, the United Kingdom of Great Britain and Northern Ireland, Uruguay* and *Venezuela*, subsequently joined by *Belarus, Bolivia, Botswana* and *Saudi Arabia*, introduced a draft resolution entitled "Report of the United Nations Commission on International Trade Law on the work of its thirty-third session" (A/C.6/55/L.5).

7. At its 25th meeting, on 8 November, the Committee adopted draft resolution A/C.6/55/L.5 without a vote (see para. 8).

III. RECOMMENDATION OF THE SIXTH COMMITTEE

8. The Sixth Committee recommends to the General Assembly the adoption of the following draft resolution:

[The text is not reproduced in this section. The draft resolution was adopted, with editorial changes, as General Assembly resolution 55/151 (see section D below).]

D. General Assembly resolution 55/151 of 12 December 2000

RESOLUTION ADOPTED
BY THE GENERAL ASSEMBLY

[on the report of the Sixth Committee (A/55/608)]

55/151. *Report of the United Nations Commission on International Trade Law on the work of its thirty-third session*

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it created the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its conviction that the progressive harmonization and unification of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting the developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity and common interest and to the elimination of discrimination in international trade and, thereby, to the well-being of all peoples,

Emphasizing the need for higher priority to be given to the work of the Commission in view of the increasing value of the modernization of international trade law for global economic development and thus for the maintenance of friendly relations among States,

Stressing the value of participation by States at all levels of economic development and from different legal systems in the process of harmonizing and unifying international trade law,

Having considered the report of the Commission on the work of its thirty-third session,[1]

Concerned that activities undertaken by other bodies of the United Nations system in the field of international trade law without coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law, as stated in its resolution 37/106 of 16 December 1982,

Stressing the importance of the further development of case law on United Nations Commission on International Trade Law texts in promoting the uniform application of the legal texts of the Commission and its value for government officials, practitioners and academics,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law on the work of its thirty-third session;[2]

2. *Commends* the Commission for the work on privately financed infrastructure projects, which culminated in the adoption of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects,[3] as well as the important progress made in its work on receivables financing;

3. *Appeals* to Governments that have not yet done so to reply to the questionnaire circulated by the Secretariat in relation to the legal regime governing the recognition and enforcement of foreign arbitral awards and, in particular, to the legislative implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958;[4]

4. *Invites* States to nominate persons to work with the private foundation established to encourage assistance to the Commission from the private sector;

5. *Reaffirms* the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field and, in this connection:

(a) Calls upon all bodies of the United Nations system and invites other international organizations to bear in mind the mandate of the Commission and the need to avoid duplication of effort and to promote efficiency, consistency and coherence in the unification and harmonization of international trade law;

(b) Recommends that the Commission, through its secretariat, continue to maintain close cooperation with the other international organs and organizations, including regional organizations, active in the field of international trade law;

6. *Also reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with training and technical assistance in the field of international trade law, such as assistance in the preparation of national legislation based on legal texts of the Commission;

7. *Expresses the desirability* for increased efforts by the Commission, in sponsoring seminars and symposia, to provide such training and technical assistance, and, in this connection:

(a) Expresses its appreciation to the Commission for organizing seminars and briefing missions in Brazil, Cameroon, Côte d'Ivoire, Madagascar, Peru, the Russian Federation and South Africa;

(b) Expresses its appreciation to the Governments whose contributions enabled the seminars and briefing missions to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, to the financing of special projects, and otherwise to assist the secretariat of the Commission in financing and organizing seminars and symposia, in particular in developing countries, and in the award of fellowships to candidates from developing countries to enable them to participate in such seminars and symposia;

[1] *Official Records of the General Assembly, Fifty-fifth Session, Supplement No. 17* (A/55/17).

[2] Ibid.

[3] Ibid., para. 372.

[4] United Nations, *Treaty Series*, vol. 330, No. 4739.

8. *Appeals* to the United Nations Development Programme and other bodies responsible for development assistance, such as the International Bank for Reconstruction and Development and the European Bank for Reconstruction and Development, as well as to Governments in their bilateral aid programmes, to support the training and technical assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission;

9. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to make voluntary contributions to the trust fund for travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General;

10. *Decides*, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the fifty-fifth session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

11. *Requests* the Secretary-General to strengthen the secretariat of the Commission within the bounds of the resources available so as to ensure and enhance the effective implementation of the programme of the Commission;

12. *Stresses* the importance of bringing into effect the conventions emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to those conventions;

13. *Requests* the Secretary-General to submit to the General Assembly at its fifty-sixth session a report on the implications of increasing the membership of the Commission, and invites Member States to submit their views on this issue;

14. *Expresses its appreciation* to Gerold Herrmann, Secretary of the United Nations Commission on International Trade Law since 1991, who will retire on 31 January 2001, for his outstanding and devoted contribution to the process of unification and harmonization of international trade law in general and to the Commission in particular.

84th plenary meeting
12 December 2000

Part Two

STUDIES AND REPORTS ON SPECIFIC SUBJECTS

A/CN.9/471

I. PRIVATELY FINANCED INFRASTRUCTURE PROJECTS

Draft chapters of a *Legislative Guide on Privately Financed Infrastructure Projects*: Report of the Secretary-General

(A/CN.9/471 and Add.1-9) [Original: English]

I. INTRODUCTION

1. At its twenty-ninth session, in 1996, having considered a note by the secretariat on "build-operate-transfer" (BOT) projects (A/CN.9/424), the United Nations Commission on International Trade Law decided to prepare a legislative *Guide* to assist States in preparing or modernizing legislation relevant to those projects.[1] The Commission requested the secretariat to review issues suitable for treatment in such a legislative *Guide* and to prepare draft materials for consideration by the Commission.

2. At its thirtieth session, in 1997, the Commission considered an annotated table of contents setting out the topics proposed for inclusion in the legislative *Guide* (A/CN.9/438, annex). The Commission also considered initial drafts of chapters I, "Scope, purpose and terminology of the *Guide*", II, "Parties and phases of privately financed infrastructure projects", and V, "Preparatory measures" (A/CN.9/438/Add.1-3, respectively), of the *Guide*. After an exchange of views on the nature of the issues to be discussed and possible methods for addressing them in the *Guide*, the Commission generally approved the line of work proposed by the secretariat, as contained in those documents.[2] The Commission requested the secretariat to seek the assistance of outside experts, as required, in the preparation of future chapters and invited Governments to identify experts who could be of assistance to the secretariat in that task.

3. At its thirty-first session, in 1998, the Commission had before it revised versions of the earlier chapters, including a revised table of contents, a draft of the introduction to the legislative *Guide*, initial drafts of chapters I, "General legislative considerations", II, "Sector structure and regulation", III, "Selection of the concessionaire" and IV, "Conclusion and general terms of the project agreement" (A/CN.9/444/Add.1-5). The Commission considered various specific suggestions concerning the draft chapters, as well as proposals for changing the structure of the legislative *Guide* and reducing the number of chapters.[3] The Commission requested the secretariat to continue the preparation of future chapters, with the assistance of outside experts, for submission to the Commission at its thirty-second session.

4. At its thirty-second session, in 1999, the Commission considered a complete draft of the legislative *Guide*, which consisted of the following: "Introduction and background information on privately financed infrastructure projects", and chapters I, "General legislative considerations", II, "Project risks and government support", III, "Selection of the concessionaire", IV, "The project agreement", V, "Infrastructure development and operation", VI, "End of project term, extension and termination", VII, "Governing law", and VIII, "Settlement of disputes" (A/CN.9/458/Add.1-9, respectively). The Commission was informed that the secretariat had changed the overall structure of the legislative *Guide* and combined some of its chapters. The Commission noted and generally approved the revised structure of the draft legislative *Guide*.[4] The Commission considered various specific suggestions concerning the draft chapters.[5]

II. STRUCTURE AND CONTENTS OF THE DRAFT LEGISLATIVE *GUIDE*

5. At the Commission's thirty-second session, in 1999, it was observed that it was the first occasion on which the draft *Guide* was available in its entirety. While it was generally felt that the draft chapters covered most of the central issues pertaining to privately financed infrastructure projects, the view was expressed that the document was rather lengthy and that adjustments were necessary in order to make the *Guide* more accessible to the intended readers.[6]

[1] *Official Records of the General Assembly, Fifty-first Session, Supplement No. 17* (A/51/17), paras. 225-230.

[2] Ibid., *Fifty-second Session, Supplement No. 17* (A/52/17), paras. 231-247.

[3] Ibid., *Fifty-third Session, Supplement No. 17* (A/53/17), paras. 12-206.

[4] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 18.

[5] Ibid., paras. 17-307.

[6] Ibid., para. 18.

Therefore, while revising the draft chapters so as to reflect suggestions made at the thirty-second session of the Commission, the secretariat has endeavoured to make the notes as concise as possible, taking into account the broad scope of the *Guide* and the wide variety of issues raised by privately financed infrastructure projects.

Introduction and background information on privately financed infrastructure projects

6. An earlier draft of the introduction was contained in document A/CN.9/458/Add.1. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[7] is contained in an addendum to the present document (A/CN.9/471/Add.1).

Chapter I. General legislative and institutional framework

7. An earlier draft of chapter I was contained in document A/CN.9/458/Add.2. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[8] is contained in an addendum to the present document (A/CN.9/471/Add.2).

Chapter II. Project risks and government support

8. An initial draft of chapter II was contained in document A/CN.9/458/Add.3. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[9] is contained in an addendum to the present document (A/CN.9/471/Add.3).

Chapter III. Selection of the concessionaire

9. An earlier version of this chapter was contained in document A/CN.9/458/Add.4. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[10] is contained in an addendum to the present document (A/CN.9/471/Add.4).

Chapter IV. Construction and operation of infrastructure

10. The draft chapter combines issues previously proposed for discussion in two separate chapters, namely, chapters IV, "The project agreement" (contained in A/CN.9/458/Add.5), and V, "Infrastructure development and operation" (also contained in A/CN.9/458/Add.6). A consolidated revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[11] is contained in an addendum to the present document (A/CN.9/471/Add.5).

Chapter V. Duration, extension and termination of the project agreement

11. An earlier version of this chapter (previously numbered chapter VI) was contained in document A/CN.9/458/Add.7. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[12] is contained in an addendum to the present document (A/CN.9/471/Add.6).

Chapter VI. Settlement of disputes

12. An earlier version of this chapter (previously numbered chapter VIII) was contained in document A/CN.9/458/Add.9. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[13] is contained in an addendum to the present document (A/CN.9/471/Add.7).

Chapter VII. Other relevant areas of law

13. An earlier version of this chapter was contained in document A/CN.9/458/Add.8. A revised draft, which takes into account suggestions made at the thirty-second session of the Commission,[14] is contained in an addendum to the present document (A/CN.9/471/Add.8).

Consolidated legislative recommendations

14. At the thirty-second session of the Commission it was agreed that the legislative recommendations contained in each chapter needed to be reformulated for greater uniformity.[15] With the assistance of experts, the secretariat has since reviewed the recommendations in their entirety, so as to ensure their coherence and consistency with one another. In order to facilitate the Commission's deliberations, all recommendations contained in the individual chapters have been consolidated into an addendum to the present document (A/CN.9/471/Add.9). The Commission may wish to consider the desirability of including such a consolidation of the recommendations in the final presentation of the *Guide* for the users' ease of reference.

III. CONCLUSION

15. The Commission may wish to consider that, given the advanced stage of preparation of the draft legislative *Guide*, two days of its upcoming session would be sufficient for a final review of the legislative recommendations and adoption of the *Guide*.

Introduction and background information on privately financed infrastructure projects*

CONTENTS

A. INTRODUCTION

1. The roles of the public and the private sectors in the development of infrastructure have evolved considerably in history. Public services such as gas street lighting, power distribution, telegraphy and telephony, steam railways and electrical tramways were launched in the nineteenth century and in many countries they were provided by private companies that had obtained a licence or concession from the Government. Numerous privately funded road or canal projects were carried out at that time and there was a rapid development of international project financing, including international bond offerings to finance railways or other major infrastructure.

2. However, during most of the twentieth century the international trend was, in turn, towards public provision of infrastructure and other services. Infrastructure operators were often nationalized and competition was reduced by mergers and acquisitions. The degree of openness of the world economy also receded during this period. Infrastructure sectors remained privately operated only in a relatively small number of countries, often with little or no competition. In many countries the pre-eminence of the public sector in infrastructure service provision became enshrined in the constitution.

3. The current reverse trend towards private sector participation and competition in infrastructure sectors started in the early 1980s and has been driven by general as well as country-specific factors. Among the general factors are significant technological innovations; high indebtedness and stringent budget constraints limiting the public sector's ability to meet increasing infrastructure needs; the expansion of international and local capital markets, with a consequent improvement in access to private funding; and an increasing number of successful international experiences with private participation and competition in infrastructure. In many countries, new legislation was adopted, not only to govern such transactions, but also to modify the market structure and the rules of competition governing the sectors in which they were taking place.

4. The purpose of the present *Guide* is to assist in the establishment of a legal framework favourable to private investment in public infrastructure. The advice provided in the *Guide* aims at achieving a balance between the desire to facilitate and encourage private participation in infrastructure projects, on the one hand, and various public interest concerns of the host country, on the other. The *Guide* discusses a number of concerns of fundamental public interest, which, despite numerous differences of policy and legislative treatment, are recognized in most legal systems. Points of public concern include matters such as continuity in the provision of public services; adherence to environmental protection, health, safety and quality standards set by the host country; fairness of prices charged to the public; non-discriminatory treatment of customers or users, full disclo-

*Section B of the present chapter is conceived as general background information on matters that are examined from a legislative perspective in the subsequent chapters of the *Guide*. For additional information, the reader is particularly advised to consult publications by other international organizations, such as the *Guidelines for Infrastructure Development through Build-Operate-Transfer (BOT) Projects*, prepared by the United Nations Industrial Development Organization (UNIDO Publication, Sales No. UNIDO.95.6.E), the *World Development Report 1994: Infrastructure for Development* (New York, Oxford University Press, 1994) and the *World Development Report 1996: From Plan to Market* (New York, Oxford University Press, 1996), both published by the World Bank, or *Financing Private Infrastructure* (Washington, D.C., 1996), published by the International Finance Corporation.

sure of information pertaining to the operation of infrastructure facilities and the flexibility needed to meet changed conditions, including expansion of the service to meet additional demand. Fundamental concerns of the private sector, in turn, usually include issues such as stability of the legal and economic environment in the host country; transparency of laws and regulations and predictability and impartiality in their application; enforceability of property rights against violations by third parties; assurances that private property is respected by the host country and not interfered with other than for reasons of public interest and only if compensation is paid; and freedom of the parties to agree on commercial terms that ensure a reasonable return on invested capital commensurate with the risks taken by private investors. The *Guide* does not provide a single set of model solutions to address these concerns, but it helps the reader to evaluate different approaches available and to choose the one most suitable in the national or local context.

1. Organization and scope of the *Guide*

5. Each chapter of the *Guide* contains a set of recommended legislative principles entitled "legislative recommendations". The legislative recommendations are intended to assist in the establishment of a legislative framework favourable to privately financed infrastructure projects. The legislative recommendations contained in the *Guide* are followed by notes offering an analytical introduction with references to financial, regulatory, legal, policy and other issues raised in the subject area. The user is advised to read the legislative recommendations together with the notes, which provide background information to enhance the understanding of the legislative recommendations.

6. The legislative recommendations deal with matters that are important to address in legislation specifically concerned with privately financed infrastructure projects. They do not deal with other areas of law, which, as discussed in notes to the legislative recommendations, also have an impact on privately financed infrastructure projects. Moreover, the successful implementation of privately financed infrastructure projects typically requires various measures beyond the establishment of an appropriate legislative framework, such as adequate administrative structures and practices, organizational capability, technical expertise, appropriate human and financial resources and economic stability. Although some of these matters are mentioned in the notes, they are not addressed in the legislative recommendations.

7. The *Guide* is intended to be used as a reference by national authorities and legislative bodies when preparing new laws or reviewing the adequacy of existing laws and regulations. For that purpose, the *Guide* helps identify areas of law that are typically most relevant to private capital investment in public infrastructure projects and discusses the content of those laws which would be conducive to attracting private capital, national and foreign. The *Guide* is not intended to provide advice on drafting agreements for the execution of privately financed infrastructure projects. However, the *Guide* discusses some contractual issues (for instance, in chaps. IV, "Construction and operation of infrastructure" and V, "Duration, extension and termination of the project agreement") to the extent that they relate to matters that might usefully be addressed in the legislation.

8. The *Guide* pays special attention to infrastructure projects that involve an obligation, on the part of the selected investors, to undertake physical construction, repair or expansion works in exchange for the right to charge a price, either to the public or to a public authority, for the use of the infrastructure facility or for the services it generates. Although such projects are sometimes grouped with other transactions for the "privatization" of governmental functions or property, the *Guide* is not concerned with "privatization" transactions that do not relate to the development and operation of public infrastructure. In addition, the *Guide* does not address projects for the exploitation of natural resources, such as mining, oil or gas exploitation projects under some "concession", "licence" or "permission" issued by the public authorities of the host country.

2. Terminology used in the *Guide*

9. The following paragraphs explain the meaning and use of certain expressions that appear frequently in the *Guide*. For terms not mentioned below, such as technical terms used in financial and business management writings, the reader is advised to consult other sources of information on the subject, such as the *Guidelines for Infrastructure Development through Build-Operate-Transfer (BOT) Projects* prepared by the United Nations Industrial Development Organization (UNIDO).[1]

(a) "Public infrastructure" and "public services"

10. As used in the *Guide*, the expression "public infrastructure" refers to physical facilities that provide services essential to the general public. Examples of public infrastructure in this sense may be found in various sectors and include various types of facility, equipment or system: power generation plants and power distribution networks (electricity sector); systems for local and long-distance telephone communications and data transmission networks (telecommunications sector); desalination plants, waste water treatment plants, water distribution facilities (water sector); facilities and equipment for waste collection and disposal (sanitation sector); and physical installations and systems used for public transportation, such as urban and inter-urban railways, underground trains, bus lines, roads, bridges, tunnels, ports, airlines and airports (transportation sector).

11. The line between "public" and "private" infrastructure must be drawn by each country as a matter of public policy. In some countries, airports are owned by the Government; in others they are privately owned but subject to regulation or to the terms of an agreement with the competent public authority. Hospital and medical facilities and prison and correctional facilities may be regarded as "public" or "private" infrastructure, depending on the country's preferences. Often, but not always, power and telecommu-

[1]UNIDO publication, Sales No. UNIDO.95.6.E, hereafter referred to as the *UNIDO BOT Guidelines.*

nication facilities are regarded as "public" infrastructure. No view is expressed in the *Guide* as to where the line should be drawn in a particular country.

12. The notions of "public infrastructure" and "public services" are well established in the legal tradition of some countries, being sometimes governed by a specific body of law, which is typically referred to as "administrative law" (see chap. VII, "Other relevant areas of law", ___). However, in a number of other countries, apart from being subject to special regulations, public services are not regarded as being intrinsically distinct from other types of business. As used in the *Guide*, the expressions "public services" and "public service providers" should not be understood in a technical sense that may be attached to them under any particular legal system.

(b) "Concession", "project agreement" and related expressions

13. In many countries, public services constitute government monopolies or are otherwise subject to special regulation. Where that is the case, the provision of a public service by an entity other than a public authority typically requires an act of authorization by the appropriate governmental body. Different expressions are used to define such acts of authorization under national laws and in some legal systems various expressions may be used to denote different types of authorizations. Commonly used expressions include terms such as "concession", "franchise", "licence" or "lease" ("*affermage*"). In some legal systems, in particular those belonging to the civil law tradition, certain forms of infrastructure projects are referred to by well-defined legal concepts such as "public works concession" or "public service concession". As used in the *Guide*, the word "concession" is not to be understood in a technical sense that may be attached to it under any particular legal system or domestic law.

14. As used in the *Guide*, the term "project agreement" means an agreement between a public authority and the entity or entities selected by that public authority to carry out the project that sets forth the terms and conditions for the construction or modernization, operation and maintenance of the infrastructure. Other expressions that may be used in some legal systems to refer to such an agreement, such as "concession agreement" or "concession contract", are not used in the *Guide*.

15. The *Guide* uses the word "concessionaire" to refer generally to an entity that carries out public infrastructure projects under a concession issued by the public authorities of the host country. The term "project company" is sometimes used in the *Guide* to refer specifically to an independent legal entity established for the purpose of carrying out a particular project.

(c) References to national authorities

16. As used in the *Guide*, the word "Government" encompasses the various public authorities of the host country entrusted with executive or policy-making functions, at the national, provincial or local level. The expression "public authorities" is used to refer, in particular, to entities of, or related to, the executive branch of the Government. The expression "legislature" is used specifically with reference to the organs that exercise legislative functions in the host country.

17. The expression "contracting authority" is generally used in the *Guide* to refer to the public authority of the host country that has the overall responsibility for the project and on behalf of which the project is awarded. Such authority may be national, provincial or local (see below, paras. 69 and 70).

18. The expression "regulatory agency" is used in the *Guide* to refer to the public authority that is entrusted with the power to issue and enforce rules and regulations governing the operation of the infrastructure. The regulatory agency may be established by statute with the specific purpose of regulating a particular infrastructure sector.

(d) "Build-operate-transfer" and related expressions

19. The various types of projects referred to in this *Guide* as privately financed infrastructure projects are sometimes divided into several categories, according to the type of private participation or the ownership of the relevant infrastructure, as indicated below:

(a) Build-operate-transfer (BOT). An infrastructure project is said to be a BOT project when the contracting authority selects a concessionaire to finance and construct an infrastructure facility or system and gives the entity the right to operate it commercially for a certain period, at the end of which the facility is transferred to the contracting authority;

(b) Build-transfer-operate (BTO). This expression is sometimes used to emphasize that the infrastructure facility becomes the property of the contracting authority immediately upon its completion, the concessionaire being awarded the right to operate the facility for a certain period;

(c) Build-rent-operate-transfer (BROT) or *"build-lease-operate-transfer" (BLOT).* These are variations of BOT or BTO projects where, in addition to the obligations and other terms usual to BOT projects, the concessionaire rents the physical assets on which the facility is located for the duration of the agreement;

(d) Build-own-operate-transfer (BOOT). These are projects in which a concessionaire is engaged for the financing, construction, operation and maintenance of a given infrastructure facility in exchange for the right to collect fees and other charges from its users. Under this arrangement the private entity owns the facility and its assets until it is transferred to the contracting authority;

(e) Build-own-operate (BOO). This expression refers to projects where the concessionaire owns the facility permanently and is not under an obligation to transfer it back to the contracting authority.

20. Besides acronyms used to highlight the particular ownership regime, other acronyms may be used to emphasize one or more of the obligations of the concessionaire. In some projects, existing infrastructure facilities are turned over to private entities to be modernized or refurbished,

operated and maintained, permanently or for a given period of time. Depending on whether the private sector will own such an infrastructure facility, those arrangements may be called either "refurbish-operate-transfer" (ROT) or "modernize-operate-transfer" (MOT), in the first case, or "refurbish-own-operate" (ROO) or "modernize-own-operate" (MOO), in the latter. The expression "design-build-finance-operate" (DBFO) is sometimes used to emphasize the concessionaire's additional responsibility for designing the facility and financing its construction.

B. BACKGROUND INFORMATION ON PRIVATELY FINANCED INFRASTRUCTURE PROJECTS

21. In most of the countries that have recently built new infrastructure through private investment, privately financed infrastructure projects are an important tool in meeting national infrastructure needs. Essential elements of national policies include the level of competition sought for each infrastructure sector, the way in which the sector is structured and the mechanisms used to ensure adequate functioning of infrastructure markets. National policies to promote private investment in infrastructure are often accompanied by measures destined to introduce competition between public service providers or to prevent abuse of monopolistic conditions where competition is not feasible.

22. In devising programmes to promote private sector investment in the development and operation of public infrastructure, a number of countries have found it useful to review the assumptions under which public sector monopolies were established, including the historical circumstances and political conditions that had led to their creation, with a view to *(a)* identifying those activities which still maintain the characteristics of natural monopoly; and *(b)* assessing the feasibility and desirability of introducing competition in certain infrastructure sectors.

1. Private investment and infrastructure policy

23. The measures that may be required to implement a governmental policy to promote competition in various infrastructure sectors will depend essentially on the prevailing market structure. The main elements that characterize a particular market structure include barriers to the entry of competitors of an economic, legal, technical or other nature, the degree of vertical or horizontal integration, the number of companies operating in the market as well as the availability of substitute products or services.

(a) Competition policy and monopolies

24. The term monopoly in the strict sense refers to a market with only one supplier. However, pure monopoly and perfect competition mark two ends of a spectrum. Most markets for commodities or services are characterized by a degree of competition that lies between those two ends. Generally, monopolies can be classified as natural monopolies, legal monopolies and de facto monopolies; each of them may require different policy approaches:

(a) Natural monopolies. These are economic activities that allow a single provider to supply the whole market at a lower cost than two or more providers. This situation is typical for economic activities that entail large investment and high fixed costs, but decreasing costs of producing an additional unit of services (e.g. an additional cubic metre of water) to attend an increase of demand. Natural monopolies tend to exhibit large upfront fixed investment requirements that make it difficult for a new company, lacking comparable economies of scale, to enter the market and undercut the incumbent;

(b) Legal monopolies. Legal monopolies are established by law and may cover sectors or activities that are or are not natural monopolies. In the latter category, monopolies exist solely because competition is prohibited. The developments that had led many countries to the establishment of legal monopolies were often based on the consideration that national infrastructure needs, both in terms of quality and quantity, could not be adequately met by leaving infrastructure to the free market;

(c) De facto monopolies. These monopolies may not necessarily be the result of economic fundamentals or of legal provisions, but simply of the absence of competition, resulting, for example, from the integrated nature of the infrastructure company and its ability to control essential facilities to the exclusion of other suppliers.

25. Although monopolies are sometimes justified by legal, political or social grounds, they may produce negative economic effects. A service provider operating under monopolistic conditions is typically able to fix prices above those which would be charged in competitive conditions. The surplus profit that results from insufficient competition implies a transfer of wealth from consumers to producers. Monopolies have also been found to cause a net loss of welfare to the economy as a result of inflated prices generated by artificially low production; a reduced rate of innovation; and insufficient efforts to reduce production costs. Furthermore, in particular in infrastructure sectors, there may be secondary effects on other markets. (For example, lack of competition and efficiency in telecommunications has negative repercussions through increases in cost for the economy at large.)

26. Despite their negative economic effects, monopolies and other regulatory barriers to competition have sometimes been maintained in the absence of natural monopoly conditions. One of the reasons cited for retaining monopolies is that they may be used to foster certain policy objectives, such as ensuring the provision of services in certain regions or to certain categories of consumers at low prices or even below cost. Examples of services for which the price may not cover costs include lifeline telephone, water or power service, discounted transport for certain categories of travellers (e.g. schoolchildren or senior citizens), as well as other services for low-income or rural users. A monopolistic service provider is able to finance the provision of such services through internal "cross-subsidies" from other profitable services provided in other regions or to other categories of consumers.

27. Another reason sometimes cited for retaining legal monopolies in the absence of natural monopoly conditions

is to make the sector more attractive to private investors. Private operators may insist on being granted exclusivity rights to provide a certain service so as to reduce the commercial risk of their investment. However, that objective has to be balanced against the interests of consumers and the economy as a whole. For those countries where the granting of exclusivity rights is found to be needed as an incentive to private investment, it may be advisable to consider restricting competition, though on a temporary basis only (see chap. I, "General legislative and institutional framework", paras. 20-22).

(b) Scope for competition in different sectors

28. Until recently, monopolistic conditions prevailed in most infrastructure sectors either because the sector was a natural monopoly or because regulatory barriers or other factors (e.g. vertically integrated structure of public service providers) prevented effective competition. However, rapid technological progress has broadened the potential scope for competition in infrastructure sectors, as discussed briefly below:

(a) Telecommunication sector. New wireless technology not only makes mobile telecommunication services possible, but it is also increasingly competing with fixed (wireline) services. Fibre optic networks, cable television networks, data transmission over power lines, global satellite systems, increasing computing power, improved data compression techniques, convergence between communications, broadcasting and data processing are further contributing to the breakdown of traditional monopolies and modes of service provision. As a result of these and other changes, telecommunication services have become competitive and countries are increasingly opening up the sector to free entry, while limiting access only to services that require the use of scarce public resources, such as radio frequency;

(b) Energy sector. In the energy sector, combined-cycle gas turbines and other technologies allowing for efficient power production on smaller scales and standardization in manufacturing of power generation equipment have led several countries to change the monopolistic and vertically integrated structure of domestic electricity markets. Increasing computing power and improved data-processing software make it easier to dispatch electricity across a grid and to organize power pools and other mechanisms to access the network and trade in electricity;

(c) Transport sector. Technology is in many cases also at the origin of changing patterns in the transport sector: the introduction of containers and other innovations, such as satellite communications, making it possible to track shipments across the globe, have had profound consequences on shipping, port management and rail and truck transport, while fostering the development of intermodal transport.

29. Technological changes such as these have prompted the legislatures in a number of countries to extend competition to infrastructure sectors by adopting legislation that abolishes monopolies and other barriers to entry, changes the way infrastructure sectors are organized and establishes a regulatory framework fostering effective competition. The extent to which this can be done depends on the sector, the size of the market and other factors.

2. Restructuring of infrastructure sectors

30. In many countries, private participation in infrastructure development has followed the introduction of measures to restructure infrastructure sectors. Legislative action typically begins with the abolition of rules that prohibit private participation in infrastructure and the removal of all other legal impediments to competition that cannot be justified by reasons of public interest. It should be noted, however, that the extent to which a particular sector may be opened to competition is a decision that is taken in the light of the country's overall economic policy. Some countries, in particular developing countries, might have a legitimate interest in promoting the development of certain sectors of local industry and might thus choose not to open certain infrastructure sectors to competition.

31. For monopolistic situations resulting from legal prohibitions rather than economic and technological fundamentals, the main legislative action needed to introduce competition is the removal of the existing legal barriers. This may need to be reinforced by rules of competition (such as the prohibition of collusion, cartels, predatory pricing or other unfair trading practices) and regulatory oversight (see chap. I, "General legislative and institutional framework", paras. 30-53). For a number of activities, however, effective competition may not be obtained through the mere removal of legislative barriers without legislative measures to restructure the sector concerned. In some countries, monopolies have been temporarily maintained only for the time needed to facilitate a gradual, more orderly and socially acceptable transition from a monopolistic to a competitive market structure.

(a) Unbundling of infrastructure services

32. In the experience of some countries it has been found that vertically or horizontally integrated infrastructure companies may be able to prevent effective competition. Integrated companies may try to extend their monopolistic powers in one market or market segment to other markets or market segments in order to extract monopoly rents in those activities as well. Therefore, some countries have found it necessary to separate the monopoly element (such as the grid in many networks) from competitive elements in given infrastructure sectors. By and large, infrastructure services tend to be competitive, whereas the underlying physical infrastructure often has monopolistic characteristics.

33. The separation of competitive activities from monopolistic ones may in turn require the unbundling of vertically or horizontally integrated activities. Vertical unbundling occurs when upstream activities are separated from downstream ones, for example, by separating production, transmission, distribution and supply activities in the power sector. The objective is typically to separate key network components or essential facilities from the competitive segments of the business. Horizontal unbundling occurs when one or more parallel activities of a monopolist public service provider are divided among separate companies, which may either compete directly with each other in the market (as is increasingly the case with power produc-

tion) or retain a monopoly over a smaller territory (as may be the case with power distribution). Horizontal unbundling refers both to a single activity or segment being broken up (as in the power sector examples) and to substitutes being organized separately in one or more markets (as in the case of separation of cellular services from fixed-line telephony, for example).

34. However, the costs and benefits of such changes need to be considered carefully. Costs may include the costs associated with the change itself (e.g. transaction and transition costs, including the loss incurred by companies that lose benefits or protected positions as a result of the new scheme) and those resulting from the operation of the new scheme, in particular higher coordination costs resulting, for example, from more complicated network planning, technical standardization or regulation. Benefits, on the other hand, may include new investments, better or new services, more choice and lower economic costs.

(b) Recent experience in major infrastructure sectors

(i) Telecommunications

35. Unbundling has not been too common in the telecommunication sector. In some countries, long-distance and international services were separated from local services; competition was introduced in the former, while the latter remained largely monopolistic. In some of those countries that trend is now being reversed, with local telephone companies being allowed to provide long-distance services and long-distance companies being allowed to provide local services, all in a competitive context. Mandatory open access rules are common in the telecommunication sector of those countries where the historical public service provider offers services in competition with other providers while controlling essential parts of the network.

(ii) Electricity

36. Electricity laws recently enacted in various countries call for the unbundling of the power sector by separating generation, transmission and distribution. In some cases, supply is further distinguished from distribution in order to leave only the monopolistic activity (i.e. the transport of electricity for public use over wires) under a monopoly. In those countries, the transmission and distribution companies do not buy or sell electricity but only transport it against a regulated fee. Trade in electricity occurs between producers or brokers on the one hand and users on the other. In some of the countries concerned, competition is limited to large users only or is being phased in gradually.

37. Where countries have opted for the introduction of competition in the power and gas sectors, new legislation has organized the new market structure, stipulating to what extent the market had to be unbundled (sometimes including the number of public service providers to be created out of the incumbent monopoly), or removed barriers to new entry. The same energy laws have also established specific competition rules, whether structural (e.g. prohibition of cross-ownership between companies in different segments of the market, such as production, transmission and distribution, or gas and electricity sale and distribution) or behavioural (e.g. third-party access rules, prohibition of alliances or other collusive arrangements). New institutions and regulatory mechanisms, such as power pools, dispatch mechanisms or energy regulatory agencies, have been established to make the new energy markets work. Finally, other aspects of energy law and policy have had to be amended in conjunction with these changes, including the rules governing the markets for oil, gas, coal and other energy sources.

(iii) Water and sanitation

38. The most common market structure reform introduced in the water and sanitation sector is horizontal unbundling. Some countries have created several water utilities where a single one existed before. This is particularly common in, but is not limited to, countries with separate networks that are not or only slightly interconnected. In practice, it has been found that horizontal unbundling facilitates comparison of the performance of service providers.

39. Some countries have invited private investors to provide bulk water to a utility or to build and operate water treatment or desalination plants, for example. In such vertical unbundling, the private services (and the discrete investments they require) are usually rendered under contract to a utility and do not fundamentally modify the monopolistic nature of the market structure: the plants usually do not compete with each other and are usually not allowed to bypass the utility to supply customers. A number of countries have introduced competition in bulk water supply and transportation; in some cases, there are active water markets. Elsewhere, competition is limited to expensive bottled or trucked water and private wells.

(iv) Transport

40. In the restructuring measures taken in various countries, a distinction is made between transport infrastructure and transport services. The former may often have natural monopoly characteristics, whereas services are generally competitive. Competition in transport services should be considered not only within a single mode but also across modes, since trains, trucks, buses, airlines and ships tend to compete for passengers and freight.

41. With respect to railways, some countries have opted for a separation between the ownership and operation of infrastructure (e.g. tracks, signalling systems and train stations) on the one hand and of rail transport services (e.g. passenger and freight) on the other. In such schemes, the law does not allow the track operator also to operate transport services, which are operated by other companies often in competition with each other. Other countries have let integrated companies operate infrastructure as well as services, but have enforced third-party access rights to the infrastructure, sometimes called “trackage rights”. In those cases, transport companies, whether another rail line or a transport service company, have right of access to the track on certain terms and the company controlling the track has the obligation to grant such access.

42. In many countries, ports were until recently managed as public sector monopolies. When opening the sector to private participation, legislators have considered different models. Under the landlord-port system, the port authority is responsible for the infrastructure as well as overall coordination of port activities; it does not, however, provide services to ships or merchandise. In service ports, the same entity is responsible for infrastructure and services. Competition between service providers (e.g. tugboats, stevedoring and warehousing) may be easier to establish and maintain under the landlord system.

43. Legislation governing airports may also require changes, whether to allow private investment or competition between or within airports. Links between airport operation and air traffic control may also need to be considered carefully. Within airports, many countries have introduced competition in handling services, catering and other services to planes, as well as in passenger services such as retail shops, restaurants, parking and the like. In some countries, the construction and operation of a new terminal at an existing airport has been entrusted to a new operator, thus creating competition between terminals. In others, new airports have been built on a BOT basis and existing ones transferred to private ownership.

(c) Transitional measures

44. The transition from monopoly to market needs to be carefully managed. Political, social or other factors have led some countries to pursue a gradual or phased approach to implementation. As technology and other outside forces are constantly changing, some countries have adopted sector reforms that could be accelerated or adjusted to take those changing circumstances into account.

45. Some countries have felt that competition should not be introduced at once. In such cases, legislation has provided for temporary exclusivity rights, limitation in the number of public service providers or other restrictions on competition. Those measures are designed to give the incumbent adequate time to prepare for competition and to adjust prices, while providing the public service provider adequate incentives for investment and service expansion. Other countries have included provisions calling for the periodic revision (at the time of price reviews, for example) of such restrictions with a view to ascertaining whether the conditions that justified them at the time when they were introduced still prevail.

46. Another transitional measure, at least in some countries with government-owned public service providers, has been the restructuring or privatization of the incumbent service provider. In most countries where government-owned providers of public services have been privatized, liberalization has by and large either accompanied or preceded privatization. Some countries have proceeded otherwise and have privatized companies with significant exclusivity rights, often to increase privatization proceeds. They have, however, found it difficult and sometimes very expensive to remove, restrict or shorten at a later stage the exclusive rights or monopolies protecting private or privatized public service providers.

3. Forms of private sector participation in infrastructure projects

47. Private sector participation in infrastructure projects may be devised in a variety of different forms, ranging from publicly owned and operated infrastructure to fully privatized projects. The appropriateness of a particular variant for a given type of infrastructure is a matter to be considered by the Government in view of the national needs for infrastructure development and an assessment of the most efficient ways in which particular types of infrastructure facilities may be developed and operated. In a particular sector more than one option may be used.

(a) Public ownership and public operation

48. In cases where public ownership and control is desired, direct private financing as well as infrastructure operation under commercial principles may be achieved by establishing a separate legal entity controlled by the Government to own and operate the project. Such an entity may be managed as an independent private commercial enterprise that is subject to the same rules and business principles that apply to private companies. Some countries have a well established tradition in operating infrastructure facilities through these types of company. Opening the capital of such companies to private investment or making use of such a company's ability to issue bonds or other securities may create an opportunity for attracting private investment in infrastructure.

49. Another form of involving private participation in publicly owned and operated infrastructure may be the negotiation of "service contracts" whereby the public operator contracts out specific operation and maintenance activities to the private sector. The Government may also entrust a broad range of operation and maintenance activities to a private entity acting on behalf of the contracting authority. Under such an arrangement, which is sometimes referred to as a "management contract", the private operator's compensation may be linked to its performance, often through a profit-sharing mechanism, although compensation on the basis of a fixed fee may also be used, in particular where the parties find it difficult to establish mutually acceptable mechanisms to assess the operator's performance.

(b) Public ownership and private operation

50. Alternatively, the whole operation of public infrastructure facilities may be transferred to private entities. One possibility is to give the private entity, usually for a certain period, the right to use a given facility, to supply the relevant services and to collect the revenue generated by that activity. Such a facility may already be in existence or may have been specially built by the private entity concerned. This combination of public ownership and private operation has the essential features of arrangements that in some legal systems may be referred to as "public works concessions" or "public service concessions".

51. Another form of private participation in infrastructure is where a private entity is selected by the contracting au-

thority to operate a facility that has been built by or on behalf of the Government, or whose construction has been financed with public funds. Under such an arrangement, the operator assumes the obligation to operate and maintain the infrastructure and is granted the right to charge for the services it provides. In such a case, the operator assumes the obligation to pay to the contracting authority a portion of the revenue generated by the infrastructure that is used by the contracting authority to amortize the construction cost. Such arrangements are referred to in some legal systems as "lease" or *"affermage"*.

(c) Private ownership and operation

52. Under the third approach, the private entity not only operates the facility, but also owns the assets related to it. Here, too, there may be substantial differences in the treatment of those projects under domestic laws, for instance as to whether the contracting authority retains the right to reclaim title to the facility or to assume responsibility for its operation (see also chap. IV, "Construction and operation of infrastructure", paras. 23-29).

53. Where the facility is operated pursuant to a governmental licence, private ownership of physical assets (e.g. a telecommunication network) is often separable from the licence to provide the service to the public (e.g. long-distance telephone services), in that the licence can be withdrawn by the competent public authority under certain circumstances. Thus, private ownership of the facility may not necessarily entail an indefinite right to provide the service.

4. Financing structures and sources of finance for infrastructure

(a) Notion of project finance

54. Large-scale projects involving the construction of new infrastructure facilities are often carried out by new corporate entities specially established for that purpose by the project promoters. Such a new entity, often called a "project company", becomes the vehicle for raising funds for the project. Because the project company lacks an established credit or an established balance sheet on which the lenders can rely, the preferred financing modality for the development of new infrastructure is called "project finance". In a project finance transaction, credit will be made available to the extent that the lenders can be satisfied to look primarily to the project's cash flow and earnings as the source of funds for the repayment of loans taken out by the project company. Other guarantees either are absent or cover only certain limited risks. To that end, the project's assets and revenue, and the rights and obligations relating to the project, are independently estimated and are strictly separated from the assets of the project company's shareholders.

55. Project finance is also said to be "non-recourse" financing owing to the absence of recourse to the project company's shareholders. In practice, however, lenders are seldom ready to commit the large amounts needed for infrastructure projects solely on the basis of a project's expected cash flow or assets. The lenders may reduce their exposure by incorporating into the project documents a number of back-up or secondary security arrangements and other means of credit support provided by the project company's shareholders, the Government, purchasers or other interested third parties. This modality is commonly called "limited recourse" financing.

(b) Financing sources for infrastructure projects

56. Alternatives to traditional public financing are playing an increasing role in the development of infrastructure. In recent years, new infrastructure investment in various countries has included projects with exclusively or predominantly private funding sources. The two main types of fund are debt finance, usually in the form of loans obtained on commercial markets, and equity investment. However, financing sources are not limited to those. Public and private investment have often been combined in arrangements sometimes called "public-private partnerships".

(i) Equity capital

57. The first type of capital for infrastructure projects is provided in the form of equity investment. Equity capital is obtained in the first place from the project promoters or other individual investors interested in taking stock in the concessionaire. However, such equity capital normally represents only a portion of the total cost of an infrastructure project. In order to obtain commercial loans or to have access to other sources of funds to meet the capital requirements of the project, the project promoters and other individual investors have to offer priority payment to the lenders and other capital providers, thus accepting that their own investment will only be paid after payment of those other capital providers. Therefore, the project promoters typically assume the highest financial risk. At the same time, they will hold the largest share in the project's profit once the initial investment is paid. Substantial equity investment by the project promoters is typically welcomed by the lenders and the Government, as it helps reduce the burden of debt service on the concessionaire's cash flow and serves as an assurance of those companies' commitment to the project.

(ii) Commercial loans

58. Debt capital often represents the main source of funding for infrastructure projects. It is obtained on the financial market primarily by means of loans extended to the project company by national or foreign commercial banks, typically using funds that originate from short- to medium-term deposits remunerated by those banks at floating interest rates. Consequently, loans extended by commercial banks are often subject to floating interest rates and normally have a maturity term shorter than the project period. However, where feasible and economic, given financial market conditions, banks may prefer to raise and lend medium- to long-term funds at fixed rates, so as to avoid exposing themselves and the concessionaire over a long period to interest rate fluctuations, while also reducing the need for hedging operations. Commercial loans are usually provided

by lenders on condition that their payment takes precedence over the payment of any other of the borrower's liabilities. Therefore, commercial loans are said to be "unsubordinated" or "senior" loans.

(iii) "Subordinated" debt

59. The third type of fund typically used in these projects are "subordinated" loans, sometimes also called "mezzanine" capital. Such loans rank higher than equity capital in order of payment, but are subordinate to senior loans. This subordination may be general (i.e. ranking generally lower than any senior debt) or specific, in which case the loan agreements specifically identify the type of debt to which it is subordinated. Subordinated loans are often provided at fixed rates, usually higher than those of senior debt. As an additional tool to attract such capital, or sometimes as an alternative to higher interest rates, providers of subordinated loans may be offered the prospect of direct participation in capital gains, by means of the issue of preferred or convertible shares or debentures, sometimes providing an option to subscribe for shares of the concessionaire at preferential prices.

(iv) Institutional investors

60. In addition to subordinated loans provided by the project promoters or by public financial institutions, subordinated debt may be obtained from financing companies, investment funds, insurance companies, collective investment schemes (e.g. mutual funds), pension funds and other so-called "institutional investors". These institutions normally have large sums available for long-term investment and may represent an important source of additional capital for infrastructure projects. Their main reasons for accepting the risk of providing capital to infrastructure projects are the prospect of remuneration and interest in diversifying investment.

(v) Capital market funding

61. As more experience is gained with privately financed infrastructure projects, increased use is being made of capital market funding. Funds may be raised by the placement of preferred shares, bonds and other negotiable instruments on a recognized stock exchange. Typically, the public offer of negotiable instruments requires regulatory approval and compliance with requirements of the relevant jurisdiction, such as requirements concerning the information to be provided in the prospectus of issuance and, in some jurisdictions, the need for prior registration. Bonds and other negotiable instruments may have no other security than the general credit of the issuer or may be secured by a mortgage or other lien on specific property.

62. The possibility of gaining access to capital markets is usually greater for existing public utilities with an established commercial record than for companies specially established to build and operate a new infrastructure and lacking the required credit rating. Indeed, a number of stock exchanges require that the issuing company have some established record over a certain minimum period before being permitted to issue negotiable instruments.

(vi) Financing by Islamic financial institutions

63. One additional group of potential capital providers are Islamic financial institutions. Those institutions operate under rules and practices derived from the Islamic legal tradition. One of the most prominent features of banking activities under their rules is the absence of interest payments or strict limits to the right to charge interest and consequently the establishment of other forms of consideration for the borrowed money, such as profit-sharing or direct participation of the financial institutions in the results of the transactions of their clients. As a consequence of their operating methods, Islamic financial institutions may be more inclined than other commercial banks to consider direct or indirect equity participation in a project.

(vii) Financing by international financial institutions

64. International financial institutions may also play a significant role as providers of loans, guarantees or equity to privately financed infrastructure projects. A number of projects have been co-financed by the World Bank, the International Finance Corporation or by regional development banks.

65. International financial institutions may also play an instrumental role in the formation of "syndications" for the provision of loans to the project. Some of those institutions have special loan programmes under which they become the sole "lender of record" to a project, acting on its own behalf and on behalf of participating banks and assuming responsibility for processing disbursements by participants and for subsequent collection and distribution of loan payments received from the borrower, either pursuant to specific agreements or based on other rights that are available under their status of preferred creditor. Some international financial institutions may also provide equity or mezzanine capital, by investing in capital market funds specialized in securities issued by infrastructure operators. Lastly, international financial institutions may provide guarantees against a variety of political risks, which may facilitate the project company's task of raising funds in the international financial market (see chap. II, "Project risks and government support", paras. 61-71).

(viii) Support by export credit and investment promotion agencies

66. Export credit and investment promotion agencies may provide support to the project in the form of loans, guarantees or a combination of both. The participation of export credit and investment promotion agencies may provide a number of advantages, such as lower interest rates than those applied by commercial banks and longer-term loans, sometimes at a fixed interest rate (see chap. II, "Project risks and government support", paras. 72-74).

(ix) Combined public and private finance

67. In addition to loans and guarantees extended by commercial banks and national or multilateral public financial institutions, in a number of cases public funds have been combined with private capital for financing new projects.

Such public funds may originate from government income or sovereign borrowing. They may be combined with private funds as initial investment or as long-term payments, or may take the form of governmental grants or guarantees. Infrastructure projects may be co-sponsored by the Government through equity participation in the concessionaire, thus reducing the amount of equity and debt capital needed from private sources (see chap. II, "Project risks and government support", paras. 40 and 41).

5. Main parties involved in implementing infrastructure projects

68. The parties to a privately financed infrastructure project may vary greatly, depending on the infrastructure sector, the modality of private sector participation and the arrangements used for financing the project. The following paragraphs identify the main parties in the implementation of a typical privately financed infrastructure project involving the construction of a new infrastructure facility and carried out under the "project finance" modality.

(a) The contracting authority and other public authorities

69. The execution of a privately financed infrastructure project frequently involves a number of public authorities in the host country at the national, provincial or local level. The contracting authority is the main body responsible for the project within the Government. Furthermore, the execution of the project may necessitate the active participation (e.g. for the issuance of licences or permits) of other public authorities in addition to the contracting authority, at the same or at a different level of Government. Those authorities play a crucial role in the execution of privately financed infrastructure projects.

70. The contracting authority or another public authority normally identifies the project pursuant to its own policies for infrastructure development in the sector concerned and determines the type of private sector participation that would allow the most efficient operation of the infrastructure facility. Thereafter, the contracting authority conducts the process that leads to the selection of the concessionaire. Furthermore, throughout the life of the project, the Government may need to provide various forms of support—legislative, administrative, regulatory and sometimes financial—so as to ensure that the facility is successfully built and adequately operated. Finally, in some projects the Government may become the ultimate owner of the facility.

(b) The project company and the project promoters

71. Privately financed infrastructure projects are usually carried out by a joint venture of companies including construction and engineering companies and suppliers of heavy equipment interested in becoming the main contractors or suppliers of the project. The companies that participate in such a joint venture are referred to in the *Guide* as the "promoters" of the project. Those companies will be intensively involved in the development of the project during its initial phase and their ability to cooperate with each other and to engage other reliable partners will be essential for timely and successful completion of the work. Furthermore, the participation of a company with experience in operating the type of facility being built is an important factor to ensure the long-term viability of the project. Where an independent legal entity is established by the project promoters, other equity investors not otherwise engaged in the project (usually institutional investors, investment banks, bilateral or multilateral lending institutions, sometimes also the Government or a government-owned corporation) may also participate. The participation of local investors, where the project company is required to be established under the laws of the host country (see chap. IV, "Construction and operation of infrastructure", paras. 12-18), is sometimes encouraged by the Government.

(c) Lenders

72. The risks to which the lenders are exposed in project finance, be it non-recourse or limited recourse, are considerably higher than in conventional transactions. This is even more the case where the security value of the physical assets involved (e.g. a road, bridge or tunnel) is difficult to realize, given the lack of a "market" where such assets could easily be sold, or act as obstacles to recovery or repossession. This circumstance affects not only the terms under which the loans are provided (e.g. the usually higher cost of project finance and extensive conditions to funding), but also, as a practical matter, the availability of funds.

73. Owing to the magnitude of the investment required for a privately financed infrastructure project, loans are often organized in the form of "syndicated" loans with one or more banks taking the lead role in negotiating the finance documents on behalf of the other participating financial institutions, mainly commercial banks. Commercial banks that specialize in lending for certain industries are typically not ready to assume risks with which they are not familiar (for a discussion of project risks and risk allocation, see chap. II, "Project risks and government support", paras. 8-29). For example, long-term lenders may not be interested in providing short-term loans to finance infrastructure construction. Therefore, in large-scale projects, different lenders are often involved at different phases of the project. With a view to avoiding disputes that might arise from conflicting actions taken by individual lenders or disputes between lenders over payment of their loans, lenders extending funds to large projects sometimes do so under a common loan agreement. Where various credit facilities are provided under separate loan agreements, the lenders will typically negotiate a so-called "inter-creditor agreement". An inter-creditor agreement usually contains provisions dealing with matters such as provisions for disbursement of payments, pro rata or in a certain order of priority; conditions for declaring events of default and accelerating the maturity of credits; and coordination of foreclosure on security provided by the project company.

(d) International financial institutions and export credit and investment promotion agencies

74. International financial institutions and export credit and investment promotion agencies will have concerns of

generally the same order as other lenders to the project. In addition to this, they will be particularly interested in ensuring that the project execution and its operation are not in conflict with particular policy objectives of those institutions and agencies. Increasing emphasis is being given by international financial institutions to the environmental impact of infrastructure projects and their long-term sustainability. The methods and procedures applied to select the concessionaire will also be carefully considered by international financial institutions providing loans to the project. Many global and regional financial institutions and national development funding agencies have established guidelines or other requirements governing procurement with funds provided by them, which is typically reflected in their standard loan agreements (see also chap. III, "Selection of the concessionaire", para. 18).

(e) Insurers

75. Typically, an infrastructure project will involve casualty insurance covering its plant and equipment, third-party liability insurance and worker's compensation insurance. Other possible types of insurance include insurance for business interruption, interruption in cash flows and cost overrun (see chap. IV, "Construction and operation of infrastructure", paras. 119 and 120). Those types of insurance are usually available on the commercial insurance markets, although the availability of commercial insurance may be limited for certain extraordinary events outside the control of the parties (e.g. war, riots, vandalism, earthquakes or hurricanes). The private insurance market is playing an increasing role in coverage against certain types of political risk, such as contract repudiation, failure by a public authority to perform its contractual obligations or unfair calls for independent guarantees. In some countries, insurance underwriters structure comprehensive insurance packages aimed at avoiding certain risks being left uncovered owing to gaps between individual insurance policies. In addition to private insurance, guarantees against political risks may be provided by international financial institutions, such as the World Bank, the Multilateral Investment Guarantee Agency and the International Finance Corporation, by regional development banks or by export credit and investment promotion agencies (see chap. II, "Project risks and government support", paras. 61-74).

(f) Independent experts and advisers

76. Independent experts and advisers play an important role at various stages of privately financed infrastructure projects. Experienced companies typically supplement their own technical expertise by retaining the services of outside experts and advisers, such as financial experts, international legal counsel or consulting engineers. Merchant and investment banks often act as advisers to project promoters in arranging the finance and in formulating the project to be implemented, an activity that, while essential to project finance, is quite distinct from the financing itself. Independent experts may advise the lenders to the project, for example, on the assessment of project risks in a specific host country. They may also assist public authorities in devising sector-specific strategies for infrastructure development and in formulating an adequate legal and regulatory framework. Furthermore, independent experts and advisers may assist the contracting authority in the preparation of feasibility and other preliminary studies, in the formulation of requests for proposals or standard contractual terms and specifications, in the evaluation and comparison of proposals or in the negotiation of the project agreement.

77. In addition to private entities, a number of intergovernmental organizations (e.g. UNIDO and the regional commissions of the Economic and Social Council) and international financial institutions (e.g. the World Bank and the regional development banks) have special programmes whereby they may either provide this type of technical assistance directly to the Government or assist the latter in identifying qualified advisers.

A/CN.9/471/Add.2

Chapter I. General legislative and institutional framework

CONTENTS

LEGISLATIVE RECOMMENDATIONS

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles be implemented by the law:

Constitutional and legislative framework (see paras. 2-14)

Recommendation 1. The legislative and institutional framework for the implementation of privately financed infrastructure projects should ensure transparency, fairness and the long-term sustainability of projects. Undesirable restrictions on private sector participation in infrastructure development and operation should be eliminated.

Scope of authority to award concessions (see paras. 15-22)

Recommendation 2. The law should identify the public authorities of the host country (including, as appropriate, national, provincial and local authorities) that are empowered to enter into agreements for the implementation of privately financed infrastructure projects.

Recommendation 3. Privately financed infrastructure projects may include concessions for the construction and operation of new infrastructure facilities and systems or the maintenance, modernization, expansion and operation of existing infrastructure facilities and systems.

Recommendation 4. The law should identify the sectors or types of infrastructure in respect of which concessions may be granted.

Recommendation 5. The law should specify whether a concession might extend to the entire region under the jurisdiction of the respective contracting authority, to a geographical subdivision thereof or to a discrete project, and whether it might be awarded with or without exclusivity, as appropriate, in accordance with rules and principles of law, statutory provisions, regulations and policies applying to the sector concerned. Contracting authorities might be jointly empowered to award concessions beyond a single jurisdiction.

Administrative coordination (see paras. 23-29)

Recommendation 6. Institutional mechanisms should be established to coordinate the activities of the public authorities responsible for issuing approvals, licences, permits or authorizations required for the implementation of privately financed infrastructure projects in accordance with statutory or regulatory provisions on the construction and operation of infrastructure facilities of the type concerned.

Authority to regulate infrastructure services (see paras. 30-53)

Recommendation 7. The authority to regulate infrastructure services should not be entrusted to entities that directly or indirectly provide infrastructure services.

Recommendation 8. Regulatory competence should be entrusted to functionally independent bodies with a level of autonomy sufficient to ensure that their decisions are taken without political interference or inappropriate pressures from infrastructure operators and public service providers.

Recommendation 9. The rules governing regulatory procedures should be made public. Regulatory decisions should state the reasons on which they are based and should be accessible to interested parties through publication or other means.

Recommendation 10. The law should establish transparent procedures whereby the concessionaire may request a review of regulatory decisions by an independent and impartial body and should set forth the grounds on which a request for review may be based and the availability of court review.

Recommendation 11. Where appropriate, special procedures should be established for handling disputes among public service providers concerning alleged violations of laws and regulations governing the relevant sector.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL REMARKS

1. The establishment of an appropriate and effective legal framework is a prerequisite to creating an environment that fosters private investment in infrastructure. For countries where such a legal framework already exists, it is important to ensure that the law is sufficiently flexible and responsive to keep pace with the developments in various infrastructure sectors. This chapter deals with some general issues that domestic legislatures are advised to consider when setting up or reviewing the legal framework for privately financed infrastructure projects in order to achieve the above objectives. Section B (paras. 2-14) sets out general considerations on the constitutional and legislative framework; section C (paras. 15-22) deals with the scope of authority to award infrastructure and public services concessions; section D (paras. 23-29) discusses possible measures to enhance administrative coordination; and section E (paras. 30-53) deals with institutional and procedural arrangements for the regulation of infrastructure sectors.

B. CONSTITUTIONAL AND LEGISLATIVE FRAMEWORK

2. This section considers general guiding principles that may inspire the legal framework for privately financed infrastructure projects. It further points out the possible implications that the constitutional law of the host country may have for the implementation of these projects. Lastly, this section deals briefly with possible choices to be made regarding the level and type of instruments that might need to be enacted and their scope of application.

1. General guiding principles for a favourable constitutional and legislative framework

3. In considering the establishment of an enabling legal framework or in reviewing the adequacy of the existing framework, domestic legislators may wish to take into account some general principles that have inspired recent legislative actions in various countries, which are discussed briefly in the following paragraphs.

(a) Transparency

4. A transparent legal framework is characterized by clear and readily accessible rules and by efficient procedures for their application. Transparent laws and administrative procedures create predictability, enabling potential investors to estimate the costs and risks of their investment and thus to offer their most advantageous terms. Transparent laws and administrative procedures may also foster openness through provisions requiring the publication of administrative decisions and the disclosure of information of public relevance. They also help to guard against arbitrary or improper actions or decisions by the contracting authority or its officials and thus help to promote confidence in a country's infrastructure development programme. Transparency of laws and administrative procedures is of particular importance where foreign investment is sought, since foreign companies may be unfamiliar with the country's practices for the award of infrastructure projects.

(b) Fairness

5. The legal framework is both the means by which Governments regulate and ensure the provision of public services to their citizens and the means by which public service providers and their customers may protect their rights. A fair legal framework takes into account the various (and sometimes possibly conflicting) interests of the Government, the public service providers and their customers and seeks to achieve an equitable balance between them. The private sector's business considerations, the users' right to adequate services, both in terms of quality and price, the Government's responsibility for ensuring the continuous provision of essential services and its role in promoting national infrastructure development are but a few of the interests that deserve appropriate recognition in the law.

(c) Long-term sustainability

6. An important objective of domestic legislation on infrastructure development is to ensure the long-term provision of public services, with increasing attention being paid to environmental sustainability. Inadequate arrangements for the operation and maintenance of public infrastructure severely limit efficiency in all sectors of infrastructure and result directly in reduced service quality and increased costs for users. From a legislative perspective, it is important to ensure that the host country has the institutional capacity to undertake the various tasks entrusted to public authorities involved in infrastructure projects throughout their phases of implementation. Another measure to enhance the long-term sustainability of a national infrastructure policy is to achieve a correct balance between competitive and monopolistic provision of public services. Competition may reduce overall costs and provide more back-up facilities for essential services. In certain sectors, competition has also helped to increase the productivity of infrastructure investment, to enhance responsiveness to the needs of the customers and to obtain better quality for public services, thus improving the business environment in all sectors of the economy.

2. Constitutional law and privately financed infrastructure projects

7. The constitutional law of a number of countries refers generally to the duty of the State to ensure the provision of public services. Some of them list the infrastructure and services sectors that come under the responsibility of the State, while in others the task of identifying those sectors is delegated to the legislator. Under some national constitutions, the provision of certain public services is reserved exclusively to the State or to specially created public entities. Other constitutions, however, authorize the State to award concessions to private entities for the development and operation of infrastructure and the provision of public services. In some countries, there are limitations to the participation of foreigners in certain sectors or requirements that the State should participate in the capital of the companies providing public services.

8. For countries wishing to promote private investment in infrastructure it is important to review existing constitutional rules so as to identify possible restrictions to the implementation of privately financed infrastructure projects. In some countries, privately financed infrastructure projects have been delayed by uncertainties regarding the extent of the State's authority to award them. Sometimes, concerns that those projects might contravene constitutional rules on State monopolies or on the provision of public services have led to judicial disputes, with a consequent negative impact on the implementation of the projects.

9. It is further important to take into account constitutional rules relating to the ownership of land or infrastructure facilities. The constitutional law of some countries contains limitations to private ownership of land and certain means of production. In other countries, private property is recognized, but the constitution declares all or certain types of infrastructure to be State property. Prohibitions and restrictions of this nature can be an obstacle to the execution of projects that entail private operation, or private operation and ownership, of the relevant infrastructure (see further chap. IV, "Construction and operation of infrastructure", paras. 23-29).

3. General and sector-specific legislation

10. Legislation frequently plays a central role in promoting private investment in public infrastructure projects. The law typically embodies a political commitment, provides specific legal rights and may represent an important guarantee of stability of the legal and regulatory regime. In most countries, the implementation of privately financed infrastructure projects was in fact preceded by legislative measures setting forth the general rules under which those projects are awarded and executed.

11. In some countries, as a matter of constitutional law or legislative practice, specific legislation may need to be adopted in respect of individual projects. In other countries with a well-established tradition of awarding concessions to the private sector for the provision of public services, the Government is authorized by general legislation to award to the private sector any activity carried out by the public sector that has an economic value that makes such activity capable of being exploited by private entities. General legislation of this type creates a framework for providing a uniform treatment to issues that are common to privately financed projects in different infrastructure sectors.

12. However, by its very nature, general legislation is normally not suitable to address all the particular requirements of different sectors. Even in countries that have adopted general legislation addressing cross-sectoral issues, it has been found that supplementary sector-specific legislation allows the legislator to formulate rules that take into account the market structure in each sector (see above, "Introduction and background information on privately financed infrastructure projects", paras. 21-46). It should be noted that in many countries sector-specific legislation was adopted at a time when a significant portion, or even the entirety of the national infrastructure constituted State monopolies. For countries interested in promoting private sector investment in infrastructure it is advisable to review existing sector-specific legislation so as to ascertain its suitability for privately financed infrastructure projects.

13. Sector-specific legislation may further play an important role in establishing a framework for the regulation of individual infrastructure sectors (see below, paras. 30-53). Legislative guidance is particularly useful in countries at the initial stages of setting up or developing national regulatory capacities. Such legislation represents a useful assurance that the regulators do not have unlimited discretion in the exercise of their functions, but are bound by the parameters provided by the law. However, it is generally advisable to avoid rigid or excessively detailed legislative provisions dealing with contractual aspects of the implementation of privately financed infrastructure projects, which in most cases would not be adequate to their long-term nature (see further chap. IV, "Construction and operation of infrastructure", and chap. V, "Duration, extension and termination of the project agreement").

14. Many countries have used legislation to establish the general principles for the organization of infrastructure sectors and the basic policy, institutional and regulatory framework. However, the law may not be the best instrument to set detailed technical and financial requirements. Many countries have preferred to enact regulations setting forth more detailed rules to implement the general provisions of domestic laws on privately financed infrastructure projects. Regulations are found to be easier to adapt to a change in environment, whether the change results from the transition to market-based rules or from external developments, such as new technologies or changing economic or market conditions. Whatever the instrument used, clarity and predictability are of the essence.

C. SCOPE OF AUTHORITY TO AWARD CONCESSIONS

15. The implementation of privately financed infrastructure projects may require the enactment of special legislation or regulations authorizing the State to entrust the provision of public services to private entities. The enactment

of express legislative authorization may be an important measure to foster the confidence of potential investors, national or foreign, in a national policy to promote private sector investment in infrastructure. Central elements to the authority to award concessions for infrastructure projects are discussed in the following paragraphs.

1. Authorized agencies and relevant fields of activity

16. In some legal systems the Government's responsibility for the provision of public services may not be delegated without prior legislative authorization. For those countries which wish to attract private investment in infrastructure, it is particularly important to state clearly in the law the authority to entrust entities other than public authorities of the host country with the right to provide certain public services. Such a general provision may be particularly important in those countries where public services are governmental monopolies or where it is envisaged to engage private entities to provide certain services that used to be available to the public free of charge (see further chap. IV, "Construction and operation of infrastructure", paras. 37 and 38).

17. Where general legislation is adopted, it is also advisable to identify clearly the public authorities or levels of government competent to award infrastructure projects and to act as contracting authorities. In order to avoid unnecessary delay, it is particularly advisable to have rules in place that make it possible to ascertain the persons or offices that have the authority to enter into commitments on behalf of the contracting authority (and, as appropriate, of other public authorities) at different stages of negotiation and to sign the project agreement. It is useful to consider the extent of powers that may be needed by authorities other than the central Government to carry out projects falling within their purview. For projects involving offices or agencies at different levels of government (for example, national, provincial or local), where it is not possible to identify in advance all the relevant offices and agencies involved, other measures may be needed to ensure appropriate coordination among them (see below, paras. 23-29).

18. For purposes of clarity, it is advisable to identify in such general legislation those sectors in which concessions may be awarded. Alternatively, where this is not deemed feasible or desirable, the law might identify those activities which may not be the object of a concession (for example, activities related to national defence or security).

2. Purpose and scope of concessions

19. It may be useful for the law to define the nature and purpose of privately financed infrastructure projects for which concessions may be awarded in the host country. One possible approach may be to define the various categories of projects according to the extent of the rights and obligations assumed by the concessionaire (for example, "build-operate-transfer", "build-own-operate", "built-transfer-operate" and "build-transfer"). However, given the wide variety of schemes that may come into play in connection with private investment in infrastructure, it may be difficult to provide exhaustive definitions of all of them. As an alternative, the law could generally provide that concessions may be awarded for the purpose of entrusting an entity, private or public, with the obligation to carry out infrastructure works and deliver certain public services, in exchange for the right to charge a price for the use of the facility or premises or for the service or goods it generates, or for other payment or remuneration agreed to by the parties. The law could further clarify that concessions may be awarded for the construction and operation of a new infrastructure facility or system or for maintenance, repair, refurbishment, modernization, expansion and operation of existing infrastructure facilities and systems, or only for the management and delivery of a public service.

20. Another important issue concerns the nature of the rights vested in the concessionaire, in particular whether the right to provide the service is exclusive or whether the concessionaire will face the competition from other infrastructure facilities or service providers. Exclusivity may concern the right to provide a service in a particular geographical region (for example, a communal water distribution company) or embrace the whole territory of the country (for example, a national railway company); it may relate to the right to supply one particular type of goods or services to one particular customer (for example, a power generator being the exclusive regional supplier to a power transmitter and distributor) or to a limited group of customers (for example, a national long-distance telephone carrier providing connections to local telephone companies).

21. The decision whether or not to grant exclusivity rights to a certain project or category of projects should be taken in the light of the host country's policy for the sector concerned. As discussed earlier, the scope for competition varies considerably in different infrastructure sectors. While certain sectors, or segments thereof, have the characteristics of natural monopolies, in which case open competition is usually not an economically viable alternative, other infrastructure sectors have been successfully opened to free competition (see "Introduction and background information on privately financed infrastructure projects", paras. 28 and 29).

22. It is desirable therefore to deal with the issue of exclusivity in a flexible manner. Rather than excluding or prescribing exclusive concessions, it may be preferable for the law to authorize the grant of exclusive concessions when it is deemed to be in the public interest, such as in cases where the exclusivity is justified for the purpose of ensuring the technical or economical viability of the project. The contracting authority may be required to state the reasons for envisaging an exclusive concession prior to starting the procedure to select the concessionaire. Such general legislation may be supplemented by sector-specific laws regulating the issue of exclusivity in a manner suitable for each particular sector.

D. ADMINISTRATIVE COORDINATION

23. Depending on the administrative structure of the host country, privately financed infrastructure projects may require the involvement of several public authorities, at vari-

ous levels of government. For instance, the competence to lay down regulations and rules for the activity concerned may rest in whole or in part with a public authority at a level different from the one that is responsible for providing the relevant service. It may also be that both the regulatory and the operational functions are combined in one entity, but that the authority to award government contracts is centralized in a different public authority. For projects involving foreign investment, it may also happen that certain specific competences fall within the mandate of an agency responsible for approving foreign investment proposals.

24. Recent international experience has demonstrated the usefulness of entrusting a central unit within the host country's administration with the overall responsibility for formulating policy and providing practical guidance on privately financed infrastructure projects. Such a central unit may also be responsible for coordinating the input of the main public authorities that interface with the project company. It is recognized, however, that such an arrangement may not be possible in some countries, owing to their particular administrative organization. Where it is not feasible to establish such a central unit, other measures may be considered to ensure an adequate level of coordination among the various public authorities involved, as discussed in the following paragraphs.

1. Coordination of preparatory measures

25. One important measure to ensure the successful implementation of privately financed infrastructure projects is the requirement that the relevant public authority conduct a preliminary assessment of the project's feasibility, including economic and financial aspects such as expected economic advantages of the project, estimated cost and potential revenue anticipated from the operation of the infrastructure facility and the environmental impact of the project. The studies prepared by the contracting authority should, in particular, identify clearly the expected output of the project, provide sufficient justification for the investment, propose a modality for private sector participation and describe a particular solution to the output requirement.

26. Following the identification of the future project, it is for the Government to establish its relative priority and to assign human and other resources for its implementation. At that point, it is desirable that the contracting authority review existing statutory or regulatory requirements relating to the operation of infrastructure facilities of the type proposed with a view to identifying the main public authorities whose input will be required for the implementation of the project. It is also important at this stage to consider the measures that may be required in order for the contracting authority and the other public authorities involved to perform the obligations they may reasonably anticipate in connection with the project. For instance, the Government may need to make advance budgeting arrangements to enable the contracting authority or other public authorities to meet financial commitments that extend over several budgetary cycles, such as long-term commitments to purchase the project's output (see chap. IV, "Construction and operation of infrastructure", paras. 50 and 51). Furthermore, a series of administrative measures may be needed to implement certain forms of support provided to the project, such as tax exemptions and customs facilitation (see chap. II, "Project risks and government support", paras. 51-54), which may require considerable time.

2. Arrangements for facilitating the issuance of licences and permits

27. Legislation may play a useful role in facilitating the issuance of licences and permits that may be needed in the course of a project (such as licences under foreign exchange regulations; licences for the incorporation of the concessionaire; authorizations for the employment of foreigners; registration and stamp duties for the use or ownership of land; import licences for equipment and supplies; construction licences; licences for the installation of cables or pipelines; licences for bringing the facility into operation; and spectrum allocation for mobile communication). The required licences or permits may fall within the competence of various organs at different levels of the administration and the time required for their issuance may be significant, in particular when the approving organs or offices were not originally involved in conceiving the project or negotiating its terms. Delay in bringing an infrastructure project into operation as a result of missing licences or permits for reasons not attributable to the concessionaire is likely to result in an increase in the cost of the project and in the price paid by the users.

28. Thus, it is advisable to conduct an early assessment of licences and permits needed for a particular project in order to avoid delay in the implementation phase. A possible measure to enhance the coordination in the issuance of licences and permits might be to entrust one organ with the authority to receive the applications for licences and permits, to transmit them to the appropriate agencies and to monitor the issuance of all licences and permits listed in the request for proposals and other licences that might be introduced by subsequent regulations. The law may also authorize the relevant agencies to issue provisional licences and permits and provide a time period beyond which those licences and permits are deemed to be granted unless they are rejected in writing.

29. However, it should be noted that the distribution of administrative authority among various levels of government (for example, local, regional and central) often reflects fundamental principles of a country's political organization. Therefore, there are instances where the central Government would not be in a position to assume responsibility for the issuance of all licences and permits or to entrust one single body with such a coordinating function. In those cases, it is important to introduce measures to counter the possibility of delay that might result from such distribution of administrative authority, such as, for instance, agreements between the contracting authority and the other public authorities concerned to facilitate the procedures for a given project or other measures intended to ensure an adequate level of coordination among the various public authorities involved and to make the process of obtaining licences more transparent and efficient. Further-

more, the Government might consider providing some assurance that it will assist the concessionaire as much as possible in obtaining licences required by domestic law, for instance by providing information and assistance to bidders regarding the required licences, as well as the relevant procedures and conditions. From a practical point of view, in addition to coordination among various levels of government and various public authorities, there is a need to ensure consistency in the application of criteria for the issuance of licences and for the transparency of the administrative process.

E. AUTHORITY TO REGULATE INFRASTRUCTURE SERVICES

30. The provision of certain public services is generally subject to a special regulatory regime that may consist of substantive rules, procedures, instruments and institutions. That framework represents an important instrument to implement the governmental policy for the sector concerned (see "Introduction and background information on privately financed infrastructure projects", paras. 21-46). Depending on the institutional structure of the country concerned and on the allocation of powers between different levels of government, provincial or local legislation may govern some infrastructure sectors, in full or concurrently with national legislation.

31. Regulation of infrastructure services involves a wide range of general and sector-specific issues, which may vary considerably according to the social, political, legal and economic reality of each host country. While occasionally discussing some of the main regulatory issues that are encountered in a similar context in different sectors (see, for instance, chapter IV, "Construction and operation of infrastructure", paras. 39-46 and 82-95), the *Guide* is not intended to exhaust the legal or policy issues arising out of the regulation of various infrastructure sectors. The term "regulatory agencies" refers to the institutional mechanisms required to implement and monitor the rules governing the activities of infrastructure operators. Because the rules applicable to infrastructure operation often allow for a degree of discretion, a body is required to interpret and apply them, monitor compliance, impose sanctions and settle disputes arising out of the implementation of the rules. The specific regulatory tasks and the amount of discretion they involve will be determined by the rules in question, which can vary widely.

32. The *Guide* assumes that the host country has in place the proper institutional and bureaucratic structures and human resources necessary for the implementation of privately financed infrastructure projects. Nevertheless, as a contribution to domestic legislatures considering the need for, and desirability of, establishing regulatory agencies for monitoring the provision of public services, this section discusses some of the main institutional and procedural issues that may arise in that connection. The discussion contained in this section is illustrative of different options that have been used in domestic legislative measures to set up a regulatory framework for privately financed infrastructure projects, but the *Guide* does not thereby advocate the establishment of any particular model or administrative structure. Practical information and technical advice may be obtained from international financial institutions that carry out programmes to assist their member countries in setting up an adequate regulatory framework (such as the World Bank and the regional development banks).

1. Sectoral competence and mandate of regulatory agencies

33. Regulatory responsibilities may be organized on a sectoral or cross-sectoral basis. Countries that have opted for a sectoral approach have in many cases decided to place closely linked sectors or segments thereof under the same regulatory structure (for example, a common regulatory agency for power and gas or for airports and airlines). Other countries have organized regulation on a cross-sectoral basis, in some cases with one regulatory entity for all infrastructure sectors, and in others with one entity for utilities (water, power, gas, telecommunications) and one for transport. In some countries the competence of regulatory agencies might also extend to several sectors within a given region.

34. Regulatory agencies whose competence is limited to a particular sector usually foster the development of technical, sector-specific expertise. Sector-specific regulation may facilitate the development of rules and practices that are tailored to the needs of the sector concerned. However, the decision between sector-specific and cross-sectoral regulation depends in part on the country's regulatory capacity. Countries with limited expertise and experience in infrastructure regulation may find it preferable to reduce the number of independent structures and try to achieve economies of scale.

35. The law setting up a regulatory mechanism often stipulates a number of general objectives that should guide the actions of regulatory agencies, such as the promotion of competition, the protection of users' interests, the satisfaction of demand, the efficiency of the sector or the public service providers, their financial viability, the safeguarding of the public interest or of public service obligations and the protection of investors' rights. Having one or two overriding objectives helps clarify the mandate of regulatory agencies and establish priorities among sometimes conflicting objectives. A clear mandate may also increase a regulatory agency's autonomy and credibility.

2. Institutional mechanisms

36. The range of institutional mechanisms for the regulation of infrastructure sectors varies greatly. While there are countries that entrust regulatory functions to organs of the Government (for example, the concerned ministries or departments), other countries have preferred to establish autonomous regulatory agencies, separate from the Government. Some countries have decided to subject certain infrastructure sectors to autonomous and independent regulation while leaving others under ministerial regulation. Sometimes, powers may also be shared between an autonomous regulatory agency and the Government, as is often

the case with respect to licensing. From a legislative perspective, it is important to devise institutional arrangements for the regulatory functions that ensure to the regulatory agency an adequate level of efficiency, taking into account the political, legal and administrative tradition of the country.

37. The efficiency of the regulatory regime is in most cases a function of the objectiveness with which regulatory decisions are taken. This, in turn, requires that regulatory agencies should be able to take decisions without interference or inappropriate pressures from infrastructure operators and public service providers. To that effect, legislative provisions in several countries require the independence of the regulatory decision-making process. In order to achieve the desired level of independence it is advisable to separate the regulatory functions from operational ones by removing any regulatory functions that may still be vested with the public service providers and entrust them to a legally and functionally independent entity. Regulatory independence is supplemented by provisions to prevent conflicts of interest, such as prohibitions for staff of the regulatory agency to hold mandates, accept gifts, enter into contracts or have any other relationship (directly or through family members or other intermediaries) with regulated companies, their parents or affiliates.

38. This leads to a related issue, namely the need to minimize the risk of decisions being made or influenced by a body that is also the owner of enterprises operating in the regulated sector or a body acting on political rather than technical grounds. In some countries it was felt necessary to provide the regulatory agency with a certain degree of autonomy vis-à-vis the political organs of government. Independence and autonomy should not be considered solely on the basis of the institutional position of the regulatory function, but also on the basis of its functional autonomy (i.e. the availability of sufficient financial and human resources to discharge their responsibilities adequately).

3. Powers of regulatory agencies

39. Regulatory agencies may have decision-making powers, advisory powers or purely consultative powers or a combination of these different levels of powers depending on the subject matter. In some countries, regulatory agencies were initially given limited powers, which were expanded later as the agencies established a track record of independence and professionalism. The legislation often specifies which powers are vested with the Government and which with a regulatory agency. Clarity in this respect is important to avoid unnecessary conflicts and confusion. Investors, as well as consumers and other interested parties, should know to whom to turn with various requests, applications or complaints.

40. Selection of public service providers, for example, is in many countries a process involving the Government as well as the regulatory agency. If the decision to award a project involves broad judgement of a political rather than technical nature, which may often be the case in the context of infrastructure privatization, final responsibility often rests with the Government. If, however, the award criteria are more technical, as may be the case with a liberal licensing regime for power generation or telecommunications services, many countries entrust the decision to an independent regulatory agency. In other cases, the Government may have to ask the regulatory agency's opinion prior to awarding a concession. On the other hand, some countries exclude direct involvement of regulatory agencies in the award process on the basis that it could affect the way they later regulate the provision of the service concerned.

41. The jurisdiction of regulatory agencies normally extends to all enterprises operating in the sectors they regulate, with no distinction between private and public enterprises. The use of some regulatory powers or instruments may be limited by law to the dominant public service providers in the sector. A regulatory agency may, for example, have price policing powers only vis-à-vis the incumbent or dominant public service provider, while new entrants may be allowed to set prices freely.

42. The matters on which regulatory agencies have to pronounce themselves range from normative responsibilities (for example, rules on the award of concessions and conditions for certification of equipment) to the actual award of concessions; the modification of such instruments; the approval of contracts or decisions proposed by the regulated entities (for example, a schedule or contract on network access); the definition and monitoring of an obligation to provide certain services; the oversight over public service providers (in particular compliance with licence conditions, norms and performance targets); price setting or adjustments; vetting of subsidies, exemptions or other advantages that could distort competition in the sector; sanctions; and dispute settlement.

4. Composition, staff and budget of regulatory agencies

43. When setting up a regulatory agency, a few countries have opted for an agency comprised of a single officer, whereas most others have preferred a regulatory commission. A commission may provide greater safeguards against undue influence or lobbying and may limit the risk of rash regulatory decisions. A one-person regulatory agency, on the other hand, may be able to reach decisions faster and may be held more accountable. To improve the management of the decision-making process in a regulatory commission, the number of members is often kept small (typically three or five members). Even numbers are often avoided to prevent a deadlock, though the chairman could have a casting vote.

44. To increase the regulatory agency's autonomy, different institutions may be involved in the nomination process. In some countries regulatory agencies are appointed by the head of State based on a list submitted by parliament; in others the executive branch of the Government appoints the regulatory agency but subject to confirmation by parliament or upon nominations submitted by parliament, user associations or other bodies. Minimum professional qualifications are often required of the officials of the regulatory agencies, as well as the absence of conflicts of interest that might disqualify them from the function. Terms of office of mem-

bers of regulatory boards may be staggered in order to prevent total turnover and appointment of all members by the same administration; staggering also promotes continuity in regulatory decision-making. Terms of office are often for a fixed term, may be non-renewable and may be terminated before the expiry of the term for limited reasons only (such as criminal conviction, mental incapacitation, gross negligence or dereliction of duty). Regulatory agencies are often faced with experienced lawyers, accountants and other experts working for the regulated industry and need to be able to acquire the same level of expertise, skills and professionalism, either in-house or by hiring outside advisers as needed.

45. Stable funding sources are critical in order for the regulatory agency to function adequately. In many countries, the budget of the regulatory agency is funded by fees and other levies on the regulated industry. Fees may be set as a percentage of the turnover of the public service providers or be levied for the award of licences, concessions or other authorizations. In some countries, the agency's budget is complemented as needed by budget transfers provided in the annual finance law. However, this may create an element of uncertainty that may reduce the agency's autonomy.

5. Regulatory process and procedures

46. The regulatory framework typically includes procedural rules governing the way the institutions in charge of the various regulatory functions have to exercise their powers. The credibility of the regulatory process requires transparency and objectivity, irrespective of whether regulatory authority is exercised by a government department or minister or by an autonomous regulatory agency. Rules and procedures should be objective and clear so as to ensure fairness, impartiality and timely action by the regulatory agency. For purposes of transparency, the law should require that they be made public. Regulatory decisions should state the reasons on which they are based and should be made accessible to interested parties, through publication or other appropriate means.

47. Transparency may be further enhanced, as required by some laws, by the publication by the regulatory agency of an annual report on the sector, including, for example, the decisions taken during the exercise, the disputes that have arisen and the way they were settled. Such an annual report may also include the accounts of the regulatory agency and an audit thereof by an independent auditor. Legislation in many countries further requires that this annual report be submitted to a committee of parliament.

48. Regulatory decisions may have an impact on the interests of diverse groups, including the concerned public service provider, its current or potential competitors and business or non-business users. In many countries, the regulatory process includes consultation procedures for major decisions or recommendations. In some countries, that consultation takes the form of public hearings, in others of consultation papers on which comments from interested groups are solicited. Some countries have also established consultative bodies comprised of users and other concerned parties and require that their opinion be sought before major decisions and recommendations are made. To enhance transparency, comments, recommendations or opinions resulting from the consultation process may have to be published or made publicly available.

6. Recourse against decisions of the regulatory agency

49. Another important element of the host country's regulatory regime are the mechanisms whereby public service providers may request a review of regulatory decisions. As with the whole regulatory process, a high degree of transparency and credibility is essential. To be credible, the review should be entrusted to an entity that is independent from the regulatory agency taking the original decision, from the political authorities of the host country and from the public service providers.

50. Review of decisions of regulatory agencies is often in the jurisdiction of courts, but in some legal systems recourse against decisions by regulatory agencies is in the exclusive jurisdiction of special tribunals dealing solely with administrative matters, which in some countries are separate from the judicial system. If there are concerns over the review process (for example, as regards possible delays or the capacity of courts to make evaluations of the complex economic issues involved in regulatory decisions) review functions may be entrusted to another body, at least in the first instance, before a final recourse to courts or administrative tribunals. In some countries, requests for review are considered by a high-level cross-sectoral independent oversight body. There are also countries where requests for review are heard by a panel composed of persons holding specified judicial and academic functions. As to the grounds on which a request for review may be based, in many cases there are limits, in particular as to the right of the appellate body to substitute its own discretionary assessment of facts for the assessment of the body whose decision is being reviewed.

7. Settlement of disputes between public service providers

51. Disputes may arise between competing concessionaires (for example, two operators of cellular telephony systems) or between concessionaires providing services in different segments of the same infrastructure sector. Such disputes may involve allegations of unfair trade practices (for example, price dumping), uncompetitive practices inconsistent with the country's infrastructure policy (see "Introduction and background information on privately financed infrastructure projects", paras. 23-29) or violation of specific duties of public service providers (see chap. IV, "Construction and operation of infrastructure", paras. 82-93). In many countries, legislative provisions have been found necessary in order to establish an appropriate framework for the settlement of these disputes.

52. Firstly, the various parties may not have contractual arrangements with one another that could provide for an appropriate dispute settlement mechanism. Even where it would be possible to establish a contractual mechanism, the host country may have an interest that disputes involving

certain issues (for example, conditions of access to a given infrastructure network) be settled by a specific body in order to ensure consistency in the application of the relevant rules. Furthermore, certain disputes between public service providers may involve issues that, under the laws of the host country, are not considered to be capable of being settled through arbitration.

53. Domestic laws often establish administrative procedures for handling disputes between public service providers. Typically, public service providers may file complaints with the regulatory agency or with another governmental agency responsible for the application of the rules alleged to have been violated (for example, a governmental body in charge of enforcing competition laws and regulations), which in some countries has the authority to issue a binding decision on the matter. Such mechanisms, even where mandatory, do not necessarily preclude resort by the aggrieved persons to courts, although in some legal systems the courts may only have the power to control the legality of the decision (for example, observance of due process) but not its merits.

A/CN.9/471/Add.3

Chapter II. Project risks and government support

CONTENTS

LEGISLATIVE RECOMMENDATIONS

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles be implemented by the law:

Project risks and risk allocation (see paras. 8-29)

Recommendation 12. No unnecessary statutory or regulatory limitations should be placed upon the contracting authority's ability to agree on an allocation of risks that is suited to the needs of the project.

Government support (see paras. 30-60)

Recommendation 13. The law should clearly state which public authorities of the host country may provide financial or economic support to the implementation of privately financed infrastructure projects and which types of support they are authorized to provide.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL REMARKS

1. Privately financed infrastructure projects create opportunities for reducing the commitment of public funds and other resources for infrastructure development and operation. They also make it possible to transfer to the private sector a number of risks that would otherwise be borne by the Government. The precise allocation of risks among the various parties involved is typically defined after consideration of a number of factors, including the public interest

in the development of the infrastructure in question and the level of risk faced by the project company, other investors and lenders (and the extent of their ability and readiness to absorb those risks at an acceptable cost). Adequate risk allocation is essential to reducing project costs and to ensuring the successful implementation of the project. Conversely, an inappropriate allocation of project risks may compromise the project's financial viability or hinder its efficient management, thus increasing the cost at which the service is provided.

2. In the past, debt financing for infrastructure projects was obtained on the basis of credit support from project sponsors, multilateral and national export credit agencies, Governments and other third parties. In recent years, these traditional sources have not been able to meet the growing needs for infrastructure capital and financing has been increasingly obtained on a project finance basis.

3. Project finance, as a method of financing, seeks to establish the creditworthiness of the project company on a "stand alone" basis, even before construction has begun or any revenues have been generated, and to borrow on the basis of that credit. Commentators have observed that project finance may hold the key to unlocking the vast pools of capital theoretically available in the capital markets for investment in infrastructure. However, project finance has distinctive and demanding characteristics from a financial point of view. Principal among these is that, in a project finance structure, financing parties must rely mainly upon the project company's assets and cash flows for repayment. If the project fails they will have no recourse, or only limited recourse, to the financial resources of a sponsor company or other third party for repayment (see also "Introduction and background information on privately financed infrastructure projects.", paras. 54 and 55).

4. The financial methodology of project financing requires a precise projection of the capital costs, revenues and projected costs, expenses, taxes and liabilities of the project. In order to predict these numbers precisely and with certainty and to create a financial model for the project, it is typically necessary to project the "base case" amounts of revenues, costs and expenses of the project company over a long period—often 20 years or more—in order to determine the amounts of debt and equity the project can support. Central to this analysis is the identification and quantification of risks. For this reason, the identification, assessment, allocation and mitigation of risks is at the heart of project financing from a financial point of view.

5. Among the most important, yet difficult, risks to assess and to mitigate are "political risks" (risks associated with adverse actions of the host Government, its agencies and its courts, in particular in granting licences and permits, adopting regulations applicable to the project company and its markets, taxation and the performance and enforcement of contractual obligations) and "currency risks" (risks related to the value, transferability and convertibility of the local currency). In order to guard against such risks, in particular, project finance structures have often incorporated insurance or guarantees of international financial institutions and export credit agencies as well as guarantees of the host Government.

6. Section B of the present chapter (paras. 8-29) gives an overview of the main risks encountered in privately financed infrastructure projects and contains a brief discussion of common contractual solutions for risk allocation, which emphasizes the need to provide the parties with the necessary flexibility for negotiating a balanced allocation of project risks. Section C (paras. 30-60) sets out policy considerations the Government may wish to take into account when designing the level of direct governmental support that may be provided to infrastructure projects, such as the degree of public interest in the execution of any given project and the need to avoid the assumption by the Government of open-ended or excessive contingent liabilities. Section C considers some additional support measures that have been used in governmental programmes to promote private investment in infrastructure development, without advocating the use of any of them in particular. Lastly, sections D (paras. 61-71) and E (paras. 72-74) outline guarantees and support measures that may be provided by export credit agencies and investment promotion agencies.

7. Other chapters of this *Guide* deal with related aspects of the host Government's legal regime that are of relevance to the credit and risk analysis of a project. Depending upon the sector and type of project the emphasis will, of course, vary. The reader is referred in particular to chapters IV, "Construction and operation of infrastructure"; V, "Duration, extension and termination of the project agreement"; VI, "Settlement of disputes"; and VII, "Other relevant areas of law".

B. PROJECT RISKS AND RISK ALLOCATION

8. As used in this chapter, the notion of "project risks" refers to those circumstances which, in the assessment of the parties, may have a negative effect on the benefit they expect to achieve with the project. While there may be events that would represent a serious risk for most parties (for example, the physical destruction of the facility by a natural disaster), each party's risk exposure will vary according to its role in the project.

9. The expression "risk allocation" refers to the determination of which party or parties should bear the consequences of the occurrence of events identified as project risks. For example, if the project company is obliged to deliver the infrastructure facility to the contracting authority with certain equipment in functioning condition, the project company is bearing the risk that the equipment may fail to function at the agreed performance levels. The occurrence of that project risk, in turn, may have a series of consequences for the project company, including its liability for failure to perform a contractual obligation under the project agreement or the applicable law (for example, payment of damages to the contracting authority for delay in bringing the facility into operation); certain losses (for example, loss of revenue as a result of delay in beginning operating the facility); or additional cost (for example, cost of repair of faulty equipment or of securing replacement equipment).

10. The party bearing a given risk may take preventive measures with a view to limiting the likelihood of the risk,

as well as specific measures to protect itself, in whole or in part, against the consequences of the risk. Such measures are often referred to as "risk mitigation". In the previous example, the project company will carefully review the reliability of the equipment suppliers and the technology proposed. The project company may require its equipment suppliers to provide independent guarantees concerning the performance of their equipment. The supplier may also be liable to pay penalties or liquidated damages to the project company for the consequences of failure of its equipment. In some cases, a more or less complex chain of contractual arrangements may be made to mitigate the consequences of a project risk. For instance, the project company may combine the guarantees provided by the equipment supplier with commercial insurance covering some consequences of the interruption of its business as a result of equipment failure.

1. Overview of main categories of project risk

11. For purposes of illustration, the following paragraphs provide an overview of the main categories of project risk and give examples of certain contractual arrangements used for risk allocation and mitigation. For further discussion on this subject, the reader is advised to consult other sources of information, such as the *UNIDO BOT Guidelines*.[2]

(a) Project disruption caused by events outside the control of the parties

12. The parties face the risk that the project may be disrupted by unforeseen or extraordinary events outside their control, which may be of a physical nature, such as natural disasters—floods, storms or earthquakes—or the result of human action, such as war, riots or terrorist attacks. Such unforeseen or extraordinary events may cause a temporary interruption of the project execution or the operation of the facility, resulting in construction delay, loss of revenue and other losses. Severe events may cause physical damage to the facility or even destruction beyond repair (for a discussion of the legal consequences of the occurrence of such events, see chap. IV, "Construction and operation of infrastructure", paras. 131-139).

(b) Project disruption caused by adverse acts of Government ("political risk")

13. The project company and the lenders face the risk that the project execution may be negatively affected by acts of the contracting authority, another agency of the Government or the host country's legislature. Such risks are often referred to as "political risks" and may be divided into three broad categories: "traditional" political risks (for example, nationalization of the project company's assets or imposition of new taxes that jeopardize the project company's prospects of debt repayment and investment recovery); regulatory risks (for example, introduction of more stringent standards for service delivery or opening of a sector to competition) and "quasi-commercial" risks (for example, breaches by the contracting authority or project interruptions due to changes in the contracting authority's priorities and plans) (for a discussion of the legal consequences of the occurrence of such events, see chap. IV, "Construction and operation of infrastructure", paras. 122-125). In addition to political risks originating from the host country, some political risks may result from acts of a foreign Government, such as blockades, embargoes or boycotts imposed by the Governments of the investors' home countries.

(c) Construction and operation risks

14. The main risks that the parties may face during the construction phase are the risks that the facility cannot be completed at all or cannot be delivered according to the agreed schedule (completion risk); that the construction cost exceeds the original estimates (construction cost overrun risk); or that the facility fails to meet performance criteria at completion (performance risk). Similarly, during the operational phase the parties may face the risk that the completed facility cannot be effectively operated or maintained to produce the expected capacity, output or efficiency (performance risk); or that the operating costs exceed the original estimates (operation cost overrun). It should be noted that construction and operation risks do not affect only the private sector. The contracting authority and the users in the host country may be severely affected by an interruption in the provision of needed services. The Government, as representative of the public interest, will be generally concerned about safety risks or environmental damage caused by improper operation of the facility.

15. Some of these risks may be brought about by the project company or its contractors or suppliers. For instance, construction cost overrun and delay in completion may be the result of inefficient construction practices, waste, insufficient budgeting or lack of coordination among contractors. Failure of the facility to meet performance criteria may also be the result of defective design, inadequacy of the technology used or faulty equipment delivered by the project company's suppliers. During the operational phase, performance failures may be the consequence, for example, of faulty maintenance of the facility or negligent operation of mechanical equipment. Operation cost overruns may also derive from inadequate management.

16. However, some of these risks may also result from specific actions taken by the contracting authority, by other public authorities or even the host country's legislature. Performance failures or cost overruns may be the consequence of the inadequacy of the technical specifications provided by the contracting authority during the selection of the concessionaire. Delays and cost overruns may also be brought about by actions of the contracting authority subsequent to the award of the project (delays in obtaining approvals and permits, additional costs caused by changes in requirements due to inadequate planning, interruptions caused by inspecting agencies or delays in delivering the land on which the facility is to be built). General legislative or regulatory measures, such as more stringent safety or

[2]See "Introduction and background information on privately financed infrastructure projects", footnote 1 on page 74.

labour standards, may also result in higher construction or operating costs. Shortfalls in production may be caused by the non-delivery of the necessary supplies (for example, power or gas) on the part of public authorities.

(d) Commercial risks

17. "Commercial risks" relate to the possibility that the project cannot generate the expected revenue because of changes in market prices or demand for the goods or services it generates. Both of these forms of commercial risk may seriously impair the project company's capacity to service its debt and may compromise the financial viability of the project.

18. Commercial risks vary greatly according to the sector and type of project. The risk may be regarded as minimal or moderate where the project company has a monopoly over the service concerned or when it supplies a single client through a standing off-take agreement. However, commercial risks may be considerable in projects that depend on market-based revenues, in particular where the existence of alternative facilities or supply sources makes it difficult to establish a reliable forecast of usage or demand. This may be a serious concern, for instance, in tollroad projects, since tollroads face competition from toll-free roads. Depending on the ease with which drivers may have access to toll-free roads, the toll revenues may be difficult to forecast, especially in urban areas where there may be many alternative routes and roads may be built or improved continuously. Furthermore, traffic usage has been found to be even more difficult to forecast in the case of new tollroads, especially those which are not an addition to an existing toll facility system, because there is no existing traffic to use as an actuarial basis.

(e) Exchange rate and other financial risks

19. Exchange rate risk relates to the possibility that changes in foreign exchange rates alter the exchange value of cash flows from the project. Prices and user fees charged to local users or customers will most likely be paid for in local currency, while the loan facilities and sometimes also equipment or fuel costs may be denominated in foreign currency. This risk may be considerable, since exchange rates are particularly unstable in many developing countries or countries whose economies are in transition. In addition to exchange rate fluctuations, the project company may face the risk that foreign exchange control or lowering reserves of foreign exchange may limit the availability in the local market of foreign currency needed by the project company to service its debt or repay the original investment.

20. Another risk faced by the project company concerns the possibility that interest rates may rise, forcing the project to bear additional financing costs. This risk may be significant in infrastructure projects given the usually large sums borrowed and the long duration of the project, with some loans extending over a period of several years. Loans are often given at a fixed rate of interest (for example, fixed-rate bonds) to reduce the interest rate risk. In addition, the finance package may include hedging facilities against interest rate risks, for example, by way of interest rate swaps or interest rate caps.

2. Contractual arrangements for risk allocation and mitigation

21. It follows from the above that the parties need to take into account a wide range of factors to allocate project risks effectively. For this reason, it is generally not advisable to have in place statutory provisions that limit unnecessarily the negotiators' ability to achieve a balanced allocation of project risks, as appropriate to the needs of individual projects. Nevertheless, it may be useful for the Government to provide some general guidance to officials acting on behalf of domestic contracting authorities, for instance, by formulating advisory principles on risk allocation.

22. Practical guidance provided to contracting authorities in a number of countries often refers to general principles for the allocation of project risks. One such principle is that specific risks should normally be allocated to the party best able to assess, control and manage the risk. Additional guiding principles envisage the allocation of project risks to the party with the best access to hedging instruments (that is, investment schemes to offset losses in one transaction by realizing a simultaneous gain on another) or the greatest ability to diversify the risks or to mitigate them at the lowest cost. In practice, however, risk allocation is often a factor of both policy considerations (for example, the public interest in the project or the overall exposure of the contracting authority under various projects) and the negotiating strength of the parties. Furthermore, in allocating project risks it is important to consider the financial strength of the parties to which a specific risk is allocated and their ability to bear the consequences of the risk, should it occur.

23. It is usually for the project company and its contractors to assume ordinary risks related to the development and operation of the infrastructure. For instance, completion, cost overrun and other risks typical of the construction phase are usually allocated to the construction contractor or contractors through a turnkey construction contract, whereby the contractor assumes full responsibility for the design and construction of the facility at a fixed price, within a specified completion date and according to particular performance specifications (see chap. IV, "Construction and operation of infrastructure", para. 70). The construction contractor is typically liable to pay liquidated damages or penalties for any late completion. In addition, the contractor is also usually required to provide a guarantee of performance, such as a bank guarantee or a surety bond. Separate equipment suppliers are also usually required to provide guarantees in respect of the performance of their equipment. Guarantees of performance provided by contractors and equipment suppliers are often complemented by similar guarantees provided by the concessionaire to the benefit of the contracting authority. Similarly, the project company typically mitigates its exposure to operation risks by entering into an operation and maintenance contract in which the operating company undertakes to achieve the required output and assumes the liability for the consequences of operational failures. In most cases,

arrangements of this type will be an essential requirement for a successful project. The lenders, for their part, will seek protection against the consequences of those risks, by requiring the assignment of the proceeds of any bonds issued to guarantee the contractor's performance, for instance. Loan agreements typically require that the proceeds from contract bonds be deposited in an account pledged to the lenders (that is, an "escrow account"), as a safeguard against misappropriation by the project company or against seizure by third parties (for example, other creditors). Nevertheless, the funds paid under the bonds are regularly released to the project company as needed to cover repair costs or operating and other expenses.

24. The contracting authority, on the other hand, will be expected to assume those risks which relate to events attributable to its own actions, such as inadequacy of technical specifications provided during the selection process or delay caused by failure to provide agreed supplies on time. The contracting authority may also be expected to bear the consequences of disruptions caused by acts of Government, for instance by agreeing to compensate the project company for loss of revenue due to price control measures (see chap. IV, "Construction and operation of infrastructure", para. 124). While some political risks may be mitigated by procuring insurance, such insurance, if at all available for projects in the country concerned, may not be obtainable at an acceptable cost. Thus, prospective investors and lenders may turn to the Government, for instance, to obtain assurances against expropriation or nationalization and guarantees that proper compensation will be payable in the event of such action (see para. 50). Depending on their assessment of the level of risk faced in the host country, prospective investors and lenders may not be ready to pursue a project in the absence of those assurances or guarantees.

25. Most of the project risks referred to in the preceding paragraphs can, to a greater or lesser extent, be regarded as falling within the control of one party or the other. However, a wide variety of project risks result from events outside the control of the parties or are attributable to the acts of third parties and other principles of risk allocation may thus need to be considered.

26. For example, the project company could expect that the interest rate risk, together with the inflation risk, would be passed on to the end-users or customers of the facility through price increases, although this may not always be possible because of market-related circumstances or price control measures. The price structure negotiated between the project company and the contracting authority will determine the extent to which the project company will avoid those risks or whether it will be expected to absorb some of them (see chap. IV, "Construction and operation of infrastructure", paras. 36-46).

27. Another category of risk that may be allocated under varying schemes concerns extraneous events such as war, civil disturbance, natural disasters or other events wholly outside the control of the parties. In traditional infrastructure projects carried out by the public sector, the public entity concerned usually bears the risk, for example, of destruction of the facility by natural disasters or similar events, to the extent that those risks may not be insurable. In privately financed infrastructure projects the Government may prefer this type of risk to be borne by the project company. However, depending on their assessment of the particular risks faced in the host country, the private sector may not be ready to bear those risks. Therefore, in practice there is not a single solution to cover this entire category of risk and special arrangements are often made to deal with each of them. For example, the parties may agree that the occurrence of some of those events may exempt the affected party from the consequences of failure to perform under the project agreement and there will be contractual arrangements providing solutions for some of their adverse consequences, such as contract extensions to compensate for delay resulting from events or even some form of direct payment under special circumstances (see chap. IV, "Construction and operation of infrastructure", paras. 131-139). Those arrangements will be supplemented by commercial insurance purchased by the project company, where available at an acceptable cost (see chap. IV, "Construction and operation of infrastructure", paras. 119 and 120).

28. Special arrangements may also need to be negotiated for the allocation of commercial risks. Projects such as mobile telecommunication projects usually have a relatively high direct cost recovery potential and in most cases the project company is expected to carry out the project without sharing those risks with the contracting authority and without recourse to support from the Government. In other infrastructure projects, such as power-generation projects, the project company may revert to contractual arrangements with the contracting authority or other public authority in order to reduce its exposure to commercial risks, for example, by negotiating long-term off-take agreements that guarantee a market for the product at an agreed price. Payments may take the form of actual consumption or availability charges or combine elements of both; the applicable rates are usually subject to escalation or indexation clauses in order to protect the real value of revenues from the increased costs of operating an ageing facility (see also chap. IV, "Construction and operation of infrastructure", paras. 50 and 51). Lastly, there are relatively capital-intensive projects with more slowly developing cost recovery potential, such as water supply and some tollroad projects, which the private sector may be reluctant to carry out without some form of risk-sharing with the contracting authority, for example, through fixed revenue assurances or agreed capacity payments regardless of actual usage (see also chap. IV, "Construction and operation of infrastructure", paras. 48 and 49).

29. The risk allocation eventually agreed to by the contracting authority and the project company will be reflected in their mutual rights and obligations, as set forth in the project agreement. The possible legislative implications of certain provisions commonly found in project agreements are discussed in other chapters of the *Guide* (see chaps. IV, "Construction and operation of infrastructure", and V, "Duration, extension and termination of the project agreement"). Various other agreements will also be negotiated by the parties to mitigate or reallocate the risks they assume (for example, loan agreements; construction, equipment supply, operation and maintenance contracts; direct agreement between the contracting authority and the lenders; and off-take and long-term supply agreements, where applicable).

C. GOVERNMENT SUPPORT

30. The discussion in the preceding section shows that the parties may use various contractual arrangements to allocate and mitigate project risks. Nevertheless, those arrangements may not always be sufficient to ensure the level of comfort required by private investors to participate in privately financed infrastructure projects. It may also be found that certain additional government support is needed to enhance the attractiveness of private investment in infrastructure projects in the host country.

31. Government support may take various forms. Generally, any measure taken by the Government to enhance the investment climate for infrastructure projects may be regarded as governmental support. From that perspective, the existence of legislation enabling the Government to award privately financed infrastructure projects or the establishment of clear lines of authority for the negotiation and follow-up of infrastructure projects (see chap. I, "General legislative and institutional framework", paras. 23-29) may represent important measures to support the execution of infrastructure projects. As used in the *Guide*, however, the expression "government support" has a narrower connotation and refers in particular to special measures, in most cases of a financial or economic nature, that may be taken by the Government to enhance the conditions for the execution of a given project or to assist the project company in meeting some of the project risks, above and beyond the ordinary scope of the contractual arrangements agreed to between the contracting authority and the project company to allocate project risks. Government support measures, where available, are typically an integral part of governmental programmes to attract private investment for infrastructure projects.

1. Policy considerations relating to government support

32. In practice, a decision to support the implementation of a project is based on an assessment by the Government of the economic or social value of the project and whether that justifies additional governmental support. The Government may estimate that the private sector alone may not be able to finance certain projects at an acceptable cost. The Government may also consider that particular projects may not materialize without certain support measures that mitigate some of the project risks. Indeed, the readiness of private investors and lenders to carry out large projects in a given country is not only based on their assessment of specific project risks, but is also influenced by their comfort with the investment climate in the host country, in particular in the infrastructure sector. Factors to which private investors may attach special importance include the host country's economic system and the degree of development of market structures and the degree to which the country has already succeeded with privately financed infrastructure projects over a period of years.

33. For the above reasons, a number of countries have adopted a flexible approach for dealing with the issue of governmental support. In some countries, this has been done by legislative provisions that tailor the level and type of support to the specific needs of individual infrastructure sectors. In other countries, this has been achieved by providing the host Government with sufficient legislative authority to extend certain types of assurance or guarantee while preserving its discretion not to make them available in all cases. However, the host Government will be interested in ensuring that the level and type of support provided to the project does not result in the assumption of open-ended liabilities. Indeed, over-commitment of public authorities through guarantees given to a specific project may prevent them from extending guarantees in other projects of perhaps even greater public interest.

34. The efficiency of governmental support programmes for private investment in infrastructure may be enhanced by the introduction of appropriate techniques for budgeting for governmental support measures or for assessing the total cost of other forms of governmental support. For example, loan guarantees provided by public authorities usually have a cost lower than the cost of loan guarantees provided by commercial lenders. The difference (less the value of fees and interests payable by the project company) represents a cost for the Government and a subsidy for the project company. However, loan guarantees are often not recorded as expenses until such time as a claim is made. Thus, the actual amount of the subsidy granted by the Government is not recorded, which may create the incorrect impression that loan guarantees entail a lesser liability than direct subsidy payments. Similarly, the financial and economic cost of tax exemptions granted by the Government may not be apparent, which makes them less transparent than other forms of direct governmental support. For these reasons, countries that are contemplating establishing support programmes for privately financed infrastructure projects may need to devise special methods for estimating the budgetary cost of support measures such as tax exemptions, loans and loan guarantees provided by public authorities that take into account the expected present value of future costs or loss of revenue.

2. Forms of government support

35. The availability of direct governmental support, be it in the form of financial guarantees, public loans or revenue assurances, may be an important element in the financial structuring of the project. The following paragraphs briefly describe forms of governmental support that are sometimes authorized under domestic laws and discuss possible legislative implications they may have for the host country, without advocating the use of any of them in particular.

36. Generally, besides the administrative and budgetary measures that may be needed to ensure the fulfilment of governmental commitments throughout the duration of the project, it is advisable for the legislature to consider the possible need for an explicit legislative authorization to provide certain forms of support. Where government support is found advisable, it is important for the legislature to bear in mind the host country's obligations under international agreements on regional economic integration or trade liberalization, which may limit the ability of public authorities of the contracting States to provide support, financial or otherwise, to companies operating in their territories.

Furthermore, where a Government is contemplating support for the execution of an infrastructure project, that circumstance should be made clear to all prospective bidders at an appropriate time during the selection proceedings (see chap. III, "Selection of the concessionaire", para. 67).

(a) Public loans and loan guarantees

37. In some cases, the law authorizes the Government to extend interest-free or low-interest loans to the project company to lower the project's financing cost. Depending on the accounting rules to be followed, some interest-free loans provided by public agencies can be recorded as revenue in the project company's accounts, with loan payments being treated as deductible costs for tax and accounting purposes. Moreover, subordinate loans provided by the Government may enhance the financial terms of the project by supplementing senior loans provided by commercial banks without competing with senior loans for repayment. Governmental loans may be generally available to all project companies in a given sector or they may be limited to providing temporary assistance to the project company in the event that certain project risks materialize. The total amount of any such loan may be further limited to a fixed sum or to a percentage of the total project cost.

38. In addition to public loans, some national laws authorize the contracting authority or other agency of the host Government to provide loan guarantees for the repayment of loans taken by the project company. Loan guarantees are intended to protect the lenders (and, in some cases, investors providing funds to the project as well) against default by the project company. Loan guarantees do not entail an immediate disbursement of public funds and they may appear more attractive to the Government than direct loans. However, loan guarantees may represent a substantial contingent liability and the Government's exposure may be significant, especially in the event of total failure by the project company. Indeed, the Government would in most cases find little comfort in a possible subrogation in the rights of the lenders against an insolvent project company.

39. Thus, in addition to introducing general measures to enhance the efficiency of governmental support programmes (see para. 34), it may be advisable to consider concrete provisions to limit the Government's exposure under loan guarantees. Rules governing the provision of loan guarantees may provide a maximum ceiling, which could be expressed as a fixed sum or, if more flexibility is needed, a certain percentage of the total investment in any given project. Another measure to circumscribe the contingent liabilities of the guaranteeing agency may be to define the circumstances under which such guarantees may be extended, taking into account the types of project risk the Government may be ready to share. For instance, if the Government considers sharing only the risks of temporary disruption caused by events outside the control of the parties, the guarantees could be limited to the event that the project company is rendered temporarily unable to service its loans owing to the occurrence of specially designated unforeseeable events outside the project company's control. If the Government wishes to extend a greater degree of protection to the lenders, the guarantees may cover the project company's permanent failure to repay its loans for the same reasons. In such a case, however, it is advisable not to remove the incentives for the lenders to arrange for the continuation of the project, for instance by identifying another suitable concessionaire or by stepping in through an agent appointed to remedy the project company's default (see chap. IV, "Construction and operation of infrastructure", paras. 147-150). The call on the governmental guarantees could thus be conditional upon the prior exhaustion of other remedies available to the lenders under the project agreement, the loan agreements or their direct agreements with the contracting authority, if any. In any event, full loan guarantees by the Government amounting to a total protection of the lenders against the risk of default by the project company are not a common feature of infrastructure projects carried out under the project finance modality.

(b) Equity participation

40. Another form of additional support by the Government may consist of direct or indirect equity participation in the project company. Equity participation by the Government may help achieve a more favourable ratio between equity and debt by supplementing the equity provided by the project sponsors, in particular where other sources of equity capital, such as investment funds, cannot be tapped by the project company. Equity investment by the Government may also be useful to satisfy legal requirements of the host country concerning the composition of locally established companies. The company laws of some jurisdictions, or special legislation on infrastructure projects, require a certain amount of participation of local investors in locally established companies. However, it may not always be possible to secure the required level of local participation on acceptable terms. Local investors may lack the interest or financial resources to invest in large infrastructure projects; they may also be averse to or lack experience in dealing with specific project risks.

41. Governmental participation may involve certain risks that the Government may wish to consider. In particular, there is a risk that such participation may be understood as an implied guarantee by the Government, so that the parties, or even third parties, may expect the Government to back the project fully or eventually even take it over at its own cost if the project company fails. Where such an implied guarantee is not intended, appropriate provisions should be made to clarify the limits of governmental involvement in the project.

(c) Subsidies

42. Tariff subsidies are used in some countries to supplement the project company's revenue when the actual income of the project falls below a certain minimum level. The provision of the services in some areas where the project company is required to operate may not be a profitable undertaking, because of low demand or high operational costs or because the project company is required to provide the service to a certain segment of the population at low cost. Thus, the law in some countries authorizes the

Government to undertake to extend subsidies to the project company in order to make it possible to provide the services at a lower price.

43. Subsidies usually take the form of direct payments to the project company, either lump-sum payments or payments calculated specifically to supplement the project company's revenue. In the latter case, the Government should ensure that it has in place adequate mechanisms for verifying the accuracy of subsidy payments made to the project company, by means, for example, of audit and financial disclosure provisions in the project agreement. An alternative to direct subsidies may be to allow the project company to cross-subsidize less profitable activities with revenue earned in more profitable ones. This may be done by combining in the same concession both profitable and less profitable activities or areas of operation, or by granting to the project company the commercial exploitation of a separate and more profitable ancillary activity (see paras. 48-60).

44. However, it is important for the legislature to consider practical implications and possible legal obstacles to the provision of subsidies to the project company. For example, subsidies are found to distort free competition and the competition laws of many countries prohibit the provision of subsidies or other forms of direct financial aid that are not expressly authorized by legislation. Subsidies may also be inconsistent with the host country's international obligations under international agreements on regional economic integration or trade liberalization.

(d) Sovereign guarantees

45. In connection with privately financed infrastructure projects, the term "sovereign guarantees" is sometimes used to refer to any of two types of guarantee provided by the host Government. The first type includes guarantees issued by the host Government to cover the breach of obligations assumed by the contracting authority under the project agreement. A second category includes guarantees that the project company will not be prevented by the Government from exercising certain rights that are granted to it under the project agreement or that derive from the laws of the country, for example, the right to repatriate profits at the end of the project. Whatever form such guarantees may take, it is important for the Government and the legislature to consider the Government's ability to assess and manage efficiently its own exposure to project risks and to determine the acceptable level of direct or contingent liabilities it can assume.

(i) Guarantees of performance by the contracting authority

46. Performance guarantees may be used where the contracting authority is a separate or autonomous legal entity that does not engage the responsibility of the Government itself. Such guarantees may be issued in the name of the Government or of a public financial institution of the host country. They may also take the form of a guarantee issued by international financial institutions that are backed by a counter-guarantee by the Government (see paras. 61-71). Guarantees given by the Government may be useful instruments to protect the project company from the consequences of default by the contracting authority or other public authority assuming specific obligations under the project agreement. The most common situations in which such guarantees are used include the following:

(a) Off-take guarantees. Under these arrangements, the Government guarantees payment of goods and services supplied by the project company to public entities. Payment guarantees are often used in connection with payment obligations under off-take agreements in the power-generation sector (see chap. IV, "Construction and operation of infrastructure", para. 50). Such guarantees may be of particular importance where the main or sole customer of the project company is a government monopoly. Additional comfort is provided to the project company and lenders when the guarantee is subscribed by an international financial institution;

(b) Supply guarantees. Supply guarantees may also be provided to protect the project company from the consequences of default by public sector entities providing goods and supplies required for the operation of the facility—fuel, electricity or water, for example—or to secure payment of indemnities for which the contracting entity may become liable under the supply agreement;

(c) General guarantees. These are guarantees intended to protect the project company against any form of default by the contracting authority, rather than default on specifically designated obligations. Although general performance guarantees may not be very frequent, there are cases in which the project company and the lenders may regard them as a condition necessary for executing the project. This may be the case, for example, where the obligations undertaken by the contracting authority are not commensurate with its creditworthiness, as may happen in connection with large concessions granted by municipalities or other autonomous entities. Guarantees by the Government may be useful to ensure specific performance, for example, when the host Government undertakes to substitute for the contracting entity in the performance of certain acts (for example, delivery of an appropriate site for disposal of by-products).

47. Generally, it is important not to overestimate the adequacy of sovereign guarantees alone to protect the project company against the consequences of default by the contracting authority. Except when their purpose is to ensure specific performance, sovereign guarantees usually have a compensatory function. Thus, they may not substitute for appropriate contractual remedies in the event of default by the contracting authority (see chap. IV, "Construction and operation of infrastructure", paras. 140-150). Different types of contractual remedies, or combinations thereof, may be used to deal with various events of default, for example, liquidated damages in the event of default and price increases or contract extensions in the event of additional delay in project execution caused by acts of the contracting authority. Furthermore, in order to limit the Government's exposure and to reduce the risk of calls on the guarantee, it is advisable to consider measures to encourage the contracting authority to live up to its obligations under

the project agreement or to make efforts to control the causes of default. Such measures may include express subrogation rights of the guarantor against the contracting authority or internal control mechanisms to ensure the accountability of the contracting authority or its agents in the event, for instance, of wanton or reckless breach of its obligations under the project agreement resulting in a call on the sovereign guarantee.

(ii) Guarantees against adverse acts of Government

48. Unlike performance guarantees, which protect the project company against the consequences of default by the contracting authority, the guarantees considered here relate to acts of other authorities of the host country that are detrimental to the rights of the project company or otherwise substantially affect the implementation of the project agreement. Such guarantees are often referred to as "political risk guarantees".

49. One type of guarantee contemplated in national laws consists of foreign exchange guarantees, which usually fulfil three functions: to guarantee the convertibility of the local earnings into foreign currency, to guarantee the availability of the required foreign currency and to guarantee the transferability abroad of the converted sums. Foreign exchange guarantees are common in privately financed infrastructure projects involving a substantial amount of debt denominated in currencies other than the local currency, in particular in those countries which do not have freely convertible currencies. Some laws also provide that such a guarantee may be backed by a bank guarantee issued in favour of the project company. A foreign exchange guarantee is not normally intended to protect the project company and the lenders against the risks of exchange rate fluctuation or market-induced devaluation, which are considered to be ordinary commercial risks. However, in practice, Governments have sometimes agreed to assist the project company in cases where the project company is unable to repay its debts in foreign currency owing to extreme devaluation of the local currency.

50. Another important type of guarantee may be to assure the company and its shareholders that they will not be expropriated without adequate compensation. Such a guarantee would typically extend both to confiscation of property owned by the project company in the host country and to the nationalization of the project company itself, that is, confiscation of shares of the project company's capital. This type of guarantee is usually provided for in laws dealing with direct foreign investment and in bilateral investment protection treaties (see chap. VII, "Other relevant areas of law", ___).

(e) Tax and customs benefits

51. Another method for the host Government to support the execution of privately financed projects could be to grant some form of tax and customs exemption, reduction or benefit. Domestic legislation on foreign direct investment often provides special tax regimes to encourage foreign investment and in some countries it has been found useful expressly to extend such a taxation regime to foreign companies participating in privately financed infrastructure projects (see also chap. VII, "Other relevant areas of law", __).

52. Typical tax exemptions or benefits include exemption from income or profit tax or from property tax on the facility, or exemptions from income tax on interest due on loans and other financial obligations assumed by the project company. Some laws provide that all transactions related to a privately financed infrastructure project will be exempted from stamp duties or similar charges. In some cases, the law establishes some preferential tax treatment or provides that the project company will benefit from the same favourable tax treatment generally given to foreign investments. Sometimes the tax benefit takes the form of a more favourable income tax rate, combined with a decreasing level of exemption during the initial years of the project. Such exemptions and benefits are sometimes extended to the contractors engaged by the project company, in particular foreign contractors.

53. Further taxation measures sometimes used to promote privately financed infrastructure projects are exemptions from withholding tax to foreign lenders providing loans to the project. Under many legal systems, any interest, commission or fee in connection with a loan or indebtedness that is borne directly or indirectly by locally established companies or is deductible against income earned locally is deemed to be local income for taxation purposes. Therefore, both local and foreign lenders to infrastructure projects may be liable to the payment of income tax in the host country, which the project company may be required to withhold from payments to foreign lenders, as non-residents of the host country. Income tax due by the lenders in the host country is typically taken into account in the negotiations between the project company and the lenders and may result in a higher financial cost for the project. In some countries, the competent organs are authorized to grant exemptions from withholding tax in connection with payments to non-residents that are found to be made for a purpose that promotes or enhances the economic or technological development of the host country or are otherwise deemed to be related to a purpose of public relevance

54. Besides tax benefits or exemptions, national laws sometimes facilitate the import of equipment for the use of the project company by means of exemption from customs duties. Such exemption typically applies to the payment of import duties on equipment, machinery, accessories, raw materials and materials imported into the country for purposes of conducting preliminary studies, designing, constructing and operating infrastructure projects. In the event that the project company wishes to transfer or sell the imported equipment on the domestic market, the approval of the contracting authority usually needs to be obtained and the relevant import duties, turnover tax or other taxes need to be paid in accordance with the laws of the country. Sometimes the law authorizes the Government either to grant an exemption from customs duty or to guarantee that the level of duty will not be raised to the detriment of the project.

(f) Protection from competition

55. An additional form of governmental support may consist of assurances that no competing infrastructure project will be developed for a certain period or that no agency of the Government will compete with the project company, directly or through another concessionaire. Assurances of this sort serve as a guarantee that the exclusivity rights that may be granted to the concessionaire (see chap. I, "General legislative and institutional framework", paras. 20-22) will not be nullified during the life of the project. Protection from competition may be regarded by the project company and the lenders as an essential condition for participating in the development of infrastructure in the host country. Some national laws contain provisions whereby the Government undertakes not to facilitate or support the execution of a parallel project that might generate competition to the project company. In some cases, the law contains an undertaking by the Government that it will not alter the terms of such exclusivity to the detriment of the project company without the project company's consent.

56. Provisions of this type may be intended to foster the confidence of the project sponsors and the lenders that the basic assumptions under which the project was awarded will be respected. However, they may be inconsistent with the host country's international obligations under agreements on regional economic integration and trade liberalization. Furthermore, they may limit the ability of the Government to deal with an increase in the demand for the service concerned as the public interest may require or to ensure the availability of the services to various categories of user. It is therefore important to consider carefully the interests of the various parties involved. For instance, the required price level to allow profitable exploitation of a tollroad may exceed the paying capacity of low-income segments of the public. Thus, the contracting authority may have an interest in maintaining open to the public a toll-free road as an alternative to a new tollroad. At the same time, however, if the contracting authority decides to improve or upgrade the alternative road, the traffic flow may be diverted from the tollroad built by the project company, thus affecting its flow of income. Similarly, the Government may wish to introduce free competition for the provision of long-distance telephone services in order to expand the availability and reduce the cost of telecommunication services (for a brief overview of issues relating to competition, see "Introduction and background information on privately financed infrastructure projects", paras. 24-29). The consequence of such a measure, however, may be a significant erosion of the income anticipated by the project company.

57. Generally, it may be useful to authorize the Government, where appropriate, to give assurances that the project company's exclusive rights will not be unduly affected by subsequent changes in governmental policies without appropriate compensation. However, it may not be advisable to adopt statutory provisions that rule out the possibility of subsequent changes in the Government's policy for the sector concerned, including a decision to promote competition or to build parallel infrastructure. The possible consequences of such future changes for the project company should be dealt with by the parties in contractual provisions dealing with changes in circumstances (see chap. IV, "Construction and operation of infrastructure", paras. 121-130). It is particularly advisable to provide the contracting authority with the necessary power to negotiate with the project company the compensation that may be due for loss or damage that may result from a competing infrastructure project subsequently launched by the contracting authority or from any equivalent measure of the Government that adversely affects the project company's exclusive rights.

(g) Ancillary revenue sources

58. One additional form of support to the execution of privately financed infrastructure projects may be to allow the project company to diversify its investment through additional concessions for the provision of ancillary services or the exploitation of other activities. In some cases, alternative sources of revenue may also be used as a subsidy to the project company for the purpose of pursuing a policy of low or controlled prices for the main service. Provided that the ancillary activities are sufficiently profitable, they may enhance the financial feasibility of a project: the right to collect tolls on an existing bridge, for example, may be an incentive for the execution of a new toll bridge project. However, the relative importance of ancillary revenue sources should not be overemphasized.

59. In order to allow the project company to pursue ancillary activities, it may be necessary for the Government to receive legislative authorization to grant the project company the right to use property belonging to the contracting authority for the purposes of such activities (for example, land adjacent to a highway for construction of service areas) or the right to charge fees for the use of a facility built by the contracting authority. Where it is felt necessary to control the development and possibly the expansion of such ancillary activities, the approval of the contracting authority might be required in order for the project company to undertake significant expansion of facilities used for ancillary activities.

60. Under some legal systems, certain types of ancillary source of revenue offered by the Government may be regarded as a concession separate from the main concession and it is therefore advisable to review possible limitations to the project company's freedom to enter into contracts for the operation of ancillary facilities (see chap. IV, "Construction and operation of infrastructure", paras. 100 and 101).

D. GUARANTEES PROVIDED BY INTERNATIONAL FINANCIAL INSTITUTIONS

61. Besides guarantees given directly by the host Government, there may be guarantees issued by international financial institutions, such as the World Bank, the Multilateral Investment Guarantee Agency and the regional development banks. Such guarantees usually protect the project company against certain political risks, but under some circumstances they may also cover breach of the project agreement, for instance, where the project company defaults on its loans as a result of the breach of an obligation by the contracting authority.

1. Guarantees provided by multilateral lending institutions

62. In addition to lending to Governments and public authorities, multilateral lending institutions, such as the World Bank and the regional development banks, have developed programmes to extend loans to the private sector. Sometimes they can also provide guarantees to commercial lenders for public and private sector projects. In most cases, such guarantees provided by those institutions require a counter-guarantee from the host Government.

63. Guarantees by multilateral lending institutions are designed to mitigate the risks of default on sovereign contractual obligations or long-maturity loans that private lenders are not prepared to bear and are not equipped to evaluate. For instance, guarantees provided by the World Bank may typically cover specified risks (the partial risk guarantee) or all credit risks during a specified part of the financing term (the partial credit guarantee), as summarized below. Most regional development banks provide guarantees under terms similar to those of the World Bank.

(a) Partial risk guarantees

64. A partial risk guarantee covers specified risks arising from non-performance of sovereign contractual obligations or certain political force majeure events. Such guarantees ensure payment in the case of debt service default resulting from the non-performance of contractual obligations undertaken by Governments or their agencies. They may cover various types of non-performance, such as failure to maintain the agreed regulatory framework, including price formulas; failure to deliver inputs, such as fuel supplied to a private power company; failure to pay for outputs, such as power purchased by a government utility from a power company or bulk water purchased by a local public distribution company; failure to compensate for project delays or interruptions caused by government actions or political events; procedural delays; and adverse changes in exchange control laws or regulations.

65. When multilateral lending institutions participate in financing a project, they sometimes provide support in the form of a waiver of recourse that they would otherwise have to the project company in the event that default is caused by events such as political risks. For example, a multilateral lending institution taking a completion guarantee from the project company may accept that it cannot enforce that guarantee if the reason for failure to complete was a political risk reason.

(b) Partial credit guarantees

66. Partial credit guarantees are provided to private sector borrowers with a government counter-guarantee. They are designed to cover the portion of financing that falls due beyond the normal tenure of loans provided by private lenders. These guarantees are generally used for projects involving private sector participation that need long-term funds to be financially viable. A partial credit guarantee typically extends maturities of loans and covers all events of non-payment for a designated part of the debt service.

2. Guarantees provided by the Multilateral Investment Guarantee Agency

67. The Multilateral Investment Guarantee Agency (MIGA) offers long-term political risk insurance coverage to new investments originating in any member country and destined for any developing member country other than the country from which the investment originates. New investment contributions associated with the expansion, modernization or financial restructuring of existing projects are also eligible, as are acquisitions that involve the privatization of State enterprises. Eligible forms of foreign investment include equity, shareholder loans and loan guarantees issued by equity holders, provided the loans and loan guarantees have terms of at least three years. Loans to unrelated borrowers can also be insured, as long as a shareholder investment in the project is concurrently insured. Other eligible forms of investment are technical assistance, management contracts and franchising and licensing agreements, provided they have terms of at least three years and the remuneration of the investor is tied to the operating results of the project. MIGA insures against the following risks: foreign currency transfer restrictions, expropriation, breach of contract, war and civil disturbance.

(a) Transfer restrictions

68. The purpose of guarantees of foreign currency transfer extended by MIGA is similar to that of sovereign foreign exchange guarantees that may be provided by the host Government (see para. 49). This guarantee protects against losses arising from an investor's inability to convert local currency (capital, interest, principal, profits, royalties and other remittances) into foreign exchange for transfer outside the host country. The coverage insures against excessive delays in acquiring foreign exchange caused by action or failure to act by the host Government, by adverse changes in exchange control laws or regulations and by deterioration in conditions governing the conversion and transfer of local currency. Currency devaluation is not covered. On receipt of the blocked local currency from an investor, MIGA pays compensation in the currency of its contract of guarantee.

(b) Expropriation

69. This guarantee protects against loss of the insured investment as a result of acts by the host Government that may reduce or eliminate ownership of, control over or rights to the insured investment. In addition to outright nationalization and confiscation, "creeping" expropriation—a series of acts that, over time, have an expropriatory effect—is also covered. Coverage is provided on a limited basis for partial expropriation (for example, confiscation of funds or tangible assets). Bona fide, non-discriminatory

measures taken by the host Government in the exercise of legitimate regulatory authority are not covered. For total expropriation of equity investments, MIGA pays the net book value of the insured investment. For expropriation of funds, MIGA pays the insured portion of the blocked funds. For loans and loan guarantees, the Agency insures the outstanding principal and any accrued and unpaid interest. Compensation is paid upon assignment of the investor's interest in the expropriated investment (for example, equity shares or interest in a loan agreement) to MIGA.

(c) Breach of contract

70. This guarantee protects against losses arising from the host Government's breach or repudiation of a contract with the investor. In the event of an alleged breach or repudiation, the investor must be able to invoke a dispute resolution mechanism (for example, arbitration) under the underlying contract and obtain an award for damages. If, after a specified period of time, the investor has not received payment or if the dispute resolution mechanism fails to function because of actions taken by the host Government, MIGA will pay compensation.

(d) War and civil disturbance

71. This guarantee protects against loss from damage to, or the destruction or disappearance of, tangible assets caused by politically motivated acts of war or civil disturbance in the host country, including revolution, insurrection, coup d'état, sabotage and terrorism. For equity investments, MIGA will pay the investor's share of the least of the book value of the assets, their replacement cost or the cost of repair of damaged assets. For loans and loan guarantees, MIGA will pay the insured portion of the principal and interest payments in default as a direct result of damage to the assets of the project caused by war and civil disturbance. War and civil disturbance coverage also extends to events that, for a period of one year, result in an interruption of project operations essential to overall financial viability. This type of business interruption is effective when the investment is considered a total loss; at that point, MIGA will pay the book value of the total insured equity investment.

E. GUARANTEES PROVIDED BY EXPORT CREDIT AGENCIES AND INVESTMENT PROMOTION AGENCIES

72. Insurance against certain political, commercial and financial risks, as well as direct lending, may be obtained from export credit agencies and investment promotion agencies. Export credit agencies and investment promotion agencies have typically been established in a number of countries to assist in the export of goods or services originating from that country. Export credit agencies act on behalf of the Governments of the countries supplying goods and services for the project. Most export credit agencies are members of the International Union of Credit and Investment Insurers (Berne Union), whose main objectives include promoting international cooperation and fostering a favourable investment climate; developing and maintaining sound principles of export credit insurance; and establishing and sustaining discipline in the terms of credit for international trade.

73. While the support available differs from country to country, export credit agencies typically offer two lines of coverage:

(a) Export credit insurance. In the context of the financing of privately financed infrastructure projects, the essential purpose of export credit insurance is to guarantee payment to the seller whenever a foreign buyer of exported goods or services is allowed to defer payment. Export credit insurance may take the form of "supplier credit" or "buyer credit" insurance arrangements. Under the supplier credit arrangements the exporter and the importer agree on commercial terms that call for deferred payment evidenced by negotiable instruments (for example, bills of exchange or promissory notes) issued by the buyer. Subject to proof of creditworthiness, the exporter obtains insurance from an export credit agency in its home country. Under the buyer credit modality, the buyer's payment obligation is financed by the exporter's bank, which in turn obtains insurance coverage from an export credit agency. Export credits are generally classified as short-term (repayment terms of usually under two years), medium-term (usually two to five years) and long-term (over five years). Official support by export credit agencies may take the form of "pure cover", by which is meant insurance or guarantees given to exporters or lending institutions without financing support. Official support may also be given in the form of "financing support", which is defined as including direct credits to the overseas buyer, refinancing and all forms of interest rate support;

(b) Investment insurance. Export credit agencies may offer insurance coverage either directly to a borrower or to the exporter for certain political and commercial risks. Typical political and commercial risks include war, insurrection or revolution; expropriation, nationalization or requisition of assets; non-conversion of currency; and lack of availability of foreign exchange. Investment insurance provided by export credit agencies typically protects the investors in a project company established overseas against the insured risks, but not the project company itself. Investment insurance cover tends to be extended to a wide range of political risks. Export credit agencies prepared to cover such risks will typically require sufficient information on the legal system of the host country.

74. The conditions under which export credit agencies of member countries of the Organisation for Economic Cooperation and Development (OECD) offer support to both supplier and buyer credit transactions have to be in accordance with the OECD Arrangement on Guidelines for Officially Supported Export Credits (also referred to as the "OECD consensus"). The main purpose of the Arrangement is to provide a suitable institutional framework to prevent unfair competition by means of official support for export credits. In order to avoid market-distorting subsidies, the Arrangement regulates the conditions of terms of insurances, guarantees or direct lending supported by Governments.

A/CN.9/471/Add.4

Chapter III. Selection of the concessionaire

CONTENTS

LEGISLATIVE RECOMMENDATIONS

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles be implemented by the law:

General considerations (see paras. 1-33)

Recommendation 14. The law should provide for the selection of the concessionaire through transparent and efficient competitive procedures adapted to the particular needs of privately financed infrastructure projects.

Pre-selection of bidders (see paras. 34-50)

Recommendation 15. The bidders should demonstrate that they meet the pre-selection criteria the contracting authority considers appropriate for the particular project, including:

(a) Adequate professional and technical qualifications, human resources, equipment and other physical facilities as necessary to carry out all the phases of the project, namely engineering, construction, operation and maintenance;

(b) Sufficient ability to manage the financial aspects of the project and capability to sustain the financing requirements for the engineering, construction and operational phases of the project;

(c) Appropriate managerial and organizational capability, reliability and experience, including previous experience in operating public infrastructure.

Recommendation 16. The bidders should be allowed to form consortia to submit proposals, provided that each member of a pre-selected consortium may participate, either directly or through subsidiary companies, in only one bidding consortium.

Recommendation 17. The contracting authority should draw up a short list of the pre-selected bidders who will subsequently be invited to submit proposals upon completion of the pre-selection phase.

Procedure for requesting proposals (see paras. 51-84)

Single-stage and two-stage procedures (see paras. 52-58)

Recommendation 18. Upon completion of the pre-selection proceedings, the contracting authority should invite the pre-selected bidders to submit final proposals.

Recommendation 19. Notwithstanding the above, the contracting authority may use a two-stage procedure to request proposals from pre-selected bidders when it is not feasible for the contracting authority to formulate project specifications or performance indicators and contractual terms in a manner sufficiently detailed and precise to permit final proposals to be formulated. Where a two-stage procedure is used, the following provisions apply:

(a) The contracting authority should first call upon the pre-selected bidders to submit proposals relating to output specifications and other characteristics of the project as well as to the proposed contractual terms;

(b) The contracting authority should convene a meeting of bidders to clarify questions concerning the initial request for proposals;

(c) Following examination of the proposals received, the contracting authority should review and, as appropriate, revise the initial project specifications and contractual terms prior to issuing a final request for proposals.

Content of the final request for proposals (see paras. 59-70)

Recommendation 20. The final request for proposals should include at least the following:

(a) General information as may be required by the bidders in order to prepare and submit their proposals;

(b) Project specifications and performance indicators, as appropriate, including the contracting authority's requirements regarding safety and security standards and environmental protection;

(c) The contractual terms proposed by the contracting authority;

(d) The criteria for evaluating the proposals, the relative weight to be accorded to each such criterion and the manner in which criteria are to be applied in the evaluation of proposals.

Clarifications and modifications (see paras. 71 and 72)

Recommendation 21. The contracting authority may, whether on its own initiative or as a result of a request for clarification by a bidder, modify the final request for proposals by issuing addenda at a reasonable time prior to the deadline for submission of proposals.

Evaluation criteria (see paras. 73-77)

Recommendation 22. The criteria for the evaluation and comparison of the technical proposals should concern the effectiveness of the proposal submitted by the bidder in meeting the needs of the contracting authority, including the following:

(a) Technical soundness;

(b) Operational feasibility;

(c) Quality of services and measures to ensure their continuity;

(d) Social and economic development potential offered by the proposals.

Recommendation 23. The criteria for the evaluation and comparison of the financial and commercial proposals may include, as appropriate:

(a) The present value of the proposed tolls, fees and other charges over the concession period;

(b) The present value of the proposed direct payments by the contracting authority, if any;

(c) The costs for design and construction activities, annual operation and maintenance costs, present value of capital costs and operating and maintenance costs;

(d) The extent of financial support, if any, expected from the Government;

(e) Soundness of the proposed financial arrangements;

(f) The extent of acceptance of the proposed contractual terms.

Submission, opening, comparison and evaluation of proposals (see paras. 78-82)

Recommendation 24. The contracting authority may establish thresholds with respect to quality, technical and commercial aspects to be reflected in the proposals in accordance with the criteria set out in the request for proposals. Proposals that fail to achieve the thresholds should be regarded as non-responsive.

Recommendation 25. Whether or not it has followed pre-selection proceedings, the contracting authority may retain the right to require the bidders to demonstrate their qualifications again in accordance with criteria and procedures set forth in the request for proposals or the pre-selec-

tion documents, as appropriate. Where pre-selection proceedings have been followed, the criteria shall be the same as those used in the pre-selection proceedings.

Final negotiations (see paras. 83 and 84)

Recommendation 26. The contracting authority should rank all responsive proposals on the basis of the evaluation criteria set forth in the request for proposals and invite for final negotiation of the project agreement the bidder that has attained the best rating. Final negotiations may not concern those terms of the contract which were stated as non-negotiable in the final request for proposals.

Recommendation 27. If it becomes apparent to the contracting authority that the negotiations with the bidder invited will not result in a project agreement, the contracting authority should inform that bidder that it is terminating the negotiations and then invite for negotiations the other bidders on the basis of their ranking until it arrives at a project agreement or rejects all remaining proposals.

Direct negotiations (see paras. 85-96)

Recommendation 28. The law should set forth the exceptional circumstances under which the contracting authority may be authorized by a higher authority to select the concessionaire through direct negotiations, such as:

(a) When there is an urgent need for ensuring continuity in the provision of the service and engaging in a competitive selection procedure would therefore be impractical;

(b) In case of projects of short duration and with an anticipated initial investment value not exceeding a specified low amount;

(c) Reasons of national defence or national security;

(d) Cases where there is only one source capable of providing the required service (for example, because it requires the use of patented technology or unique know-how);

(e) When an invitation to the pre-selection proceedings or a request for proposals has been issued but no applications or proposals were submitted or all proposals failed to meet the evaluation criteria set forth in the request for proposals and if, in the judgement of the contracting authority, issuing a new request for proposals would be unlikely to result in a project award;

(f) Other cases where the higher authority authorizes such an exception for compelling reasons of public interest.

Recommendation 29. The law may require that the following procedures be observed in direct negotiations:

(a) The contracting authority should publish a notice of the negotiation proceedings and engage in negotiations with as many companies judged capable of carrying out the project as circumstances permit;

(b) The contracting authority should establish and make known to bidders the qualification criteria and the criteria for evaluating the proposals and should determine the relative weight to be accorded to each such criterion and the manner in which criteria are to be applied in the evaluation of the proposals;

(c) The contracting authority should treat proposals in a manner that avoids the disclosure of their contents to competing bidders;

(d) Any such negotiations between the contracting authority and bidders should be confidential and one party to the negotiations should not reveal to any other person any technical, price or other commercial information relating to the negotiations without the consent of the other party;

(e) Following completion of negotiations, the contracting authority should request all bidders remaining in the proceedings to submit, by a specified date, a best and final offer with respect to all aspects of their proposals;

(f) Proposals should be evaluated and ranked according to the criteria for the evaluation of proposals established by the contracting authority.

Unsolicited proposals (see paras. 97-117)

Recommendation 30. By way of exception to the selection procedures described in legislative recommendations 14-27, the contracting authority may be authorized to handle unsolicited proposals pursuant to specific procedures established by the law for handling unsolicited proposals, provided that such proposals do not relate to a project for which selection procedures have been initiated or announced by the contracting authority.

Procedures for determining the admissibility of unsolicited proposals (see paras. 110-112)

Recommendation 31. Following receipt and preliminary examination of an unsolicited proposal, the contracting authority should inform the author, within a reasonably short period, whether or not there is a potential public interest in the project. If the project is found to be in the public interest, the contracting authority should invite the author to submit a formal proposal in sufficient detail to allow the contracting authority to make a proper evaluation of the concept or technology and determine whether the proposal meets the conditions set forth in the law and is likely to be successfully implemented on the scale of the proposed project.

Recommendation 32. The author of an unsolicited proposal should retain title to all documents submitted throughout the procedure and those documents should be returned to it in the event the proposal is rejected.

Procedures for handling unsolicited proposals that do not involve proprietary concepts or technology (see paras. 113 and 114)

Recommendation 33. The contracting authority should initiate competitive selection procedures under recommendations 14-27 if it is found that the envisaged output of the project can be achieved without the use of a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights or if the proposed concept or technology is not truly unique or new. The author of the unsolicited proposal should be invited to participate in such proceedings and might be given a premium for submitting the proposal.

Procedures for handling unsolicited proposals involving proprietary concepts or technology (see paras. 115-117)

Recommendation 34. If it appears that the envisaged output of the project cannot be achieved without using a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights, the contracting authority should seek to obtain elements of comparison for the unsolicited proposal. For that purpose, the contracting authority should publish a description of the essential output elements of the proposal with an invitation for other interested parties to submit alternative or comparable proposals within a certain reasonable period.

Recommendation 35. The contracting authority may engage in negotiations with the author of the unsolicited proposal if no alternative proposals are received, subject to approval by a higher authority. If alternative proposals are submitted, the contracting authority should invite all the proponents to negotiations in accordance with the provisions of legislative recommendation 29 *(b)-(f)*.

Review procedures (see paras. 118-122)

Recommendation 36. Bidders who claim to have suffered, or who may suffer, loss or injury owing to a breach of a duty imposed on the contracting authority by the law may seek review of the contracting authority's acts in accordance with the laws of the host country.

Notice of project award (see para. 123)

Recommendation 37. The contracting authority should cause a notice of the award of the project to be published. The notice should identify the concessionaire and include a summary of the essential terms of the project agreement.

Record of selection and award proceedings (see paras. 124-130)

Recommendation 38. The contracting authority should keep an appropriate record of key information pertaining to the selection and award proceedings. The law should set forth the requirements for public access.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL CONSIDERATIONS

1. The present chapter deals with methods and procedures recommended for use in the award of privately financed infrastructure projects. In line with the advice of international organizations, such as UNIDO[1] and the World Bank,[2] the *Guide* expresses a preference for the use of competitive selection procedures, rather than negotiations with bidders, while recognizing that direct negotiations might also be used, according to the legal tradition of the country concerned (see also paras. 85-88).

2. The selection procedures recommended in this chapter present some of the features of the principal method for the procurement of services under the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the "UNCITRAL Model Procurement Law").[3] A number of adaptations have been introduced to take into account the particular needs of privately financed infrastructure projects, such as a clearly defined pre-selection phase. Where appropriate, this chapter refers the reader to provisions of the UNCITRAL Model Procurement Law, which may, mutatis mutandis, supplement the selection procedure described herein.

1. Selection procedures covered by the *Guide*

3. Private investment in infrastructure may take various forms, each requiring special methods for selecting the concessionaire. For the purpose of discussing possible selection methods for the infrastructure projects dealt with in the *Guide*, a distinction may be made between three main forms of private investment in infrastructure:

(a) Purchase of public utility enterprises. Private capital may be invested in public infrastructure through the purchase of physical assets or the shares of public utility enterprises. Such transactions are often carried out in accordance with rules governing the award of contracts for the disposition of state property. In many countries, the sale of shares of public utility enterprises requires prior legislative authorization. Disposition methods often include offering of shares on stock markets or competitive proceedings such as auctions or invitations to bid whereby the property is awarded to the qualified party offering the highest price;

(b) Provision of public services without development of infrastructure. In other types of project, the service providers own and operate all the equipment necessary and sometimes compete with other suppliers for the provision of the relevant service. Some national laws establish special procedures whereby the State may authorize a private entity to supply public services by means of exclusive or non-exclusive "licences". Licences may be publicly offered to interested parties who satisfy the qualification requirements set forth by the law or established by the licensing authority. Sometimes licensing procedures involve public auctions to interested qualified parties;

(c) Construction and operation of public infrastructure. In projects for the construction and operation of public infrastructure, a private entity is engaged to provide both works and services to the public. The procedures governing the award of those contracts are in some aspects similar to those which govern public procurement of construction and services. National laws provide a variety of methods for public procurement, ranging from structured competitive methods, such as tendering proceedings, to less structured negotiations with prospective suppliers.

[1] *UNIDO BOT Guidelines*, p. 96.

[2] International Bank for Reconstruction and Development, *Procurement under IBRD and IDA Loans*, 1996, para. 3.13 *(a)*.

[3] The UNCITRAL Model Law on Procurement of Goods, Construction and Services and its accompanying Guide to Enactment were adopted by the United Nations Commission on International Trade Law at its twenty-seventh session, held in New York from 31 May to 17 June 1994.

4. This chapter deals primarily with selection procedures suitable for use in relation to infrastructure projects that involve an obligation, on the part of the selected private entity, to undertake physical construction, repair or expansion works in the infrastructure concerned with a view to subsequent private operation (that is, those referred to in para. 3 *(c)*). It does not deal specifically with other methods of selecting providers of public services through licensing or similar procedures, or of merely disposing of State property through capital increases or offerings of shares.

2. General objectives of selection procedures

5. For the award of contracts for infrastructure projects, the contracting authority may either apply methods and procedures already provided in the laws of the host country or establish procedures specifically designed for that purpose. In either situation, it is important to ensure that such procedures are generally conducive to attaining the fundamental objectives of rules governing the award of public contracts. Those objectives are briefly discussed below.

(a) Economy and efficiency

6. In connection with infrastructure projects, economy refers to the selection of a concessionaire that is capable of performing works and delivering services of the desired quality at the most advantageous price or that offers the best commercial proposal. In most cases, economy is best achieved by means of procedures that promote competition among bidders. Competition provides them with incentives to offer their most advantageous terms, and it can encourage them to adopt efficient or innovative technologies or production methods in order to do so.

7. It should be noted, however, that competition does not necessarily require the participation of a large number of bidders in a given selection process. For large projects in particular, there may be reasons for the contracting authority to wish to limit the number of bidders to a manageable number (see para. 20). Provided that appropriate procedures are in place, the contracting authority can take advantage of effective competition even where the competitive base is limited.

8. Economy can often be promoted through participation by foreign companies in selection proceedings. Not only can foreign participation expand the competitive base, it can also lead to the acquisition by the contracting authority and its country of technologies that are not available locally. Foreign participation in selection proceedings may be necessary where there exists no domestic expertise of the type required by the contracting authority. A country wishing to achieve the benefits of foreign participation should ensure that its relevant laws and procedures are conducive to such participation.

9. Efficiency refers to selection of a concessionaire within a reasonable amount of time, with minimal administrative burdens and at reasonable cost both to the contracting authority and to participating bidders. In addition to the losses that can accrue directly to the contracting authority from inefficient selection procedures (owing, for example, to delayed selection or high administrative costs), excessively costly and burdensome procedures can lead to increases in the overall project costs or even discourage competent companies from participating in the selection proceedings altogether.

(b) Promotion of integrity of and confidence in the selection process

10. Another important objective of rules governing the selection of the concessionaire is to promote the integrity of and confidence in the process. Thus, an adequate selection system will usually contain provisions designed to ensure fair treatment of bidders, to reduce or discourage unintentional or intentional abuses of the selection process by persons administering it or by companies participating in it and to ensure that selection decisions are taken on a proper basis.

11. Promoting the integrity of the selection process will help to promote public confidence in the process and in the public sector in general. Bidders will often refrain from spending the time and sometimes substantial sums of money to participate in selection proceedings unless they are confident that they will be treated fairly and that their proposals or offers have a reasonable chance of being accepted. Those which do participate in selection proceedings in which they do not have that confidence would probably increase the project cost to cover the higher risks and costs of participation. Ensuring that selection proceedings are run on a proper basis could reduce or eliminate that tendency and result in more favourable terms to the contracting authority.

12. To guard against corruption by government officials, including employees of the contracting authorities, the host country should have in place an effective system of sanctions. These could include sanctions of a criminal nature that would apply to unlawful acts of officials conducting the selection process and of participating bidders. Conflicts of interest should also be avoided, for instance by requiring that officials of the contracting authority, their spouses, relatives and associates abstain from owning a debt or equity interest in a company participating in a selection process or accepting to serve as a director or employee of such a company. Furthermore, the law governing the selection proceedings should obligate the contracting authority to reject offers or proposals submitted by a party who gives or agrees to give, directly or indirectly, to any current or former officer or employee of the contracting authority or other public authority a gratuity in any form, an offer of employment or any other thing or service of value, as an inducement with respect to an act or decision of or procedure followed by the contracting authority in connection with the selection proceedings. These provisions may be supplemented by other measures, such as the requirement that all companies invited to participate in the selection process undertake neither to seek to influence unduly the decisions of the public officials involved in the selection process nor otherwise to distort the competition by means of collusive or other illicit practices (that is, the so-called “integrity agreement”). Also, in the procurement practices

adopted by some countries, bidders are required to guarantee that no official of the procuring entity has been or shall be admitted by the bidder to any direct or indirect benefit arising from the contract or the award thereof. Breach of such a provision typically constitutes a breach of an essential term of the contract.

13. The confidence of investors may be further fostered by adequate provisions to protect the confidentiality of proprietary information submitted by them during the selection proceedings. This should include sufficient assurances that the contracting authority will treat proposals in such a manner as to avoid the disclosure of their contents to competing bidders; that any discussions or negotiations will be confidential; and that trade or other information that bidders might include in their proposals will not be made known to their competitors.

(c) Transparency of laws and procedures

14. Transparency of laws and procedures governing the selection of the concessionaire will help to achieve a number of the policy objectives already mentioned. Transparent laws are those in which the rules and procedures to be followed by the contracting authority and by bidders are fully disclosed, are not unduly complex and are presented in a systematic and understandable way. Transparent procedures are those which enable the bidders to ascertain what procedures have been followed by the contracting authority and the basis of decisions taken by it.

15. One of the most important ways to promote transparency and accountability is to include provisions requiring that the contracting authority maintain a record of the selection proceedings (see paras. 124-130). A record summarizing key information concerning those proceedings facilitates the exercise of the right of aggrieved bidders to seek review. That in turn will help to ensure that the rules governing the selection proceedings are, to the extent possible, self-policing and self-enforcing. Furthermore, adequate record requirements in the law will facilitate the work of public authorities exercising an audit or control function and promote the accountability of contracting authorities to the public at large as regards the award of infrastructure projects.

16. An important corollary of the objectives of economy, efficiency, integrity and transparency is the availability of administrative and judicial procedures for the review of decisions made by the authorities involved in the selection proceedings (see paras. 118-122).

3. Special features of selection procedures for privately financed infrastructure projects

17. Generally, economy in the award of public contracts is best achieved through methods that promote competition among a range of bidders within structured, formal procedures. Competitive selection procedures, such as tendering, are usually prescribed by national laws as the rule for normal circumstances in procurement of goods or construction.

18. The formal procedures and the objectivity and predictability that characterize the competitive selection procedures generally provide optimal conditions for competition, transparency and efficiency. Thus, the use of competitive selection procedures in privately financed infrastructure projects has been recommended by UNIDO, which has formulated detailed practical guidance on how to structure those procedures.[1] The rules for procurement under loans provided by the World Bank also advocate the use of competitive selection procedures and provide that a concessionaire selected pursuant to bidding procedures acceptable to the World Bank is generally free to adopt its own procedures for the award of contracts required to implement the project. However, where the concessionaire was not itself selected pursuant to those competitive procedures, the award of subcontracts has to be done pursuant to competitive procedures acceptable to the World Bank.[2]

19. It should be noted, however, that no international legislative model has thus far been specifically devised for competitive selection procedures in privately financed infrastructure projects. On the other hand, domestic laws on competitive procedures for the procurement of goods, construction or services may not be entirely suitable for privately financed infrastructure projects. International experience in the award of privately financed infrastructure projects has in fact revealed some limitations of traditional forms of competitive selection procedures, such as the tendering method. In view of the particular issues raised by privately financed infrastructure projects, which are briefly discussed below, it is advisable for the Government to consider adapting such procedures for the selection of the concessionaire.

(a) Range of bidders to be invited

20. The award of privately financed infrastructure projects typically involves complex, time-consuming and expensive proceedings, and the sheer scale of most infrastructure projects reduces the likelihood of obtaining proposals from a large number of suitably qualified bidders. In fact, competent bidders may be reluctant to participate in procurement proceedings for high-value projects if the competitive field is too large and where they run the risk of having to compete with unrealistic proposals or proposals submitted by unqualified bidders. Open tendering without a pre-selection phase is therefore usually not advisable for the award of infrastructure projects.

(b) Definition of project requirements

21. In traditional public procurement of construction works the procuring authority usually assumes the position of a *maître d'ouvrage* or employer, while the selected contractor carries out the function of the performer of the works. The procurement procedures emphasize the inputs to be provided by the contractor, that is, the contracting authority establishes clearly what is to be built, how and by what means. It is therefore common for invitations to tender for construction works to be accompanied by extensive and very detailed technical specifications of the type of works and services being procured. In those cases, the

contracting authority will be responsible for ensuring that the specifications are adequate to the type of infrastructure to be built and that such infrastructure will be capable of being operated efficiently.

22. However, for many privately financed infrastructure projects, the contracting authority may envisage a different allocation of responsibilities between the public and the private sector. In those cases, after having established a particular infrastructure need, the contracting authority may prefer to leave to the private sector the responsibility for proposing the best solution for meeting such a need, subject to certain requirements that may be established by the contracting authority (for example, regulatory performance or safety requirements, sufficient evidence that the technical solutions proposed had been previously tested and satisfactorily met internationally acceptable safety and other standards). The selection procedure used by the contracting authority may thus give more emphasis to the output expected from the project (that is, the services or goods to be provided) than to technical details of the works to be performed or means to be used to provide those services.

(c) Evaluation criteria

23. For projects to be financed, owned and operated by public authorities, goods, construction works or services are typically purchased with funds available under approved budgetary allocations. With the funding sources usually secured, the main objective of the procuring entity is to obtain the best value for the funds it spends. Therefore, in those types of procurement the decisive factor in establishing the winner among the responsive and technically acceptable proposals is often the global price offered for the construction works, which is calculated on the basis of the cost of the works and other costs incurred by the contractor, plus a certain margin of profit.

24. Privately financed infrastructure projects, in turn, are typically expected to be financially self-sustainable, with the development and operational costs being recovered from the project's own revenue. Therefore, a number of other factors will need to be considered in addition to the construction and operation cost and the price to be paid by the users. For instance, the contracting authority will need to consider carefully the financial and commercial feasibility of the project, the soundness of the financial arrangements proposed by the bidders and the reliability of the technical solutions used. Such interest exists even where no governmental guarantees or payments are involved, because unfinished projects or projects with large cost overruns or higher than expected maintenance costs often have a negative impact on the overall availability of needed services and on the public opinion in the host country. Also, the contracting authority will aim at formulating qualification and evaluation criteria that give adequate weight to the need to ensure the continuous provision of and, as appropriate, universal access to the public service concerned. Furthermore, given the usually long duration of infrastructure concessions, the contracting authority will need to satisfy itself as to the soundness and acceptability of the arrangements proposed for the operational phase and will weigh carefully the service elements of the proposals (see para. 74).

(d) Negotiations with bidders

25. Laws and regulations governing tendering proceedings often prohibit negotiations between the contracting authority and the contractors concerning a proposal submitted by them. The rationale for such a strict prohibition, which is also contained in article 35 of the UNCITRAL Model Procurement Law, is that negotiations might result in an "auction", in which a proposal offered by one contractor is used to apply pressure on another contractor to offer a lower price or an otherwise more favourable proposal. As a result of that strict prohibition, contractors selected to provide goods or services pursuant to traditional procurement procedures are typically required to sign standard contract documents provided to them during the procurement proceedings.

26. The situation is different in the award of privately financed infrastructure projects. The complexity and long duration of such projects makes it unlikely that the contracting authority and the selected bidder could agree on the terms of a draft project agreement without negotiation and adjustments to adapt those terms to the particular needs of the project. This is particularly true for projects involving the development of new infrastructure where the final negotiation of the financial and security arrangements takes place only after the selection of the concessionaire. It is important, however, to ensure that these negotiations are carried out in a transparent manner and do not lead to changes to the basis on which the competition was carried out (see paras. 83 and 84).

4. Preparations for the selection proceedings

27. The award of privately financed infrastructure projects is in most cases a complex exercise requiring careful planning and coordination among the offices involved. By ensuring that adequate administrative and personnel support is available to conduct the type of selection proceeding that it has chosen, the Government plays an essential role in promoting confidence in the selection process.

(a) Appointment of the award committee

28. One important preparatory measure is the appointment of the committee that will be responsible for evaluating the proposals and making an award recommendation to the contracting authority. The appointment of qualified and impartial members to the selection committee is not only a requirement for an efficient evaluation of the proposals, but may further foster the confidence of bidders in the selection process.

29. Another important preparatory measure is the appointment of the independent advisers who will assist the contracting authority in the selection procedures. The contracting authority may need, at this early stage, to retain the services of independent experts or advisers to assist in establishing appropriate qualification and evaluation criteria, defining performance indicators (and, if necessary, project specifications) and preparing the documentation to be issued to bidders. Consultant services and advisers may also

be retained to assist the contracting authority in the evaluation of proposals, drafting and negotiation of the project agreement. Consultants and advisers can be particularly helpful by bringing a range of technical expertise that may not always be available in the host country's civil service, such as technical or engineering advice (for example, on technical assessment of the project or installations and technical requirements of contract); environmental advice (for example, environmental assessment and operation requirements); or financial advice (for example, on financial projections, review of financing sources, assessing the adequate ratio between debt and equity and drafting of financial information documents).

(b) Feasibility and other studies

30. As indicated earlier (see chap. I, "General legislative and institutional framework", para. 25), one of the initial steps that should be taken by the Government in relation to a proposed infrastructure project is to conduct a preliminary assessment of its feasibility, including economic and financial aspects such as expected economic advantages of the project, estimated cost and potential revenue anticipated from the operation of the infrastructure facility. The option to develop infrastructure as a privately financed project requires a positive conclusion on the feasibility and financial viability of the project. An assessment of the project's environmental impact should also ordinarily be carried out by the contracting authority as part of its feasibility studies. In some countries, it has been found useful to provide for some public participation in the preliminary assessment of the project's environmental impact and the various options available to minimize it.

31. Prior to starting the proceedings leading to the selection of a prospective concessionaire, it is advisable for the contracting authority to review and, as required, expand those initial studies. In some countries contracting authorities are advised to formulate model projects for reference purposes (typically including a combination of estimated capital investment, operation and maintenance costs) prior to inviting proposals from the private sector. The purpose of such model projects is to demonstrate the viability of the commercial operation of the infrastructure and the affordability of the project in terms of total investment cost and cost to the public. They will also provide the contracting authority with a useful tool for comparison and evaluation of proposals. The confidence of bidders will be promoted by evidence that the technical, economical and financial assumptions of the project, as well as the proposed role of the private sector, have been carefully considered by the contracting authority.

(c) Preparation of documentation

32. Selection proceedings for the award of privately financed infrastructure projects typically require the preparation of extensive documentation, including a project outline, pre-selection documents, the request for proposals, instructions for preparing proposals and a draft of the project agreement. The quality and clarity of the documents issued by the contracting authority plays a significant role in ensuring an efficient and transparent selection procedure.

33. Standard documentation prepared in sufficiently precise terms may be an important element to facilitate the negotiations between bidders and prospective lenders and investors. It may also be useful for ensuring consistency in the treatment of issues common to most projects in a given sector. However, in using standard contract terms it is advisable to bear in mind the possibility that a specific project may raise issues that had not been anticipated when the standard document was prepared or that the project may necessitate particular solutions that might be at variance with the standard terms. Careful consideration should be given to the need to achieve an appropriate balance between the level of uniformity desired for project agreements of a particular type and the flexibility that might be needed for finding project-specific solutions.

B. PRE-SELECTION OF BIDDERS

34. Given the complexity of privately financed infrastructure projects the contracting authority may wish to limit the number of bidders from whom proposals will subsequently be requested only to those who satisfy certain qualification criteria. In traditional government procurement, the pre-selection proceedings may consist of the verification of certain formal requirements, such as adequate proof of technical capability or prior experience in the type of procurement, so that all bidders who meet the pre-selection criteria are automatically admitted to the tendering phase. The pre-selection proceedings for privately financed infrastructure projects, in turn, may involve elements of evaluation and selection. This may be the case, for example, where the contracting authority establishes a ranking of pre-selected bidders (see para. 48).

1. Invitation to the pre-selection proceedings

35. In order to promote transparency and competition, it is advisable that the invitation to the pre-selection proceedings be made public in a manner that reaches an audience wide enough to provide an effective level of competition. The laws of many countries identify publications, usually the official gazette or other official publication, in which the invitation to the pre-selection proceedings is to be published. With a view to fostering participation of foreign companies and maximizing competition, the contracting authority may wish to have the invitations to the pre-selection proceedings made public also in a language customarily used in international trade, in a newspaper of wide international circulation or in a relevant trade publication or technical or professional journal of wide international circulation. One possible medium for such publication is *Development Business*, published by the Department of Public Information of the United Nations Secretariat.

36. Pre-selection documents should contain sufficient information for bidders to be able to ascertain whether the works and services entailed by the project are of a type that they can provide and, if so, how they can participate in the selection proceedings. The invitation to the pre-selection proceedings should, in addition to identifying the infra-

structure to be built or renovated, contain information on other essential elements of the project, such as the services to be delivered by the concessionaire, the financial arrangements envisaged by the contracting authority (for example, whether the project will be entirely financed by user fees or tolls or whether public funds may be provided as direct payments, loans or guarantees) and, where already known, a summary of the main required terms of the project agreement to be entered into as a result of the selection proceedings.

37. In addition to that, the invitation to the pre-selection proceedings should include general information similar to the information typically provided in pre-selection documents under general rules on public procurement.[4]

2. Pre-selection criteria

38. Generally, bidders should be required to demonstrate that they possess the professional and technical qualifications, financial and human resources, equipment and other physical facilities, managerial capability, reliability and experience necessary to carry out the project. Additional criteria that might be particularly relevant for privately financed infrastructure projects may include the ability to manage the financial aspects of the project and previous experience in operating public infrastructure or in providing services under regulatory oversight (for example, quality indicators of their past performance, size and type of previous projects carried out by the bidders); the level of experience of the key personnel to be engaged in the project; sufficient organizational capability (including minimum levels of construction, operation and maintenance equipment); capability to sustain the financing requirements for the engineering, construction and operational phases of the project (demonstrated, for instance, by evidence of the bidders' ability to provide an adequate amount of equity to the project, and sufficient evidence from reputable banks attesting the bidder's good financial standing). Qualification requirements should cover all phases of an infrastructure project, including financing management, engineering, construction, operation and maintenance, where appropriate. In addition, the bidders should be required to demonstrate that they meet such other qualification criteria as would typically apply under the general procurement laws of the host country.[5]

39. One important aspect to be considered by the contracting authority relates to the relationship between the award of one particular project and the governmental policy pursued for the sector concerned (see "Introduction and background information on privately financed infrastructure projects", paras. 21-46). Where competition is sought, the Government may be interested in ensuring that the relevant market or sector is not dominated by one enterprise (for example, that the same company does not operate more than a certain limited number of local telephone companies within a given territory). To implement such a policy and to avoid market domination by bidders who may have already been awarded a concession within a given sector of the economy, the contracting authority may wish to include in the pre-selection documents for new concessions provisions that limit the participation or prevent another award to such bidders. For purposes of transparency, it is desirable for the law to provide that, where the contracting authority reserves the right to reject a proposal on those or similar grounds, adequate notice of that circumstance must be included in the invitation to the pre-selection proceedings.

40. Qualification requirements should apply equally to all bidders. A contracting authority should not impose any criterion, requirement or procedure with respect to the qualifications of bidders that has not been set forth in the pre-selection documents. When considering the professional and technical qualifications of bidding consortia, the contracting authority should consider the individual specialization of the consortium members and assess whether the combined qualifications of the consortium members are adequate to meet the needs of all phases of the project.

3. Issues relating to the participation of bidding consortia

41. Given the large scale of most infrastructure projects, the interested companies typically participate in the selection proceedings through consortia especially formed for that purpose. Therefore, information required from members of bidding consortia should relate to the consortium as a whole as well as to its individual participants. For the purpose of facilitating the liaison with the contracting authority, it may be useful to require in the pre-selection documents that each consortium designate one of its members as a focal point for all communications with the contracting authority. It is generally advisable for the contracting authority to require that the members of bidding consortia submit a sworn statement undertaking that, if awarded the contract, they shall bind themselves jointly and severally for the obligations assumed in the name of the consortium under the project agreement. Alternatively, the contracting authority may reserve itself the right to require at a later stage that the members of the selected consortium establish an independent legal entity to carry out the project (see also chap. IV, "Construction and operation of infrastructure", paras. 12-18).

42. It is also advisable for the contracting authority to review carefully the composition of consortia and their parent companies. It may happen that one company, directly or through subsidiary companies, joins more than

---

[4]For example, instructions for preparing and submitting pre-selection applications; any documentary evidence or other information that must be submitted by bidders to demonstrate their qualifications; and the manner, place and deadline for the submission of applications (see UNCITRAL Model Procurement Law, art. 7, para. 3).

[5]For example, that they have legal capacity to enter into the project agreement; that they are not insolvent, in receivership, bankrupt or being wound up, their affairs are not being administered by a court or a judicial officer, their business activities have not been suspended and they are not the subject of legal proceedings for any of the foregoing; that they have fulfilled their obligations to pay taxes and social security contributions in the State; that they have not, and their directors or officers have not, been convicted of any criminal offence related to their professional conduct or the making of false statements or misrepresentations as to their qualifications to enter into a procurement contract within a certain period of years preceding the commencement of the selection proceedings or have not been otherwise disqualified pursuant to administrative suspension or disbarment proceedings (see UNCITRAL Model Procurement Law, art. 6, para. 1 *(b)*).

one consortium to submit proposals for the same project. Such a situation should not be allowed, since it raises the risk of leakage of information or collusion between competing consortia, thus undermining the credibility of the selection proceedings. It is therefore advisable to provide in the invitation to the pre-selection proceedings that each of the members of a qualified consortium may participate, either directly or through subsidiary companies, in only one bid for the project. A violation of this rule should cause the disqualification of the consortium and of the individual member companies.

4. Pre-selection and domestic preferences

43. The laws of some countries provide for some sort of preferential treatment for domestic entities or afford special treatment to bidders that undertake to use national goods or employ local labour. Such preferential or special treatment is sometimes provided as a material qualification requirement (for example, a minimum percentage of national participation in the consortium) or as a condition for participating in the selection procedure (for example, to appoint a local partner as a leader of the bidding consortium).

44. Domestic preferences may give rise to a variety of issues. Firstly, their use is not permitted under the guidelines of some international financial institutions and might be inconsistent with international obligations entered into by many States pursuant to agreements on regional economic integration or trade facilitation. Furthermore, from the perspective of the host country it is important to weigh the expected advantages against the disadvantage of depriving the contracting authority of the possibility of obtaining better options to meet the national infrastructure needs. It is also important not to allow total insulation from foreign competition so as not to perpetuate lower levels of economy, efficiency and competitiveness of the concerned sectors of national industry. This is the reason why many countries that wish to provide some incentive to national suppliers, while at the same time taking advantage of international competition, do not contemplate a blanket exclusion of foreign participation or restrictive qualification requirements. Domestic preferences may take the form of special evaluation criteria establishing margins of preference for national bidders or bidders who offer to procure supplies, services and products in the local market. The margin of preference technique, which is provided in article 34, paragraph 4 *(d)*, of the UNCITRAL Model Procurement Law, is more transparent than subjective qualification or evaluation criteria. Furthermore, it allows the contracting authority to favour local bidders that are capable of approaching internationally competitive standards, and it does so without simply excluding foreign competition. Where domestic preferences are envisaged, they should be announced in advance, preferably in the invitation to the pre-selection proceedings.

5. Contribution towards costs of participation in the selection proceedings

45. The price charged for the pre-selection documents should only reflect the cost of printing such documents and providing them to the bidders. It should not be used as an additional tool to limit the number of bidders. Such a practice is both ineffective and adds to the already considerable cost of participation in the pre-selection proceedings. The high costs of preparing proposals for infrastructure projects and the relatively high risks that a selection procedure may not lead to a contract award may function as a deterrent for some companies to join in a consortium to submit a proposal, in particular when they are not familiar with the selection procedures applied in the host country.

46. Therefore, some countries authorize the contracting authority to consider arrangements for compensating pre-selected bidders if the project cannot proceed for reasons outside their control or for contributing to the costs incurred by them after the pre-selection phase, when justified in a particular case by the complexity involved and the prospect of significantly improving the quality of the competition. When such contribution or compensation is envisaged, appropriate notice should be given to potential bidders at an early stage, preferably in the invitation to the pre-selection proceedings.

6. Pre-selection proceedings

47. The contracting authority should respond to any request by a bidding consortium for clarification of the pre-selection documents that is received by the contracting authority within a reasonable time prior to the deadline for the submission of applications so as to enable the bidders to make a timely submission of their application. The response to any request that might reasonably be expected to be of interest to other bidders should, without identifying the source of the request, be communicated to all bidders to which the contracting authority provided the pre-selection documents.

48. In some countries, practical guidance on selection procedures encourages domestic contracting authorities to limit the prospective proposals to the lowest possible number sufficient to ensure meaningful competition (for example, three or four). For that purpose, those countries apply a quantitative rating system for technical, managerial and financial criteria, taking into account the nature of the project. Quantitative pre-selection criteria are found to be more easily applicable and transparent than qualitative criteria involving the use of merit points. However, in devising a quantitative rating system, it is important to avoid unnecessary limitation of the contracting authority's discretion in assessing the qualifications of bidders. The contracting authority may also need to take into account the fact that the procurement guidelines of some multilateral financial institutions prohibit the use of pre-selection proceedings for the purpose of limiting the number of bidders to a predetermined number. In any event, where such a rating system is to be used, that circumstance should be clearly stated in the pre-selection documents.

49. Upon completion of the pre-selection phase, the contracting authority usually draws up a short list of the pre-selected bidders which will subsequently be invited to submit proposals. One practical problem sometimes faced by

contracting authorities concerns proposals for changes in the composition of bidding consortia during the selection proceedings. From the perspective of the contracting authority, it is generally advisable to exercise caution in respect of proposed substitutions of individual members of bidding consortia after the closing of the pre-selection phase. Changes in the composition of consortia may substantially alter the basis on which the pre-selected bidding consortia were short-listed by the contracting authority and may give rise to questions about the integrity of the selection proceedings. As a general rule, only pre-selected bidders should be allowed to participate in the selection phase, unless the contracting authority can satisfy itself that a new consortium member meets the pre-selection criteria to substantially the same extent as the retiring member of the consortium.

50. While the criteria used for pre-selecting bidders should not be weighted again at the evaluation phase, the contracting authority may wish to reserve itself the right to require, at any stage of the selection process, that the bidders again demonstrate their qualifications in accordance with the same criteria used to pre-select them.

C. PROCEDURES FOR REQUESTING PROPOSALS

51. This section discusses the procedures for requesting proposals from the pre-selected bidders. The procedures described herein are in a number of respects similar to the procedures for the solicitation of proposals under the preferred method for the procurement of services provided in the UNCITRAL Model Procurement Law, with some adaptations needed to fit the needs of contracting authorities awarding infrastructure projects.

1. Phases of the procedure

52. Following the pre-selection of bidders, it is advisable for the contracting authority to review its original feasibility study and the definition of the output and performance requirements and to consider whether a revision of those requirements is needed in the light of the information obtained during the pre-selection proceedings. At this stage, the contracting authority should have already determined whether a single or a two-stage procedure will be used to request proposals.

(a) Single-stage procedure

53. The decision between having a single or a two-stage procedure for requesting proposals will depend on the nature of the contract, on how precisely the technical requirements can be defined and whether output results (or performance indicators) are used for selection of the concessionaire. If it is deemed both feasible and desirable for the contracting authority to formulate performance indicators or project specifications to the necessary degree of precision or finality, the selection process may be structured as a single-stage procedure. In that case, after having concluded the pre-selection of bidders, the contracting authority would proceed directly to issuing a final request for proposals (see paras. 59-72).

(b) Two-stage procedure

54. There are cases, however, in which it may not be feasible for the contracting authority to formulate its requirement in sufficiently detailed and precise project specifications or performance indicators to permit proposals to be formulated, evaluated and compared uniformly on the basis of those specifications and indicators. This may be the case, for instance, when the contracting authority has not determined the type of technical and material input that would be suitable for the project in question (for example, the type of construction material to be used in a bridge). In such cases, it might be considered undesirable, from the standpoint of obtaining the best value, for the contracting authority to proceed on the basis of specifications or indicators it has drawn up in the absence of discussions with bidders as to the exact capabilities and possible variations of what is being offered. For that purpose, the contracting authority may wish to divide the selection proceedings into two stages and allow a certain degree of flexibility for discussions with bidders.

55. Where the selection procedure is divided into two stages, the initial request for proposals typically calls upon the bidders to submit proposals relating to output specifications and other characteristics of the project as well as to the proposed contractual terms. The invitation for bids would allow bidders to offer their own solutions for meeting the particular infrastructure need in accordance with defined standards of service. The proposals submitted at this stage would typically consist of solutions on the basis of a conceptual design or performance indicators without indication of financial elements, such as the expected price or level of remuneration.

56. To the extent the terms of the contractual arrangements are already known by the contracting authority, they should be included in the request for proposals, possibly in the form of a draft of the project agreement. Knowledge of certain contractual terms, such as the risk allocation envisaged by the contracting authority, is important in order for the bidders to formulate their proposals and discuss the "bankability" of the project with potential lenders. The initial response to those contractual terms, in particular the risk allocation envisaged by the contracting authority, may help the contracting authority assess the feasibility of the project as originally conceived. However, it is important to distinguish between the procedure to request proposals and the negotiation of the final contract, after the project has been awarded. The purpose of this initial stage is to enable the contracting authority to formulate its requirement subsequently in a manner that enables a final competition to be carried out on the basis of a single set of parameters. The invitation of initial proposals at this stage should not lead to a negotiation of the terms of the contract prior to its final award.

57. The contracting authority may then convene a meeting of bidders to clarify questions concerning the request for proposals and accompanying documentation. The contracting authority may, in the first stage, engage in discussions with any bidder concerning any aspect of its proposal. The contracting authority should treat proposals in such a manner as to avoid the disclosure of their contents to competing bidders. Any discussions need to be confidential and one party to the discussions should not reveal to any other person any technical, financial or other information relating to the discussions without the consent of the other party.

58. Following those discussions, the contracting authority should review and, as appropriate, revise the initial output specifications. In formulating those revised specifications, the contracting authority should be allowed to delete or modify any aspect of the technical or quality characteristics of the project originally set forth in the request for proposals and any criterion originally set forth in those documents for evaluating and comparing proposals. Any such deletion, modification or addition should be communicated to bidders in the invitation to submit final proposals. Bidders not wishing to submit a final proposal should be allowed to withdraw from the selection proceedings without forfeiting any security that they may have been required to provide.

2. Content of the final request for proposals

59. At the final stage, the contracting authority should invite the bidders to submit final proposals with respect to the revised project specifications, performance indicators and contractual terms. The request for proposals should generally include all information necessary to provide a basis to enable the bidders to submit proposals that meet the needs of the contracting authority and that the contracting authority can compare in an objective and fair manner.

(a) General information to bidders

60. General information to bidders should cover, as appropriate, those items which are ordinarily included in solicitation documents or requests for proposals for the procurement of goods, construction and services.[6] Particularly important is the disclosure of the criteria to be used by the contracting authority in determining the successful proposal and the relative weight of such criteria (see paras. 73-77).

(i) Information on feasibility studies

61. It is advisable to include in the general information provided to bidders instructions for the preparation of feasibility studies they may be required to submit with their final proposals. Such feasibility studies typically cover, for instance, the following aspects:

(a) Commercial viability. In particular in projects financed on a non-recourse or limited recourse basis, it is essential to establish the need for the project outputs and to evaluate and project such needs over the proposed operational life of the project, including expected demand (for example, traffic forecasts for roads) and pricing (for example, tolls);

(b) Engineering design and operational feasibility. Bidders should be requested to demonstrate the suitability of the technology they propose, including equipment and processes, to national, local and environmental conditions, the likelihood of achieving the planned performance level and the adequacy of the construction methods and schedules. This study should also define the proposed organization, methods and procedures for operating and maintaining the completed facility;

(c) Financial viability. Bidders should be requested to indicate the proposed sources of financing for the construction and operation phases, including debt capital and equity investment. While the loan and other financing agreements in most cases are not executed until after the signing of the project agreement, the bidders should be required to submit sufficient evidence of the lenders' intention to provide the specified financing. In some countries, bidders are also required to indicate the expected financial internal rate of return in relation to the effective cost of capital corresponding to the financing arrangements proposed. Such information is intended to allow the contracting authority to consider the reasonableness and affordability of the proposed prices or fees to be charged by the concessionaire and the potential for subsequent increases therein;

(d) Environmental impact. This study should identify possible negative or adverse effects on the environment as a consequence of the project and indicate corrective measures that need to be taken to ensure compliance with the applicable environmental standards. Such a study should take into account, as appropriate, the relevant environmental standards of international financial institutions and of national, provincial and local authorities.

(ii) Information on bid securities

62. It is advisable for the request for proposals to indicate any requirements of the contracting authority with respect to the issuer and the nature, form, amount and other principal terms of any bid security that the bidders may be required to provide so as to cover those losses which may result from withdrawal of proposals or failure by the selected bidder to conclude a project agreement. In order to ensure fair treatment of all bidders, requirements that refer directly or indirectly to the conduct by the bidder submitting the proposal should not relate to conduct other than withdrawal or modification of the proposal after the deadline for submission of proposals or before the deadline if so stipulated in the request for proposals; failure to achieve financial closing; failure to sign the project agreement if required by the contracting authority to do so; and failure to provide required security for the fulfilment of the project agreement after the proposal has begn accepted or to com-

[6]For example, instructions for preparing and submitting proposals, including the manner, place and deadline for the submission of proposals and the period of time during which proposals shall be in effect and any requirements concerning tender securities; the means by which bidders may seek clarifications of the request for proposals, and a statement as to whether the contracting authority intends, at this stage, to convene a meeting of bidders; the place, date and time for the opening of proposals and the procedures to be followed for opening and examining proposals; and the manner in which the proposals will be evaluated (see UNCITRAL Model Procurement Law, arts. 27 and 38).

ply with any other condition prior to signing the project agreement specified in the request for proposals. Safeguards should be included to ensure that a bid security requirement is only imposed fairly and for the purpose intended.[7]

(iii) Qualification of bidders

63. Where no pre-selection of bidders was carried out prior to the issuance of the request for proposals or when the contracting authority retains the right to require the bidders to demonstrate again their qualifications, the request for proposals should set out the information that needs to be provided by the bidders to substantiate their qualifications (see paras. 38-40).

(b) Project specifications and performance indicators

64. The level of detail provided in the specifications, as well as the appropriate balance between the input and output elements, will be influenced by considerations of issues such as the type and ownership of the infrastructure and the allocation of responsibilities between the public and the private sectors (see paras. 21 and 22). It is generally advisable for the contracting authority to bear in mind the long-term needs of the project and to formulate its specifications in a manner that allows it to obtain sufficient information to select the bidder that offers the highest quality of services at the best economic terms. The contracting authority may find it useful to formulate the project specifications in a way that defines adequately the output and performance required without being overly prescriptive in how that is to be achieved. Project specifications and performance indicators typically cover items such as the following:

(a) Description of project and expected output. If the services require specific buildings, such as a transport terminal or an airport, the contracting authority may wish to provide no more than outline planning concepts for the division of the site into usage zones on an illustrative basis, instead of plans indicating the location and size of individual buildings, as would normally be the case in traditional procurement of construction services. However, where in the judgement of the contracting authority it is essential for the bidders to provide detailed technical specifications, the request for proposals should include, at least, the following information: description of the works and services to be performed, including technical specifications, plans, drawings and designs; time schedule for the execution of works and provision of services; and the technical requirements for the operation and maintenance of the facility;

(b) Minimum applicable design and performance standards, including appropriate environmental standards. Performance standards are typically formulated in terms of the desired quantity and quality of the outputs of the facility. Proposals that deviate from the relevant performance standards should be regarded as non-responsive;

(c) Quality of services. For projects involving the provision of public services, the performance indicators should include a description of the services to be provided and the relevant standards of quality to be used by the contracting authority in the evaluation of the proposals. Where appropriate, reference should be made to any general obligations of public service providers as regards expansion and continuity of the service so as to meet the demand of the community or territory served, ensuring non-discriminatory availability of services to the users and granting non-discriminatory access of other service providers to any public infrastructure network operated by the concessionaire, under the terms and conditions established in the project agreement (see chap. IV, "Construction and operation of infrastructure", paras. 82-93).

65. Bidders should be instructed to provide the information necessary in order for the contracting authority to evaluate the technical soundness of proposals, their operational feasibility and responsiveness to standards of quality and technical requirements, including the following information:

(a) Preliminary engineering design, including proposed schedule of works;

(b) Project cost, including operating and maintenance cost requirements and proposed financing plan (for example, proposed equity contribution or debt);

(c) The proposed organization, methods and procedures for the operation and maintenance of the project under bidding;

(d) Description of quality of services.

66. Each of the above-mentioned performance indicators may require the submission of additional information by the bidders, according to the project being awarded. For the award of a concession for distribution of electricity in a specific region, for example, indicators may include minimum technical standards such as: *(a)* specified voltage (and frequency) fluctuation at consumer level; *(b)* duration of outages (expressed in hours per year); *(c)* frequency of outages (expressed in a number per year); *(d)* losses; *(e)* number of days to connect a new customer; *(f)* commercial standards for customer relationship (for example, number of days to pay bills, to reconnect installations or to respond to customers' complaints).

(c) Contractual terms

67. It is advisable for the bidding documents to provide some indication of how the contracting authority expects to allocate the project risks (see also chaps. II, "Project risks and government support", and IV, "Construction and operation of infrastructure"). This is important in order to set the terms of debate for negotiations on certain details of the

[7] Article 32 of the UNCITRAL Model Procurement Law provides certain important safeguards, including, inter alia, the requirement that the contracting authority should make no claim to the amount of the tender security and should promptly return, or procure the return of, the tender security document, after whichever of the following that occurs earliest: *(a)* the expiry of the tender security; *(b)* the entry into force of the project agreement and the provision of a security for the performance of the contract, if such a security is required by the request for proposals; *(c)* the termination of the selection process without the entry into force of a project agreement; or *(d)* the withdrawal of the proposal prior to the deadline for the submission of proposals, unless the request for proposals stipulates that no such withdrawal is permitted.

project agreement (see paras. 83 and 84). If risk allocation is left entirely open, the bidders may respond by seeking to minimize the risks they accept, which may frustrate the purpose of seeking private investment for developing the project. Furthermore, the request of proposals should contain information on essential elements of the contractual arrangements envisaged by the contracting authority, such as:

(a) The duration of the concession or invitations to bidders to submit proposals for the duration of the concession;

(b) Formulas and indices to be used in adjustments to prices;

(c) Government support and investment incentives, if any;

(d) Bonding requirements;

(e) Requirements of regulatory agencies, if any;

(f) Monetary rules and regulations governing foreign exchange remittances;

(g) Revenue-sharing arrangements, if any;

(h) Indication of the categories of assets that the concessionaire would be required to transfer to the contracting authority or make available to a successor concessionaire at the end of the project period;

(i) Where a new concessionaire is being selected to operate an existing infrastructure, a description of the assets and property that will be made available to the concessionaire;

(j) The possible alternative, supplementary or ancillary revenue sources (for example, concessions for exploitation of existing infrastructure), if any, that may be offered to the successful bidder.

68. Bidders should be instructed to provide the information necessary in order for the contracting authority to evaluate the financial and commercial elements of the proposals and their responsiveness to the proposed contractual terms. The financial proposals should normally include the following information:

(a) For projects in which the concessionaire's income is expected to consist primarily of tolls, fees or charges paid by the customers or users of the infrastructure facility, the financial proposal should indicate the proposed price structure. For projects in which the concessionaire's income is expected to consist primarily of payments made by the contracting authority or another public authority to amortize the concessionaire's investment, the financial proposal should indicate the proposed amortization payments and repayment period;

(b) The present value of the proposed prices or direct payments based on the discounting rate and foreign exchange rate prescribed in the bidding documents;

(c) If it is estimated that the project would require financial support by the Government, the level of such support, including, as appropriate, any subsidy or guarantee expected from the Government or the contracting authority;

(d) The extent of risks assumed by the bidders during the construction and operation phase, including unforeseen events, insurance, equity investment and other guarantees against those risks.

69. In order to limit and establish clearly the scope of the negotiations that will take place following the evaluation of proposals (see paras. 83 and 84), the final request for proposals should indicate which are the terms of the project agreement that are deemed not negotiable.

70. It is useful for the contracting authority to require that the final proposals submitted by the bidders contain evidence showing the comfort of the bidder's main lenders with the proposed commercial terms and allocation of risks, as outlined in the request for proposals. Such a requirement might play a useful role in resisting pressures to reopen commercial terms at the stage of final negotiations. In some countries, bidders are required to initial and return to the contracting authority the draft project agreement together with their final proposals as a confirmation of their acceptance of all terms in respect of which they did not propose specific amendments.

3. Clarifications and modifications

71. The right of the contracting authority to modify the request for proposals is important in order to enable it to obtain what is required to meet its needs. It is therefore advisable to authorize the contracting authority, whether on its own initiative or as a result of a request for clarification by a bidder, to modify the request for proposals by issuing an addendum at any time prior to the deadline for submission of proposals. However, when amendments are made that would reasonably require bidders to spend additional time preparing their proposals, such additional time should be granted by extending the deadline for submission of proposals accordingly.

72. Generally, clarifications, together with the questions that gave rise to the clarifications, and modifications must be communicated promptly by the contracting authority to all bidders to whom the contracting authority provided the request for proposals. If the contracting authority convenes a meeting of bidders, it should prepare minutes of the meeting containing the requests submitted at the meeting for clarification of the request for proposals and its responses to those requests and should send copies of the minutes to the bidders.

4. Evaluation criteria

73. The award committee should rate the technical and financial elements of each proposal in accordance with the predisclosed rating systems for the technical evaluation criteria and should specify in writing the reasons for its rating. Generally, it is important for the contracting authority to achieve an appropriate balance between evaluation criteria relating to the physical investment (for example, the construction works) and evaluation criteria relating to the operation and maintenance of the infrastructure and the quality of services to be provided by the concessionaire. Adequate emphasis should be given to the long-term needs of the contracting authority, in particular the need to ensure the continuous delivery of the service at the required level of quality and safety.

(a) Evaluation of technical aspects of the proposals

74. Technical evaluation criteria are designed to facilitate the assessment of the technical, operational, environmental and financing viability of the proposal vis-à-vis the prescribed specifications, indicators and requirements prescribed in the bidding documents. To the extent practicable, the technical criteria applied by the contracting authority should be objective and quantifiable, so as to enable proposals to be evaluated objectively and compared on a common basis. This reduces the scope for discretionary or arbitrary decisions. Regulations governing the selection process might spell out how such factors are to be formulated and applied. Technical proposals for privately financed infrastructure projects are usually evaluated in accordance with the following criteria:

(a) Technical soundness. Where the contracting authority has established minimum engineering design and performance specifications or standards, the basic design of the project should conform to those specifications or standards. Bidders should be required to demonstrate the soundness of the proposed construction methods and schedules;

(b) Operational feasibility. The proposed organization, methods and procedures for operating and maintaining the completed facility must be well defined, should conform to the prescribed performance standards and should be shown to be workable;

(c) Quality of services. Evaluation criteria used by the contracting authority should include an analysis of the manner in which the bidders undertake to maintain and expand the service, including the guarantees offered for ensuring its continuity;

(d) Environmental standards. The proposed design and the technology of the project to be used should be in accordance with the environmental standards set forth in the request for proposals. Any negative or adverse effects on the environment as a consequence of the project as proposed by the bidders should be properly identified, including the corresponding corrective or mitigating measures;

(e) Enhancements. These may include other terms the author of the project may offer to make the proposals more attractive, such as revenue-sharing with the contracting authority, fewer governmental guarantees or reduction in the level of government support;

(f) Potential for social and economic development. Under this criterion, the contracting authority may take into account the potential for social and economic development offered by the bidders, including benefits to underprivileged groups of persons and businesses, domestic investment or other business activity, the encouragement of employment, the reservation of certain production for domestic suppliers, the transfer of technology and the development of managerial, scientific and operational skills;

(g) Qualification of bidders. When no pre-selection was made by the contracting authority prior to the issuance of the request for proposals, the contracting authority should not accept a proposal if the bidders that submitted the proposals are not qualified.

(b) Evaluation of financial and commercial aspects of the proposals

75. In addition to criteria for the technical evaluation of proposals, the contracting authority needs to define criteria for assessing and comparing the financial proposals. For projects in which the concessionaire's income is expected to consist primarily of tolls, fees or charges paid by the customers or users of the infrastructure facility, the assessment and comparison of the financial elements of the final proposals is typically based on the present value of the proposed tolls, fees, rentals and other charges over the concession period according to the prescribed minimum design and performance standards. For projects in which the concessionaire's income is expected to consist primarily of payments made by the contracting authority to amortize the concessionaire's investment, the assessment and comparison of the financial elements of the final proposals is typically based on the present value of the proposed schedule of amortization payments for the facility to be constructed according to the prescribed minimum design and performance standards, plans and specifications.

76. However, the contracting authority's assessment of financial elements of the final proposals should not be limited to a comparison of the unit prices offered for the expected output. In order to consider adequately the financial feasibility of the proposals and the likelihood of subsequent increases in the proposed prices, additional criteria may need to be considered, such as the costs for design and construction activities; annual operation and maintenance costs; present value of capital costs and operating costs; and the amount of subsidy, if any, expected from the Government. The contracting authority should assess whether the proposed financing plan, including the proposed ratio between equity investment and debt, is adequate to meet the construction, operating and maintenance costs of the project.

77. In establishing the criteria for the evaluation of financial proposals, it is important for the contracting authority to consider carefully the relative importance of the proposed unit price for the expected output as an evaluation criterion. While the unit price is an important factor for ensuring objectiveness and transparency in the choice between equally responsive proposals, it should be noted that the notion of "price" usually does not have the same value for the award of privately financed infrastructure projects as it has in the procurement of goods and services. Indeed, the remuneration of the concessionaire is often the combined result of charges paid by the users, ancillary revenue sources and direct subsidies or payments made by the public entity awarding the contract. Therefore, while the unit price for the expected output retains its role as an important element of comparison of proposals, it may not always be regarded as the most important factor.

5. Submission, opening, comparison and evaluation of proposals

78. Proposals should be required to be submitted in writing, signed and placed in sealed envelopes. A proposal

received by the contracting authority after the deadline for the submission of proposals should not be opened and should be returned to the bidder that submitted it. For the purpose of ensuring transparency, national laws often prescribe formal procedures for the opening of proposals, usually at a time previously specified in the request for proposals, and require that the bidders that have submitted proposals, or their representatives, be permitted by the contracting authority to be present at the opening of proposals. Such a requirement helps to minimize the risk that the proposals might be altered or otherwise tampered with and represents an important guarantee of the integrity of the proceedings.

79. In view of the complexity of privately financed infrastructure projects and the variety of evaluation criteria usually applied in the award of the project, it may be advisable for the contracting authority to apply a two-step evaluation process whereby non-financial criteria would be taken into consideration separately from, and perhaps before, financial criteria so as to avoid situations where undue weight would be given to certain elements of the financial criteria (such as the unit price) to the detriment of the non-financial criteria.

80. To that end, in some countries bidders are required to formulate and submit their technical and financial proposals in two separate envelopes. The two-envelope system is sometimes used because it permits the contracting authority to evaluate the technical quality of proposals without being influenced by their financial components. However, the method has been criticized as being contrary to the objective of economy in the award of public contracts. In particular, there is said to be a danger that, by selecting proposals initially on the basis of technical merit alone and without reference to price, a contracting authority might be tempted to select, upon the opening of the first envelope, proposals offering technically superior works and to reject proposals offering less sophisticated solutions that nevertheless meet the contracting authority's needs at an overall lower cost. International financial institutions, such as the World Bank, do not accept the two-envelope system for projects financed by them because of concerns that the system gives margin to a higher degree of discretion in the evaluation of proposals and makes it more difficult to compare them in an objective manner.

81. As an alternative to the use of a two-envelope system, the contracting authorities may require both technical and financial proposals to be contained in one single proposal, but structure their evaluation in two stages, as in the evaluation procedure provided in article 42 of the UNCITRAL Model Procurement Law. At an initial stage, the contracting authority typically establishes a threshold with respect to quality and technical aspects to be reflected in the technical proposals in accordance with the criteria as set out in the request for proposals, and rates each technical proposal in accordance with such criteria and the relative weight and manner of application of those criteria as set forth in the request for proposals. The contracting authority then compares the financial and commercial proposals that have attained a rating at or above the threshold. When the technical and financial proposals are to be evaluated consecutively, the contracting authority should initially ascertain whether the technical proposals are prima facie responsive to the request for proposals (that is, whether they cover all items required to be addressed in the technical proposals). Incomplete proposals, as well as proposals that deviate from the request for proposals, should be rejected at this stage. While the contracting authority may ask bidders for clarifications of their proposals, no change in a matter of substance in the proposal, including changes aimed at making a non-responsive proposal responsive, should be sought, offered or permitted at this stage.

82. In addition to deciding whether to use a two-envelope system or a two-stage evaluation procedure, it is important for the contracting authority to disclose the relative weight to be accorded to each evaluation criterion and the manner in which criteria are to be applied in the evaluation of proposals. Two possible approaches might be used to reach an appropriate balance between financial and technical aspects of the proposals. One possible approach is to consider as most advantageous the proposal that obtains the highest combined rating in respect of both price and non-price evaluation criteria. Alternatively, the price proposed for the output (for example, the water or electricity price or the level of tolls) might be the deciding factor in establishing the winning proposal among the responsive proposals (that is, those which have passed the threshold with respect to quality and technical aspects). In any event, in order to promote the transparency of the selection process and to avoid improper use of non-price evaluation criteria, it is advisable to require the awarding committee to provide written reasons for selecting a proposal other than the one offering the lowest unit price for the output.

6. Final negotiations and project award

83. The contracting authority should rank all responsive proposals on the basis of the evaluation criteria set forth in the request for proposals and invite the best rated bidder for final negotiation of certain elements of the project agreement. The final negotiations should be limited to fixing the final details of the transaction documentation and satisfying the reasonable requirements of the selected bidder's lenders. One particular problem faced by contracting authorities is the danger that the negotiations with the selected bidder might lead to pressures to amend, to the detriment of the Government or the consumers, the price or risk allocation originally contained in the proposal. Changes in essential elements of the proposal should not be permitted, as they may distort the assumptions on the basis of which the proposals were submitted and rated. Therefore, the negotiations at this stage may not concern those terms of the contract which were deemed not negotiable in the final request for proposals (see para. 69). The risk of reopening commercial terms at this late stage could be further minimized by insisting that the selected bidder's lenders indicate their comfort with the risk allocation embodied in their bid at a stage where there is competition among bidders (see para. 70). The contracting authority's financial advisers might contribute to this process by advising whether bidders' proposals are realistic and what levels of financial commitment are appropriate at each stage. The process of reaching financial close can itself be quite lengthy.

84. The contracting authority should inform the remaining responsive bidders that they may be considered for negotiation if the negotiations with the bidder with better ratings do not result in a project agreement. If it becomes apparent to the contracting authority that the negotiations with the invited bidder will not result in a project agreement, the contracting authority should inform that bidder that it is terminating the negotiations and then invite for negotiations the next bidder on the basis of its ranking until it arrives at a project agreement or rejects all remaining proposals. To avoid the possibility of abuse and unnecessary delay, the contracting authority should not reopen negotiations with any bidder with whom they have already been terminated.

D. DIRECT NEGOTIATIONS

85. In the legal tradition of certain countries, privately financed infrastructure projects involve the delegation by the contracting authority of the right and duty to provide a public service. As such, they are subject to a special legal regime that differs in many respects from the regime that applies generally to the award of public contracts for the purchase of goods, construction or services.

86. Given the very particular nature of the services required (including their complexity, amount of investment involved and completion time), the procedures used place the accent on the contracting authority's freedom to choose the operator who best suits its need, in terms of professional qualification, financial strength, ability to ensure the continuity of the service, equal treatment of the users and quality of the proposal. In contrast to the competitive selection procedures usually followed for the award of public contracts, which sometimes may appear to be excessively rigid, selection by direct negotiation is characterized by a high degree of flexibility as to the procedures involved and discretion on the part of the contracting authority. However, freedom of negotiation does not mean arbitrary choice and the laws of those countries provide procedures to ensure transparency and fairness in the conduct of the selection process.

87. In those countries where tendering is under normal circumstances the rule for public procurement of goods, construction and services, guidelines issued to contracting authorities advise the use of direct negotiations whenever possible for the award of privately financed infrastructure projects. The rationale for encouraging negotiations in those countries is that in negotiating with bidders the Government is not bound by predetermined requirements or rigid specifications and has more flexibility for taking advantage of innovative or alternative proposals that may be submitted by the bidders in the selection proceedings, as well as for changing and adjusting its own requirements in the event that more attractive options for meeting the infrastructure needs are formulated during the negotiations.

88. Direct negotiations generally afford a high degree of flexibility that some countries have found beneficial to the selection of the concessionaire. Coupled with appropriate measures to ensure transparency, integrity and fairness, direct negotiations carried out in those countries have led to satisfactory results. However, direct negotiations may have a number of disadvantages that make them less suitable to be used as a principal selection method in a number of countries. Because of the high level of flexibility and discretion afforded to the contracting authority, direct negotiations require highly skilled personnel with sufficient experience in negotiating complex projects. They also require a well structured negotiating team, clear lines of authority and a high level of coordination and cooperation among all the offices involved. The use of direct negotiations for the award of privately financed infrastructure projects may therefore not represent a viable alternative for countries that do not have the tradition of using such methods for the award of large government contracts. Another disadvantage of direct negotiations is that they may not ensure the level of transparency and objectivity that can be achieved by more structured competitive methods. In some countries there might be concerns that the higher level of discretion in direct negotiations might carry with it a higher risk of abusive or corrupt practices. In view of the above, the host country may wish to prescribe the use of competitive selection procedures as a rule for the award of privately financed infrastructure projects and to reserve direct negotiations only for exceptional cases.

1. Circumstances authorizing the use of direct negotiations

89. For purposes of transparency as well as for ensuring discipline in the award of projects, it might be generally desirable for the law to identify the exceptional circumstances under which the contracting authority may be authorized to select the concessionaire through direct negotiations. They may include, for example, the following:

(a) When there is an urgent need for ensuring immediate provision of the service and engaging in a competitive selection procedure would therefore be impractical, provided that the circumstances giving rise to the urgency were neither foreseeable by the contracting authority nor the result of dilatory conduct on its part. Such an exceptional authorization may be needed, for instance, in cases of interruption in the provision of a given service or where an incumbent concessionaire fails to provide the service at acceptable standards or if the project agreement is rescinded by the contracting authority, when engaging in a competitive selection procedure would be impractical in view of the urgent need to ensure the continuity of the service;

(b) In the case of projects of short duration and with an anticipated initial investment value not exceeding a specified low amount;

(c) Reasons of national defence or security;

(d) Cases where there is only one source capable of providing the required service (for example, because it can be provided only by the use of patented technology or unique know-how);

(e) When an invitation to the pre-selection proceedings or a request for proposals has been issued, but no applications or proposals were submitted or all proposals were rejected and, in the judgement of the contracting authority,

issuing a new request for proposals would be unlikely to result in a project award. However, in order to reduce the risk of abuse in changing the selection method, the contracting authority should only be authorized to resort to direct negotiations when such a possibility was expressly provided for in the original request for proposals.

2. Measures to enhance transparency in direct negotiations

90. Procedures to be followed in procurement through negotiation are typically characterized by a higher degree of flexibility than the procedures applied to other methods of procurement. Few rules and procedures are established to govern the process by which the parties negotiate and conclude their contract. In some countries, procurement laws allow contracting authorities virtually unrestricted freedom to conduct negotiations as they see fit. The laws of other countries establish a procedural framework for negotiation designed to maintain fairness and objectivity and to bolster competition by encouraging participation of bidders. Provisions on procedures for selection through negotiation address a variety of issues discussed below, in particular, requirements for approval of the contracting authority's decision to select the concessionaire through negotiation, selection of negotiating partners, criteria for comparison and evaluation of offers, and recording of the selection proceedings.

(a) Approval

91. A threshold requirement found in many countries is that a contracting authority must obtain the approval of a higher authority prior to engaging in selection through negotiation. Such provisions generally require the application for approval to be in writing and to set forth the grounds necessitating the use of negotiation. Approval requirements are intended, in particular, to ensure that the negotiation method of selection is used only in appropriate circumstances.

(b) Selection of negotiating partners

92. In order to make the negotiation proceedings as competitive as possible, it is advisable to require the contracting authority to engage in negotiations with as many companies judged susceptible of meeting the need as circumstances permit. Beyond such a general provision, there is no specific provision in the laws of some countries on the minimum number of contractors or suppliers with whom the contracting authority is to negotiate. The laws of some other countries, however, require the contracting authority, where practicable, to negotiate with, or to solicit proposals from, a minimum number of bidders (three, for example). The contracting authority is permitted to negotiate with a smaller number in certain circumstances, in particular, when fewer than the minimum number of contractors or suppliers were available.

93. For the purpose of enhancing transparency, it is also advisable to require a notice of the negotiation proceedings to be given to bidders in a specified manner. For example, the contracting authority may be required to publish the notice in a particular publication normally used for that purpose. Such notice requirements are intended to bring the procurement proceedings to the attention of a wider range of bidders than might otherwise be the case, thereby promoting competition. Given the magnitude of most infrastructure projects, the notice should normally contain certain minimum information (a description of the project, for example, or qualification requirements) and should be issued in sufficient time to allow bidders to prepare offers. Generally the formal eligibility requirements applicable to bidders in competitive selection proceedings should also apply in negotiation proceedings.

94. In some countries, notice requirements are waived when the contracting authority resorts to negotiation following unsuccessful bidding proceedings (see para. 89 *(e)*), if all qualified contractors or suppliers that submitted bids are permitted to participate in the negotiations or if no bids at all were received.

(c) Criteria for comparison and evaluation of offers

95. Another useful measure to enhance the transparency and effectiveness of direct negotiations consists of establishing general criteria that proposals are requested to meet (for example, general performance objectives or output specifications), as well as criteria for comparing and evaluating offers made during the negotiations and for selecting the winning concessionaire (for example, the technical merit of an offer, prices, operating and maintenance costs and the profitability and development potential of the project agreement). The contracting authority should identify the proposals that appear to meet those criteria and engage in discussions with the author of each such proposal in order to refine and improve upon the proposal to the point where it is satisfactory to the contracting authority. The price of each proposal does not enter into those discussions. When the proposals have been finalized, it may be advisable for the contracting authority to seek a best and final offer on the basis of the clarified proposals. It is recommendable that bidders should include with their final offer evidence that the risk allocation that the offer embodies would be acceptable to their proposed lenders. From the best and final offers received, the preferred bidder can then be chosen. The project would then be awarded to the party offering the "most economical" or "most advantageous" proposal in accordance with the criteria for selecting the winning concessionaire set forth in the invitation to negotiate. It is recommended that the contracting authority's intention to seek a best and final offer or not should be stated in the invitation to negotiate.

(d) Record of selection proceedings

96. The contracting authority should be required to establish a record of the selection proceedings (see paras. 124-130) and should publish a notice of the award of the project (see para. 123). In some countries, transparency is further enhanced by requiring that the project agreement be opened to public inspection.

E. UNSOLICITED PROPOSALS

97. Public authorities are sometimes approached directly by private companies who submit proposals for the development of projects in respect of which no selection procedures have been opened. These proposals are usually referred to as "unsolicited proposals". Unsolicited proposals may result from the identification by the private sector of an infrastructure need that may be met by a privately financed project. They may also involve innovative proposals for infrastructure management and offer the potential for transfer of new technology to the host country.

1. Policy considerations

98. One possible reason sometimes cited for waiving the requirement of competitive selection procedures is to provide an incentive for the private sector to submit proposals involving the use of new concepts or technologies to meet the contracting authority's needs. By the very nature of competitive selection procedures, no bidder has an assurance of being awarded the project, unless it wins the competition. The cost of formulating proposals for large infrastructure projects may be a deterrent for companies concerned about their ability to match proposals submitted by competing bidders. In contrast, the private sector may see an incentive for the submission of unsolicited proposals in rules that allow a contracting authority to negotiate such proposals directly with their authors. The contracting authority, too, may have an interest in the possibility of engaging in direct negotiations in order to stimulate the private sector to formulate innovative proposals for infrastructure development.

99. At the same time, however, the award of projects pursuant to unsolicited proposals and without competition from other bidders may expose the Government to serious criticism, in particular in cases involving exclusive concessions. In addition, prospective lenders, including multilateral and bilateral financial institutions, may have difficulty in lending or providing guarantees for projects that have not been the subject of competitive selection proceedings. They may fear the possibility of challenge and cancellation by future Governments (for example, because the project award may be deemed subsequently to have been the result of favouritism or because the procedure did not provide objective parameters for comparing prices, technical elements and the overall effectiveness of the project) or legal or political challenge by other interested parties, such as customers dissatisfied with increased prices or competing companies alleging unjust exclusion from a competitive selection procedure.

100. In view of the above considerations, it is important for the host country to consider the need for, and the desirability of, devising special procedures for handling unsolicited proposals that differ from the procedures usually followed for the award of privately financed infrastructure projects. For that purpose, it may be useful to analyse two situations most commonly mentioned in connection with unsolicited proposals, namely, unsolicited proposals claiming to involve the use of new concepts or technologies to address the contracting authority's infrastructure needs and unsolicited proposals claiming to address an infrastructure need not already identified by the contracting authority.

(a) Unsolicited proposals claiming to involve the use of new concepts or technologies to address the contracting authority's infrastructure needs

101. Generally, for infrastructure projects that require the use of some kind of industrial process or method, the contracting authority would have an interest in stimulating the submission of proposals incorporating the most advanced processes, designs, methodologies or engineering concepts with demonstrated ability to enhance the project's outputs (by significantly reducing construction costs, for example, accelerating project execution, improving safety, enhancing project performance, extending economic life, reducing costs of facility maintenance and operations or reducing negative environmental impact or disruptions during either the construction or the operational phase of the project).

102. The contracting authority's legitimate interests might also be achieved through appropriately modified competitive selection procedures instead of a special set of rules for handling unsolicited proposals. For instance, if the contracting authority is using selection procedures that emphasize the expected output of the project, without being prescriptive about the manner in which that output is to be achieved (see paras. 64-66), the bidders would have sufficient flexibility to offer their own proprietary processes or methods. In such a situation, the fact that each of the bidders has its own proprietary processes or methods would not pose an obstacle to competition, provided that all the proposed methods are technically capable of generating the output expected by the contracting authority.

103. Adding the necessary flexibility to the competitive selection procedures may in these cases be a more satisfactory solution than devising special non-competitive procedures for dealing with proposals claiming to involve new concepts or technologies. With the possible exception of proprietary concepts or technologies whose uniqueness may be ascertained on the basis of the existing intellectual property rights, a contracting authority may face considerable difficulties in defining what constitutes a new concept or technology. Such a determination may require the services of costly independent experts, possibly from outside the host country, to avoid allegations of bias. A determination that a project involves a novel concept or technology might also be met by claims from other interested companies also claiming to have appropriate new technologies.

104. However, a somewhat different situation may arise if the uniqueness of the proposal or its innovative aspects are such that it would not be possible to implement the project without using a process, design, methodology or engineering concept for which the proponent or its partners possess exclusive rights, either worldwide or regionally. The existence of intellectual property rights in relation to a method or technology may indeed reduce or eliminate the scope for meaningful competition. This is why the procurement laws of most countries authorize procuring entities to engage in

single-source procurement if the goods, construction or services are available only from a particular supplier or contractor or if the particular supplier or contractor has exclusive rights over the goods, construction or services and no reasonable alternative or substitute exists (see the UNCITRAL Model Procurement Law, art. 22).

105. In such a case, it would be appropriate to authorize the contracting authority to negotiate the execution of the project directly with the proponent of the unsolicited proposal. The difficulty, of course, would be how to establish, with the necessary degree of objectivity and transparency, that there exists no reasonable alternative or substitute to the method or technology contemplated in the unsolicited proposal. For that purpose, it is advisable for the contracting authority to establish procedures for obtaining elements of comparison for the unsolicited proposal.

(b) Unsolicited proposals claiming to address an infrastructure need not already identified by the contracting authority

106. The merit of unsolicited proposals of this type consists of the identification of a potential for infrastructure development that has not been considered by the authorities of the host country. However, in and of itself this circumstance should not normally provide sufficient justification for a directly negotiated project award in which the contracting authority has no objective assurance that it has obtained the most advantageous solution for meeting its needs.

2. Procedures for handling unsolicited proposals

107. In the light of the above considerations, it is advisable for the contracting authority to establish transparent procedures for determining whether an unsolicited proposal meets the required conditions and whether it is in the contracting authority's interest to pursue it.

(a) Restrictions to the receivability of unsolicited proposals

108. In the interest of ensuring proper accountability for public expenditures, some domestic laws provide that no unsolicited proposal may be considered if the execution of the project would require significant financial commitments from the contracting authority or other public authority such as guarantees, subsidies or equity participation. The reason for such a limitation is that the procedures for handling unsolicited proposals are typically less elaborate than ordinary selection procedures and may not ensure the same level of transparency and competition that would otherwise be achieved. However, there may be reasons for allowing some flexibility in the application of this condition. In some countries, the presence of government support other than direct government guarantees, subsidy or equity participation (for example, the sale or lease of public property to authors of project proposals) does not necessarily disqualify a proposal from being treated and accepted as an unsolicited proposal.

109. Another condition for consideration of an unsolicited proposal is that it should relate to a project for which no selection procedures have been initiated or announced by the contracting authority. The rationale for handling an unsolicited proposal without using a competitive selection procedure is to provide an incentive for the private sector to identify new or unanticipated infrastructure needs or to formulate innovative proposals for meeting those needs. This justification may no longer be valid if the project has already been identified by the authorities of the host country and the private sector is merely proposing a technical solution different from the one envisaged by the contracting authority. In such a case, the contracting authority could still take advantage of innovative solutions by applying a two-stage selection procedure (see paras. 54-58). However, it would not be consistent with the principle of fairness in the award of public contracts to entertain unsolicited proposals outside selection proceedings already started or announced.

(b) Procedures for determining the admissibility of unsolicited proposals

110. A company or group of companies that approaches the Government with a suggestion for private infrastructure development should be requested to submit an initial proposal containing sufficient information to allow the contracting authority to make a prima facie assessment of whether the conditions for handling unsolicited proposals are met, in particular whether the proposed project is in the public interest. The initial proposal should include, for instance, the following information: statement of the author's previous project experience and financial standing; description of the project (type of project, location, regional impact, proposed investment, operational costs, financial assessment and resources needed from the Government or third parties); the site (ownership and whether land or other property will have to be expropriated); and a description of the service and the works.

111. Following a preliminary examination, the contracting authority should inform the company, within a reasonably short period, whether or not there is a potential public interest in the project. If the contracting authority reacts positively to the project, the company should be invited to submit a formal proposal, which, in addition to the items covered in the initial proposal, should contain a technical and economical feasibility study (including characteristics, costs and benefits) and an environmental impact study. Furthermore, the author of the proposal should be required to submit satisfactory information regarding the concept or technology contemplated in the proposal. The information disclosed should be in sufficient detail to allow the contracting authority to evaluate the concept or technology properly and to determine whether it meets the required conditions and is likely to be successfully implemented on the scale of the proposed project. The company submitting the unsolicited proposal should retain title to all documents submitted throughout the procedure and those documents should be returned to it in the event the proposal is rejected.

112. Once all the required information is provided by the author of the proposal, the contracting authority should

decide, within a reasonably short period, whether it intends to pursue the project and, if so, what procedure will be used. Choice of the appropriate procedure should be made on the basis of the contracting authority's preliminary determination as to whether or not the implementation of the project would be possible without the use of a process, design, methodology or engineering concept for which the proposing company or its partners possess exclusive rights.

(c) Procedures for handling unsolicited proposals that do not involve proprietary concepts or technology

113. If the contracting authority, upon examination of an unsolicited proposal, decides that there is public interest in pursuing the project, but the implementation of the project is possible without the use of a process, design, methodology or engineering concept for which the proponent or its partners possess exclusive rights, the contracting authority should be required to award the project by using the procedures that would normally be required for the award of privately financed infrastructure projects, such as, for instance, the competitive selection procedures described in this *Guide* (see paras. 34-84). However, the selection procedures may include certain special features so as to provide an incentive to the submission of unsolicited proposals. These incentives may consist of the following measures:

(a) The contracting authority could undertake not to initiate selection proceedings regarding a project in respect of which an unsolicited proposal was received without inviting the company that submitted the original proposal;

(b) The original bidder might be given some form of premium for submitting the proposal. In some countries that use a merit-point system for the evaluation of financial and technical proposals the premium takes the form of a margin of preference over the final rating (that is, a certain percentage over and above the final combined rating obtained by that company in respect of both financial and non-financial evaluation criteria). One possible difficulty of such a system is the risk of setting the margin of preference so high as to discourage competing meritorious bids, thus resulting in the receipt of a project of lesser value in exchange for the preference given to the innovative bidder. Alternative forms of incentives may include the reimbursement, in whole or in part, of the costs incurred by the original author in the preparation of the unsolicited proposal. For purposes of transparency, any such incentives should be announced in the request for proposals.

114. Notwithstanding the incentives that may be provided, the author of the unsolicited proposal should generally be required to meet essentially the same qualification criteria as would be required of the bidders participating in a competitive selection proceedings (see paras. 38-40).

(d) Procedures for handling unsolicited proposals involving proprietary concepts or technology

115. If it appears that the innovative aspects of the proposal are such that it would not be possible to implement the project without using a process, design, methodology or engineering concept for which the author or its partners possess exclusive rights, either worldwide or regionally, it may be useful for the contracting authority to confirm that preliminary assessment by applying a procedure for obtaining elements of comparison for the unsolicited proposal. One such procedure may consist of the publication of a description of the essential output elements of the proposal (for example, the capacity of the infrastructure facility, quality of the product or the service or price per unit) with an invitation to other interested parties to submit alternative or comparable proposals within a certain period. Such a description should not include input elements of the unsolicited proposal (the design of the facility, for example, or the technology and equipment to be used), in order to avoid disclosing to potential competitors proprietary information of the person who had submitted the unsolicited proposal. The period for submitting proposals should be commensurate with the complexity of the project and should afford the prospective competitors sufficient time to formulate their proposals. This may be a crucial factor for obtaining alternative proposals, for example, if the bidders would have to carry out detailed subsurface geological investigations that might have been carried out over many months by the original bidder, who would want the geological findings to remain secret.

116. The invitation for comparative or competitive proposals should be published with a minimum frequency (for example, once every week for three weeks) in at least one newspaper of general circulation. It should indicate the time and place where bidding documents may be obtained and should specify the time during which proposals may be received. It is important for the contracting authority to protect the intellectual property rights of the original author and to ensure the confidentiality of proprietary information received with the unsolicited proposal. Any such information should not form part of the bidding documents. Both the original bidder and any other company that wishes to submit an alternative proposal should be required to submit a bid security (see para. 62). Two possible avenues may then be pursued, according to the reactions received to the invitation:

(a) If no alternative proposals are received, the contracting authority may reasonably conclude that there is no reasonable alternative or substitute to the method or technology contemplated in the unsolicited proposal. This finding of the contracting authority should be appropriately recorded and the contracting authority could be authorized to engage in direct negotiations with the original proponent. It may be advisable to require that the decision of the contracting authority be reviewed and approved by the same authority whose approval would normally be required in order for the contracting authority to select a concessionaire through direct negotiation (see para. 89). Some countries whose laws mandate the use of competitive procedures have used these procedures in order to establish the necessary transparency required to avoid future challenges to the award of a concession following an unsolicited proposal. In those countries, the mere publication of an invitation to bid would permit an award to the bidder who originally submitted the unsolicited proposal, even if its bid were the only one received. This is so because compliance with competitive procedures typically requires that the possibility of competition should have been present and not

necessarily that competition actually occurred. Publicity creates such a possibility and adds a desirable degree of transparency;

(b) If alternative proposals are submitted, the contracting authority should invite all the bidders to negotiations with a view to identifying the most advantageous proposal for carrying out the project (see paras. 90-96). In the event that the contracting authority receives a sufficiently large number of alternative proposals, which appear prima facie to meet its infrastructure needs, there may be scope for engaging in full-fledged competitive selection procedures (see paras. 34-84), subject to any incentives that may be given to the author of the original proposal (see para. 113 *(b)*).

117. The contracting authority should be required to establish a record of the selection proceedings (paras. 124-130) and to publish a notice of the award of the project (see para. 123).

F. REVIEW PROCEDURES

118. The existence of fair and efficient review procedures is one of the basic requirements for attracting serious and competent bidders and for reducing the cost and the length of award proceedings. An important safeguard of proper adherence to the rules governing the selection procedure is that bidders have the right to seek review of actions by the contracting authority in violation of those rules or of the rights of bidders. Various remedies and procedures are available in different legal systems and systems of administration, which are closely linked to the question of review of governmental actions. Whatever the exact form of review procedures, it is important to ensure that an adequate opportunity and effective procedures for review are provided. It is particularly useful to establish a workable "pre-contract" recourse system (that is, procedures for reviewing the contracting authority's acts as early in the selection proceedings as feasible). Such a system increases the possibility of taking corrective actions by the contracting authority before loss is caused and helps to reduce cases where monetary compensation is the only option left to redress the consequences of an improper action by the contracting authority. Elements for the establishment of an adequate review system are contained in chapter VI of the UNCITRAL Model Procurement Law.

119. Appropriate review procedures should establish in the first place that bidders have a right to seek review of decisions affecting their rights. In the first instance, that review may be sought from the contracting authority itself, in particular where the project is yet to be awarded. This may facilitate economy and efficiency, since in many cases, in particular prior to the awarding of the project, the contracting authority may be quite willing to correct procedural errors, of which it may even not have been aware. It may also be useful to provide for a review by higher administrative organs of the Government, where such a procedure would be consistent with constitutional, judicial and administrative structures. Finally, most domestic procurement regimes affirm the right to judicial review, which should generally also be available in connection with the award of infrastructure projects.

120. In order to strike a workable balance between, on the one hand, the need to preserve the rights of bidders and the integrity of the selection process and, on the other, the need to limit disruption of the selection process, domestic laws often include a number of restrictions on review procedures. These include limitation of the right to review to bidders; time limits for filing of applications for review and for disposition of cases, including time limits for any suspension of the selection proceedings that may apply at the level of administrative review; and exclusion from the review procedures of a number of decisions that are left to the discretion of the contracting authority and that do not directly involve questions of the fairness of treatment accorded to bidders. In most legal systems, administrative review procedures are available to bidders to challenge decisions by contracting authorities, although judicial review procedures may not be universally available.

121. There exist in most States mechanisms and procedures for review of acts of administrative organs and other public entities. In some States, review mechanisms and procedures have been established specifically for disputes arising in the context of procurement by those organs and entities. In other States, those disputes are dealt with by means of the general mechanisms and procedures for review of administrative acts. Certain important aspects of proceedings for review, such as the forum where review may be sought and the remedies that may be granted, are related to fundamental conceptual and structural aspects of the legal system and the system of State administration in every country. Many legal systems provide for review of acts of administrative organs and other public entities before an administrative body that exercises hierarchical authority or control over the organ or entity. In legal systems that provide for such hierarchical administrative review, the question of which body or bodies are to exercise that function in respect of acts of particular organs or entities depends largely on the structure of the State administration. In the context of general procurement laws, for example, some States provide for review by a body that exercises overall supervision and control over procurement in the State (such as a central procurement board); in other States the review function is performed by the body that exercises financial control and oversight over operations of the Government and of the public administration. In some States, the review function in relation to particular types of cases involving administrative organs or other public entities is performed by specialized independent administrative bodies whose competence is sometimes referred to as "quasi-judicial". Those bodies are not, however, considered in those States to be courts within the judicial system.

122. Many national legal systems provide for judicial review of acts of administrative organs and public entities. In several of those legal systems judicial review is provided in addition to administrative review, while in other systems only judicial review is provided. Some legal systems provide only administrative review, and not judicial review. In some legal systems where both administrative and judicial review is provided, judicial review may be sought only after opportunities for administrative review have been exhausted; in other systems the two means of review are available as options. The main issue raised concerning judicial review is the effect that a judgement that annuls a

public bidding would have on the awarded contract, especially when public works have already been initiated. Procurement laws tend to attempt to strike a balance between the conflicting interests of the public sector, that is, the need to uphold the integrity of the procurement procedure and not to delay the rendering of a public service, and the interest of the bidders to preserve their rights. Except where a project agreement was the result of unlawful acts, a good solution is that a judgement should not render the project agreement void, but award damages to the injured party. It is usually agreed that such damages should not include loss of profits, but be limited to the cost incurred by the bidder in preparing the bid.

G. NOTICE OF PROJECT AWARD

123. Project agreements frequently include provisions that are of direct interest for parties other than the contracting authority and the concessionaire and who might have a legitimate interest in being informed about certain essential elements of the project. This is the case in particular for projects involving the provision of a service directly to the general public. For transparency purposes, it may be advisable to establish procedures for publicizing those terms of the project agreement which may be of public interest. Such a requirement should apply regardless of the method used by the contracting authority to select the concessionaire (for example, whether through competitive selection procedures, direct negotiations or as a result of an unsolicited proposal). One possible procedure may be to require the contracting authority to publish a notice of the award of the project, indicating the essential elements of the proposed agreements, such as: *(a)* the name of the concessionaire; *(b)* a description of the works and services to be performed by the concessionaire; *(c)* the duration of the concession; *(d)* the price structure; *(e)* a summary of the essential rights and obligations of the concessionaire and the guarantees to be provided by it; *(f)* a summary of the monitoring rights of the contracting authority and remedies for breach of the project agreement; *(g)* a summary of the essential obligations of the Government, including any payment, subsidy or compensation offered by it; and *(h)* any other essential term of the project agreement, as provided in the request for proposals.

H. RECORD OF SELECTION AND AWARD PROCEEDINGS

124. In order to ensure transparency and accountability and to facilitate the exercise of the right of aggrieved bidders to seek review of decisions made by the contracting authority, the contracting authority should be required to keep an appropriate record of key information pertaining to the selection proceedings.

125. The record to be kept by the contracting authority should contain, as appropriate, such general information concerning the selection proceedings as is usually required to be recorded for public procurement (such as the information listed in article 11 of the UNCITRAL Model Procurement Law), as well as information of particular relevance for privately financed infrastructure projects. Such information may include the following:

(a) A description of the project for which the contracting authority requested proposals;

(b) The names and addresses of the companies participating in bidding consortia and the name and address of the members of the bidders with whom the project agreement has been entered into; and a description of the publicity requirements, including copies of the publicity used or of the invitations sent;

(c) If changes to the composition of the pre-selected bidders are subsequently permitted, a statement of the reasons for authorizing such changes and a finding as to the qualifications of any substitute or additional consortia concerned;

(d) Information relative to the qualifications, or lack thereof, of bidders; and a summary of the evaluation and comparison of proposals, including the application of any margin of preference;

(e) A summary of the conclusions of the preliminary feasibility studies commissioned by the contracting authority and a summary of the conclusions of the feasibility studies submitted by the qualified bidders;

(f) A summary of any requests for clarification of the pre-selection documents or the request for proposals, the responses thereto, as well as a summary of any modification of those documents;

(g) A summary of the principal terms of the proposals and of the project agreement;

(h) If the contracting authority has found most advantageous a proposal other than the proposal offering the lowest unit price for the expected output, a justification of the reasons for that finding by the awarding committee;

(i) If all proposals were rejected, a statement to that effect and the grounds for rejection;

(j) If the negotiations with the consortium that submitted the most advantageous proposal and any subsequent negotiations with remaining responsive consortia did not result in a project agreement, a statement to that effect and of the grounds therefor.

126. For selection proceedings that involve direct negotiations (see para. 89), it may be useful to include in the record of those proceedings, in addition to requirements referred to in paragraph 125 that may be applicable, the following additional information:

(a) A statement of the grounds and circumstances on which the contracting authority relied to justify the direct negotiation;

(b) The type of publicity used or the name and address of the company or companies directly invited to the negotiations;

(c) The name and address of the company or companies that requested to participate and those which were excluded from participating, if any, and the grounds for their exclusion;

(d) If the negotiations did not result in a project agreement, a statement to that effect and of the grounds therefor;

(e) The justification given for the selection of the final concessionaire.

127. For selection proceedings engaged in as a result of unsolicited proposals (see paras. 107-117), it may be useful to include in the record of those proceedings, in addition to requirements referred to in paragraph 125 that may be applicable, the following additional information:

(a) The name and address of the company or companies submitting the unsolicited proposal and a brief description of it;

(b) A certification by the contracting authority that the unsolicited proposal was found to be of public interest and to involve new concepts or technologies, as appropriate;

(c) The type of publicity used or the name and address of the company or companies directly invited to the negotiations;

(d) The name and address of the company or companies that requested to participate and those which were excluded from participating, if any, and the grounds for their exclusion;

(e) If the negotiations did not result in a project agreement, a statement to that effect and of the grounds therefor;

(f) The justification given for the selection of the final concessionaire.

128. It is advisable for the rules on record requirements to specify the extent and the recipients of the disclosure. Setting the parameters of disclosure involves balancing factors such as the general desirability, from the standpoint of the accountability of contracting authorities, of broad disclosure; the need to provide bidders with information necessary to enable them to assess their performance in the proceedings and to detect instances in which there are legitimate grounds for seeking review; and the need to protect the bidders' confidential trade information. In view of these considerations, it may be advisable to provide two levels of disclosure, as envisaged in article 11 of the UNCITRAL Model Procurement Law. The information to be provided to any member of the general public may be limited to basic information geared to the accountability of the contracting authority to the general public. However, it is advisable to provide for the disclosure for the benefit of bidders of more detailed information concerning the conduct of the selection, since that information is necessary to enable the bidders to monitor their relative performance in the selection proceedings and to monitor the conduct of the contracting authority in implementing the requirements of the applicable laws and regulations.

129. Moreover, appropriate measures should be taken to avoid the disclosure of confidential trade information of suppliers and contractors. That is true in particular with respect to what is disclosed concerning the evaluation and comparison of proposals, as excessive disclosure of such information may be prejudicial to the legitimate commercial interests of bidders. As a general rule, the contracting authority should not disclose more detailed information relating to the examination, evaluation and comparison of proposals and proposal prices, except when ordered to do so by a competent court.

130. Provisions on limited disclosure of information relating to the selection process would not preclude the applicability to certain parts of the record of other statutes in the enacting State that confer on the public at large a general right to obtain access to government records. Disclosure of the information in the record to legislative or parliamentary oversight bodies may be mandated pursuant to the law applicable in the host country.

A/CN.9/471/Add.5

Chapter IV. Construction and operation of infrastructure

CONTENTS

LEGISLATIVE RECOMMENDATIONS

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles be implemented by the law:

General provisions on the project agreement (see paras. 1-11)

Recommendation 39. The law might identify the core terms to be provided in the project agreement, which may include those terms referred to in recommendations _____ below.

Recommendation 40. Unless otherwise provided, the project agreement is governed by the law of the host country.

Organization of the concessionaire (see paras. 12-18)

Recommendation 41. The contracting authority should have the option to require that the selected bidders establish an independent legal entity with a seat in the country.

Recommendation 42. The project agreement should specify the minimum capital of the project company and the procedures for obtaining the approval of the contracting authority to its statutes and by-laws of the project company and fundamental changes therein.

The project site, assets and easements (see paras. 19-32)

Recommendation 43. The project agreement should specify, as appropriate, which assets will be public property and which assets will be the private property of the con-

cessionaire. The project agreement should further identify which assets the concessionaire is required to transfer to the contracting authority or to a new concessionaire upon expiry or termination of the project agreement; which assets the contracting authority, at its option, may purchase from the concessionaire; and which assets the concessionaire may freely remove or dispose of upon expiry or termination of the project agreement.

Recommendation 44. The contracting authority should assist the concessionaire in the acquisition of easements needed for the operation, construction and maintenance of the facility. The law might empower the concessionaire to enter upon, transit through, do work or fix installations upon property of third parties, as required for the construction and operation of the facility.

Financial arrangements (see paras. 33-51)

Recommendation 45. The law should enable the concessionaire to collect tariffs or user fees for the use of the facility or the services it provides. The project agreement should provide for methods and formulas for the adjustment of those tariffs or user fees.

Recommendation 46. Where the tariffs or fees charged by the concessionaire are subject to external control by a regulatory agency, the law should set forth the mechanisms for periodic and extraordinary revisions of the tariff adjustment formulas.

Recommendation 47. The contracting authority should have the power, where appropriate, to agree to make direct payments to the concessionaire as a substitute for, or in addition to, service charges to be paid by the users or to enter into commitments for the purchase of fixed quantities of goods or services.

Security interests (see paras. 52-61)

Recommendation 48. The concessionaire should be responsible for raising the funds required to construct and operate the infrastructure facility and, for that purpose, should have the right to secure any financing required for the project with a security interest in any of its property, with a pledge of shares of the project company, with a pledge of the proceeds and receivables arising out of the concession or with other suitable security, without prejudice to any rule of law that might prohibit the creation of security interests in public property in the possession of the concessionaire.

Assignment of the concession (see paras. 62 and 63)

Recommendation 49. The project agreement should set forth the conditions under which the contracting authority might give its consent to an assignment of the concession, including the acceptance by the new concessionaire of all obligations under the project agreement and evidence of the new concessionaire's technical and financial capability as necessary for providing the service. The concession should not be assigned to third parties without the consent of the contracting authority.

Transfer of controlling interest in the project company (see paras. 64-68)

Recommendation 50. The transfer of a controlling interest in the capital of a concessionaire company may require the consent of the contracting authority.

Construction works (see paras. 69-79)

Recommendation 51. The project agreement should set forth the procedures for the review and approval of construction plans and specifications by the contracting authority, the contracting authority's right to monitor the construction of, or improvements to, the infrastructure facility, the conditions under which the contracting authority may order variations in respect of construction specifications and the procedures for testing and final inspection, approval and acceptance of the facility, its equipment and appurtenances.

Operation of infrastructure (see paras. 80-97)

Recommendation 52. The project agreement should set forth, as appropriate, the extent of the concessionaire's obligations to ensure:

(a) The adaptation of the service so as to meet the actual demand for the service;

(b) The continuity of the service;

(c) The availability of the service under essentially the same conditions to all users;

(d) The non-discriminatory access, as appropriate, of other service providers to any public infrastructure network operated by the concessionaire.

Recommendation 53. The project agreement should set forth:

(a) The extent of the concessionaire's obligation to provide the contracting authority or a regulatory agency, as appropriate, with reports and other information on its operations;

(b) The procedures for monitoring the concessionaire's performance and for the taking of such reasonable actions as the contracting authority or a regulatory agency may find appropriate, to ensure that the infrastructure facility is properly operated and the services are provided in accordance with the applicable legal and contractual requirements.

Recommendation 54. The concessionaire should have the right to issue and enforce rules governing the use of the facility, subject to the approval of the contracting authority or a regulatory agency.

General contractual arrangements (see paras. 98-150)

Recommendation 55. The contracting authority may reserve the right to review and approve major contracts to be entered into by the concessionaire, in particular contracts with the concessionaire's own shareholders or related persons. The contracting authority's approval should not normally be withheld except where the contracts contain provisions inconsistent with the project agreement or manifestly contrary to the public interest or to mandatory rules of a public law nature.

Recommendation 56. The concessionaire and its lenders, insurers and other contracting partners should be free to choose the law applicable to govern their contractual relations, except where such a choice would violate the host country's public policy.

Recommendation 57. The project agreement should set forth:

(a) The forms, duration and amounts of the guarantees of performance that the concessionaire may be required to provide in connection with the construction and the operation of the facilities;

(b) The insurance policies that the concessionaire may be required to maintain;

(c) The compensation to which the concessionaire may be entitled following the occurrence of legislative changes or other changes in the economic or financial conditions that render the performance of the obligation substantially more onerous than originally foreseen. The project agreement should further provide mechanisms for revising the terms of the project agreement following the occurrence of any such changes;

(d) The extent to which either party may be exempt from liability for failure or delay in complying with any obligation under the project agreement owing to circumstances beyond their reasonable control;

(e) Remedies available to the contracting authority and the concessionaire in the event of default by the other party.

Recommendation 58. The project agreement should set forth the circumstances under which the contracting authority may temporarily take over the operation of the facility for the purpose of ensuring the effective and uninterrupted delivery of the service in the event of serious failure by the concessionaire to perform its obligations.

Recommendation 59. The contracting authority should be authorized to enter into agreements with the lenders providing for the appointment, with the consent of the contracting authority, of a new concessionaire to perform under the existing project agreement if the concessionaire seriously fails to deliver the service required or if other specified events occur that could justify the termination of the project agreement.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL PROVISIONS OF THE PROJECT AGREEMENT

1. The "project agreement" between the contracting authority and the concessionaire is the central contractual document in an infrastructure project. The project agreement defines the scope and purpose of the project as well as the rights and obligations of the parties; it provides details on the execution of the project and sets forth the conditions for the operation of the infrastructure or the delivery of the relevant services. Project agreements may be contained in a single document or may consist of more than one separate agreement between the contracting authority and the concessionaire. This section discusses the relation between the project agreement and the host country's legislation on privately financed infrastructure projects. It also discusses procedures and formalities for the conclusion and entry into force of the project agreement.

1. Legislative approaches

2. Domestic legislation often contains provisions dealing with the content of the project agreement. In some countries, the law merely refers to the need for an agreement between the concessionaire and the contracting authority, while the laws of other countries contain extensive mandatory provisions concerning the content of clauses to be included in the agreement. An intermediate approach is taken by those laws which list a number of issues that need to be addressed in the project agreement without regulating in detail the content of its clauses.

3. General legislative provisions on certain essential elements of the project agreement may serve the purpose of establishing a general framework for the allocation of rights and obligations between the parties. They may be intended to ensure consistency in the treatment of certain contractual issues and to provide guidance to the public authorities involved in the negotiation of project agreements at different levels of government (national, provincial or local). Such guidance may be found particularly useful by contracting authorities lacking experience in the negotiation of project agreements. Lastly, legislation may sometimes be required so as to provide the contracting authority with the power to agree on certain types of provisions.

4. However, general legislative provisions dealing in detail with the rights and obligations of the parties might deprive the contracting authority and the concessionaire of the necessary flexibility to negotiate an agreement that takes into account the needs and particularities of a specific project. Therefore, it is advisable to limit the scope of general legislative provisions concerning the project agreement to those strictly necessary, such as, for instance, provisions on matters for which prior legislative authorization might be needed or those which might affect the interests of third parties or provisions relating to essential policy matters on which variation by agreement is not admitted.

2. The law governing the project agreement

5. Statutory provisions on the law applicable to the project agreement are not frequently found in domestic legislation on privately financed infrastructure projects. Where they do appear, they usually provide for the application of the laws of the host country by a general reference to domestic law or by mentioning special statutory or regulatory texts that apply to the project agreement. In some legal systems there may be an implied submission to the laws of the host country, even in the absence of a statutory provision to that effect.

6. The law governing the project agreement includes the rules contained in laws and regulations of the host country related directly to privately financed infrastructure projects, where specific legislation on the matter exists. The main elements of those laws have been considered in previous

chapters of the *Guide*. In some countries the project agreement may be subject to administrative law, while in others the project agreement may be governed by private law (see chap. VII, "Other relevant areas of law", ___). The governing law also includes legal rules of other fields of law that apply to the various issues that arise during the execution of an infrastructure project (see chap. VII, "Other relevant areas of law", ___). Some of those rules may be of an administrative or other public law nature and their application in the host country may be mandatory, such as those dealing with environmental protection measures and health and labour conditions. Some domestic laws expressly identify the matters that are subject to rules of mandatory application. However, a number of issues arising out of the project agreement or the operation of the facility may not be the subject of mandatory rules of a public law nature. This is typically the case of most contractual issues arising under the project agreement (for example, formation, validity and breach of contract, including liability and compensation for breach of contract and wrongful termination).

7. Host countries wishing to adopt legislation on privately financed infrastructure projects where no such legislation exists may need to address the various issues raised by such projects in more than one statutory instrument. Other countries may wish to introduce legislation dealing only with certain issues that have not already been addressed in a satisfactory manner in existing laws and regulations. For instance, specific legislation on privately financed infrastructure projects could establish the particular features of the procedures to select the concessionaire and refer, as appropriate, to existing legislation on the award of government contracts for details on the administration of the process. By the same token, when adopting legislation on privately financed infrastructure projects, host countries may need to repeal the application of certain laws and regulations that, in the view of the legislature, constitute obstacles to their implementation.

8. For purposes of clarity, it may be useful to provide information to potential investors concerning those statutory and regulatory texts which are directly applicable to the execution of privately financed infrastructure projects and, as appropriate, those whose application has been repealed by the legislature. However, as it would not be possible to list exhaustively in the law all the statutes or regulations of direct or subsidiary relevance for privately financed infrastructure projects, such a list might best be provided in a non-legislative document, such as a promotional brochure or general information provided to bidders with the request for proposals (see chap. III, "Selection of the concessionaire", para. 60).

3. Conclusion of the project agreement

9. For projects as complex as infrastructure projects, it is not unusual for several months to elapse in the final negotiations (see chap. III, "Selection of the concessionaire", paras. 83 and 84) before the parties are ready to sign the project agreement. Additional time may also be needed in order to accomplish certain formalities that are often prescribed by law, such as approval of the project agreement by a higher authority. The entry into force of the project agreement or of certain categories of project agreement is in some countries subject to an act of parliament or even the adoption of special legislation. Given the cost entailed by delay in the implementation of the project agreement, it is advisable to find ways of expediting the final negotiations in order to avoid unnecessary delay in the conclusion of the project agreement.

10. A number of factors have been found to cause delay in negotiations, such as inexperience of the parties, poor coordination between different public authorities, uncertainty as to the extent of governmental support and difficulties in establishing security arrangements acceptable to the lenders. The Government may make a significant contribution by providing adequate guidance to negotiators acting on behalf of the contracting authority in the country. The clearer the understanding of the parties as to the provisions to be made in the project agreement, the greater the chances that the negotiation of the project agreement will be conducted successfully. Conversely, where important issues remain open after the selection process and little guidance is provided to the negotiators as to the substance of the project agreement, there may be considerable risk of costly and protracted negotiations as well as of justified complaints that the selection process was not sufficiently transparent and competitive (see also chap. III, "Selection of the concessionaire", paras. 83 and 84).

11. The procedures for conclusion and entry into force of the project agreement should also be reviewed with a view to expediting matters and avoiding the adverse consequences of delays in the project's timetable. In some countries the power to bind the contracting authority or the Government, as appropriate, is delegated in the relevant legislation to designated officials, so that the entry into force of the project agreement occurs upon signature or upon the completion of certain formalities, such as publication in the official gazette. In countries where such a procedure would not be feasible or where final approvals by another entity may still be required, it would be desirable to consider streamlining the approval procedures. Where such procedures are perceived as arbitrary or cumbersome, the Government may be requested to provide sufficient guarantees to the concessionaire and the lenders against such risk (see chap. II, "Project risks and government support", paras. 45-50). In some countries where approval requirements exist, contracting authorities have sometimes been authorized to compensate the selected bidder for costs incurred during the selection process and in preparations for the project, should final approval be withheld for reasons not attributable to the selected bidder.

B. ORGANIZATION OF THE CONCESSIONAIRE

12. Certain requirements concerning the organization of the concessionaire are often found in domestic legislation and are elaborated upon by detailed provisions in project agreements. They typically deal with issues such as the establishment of the concessionaire as a legal entity, its capital, scope of activities, statutes and by-laws. In most cases, the selected bidders establish a project company as an independent legal entity with its own juridical personality, which then becomes the concessionaire under the

project agreement. A project company established as an independent legal entity is the vehicle typically used for raising financing under the project finance modality (see "Introduction and background information on privately financed infrastructure projects", para. 54). Its establishment facilitates coordination in the execution of the project and provides a mechanism for protecting the interests of the project, which may not necessarily coincide with the individual interests of all of the project promoters. This aspect may be of particular importance where significant portions of the services or supplies required by the project are to be provided by members of the project consortium.

13. The project company is usually required to be established within a reasonably short period after the award of the project. Since a substantial part of the liabilities and obligations of the concessionaire, including long-term ones (project agreement, loan and security agreements and construction contracts), are usually agreed upon at an early stage, the project may benefit from being independently represented at the time those instruments are negotiated. However, firm and final commitments by the lenders and other capital providers cannot reasonably be expected to be available prior to the final award of the concession.

14. Entities providing public services are often required to be established as legal entities under the laws of the host country. This requirement reflects the legislature's interest to ensure, inter alia, that public service providers comply with domestic accounting and publicity provisions (such as publication of financial statements or requirements to make public certain corporate acts). However, this emphasizes the need for the host country to have adequate company laws in place (see chap. VII, "Other relevant areas of law", ___). The ease with which the project company can be established, with due regard to reasonable requirements deemed to be of public interest, may help to avoid unnecessary delay in the implementation of the project.

15. Another important issue concerns the equity investment required for the establishment of the project company. The contracting authority has a legitimate interest in seeking an equity level that ensures a sound financial basis for the project company and guarantees its capability to meet its obligations. However, as the total investment needed as well as the ideal proportion of debt and equity capital vary from project to project, it may be undesirable to provide a legislative requirement of a fixed sum as minimum capital for all companies carrying out infrastructure projects in the country. The contracting authority might instead be given more flexibility to arrive at a desirable amount of equity investment commensurate with the project's financial needs. For instance, the expected equity investment might be expressed as a desirable ratio between debt and equity in the request for proposals and might be included among the evaluation criteria for financial and commercial proposals, so as to stimulate competition among the bidders (see chap. III, "Selection of the concessionaire", paras. 75 and 76).

16. In any event, it is advisable to review legislative provisions or regulatory requirements relating to the organization of the concessionaire so as to ensure their consistency with international obligations assumed by the host country. Provisions that restrict or require specific types of legal entity or joint venture through which a service supplier may supply a service and limitations on the participation of foreign capital in terms of a maximum percentage limit on foreign share-holding or the total value of individual or aggregate foreign investment may be inconsistent with specific obligations undertaken by the signatory States of certain international agreements on economic integration or the liberalization of trade in services.

17. Domestic laws sometimes contain provisions concerning the scope of activities of the project company, requiring, for instance, that they be limited to the development and operation of a particular project. Such restrictions may serve the purpose of ensuring the transparency of the project's accounts and preserving the integrity of its assets, by segregating the assets, proceeds and liabilities of this project from those of other projects or other activities not related to the project. Also, such a requirement may facilitate the assessment of the performance of each project since deficits or profits could not be covered with, or set off against, debts or proceeds from other projects or activities.

18. The contracting authority might also wish to be assured that the statutes and by-laws of the project company will adequately reflect the obligations assumed by the company in the project agreement. For this reason, project agreements sometimes provide that the entry into force of changes in the statutes and by-laws of the project company is effective upon approval by the contracting authority. Where the contracting authority or another public authority participates in the project company, provisions are sometimes made to the effect that certain decisions necessitate the positive vote of the contracting authority in the meeting of the shareholders or board. In any event, it is important to weigh the public interests represented through the contracting authority against the need to afford the project company the flexibility necessary for the conduct of its business. Where it is deemed necessary to require the contracting authority's approval to proposed amendments to the statutes and by-laws of the project company, it is advisable to limit such a requirement to cases concerning provisions deemed to be of fundamental importance (for example, amount of capital, classes of shares and their privileges or liquidation procedures), which should be identified in the project agreement.

C. THE PROJECT SITE, ASSETS AND EASEMENTS

19. Provisions relating to the site of the project are an essential part of most project agreements. They typically deal with issues such as the acquisition of the required land, title to land and project assets, and easements required by the concessionaire to carry out works or to operate the infrastructure. To the extent that the project agreement contemplates transfer of public property to the concessionaire or the creation of a right of use regarding public property, prior legislative authority may be required. Legislation may also be needed to facilitate the acquisition of the required property or easements when the project site is not located on public property.

1. Acquisition of land required for execution of the project

20. Where a new infrastructure facility is to be built on public land (that is, land owned by the contracting authority or another public authority) or an existing infrastructure facility is to be modernized or rehabilitated, it will normally be for the owner of such land or facility to make it available to the concessionaire. The situation is more complex when the land is not already owned by the contracting authority and needs to be purchased from its owners. In most cases, the concessionaire would not be in the best position to assume responsibility for purchasing the land needed for the project, in view of the potential delay and expense involved in negotiations with a possibly large number of individual owners and, as may be necessary in some jurisdictions, to undertake complex searches of title deeds and review of chains of previous property transfers so as to establish the regularity of the title of individual owners. It is therefore typical for the contracting authority to assume responsibility for providing the land required for the implementation of the project, so as to avoid unnecessary delay or increase in project cost as a result of the acquisition of land. The contracting authority may purchase the required land from its owners or, if necessary, acquire it compulsorily.

21. The procedure whereby private property is compulsorily acquired by the Government against the payment of appropriate compensation to the owners, which is referred to in domestic legal systems by various technical expressions, such as "expropriation", is referred to in the present *Guide* as "compulsory acquisition". In countries where the law contemplates more than one type of procedure for compulsory acquisition, it may be desirable to authorize the competent public authorities to carry out all acquisitions required for privately financed infrastructure projects pursuant to the most efficient of those procedures, such as the special procedures that in some countries apply for reasons of compelling public need (see chap. VII, "Other relevant areas of law", ___).

22. The power to acquire property compulsorily is usually vested in the Government, but the laws of a number of countries also authorize infrastructure operators or public service providers (such as railway companies, electricity authorities or telephone companies) to perform certain actions for the compulsory acquisition of private property required for providing or expanding their services to the public. In those countries in particular where the award of compensation to the owners of the property compulsorily acquired is adjudicated in court proceedings, it has been found useful to delegate to the concessionaire the authority to carry out certain acts relating to the compulsory acquisition, while the Government remains responsible for accomplishing those acts which, under the relevant legislation, are preconditions to the initiation of the acquisition proceedings. Upon acquisition, the land often becomes public property, although in some cases the law may authorize the contracting authority and the concessionaire to agree on a different arrangement, taking into account their respective shares in the cost of acquiring the property.

2. Ownership of project assets

23. As indicated earlier, private sector participation in infrastructure projects may be devised in a variety of different forms, ranging from publicly owned and operated infrastructure to fully privatized projects (see "Introduction and background information on privately financed infrastructure projects", paras. 47-53). Irrespective of the host country's general or sectoral policy, it is important that the ownership regime of the various assets involved be clearly defined and based on sufficient legislative authority. However, there may be no compelling need for detailed legislative provisions on this matter. In various countries it was found sufficient to provide legislative guidance as to matters that need to be addressed in the project agreement.

24. In some legal systems, physical infrastructure required for the provision of public services is generally regarded as public property, even where it was originally acquired or created with private funds. This would typically include any property especially acquired for the construction of the facility in addition to any property that might have been made available to the concessionaire by the contracting authority. However, during the life of the project the concessionaire may make extensive improvements or additions to the facility. It may not always be easily ascertainable under the applicable law whether or not such improvements or additions become an integral part of the public assets held in possession by the concessionaire or whether some of them may be separable from the public property held by the concessionaire and become the concessionaire's private property. It is therefore advisable for the project agreement to specify, as appropriate, which assets will be public property and which will become the private property of the concessionaire.

25. The need for clarity in respect of ownership of project assets is not limited to legal systems where physical infrastructure required for the provision of public services is regarded as public property. Generally, where the contracting authority provides the land or facility required to execute the project, it is advisable for the project agreement to specify, as appropriate, which assets will remain public property and which will become the private property of the concessionaire. The concessionaire may either receive title to such land or facilities or be granted only a leasehold interest or the right to use the land or facilities and build upon it, in particular where the land remains public property. In either case, the nature of the concessionaire's rights should be clearly established, as this will directly affect the concessionaire's ability to create security interests in project assets for the purpose of raising financing for the project (see paras. 54 and 55).

26. In addition to the ownership of assets during the duration of the concession period, it is important to consider the ownership regime upon expiry or termination of the project agreement. In some countries the law places particular emphasis on the contracting authority's interest in the physical assets related to the project and generally require the handover to the contracting authority of all of them, whereas in other countries privately financed infrastructure projects are regarded primarily as a means of pro-

curing services over a specified period, rather than of constructing assets. Thus, the laws of the latter countries limit the concessionaire's handover obligations to public assets and property originally made available to the concessionaire or certain other assets deemed to be necessary to ensure provision of the service. Sometimes, such property is transferred directly from the concessionaire to another concessionaire who succeeds it in the provision of the service.

27. Differences in legislative approaches often reflect the varying role of the public and private sectors under different legal and economic systems, but may also be the result of practical considerations on the part of the contracting authority. One practical reason for the contracting authority to allow the concessionaire to retain certain assets at the end of the project period may be the desire to lower the cost at which the service will be provided. If the project assets are likely to have a residual value for the concessionaire and that value can be taken into account during the selection process, the contracting authority may expect the tariffs charged for the service to be lower. Indeed, if the concessionaire does not expect to have to cover the entire cost of the assets in the life of the project, but can cover part of it by selling them, or using them for other purposes, after the project agreement expires, there is a possibility that the service may be provided at a lower cost than if the concessionaire had to cover all its costs in the life of the project. Moreover, certain assets may require such extensive refurbishing or technological upgrading at the end of the project period that it might not be cost-effective for the contracting authority to claim them. There may also be residual liabilities or consequential costs, for instance, because of liability for environmental damage or demolition costs.

28. For these reasons, the laws of some countries do not contemplate an unqualified transfer of all assets to the contracting authority, but allow a distinction between three main categories of assets:

(a) Assets that must be transferred to the contracting authority. This category typically includes public property that was used by the concessionaire to provide the service concerned. Assets may include both facilities made available to the concessionaire by the contracting authority and new facilities built by the concessionaire pursuant to the project agreement. Some laws also require the transfer of assets, goods and property subsequently acquired by the concessionaire for the purpose of operating the facility, in particular where they become part of, or are permanently affixed to, the infrastructure facility to be handed over to the contracting authority;

(b) Assets that may be purchased by the contracting authority, at its option. This category usually includes assets originally owned by the concessionaire, or subsequently acquired by it, which, without being indispensable or strictly necessary for the provision of the service, may enhance the convenience or efficiency of operating the facility or the quality of the service;

(c) Assets that remain the private property of the concessionaire. These are assets owned by the concessionaire that do not fall under *(b)* above. Typically the contracting authority is not entitled to such assets, which may be freely removed or disposed of by the concessionaire.

29. In the light of the above, it is useful to require in the law that the project agreement specify, as appropriate, which assets will be public property and which assets will be the private property of the concessionaire. The project agreement should identify which assets the concessionaire is required to transfer to the contracting authority or to a new concessionaire upon expiry or termination of the project agreement; which assets the contracting authority, at its option, may purchase from the concessionaire and which assets the concessionaire may freely remove or dispose of upon expiry or termination of the project agreement. These provisions should be complemented by contractual criteria for establishing, as appropriate, the compensation to which the concessionaire may be entitled in respect of assets transferred to the contracting authority or to a new concessionaire or purchased by the contracting authority upon expiry or termination of the project agreement (see chap. V, "Duration, extension and termination of the project agreement", ___).

3. Easements

30. Special arrangements may be required, in cases where the concessionaire needs to transit on or through the property of third parties to access the project site or to perform or maintain any works required for the provision of the service (for example, to place traffic signs on adjacent lands; to install poles or electric transmission lines above third parties' property; to install and maintain transforming and switching equipment; to trim trees that interfere with telephonic lines placed on abutting property; or to lay oil, gas or water pipes).

31. The right to use another person's property for a specific purpose or to do work on it is often referred to by the word "easement". Easements usually require the consent of the owner of the property to which they pertain, unless such rights are provided by the law. Usually it is not an expeditious or cost-effective solution to leave it to the concessionaire to acquire easements directly from the owners of the properties concerned. Instead it is more frequent that those easements are compulsorily acquired by the contracting authority simultaneously with the project site.

32. A somewhat different alternative might be for the law itself to empower public service providers to enter, pass through or do work or fix installations upon the property of third parties, as required for the construction, operation and maintenance of public infrastructure. Such an approach, which may obviate the need to acquire easements in respect of individual properties, may be used in sector-specific legislation where it is deemed possible to determine, in advance, certain minimum easements that may be needed by the concessionaire. For instance, a law specific to the power generation sector may lay down the conditions under which the concessionaire obtains a right of cabling for the purpose of placing and operating basic and distribution networks on property belonging to third parties. Such a right may be needed for a number of measures, such as establishing or placing underground and overhead cables, as well as establishing supporting structures and transforming and switching equipment; maintaining, repairing and

removing any of those installations; establishing a safety zone along underground or overhead cables; or removing obstacles along the wires or encroaching on the safety zone. Under some legal systems, the owners may be entitled to compensation should the extent of the rights granted to the concessionaire be such that the use of the properties by their owners is substantially hindered.

D. FINANCIAL ARRANGEMENTS

33. Financial arrangements typically include provisions concerning the concessionaire's obligations to raise funds for the project, outline the mechanisms for disbursing and accounting for funds, establish methods for calculating and adjusting the tariffs charged by the concessionaire and deal with the types of security interests that may be established in favour of the concessionaire's creditors. It is important to ensure that the laws of the host country facilitate or at least do not pose obstacles to the financial management of the project.

1. Financial obligations of the concessionaire

34. In privately financed infrastructure projects the concessionaire is typically responsible for raising the funds required to construct and operate the infrastructure facility. The concessionaire's obligations in this regard are typically set forth in detailed provisions in the project agreement. In most cases, the contracting authority or other public authorities would be interested in limiting their financial obligations to those specifically expressed in the project agreement or those forms of direct support that the Government has agreed to extend to the project.

35. The amount of private capital contributed directly by the project company's shareholders typically represents only a portion of the total proposed investment. A far greater portion derives from loans extended to the concessionaire by commercial banks and international financial institutions and from the proceeds of the placement of bonds and other negotiable instruments on the capital market (see "Introduction and background information on privately financed infrastructure projects", paras. 54-67). It is therefore important to ensure that the law does not unnecessarily restrict the concessionaire's ability to enter into the financial arrangements it sees fit for the purpose of financing the infrastructure.

2. Tariff setting and tariff control

36. Tariffs or usage fees charged by the concessionaire may be the main (sometimes even the sole) source of revenue to recover the investment made in the project in the absence of subsidies or payments by the contracting authority (see paras. 47-51) or the Government (see chap. II, "Project risks and government support," paras. 30-60). The concessionaire will therefore seek to be able to set and maintain tariffs and fees at a level that ensures sufficient cash flow for the project. However, in some legal systems there may be limits to the concessionaire's freedom to establish tariffs and fees. The cost at which public services are provided is typically an element of the Governments's infrastructure policy and a matter of immediate concern for large sections of the public. Thus, the regulatory framework in many countries includes special rules to control tariffs and fees for the provision of public services. Furthermore, statutory provisions or general rules of law in some legal systems establish parameters for pricing goods or services, for instance by requiring that tariffs meet certain standards of "reasonableness", "fairness" or "equity".

(a) The concessionaire's authority to collect tariffs

37. In a number of countries prior legislative authorization may be necessary in order for a concessionaire to collect tariffs for the provision of public services or to demand a fee for the use of public infrastructure facilities. The absence of such a general provision in legislation has in some countries given rise to judicial disputes challenging the concessionaire's authority to charge a tariff for the service.

38. Where it is deemed necessary to include in general legislation provisions concerning the level of tariffs and user fees, they should seek to achieve a balance between the interests of investors and current and future users. It is advisable that statutory criteria for determining tariffs and fees take into account, in addition to social factors the Government regards as relevant, the concessionaire's interest in achieving a level of cash flow that ensures the economic viability and commercial profitability of the project. Furthermore, it is advisable to provide the parties with the necessary authority to negotiate appropriate arrangements, including compensation provisions, in order to address situations where the application of tariff control rules directly or indirectly related to the provision of public services may result in fixing tariffs or fees below the level required for the profitable operation of the project (see para. 124).

(b) Tariff control methods

39. Domestic laws often subject tariffs or user fees to some control mechanism. Many countries have chosen to set only the broad tariff principles in legislation while leaving their actual implementation to the regulatory agency concerned and to the terms and conditions of licences or concessions. This approach is advisable because formulas are sector-specific and may require adaptation during the life of a project. Where tariff control measures are used, the law typically requires that the tariff formula be advertised with the request for proposals and be incorporated into the project agreement. Tariff control systems typically consist of formulas for the adjustment of tariffs and monitoring provisions to ensure compliance with the parameters for tariff adjustment. The most common tariff control methods used in domestic laws are based on rate-of-return and price-cap principles. There are also hybrid regimes that have elements of both. It should be noted that a well-functioning tariff control mechanism requires detailed commercial and economic analysis and that the brief discussion that follows offers only an overview of selected issues and possible solutions.

(i) Rate-of-return method

40. Under the rate-of-return method, the tariff adjustment mechanism is devised so as to allow the concessionaire an agreed rate of return on its investment. The tariffs for any given period are established on the basis of the concessionaire's overall revenue requirement to operate the facility, which involves determining its expenses, the investments undertaken to provide the services and the allowed rate of return. Reviews of the tariffs are undertaken periodically, sometimes whenever the contracting authority or other interested parties consider that the actual revenue is higher or lower than the revenue requirement of the facility. For that purpose, the contracting authority verifies the expenses of the facility, determines to what extent investments undertaken by the concessionaire are eligible for inclusion in the rate base and calculates the revenues that need to be generated to cover the allowable expenses and the return on investment agreed upon. The rate-of-return method is typically used in connection with the supply of public services for which a constant demand can be forecast, such as power, gas or water supply. For facilities or services exposed to greater elasticity of demand, such as tollroads, it might not be possible to keep the concessionaire's rate of return constant by regular tariff adjustments.

41. The rate-of-return method has been found to provide a high degree of security for infrastructure operators, since the concessionaire is assured that the tariffs charged will be sufficient to cover its operating expenses and allow the agreed rate of return. Because tariffs are adjusted regularly, thus keeping the concessionaire's rate of return essentially constant, investment in companies providing public services is exposed to little market risk. The result is typically lower costs of capital. The possible disadvantage of the rate-of-return method is that it provides little incentive for infrastructure operators to minimize their costs because of the assurance that those costs will be recovered through tariff adjustments. However, some level of incentive may exist if the tariffs are not adjusted instantaneously or if the adjustment does not apply retroactively. It should be noted that the implementation of the rate-of-return method requires a substantial amount of information, as well as extensive negotiations (for example, on eligible expenditures and cost allocation).

(ii) Price-cap method

42. Under the price-cap method, a tariff formula is set for a given period (such as four or five years) taking into account future inflation and future efficiency gains expected from the facility. Tariffs are allowed to fluctuate within the limits set by the formula. In some countries, the formula is a weighted average of various indices, in others it is a consumer price index minus a productivity factor. Where substantial new investments are required, the formula may include an additional component to cover these extra costs. The formula can apply to all services of the company or to selected groups of services only, and different formulas may be used for different groups. The periodic readjustment of the formula is, however, based on the rate-of-return type of calculations, requiring the same type of detailed information as indicated above, though on a less frequent basis.

43. The implementation of the price-cap method may be less complex than the rate-of-return method. The price-cap method has been found to provide greater incentives for public service providers, since the concessionaire retains the benefits of lower than expected costs until the next adjustment period. At the same time, however, public service providers are typically exposed to more risk under the price-cap method than under the rate-of-return method. In particular, the concessionaire faces the risk of loss when the costs turn out to be higher than expected, since the concessionaire cannot raise the tariffs until the next tariff adjustment. The greater risk exposure increases the costs of capital. If the project company's returns are not allowed to rise, there might be difficulties in attracting new investment. Also, the company might be tempted to lower the quality of the service in order to reduce costs.

(iii) Hybrid methods

44. Many tariff adjustment methods currently being used combine elements of both the rate-of-return and the price-cap methods with a view to both reducing the risk borne by the service providers and providing sufficient incentives for efficiency in the operation of the infrastructure. One such hybrid method employs sliding scales for adjusting the tariffs that ensure upward adjustment when the rate of return falls below a certain threshold and downward adjustment when the rate of return exceeds a certain maximum, with no adjustment for rates of return falling between those levels. Other possible approaches to balancing the rate-of-return and price-cap methods include a review by the contracting authority of the investments made by the concessionaire to ensure that they meet the criteria of usefulness in order to be taken into account when calculating the concessionaire's revenue requirement. Another tariff adjustment technique that may be used to set tariffs, or more generally to monitor tariff levels, is benchmark or yardstick pricing. By comparing the various cost components of one public service provider with those of another and with international norms, the contracting authority may be able to judge whether tariff adjustments requested by the public service provider are reasonable.

(c) Policy considerations on tariff control

45. Each of the main tariff adjustment methods discussed above has its own advantages and disadvantages and varying impact on private sector investment decisions (see paras. 41 and 43). This should be taken into account by the legislature when considering the appropriateness of tariff control methods to domestic circumstances. Different methods may also be used for different infrastructure sectors. Some laws indeed authorize the contracting authority to apply either a price-cap or rate-of-return method in the selection of concessionaires, according to the scope and nature of investments and services. In choosing a tariff control method, it is important to take into account the impact of the various policy options on private sector investment decisions . Whatever mechanism is chosen, the capacity of the contracting authority or the regulatory agency to monitor adequately the performance of the concessionaire and to implement the adjustment method satisfactorily should be carefully considered (see also chap. I, "General legislative and institutional framework", paras. 30-53).

46. It is important to bear in mind that tariff adjustment formulas cannot be set once and for all, as technology, exchange rates, wage levels, productivity and other factors are bound to change significantly, sometimes even unpredictably, over the concession period. Furthermore, tariff adjustment formulas are typically drawn up assuming a certain level of output or demand and may lead to unsatisfactory results if the volume of output or demand changes considerably. Therefore, many countries have established mechanisms for revision of tariff formulas, including periodic revisions (every four or five years, say) of the formula or ad hoc revisions whenever it is demonstrated that the formula has failed to ensure adequate compensation to the concessionaire (see also paras. 59-68). The tariff regime will also require adequate stability and predictability to enable public service providers and users to plan accordingly and to allow financing based on a predictable revenue. Investors and lenders may be particularly concerned about regulatory changes affecting the tariff adjustment method. Thus, they typically require the tariff adjustment formula to be incorporated into the project agreement.

3. Financial obligations of the contracting authority

47. Where the concessionaire offers services directly to the general public, the contracting authority or other public authority may undertake to make direct payments to the concessionaire as a substitute for, or in addition to, service charges to be paid by the users. Where the concessionaire produces a commodity for further transmission or distribution by another service provider, the contracting authority may undertake to purchase that commodity wholesale at an agreed price and on agreed conditions. The main examples of such arrangements are discussed briefly below.

(a) Direct payments

48. Direct payments by the contracting authority have been used in some countries as a substitute for, or as a supplement to, payments by the end users, in particular in tollroad projects, through a mechanism known as "shadow tolling". Shadow tolls are arrangements whereby the concessionaire assumes the obligation to develop, build, finance and operate a road or another transportation facility for a set number of years in exchange for periodic payments in place of, or in addition to, real or explicit tolls paid by users. Shadow toll schemes may be used to address risks that are specific to transportation projects, in particular the risk of lower-than-expected traffic levels (see chap. II, "Project risks and government support", para. 18). Furthermore, shadow toll schemes may be politically more acceptable than direct tolls, for example, where it is feared that the introduction of toll payments on public roads may give rise to protests by road users. However, where such arrangements involve some form of subsidy to the project company, their conformity with certain obligations of the host country under international agreements on regional economic integration or trade liberalization should be carefully considered.

49. Shadow tolls may involve a substantial expenditure for the contracting authority and require close and extensive monitoring by the contracting authority. In countries that have used shadow tolls for the development of new road projects, payments by the contracting authority to the concessionaire are based primarily on actual traffic levels, as measured in vehicle-miles. It is considered advisable to provide that payments are not made until traffic begins, so that the concessionaire has an incentive to open the road as quickly as possible. At the same time, it has been found useful to calculate payments on the basis of actual traffic for the duration of the concession. This system gives the concessionaire a reason to ensure that usage of the road will be disrupted as little as possible by repair works. Alternatively, the project agreement could contain a penalty or liquidated damages clause for lack of lane availability resulting from repair works. The concessionaire is typically required to perform continuous traffic counts to calculate annual vehicle-miles, which are verified periodically by the contracting authority. A somewhat modified system may combine both shadow tolls and direct tolls paid by the users. In such a system, shadow tolls are only paid by the contracting authority in the event that the traffic level over a certain period falls below the agreed minimum level necessary for the concessionaire to operate the road profitably.

(b) Purchase commitments

50. In the case of independent power plants or other facilities that generate goods or services capable of being delivered on a long-term basis to an identified purchaser, the contracting authority or other public authority often assume an obligation to purchase such goods and services, at an agreed rate, as they are offered by the concessionaire. Contracts of this type are usually referred to as "off-take agreements". Off-take agreements often include two types of payments: payments for the availability of the production capacity and payments for units of actual consumption. In a power generation project, for example, the power purchase agreement may contemplate the following charges:

(a) Capacity charges. These are charges payable regardless of actual output in a billing period and are calculated to be sufficient to pay all of the concessionaire's fixed costs incurred to finance and maintain the project, including debt service and other ongoing financing expenses, fixed operation and maintenance expenses and a certain rate of return. The payment of capacity charges is often subject to the observance of certain performance or availability standards;

(b) Consumption charges. These charges are not intended to cover all of the concessionaire's fixed costs, but rather to pay the variable or marginal costs that the concessionaire has to bear to generate and deliver a given unit of the relevant service or good (such as a kilowatt-hour of electricity). Consumption charges are usually calculated to cover the concessionaire's variable operating costs, such as that of fuel consumed when the facility is operating, water treatment expenses and costs of consumables. Variable payments are often tied to the concessionaire's own variable operating costs or to an index that reasonably reflects changes in operating costs.

51. From the perspective of the concessionaire, a combined scheme of capacity and consumption charges is particularly useful to ensure cost recovery where the transmission or distribution function for the goods or services generated by the concessionaire is subject to a monopoly. However, the capacity charges provided in the off-take agreement should be commensurate with the other sources of generating capacity available to, or actually used by, the contracting authority. In order to ensure the availability of funds for payments by the contracting authority under the off-take agreement, it is advisable to consider whether advance budgeting arrangements are required. Payments under an off-take agreement may be backed by a guarantee issued by the host Government or by a national or international guarantee agency (see chap. II, "Project risks and government support", paras. 46 and 47).

E. SECURITY INTERESTS

52. Generally, security interests in personal property provide the secured creditor with essentially two kinds of rights: a property right allowing the secured creditor, in principle, to repossess the property or have a third party repossess and sell it, and a priority right to receive payment with the proceeds from the sale of the property in the event of default by the debtor. Security arrangements in project finance generally play a defensive or preventive role by ensuring that, in the event a third party acquires the debtor's operations (for example, by foreclosure, in bankruptcy or directly from the debtor) all of the proceeds resulting from the sale of those assets will go first to repayment of outstanding loans. Nevertheless, lenders would generally aim at obtaining security interests that allow them to foreclose and take possession of a project they can take over and operate either to restore its economical viability with a view to reselling at an appropriate time or to retaining the project indefinitely and collecting an ongoing revenue.

53. Security arrangements are crucial for financing infrastructure projects, in particular where the financing is structured under the "project finance" modality. The financing documents for privately financed infrastructure projects typically include both security over physical assets related to the project and security over intangible assets held by the concessionaire. A few of the main requirements for the successful closure of the security arrangements are discussed below. It should be noted, however, that, in some legal systems, any security given to lenders that makes it possible for them to take over the project is only allowed under exceptional circumstances and under certain specific conditions, namely, that the creation of such security requires the agreement of the contracting authority; that the security should be granted for the specific purpose of facilitating the financing or operation of the project; and that the security interests should not affect the obligations undertaken by the concessionaire. Those conditions often derive from general principles of law or from statutory provisions and cannot be waived by the contracting authority through contractual arrangements.

1. Security over physical assets

54. The negotiation of security arrangements required in order to obtain financing for the project may face legal obstacles where project assets are public property. If the concessionaire lacks title to the property it will in many legal systems have no (or only limited) power to encumber such property. Where limitations of this type exist, the law may still facilitate the negotiation of security arrangements for instance by indicating the types of asset in respect of which such security interests may be created or the type of security interest that is permissible. In some legal systems, a concessionaire that is granted a leasehold interest or right to use certain property may create a security interest over the leasehold interest or right to use.

55. Furthermore, security interests may also be created where the concession encompasses different types of public property, such as when title to adjacent land (and not only the right to use it) is granted to a railway company in addition to the right to use the public infrastructure. Where it is possible to create any form of security interests in respect of assets owned by, or required to be handed over to, the contracting authority or assets in relation to which the contracting authority has a contractual option of purchase (see para. 28), the law may require the approval of the contracting authority in order for the concessionaire to create such security interests.

2. Security over intangible assets

56. The main intangible asset in an infrastructure project is the concession itself, that is, the concessionaire's right to operate the infrastructure or to provide the relevant service. In most legal systems, the concession provides its holder with the authority to control the entire project and entitles the concessionaire to earn the revenue generated by the project. Thus, the value of the concession well exceeds the combined value of all of the physical assets involved in a project. Because the concession holder would usually have the right to possess and dispose of all project assets (with the possible exception of those which are owned by other parties, such as public property in the possession of the concessionaire), the concession would typically encompass both present and future assets of a tangible or intangible nature. The lenders may therefore regard the concession as an essential component of the security arrangements negotiated with the concessionaire. A pledge of the concession itself may have various practical advantages for the concessionaire and the lenders, in particular in legal systems that would not otherwise allow the creation of security over all of a company's assets or which do not generally recognize non-possessory security interests (see chap. VII, "Other relevant areas of law", ___). These advantages may include avoiding the need to create separate security interests for each project asset, allowing the concessionaire to continue to deal with those assets in the ordinary course of business and making it possible to pledge certain assets without transferring actual possession of the assets to the creditors. Furthermore, a pledge of the concession may entitle the lenders, in case of default by the concessionaire, to avert termination of the project by taking over the concession and making arrangements for continuation of the project

under another concessionaire. A pledge of the concession may, therefore, represent a useful complement to or, under certain circumstances, a substitute for a direct agreement between the lenders and the contracting authority concerning the lenders' step-in rights (see paras. 147-150).

57. However, in some legal systems there may be obstacles to a pledge of the concession in the absence of express legislative authorization. Under various legal systems, security interests may only be created in respect of assets that can be freely transferable by the grantor of the security. Since the right to operate the infrastructure is in most cases not transferable without the consent of the contracting authority (see paras. 62 and 63), in some legal systems it may not be possible for the concessionaire to create security interests over the concession itself. Recent legislation in some civil law jurisdictions has removed that obstacle by creating a special category of security interest, sometimes referred to by expressions such as "*hipoteca de concesión de obra pública*" or "*prenda de concesión de obra pública*" ("public works concession mortgage" or "pledge of public works concession"), which generally provides the lenders with an enforceable security interest covering all of the rights granted to the concessionaire under the project agreement. However, in order to protect the public interest, the law requires the consent of the contracting authority for any measure by the lenders to enforce such a right, under conditions to be provided in an agreement between the contracting authority and the lenders. A somewhat more limited solution has been achieved in some common law jurisdictions in which a distinction has been made between the non-transferable right to carry out a certain activity under a governmental licence (that is, the "public rights" arising under the licence) and the right to claim proceeds received by the licensee (the latter's "private rights" under the licence).

3. Securities over trade receivables

58. Another form of security typically given in connection with most privately financed infrastructure projects is an assignment to lenders of proceeds from contracts with customers of the concessionaire. Those proceeds may consist of the proceeds of a single contract (such as a power purchase commitment by a power distribution entity) or of a large number of individual transactions (such as monthly payment of gas or water bills). Those proceeds typically include the tariffs charged to the public for the use of the infrastructure (for example, tolls on a tollroad) or the price paid by the customers for the goods or services provided by the concessionaire (electricity charges, for example). They may also include the revenue of ancillary concessions. Security of this type is a typical element of the financing arrangements negotiated with the lenders and the loan agreements often require that the proceeds of infrastructure projects be deposited in an escrow account managed by a trustee appointed by the lenders. Such a mechanism may also play an essential role in the issuance of bonds and other negotiable instruments by the concessionaire.

59. Security over trade receivables plays a central role in financing arrangements that involve the placement of bonds and other negotiable instruments. Those instruments may be issued by the concessionaire itself, in which case the investors purchasing the security will become its creditors, or they may be issued by a third party to whom the project receivables have been assigned through a mechanism known as "securitization". Securitization involves the creation of financial securities backed by the project's revenue stream, which is pledged to pay the principal and interest of that security. Securitization transactions usually involve the establishment of a legal entity separate from the concessionaire and especially dedicated to the business of securitizing assets or receivables. This legal entity is often referred to as a "special-purpose vehicle". The concessionaire assigns project receivables to the special-purpose vehicle, which, in turn, issues to investors interest-bearing instruments that are backed by the project receivables. The securitized bondholders thereby acquire the right to the proceeds of the concessionaire's transactions with its customers. The concessionaire collects the tariffs from the customers and transfers the funds to the special-purpose vehicle, which then transfers it to the securitized bondholders. In some countries, recent legislation has expressly recognized the concessionaire's authority to assign project receivables to a special-purpose vehicle, which holds and manages the receivables for the benefit of the project's creditors. With a view to protecting the bondholders against the risk of insolvency of the concessionaire, it may be advisable to adopt the necessary legislative measures to enable the legal separation between the concessionaire and the special-purpose vehicle.

60. In most cases it would not be practical for the concessionaire to specify individually the receivables being assigned to the creditors. Assignment of receivables in project finance therefore typically takes the form of a bulk assignment of future receivables. Statutory provisions recognizing the concessionaire's authority to pledge the proceeds of infrastructure projects have been included in recent domestic legislation in various legal systems. However, there may be considerable uncertainty in various legal systems with regard to the validity of the wholesale assignment of receivables and of future receivables. It is therefore important to ensure that domestic laws on security interests do not hinder the ability of the parties effectively to assign trade receivables in order to obtain financing for the project (see chap. VII, "Other relevant areas of law", ___).

4. Security over shares of the project company

61. Where the concession may not be assigned or transferred without the consent of the contracting authority (see paras.___), the law sometimes prohibits the establishment of security over the shares of the project company. It should be noted, however, that security over the shares of the project company is commonly required by lenders in project finance transactions and that general prohibitions on the establishment of such security may limit the project company's ability to raise funding for the project. As with other forms of security, it may therefore be useful for the law to authorize the concessionaire's shareholders to create such security, subject to the contracting authority's prior approval, where an approval would be required for the transfer of equity participation in the project company (see paras. 64-68).

F. ASSIGNMENT OF THE CONCESSION

62. Concessions are granted in view of the particular qualifications and reliability of the concessionaire and in most legal systems they are not freely transferable. Indeed, domestic laws often prohibit the assignment of the concession without the consent of the contracting authority. The purpose of these restrictions is typically to ensure the contracting authority's control over the qualifications of infrastructure operators or public service providers.

63. Some countries have found it useful to mention in the legislation the conditions under which approval for the transfer of a concession prior to its expiry may be granted, such as, for example, acceptance by the new concessionaire of all obligations under the project agreement and evidence of the new concessionaire's technical and financial capability to provide the service. General legislative provisions of this type may be supplemented by specific provisions in the project agreement setting forth the scope of those restrictions, as well as the conditions under which the consent of the contracting authority may be granted. However, it should be noted that restrictions typically apply to the voluntary transfer of its rights by the concessionaire; they do not preclude the compulsory transfer of the concession to an entity appointed by the lenders, with the consent of the contracting authority, for the purpose of averting termination due to serious default by the concessionaire (see also paras. 147-150).

G. TRANSFER OF CONTROLLING INTEREST IN THE PROJECT COMPANY

64. The contracting authority may be concerned that the original members of the bidding consortium maintain their commitment to the project throughout its duration and that effective control over the project company will not be transferred to entities unknown to the contracting authority. Concessionaires are selected to carry out infrastructure projects at least partly on the basis of their experience and capabilities for that sort of project (see chap. III, "Selection of the concessionaire", paras. 38-40). Contracting authorities are therefore concerned that, if the concessionaire's shareholders are entirely free to transfer their investment in a given project, there will be no assurance as to who will actually be delivering the relevant services.

65. Contracting authorities may draw reassurance from the experience that the selected bidding consortium demonstrated in the pre-selection phase and from the performance guarantees provided by the parent organizations of the original consortium and its subcontractors. In practice, however, the reassurance that may result from the apparent expertise of the shareholders in the concessionaire should not be overemphasized. Where a separate legal entity is established to carry out the project, which is often the case (see para. 12), the backing of the concessionaire's shareholders, should the project run into difficulties, may be limited to their maximum liability. Thus, restrictions on the transferability of investment, in and of themselves, may not represent sufficient protection against the risk of performance failure by the concessionaire. In particular, these restrictions are not a substitute for appropriate contractual remedies under the project agreement, such as monitoring of the level of service provided (see paras. 147-150) or termination without full compensation in case of unsatisfactory performance (see chap. V, "Duration, extension and termination of the project agreement", ___).

66. In addition to the above, restrictions on the transferability of shares in companies providing public services may also present some disadvantages for the contracting authority. As noted earlier (see "Introduction and background information on privately financed infrastructure projects", paras. 54-67), there are numerous types of funding available from different investors for different risk and reward profiles. The initial investors, such as construction companies and equipment suppliers, will seek to be rewarded for the higher risks they take on, while subsequent investors may require a lesser return commensurate with the reduced risks they bear. Most of the initial investors have finite resources and need to recycle capital in order to be able to participate in new projects. Therefore, those investors might not be willing to tie up capital in long-term projects. At the end of the construction period, the initial investors might prefer to sell their interest on to a secondary equity provider whose required rate of return is less. Once usage is more certain, another refinancing could take place. However, if the investors' ability to invest and reinvest capital for project development is restricted by constraints on the transferability of shares in infrastructure projects, there is a risk of a higher cost of funding. In some circumstances it may not be possible to fund a project at all, as some investors whose involvement may be crucial for the implementation of the project may not be willing to participate. From a long-term perspective, the development of a market place for investment in public infrastructure may be hindered if investors are unnecessarily constrained in the freedom to transfer their interest in privately financed infrastructure projects.

67. For the above reasons, it may be advisable to limit the restrictions on the transfer of a controlling interest in the project company to a certain period of time (for example, a certain number of years after the entry into force of the project agreement) or to situations where such restrictions are justified by reasons of public interest. One such situation may be where the concessionaire is in possession of public property or where the concessionaire receives loans, subsidies, equity or other forms of direct governmental support. In these cases, the contracting authority's accountability for the proper use of public funds requires assurances that the funds and assets are entrusted to a solid company, to which the original investors remain committed during a reasonable period. Another situation that may justify imposing limitations on the transfer of shares of concessionaire companies may be where the contracting authority has an interest in preventing transfer of shares to particular investors. For example, the contracting authority may wish to control acquisition of controlling shares of public service providers to avoid the formation of oligopolies or monopolies in liberalized sectors. Or it may not be thought appropriate for a company that had defrauded one part of Government to be employed by another through a newly acquired subsidiary.

68. In these exceptional cases it may be advisable to require that the initial investors seek the prior consent of the contracting authority before transferring their equity participation. It should be made clear in the project agreement that any such consent should not be unreasonably withheld or unduly delayed. For transparency purposes, it may also be advisable to establish the grounds for withholding approval and to require the contracting authority to specify in each instance the reasons for any refusal. The appropriate duration of such limitations—whether for a particular phase of the project or for the entire concession term—may need to be considered on a case-by-case basis. In some projects, it may be possible to relax such restrictions after the facility has been completed. It is also advisable to clarify in the project agreement whether these limitations, if any, should apply to the transfer of any participation in the concessionaire, or whether the concerns of the contracting authority will focus on one particular investor (such as. a construction company or the facility designer) while the construction phase lasts or for a significant time beyond.

H. CONSTRUCTION WORKS

69. Contracting authorities purchasing construction works typically act as the employer under a construction contract and retain extensive monitoring and inspection rights, including the right to review the construction project and request modifications to it, to follow closely the construction work and schedule, to inspect and formally accept the completed work and to give final authorization for the operation of the facility.

70. On the other hand, in many privately financed infrastructure projects, the contracting authority may prefer to transfer such responsibility to the concessionaire. Instead of assuming direct responsibility for managing the details of the project, the contracting authorities may prefer to transfer that responsibility to the concessionaire by requiring the latter to assume full responsibility for the timely completion of the construction. The concessionaire, too, will be interested in ensuring that the project is completed on time and that the cost estimate is not exceeded, and will typically negotiate fixed-price, fixed-time turnkey contracts that include guarantees of performance by the construction contractors. Therefore, in privately financed infrastructure projects it is the concessionaire that for most purposes performs the role that the employer would normally play under a construction contract.

71. For these reasons, legislative provisions on the construction of privately financed infrastructure facilities are in some countries limited to a general definition of the concessionaire's obligation to perform the public works in accordance with the provisions of the project agreement and give the contracting authority the general right to monitor the progress of the work with a view to ensuring that it conforms to the provisions of the agreement. In those countries, more detailed provisions are then left to the project agreement.

1. Review and approval of construction plans

72. Where it is felt necessary to deal with construction works and related matters in legislation, it is advisable to devise procedures that help to keep completion time and construction costs within estimates and lower the potential for disputes between the concessionaire and the public authorities involved. For instance, where statutory provisions require that the contracting authority review and approve the construction project, the project agreement should establish a deadline for the review of the construction project and provide that the approval shall be deemed to be granted if no objections are made by the contracting authority within the relevant period. It may also be useful to set out in the project agreement the grounds on which the contracting authority may raise objections to or request modifications in the project, such as safety, defence, security, environmental concerns or non-conformity with the specifications.

2. Variation in the project terms

73. During the course of construction of an infrastructure facility, it is common for situations to arise that make it necessary or advisable to alter certain aspects of the construction. The contracting authority may therefore wish to retain the right to order changes in respect of such aspects as the scope of construction, the technical characteristics of equipment or materials to be incorporated in the work or the construction services required under the specifications. Such changes are referred to in this *Guide* as "variations". As used in the *Guide*, the word "variation" does not include tariff adjustments or revisions made as a result of cost changes or currency fluctuations (see paras. 39-44). Likewise, renegotiation of the project agreement in cases of substantial change in conditions (see paras. 126-130) is not regarded in the *Guide* as a variation.

74. Given the complexity of most infrastructure projects, it is not possible to exclude the need for variations in the construction specifications or other requirements of the project. However, such variations often cause delay in the execution of the project or in the delivery of the public service; they may also render the performance under the project agreement more onerous for the concessionaire. Furthermore, the cost of implementing extensive variation orders may exceed the concessionaire's own financial means, thus requiring substantial additional funding that may not be obtainable at an acceptable cost. It is therefore advisable for the contracting authority to consider measures to control the possible need for variations. The quality of the feasibility studies required by the contracting authority and of the specifications provided during the selection process (see chap. III, "Selection of the concessionaire", paras. 61 and 64-66) play an important role in avoiding subsequent changes in the project.

75. The project agreement should set forth the specific circumstances under which the contracting authority may order variations in respect of construction specifications and the compensation that may be due to the concessionaire, as appropriate, to cover the additional cost and delay

entailed by implementing the variations. The project agreement should also clarify the extent to which the concessionaire is obliged to implement those variations and whether the concessionaire may object to variations and, if so, on which grounds. According to the contractual practice of some legal systems, the concessionaire may be released of its obligations when the amount of additional costs entailed by the modification exceeds a set maximum limit.

76. Various contractual approaches for dealing with variations have been used in large construction contracts to deal with the extent of the contractor's obligation to implement changes and the required adjustments in the contract price or contract duration. Such solutions may also be used, mutatis mutandis, to deal with variations sought by the contracting authority under the project agreement.[1] It should be noted, however, that in infrastructure concessions the project company's payment consists of user fees or prices for the output of the facility, rather than a global price for the construction work. Thus, compensation methods used in connection with infrastructure concessions sometimes include a combination of various methods, ranging from lump-sum payments to tariff increases, or extensions of the concession period. For instance, there may be changes that result in an increase in the cost that the concessionaire may be able to absorb and finance itself and amortize by means of an adjustment in the tariff or payment mechanism, as appropriate. If the concessionaire cannot refinance or fund the changes itself, the parties may wish to consider lump-sum payments as an alternative to an expensive and complicated refinancing structure.

3. Monitoring powers of the contracting authority

77. In some legal systems, public authorities purchasing construction works customarily retain the power to order the suspension or interruption of the works for reasons of public interest. However, with a view to providing some reassurance to potential investors, it may be useful to limit the possibility of such interference and to provide that no such interruption should be of a duration or extent greater than is necessary, taking into consideration circumstances that gave rise to the requirement to suspend or interrupt the work. It may also be useful to agree on a maximum period of suspension and to provide for appropriate compensation to the concessionaire. Furthermore, guarantees may be provided to ensure payment of compensation or to indemnify the concessionaire for loss resulting from suspension of the project (see also chap. II, "Project risks and government support", paras. 48-50).

78. In some legal systems, facilities built for use in connection with the provision of certain public services become public property once construction is finished (see para. 24). In such cases, the law often requires that the completed facility be formally accepted by the contracting authority or another public authority. Such formal acceptance is typically given only after inspection of the completed facility and satisfactory conclusion of the necessary tests to ascertain that the facility is operational and meets the specifications and technical and safety requirements. Even where formal acceptance by the contracting authority is not required (for example, where the facility remains the property of the concessionaire), provisions concerning final inspection and approval of the construction work by the contracting authority are often required in order to ensure compliance with health, safety, building or labour regulations. The project agreement should set out in detail the nature of the completion tests or the inspection of the completed facility; the timetable for the tests (for instance, it may be appropriate to undertake partial tests over a period, rather than a single test at the end); the consequences of failure to pass a test; and the responsibility for organizing the resources for the test and covering the corresponding costs. In some countries, it has been found useful to authorize the facility to operate on a provisional basis, pending final approval by the contracting authority, and to provide an opportunity for the concessionaire to rectify defects that might be found at that juncture.

4. Guarantee period

79. The construction contracts negotiated by the concessionaire will typically provide for a quality guarantee under which the contractors assume liability for defects in the works and for inaccuracies or insufficiencies in technical documents supplied with the works, except for reasonable exclusions (such as normal wear and tear or faulty maintenance or operation by the concessionaire). Additional liability may also derive from statutory provisions or general principles of law under the applicable law, such as a special extended liability period for structural defects in works, which is provided in some legal systems. The project agreement should provide that final approval or acceptance of the facility by the contracting authority will not release the construction contractors from any liability for defects in the works and for inaccuracies or insufficiencies in technical documents that may be provided under the construction contracts and the applicable law.

I. OPERATION OF INFRASTRUCTURE

80. Conditions for the operation and maintenance of the facility, as well as for quality and safety standards, are often enumerated in the law and spelled out in detail in the project agreement. In addition, especially in the fields of electricity, water and sanitation and public transportation, the contracting authority or an independent regulatory agency may exercise an oversight function over the operation of the facility. An exhaustive discussion of legal issues relating to the conditions of operation of infrastructure facilities would exceed the scope of this *Guide*. The following paragraphs therefore contain only a brief presentation of some of the main issues.

81. Regulatory provisions on infrastructure operation and legal requirements for the provision of public services are intended to achieve various objectives of public relevance.

[1] For a discussion of approaches and possible solutions used in construction contracts for complex industrial works, see the *UNCITRAL Legal Guide on Drawing Up Contracts for the Construction of Industrial Works* (United Nation publication, Sales No. E.87.V.10), chap. XXIII, "Variation clauses".

Given the usually long duration of infrastructure projects, there is a possibility that such provisions and requirements may need to be changed during the life of the project agreement. It is important, however, to bear in mind the private sector's need for a stable and predictable regulatory framework. Changes in regulations or the frequent introduction of new and stricter rules may have a disruptive impact on the implementation of the project and compromise its financial viability. Therefore, while contractual arrangements may be agreed to by the parties to counter the adverse effects of subsequent regulatory changes (see paras. 122-125), regulatory agencies would be well advised to avoid excessive regulation or unreasonably frequent changes in existing rules.

1. Performance standards

82. Public service providers generally have to meet a set of technical and service standards. Such standards are in most cases too detailed to figure in legislation and may be included in implementing decrees, regulations or other instruments. Service standards are often spelled out in great detail in the project agreement. They include quality standards, such as requirements with respect to water purity and pressure; ceilings on the length of time to perform repairs; ceilings on the number of defects or complaints; timely performance of transport services; continuity in supply; and health, safety and environmental standards. Legislation may, however, impose the basic principles that will guide the establishment of detailed standards or require compliance with international standards.

83. The contracting authority typically retains the power to monitor the adherence of the project company to the regulatory performance standards. The concessionaire will be interested in avoiding as much as possible any interruption in the operation of the facility and in protecting itself against the consequences of any such interruption. It will seek assurances that the exercise by the contracting authority of its monitoring or regulatory powers does not cause undue disturbance or interruption in the operation of the facility and that it does not result in undue additional costs to the concessionaire.

2. Extension of services

84. In some legal systems, an entity operating under a governmental concession to provide certain essential services such as electricity or potable water to a community or territory and its inhabitants is held to assume an obligation to provide a service system that is reasonably adequate to meet the demand of the community or territory. That obligation often relates not only to the historical demand at the time the concession was awarded, but implies an obligation to keep pace with the growth of the community or territory served and gradually to extend the system as may be required by the reasonable demand of the community or territory.

85. In some legal systems, the obligation has the nature of a public duty that may be invoked by any resident of the relevant community or territory. In other legal systems, it has the nature of a statutory or contractual obligation that may be enforced by the contracting authority or by a regulatory agency, as the case may be. In some legal systems, this obligation is not absolute and unqualified. The concessionaire's duty to extend its service facilities may indeed depend upon various factors, such as the need and cost of the extension and the revenue that may be expected as a result of the extension; the concessionaire's financial situation; the public interest in effecting such an extension; and the scope of the obligations assumed by the concessionaire in that regard under the project agreement. In some legal systems, the concessionaire may be under an obligation to extend its service facilities even if the particular extension is not immediately profitable or even if, as a result of the extensions being carried out, the concessionaire's territory might eventually include unprofitable areas. That obligation is nevertheless subject to some limits, since the concessionaire is not required to carry out extensions that place an unreasonable burden on it or its customers. Depending on the particular circumstances, the cost of carrying out extensions of service facilities may be absorbed by the concessionaire, passed on to the customers or end users in the form of tariff increases or extraordinary charges or absorbed in whole or in part by the contracting authority or other public authority by means of subsidies or grants. Given the variety of factors that may need to be taken into account in order to assess the reasonableness of any particular extension, the project agreement should define the circumstances under which the concessionaire may be required to carry out extensions in its service facilities and the appropriate methods for financing the cost of any such extension.

3. Continuity of service

86. Another obligation of public service providers is to ensure the continuous provision of the service under most circumstances, except for narrowly defined exempting events (see also paras. 132-134). In some legal systems, that obligation has the nature of a statutory duty that applies even if it is not expressly stated in the project agreement. The corollary of that rule, in legal systems where it exists, is that various circumstances under general principles of contract law might authorize a contract party to suspend or discontinue the performance of its obligations, such as economic hardship or breach by the other party, cannot be invoked by the concessionaire as grounds for suspending or discontinuing, in whole or in part, the provision of a public service. In some legal systems, the contracting authority may even have special enforcement powers to compel the concessionaire to resume providing service in the event of unlawful discontinuance.

87. That obligation, too, is subject to a general rule of reasonableness. Various legal systems recognize the concessionaire's right to fair compensation for having to deliver the service under situations of hardship (see paras. 126-130). Moreover, in some legal systems, it is held that a public service provider may not be required to operate where its overall operation results in a loss. Where the public service as a whole, and not only one or more of its

branches or territories, ceases being profitable, the concessionaire may have the right to direct compensation by the contracting authority or, alternatively, the right to terminate the project agreement. However, termination typically requires the consent of the contracting authority or a judicial decision. In legal systems that allow such a solution, it is advisable to clarify in the project agreement which extraordinary circumstances would justify the suspension of the service or even release the concessionaire from its obligations under the project agreement (see also chap. V, "Duration, extension and termination of the project agreement", ___).

4. Equal treatment of customers or users

88. Entities that provide certain services to the general public are, in some jurisdictions, under a specific obligation to ensure the availability of the service under essentially the same conditions to all users and customers falling within the same category. However, differentiation based on a reasonable and objective classification of customers and users is accepted in those legal systems as long as like contemporaneous service is rendered to consumers and users engaged in like operations under like circumstances. It may thus not be inconsistent with the principle of equal treatment to charge different prices or to offer different access conditions to different categories of users (for example, domestic consumers, on the one hand, and business or industrial consumers, on the other), provided that the differentiation is based on objective criteria and corresponds to actual differences in the situation of the consumers or the conditions under which the service is provided to them. Nevertheless, where a difference in charges or other conditions of service is based on actual differences in service (such as higher charges for services provided at hours of peak consumption), it typically has to be commensurate with the amount of difference.

89. In addition to differentiation established by the concessionaire itself, different treatment of certain users or customers may be the result of legislative action. In many countries, the law requires that specific services must be provided at particularly favourable terms to certain categories of users and customers, such as discounted transport for schoolchildren or senior citizens, or reduced water or electricity rates for lower-income or rural users. Public service providers may recoup these service burdens or costs in several ways, including through government subsidies, through funds or other official mechanisms created to share the financial burden of these obligations among all public service providers or through internal cross-subsidies from more profitable services (see chap. II, "Project risks and government support", paras. 42-44).

5. Interconnection and access to infrastructure networks

90. Companies operating infrastructure networks in sectors such as railway transport, telecommunications or power or gas supply are sometimes required to allow other companies to have access to the network. That requirement may be stated in the project agreement or in sector-specific laws or regulations. Interconnection and access requirements have been introduced in certain infrastructure sectors as a complement to reforms in the structure of a given sector; in others, they have been adopted to foster competition in sectors that remained fully or partially integrated (for a brief discussion of market structure issues, see "Introduction and background information", paras. 21-46).

91. Network operators are often required to provide access on terms that are fair and non-discriminatory from a financial as well as a technical point of view. Non-discrimination implies that the new entrant or service provider should be able to use the infrastructure of the network operator on conditions that are not less favourable than those granted by the network operator to its own services or to those of competing providers. It should be noted, however, that many pipeline access regimes, for example, do not require completely equal terms for the carrier and rival users. The access obligation may be qualified in some way. It may, for instance, be limited to spare capacity only or be subject to reasonable, rather than equal, terms and conditions.

92. While access pricing is usually cost-based, regulatory agencies often retain the right to monitor access tariffs to ensure that they are high enough to give adequate incentive to invest in the required infrastructure and low enough to allow new entrants to compete on fair terms. Where the network operator provides services in competition with other providers, there may be requirements that its activities be separated from an accounting point of view in order to determine the actual cost of the use by third parties of the network or parts of it.

93. Technical access conditions may be equally important and network operators may be required to adapt their network to satisfy the access requirements of new entrants. Access may be to the network as a whole or to monopolistic parts or segments of the network (sometimes also referred to as bottleneck or essential facilities). Many governments allow service providers to build their own infrastructure or to use alternative infrastructure where available. In such cases, the service provider may only need access to a small part of the network and cannot, under many regulations, be forced to pay more than the cost corresponding to the use of the specific facility it needs, such as the local telecommunications loop, transmission capacity for the supply of electricity or the use of a track section of railway.

6. Disclosure requirements

94. Many domestic laws impose on public service providers an obligation to provide to the regulatory agency accurate and timely information on their operations and to grant it specific enforcement rights. The latter may encompass inquiries and audits, including detailed performance and compliance audits, sanctions for non-cooperative companies and injunctions or penalty procedures to enforce disclosure.

95. Public service providers are normally required to maintain and disclose to the regulatory agency their financial accounts and statements and to maintain detailed cost accounting allowing the regulatory agency to track various aspects of the company's activities separately. Financial transactions between the concessionaire company and affiliated companies may also require scrutiny, as concessionaire companies may try to transfer profits to non-regulated businesses or foreign affiliates. Infrastructure operators may also have detailed technical and performance reporting requirements. As a general rule, however, it is important to define reasonable limits to the extent and type of information that infrastructure operators are required to submit. Furthermore, appropriate measures should be taken to protect the confidentiality of any proprietary information that the concessionaire and its affiliated companies may submit to the regulatory agency.

7. Enforcement powers of the concessionaire

96. In countries with a well-established tradition of awarding concessions for the provision of public services, the concessionaire may have the power to establish rules designed to facilitate the provision of the service (such as instructions to users or safety rules), take reasonable measures to ensure compliance with those rules and suspend the provision of service for emergency or safety reasons. For that purpose, general legislative authority, or even case-by-case authorization from the legislature, may be required in most legal systems. The extent of powers given to the concessionaire is usually defined in the project agreement, however, and may not need to be provided in detail in legislation. It may be advisable to provide that the rules issued by the concessionaire become effective upon approval by the regulatory agency or the contracting authority, as appropriate. However, the right to approve operating rules proposed by the concessionaire should not be arbitrary and the concessionaire should have the right to appeal a decision to refuse approval of the proposed rules (see also chap. I, "General legislative and institutional framework", paras. 49 and 50).

97. Of particular importance for the concessionaire is the question whether the provision of the service may be discontinued because of default or non-compliance by its users. Despite the concessionaire's general obligation to ensure the continuous provision of the service (see paras. 86 and 87), many legal systems recognize that entities providing public services may establish and enforce rules that provide for shutting off of the service for a consumer or user who has defaulted in payment for it or who has seriously infringed the conditions for using it. The power to do so is often regarded as crucial in order to prevent abuse and ensure the economic viability of the service. However, given the essential nature of certain public services, that power may require legislative authority in some legal systems. Furthermore, there may be a number of expressed or implied limitations upon or conditions for the exercise of that power, such as special notice requirements and specific consumer remedies. Additional limitations and conditions may derive from the application of general consumer protection rules (see chap. VII, "Other relevant areas of law", ___).

J. GENERAL CONTRACTUAL ARRANGEMENTS

98. This section discusses selected contractual arrangements that typically appear in project agreements in various sectors and are often reflected in standard contract clauses used by domestic contracting authorities. Although essentially contractual in nature, the arrangements discussed in this section may have some important implications for the legislation of the host country, according to its particular legal system.

1. Subcontracting

99. Given the complexity of infrastructure projects, the concessionaire typically retains the services of one or more construction contractors to perform some or the bulk of the construction work under the project agreement. The concessionaire may also wish to retain the services of contractors with experience in the operation and maintenance of infrastructure during the operational phase of the project. The laws of some countries generally acknowledge the concessionaire's right to enter into contracts as needed for the execution of the construction work. A legislative provision recognizing the concessionaire's authority to subcontract may be particularly useful in countries where there are limitations to the ability of government contractors to subcontract.

(a) Choice of subcontractors

100. The concessionaire's freedom to hire subcontractors is in some countries restricted by rules that prescribe the use of tendering and similar procedures for the award of subcontracts by public service providers. Such statutory rules have often been adopted when infrastructure facilities were primarily or exclusively operated by the Government, with little or only marginal private sector investment. The purpose of such statutory rules is to ensure economy, efficiency, integrity and transparency in the use of public funds. However, in the case of privately financed infrastructure projects, such provisions may discourage the participation of potential investors, since the project sponsors typically include engineering and construction companies that participate in the project in the expectation that they will be given the main contracts for the execution of the construction and other work.

101. The concessionaire's freedom to select its subcontractors is not unlimited, however. In some countries, the concessionaire has to identify in its proposal which contractors will be retained, including information on their technical capability and financial standing. Other countries either require that such information be provided at the time the project agreement is concluded or subject such contracts to prior review and approval by the contracting authority. The purpose of such provisions is to avoid possible conflicts of interest between the project company and its shareholders, a point that would normally also be of interest to the lenders, who may wish to ensure that the project company's contractors are not overpaid. In any event, if it is deemed necessary for the contracting authority to have the right to review and approve the project company's subcontracts, the project agreement should clearly define the purpose of such review and approval procedures and the

circumstances under which the contracting authority's approval may be withheld. As a general rule, approval should not normally be withheld unless the subcontracts are found to contain provisions manifestly contrary to the public interest (for example, provisions for excessive payments to subcontractors or unreasonable limitations of liability) or contrary to mandatory rules having the nature of public law that apply to the execution of privately financed infrastructure projects in the host country.

(b) Governing law

102. It is common for the concessionaire and its contractors to choose a law that is familiar to them and that in their view adequately governs the issues addressed in their contracts. Depending upon the type of contract, different issues concerning the governing law clause will arise. For example, equipment supply and other contracts may be entered into with foreign companies and the parties may wish to choose a law known to them as providing, for example, an adequate warranty regime for equipment failure or non-conformity of equipment. In turn, the concessionaire may agree to the application of the laws of the host country in connection with contracts entered into with local customers.

103. Domestic laws specific to privately financed infrastructure projects seldom contain provisions concerning the law governing the contracts entered into by the concessionaire. In fact, most countries have found no compelling reason for making specific provisions concerning the law governing the contracts between the concessionaire and its contractors and have preferred to leave the question to a choice-of-law clause in their contracts or to the applicable rules of private international law. It should be noted, however, that the freedom to choose the applicable law for contracts and other legal relationships is in some legal systems subject to conditions and restrictions pursuant to rules of private international law or certain rules of public law of the host country. For instance, States parties to some regional economic integration agreements are obliged to enact harmonized provisions of private international law dealing, inter alia, with contracts between public service providers and their contractors. While rules of private international law often allow considerable freedom to choose the law governing commercial contracts, that freedom is in some countries restricted for contracts and legal relationships that are not qualified as commercial, such as, for instance, certain contracts entered into by public authorities of the host country (for example, guarantees and assurances by the Government, power purchase or fuel supply commitments by a public authority) or contracts with consumers.

104. In some cases, provisions have been included in domestic legislation for the purpose of clarifying, as appropriate, that the contracts entered into between the concessionaire and its contractors are governed by private law and that the contractors are not agents of the contracting authority. A provision of that type may in some countries have a number of practical consequences, such as no subsidiary liability of the contracting authority for the acts of the subcontractors or No obligation on the part of the responsible public entity to pay worker's compensation for work-related illness, injury or death to the subcontractors' employees.

2. Liability with respect to users and third parties

105. Defective construction or operation of an infrastructure facility may result in the death of or personal injury to employees of the concessionaire, users of the facility or other third parties or in damage to their property. The issues concerning damages to be paid to third parties in such cases are complex and may be governed not by rules of the law applicable to the project agreement governing contractual liability, but rather by applicable legal rules governing extra-contractual liability, which are often mandatory. Also, in some legal systems, there are special mandatory rules governing the extra-contractual liability of public authorities to which the contracting authority may be subject. Moreover, the project agreement cannot limit the liability of the concessionaire or the contracting authority to compensate third parties who are not parties to the project agreement. It is therefore advisable for the contracting authority and the concessionaire to provide for the internal allocation of risks between them as regards damages to be paid to third parties due to death, personal injury or damage to their property, to the extent that this allocation is not governed by mandatory rules. It is also advisable for the parties to provide for insurance against such risks (see paras. 119 and 120).

106. If a third party suffers personal injury or damage to its property as a result of the construction or operation of the facility and brings a claim against the contracting authority, the law may provide that the concessionaire alone should bear any responsibility in that regard and that contracting authority should not bear any liability as regards such third party claims, except where the damage was caused by the serious default or recklessness of the contracting authority. It may be useful to provide, in particular, that the mere approval of the design or specification of the facility by the contracting authority or its acceptance of the construction works or final authorization for the operation of the facility or its use by the public does not entail the assumption by the contracting authority of any liability for damage sustained by users of the facility or other third parties arising out of the construction or operation of the facility or the inadequacy of the approved design or specifications. Moreover, since provisions on the allocation of liability may not be enforceable against third parties under the applicable law, it may be advisable for the project agreement to provide that the contracting authority should be protected and indemnified in respect of compensation claims brought by third parties who sustain injury or damage to their property resulting from the construction or operation of the infrastructure facility.

107. The project agreement should also provide that the parties should inform each other of any claim or proceedings or anticipated claims or proceedings against them in respect of which the contracting authority is entitled to be indemnified and give reasonable assistance to one another in the defence of such claims or proceedings to the extent permitted by the law of the country where such proceedings are instituted.

3. Performance guarantees and insurance

108. The obligations of the concessionaire are usually complemented by the provision of some form of guarantee of performance in the event of default and insurance coverage against a number of risks. The law in some countries generally requires that adequate guarantees of performance be provided by the concessionaire and refer the matter to the project agreement for further details. In other countries, the law contains more detailed provisions, for instance requiring the offer of a certain type of guarantee up to a stated percentage of the basic investment.

(a) Types, functions and nature of performance guarantees

109. Performance guarantees are generally of two types. Under one type, the monetary performance guarantee, the guarantor undertakes only to pay the contracting authority funds up to a stated limit to satisfy the liabilities of the concessionaire in the event of the latter's failure to perform. Monetary performance guarantees may take the form of a contract bond, a stand-by letter of credit or an on-demand guarantee. Under the other type of guarantee, the performance bond, the guarantor chooses one of two options: *(a)* to rectify defective or finish incomplete construction itself; or *(b)* to obtain another contractor to rectify defective or finish incomplete construction and compensate the contracting authority for losses caused by the failure to perform. The value of such an undertaking is limited to a stated amount or a certain percentage of the contract value. Under a performance bond, the guarantor also frequently reserves the option to discharge its obligations solely by the payment of money to the contracting authority. Performance bonds are generally furnished by specialized guarantee institutions, such as bonding and insurance companies. A special type of performance bond is the maintenance bond, which protects the contracting authority against future failures that could arise during the start-up or maintenance period and serve as guarantee that any repair or maintenance work during the post-completion warranty period will be duly carried out by the concessionaire.

110. As regards their nature, performance guarantees may be generally divided into independent guarantees and accessory guarantees. A guarantee is said to be "independent" if the guarantor's obligation is independent from the concessionaire's obligations under the project agreement. Under an independent guarantee (often called a first-demand guarantee) or a stand-by letter of credit, the guarantor or issuer is obligated to make payment on demand by the beneficiary and the latter is entitled to recover under the instrument if it presents the document or documents stipulated in the terms of the guarantee or stand-by letter of credit. Such a document might be simply a statement by the beneficiary that the contractor has failed to perform. The guarantor or issuer is not entitled to withhold payment on the ground that there has in fact been no failure to perform under the main contract; however, under the law applicable to the instrument, payment may in very exceptional and narrowly defined circumstances be refused or restrained (for example, when the claim by the beneficiary is manifestly fraudulent). In contrast, a guarantee is accessory when the obligation of the guarantor involves more than the mere examination of a documentary demand for payment in that the guarantor may have to evaluate evidence of liability of the contractor for failure to perform under the works contract. The nature of the link may vary under different guarantees and may include the need to prove the contractor's liability in arbitral proceedings. By their nature, performance bonds have an accessory character to the underlying contract.

(b) Advantages and disadvantages of various types of performance guarantee

111. From the perspective of the contracting authority, monetary performance guarantees may be particularly useful in covering additional costs that may be incurred by the contracting authority as a result of delay or default by the concessionaire. Monetary performance guarantees may also serve as an instrument to put pressure on the concessionaire to complete construction in time and to perform its other obligations in accordance with the requirements of the project agreement. However, the amount of those guarantees is typically only a fraction of the economic value of the obligation guaranteed and is usually not sufficient to cover the cost of engaging a third party to perform instead of the concessionaire or its contractors.

112. From the perspective of the contracting authority, a first-demand guarantee has the advantage of assuring prompt recovery of funds under the guarantee, without evidence of failure to perform by the contractor or of the extent of the beneficiary's loss. Furthermore, guarantors furnishing monetary performance guarantees, in particular banks, prefer first-demand guarantees, as the conditions are clear as to when their liability to pay accrues, and the guarantors will thus not be involved in disputes between the contracting authority and the concessionaire as to whether or not there has been a failure to perform under the project agreement. Another advantage for a bank issuing a first-demand guarantee is the possibility of quick and efficient recovery of the sums paid under a first-demand guarantee by direct access to the concessionaire's assets.

113. A disadvantage to the contracting authority of a first-demand guarantee or a stand-by letter of credit is that those instruments may increase the overall project costs, since the concessionaire is usually obliged to obtain and set aside large counter-guarantees in favour of the institutions issuing the first-demand guarantee or the stand-by letter of credit. Also, a concessionaire that furnishes such a guarantee may wish to take out insurance against the risk of recovery by the contracting authority under the guarantee or the stand-by letter of credit when there has been in fact no failure to perform by the concessionaire and the cost of that insurance is included in the project cost. The concessionaire also may include in the project cost the potential costs of any action that it may need to institute against the contracting authority to obtain the repayment of the sum improperly claimed.

114. A disadvantage to the concessionaire of a first-demand guarantee or a stand-by letter of credit is that, if there is recovery by the contracting authority when there has been no failure to perform by the concessionaire, the latter may suffer immediate loss if the guarantor or the issuer of the letter of credit reimburses itself from the assets of the concessionaire after payment to the contracting authority. The concessionaire may also experience difficulties and delays in recovering from the contracting authority the sum improperly claimed.

115. The terms of an accessory guarantee usually require the beneficiary to prove the failure of the contractor to perform and the extent of the loss suffered by the beneficiary. Furthermore, the defences available to the debtor if it is sued for a failure to perform are also available to the guarantor. Accordingly, there is a risk that the contracting authority may face a protracted dispute when it makes a claim under the bond. In practice, this risk may be reduced, for instance, if the submission of claims under the terms of the bond is subject to a procedure such as that provided in article 7 *(j)*(i) of the Uniform Rules on Contract Bonds, drawn up by the International Chamber of Commerce.[2] Article 7 *(j)*(i) of the Uniform Rules provides that notwithstanding any dispute or difference between the principal and the beneficiary in relation to the performance of the contract or any contractual obligation, a default for the purposes of payment of a claim under a contract bond shall be deemed to be established upon issue of a certificate of default by a third party (who may without limitation be an independent architect or engineer or referee) if the bond so provides and the service of such a certificate or a certified copy thereof upon the guarantor. Where such a procedure is adopted, the contracting authority may be entitled to obtain payment under the contract bond even though its entitlement to that payment is disputed by the concessionaire.

116. As a reflection of the lesser risk borne by the guarantor, the monetary limit of liability of the guarantor may be considerably higher than under a first-demand guarantee, thus covering a larger percentage of work under the project agreement. A performance bond may also be advantageous if the contracting authority cannot conveniently arrange for the rectification of faults or completion of construction itself and requires the assistance of a third party to arrange for rectification or completion. Where, however, the construction involves the use of a technology known only to the concessionaire, rectification or completion by a third person may not be feasible and a performance bond may not have the last-mentioned advantage over a monetary performance guarantee. For the concessionaire, accessory guarantees have the advantage of preserving the concessionaire's borrowing power, since accessory guarantees, unlike first-demand guarantees and stand-by letters of credit, do not affect the concessionaire's line of credit with the lenders.

117. It flows from the above considerations that different types of guarantees may be useful in connection with the various obligations assumed by the concessionaire. While it is useful to require the concessionaire to provide adequate guarantees of performance, it is advisable to leave it to the parties to determine the extent to which guarantees are needed and which guarantees should be provided in respect of the various obligations assumed by the concessionaire, rather than requiring in the law only one form of guarantee to the exclusion of others. It should be noted that the project company itself will require a series of performance guarantees to be provided by its contractors (see para. 6) and that additional guarantees to the benefit of the contracting authority usually increase the overall cost and complexity of a project. In some countries, practical guidance provided to domestic contracting authorities advises them to consider carefully whether and under what circumstances such guarantees are required, which specific risks or loss they should cover and which type of guarantee is best suited in each case. The ability of the project company to raise finance for the project may be jeopardized by bond requirements set at an excessive level.

118. One particular problem of privately financed infrastructure projects concerns the duration of the guarantee. The contracting authority may have an interest in obtaining guarantees of performance that remain valid during the entire life of the project, covering both the construction and the operational phase. However, given the long duration of infrastructure projects and the difficulty in evaluating the various risks that may arise, it may be problematic for the guarantor to issue a performance bond for the whole duration of the project or to procure reinsurance for its obligations under the performance bond. In practice, this problem is compounded by stipulations that the non-renewal of a performance bond constitutes a reason for a call on the bond, so that merely allowing the project company to provide bonds for shorter periods may not be a satisfactory solution. One possible solution, used in some countries, is to require separate bonds for the construction and the operation phase, thus allowing for better assessment of risks and reinsurance prospects. Such a system may be enhanced by defining in precise terms the risk to be covered during the operation period, thus allowing for a better assessment of risks and a reduction of the total amount of the bond. Another possibility to be considered by the contracting authority may be to require the provision of performance guarantees during specific crucial periods, rather than for the entire duration of the project. For instance, a bond might be required during the construction phase and last for an appropriate period beyond completion, so as to cover possible latent defects. Such a bond might then be replaced by a performance bond for a certain number of years of operation, as appropriate in order for the project company to demonstrate its capability to operate the facility in accordance with the required standards. If the project company's performance proves to be satisfactory, the bond requirement might be waived for the remainder of the operation phase, up to a certain period before the end of the concession term, when the project company might be required to place another bond to guarantee its obligations in connection with the handing over of assets and other measures for the orderly wind-up of the project, as appropriate (see chap. V, "Duration, extension and termination of the project agreement", ___).

[2]The text of the Uniform Rules on Contract Bonds is reproduced in document A/CN.9/459/Add.1.

(c) Insurance arrangements

119. Insurance arrangements made in connection with privately financed infrastructure projects typically vary according to the phase to which they apply, with certain types of insurance only being purchased during a particular project phase. Some forms of insurance, such as business interruption insurance, may be purchased by the concessionaire in its own interest, while other forms of insurance may be a requirement under the laws of the host country. Forms of insurance often required by law include insurance coverage against damage to the facility, third-party liability insurance, workers' compensation insurance and pollution and environmental damage insurance.

120. Mandatory insurance policies under the laws of the host country often need to be obtained from a local insurance company or from another institution admitted to operate in the country, which in some cases may pose a number of practical difficulties. In some countries, the type of coverage usually offered may be more limited than the standard coverage available on the international market, in which case the concessionaire may remain exposed to a number of perils that may exceed its self-insurance capacity. That risk is particularly serious in connection with environmental damage insurance. Further difficulties may arise in some countries as a result of limitations on the ability of local insurers to reinsure the risks on the international insurance and reinsurance markets. As a consequence, the project company may often need to procure additional insurance outside the country, thus adding to the overall cost of financing the project.

4. Changes in conditions

121. Privately financed infrastructure projects normally last for a long period of time, during which many circumstances relevant to the project may change. The impact of many changes may be automatically covered in the project agreement, either through financial arrangements such as a tariff structure that includes an indexation clause (see paras. 39-46), or by the assumption by either party, expressly or by exclusion, of certain risks (for example, if the price of fuel or electricity supply is not taken into account in the indexation mechanisms, then the risk of higher than expected prices is absorbed by the concessionaire). However, there are changes that might not lend themselves easily to inclusion in an automatic adjustment mechanism or that the parties may prefer to exclude from such a mechanism. From a legislative perspective, two particular categories deserve special attention: legislative or regulatory changes and unexpected changes in economic conditions.

(a) Legislative and regulatory changes

122. Given the long duration of privately financed infrastructure projects, the concessionaire may face additional costs in meeting its obligations under the project agreement because of future, unforeseen changes in legislation applying to its activities. In extreme cases, legislation could even make it financially or physically impossible for the concessionaire to carry on with the project. For the purpose of considering the appropriate solution for dealing with legislative changes, it may be useful to distinguish between legislative changes having a particular incidence on privately financed infrastructure projects or on one specific project, on the one hand, and general legislative changes affecting other economic activities also, and not only infrastructure operation, on the other hand.

123. All business organizations, in the private and public sectors alike, are subject to changes in law and generally have to deal with the consequences that such changes may have for business, including the impact of changes on the price of or demand for their products. Possible examples might include changes in the structure of capital allowances that apply to entire classes of assets, whether owned by the public or private sector and whether related to infrastructure projects or not; regulations that affect the health and safety of construction workers on all construction projects, not just infrastructure projects; and changes in the regulations on the disposal of hazardous substances. General changes in law may be regarded as an ordinary business risk rather than a risk specific to the concessionaire's activities and it may be difficult for the Government to undertake to protect infrastructure operators from the economic and financial consequences of changes in legislation that affect other business organizations equally. Thus, there may not be a prima facie reason why the concessionaire should not bear the consequences of general legislative risks, including the risk of costs arising from changes in law applying to the whole business sector.

124. Nevertheless, it is important to take into account possible limitations in the concessionaire's capacity to respond to or absorb cost increases that result from general legislative changes. Infrastructure operators are often subject to service standards and tariff control mechanisms that make it difficult for them to respond to changes in the law in the same manner as other private companies (by increasing tariffs or by reducing services, for example). Where tariff control mechanisms are provided in the project agreement, the concessionaire will seek to obtain assurances from the contracting authority and the regulatory agency, as appropriate, that it will be allowed to recover the additional costs entailed by changes in legislation by means of tariff increases. Where such an assurance cannot be given, it is advisable to empower the contracting authority to negotiate with the concessionaire the compensation to which the concessionaire may be entitled in the event that tariff control measures do not allow for full recovery of the additional costs generated by general legislative changes.

125. A different situation arises when the concessionaire faces increased costs as a result of specific legislative changes that target the particular project, a class of similar projects or privately financed infrastructure projects in general. Such changes cannot be regarded as an ordinary business risk and may significantly alter the economic and financial assumptions based on which the project agreement was negotiated. Thus, the contracting authority often agrees to bear the additional cost resulting from specific legisla-

tion that targets the particular project, a class of similar projects or privately financed infrastructure projects in general. For example, in highways projects, legislation aimed at a specified road project or road operating company, or at that class of privately operated road projects, might result in a tariff adjustment under the relevant provisions in the project agreement.

(b) Changes in economic conditions

126. Some legal systems have rules that allow a revision of the terms of the project agreement following changes in the economic or financial conditions that, without preventing the performance of a party's contractual obligations, render the performance of those obligations substantially more onerous than originally foreseen at the time they were entered into. In some legal systems, the possibility of a revision of the terms of the agreement is generally implied in all Government contracts or is expressly provided for in the relevant legislation.

127. The financial and economic considerations for the concessionaire's investment are negotiated in the light of assumptions based on the circumstances prevailing at the time of the negotiations and the reasonable expectations of the parties as to how those circumstances will evolve during the life of the project. To a certain extent, projections of economic and financial parameters and sometimes even a certain margin of risk, will normally be included in the formulation of the financial proposals by the bidders (see chap. III, "Selection of the concessionaire", para. 68). However, certain events may occur that the parties could not reasonably have anticipated when the project agreement was negotiated and that, had they been taken into account, would have resulted in a different risk allocation or consideration for the concessionaire's investment. Given the long duration of infrastructure projects, it is important to devise mechanisms to deal with the financial and economic impact of such events. Revision rules have been applied in a number of countries and have been found useful to help parties find equitable solutions for ensuring the continued economic and financial viability of infrastructure projects, thus averting a disruptive failure of performance by the concessionaire. However, revision rules may also have some disadvantages, in particular from the perspective of the Government.

128. As with general legislative changes, changes in economic conditions are risks to which most business organizations are exposed without having recourse to a general guarantee of the Government that would protect them against the economic and financial effects of those changes. An unqualified obligation of the contracting authority to compensate the concessionaire for changes of economic conditions may result in a reversion to the public sector of a substantial portion of the commercial risks originally allocated to the concessionaire and represent an open-ended financial liability. Furthermore, it should be noted that the proposed tariff level and the essential elements of risk allocation are important, if not decisive, factors in the selection of the concessionaire. An excessively generous recourse to renegotiation of the project may lead to unrealistically low proposals being submitted during the selection procedure in the expectation of tariff increases once the project has been awarded. Thus, the contracting authority may have an interest in establishing reasonable limits for statutory or contractual provisions authorizing revisions of the project agreement following changes in economic conditions.

129. It may be desirable to provide in the project agreement that a change in circumstances that justifies a revision of the project agreement must have been beyond the control of the concessionaire and of such a nature that the concessionaire could not reasonably be expected to have taken it into account at the time the project agreement was negotiated or to have avoided or overcome its consequences. For example, a tollroad operator holding an exclusive concession might not be expected to take into account and assume the risk of traffic shortfalls brought about by the subsequent opening of an alternative toll-free road by an entity other than the contracting authority. However, the concessionaire would normally be expected to take into account the possibility of reasonable labour cost increases over the life of the project. Thus, under normal circumstances, the fact that wages turned out to be higher than expected would not be sufficient reason for revising the project agreement.

130. It may also be desirable to provide in the project agreement that a request for revision of the project agreement requires that the alleged changes of economic and financial conditions amount to a certain minimum value in proportion to the total project cost or the concessionaire's revenue. Such a rule might be useful in order to avoid cumbersome adjustment negotiations for small changes until the changes have accumulated to comprise a significant figure. In some countries, there are rules that establish a ceiling for the cumulative amount of periodic revisions of the project agreement. The purpose of such rules is to avoid the misuse of the change mechanism as a means for achieving an overall financial balance that bears no relation to the one contemplated in the original project agreement. From the perspective of the concessionaire and the lenders, however, such limitations may represent exposure to considerable risk in the event, for instance, of dramatic cost increases resulting from an extraordinarily radical change of circumstances. Therefore, both the desirability of introducing a ceiling and the appropriate amount of such ceiling need to be carefully considered.

5. Exemption provisions

131. During the life of an infrastructure project, events may occur that impede the performance by a party of its contractual obligations. The events causing such an impediment are typically outside either party's control and may be of a physical nature, such as a natural disaster, or may be the result of human action, such as war, riots or terrorist attacks. Many legal systems generally recognize that a party that fails to perform a contractual obligation because of the occurrence of certain types of events may be exempted from the consequences of any such failure to perform.

(a) Definition of exempting impediments

132. Exempting impediments typically include occurrences beyond the control of a party that cause the party to be unable to perform its obligation and that the party has been unable to overcome by the exercise of due diligence. Common examples include the following: natural disasters (such as cyclones, floods, droughts, earthquakes, storms, fires or lightning); war (whether declared or not) or other military activity, including riots and civil disturbance; failure or sabotage of facilities, acts of terrorism, criminal damage or the threat of such acts; radioactive or chemical contamination or ionizing radiation; effects of the natural elements, including geological conditions that cannot be foreseen and resisted; and employees' strikes of exceptional importance.

133. Some laws make only a general reference to exempting impediments, whereas other laws contain extensive lists of circumstances that excuse the parties from performance under the project agreement. The latter technique may serve the purpose of ensuring a consistent treatment of the matter for all projects developed under the relevant legislation, thus avoiding situations where one concessionaire obtains a more favourable allocation of risks than that provided in other project agreements. However, it is important to consider the possible disadvantages of setting forth in statutory or regulatory provisions a list of events that are to be considered exempting impediments for all cases. There is a risk that the list might be incomplete, leaving out important impediments. Furthermore, certain natural disasters, such as storms, cyclones and floods, may be normal conditions at a particular time of the year at the project site. As such, those natural disasters may represent risks that any public service provider acting in the region would be expected to assume.

134. Another aspect that may need to be carefully considered is whether and to what extent certain acts of public authorities other than the contracting authority may constitute exempting impediments. The concessionaire may be required to secure a licence or other official approval for the performance of certain of its obligations. The project agreement might thus provide that, if the licence or approval is refused, or if it is granted but later withdrawn because of the concessionaire's own failure to meet the relevant criteria for the issuance of the licence or approval, the concessionaire cannot rely on the refusal as an exempting impediment. However, if the licence or approval is refused or withdrawn for extraneous or improper motives, it would be equitable to provide that the concessionaire may rely on the refusal as an exempting impediment. A further possibility of impediment might be an interruption of the project brought about by a public authority or organ of government other than the contracting authority, for instance, because of changes in governmental plans and policies that require the interruption or major revision of the project that substantially affect the original design. In such situations, it may be important to consider the institutional relationship between the contracting authority and the public authority that brings about the impediment as well as their degree of independence from one another. An event classified as an exempting impediment may in some cases amount to an outright breach of the project agreement by the contracting authority, depending on whether the contracting authority could reasonably control or influence the acts of the other public authority.

(b) Consequences for the parties

135. During the construction phase, the occurrence of exempting impediments usually justifies an extension of the time allowed for the completion of the facility. In that connection, it is important to consider the implications of any such extension for the overall duration of the project, in particular where the construction phase is taken into account for calculating the total concession period. Delays in the completion of the facility reduce the operational period and may adversely affect the global revenue estimates of the concessionaire and the lenders. It may therefore be advisable to consider under what circumstances it may be justified to extend the concession period so as to take into account possible extensions that occur during the construction phase. Lastly, it is advisable to provide that, if the event in question is of a permanent nature, the parties may have the option to terminate the project agreement (see also chap. V, "Duration, extension and termination of the project agreement", ___).

136. Another important question is whether the concessionaire will be entitled to compensation for loss of revenue or property damage that results from the occurrence of exempting impediments. The answer to that question is given by the risk allocation provided in the project agreement. Except for cases in which the Government provides some form of direct support, privately financed infrastructure projects are typically undertaken at the concessionaire's own risk, including the risk of losses that may result from natural disasters and other exempting impediments, against which the concessionaire is usually required to procure adequate insurance coverage. Thus, some laws expressly exclude any form of compensation to the concessionaire in the event of loss or damage that results from the occurrence of exempting impediments. It does not necessarily follow, however, that an event qualified as an exempting impediment may not, at the same time, justify a revision of the terms of the project agreement so as to restore its economic and financial balance (see also paras. 126-130).

137. However, a different type of risk allocation is sometimes contemplated for projects involving the construction of facilities that are permanently owned by the contracting authority or facilities that are required to be transferred to the contracting authority at the end of the project period. In some countries, the contracting authority is authorized to make arrangements for assisting the concessionaire to repair or rebuild infrastructure facilities damaged by natural disasters or similar occurrences defined in the project agreement, provided that the possibility of such assistance was contemplated in the request for proposals. Sometimes the contracting authority is authorized to agree to pay compensation to the concessionaire in case of an interruption of the work for more than a certain number of days up to a maximum time limit, if the interruption is caused by an event for which the concessionaire is not responsible.

138. Should the concessionaire become unable to perform because of any such impediment and should the parties fail to achieve an acceptable revision of the contract, some national laws authorize the concessionaire to terminate the project agreement, without prejudice to the compensation that might be due under the circumstances (see chap. V, "Duration, extension and termination of the project agreement", ___).

139. Statutory and contractual provisions on exempting impediments also need to be considered in the light of other rules governing the provision of the service concerned. The law in some legal systems requires public service providers to make every effort to continue providing the service despite the occurrence of circumstances defined as contractual impediments (see paras. 86 and 87). In those cases, it is advisable to consider the extent to which such an obligation may reasonably be imposed on the concessionaire and what compensation may be due for the additional costs and hardship faced by it.

6. Events of default and remedies

140. Generally, there is a wide range of remedies that the parties may agree on to deal with the consequences of default, culminating with termination. The following paragraphs discuss general considerations on events of default and remedies by either party (see paras. 141 and 142). They consider the legislative implication of certain types of remedies intended to rectify the causes of default and preserve the continuity of the project, in particular the intervention of the contracting authority (see paras. 143-146) or the substitution of the concessionaire (see paras. 147-150). The ultimate remedy of terminating the project agreement and the consequences that may result from termination are discussed elsewhere in the *Guide* (see chap. V, "Duration, extension and termination of the project agreement", ___).

(a) General considerations on failures to perform and remedies

141. The remedies for default by the concessionaire typically include those which are customary in construction or long-term service contracts such as forfeiture of guarantees, contractual penalties and liquidated damages.[3] In most cases, such remedies are typically contractual in nature and do not give rise to significant legislative considerations. Nevertheless, it is important to establish adequate procedures for ascertaining failures and giving opportunity for rectifying such failures. In some countries, the imposition of contractual penalties requires findings of official inspections and other procedural steps, including review by senior officials of the contracting authority prior to the imposition of more serious sanctions. Those procedures may be complemented by provisions distinguishing between defects that can be rectified and those which cannot, and setting down the corresponding procedures and remedies. It is usually advisable to require that the concessionaire be given notice requiring it to remedy the breach within a sufficient period. It may also be advisable to contemplate the payment of penalties or liquidated damages by the concessionaire in the event of non-performance of essential obligations and to clarify that no penalties apply in case of breach of secondary or ancillary obligations and for which other remedies may be obtained under national law. Furthermore, a performance monitoring system that provides for penalties or liquidated damages may be complemented by a scheme of bonuses payable to the concessionaire for improving over agreed terms.

142. While the contracting authority may protect itself against the consequences of default by the concessionaire through a variety of judicially enforceable contractual arrangements, the remedies available to the concessionaire may be subject to a number of limitations under the applicable law. Important limitations may derive from rules of law that recognize the immunity of public authorities from judicial suit and enforcement measures. Depending on the legal nature of the contracting authority or of other public authorities that assume obligations vis-à-vis the concessionaire, the latter may be deprived of the possibility of enforcing measures of execution to secure the fulfilment of obligations entered into by those public entities (see also chap. VI, "Settlement of disputes", ___). This situation makes it the more important to provide mechanisms to protect the concessionaire against the consequences of default by the contracting authority, for example by means of governmental guarantees covering specific events of default or guarantees provided by third parties, such as multilateral lending institutions (see also chap. II, "Project risks and government support", paras. 61-71).

(b) Step-in rights for the contracting authority

143. Some national laws expressly authorize the contracting authority to take over temporarily the operation of the facility, normally in case of failure to perform by the concessionaire, in particular where the contracting authority has a statutory duty to ensure the effective delivery at all times of the service concerned. In some legal systems, such a prerogative is considered to be inherent in most government contracts and may be presumed to exist even without being expressly mentioned in legislation or in the project agreement.

144. It should be noted that the contracting authority's right to intervene, its "step-in right", is an extreme measure. Private investors may fear that the contracting authority may use it, or threaten to use it, in order to impose its own desires about the way in which the service is provided, or even to get control of the project assets. It is therefore advisable to define as clearly as possible the circumstances in which step-in rights can be exercised. It is important to

[3]For a discussion of remedies used in construction contracts for complex industrial works, see the *UNCITRAL Legal Guide on Drawing Up Contracts for the Construction of Industrial Works*, chap. XVIII, "Delay, defects and other failures to perform".

limit the contracting authority's right to intervene to cases of serious failure of services and not merely in case of dissatisfaction with the concessionaire's performance. It may be useful to clarify in the law that the contracting authority's intervention in the project is temporary and is intended to remedy a specific, urgent problem that the concessionaire has failed to remedy. The concessionaire should resume responsibility for service delivery once the emergency situation has been remedied.

145. The contracting authority's ability to step in may be limited in that it may be difficult immediately to identify and engage a subcontractor to carry out the actions that the contracting authority is stepping in to do. Furthermore, frequent interventions carry a risk of the reversion to the contracting authority of risks that have been transferred in the project agreement to the concessionaire. The concessionaire should not rely on the contracting authority to step in to deal with a particular risk instead of handling it itself, as required by the project agreement.

146. It is advisable to clarify in the project agreement which party bears the cost of an intervention by the contracting authority. In most cases, the concessionaire should bear the costs incurred by the contracting authority when the intervention is caused by a performance failure attributable to the concessionaire's own fault. In some cases, to prevent disputes about liability and about the appropriate level of costs, the agreement may authorize the contracting authority to take steps to remedy the problem itself and then charge the actual cost of having done so (including its own administrative costs) to the concessionaire. However, when such intervention takes place following the occurrence of an exempting impediment (see paras. 131-139), the parties might agree on a different solution, depending on how that particular risk has been allocated in the project agreement.

(c) Step-in rights for the lenders and compulsory transfer of the concession

147. During the life of the project situations may arise where, because of default by the concessionaire or the occurrence of an extraordinary event outside the concessionaire's control, it may nevertheless be in the interest of the parties to avert termination of the project (see chap. V, "Duration, extension and termination of the project agreement", ___) by allowing the project to continue under the responsibility of a different concessionaire. The lenders, whose main security is the revenue generated by the project, are particularly concerned about the risk of interruption or termination of the project prior to repayment of the loans. In the event of default of or an impediment affecting the concessionaire, the lenders will be interested in ensuring that the work will not be left incomplete and that the concession will be operated profitably. The contracting authority, too, may be interested in allowing the project to be carried out by a new concessionaire, as an alternative for having to take it over and continue it under its own responsibility.

148. Clauses allowing the lenders to select, with the consent of the contracting authority, a new concessionaire to perform under the existing project agreement have been included in a number of recent agreements for large infrastructure projects. Such clauses are typically supplemented by a direct agreement between the contracting authority and the lenders who are providing finance to the concessionaire. The main purpose of such a direct agreement is to allow the lenders to avert termination by the contracting authority when the concessionaire is in default by substituting a concessionaire that will continue to perform under the project agreement in place of the concessionaire in default. Unlike the contracting authority's right to intervene, which relates to a specific, temporary and urgent failure of the service, lenders' step-in rights are for cases where the concessionaire's failure to provide the service is recurrent or can reasonably be regarded as irremediable. In the experience of countries that have recently made use of such direct agreements, it has been found that the ability to head off termination and provide an alternative concessionaire gives the lenders additional security against default by the concessionaire. At the same time, it provides the contracting authority an opportunity to avoid the disruption entailed by terminating the project agreement, thus maintaining continuity of service.

149. However, in some countries, the implementation of such clauses may face difficulties in the absence of legislative authorization. The concessionaire's inability to carry out its obligations is usually a ground for the contracting authority to take over the operation of the facility or terminate the agreement (see chap. V, "Duration, extension and termination of the project agreement", ___). For the purpose of selecting a new concessionaire to succeed the defaulting one, the contracting authority often needs to follow the same procedures that applied to the selection of the original concessionaire and it might not be possible for the contracting authority to agree in consultation with the lenders on engaging a new concessionaire that has not been selected pursuant to those procedures. On the other hand, even where the contracting authority is authorized to negotiate with a new concessionaire under emergency conditions, a new project agreement might need to be entered into with the new concessionaire and there may be limitations to its ability to assume the obligations of its predecessor.

150. Therefore, it may be useful to acknowledge in the law the contracting authority's right to enter into agreements with the lenders providing for the appointment, with the consent of the contracting authority, of a new concessionaire to perform under the existing project agreement, when the concessionaire seriously fails to deliver the service required under the project agreement or following the occurrence of other specified events that could justify the termination of the project agreement. The agreement between the contracting authority and the lenders should, inter alia, specify the following: the circumstances in which the lenders are permitted to substitute a new concessionaire; the procedures for the substitution of the concessionaire; the grounds for refusal by the contracting authority of a proposed substitute; and the obligations of the lenders to maintain the service at the same standards and on the same terms as required by the project agreement.

A/CN.9/471/Add.6

Chapter V. Duration, extension and termination of the project agreement

CONTENTS

LEGISLATIVE RECOMMENDATIONS

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles should be implemented by the law:

Duration and extension of the project agreement (see paras. 2-8)

Recommendation 60. The duration of the concession should be specified in the project agreement.

Recommendation 61. The term of the concession should not be extended, except in those circumstances specified in the law, such as:

(a) Completion delay or interruption of operation due to the occurrence of circumstances beyond either party's reasonable control;

(b) Project suspension brought about by acts of the contracting authority or other public authorities;

(c) To allow the concessionaire to recover additional costs arising from requirements of the contracting authority not originally foreseen in the project agreement that the concessionaire would not be able to recover during the normal term of the project agreement.

Termination of the project agreement (see paras. 9-35)

Termination by the contracting authority

Recommendation 62. The contracting authority should have the right to terminate the project agreement:

(a) In the event that it can no longer be reasonably expected that the concessionaire will be able or willing to perform its obligations, owing to insolvency, serious breach or otherwise;

(b) For reasons of public interest, subject to payment of compensation to the concessionaire.

Termination by the concessionaire

Recommendation 63. The concessionaire should have the right to terminate the project agreement under exceptional circumstances specified in the law, such as:

(a) In the event of serious breach by the contracting authority or other public authority as regards the fulfilment of their obligations under the project agreement;

(b) In the event that the concessionaire's performance is rendered substantially more onerous as a result of variation orders or other acts of the contracting authority, unforeseen changes in conditions or acts of other public authorities and that the parties have failed to agree on an appropriate revision of the project agreement.

Termination by either party

Recommendation 64. Either party should have the right to terminate the project agreement in the event that the performance of its obligations is rendered impossible by the occurrence of circumstances beyond either party's reasonable control. The parties should also have the right to terminate the project agreement by mutual consent.

Consequences of expiry or termination of the project agreement (see paras. 36-62)

Transfer of assets to the contracting authority or to a new concessionaire

Recommendation 65. The project agreement should lay down the criteria for establishing, as appropriate, the compensation to which the concessionaire may be entitled in respect of assets transferred to the contracting authority or to a new concessionaire or purchased by the contracting authority upon expiry or termination of the project agreement.

Financial arrangements upon termination

Recommendation 66. The project agreement should stipulate how compensation due to either party in the event of termination of the project agreement is to be calculated, providing, where appropriate, for compensation for the fair value of works performed under the project agreement and for losses, including lost profits.

Wind-up and transfer measures

Recommendation 67. The project agreement should set out, as appropriate, the rights and obligations of the parties with respect to:

(a) The transfer of technology required for the operation of the facility;

(b) The training of the contracting authority's personnel or of a successor concessionaire in the operation and maintenance of the facility;

(c) The provision, by the concessionaire, of operation and maintenance services and the supply of spare parts, if required, for a reasonable period after the transfer of the facility to the contracting authority or to a successor concessionaire.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL REMARKS

1. Most privately financed infrastructure projects are undertaken for a certain period, at the end of which the concessionaire transfers to the contracting authority the responsibility for the operation of the infrastructure facility. Section B deals with elements to be taken into account when establishing the concession period. Section C deals with the question of whether and under what circumstances the project agreement may be extended. Section D considers circumstances that may authorize the termination of the project agreement prior to the expiry of its term. Lastly, section E deals with the consequences of the expiry or termination of the project agreement, including the transfer of project assets and the compensation to which either party may be entitled upon termination, and the wind-up of the project.

B. DURATION OF THE PROJECT AGREEMENT

2. The laws of some countries contain provisions that limit the duration of infrastructure concessions to a certain number of years. Some laws establish a general limit for most infrastructure projects and special limits for projects in particular infrastructure sectors. In some countries there are maximum duration periods only for certain infrastructure sectors.

3. The desirable duration of a project agreement may depend on a number of factors, such as the operational life of the facility; the period during which the service is likely to be required; the expected useful life of the assets associated with the project; how changeable the technology required for the project is; and the time needed for the concessionaire to repay its debts and amortize the initial investment. The notion of economic "amortization", in this context, refers to the gradual charging of the investment made against project revenue on the assumption that the facility would have no residual value at the end of the project term. Given the difficulty of establishing a single statutory limit for the duration of infrastructure projects, it is advisable to provide the contracting authority with some flexibility to negotiate, in each case, a term that is appropriate to the project in question.

4. In some legal systems, this result is achieved by provisions that require that all concessions should be subject to a maximum duration period, without specifying any number of years. Sometimes the law only indicates which elements are to be taken into account for determining the duration of the concession, which may include the nature and amount of investment required to be made by the concessionaire and the normal amortization period for the particular facilities and installations concerned. Some project- or sector-specific laws provide for a combined system requiring that the project agreement should provide for the expiry of the concession at the end of a certain period or once the debts of the concessionaire have been fully repaid and a certain revenue, production or usage level has been achieved, whichever is the earliest.

5. However, where it is found necessary to adopt statutory limits, the maximum period should be sufficiently long to allow the concessionaire to repay its debts fully and to achieve a reasonable profit. Furthermore, it may be useful to authorize the contracting authority, in exceptional cases, to agree to longer concession periods, taking into account the amount of the investment and the required recovering period, and subject to special approval procedures.

C. EXTENSION OF THE PROJECT AGREEMENT

6. In the contracting practice of some countries, the contracting authority and the concessionaire may agree on one or more extensions of the concession period. More often, however, domestic laws only authorize an extension of the project agreement under exceptional circumstances. In this case, upon expiry of the project agreement the contracting authority is normally required to select a new concessionaire, normally using the same procedures applied to select

the concessionaire whose concession has expired (for a discussion of selection procedures, see chap. III, "Selection of the concessionaire").

7. A number of countries have found it useful to require that exclusive concessions be rebid from time to time rather than freely extended by the parties. Periodic rebidding may give the concessionaire strong performance incentives. The period between the initial award and the first (and subsequent) rebidding should take into account the level of investment and other risks faced by the concessionaire. For example, for solid waste collection concessions not requiring heavy fixed investments, the periodicity may be relatively short (three to five years, for example), whereas longer periods may be desirable for power or water distribution concessions. In most countries, rebidding coincides with the end of the project term, but in others a concession may be granted for a long period (say 99 years), with periodic rebidding (for instance, every 10 or 15 years). In the latter mechanism, which has been adopted in a few countries, the first rebidding occurs before the concessionaire has fully recouped its investments. As an incentive to the incumbent operator, some laws provide that the concessionaire may be given preference over other bidders in the award of subsequent concessions for the same activity. However, the concessionaire may have rights to compensation if it does not win the next bidding round, in which case all or part of the bidding proceeds may revert to the incumbent concessionaire. Requiring that the winning bidder should pay off the incumbent concessionaire for any property rights and for the investment not yet recovered reduces the longer-term risk faced by investors and lenders and provides them a valuable exit option (see paras. 39 and 40).

8. Notwithstanding the above, it is advisable not to exclude entirely the option to negotiate an extension of the concession period under certain specified circumstances. The duration of an infrastructure project is one of the main factors taken into account in the negotiation of financial arrangements and has a direct impact on the price of the services provided by the concessionaire. The parties may find that an extension of the project agreement (as a substitute for or combined with other compensation mechanisms) may be a useful option to deal with unexpected impediments or other changes of circumstances arising during the life of the project. Such circumstances may include any of the following: extension to compensate for project suspension or loss of profit due to the occurrence of impeding events (see chap. IV, "Construction and operation of infrastructure", paras. 131-139); extension to compensate for project suspension brought about by the contracting authority or other public authorities (see chap. IV, "Construction and operation of infrastructure", paras. 140 and 141); or extension to allow the concessionaire to recover the cost of additional work required to be done on the facility and which the concessionaire would not be able to recover during the normal term of the project agreement without unreasonable tariff increases (see chap. IV, "Construction and operation of infrastructure", paras. 73-76). For purposes of transparency and accountability, in some countries the extension of the concession period is subject to a global cumulative limit or requires the approval of a specially designated public authority.

D. TERMINATION

9. The grounds for termination of the project agreement before the expiry of its term and the consequences of any such termination are often dealt with in domestic legislation. Usually the law authorizes the parties to terminate the project agreement following the occurrence of certain types of events. The main interest of all parties involved in a privately financed infrastructure project is to ensure the satisfactory completion of the facility and the continuous and orderly provision of the relevant public service. Given the serious consequences of termination, as provision of the service may be interrupted or even discontinued, termination should under most circumstances be regarded as a measure of last resort. The conditions for the exercise of this right by either party should be carefully considered. While they may not need to be identical, it is generally desirable to achieve a broadly equitable balance of rights and conditions regarding termination for both parties.

10. In addition to identifying the circumstances or types of events that may give rise to a termination right, it is advisable for the parties to consider appropriate procedures to establish whether there are valid grounds for terminating the project agreement. Of particular importance is the question whether the project agreement may be unilaterally terminated or whether termination requires a decision by a judicial or other dispute settlement body.

11. The concessionaire is usually not allowed to terminate the project agreement without cause and in some legal systems termination by the concessionaire even in the event of breach by the contracting authority requires a final judicial decision. However, in some countries, pursuant to rules applicable to contracts with government entities, such a right may be exercised by public authorities, subject to payment of compensation to the concessionaire. In other countries, however, an exception is made in the case of public service concessions, whose contractual nature is found to be incompatible with unilateral termination rights. Lastly, some legal systems do not recognize unilateral termination rights for public authorities. However, project promoters and lenders would be concerned about the risk of premature or unjustified termination by the contracting authority, even where a decision to terminate might be subject to review through the dispute settlement mechanism. It should also be noted that giving the contracting authority the unilateral right to terminate the project agreement would not be an adequate substitute for well-designed contractual mechanisms of performance monitoring or for appropriate guarantees of performance (see chap. IV, "Construction and operation of infrastructure", paras. 80-97 and 108-120).

12. Provisions concerning termination should therefore be brought into line with the remedies for breach provided in the project agreement. In particular, it is useful to distinguish the conditions for termination from those for step-in by the contracting authority (see chap. IV, "Construction and operation of infrastructure", paras. 143-146). It is also important to consider the contracting authority's termination rights against the background of the financing agreements negotiated by the concessionaire with its lenders. In

most cases, events that may lead to the termination of the project agreement would also constitute events of default under the loan agreements, with the consequence that the entire outstanding debt of the concessionaire may fall due immediately. It would thus be useful to attempt to avoid the risk of termination by allowing the lenders to propose another concessionaire when termination of the project agreement with the original concessionaire appears imminent (see chap. IV, "Construction and operation of infrastructure", paras. 108-120).

13. In the light of the above, it is generally advisable to provide that the termination of the project agreement in most cases require a final finding by the dispute settlement body provided in the agreement. Such a requirement would reduce concerns about premature or unjustified recourse to termination. At the same time, it would not preclude the taking of appropriate measures to ensure the continuity of the service, pending the final decision of the dispute settlement body, as long as contractual remedies for breach, such as step-in rights for the contracting authority and the lenders, are provided in the project agreement. In countries where such a requirement would not be consistent with general principles of administrative law applicable to government contracts, it might be important to ensure, at least, that the contracting authority's right to terminate the project agreement should be without prejudice to the concessionaire's right to seek subsequent judicial review of the contracting authority's decision to terminate.

1. Termination by the contracting authority

14. The contracting authority's termination rights usually relate to three categories of circumstances: serious breach by the concessionaire; insolvency or bankruptcy of the concessionaire; and termination for reasons of public interest.

(a) Serious breach by the concessionaire

15. The contracting authority has the duty to ensure that public services are provided in accordance with applicable laws, regulations and contractual provisions. Thus, a number of domestic laws expressly recognize the contracting authority's right to terminate the project agreement in the event of breach by the concessionaire. Because of the disruptive effects of termination and in the interest of preserving the continuity of the service, it is not advisable to regard termination as a sanction for each and any instance of unsatisfactory performance by the concessionaire. On the contrary, it is generally advisable to resort to the extreme remedy of termination only in cases of "particularly serious" or "repeated" failures to perform, especially when it can no longer be reasonably expected that the concessionaire will be able or willing to perform under the project agreement. Many legal systems use specific technical expressions to refer to situations where the degree of breach by one contracting party is of such a nature that the other party may terminate their contractual relation before the expiry of its term (for example, "fundamental breach", "material breach" or similar expressions). Such situations are referred to in the *Guide* as "serious breach".

16. Circumscribing the possibility of termination to cases of serious breach may give assurance to lenders and project promoters that they will be protected against unreasonable or premature decisions by the contracting authority. The law may generally provide for the contracting authority's right to terminate the project agreement upon serious breach by the concessionaire and leave it for the project agreement to define further the notion of serious breach and, as appropriate, provide illustrative examples of it. From a practical point of view, it is not advisable to attempt, by statute or in the project agreement, to provide a list of the events that justify termination.

17. As a general rule, it is desirable that the concessionaire be granted an additional period of time to fulfil its obligations and to avert the consequences of its breach prior to the contracting authority's resorting to remedies. For example, the concessionaire should be given notice specifying the nature of the relevant circumstances and requiring it to rectify them within a certain period. The possibility might also be given for the lenders and sureties, as the case may be, to avert the consequences of the concessionaire's breach, for instance by temporarily engaging a third party to cure the consequences of breach by the concessionaire, in accordance with the terms of the performance bonds provided to the contracting authority or the terms of a direct agreement between the lenders and the contracting authority (see chap. IV, "Construction and operation of infrastructure", paras. 108-120 and 147-150). The project agreement may also provide that, if the circumstances are not rectified before the expiry of the relevant period, the contracting authority may then terminate the project agreement, subject to first notifying the lenders and giving them an opportunity within a certain period to exercise any right of substitution that the lenders might have in accordance with a direct agreement between them and the contracting authority. However, reasonable deadlines need to be set, since the contracting authority cannot be expected to bear indefinitely the continuing cost of a situation of breach of the project agreement by the concessionaire. Furthermore, the procedures should be without prejudice to the contracting authority's right to step in to avert the risk of disruption of service by the concessionaire (see chap. IV, "Construction and operation of infrastructure", paras. 145 and 146).

(i) Serious breach before the beginning of construction

18. The concessionaire typically needs to accomplish a series of steps prior to undertaking construction works. Some of these requirements may even constitute conditions precedent to the entry into force of the project agreement. Examples of events that often justify the withdrawal of the concession award at an early stage include the following:

(a) Failure to secure the required financial means, to sign the project agreement or to establish the project company within the established deadline;

(b) Failure to obtain licences or permits required for pursuing the activity that is the object of the concession;

(c) Failure to undertake the construction of the facility, to commence development of the project or to submit the

plans and designs required within a set period of time from the award of the concession.

19. Termination should in principle be reserved for situations where the contracting authority may no longer reasonably expect that the selected concessionaire will take the necessary measures to commence execution of the project. In that connection, it is important for the contracting authority to take into account any circumstances that may excuse the concessionaire's delay in fulfilling its obligations. Furthermore, the concessionaire should not suffer the consequences of inaction or error on the part of the contracting authority or other public authorities. For instance, the termination of the project agreement would not normally be justified if the concessionaire's failure to obtain government licences and permits within the agreed schedule was not attributable to the concessionaire's own fault.

(ii) Serious breach during the construction phase

20. Examples of events that may justify the termination of the project agreement during the construction phase include the following:

(a) Failure to observe building regulations, specifications or minimum design and performance standards and non-excusable failure to complete work within the agreed schedule;

(b) Failure to provide or renew the required guarantees in the agreed terms;

(c) Violation of essential statutory or contractual obligations.

21. Termination should be commensurate with the degree of breach by the concessionaire and the consequences of breach for the contracting authority. For instance, the contracting authority may have a legitimate interest in specifying a date when the construction must be completed and may therefore be justified in regarding a delay in completion as an event of breach and hence a ground for termination. However, delay alone, in particular if it is not excessive in relation to the specifications of the project agreement, might not be sufficient reason for termination when the contracting authority is otherwise satisfied of the concessionaire's ability to complete the construction in accordance with the required quality standards and its commitment to doing so.

(iii) Serious breach during the operational phase

22. Examples of particular instances of breach that typically justify the termination of the concession during the operational phase include any of the following:

(a) Serious failure to provide services in accordance with the statutory and contractual standards of quality, including disregard of price control measures;

(b) Non-excusable suspension or interruption of the provision of the service without prior consent from the contracting authority;

(c) Serious failure by the concessionaire to maintain the facility, its equipment and appurtenances in accordance with the agreed standards of quality or non-excusable delay in carrying out maintenance works in accordance with the agreed plans, schedules and timetables;

(d) Failure to comply with sanctions imposed by the contracting authority or the regulatory agency, as appropriate, for infringements of the concessionaire's duties.

23. For the purpose of enhancing transparency and integrity in governmental matters, the laws of some countries also provide for the termination of project agreements if the concessionaire is guilty of tax fraud or other types of fraudulent acts, or if its agents or employees are involved in bribery of public officials and other corrupt practices (see also chap. VII, "Other relevant areas of law", paras. 50-52). The later considerations underscore the importance of designing effective mechanisms to combat corruption and bribery and to afford the concessionaire the opportunity to file complaints against demands for illegal payments or unlawful threats by officials of the host country.

(b) Insolvency of the concessionaire

24. Infrastructure services typically need to be provided continuously and for that reason most domestic laws stipulate that the agreement may be terminated if the concessionaire is declared insolvent or bankrupt. In order to ensure the continuity of the service, the assets and property required to be handed over to the contracting authority may be excluded from the insolvency proceedings and the law may require prior governmental approval for any act of disposition by a liquidator or insolvency administrator of any categories of assets owned by the concessionaire.

25. In legal systems that allow the establishment of security interests over the concession itself (see chap. IV, "Construction and operation of infrastructure", para. 57), the law usually provides that the contracting authority may, in consultation with the secured creditors, appoint a temporary administrator so as to ensure the continued provision of the relevant service, until the secured creditors admitted to the insolvency proceedings decide, upon the recommendation of the insolvency administrator, whether the activity should be pursued or whether the right to exploit the concession should be put to a bidding process.

(c) Termination for reasons of public interest

26. In the contracting practice of some countries, public authorities procuring construction works traditionally retain the right to terminate the construction contract for reasons of public interest (that is, without having to provide any justification other than that the termination is in the Government's interest). In some common law jurisdictions, that right, which is sometimes referred to as "termination for convenience", can only be exercised if expressly provided for in a statute or in the relevant contract. Several legal systems belonging to the civil law tradition also recognize a similar power of public authorities to terminate contracts

for reasons of public interest or "general interest". In some countries, such a right may be implied in the Government's contracting power, even in the absence of an explicit statutory or contractual provision to that effect. The Government's right to terminate for reasons of public interest, in those legal systems which recognize it, is regarded as essential in order to preserve the Government's unfettered ability to exercise its functions affecting the public good.

27. Nevertheless, the conditions for the exercise of this right, and the consequences of doing so, should be carefully considered. The authority to determine what constitutes public interest may lie within the Government's discretion, so that the contracting authority's decision to terminate the project agreement could only be challenged under specific circumstances (for instance, improper motive, "*détournement de pouvoir*"). However, a general and unqualified right to terminate the project agreement for reasons of public interest may represent an imponderable risk that neither the concessionaire nor the lenders may be ready to accept without sufficient guarantees that they will receive prompt compensation for the loss sustained. The possibility of termination for reasons of public interest, where contemplated, should therefore be made known to prospective investors on the earliest possible occasion and should be expressly mentioned in the draft project agreement circulated with the request for proposals (see chap. III, "Selection of the concessionaire", para. 67). The compensation due for termination for reasons of public interest may, in practice, cover items that are taken into account when calculating the compensation that is due for termination for serious breach by the contracting authority (see para. 42). Furthermore, it is generally advisable to limit the exercise of the right to terminate the project agreement to situations where such termination is needed for a compelling reason of public interest, which should be restrictively interpreted (for example, where major subsequent changes in governmental plans and policies require the integration of a project into a larger network or where changes in the contracting authority's plans require major project revisions that substantially affect the original design or the project's commercial feasibility under private operation). In particular, it is not advisable to regard the right of termination for reasons of public interest as a substitute for other contractual remedies in case of dissatisfaction with the concessionaire's performance (see chap. IV, "Construction and operation of infrastructure", paras. 140-150).

2. Termination by the concessionaire

28. While the contracting authority in some legal systems may retain an unqualified right to terminate the project agreement, the grounds for termination by the concessionaire are usually limited to serious breach by the contracting authority or other exceptional situations and do not normally include a general right to terminate the project agreement at will. Moreover, some legal systems do not recognize the concessionaire's right to terminate the project agreement unilaterally, but only the right to request a third party, such as the competent court, to declare the termination of the project agreement.

(a) Serious breach by the contracting authority

29. Generally, the concessionaire's right to terminate the project agreement is limited to situations where the contracting authority is found to be in breach of a substantial part of its obligations (such as failure to make agreed payments to the concessionaire or failure to issue licences required for the operation of the facility for reasons other than the concessionaire's own fault). In those legal systems where the contracting authority has the right to request modifications in the project, the concessionaire may have the right to terminate the project agreement if the contracting authority alters or modifies the original project in such a fashion as to cause a substantial increase in the amount of investment required and the parties fail to agree on the appropriate amount of compensation (see chap. IV, "Construction and operation of infrastructure", paras. 73-76).

30. In addition to serious breach by the contracting authority itself, it may be equitable to authorize termination by the concessionaire should the latter be rendered unable to provide the service as a result of acts of public authorities other than the contracting authority, such as failure to provide certain measures of support required for the execution of the project agreement (see chap. II, "Project risks and government support", paras. 35-60).

31. Although termination by the concessionaire may not always require a final finding by a judicial or other dispute settlement body, there may be limits to the remedies available to the concessionaire in the event of breach by the contracting authority. Pursuant to a rule of law followed in many legal systems, a party to a contract may withhold performance of its obligations in the event of breach by the other party of a substantial part of its obligations. However, in some legal systems that rule does not apply to government contracts and the law provides instead that government contractors are not excused from performing solely on the ground of breach by the contracting authority unless and until the contract is rescinded by a judicial or arbitral decision.

32. Limitations on the concessionaire's right to withhold performance are typically intended to ensure the continuity of public services (see chap. IV, "Construction and operation of infrastructure", paras. 86 and 87). Nevertheless, it should be noted that while the contracting authority may mitigate the consequences of breach by the concessionaire by using its right to step in, the concessionaire does not usually have a comparable remedy. In the event of serious breach by the contracting authority, the concessionaire may sustain considerable or even irreparable damage, depending on the time required to obtain a final decision releasing the concessionaire from its obligations under the project agreement. These circumstances underscore the importance of government guarantees in respect of obligations assumed by contracting authorities (see chap. II, "Project risks and government support", paras. 45-50) and the need for allowing the parties the choice of expeditious and effective dispute settlement mechanisms (see chap. VI, "Settlement of disputes", paras. 3-42).

(b) Changes in conditions

33. Domestic laws often allow the concessionaire to terminate the project agreement if the concessionaire's performance has been rendered substantially more onerous by the occurrence of an unforeseen change in conditions and the parties have failed to agree on an appropriate revision to adapt the project agreement to the changed conditions (see chap. IV, "Construction and operation of infrastructure", paras. 126-130).

3. Termination by either party

(a) Impediment of performance

34. Some laws provide that the parties may terminate the project agreement if the performance of their obligations is rendered permanently impossible as a result of a circumstance defined in the project agreement as an exempting impediment (see chap. IV, "Construction and operation of infrastructure", paras. 132-139). In that connection, it is advisable to provide in the project agreement that if the exempting impediment persists for a certain period or if the cumulative duration of two or more exempting impediments exceeds a certain time, the agreement may be terminated by either party. If the execution of the project is rendered impossible on legal grounds, because of changes in legislation or as a result of judicial decisions affecting the validity of the project agreement, for instance, such a termination right might not require any period of time to elapse and might be exercised immediately upon the change of legislation or other legal obstacle becoming effective.

(b) Mutual consent

35. Some domestic laws authorize the parties to terminate the project agreement by mutual consent, usually subject to the approval of a higher authority. Legislative power to this effect may be needed by the contracting authority in legal systems where the termination by mutual consent might amount to a discontinuation of the public service for which the contracting authority is responsible.

E. CONSEQUENCES OF EXPIRY OR TERMINATION OF THE PROJECT AGREEMENT

36. The concessionaire's right to operate the facility and to provide the relevant service typically finishes upon expiry of the project term or termination of the project agreement. Unless the infrastructure is to be permanently owned by the concessionaire, the expiry or termination of the project agreement often requires the transfer of assets to the contracting authority or to another concessionaire who undertakes to operate the facility. There may be important financial consequences that will need to be regulated in detail in the project agreement, in particular in the event of termination by either party. The parties will also need to agree on various wind-up measures to ensure the orderly transfer of the responsibility for operating the facility and providing the service.

1. Transfer of project-related assets

37. In most cases, the assets and property originally made available to the concessionaire and other goods related to the project are to revert to the contracting authority upon expiry or termination of the project agreement (see chap. IV, "Construction and operation of infrastructure", paras. 23-29). In a typical "build-operate-transfer" project, the concessionaire would also be obliged to transfer to the contracting authority the physical infrastructure and other project-related assets upon expiry or termination of the project agreement. The assets required to be transferred to the contracting authority often include intangible assets, such as outstanding receivables and other rights existing at the time of transfer. Depending on the project, the assets to be transferred may include specific technology or know-how (see paras. 51-55). It should be noted that in some projects the assets are transferred directly from the concessionaire to another concessionaire who succeeds it in the provision of the service.

(a) Transfer of assets to the contracting authority

38. Different arrangements may be needed, depending on the type of asset to be transferred (see chap. IV, "Construction and operation of infrastructure", para. 28):

(a) Assets that must be transferred to the contracting authority. In the legal tradition of some countries, at the end of the project term, the concessionaire is required to transfer such assets free of any liens and encumbrances and at no cost to the contracting authority, except for compensation for improvements made to, or modernization of, the property for the purpose of ensuring the continuity of the service the cost of which has not yet been recovered by the concessionaire. In practice, such a rule presupposes the negotiation of a concession period sufficiently long and a level of revenue high enough for the concessionaire to amortize fully its investment and to repay its debts in full. Other laws allow for more flexibility by authorizing the contracting authority to compensate the concessionaire for the residual value, if any, of assets built by the concessionaire;

(b) Assets that may be purchased by the contracting authority, at its option. If the contracting authority decides to exercise its option to purchase those assets, the concessionaire is normally entitled to compensation corresponding to their fair market value at the time. However, if those assets were expected to be fully amortized (that is, if the concessionaire's financing arrangements do not envisage any expectation of residual value of the assets), then the price paid might be only nominal. In the contracting practice of some countries, it is usual for contracting authorities to be granted some security interest in such assets as a guarantee for their effective transfer;

(c) Assets that remain the private property of the concessionaire. Typically these assets may be freely removed or disposed of by the concessionaire.

(b) Transfer of assets to a new concessionaire

39. As indicated earlier, the contracting authority may wish to rebid the concession at the end of the project agreement, rather than to operate the facility itself (see para. 3). For that purpose, it may be useful for the law to require the concessionaire to make the assets available to a new concessionaire. In order to ensure an orderly transition and continuity of the service, the concessionaire should be required to cooperate with the new concessionaire in the handover. The transfer of assets between the concessionaires may require that some compensation be paid to the incumbent concessionaire, depending on whether or not the assets have been amortized.

40. One important element to consider in this connection is the structure of the financial proposal formulated by the concessionaire during the selection process (see also chap. IV, "Construction and operation of infrastructure", para. 27). In public infrastructure projects, one of the basic assumptions of the bidders' financial proposal is that all assets required to be built or acquired for the project will be fully amortized (that is, their cost will be recovered in full) in the life of the project. Thus, the financial proposals will not normally include an expectation of residual value for the assets at the end of the project period. In such cases, there may not be a prima facie reason for requiring a successor concessionaire to pay any compensation to the original concessionaire, which may be required to make all assets available to its successor at no cost or only for a nominal consideration. Indeed, if the concessionaire has achieved its expected return, a transfer payment from a successor concessionaire would be an additional cost that would ultimately have to be remunerated by the prices charged by the successor under the second agreement. However, if the tariff level contemplated in the concessionaire's original proposal was based on the assumption of some residual value of the assets at the end of the project period or if the financial proposal assumed significant revenue from third parties, the concessionaire might be entitled to compensation for assets handed over to a successor concessionaire.

(c) Condition of assets at the time of transfer

41. Where assets are handed over to the contracting authority or transferred directly to a new concessionaire upon the expiry of the concession period, the concessionaire is typically obligated to transfer them, free of liens or encumbrances, and in such condition as would be necessary for normal functioning of the infrastructure facility, taking into account the needs of the service. The contracting authority's right to receive those assets in such operating condition is complemented in some laws by the obligation imposed upon the concessionaire to keep and transfer the project in such proper condition as prudent maintenance requires and to provide some sort of guarantee to that effect (see chap. IV, "Construction and operation of infrastructure", para. 118). Where the contracting authority requires the assets to be returned in a prescribed condition, the required conditions should be reasonable. While it may be reasonable for the contracting authority to require that the assets have some defined period of residual life, it would not be reasonable to expect them to be as new. Furthermore, these requirements may not be applicable in the event of termination of the project agreement, in particular termination prior to successful completion of the construction phase.

42. It is advisable to devise procedures for ascertaining the condition of the assets that should be transferred to the contracting authority. It may be useful, for example, to establish a committee comprised of representatives of both the contracting authority and the concessionaire to establish whether the facilities are in the prescribed condition and conform to the relevant requirements set forth in the project agreement. The project agreement may also provide for the appointment and terms of reference of such a committee, which may be given authority to request reasonable measures by the concessionaire to repair or eliminate any defects and deficiencies found in the facilities. It may be advisable to provide for a special inspection to take place one year prior to the termination of the concession, following which the contracting authority may require additional maintenance measures by the concessionaire so as to ensure that the goods are in proper condition at the time of the transfer. The contracting authority may wish to require that the concessionaire provide special guarantees for the satisfactory handover of the facilities (see chap. IV, "Construction and operation of infrastructure", para. 118). The contracting authority might draw on such guarantees to pay the repair cost of damaged assets or property.

2. Financial arrangements upon termination

43. Termination of the project agreement may occur before the concessionaire has been able to recover its investment, repay its debts and yield the expected profit, which may cause significant loss to the concessionaire. Loss may also be sustained by the contracting authority, which may need to make additional investment or incur considerable expense in order, for instance, to ensure the completion of the facility or the continued provision of the relevant services. In view of these circumstances, project agreements typically contain extensive provisions dealing with the financial rights and obligations of the parties upon termination. The usual standards of compensation typically vary according to the various grounds for termination. Nevertheless, the following factors are usually taken into account in compensation arrangements:

(a) Outstanding debt, equity investment and anticipated profit. Project termination is typically included among the events of default in the concessionaire's loan agreements. Since loan agreements usually include a so-called "acceleration clause", whereby the entire debt may become due upon the occurrence of an event of default, the immediate loss sustained by the concessionaire upon termination of the project agreement may include the amount of debt then outstanding. Whether and to what extent such a loss might

be compensated for by the contracting authority usually depends on the grounds for terminating the project agreement. Partial compensation may be limited to an amount corresponding to the value of works satisfactorily performed by the concessionaire, whereas full compensation would cover the entire outstanding debt. Another category of loss that is sometimes taken into account in compensation arrangements refers to loss of equity investment by the project promoters, to the extent that such an investment has not yet been recovered at the time of termination. Lastly, termination also deprives the concessionaire of future profits that the facility may generate. Although lost profits are not usually regarded as actual damage, in exceptional circumstances, such as wrongful termination by the contracting authority, the current value of expected future profit may be included in the compensation due to the concessionaire;

(b) Degree of completion, residual value and amortization of assets. Contractual compensation schemes for various termination grounds typically include compensation commensurate with the degree of completion of the works at the time of termination. The value of the works is usually determined on the basis of the investment required for construction (in particular if the termination takes place during the construction phase), the replacement cost or the "residual" value of the facility. The residual value means the market value of the infrastructure at the time of termination. Market value may be difficult to determine or even inexistent for certain types of physical infrastructure (such as bridges or roads) or for facilities whose operational life is close to expiry. Sometimes the residual value may be estimated taking into account the expected usefulness of the facility for the contracting authority. However, difficulties may be found in establishing the value of unfinished works, in particular if the amount of the investment still required by the contracting authority to render the facility operational would exceed the amount actually invested by the concessionaire. In any event, full payment of residual value seldom takes place, in particular where the project's revenue constitutes the sole remuneration for the concessionaire's investment. Thus, instead of full compensation for the facility's value, the concessionaire often receives compensation only for the residual value of assets that have not yet been fully amortized at the time of termination.

(a) Termination due to breach by the concessionaire

44. The concessionaire is not usually entitled to damages in the event of termination due to its own breach. In some cases the concessionaire may be under an obligation to pay damages to the contracting authority, although, in practice, a defaulting concessionaire whose debts are declared due by its creditors would seldom have sufficient financial means left for actual payment of such damages.

45. It should be noted that termination due to breach, even where it is regarded as a sanction for serious performance failures, should not result in the unjust enrichment of either party. Thus, termination does not necessarily entail a right for the contracting authority to take over assets without making any payment to the concessionaire. An equitable solution for dealing with this issue may be to distinguish between the different types of asset, according to the arrangements envisaged for them in the project agreement (see para. 38):

(a) Assets that must be transferred to the contracting authority. Where the project agreement requires the automatic transfer of project assets to the contracting authority at the end of the project agreement, termination on breach does not usually entail the payment of compensation to the concessionaire for those assets, except for the residual value of work satisfactorily performed, to the extent that it has not yet been amortized by the concessionaire;

(b) Assets that may be purchased by the contracting authority, at its option. Financial compensation may be adequate in cases where the contracting authority has an option to buy the assets at market value on expiry of the project agreement or the right to require that such an option be given to the winner of a new project award. However, it may be legitimate to envisage a financial compensation that is less than the full value of the assets so as to stimulate performance by the concessionaire. By the same token, such compensation may not need to cover the full cost of repaying the concessionaire's outstanding debt. It is advisable to set forth the details of the formula for financial compensation in the project agreement (that is, whether it covers the break-up value of the asset or the lesser of the outstanding debt and the alternative use value);

(c) Assets that remain the private property of the concessionaire. Assets in the concessionaire's private property that do not fall under *(a)* or *(b)* above may usually be removed and disposed of by the concessionaire, so that the need for compensation arrangements seldom arises. However, a different situation may arise in the case of fully privatized projects, where all assets, including those essential for the provision of the services, are owned by the concessionaire. In such cases, in order to ensure the continuity of the services, the contracting authority may find it necessary to take over the assets, even though not contemplated in the project agreement. In such cases, it would be equitable to compensate the concessionaire for the fair market value of the assets. The project agreement may, however, provide that the compensation should be reduced by the costs incurred by the contracting authority in operating the facility or engaging another operator.

(b) Termination due to breach by the contracting authority

46. The concessionaire is usually entitled to full compensation for loss sustained as a result of termination on grounds attributable to the contracting authority. The compensation due to the concessionaire usually includes compensation for the value of the works and installations, to the extent they have not already been amortized, as well as for the loss caused to the concessionaire, including lost profits, which are usually calculated on the basis of the concessionaire's revenue during previous financial years, when termination occurs during the operational phase, or are based on a projection of the expected benefit during the duration originally envisaged. The concessionaire may be entitled to full compensation of debt and equity, including debt service and lost profits.

(c) Termination on other grounds

47. When considering compensation arrangements for termination due to circumstances unrelated to breach by either party, it may be useful to distinguish exempting impediments from termination declared by the contracting authority for reasons such as public interest or other similar reasons.

(i) Termination due to exempting impediments

48. By definition, exempting impediments are events beyond the parties' control and, as a general rule, termination under such circumstances might not give rise to claims for damages by either party. However, there may be circumstances where it might be equitable to provide for some compensation to the concessionaire, such as fair compensation for works already completed, in particular where, because of the specialized nature of the assets, they cannot be removed by the concessionaire or meaningfully used by it, but may be effectively used by the contracting authority for the purpose of providing the relevant service (a bridge, for instance). However, since termination in such cases cannot be attributed to the contracting authority, the compensation due to the concessionaire may not necessarily need to be "full" compensation (that is, repayment of debt, equity and lost profits).

(ii) Termination for convenience

49. Where the project agreement recognizes the contracting authority's right to terminate for its convenience, the compensation payable to the concessionaire usually covers compensation for the same items included in compensation payable upon termination for breach by the contracting authority (see para. 46), although not necessarily to the full extent. In order to establish the equitable amount of compensation due to the concessionaire, it may be useful to distinguish between termination for convenience during the construction phase and termination for convenience during the operational phase:

(a) Termination for convenience during the construction phase. If the project agreement is terminated during the construction phase, the compensation arrangements may be similar to those which are followed in connection with large construction contracts that allow for termination for convenience. In those cases, the contractor is usually entitled to the portion of the price that is attributable to the construction satisfactorily performed, as well as for expenses and losses incurred by the contractor arising from the termination. However, since the contracting authority does not normally pay a price for the construction work carried out by the concessionaire, the main criterion for calculating compensation would typically be the total investment effectively made by the concessionaire up to the time of termination, including all sums actually disbursed under the loan facilities extended by the lenders to the concessionaire for the purpose of carrying out construction under the project agreement, and expenses related to the cancellation of loan agreements. One additional question is whether and to what extent the concessionaire may be entitled to recover lost profit for the portion of the contract that has been terminated for convenience. On the one hand, the concessionaire might have foregone other business opportunities in anticipation of completing the project and operating the facility through the anticipated duration of the concession. On the other hand, an obligation of the contracting authority to compensate the concessionaire for its lost profit might make it financially prohibitive for the contracting authority to exercise its right of termination for convenience. One approach may be for the project agreement to establish a scale of payments to be made by the contracting authority as compensation for lost profits and the amount of the payments depending upon the stage of the construction that has been completed when the project agreement is terminated for convenience;

(b) Termination for convenience during the operational phase. As regards the construction work satisfactorily completed by the concessionaire, the compensation arrangements may be the same as for termination for convenience during the construction phase. However, equitable compensation for termination for convenience during the operational phase might require fair compensation for lost profits. The higher standard of compensation in this case may be justified by the fact that, unlike termination during the construction phase, when the contracting authority might need to undertake to complete the work at its own expense, upon termination during the operational phase the contracting authority might be able to receive a completed facility capable of being operated profitably. Compensation for lost profits is often calculated on the basis of the concessionaire's revenue during a certain number of previous financial years, but in some cases other elements, such as the anticipated profit on the basis of the agreed tariffs, may need to be taken into account. This is so because in some infrastructure projects such as toll roads and similar projects, which are characterized by high financial costs and relatively low income at the early stages of operation, termination may occur before the project has a history of profitability.

3. Wind-up and transitional measures

50. Where the facility is transferred to the contracting authority at the end of the concession period, the parties may need to make a series of arrangements in order to ensure that the contracting authority will be able to operate the facility at the prescribed standards of efficiency and safety. The project agreement may provide for the concessionaire's obligation to transfer certain technology or know-how required to operate the infrastructure facility. The project agreement may also provide for the continuation, for a certain transitional period, of certain obligations of the concessionaire in respect of the operation and maintenance of the facility. It may further include an obligation, on the part of the concessionaire, to supply or facilitate the supply of spare parts that may be needed by the contracting authority to carry out repairs in the facility. It should be noted, however, that the concessionaire might not be in a position to undertake itself some of the transitional measures referred to below, since in most cases the concessionaire would have been established for the sole purpose of carrying out the project and would need to procure the relevant technology or spare parts from third parties.

(a) Transfer of technology

51. In some cases, the facility transferred to the contracting authority will embody various technological processes necessary for the generation of certain goods, such as electricity or potable water, or the provision of the relevant services, such as telephone services. The contracting authority will often wish to acquire a knowledge of those processes and their application. The contracting authority will also wish to acquire the technical information and skills necessary for the operation and maintenance of the facility. Even where the contracting authority has the basic capability to undertake certain elements of the operation and maintenance (for example, building or civil engineering), the contracting authority may need to acquire a knowledge of special technical processes necessary to effect the operation in a manner appropriate to the facility in question. The communication to the contracting authority of that knowledge, information and skills is often referred to as the "transfer of technology". Obligations concerning the transfer of technology cannot be unilaterally imposed on the concessionaire and, in practice, these matters are the subject of extensive negotiations between the parties concerned. While the host country has a legitimate interest in gaining access to the technology needed to operate the facility, due account should be taken of the commercial interests and business strategies of the private investors.

52. Differing contractual arrangements can be adopted for the transfer of technology and the performance of the other obligations necessary to construct and operate the facility. The transfer of technology itself may occur in different ways, for example, through the licensing of industrial property, through the creation of a joint venture between the parties or the supply of confidential know-how. The *Guide* does not attempt to deal comprehensively with contract negotiation and drafting relating to the licensing of industrial property or the supply of know-how, as this subject has already been dealt with in detail in publications issued by other United Nations bodies.[1] The following paragraphs merely note certain major issues concerning the communication of skills necessary for the operation and maintenance of the facility through the training of the contracting authority's personnel or through documentation.

53. The most important method of conveying to the contracting authority the technical information and skills necessary for the proper operation and maintenance of the works is the training of the contracting authority's personnel. In order to enable the contracting authority to decide on its training requirements, in the request for proposals or during the contract negotiations the contracting authority might request the concessionaire to supply the contracting authority with an organizational chart showing the personnel requirements for the operation and maintenance of the works, including the basic technical and other qualifications the personnel must possess. Such a statement of requirements should be sufficiently detailed to enable the contracting authority to determine the extent of training required in relation to the personnel available to it. The concessionaire will often have the capability to provide the training. In some cases, however, the training may be given more effectively by a consulting engineer or through an institution specializing in training.

54. Technical information and skills necessary for the proper operation and maintenance of the facility may also be conveyed through the supply of technical documentation. The documentation to be supplied may consist of plans, drawings, formulas, manuals of operation and maintenance and safety instructions. It may be advisable to list in the project agreement the documents to be supplied. The concessionaire may be required to supply documents that are comprehensive and clearly drafted and are in a specified language. It may be advisable to obligate the concessionaire, at the request of the contracting authority, to give demonstrations of procedures described in the documentation if the procedures cannot be understood without demonstrations.

55. The points in time when the documentation is to be supplied may be specified. The project agreement may provide that the supply of all documentation is to be completed by the time fixed in the contract for completion of the construction. The parties may also wish to provide that transfer of the facility is not to be considered completed unless all documentation relating to the operation of the works and required under the contract to be delivered prior to the completion has been supplied. It may be advisable to provide that some documentation, such as operating manuals, is to be supplied during the course of construction, as such documentation may enable the contracting authority's personnel or engineer to obtain an understanding of the working of machinery or equipment while it is being erected.

(b) Assistance in connection with operation and maintenance of the facility after its transfer

56. The degree of assistance from the concessionaire needed by the contracting authority with regard to the supply of spare parts and services will depend on the technology and skilled personnel available to the contracting authority. If the contracting authority lacks personnel sufficiently skilled for the technical operation of the facil-

[1]The negotiation and drafting of contracts for the licensing of industrial property and the supply of know-how is dealt with in detail in World Intellectual Property Organization, *Licensing Guide for Developing Countries* (WIPO publication No. 620 *(E)*, 1977). The main issues to be considered in negotiating and drafting such contracts are set forth in the *Guidelines for Evaluation of Transfer of Technology Agreements*, Development and Transfer of Technology Series, No. 12 (ID/233, 1979), and in the *Guide for Use in Drawing Up Contracts Relating to the International Transfer of Know-How in the Engineering Industry* (United Nations publication, Sales No. E.70.II.E.15). Another relevant publication is the *Handbook on the Acquisition of Technology by Developing Countries* (United Nations publication, Sales No. E.78.II.D.15). For a discussion of transfer of technology in the context of contracts for the construction of industrial works, see the *UNCITRAL Legal Guide on Drawing Up International Contracts for the Construction of Industrial Works* (United Nations publication, Sales No. E.87.V.10), chap. VI, "Transfer of technology".

ity, it may wish to obtain the concessionaire's assistance in operating the facility, at least for an initial period. The contracting authority may, in some cases, wish the concessionaire to provide the personnel to occupy many of the technical posts in the facility, while in other cases the contracting authority may wish the concessionaire only to provide technical experts to collaborate in an advisory capacity with the contracting authority's personnel in the performance of a few highly specialized operations.

57. In order to assist the contracting authority in operating and maintaining the facility, the project agreement may obligate the concessionaire to submit, prior to the transfer of the facility, an operation and maintenance programme designed to keep the facility operating over its remaining lifetime at the level of efficiency required under the project agreement. An operation and maintenance programme would include matters such as an organizational chart showing the key personnel required for the technical operation of the facility and the functions to be discharged by each person; periodic inspection of the facility; lubrication, cleaning and adjustment; and replacement of defective or worn-out parts. Maintenance may also include operations of an organizational character, such as establishing a maintenance schedule or maintenance records. The concessionaire may also be required by the contracting authority to supply operation and maintenance manuals setting out appropriate operation and maintenance procedures. Those manuals should be in a format and language readily understood by the contracting authority's personnel.

58. An effective means of training the contracting authority's personnel in operation and maintenance procedures may be to provide in the project agreement that the personnel of the contracting authority are to be associated with the personnel of the concessionaire in carrying out the operation and maintenance for a certain time prior to or beyond the transfer of the facility. The positions to be occupied by the personnel employed by the contracting authority can then be identified and their qualifications and experience specified. In order to avoid friction and inefficiency, it is desirable that any authority to be exercised by the personnel of each party over the personnel of the other during the relevant period be clearly described.

(c) Supplies of spare parts

59. In projects that provide for the transfer of the facility to the contracting authority, the contracting authority will have to obtain spare parts to replace those which are worn out or damaged and to maintain, repair and operate the facility. Spare parts may not be available locally and the contracting authority may have to depend on the concessionaire to supply them. The planning of the parties with respect to the supply of spare parts and services after the transfer of the facility would be greatly facilitated if the parties were to anticipate and provide in the project agreement for the needs of the contracting authority in that regard. However, given the long duration of most infrastructure projects, it may be difficult for the parties to anticipate and provide in the project agreement for the needs of the contracting authority after the transfer of the facility.

60. A possible approach may be for the parties to enter into a separate contract regulating these matters.[2] Such a contract may be entered into closer in time to the transfer of the facility, when the contracting authority may have a clearer view of its requirements. If spare parts are manufactured not by the concessionaire but for the concessionaire by suppliers, the contracting authority may prefer to enter into contracts with those suppliers rather than to obtain them from the concessionaire or, alternatively, the contracting authority may wish to have the concessionaire procure them as the contracting authority's agent.

61. It is desirable for the contracting authority's personnel to develop the technical capacity to install the spare parts. For this purpose, the project agreement may obligate the concessionaire to supply the necessary instruction manuals, tools and equipment. The instruction manuals should be in a format and language readily understood by the contracting authority's personnel. The contract may also require the concessionaire to furnish "as built" drawings indicating how the various pieces of equipment interconnect and how access can be obtained to them to enable the spare parts to be installed and to enable maintenance and repairs to be carried out. In certain cases, it may be appropriate for the concessionaire to be required to train the contracting authority's personnel in the installation of spare parts.

(d) Repairs

62. It is in the contracting authority's interest to enter into contractual arrangements that will ensure that the facility will be repaired expeditiously in the event of a breakdown. In many cases, the concessionaire may be better qualified than a third person to effect repairs. In addition, if the project agreement prevents the contracting authority from disclosing to third persons the technology supplied by the concessionaire, this may limit the selection of third persons to effect repairs to those who provide assurances regarding non-disclosure of the concessionaire's technology that are acceptable to the concessionaire. On the other hand, if major items of equipment have been manufactured for the concessionaire by suppliers, the contracting authority may find it preferable to enter into independent contracts for repair with them. In defining the nature and duration of repair obligations imposed on the concessionaire, if any, it is advisable to do so clearly and to distinguish them from obligations assumed by the concessionaire under quality guarantees to remedy defects in the facility.

[2]The Economic Commission for Europe has prepared a *Guide on Drawing Up International Contracts for Services Relating to Maintenance, Repair and Operation of Industrial and Other Works*, which may, mutatis mutandis, assist parties in drafting a separate contract or contracts dealing with maintenance and repair of the facility after its transfer to the contracting authority (ECE/TRADE/154).

A/CN.9/471/Add.7

Chapter VI. Settlement of disputes

CONTENTS

LEGISLATIVE RECOMMENDATIONS

Disputes between the contracting authority and the concessionaire (see paras. 3-42)

Recommendation 68. The contracting authority should be free to agree to dispute settlement mechanisms regarded by the parties as suited to the needs of the project, including arbitration.

[*Recommendation 68*bis. The law should indicate whether and, if so, to what extent the contracting authority may raise a plea of sovereign immunity, both as a bar to the commencement of arbitral or judicial proceedings as well as a defence against enforcement of the award or judgement.]

Disputes between the concessionaire and its lenders, contractors and suppliers (see para. 43)

Recommendation 69. The concessionaire and the project promoters should be free to choose the appropriate mechanisms for settling commercial disputes among project promoters or disputes between the concessionaire and its lenders, contractors, suppliers and other business partners.

Disputes between the concessionaire and its customers (see paras. 44-46)

Recommendation 70. The concessionaire may be required to make available simplified and efficient mechanisms for handling claims submitted by its customers or users of the infrastructure facility.

NOTES ON THE LEGISLATIVE RECOMMENDATIONS

A. GENERAL REMARKS

1. An important factor for the implementation of privately financed infrastructure projects is the legal framework in the host country for the settlement of disputes. Investors, contractors and lenders will be encouraged to participate in projects in countries where they have the confidence that any disputes arising out of contracts forming part of the project will be resolved fairly and efficiently. By the same token, efficient procedures for avoiding disputes or settling them expeditiously will facilitate the exercise of the contracting authority's monitoring functions and reduce the contracting authority's overall administrative cost. In order to create a more hospitable climate for investors, the legal framework of the host country should give effect to certain basic principles, such as the following: foreign firms should be guaranteed access to the courts under substantially the same conditions as domestic ones; parties to private contracts should have the right to choose foreign law as the law applicable to their contracts; foreign judgements should be enforceable; and there should be neither unnecessary restrictions to access to non-judicial dispute settlement mechanisms nor legal impediments for the creation of facilities for settling disputes amicably outside the judicial system.

2. Privately financed infrastructure projects typically require the establishment of a network of interrelated contracts and other legal relationships involving various parties. Legislative provisions dealing with the settlement of

disputes arising in the context of these projects must take account of the diversity of relations, which may call for different dispute settlement methods depending on the type of dispute and the parties involved. The main disputes may be divided into three broad categories:

(a) Disputes arising under agreements between the concessionaire and the contracting authority and other governmental agencies. In most civil law countries, the project agreement is governed by administrative law (see chap. VII, "Other relevant areas of law", paras. 24-27), while in other countries the agreement is in principle governed by contract law as supplemented by special provisions developed for government contracts for the provision of public services. This regime may have implications for the dispute settlement mechanism that the parties to the project agreement may be able to agree upon. Similar considerations may also apply to certain contracts entered into between the concessionaire and governmental agencies or government-owned companies supplying goods or services to the project or purchasing goods or services generated by the infrastructure facility;

(b) Disputes arising under contracts and agreements entered into by the project promoters or the concessionaire with related parties for the implementation of the project. These contracts usually include at least the following: (i) contracts between parties holding equity in the project company (e.g. shareholders' agreements, agreements regarding the provision of additional financing or arrangements regarding voting rights); (ii) financing and related agreements, which involve, apart from the project company, parties such as commercial banks, governmental lending institutions, international lending institutions and export credit insurers; (iii) contracts between the project company and contractors, which themselves may be consortia of contractors, equipment suppliers and providers of services; (iv) contracts between the project company and the parties who operate and maintain the project facility; and (v) contracts between the concessionaire and private companies for the supply of goods and services needed for the operation and maintenance of the facility;

(c) Disputes between the concessionaire and other parties. These other parties include the users or customers of the facility. These users may be, for example, a government-owned utility company that purchases electricity or water from the project company so as to resell it to the ultimate users; commercial companies, such as airlines or shipping lines contracting for the use of the airport or port; or individual persons paying for the use of a toll road. The parties to these disputes may not necessarily be bound by any prior legal relationship of a contractual or similar nature.

B. DISPUTES BETWEEN THE CONTRACTING AUTHORITY AND THE CONCESSIONAIRE

3. Disputes that arise under the project agreement frequently involve problems that do not often arise in connection with other types of contracts. This is due to the complexity of infrastructure projects and the fact that they are to be performed over a long period of time, with a number of enterprises participating in the construction and in the operational phases. In addition, disputes under project agreements may concern highly technical matters connected with the construction processes, the technology incorporated in the works and the conditions for operating the facility. Furthermore, these projects usually involve governmental agencies and a high level of public interest. These circumstances place emphasis on the need to have mechanisms in place that avoid as much as possible the escalation of disagreements between the parties and preserve their business relationship; that prevent the disruption of the construction works or the provision of the services; and that are tailored to the particular characteristics of the disputes that may arise.

4. Some of the main considerations particular to the various phases of implementation of privately financed infrastructure projects are discussed in this section. The settlement of the concessionaire's grievances in connection with decisions by regulatory agencies has been considered in the context of the authority to regulate infrastructure services (see chap. I, "General legislative and institutional framework", paras. 51-53). The settlement of disputes arising during the process of selecting a concessionaire (that is, pre-contractual disputes) has also been dealt with earlier in the *Guide* (see chap. III, "Selection of the concessionaire", paras. 118-122).

1. General considerations on methods for prevention and settlement of disputes

5. The issues that most frequently give rise to disputes during the life of the project agreement are those related to possible breaches of the agreement during the construction phase, the operation of the infrastructure facility or in connection with the expiry or termination of the project agreement. These disputes may be very complex and they often involve highly technical matters that need to be resolved speedily in order not to disrupt the construction or the operation of the infrastructure facility. For these reasons it is advisable for the parties to devise mechanisms that allow for the choice of competent experts to assist in the settlement of disputes. Furthermore, the long duration of privately financed infrastructure projects makes it important to devise mechanisms to prevent, as much as possible, disputes from arising so as to preserve the business relationship between the parties.

6. With a view to achieving the objectives mentioned above, project agreements often provide for composite dispute-settlement clauses designed to prevent, to the extent possible, disputes from arising, to foster reaching agreed solutions and to put in place efficient dispute settlement methods when disputes nevertheless arise. Such clauses typically provide for a sequential series of steps starting with an early warning of issues that may develop into a dispute unless the parties take action to prevent them. When a dispute does occur it is provided that the parties should exchange information and discuss the dispute with a view to identifying a solution. If the parties are unable to resolve the dispute themselves, then either party may require participation of an independent and impartial third party to assist them to find an acceptable solution. In most cases, adversarial dispute settlement mechanisms are only used when the disputes cannot be settled through the use of such conciliatory methods.

7. However, there may be limits to the parties' freedom to agree to certain dispute prevention or dispute settlement methods: one such limit may arise from the subject matter of the dispute; another limit may in some legal systems arise from the governmental character of the contracting authority. In some legal systems, the traditional position has been that the Government and its agencies may not agree on certain dispute settlement methods, in particular, arbitration. This position has often been restricted to mean that it does not apply to public enterprises of industrial or commercial character, which, in their relations with third parties, act pursuant to private law or commercial law.

8. Limitations to the freedom to agree on dispute settlement methods, including arbitration, may also relate to the legal nature of the project agreement. Under some civil law systems, project agreements may be regarded as administrative contracts, with the consequence that disputes arising thereunder need to be settled through the judiciary or through administrative courts of the host country. Under other legal systems, similar prohibitions may be expressly included in legislation or judicial precedents directly applicable to project agreements, or may be the result of established contract practices, usually based on legislative rules or regulations.

9. For countries that wish to allow the use of non-judicial methods, including arbitration, for the settlement of disputes arising in connection with privately financed infrastructure projects, it is important to remove possible legal obstacles and to provide a clear authorization for domestic contracting authorities to agree on dispute settlement methods. The absence of such legislative authority may give rise to questions as to the validity of the dispute-settlement clause and cause delay in the settlement of disputes. If, for example, an arbitral tribunal finds that the arbitration agreement has been validly concluded despite any subsequent defence that the contracting authority had no authorization to conclude it, the question may reappear at the recognition and enforcement stage before a court in the host country or before a court of a third country where the award is to be recognized or enforced.

2. Commonly used methods for preventing and settling disputes

10. The following paragraphs set out the essential features of methods used for preventing and settling disputes and consider their suitability for the various phases of large infrastructure projects, namely, the construction phase, the operational phase and the post-termination phase. Although the project agreement usually provides for composite dispute prevention and dispute settlement mechanisms, care should be taken to avoid excessively complex procedures or to impose too many layers of different procedures. The brief presentation of selected methods for dispute prevention and dispute settlement methods contained in the following paragraphs is intended to inform legislators about the particular features and usefulness of these various methods. It should not be understood as a recommendation for the use of any particular combination of methods.

(a) Early warning

11. Early warning provisions may be an important tool to avoid disputes. Under these provisions, if one of the parties to a contract feels that events that have occurred, or claims that the party intends to make, have the potential to cause disputes, these events or claims should be brought to the attention of the other party as soon as possible. Delays in making these claims are not only a source of conflict, because they are likely to surprise the other party and therefore create resentment and hostility, but they also render the claims more difficult to prove. For that reason, early warning provisions typically require the claiming party to submit a quantified claim, along with the necessary proof, within an established time period. To make the provision effective, a sanction is frequently included for non-compliance with the provision, such as the loss of the right to pursue the claim or an increased burden of proof. In infrastructure projects, early warning frequently refers to events that might adversely affect the quality of the works or the public services, increase their cost, cause delays or endanger the continuity of the service. Early warning provisions are therefore useful throughout the duration of an infrastructure project.

(b) Partnering

12. Another tool that is used as a means of dispute avoidance is partnering. The object of partnering is to create, through mutually developed formal strategies and from the outset of a project, an environment of trust, teamwork and cooperation among all key parties involved in the project. Partnering has been found to be useful to avoid disputes and to commit the parties to work efficiently to achieve the goals of the project. The partnering relationships are defined in workshops attended by the key parties to the project, and usually organized by the contracting authority. At the initial workshop, a mutual understanding of the concept of partnering is established, goals for the project for all the parties are defined and a procedure to resolve critical issues quickly is developed. At the conclusion of this workshop, a "partnering charter" is drafted and signed by the participants, signifying their commitment to work jointly towards the success of the project. The charter usually includes an issue resolution procedure designed to determine claims and resolve other problems, beginning at the lowest possible level of management and at the earliest possible opportunity. If a solution is not reached within a given time-frame, the issue is raised to the next level of management. Outsiders to the project are only called in if no agreement by the people responsible for the project is achieved.

(c) Facilitated negotiation

13. The purpose of this procedure is to aid the parties in the negotiation process. The parties appoint a facilitator at the commencement of the project. His function is to assist the parties in resolving any disputes, without providing subjective opinions on the issues, but rather coaxing them into analysing thoroughly the merits of their cases. This procedure is specially useful when there are numerous parties involved who would find it difficult to negotiate and coordinate all the differing opinions without such facilitation.

(d) Mediation and conciliation

14. The term "conciliation" is used in the *Guide* as a broad notion referring to proceedings in which a person or a panel assists the parties in an independent and impartial manner in their attempt to reach an amicable settlement of their dispute. Conciliation differs from negotiations between the parties in dispute (in which the parties would typically engage after the dispute has arisen) in that conciliation involves independent and impartial assistance to settle the dispute, whereas in settlement negotiations between the parties no third-person assistance is involved. The difference between conciliation and arbitration is that conciliation ends either in the settlement of the dispute agreed by the parties or it ends unsuccessfully; in arbitration, however, the arbitral tribunal imposes a binding decision on the parties, unless they have settled the dispute before the award is made. In practice, such conciliation proceedings are referred to by various expressions, including "mediation". Nevertheless, in the legal tradition of some countries, a distinction is drawn between conciliation and mediation to emphasize the fact that, in conciliation, a third party is trying to bring together the disputing parties to help them reconcile their differences, while mediation goes further by allowing the mediator to suggest terms for the resolution of the dispute. However, the terms "conciliation" and "mediation" are used as synonyms more frequently than not.

15. Conciliation is increasingly being increasingly practised in various parts of the world, including in regions where it was not commonly used in the past. This trend is reflected, inter alia, in the establishment of a number of private and public bodies offering conciliation services to interested parties. The conciliation procedure is usually private, confidential, informal and easily pursued. It may also be quick and inexpensive. The conciliator may assume multiple roles and is in general more active than a facilitator. He or she may frequently challenge the parties' position to stress weaknesses that usually facilitate agreement and, if authorized, may suggest possible settlement scenarios. The procedure is generally non-binding and the conciliator's responsibility is to facilitate settlement by directing the parties' attention to the issues and possible solutions, rather than passing judgement. This procedure is particularly useful when there are many parties involved and it would therefore be difficult to achieve an agreement by direct negotiations.

16. If the parties provide for conciliation in the project agreement, they will have to settle a number of procedural questions in order to increase the chance of a settlement. Settling such procedural questions is greatly facilitated by the incorporation into the contract, by reference, of a set of conciliation rules such as the UNCITRAL Conciliation Rules.[1] Other sets of conciliation rules have been prepared by various international and national organizations.

(e) Non-binding expert appraisal

17. This is a procedure where a neutral third party is charged with providing an appraisal on the merits of the dispute and suggested outcome. It serves as a "reality check" showing the contesting parties what the possible outcome of the more expensive and usually slower binding procedures such as arbitration or court proceedings would be. This procedure is useful where the parties have difficulty in communicating because their positions have become entrenched or where they do not see clearly the weaknesses of their positions or the strengths of the other party's positions. A non-binding expert appraisal is usually followed by negotiations, either direct or facilitated.

(f) Mini-trial

18. This procedure assumes the form of a mock trial in which site-level personnel of each party make submissions to a "tribunal" composed of a senior executive of each party and a third neutral person. After the submissions, which are typically to be made within predetermined time periods, the executives enter into a facilitated negotiation procedure with the assistance of a neutral person, to try to reach an agreement taking advantage of the issues that have been elucidated during the "trial". Counsel for the parties are frequently present and are useful in identifying the relevant issues. The purpose of the mini-trial is to inform senior executives of the issues involved in the dispute and to serve as a reality check of what the outcome of a real trial might be.

(g) Senior executive appraisal

19. This procedure is similar to the mini-trial but it is less adversarial and uses a more consensus-oriented approach. The procedure begins with the presentation of short position papers by each party, followed by short responses. At an "appraisal conference" headed by a facilitator, a senior executive from each of the parties makes brief oral presentations elucidating the issues submitted in the position papers or other points raised by the parties or the facilitator. This conference is followed by a negotiation meeting, chaired by the facilitator, with a view to reaching an agreement. Both the mini-trial and the senior executive appraisal tend to be less of a strong reality check than the non-binding expert appraisal and therefore less likely to motivate difficult decisions in the absence of commercial pressure to do so.

(h) Review of technical disputes by independent experts

20. During the construction phase, the parties may wish to consider providing for certain types of disputes to be referred to an independent expert appointed by both parties. This method may be of particular use in connection with disagreements relating to technical aspects of the construction of the infrastructure facility (for example, whether the works comply with contractual specifications or technical standards).

[1]For the report of the United Nations Commission on International Trade Law on the work of its thirteenth session, see *Official Records of the General Assembly, Thirty-fifth Session, Supplement No. 17* (A/35/17), para. 106 (*Yearbook of the United Nations Commission on International Trade Law*; vol. XI, 1980, part one, chap. II, sect. A (United Nations publication, Sales No. E.81.V.8)). The UNCITRAL Conciliation Rules have also been reproduced in booklet form (United Nations publication, Sales No. E.81.V.6). Accompanying the Rules is a model conciliation clause, which reads:"Where, in the event of a dispute arising out of or relating to this contract, the parties wish to seek an amicable settlement of that dispute by conciliation, the conciliation shall take place in accordance with the UNCITRAL Conciliation Rules as at present in force". The use of the UNCITRAL Conciliation Rules was recommended by the General Assembly in its resolution 35/52 of 4 December 1980.

21. The parties may, for instance, appoint a design inspector or a supervisor engineer, respectively, to review disagreements relating to the inspection and approval of the design, and the progress of construction works (see chap. IV, "Construction and operation of infrastructure", paras. 69-79). The independent experts should have expertise in the designing and construction of similar projects. The powers of the independent expert (such as whether the independent expert makes recommendations or issues binding decisions), as well as the circumstances under which the independent expert's advice or decision may be sought by the parties, should be set forth in the project agreement. In some large infrastructure projects, for instance, the advice of the independent expert may be sought by the concessionaire whenever there is a disagreement between the concessionaire and the contracting authority as to whether certain aspects of the design or construction works conform with the applicable specifications or contractual obligations. Referral of a matter to a design inspector or to a supervising engineer, as appropriate, may be particularly relevant in connection with provisions in the project agreement that require prior consent of the contracting authority for certain actions by the concessionaire, such as final authorization for operation of the infrastructure facility (see chap. IV, "Construction and operation of infrastructure", para. 78).

22. Independent experts have been often used for the settlement of technical disputes under construction contracts, and the various mechanisms and procedures developed in the practice of the construction industry may be used, mutatis mutandis, in connection with privately financed infrastructure projects. However, it should be noted that the scope of disputes between the contracting authority and the concessionaire is not necessarily the same as would be the case for disputes that typically arise under a construction contract. This is so because the respective positions of the contracting authority and the concessionaire under the project agreement are not fully comparable with those of the owner and the performer of works under a construction contract. For instance, disputes concerning the amount of payment due to the contractor for the quantities of works actually performed, which are frequent in construction contracts, are not typical for the relations between contracting authority and concessionaire, since the latter does not usually receive payments from the contracting authority for the construction works performed.

(i) Dispute review boards

23. Project agreements for large infrastructure projects often establish permanent boards composed of experts appointed by both parties, possibly with the assistance of an appointing authority, for the purpose of assisting in the settlement of disputes that may arise during the construction and the operational phases (referred to in the *Guide* as "dispute review boards"). Proceedings before a dispute review board can be informal and expeditious, and tailored to suit the characteristics of the dispute that it is called upon to settle. The appointment of a dispute review board may prevent misunderstandings or differences between the parties from developing into formal disputes that would require settlement in arbitral or judicial proceedings. In fact, its effectiveness as a tool for avoiding disputes is one of the special strengths of this procedure, but a dispute review board may also serve as a mechanism to resolve disputes, in particular when the board is given the power to render binding decisions.

24. Under the dispute review board procedure, the parties typically select, at the outset of the project, three experts renowned for their knowledge in the field of the project to constitute the board. These experts may be replaced if the project comprises different stages that may require different expertise (that is, different expertise will be required during the construction of the facility from during the later administration of the public service), and in some large infrastructure projects more than one board has been established. For example, one dispute review board may deal exclusively with disputes regarding matters of a technical nature (e.g. engineering design, fitness of certain technology, compliance with environmental standards) whereas another board may deal with disputes of a contractual or financial nature (regarding, for instance, the amount of compensation due for delay in issuing licences or disagreements on the application of price adjustment formulas). Each board member should be experienced in the particular type of project, including experience in the interpretation and administration of project agreements, and should undertake to remain impartial and independent of the parties. These persons may be furnished with periodic reports on the progress of construction or on the operation of the infrastructure facility, as appropriate, and may be informed immediately of differences arising between the parties. They may meet with the parties, either at regular intervals or when the need arises, to consider differences that have arisen and to suggest possible ways of resolving those differences.

25. In their capacity as agents to avert disputes, the members of the board may make periodic visits to the project site, meet with the parties and keep informed of the progress of the work. These meetings help identify any potential conflicts early, before they start festering and turn into full-fledged disputes. When potential conflicts are detected, the board proposes solutions, which, given the expertise and prestige of its members, are likely to be accepted by the parties. Referral of a dispute triggers an evaluation by the board, which is done in an informal manner, typically by discussion with the parties during a regular site visit. The board controls the discussion, but each party is given a full opportunity to state its views, and the dispute review board is free to ask questions and to request documents and other evidence. The advantages of conducting hearings at the job site, soon after the events have occurred and before adversarial positions have hardened, are obvious. The board then meets privately and seeks to formulate a recommendation or a decision. If the parties do not accept these proposals and disputes do arise, the board, if authorized to do so by the parties, is in a unique position to solve them expeditiously because of its familiarity with the problems and contractual documents.

26. Given their usually long duration, many circumstances relevant to the execution of privately financed infrastructure projects may change before the end of the concession term. While the impact of some changes may be

automatically covered in the project agreement (see chap. IV, "Construction and operation of infrastructure", paras. 126-130) there are changes that might not lend themselves easily to inclusion in an automatic adjustment mechanism or that the parties may prefer to exclude from such a mechanism. It is therefore important for the parties to establish mechanisms for dealing with disputes that may arise in connection with changing circumstances. This is of particular significance for the operational phase of the project. Where the parties have agreed on rules that allow a revision of the terms of the project agreement following certain circumstances, the question may arise as to whether those circumstances have occurred and, if so, how the contractual terms should be changed or supplemented. With a view to facilitating a resolution of possible disputes and avoiding a stalemate in case the parties are unable to agree on a contract revision, it is advisable for the parties to clarify whether and to what extent certain contractual terms may be changed or supplemented by the dispute review board. It may be noted, in this context, that the parties might not always be able to rely on an arbitral tribunal or a domestic court for that purpose. Indeed, under some legal systems, courts and arbitrators are not competent to change or supplement contractual terms. Under other legal systems, courts and arbitrators may do so only if they are expressly so authorized by the parties. Under yet other legal systems, arbitrators may do so but courts may not.

27. The law governing arbitral or judicial proceedings may determine the extent to which the parties may authorize arbitrators or a court to review a decision of the dispute review board. Excluding such review has the advantage that the decision of the dispute review board would be immediately final and binding. However, permitting such a review gives the parties greater assurance that the decision will be correct. Early clauses on dispute review boards did not provide that their recommendations would become binding if not challenged in arbitral or judicial proceedings. In practice, however, the combination of the persuasive force of unanimous recommendations by independent experts agreed by the parties has led both contracting authorities and project companies to accept the recommendations voluntarily rather than litigate. Recent contract provisions on dispute review boards usually provide that a decision of the board, while not immediately binding on the parties, becomes binding unless one or both parties refer the dispute to arbitration or initiate judicial proceedings within a specified period of time. Apart from avoiding potentially protracted litigation, the parties often take into account the potential difficulty of overcoming what might be regarded by the court or arbitral tribunal as a powerful recommendation, inasmuch as it had been made by independent experts familiar with the project from the outset and was based on contemporaneous observation of the project prior to, and at the time of, the dispute having first arisen.

28. Although this occurs very rarely, the parties may agree to make the board's decision final and binding. It should be noted, however, that despite the parties' agreement to be bound by the board's decision, under many legal systems, the decision by the dispute review board, while binding as a contract, may not be enforceable in a summary proceeding, such as a proceeding for the enforcement of an arbitral award, since it does not have the status of an arbitral award. If the parties contemplate providing for proceedings before a dispute review board, it will be necessary for them to settle various aspects of those proceedings in the project agreement. It would be desirable for the project agreement to delimit as precisely as possible the authority conferred upon the dispute review board. With regard to the nature of their functions, the project agreement might authorize the dispute review board to make findings of fact and to order interim measures. It mcy specify the functions to be performed by the dispute review board and the type of issues with which they may deal. If the parties are permitted to initiate arbitral or judicial proceedings within a specified period of time after the decision is rendered, the parties might specify that findings of fact made by a dispute review board are to be regarded as conclusive in arbitral or judicial proceedings. The project agreement might also obligate the parties to implement a decision by the dispute review board concerning interim measures or a decision on the substance of specified issues; if the parties fail to do so, they will be considered as having failed to perform a contractual obligation. Regarding the duration of the board's functions, the project agreement may provide that the board will continue to function for a certain period beyond the expiry or termination of the project agreement, in order to deal with disputes that may arise at that stage (for example, disputes as to the condition of and compensation due for assets handed over to the contracting authority).

(j) Non-binding arbitration

29. This procedure is sometimes used when less adversarial methods such as facilitated negotiation, conciliation or dispute review board procedures have been unsuccessful. Non-binding arbitration is conducted in the same manner as binding arbitration, and the same rules may be used except that the procedure ends with a recommendation. The procedure contemplates that the parties will proceed directly to litigation if the dispute is still unresolved under non-binding arbitration. Those who choose this procedure do so *(a)* if they have reservations about the binding nature of arbitration; or *(b)* as an incentive to avoid both arbitration and litigation, arbitration because it would seem redundant to go through the same procedure twice and litigation because of its length and cost.

(k) Arbitration

30. In recent years, arbitration has been used increasingly for settling disputes arising under privately financed infrastructure projects. Arbitration is typically used both for the settlement of disputes that arise during the construction or operation of the infrastructure facility and for the settlement of disputes related to the expiry or termination of the project agreement. Arbitration is preferred by private investors and lenders, in particular foreign ones, since arbitral proceedings may be structured by the parties so as to be less formal than judicial proceedings and better suited to the needs of the parties and to the specific features of the disputes likely to arise under the project agreement. The parties can choose as arbitrators persons who have expert knowledge of the particular type of project. They may choose the place where the arbitral proceedings are to be conducted. They can also choose the language or languages

to be used in the arbitral proceedings. Arbitral proceedings may be less disruptive of business relations between the parties than judicial proceedings. The proceedings and arbitral awards can be kept confidential, while judicial proceedings and decisions usually cannot. Furthermore, the enforcement of arbitral awards in countries other than the country in which the award was rendered is facilitated by the wide acceptance of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards of 1958.[2]

31. With regard, in particular, to infrastructure projects involving foreign investors, it may be noted that a framework for the settlement of disputes between the contracting authority and foreign companies participating in a project consortium may be provided through adherence to the Convention on the Settlement of Investment Disputes between States and Nationals of Other States.[3] The Convention, which has thus far been adhered to by 131 States, established the International Centre for the Settlement of Investment Disputes (ICSID). ICSID is an autonomous international organization with close links to the World Bank. ICSID provides facilities for the conciliation and arbitration of disputes between member countries and investors who qualify as nationals of other member countries. Recourse to ICSID conciliation and arbitration is voluntary. However, once the parties to a contract or dispute have consented to arbitration under the ICSID Convention, neither can withdraw its consent unilaterally. All ICSID members, whether or not parties to the dispute, are required by the Convention to recognize and enforce ICSID arbitral awards. The consent of the parties to ICSID arbitration may be given with regard to an existing dispute or with respect to a defined class of future disputes. The consent of the parties need not, however, be expressed in relation to a specific project; a host country might in its legislation on the promotion of investment offer to submit disputes arising out of certain classes of investment to the jurisdiction of ICSID and the investor might give its consent by accepting the offer in writing.

32. Bilateral investment agreements may also provide a framework for the settlement of disputes between the contracting authority and foreign companies. In these treaties, the host State typically extends to investors that qualify as nationals of the other signatory State a number of assurances and guarantees (see chap. VII, "Other relevant areas of law", paras. 4-6) and expresses its consent to arbitration, for instance, by referral to ICSID or to an arbitral tribunal applying the UNCITRAL Arbitration Rules.

(i) Sovereign immunity

33. When arbitration is allowed and agreed upon between the parties to the project agreement, the implementation of an agreement to arbitrate may be frustrated or hindered if the contracting authority is able to plead sovereign immunity, either as a bar to the commencement of arbitral proceedings or as a defence against recognition and enforcement of the award. Sometimes the law on this matter is not clear, which may raise concerns with the interested parties (for instance, the concessionaire, project promoters and lenders) that an agreement to arbitrate might not be effective. In order to address such possible concerns, it is advisable to review the law on this topic and to indicate the extent to which the contracting authority may raise a plea of sovereign immunity.

34. In addition, a contracting authority against which an award has been issued may raise a plea of immunity from execution against public property. There is a diversity of approaches to the question of sovereign immunity from execution. For example, under some national laws immunity does not cover governmental entities when engaged in commercial activities. In other national laws a link is required between the property to be attached and the claim in that, for example, immunity cannot be pleaded in respect of funds allocated for economic or commercial activity governed by private law upon which the claim is based or that immunity cannot be pleaded with respect to assets set aside by the State to pursue its commercial activities. In some countries, it is considered that it is for the Government to prove that the assets to be attached are in non-commercial use.

35. In some contracts involving entities that might plea sovereign immunity, clauses have been included to the effect that the Government waives its right to plead sovereign immunity. Such a consent or waiver might be contained in the project agreement or an international agreement; it may be limited to recognizing that certain property is used or intended to be used for commercial purposes. Such written clauses may be necessary inasmuch as it is not clear whether the conclusion of an arbitration agreement and participation in arbitral proceedings by the governmental entity constitutes an implied waiver of sovereign immunity from execution.

36. The legislator may wish to review its laws on this matter and, to the extent considered advisable, clarify in which areas contracting authorities may not plead sovereign immunity.

(ii) Effectiveness of the arbitration agreement and enforceability of the award

37. The effectiveness of an agreement to arbitrate depends on the legislative regime where the arbitration takes place. If the legislative regime for arbitration in the host country is seen as unsatisfactory, for instance, because it is found to pose unreasonable restrictions on party autonomy, a party might wish to agree on a place of arbitration outside the host country. It is therefore important for the host country to ensure that the domestic legislative regime for arbitration resolves the principal procedural issues in a manner appropriate for international arbitration cases. Such a regime is contained in the UNCITRAL Model Law on International Commercial Arbitration.[4]

[2]See United Nations, *Treaty Series*, vol. 330, No. 4739, p. 38, reproduced in the *Register of Conventions and Other Instruments concerning International Trade Law*; vol. II (United Nations publication, Sales No. E.73.V.3).

[3]United Nations *Treaty Series*, vol. ___, No. 8359, p. 160.

[4]For the report of the United Nations Commission on International Trade Law on the work of its eighteenth session. See *Official Records of the General Assembly, Fortieth Session, Supplement No. 17* (A/40/17), para. 332 and annex I. The General Assembly, in its resolution 40/72 of 11 December 1985, recommended that all States give due consideration to the Model Law on International Commercial Arbitration, in view of the desirability of uniformity of the law of arbitral procedures and the specific needs of international commercial arbitration practice.

38. If the arbitration takes place outside the host country or if an award rendered in the host country would need to be enforced abroad, the effectiveness of the arbitration agreement would also depend on legislation governing the recognition and enforcement of arbitral awards. The Convention on the Recognition and Enforcement of Foreign Arbitral Awards (see para. 30), inter alia, deals with the recognition of an arbitration agreement and the grounds on which the court may refuse to recognize or enforce an award. The Convention is generally regarded as providing an acceptable and balanced regime for the recognition and enforcement of arbitral awards. The fact that the host country is a party to the Convention is likely to be seen as a crucial element in assessing the legal certainty of binding commitments and of the reliability of arbitration as a method for solving disputes by arbitration with parties from the country. It would also facilitate the enforcement abroad of an arbitral award rendered in the host country.

(l) Judicial proceedings

39. As indicated earlier, in some legal systems, pursuant to mandatory rules of a public law nature, the settlement of disputes arising out of project agreements whereby the concessionaire is entrusted with the provision of public services is a matter of the exclusive competence of the domestic judiciary or administrative courts. In some countries, governmental agencies lack the power to agree to arbitration, except under specific circumstances (see paras. 7-9), while in other legal systems the parties have the freedom to choose between judicial and arbitral proceedings.

40. Where it is possible for the parties to choose between judicial and arbitral proceedings, the contracting authority may see reasons for leaving any dispute to be resolved by the courts of the host country. Those courts are familiar with the law of the country, which often includes specific legislation directly applicable to the project agreement. Furthermore, the contracting authority and other governmental agencies of the host country that might be involved in the dispute may prefer local courts because of the familiarity with the court procedures and the language of the proceedings. It may also be considered that, to the extent project agreements involve issues of public policy and the protection of public interest, State courts are in a better position to give them proper effect.

41. However, such a view by the contracting authority may not be shared by prospective investors, financiers and other private parties. These parties may consider that arbitration is preferable to judicial proceedings because arbitration, being to a larger degree subject to the agreement of the parties than judicial proceedings, is in a position to resolve a dispute more efficiently. Private investors, in particular foreign ones, may also be reluctant to submit to the jurisdiction of domestic courts functioning under rules unfamiliar to them. In some countries it has been found that allowing the parties to choose the dispute settlement mechanism helped to attract foreign investment for the development of its infrastructure.

42. In considering whether any dispute should be resolved in judicial proceedings or whether an arbitration agreement should be entered into, where such choice is permitted under the applicable law, factors typically taken into account by the parties include, for example, their confidence that the courts competent to decide a dispute will be unbiased and that the dispute will be resolved without inordinate delay. The efficiency of the national judicial system and the availability of forms of judicial relief that are adequate to disputes that might arise under the project agreement are additional factors to be taken into account. Furthermore, in view of the highly technical and complex issues involved in infrastructure projects, the parties will also consider the implications of using arbitrators selected for their particular knowledge and experience as compared to domestic courts which may lack specific knowledge or experience in handling the technical questions in the area where the dispute arose. Another consideration may be the confidentiality of arbitration proceedings, relative informality of arbitral procedures, and the possibly greater flexibility arbitrators may have in awarding appropriate remedies, all of which may be beneficial for preserving and developing the long-term relationship implicit in project agreements.

C. DISPUTES BETWEEN THE CONCESSIONAIRE AND ITS LENDERS, CONTRACTORS AND SUPPLIERS

43. It is generally accepted in domestic laws that parties to commercial transactions, and in particular international commercial transactions, are free to agree on the forum that will decide in a binding decision any dispute that may arise from those transactions. In international transactions, arbitration has become the preferred method, whether or not it is preceded by, or combined with, conciliation. As to contracts between the concessionaire and the lenders, contractors and suppliers, which invariably form part of privately financed infrastructure projects, in many countries the parties are free to subject disputes to arbitration, to select the place of arbitration and to determine whether or not any arbitration case should be administered by an arbitral institution. These contracts are generally considered commercial agreements to which, as regards dispute settlement clauses, general rules regarding commercial contracts are applicable. Host countries wishing to establish a hospitable legal climate for privately financed infrastructure projects would be well advised to review their laws with respect to these contracts so as to eliminate any uncertainty regarding the freedom of the parties to agree to dispute settlement mechanisms of their choice.

D. DISPUTES BETWEEN THE CONCESSIONAIRE AND ITS CUSTOMERS

44. Depending on the type of project, the concessionaire's customers may include various persons and entities, such as, for example, a government-owned utility company that purchases electricity or water from the concessionaire so as to resell it to the ultimate users; commercial companies, such as airlines or shipping lines contracting for the use of the airport or port; or individual persons paying for the use of a toll road. The considerations and policies regarding contracts with the end-purchasers of the goods or services supplied by the project company may vary according to

who the parties to those contracts are, the conditions under which the services are provided and the applicable regulatory regime.

45. In some countries, public service providers are required by law to establish special simplified and efficient mechanisms for handling claims brought by their customers. Such special regulation is typically limited to certain industrial sectors and applies to purchases of goods or services by customers. Statutory requirements for the establishment of such dispute settlement mechanisms may apply generally to claims brought by any of the concessionaire's customers or may be limited to customers who are individual persons acting in their non-commercial capacity. The concessionaire's obligation may be limited to the establishment of a mechanism for receiving and dealing with complaints by individual consumers. Such mechanisms may include a special facility or department set up within the project company for receiving and handling claims expeditiously, for instance by making available to the customers standard claim forms or toll-free telephone numbers for voicing grievances. If the matter is not satisfactorily resolved, the customer may have the right to file a complaint with a regulatory agency, if any, which in some countries may have the authority to issue a binding decision on the matter. Such mechanisms are often optional for the consumer and typically do not preclude resort by the aggrieved persons to courts.

46. If the customers are utility companies (such as a power distribution company) or commercial enterprises (for instance, a large factory purchasing power directly from an independent producer) who freely choose the services provided by the concessionaire and negotiate the terms of their contracts, the parties would typically settle any disputes by methods usual in trade contracts, including arbitration. Accordingly, there may not be a need for addressing the settlement of these disputes in legislation relating to privately financed infrastructure projects. However, where the concessionaire's customers are government-owned entities, their ability to agree on dispute settlement methods may be limited by rules of administrative law governing the settlement of disputes involving governmental entities. For countries that wish to allow the use of non-judicial methods, including arbitration, for the settlement of disputes between the concessionaire and its government-owned customers, it is important to remove possible legal obstacles and to provide a clear authorization for those entities to agree on dispute settlement methods (see paras. 7-9).

A/CN.9/471/Add.8

Chapter VII. Other relevant areas of law

CONTENTS

A. GENERAL REMARKS

1. The stage of development of the relevant laws of the host country, the stability of its legal system and the adequacy of remedies available to private parties are essential elements of the overall legal framework for privately financed infrastructure projects. By reviewing and, as appropriate, improving its laws in those areas of immediate relevance for privately financed infrastructure projects, the host country will make an important contribution to securing a hospitable climate for private sector investment in infrastructure. Greater legal certainty and a favourable legal framework will translate into a better assessment of country risks by lenders and project sponsors. This will have a positive influence on the cost of mobilizing private capital and reduce the need for governmental support or guarantees (see chap. II, "Project risks and government support", paras. 30-60).

2. Section B points out a few selected aspects of the laws of the host country that, without necessarily dealing directly with privately financed infrastructure projects, may have an impact on their implementation (see paras. 3-52). Section C indicates the possible relevance of a few international agreements for the implementation of privately financed infrastructure projects in the host country (see paras. 53-57).

B. OTHER RELEVANT AREAS OF LAW

3. In addition to issues pertaining to legislation directed specifically towards privately financed infrastructure projects, a favourable legal framework also requires supportive provisions in other areas of legislation. Private investment in infrastructure will be encouraged by the existence of legislation that promotes and protects private investment in economic activities. The following paragraphs pinpoint only a few selected aspects of other fields of law that may have an impact on the implementation of infrastructure projects. The existence of adequate legal provisions in those other fields may facilitate a number of transactions necessary to carry out infrastructure projects and help to reduce the perceived legal risk of investment in the host country.

1. Promotion and protection of investment

4. One matter of particular concern for the project consortia and the lenders is the degree of protection afforded to investment in the host country. Foreign investors in the host country will require assurances that they will be protected from nationalization or dispossession without judicial review and appropriate compensation in accordance with the rules in force in the host country and in accordance with international law. Project promoters will also be concerned about their ability, inter alia, to bring to the country without unreasonable restriction the qualified personnel required to work with the project, to import needed goods and equipment, to gain access to foreign exchange as needed and to transfer abroad or repatriate their profits or sums needed to repay loans that the company has entered into for the purpose of the infrastructure project. In addition to specific guarantees that may be provided by the Government (see chap. II, "Project risks and government support", paras. 45-50), legislation on promotion and protection of investment may play an important role in connection with privately financed infrastructure projects. For countries that already have adequate investment protection legislation, it may be useful to consider expressly extending the protection provided in such legislation to private investment in infrastructure projects.

5. An increasing number of countries have entered into bilateral investment agreements that aim at facilitating and protecting the flow of investment between the contracting parties. Investment protection agreements usually contain provisions concerning the admission and treatment of foreign investment; transfer of capital between the contracting parties (payment of dividends abroad or repatriation of investment, for example); availability of foreign exchange for transfer or repatriation of proceeds of investment; protection from expropriation and nationalization; and settlement of investment disputes. The existence of such an agreement between the host country and the originating country or countries of the project sponsors may play an important role in their decision to invest in the host country. Depending on its terms, such an agreement may reduce the need for assurances or guarantees by the Government geared to individual infrastructure projects. Multilateral treaties may also be a source of investment protection provisions.

6. Moreover, in a number of countries rules aimed at facilitating and protecting the flow of investment (which also include areas such as immigration legislation, import control and foreign exchange rules) are contained in legislation that might not necessarily be based on a bilateral or multilateral treaty

2. Property law

7. It is desirable for the property laws of the host country to reflect acceptable international standards, contain adequate provisions on the ownership and use of land and buildings, as well as movable and intangible property, and ensure the concessionaire's ability to purchase, sell, transfer and license the use of property, as appropriate. Constitutional provisions protecting property rights have been found to be important factors in fostering private investment in many countries.

8. Where the concessionaire owns the land on which the facility is built, it is important that the ownership of the land can be clearly and unequivocally established through adequate registration and publicity procedures. The concessionaire and lenders will need clear proof that ownership of the land will not be subject to dispute. They will therefore be reluctant to commit funds to the project if the laws of the host country do not provide adequate means for ascertaining ownership of the land.

9. It is also necessary to provide effective mechanisms for the enforcement of the property and possessory rights granted to the concessionaire against violation by third parties. Enforcement should also extend to easements and

rights of way that may be needed by the concessionaire for providing and maintaining the relevant service (such as placing of poles and cables on private property to ensure the distribution of electricity) (see chap. IV, "Construction and operation of infrastructure", paras. 30-35).

3. Security interests

10. As indicated earlier (see chap. IV, "Construction and operation of infrastructure", paras. 52-61), security arrangements in privately financed infrastructure projects may be complex and consist of a variety of forms of security, including fixed security over physical assets of the concessionaire (for example, mortgages or charges), pledges of shares of the concessionaire and assignment of intangible assets (receivables) of the project. While the loan agreements are usually subject to the governing law chosen by the parties, the laws of the host country will in most cases determine the type of security that can be enforced against assets located in the host country and the remedies available.

11. Differences in the type of security or limitations in the remedies available under the laws of the host country may be a cause of concern to potential lenders. It is therefore important to ensure that domestic laws provide adequate legal protection to secured creditors and do not hinder the ability of the parties to establish appropriate security arrangements. Because of the significant differences between legal systems regarding the law of security interests, the *Guide* does not discuss in detail the technicalities of the requisite legislation and the following paragraphs provide only a general outline of the main elements of a modern regime for secured transactions.

12. In some legal systems, security interests can be created in virtually all kinds of assets, including intellectual property, whereas in other systems security interests can only be created in a limited category of assets, such as land and buildings. In some countries, security interests can be created over assets that do not yet exist (future assets) and security may be taken over all of a company's assets, while allowing the company to continue to deal with those assets in the ordinary course of business. Some legal systems provide for a non-possessory security interest, so that security can be taken over assets without taking actual possession of the assets; in other systems, as regards those assets which are not subject to a title registration system, security may only be taken by physical possession or constructive possession. Under some systems, enforcement of the security interest can be undertaken without court involvement, whereas in other systems it may only be enforced through court procedures. Some countries provide enforcement remedies that not only include sale of the asset, but also enable the secured lender to operate the asset either by taking possession or appointing a receiver; in other countries, judicial sale may be the primary enforcement mechanism. Under some systems, certain types of security will rank ahead of preferential creditors, whereas in others the preferential creditors rank ahead of all types of security. In some countries, creation of a security interest is cost-efficient, with minimal fees and duties payable, whereas in other countries it can be costly. In some countries, the value of the amount of security taken may be unlimited, while in others the value of security cannot be excessive in comparison with the debt owed. Some legal systems impose obligations on the secured lender on enforcement of the security, such as the obligation to take steps ensuring that assets will be sold at fair market value.

13. Basic legal protection may include provisions ensuring that fixed security (such as a mortgage) is a registrable interest and that, once such security is registered in the register of title or other public register, any purchaser of the property to which the security attaches should take the property subject to such security. This may be difficult, since in many countries no specialized registers of title exist. Furthermore, security should be enforceable against third parties, which may require that they have the nature of a property right and not a mere obligation, and should entitle the person receiving security to a sale, in enforcement proceedings, of the assets taken as security.

14. Another important aspect concerns the flexibility given to the parties to define the assets that are given as security. In some legal systems, broad freedom is given to the parties in the definition of assets that may be given as security. In some legal systems, it is possible to create security that covers all the assets of an enterprise, making it possible to sell the enterprise as a going concern, which may enable an enterprise in financial difficulties to be rescued while increasing the recovery of the secured creditor. Other legal systems, however, allow only the creation of security that attaches to specific assets and do not recognize security covering the entirety of the debtor's assets. There may also be limitations on the debtor's ability to trade in goods given as security. The existence of limitations and restrictions of this type makes it difficult or even impossible for the debtor to create security over generically described assets or over assets traded in the ordinary course of its business.

15. Given the long-term nature of privately financed infrastructure projects, the parties may wish to be able to define the assets that are given as security specifically or generally. They may also wish such security to cover present or future assets and assets that might change during the life of the security. It may be desirable to review existing provisions on security interests with a view to including provisions enabling the parties to agree on suitable security arrangements.

16. Thus far, no comprehensive uniform regime or model for the development of domestic security laws has been developed by international intergovernmental bodies. Governments might be advised, however, to take account of various efforts being undertaken in different organizations. A model for the development of modern legislation on security interests is offered in the Model Law on Secured Transactions, which was prepared by the European Bank for Reconstruction and Development (EBRD) to assist legislative reform efforts in central and eastern European countries. Besides general provisions on who can create and who can receive a security right and general rules concerning the secured debts and the charged property, the EBRD Model Law on Secured Transactions covers other matters, such as the creation of security rights, the interests

of third parties, enforcement of security and registration proceedings.

[*Note for the Commission: Appropriate reference will be made to the draft convention on assignment in receivables financing developed by the Working Group on International Contract Practices, as well as to other international initiatives (such as the draft model inter-American law on secured transactions currently being considered by the Organization of American States in the context of preparations for the Sixth Inter-American Conference on Private International Law and the UNIDROIT draft convention on international interests in mobile equipment).*]

4. Intellectual property law

17. Privately financed infrastructure projects frequently involve the use of new or advanced technologies protected under patents or similar intellectual property rights. They may also involve the formulation and submission of original or innovative solutions, which may constitute the proponent's proprietary information under copyright protection. Therefore, private investors, national and foreign, bringing new or advanced technology into the host country or developing original solutions will need to be assured that their intellectual property rights will be protected and that they will be able to enforce those rights against infringements, which may require the enactment of criminal law provisions designed to combat infringements of intellectual property rights.

18. A legal framework for the protection of intellectual property may be provided by adherence to international agreements regarding the protection and registration of intellectual property rights. It would be desirable to strengthen the protection of intellectual property rights in line with such instruments as the Paris Convention for the Protection of Industrial Property of 1883.[1] The Convention applies to industrial property in the widest sense, including inventions, marks, industrial designs, utility models, trade names, geographical indications and the repression of unfair competition. The Convention provides that, as regards the protection of industrial property, each contracting State must grant national treatment. It also provides for the right of priority in the case of patents, marks and industrial designs and establishes a few common rules that all the contracting States must follow in relation to patents, marks, industrial designs, trade names, indications of source, unfair competition and national administrations. A framework for further international patent protection is provided under the Patent Cooperation Treaty of 1970, which makes it possible to seek patent protection for an invention simultaneously in each of a large number of countries by filing an international patent application. In some countries, international standards are supplemented by legislation aimed at affording legal protection to new technological developments, such as legislation that protects intellectual property rights in computer software and computer hardware design.

19. Other important instruments providing international protection of industrial property rights are the Madrid Agreement Concerning the International Registration of Marks of 1891,[2] the Protocol Relating to the Madrid Agreement of 1989 and the Common Regulations under the Madrid Agreement and the Protocol Relating thereto of 1998. The Madrid Agreement provides for the international registration of marks (both trademarks and service marks) at the International Bureau of the World Intellectual Property Organization (WIPO). International registration of marks under the Madrid Agreement has effect in several countries, potentially in all the contracting States (except the country of origin). Furthermore, the Trademark Law Treaty of 1994 simplifies and harmonizes procedures for the application for registration of trademarks, changes after registration and renewal.

20. In the area of industrial designs, the Hague Agreement Concerning the International Deposit of Industrial Designs of 1925[3] provides for the international deposit of industrial designs at the International Bureau of WIPO. The international deposit has, in each of the contracting States designated by the applicant, the same effect as if all the formalities required by the domestic law for the grant of protection had been complied with by the applicant and as if all administrative acts required to that end had been accomplished by the office of that country.

21. The most comprehensive multilateral agreement on intellectual property to date is the Agreement on Trade-Related Aspects of Intellectual Property Rights (the "TRIPS Agreement") which was negotiated under the auspices of the World Trade Organization (WTO) and came into effect on 1 January 1995. The areas of intellectual property that it covers are copyright and related rights (that is, the rights of performers, producers of sound recordings and broadcasting organizations); trademarks, including service marks; geographical indications, including appellations of origin; industrial designs; patents, including the protection of new varieties of plants; the layout-designs of integrated circuits; and undisclosed information, including trade secrets and test data. In respect of each of the main areas of intellectual property covered by it, the TRIPS Agreement sets out the minimum standards of protection to be provided by each contracting party by requiring, first, compliance with the substantive obligations, inter alia, of the Paris Convention in its most recent version. The main substantive provisions of the Paris Convention are incorporated by reference and thus become obligations under the TRIPS Agreement. The TRIPS Agreement also adds a substantial number of additional obligations on matters where the pre-existing conventions on intellectual property are silent or were seen as being inadequate. In addition to that, the Agreement lays down certain general principles applicable to all procedures for the enforcement of intellectual property rights. Furthermore, the TRIPS Agreement contains provisions on civil and administrative procedures and

[1] As revised at Brussels on 14 December 1900, at Washington, D.C., on 2 June 1911, at The Hague on 6 November 1925, at London on 2 June 1934, at Lisbon on 31 October 1958 and at Stockholm on 14 July 1967 and as amended on 2 October 1979.

[2] As revised at Brussels on 14 December 1900, at Washington, D.C., on 2 June 1911, at The Hague on 6 November 1925, at London on 2 June 1934, at Nice on 15 June 1957 and at Stockholm on 14 July 1967.

[3] With the Additional Act of Monaco of 1961, the Complementary Act of Stockholm of 1967 as amended on 28 September 1979 and the Regulations Under the Hague Agreement Concerning the International Deposit of Industrial Designs of 1998.

remedies, provisional measures, special requirements related to border measures and criminal procedures, which specify, in a certain amount of detail, the procedures and remedies that must be available so that intellectual property rights can effectively be enforced by their holders.

5. Rules and procedures on compulsory acquisition of private property

22. Where the Government assumes responsibility for providing the land required for the implementation of the project, that land may be either purchased from its owners or, if necessary, compulsorily acquired against the payment of adequate compensation by procedures sometimes referred to as "compulsory acquisition" or "expropriation" (see chap. IV, "Construction and operation of infrastructure", paras. 20-22). Many countries have legislation governing compulsory acquisition of private property and that legislation would probably apply to the compulsory acquisition of property required for privately financed infrastructure projects.

23. Compulsory acquisition may be carried out in judicial or administrative proceedings or may be effected by an ad hoc legislative act. In most cases, the proceedings involve both administrative and judicial phases, which may be lengthy and complex. The Government may thus wish to review existing provisions on compulsory acquisition for reasons of public interest with a view to assessing their adequacy to the needs of large infrastructure projects and to determining whether such provisions allow quick and cost-effective procedures, while affording adequate protection to the rights of the owners. To the extent permitted by law, it is important to enable the Government to take possession of the property without unnecessary delay, so as to avoid increased project costs.

6. Rules on government contracts and administrative law

24. In many legal systems belonging to or influenced by the tradition of civil law, the provision of public services may be governed by a body of law known as "administrative law", which regulates a wide range of governmental functions. Such systems operate under the principle that the Government can exercise its powers and functions either by means of an administrative act or an administrative contract. It is also generally understood that, alternatively, the Government may enter into a private contract, subject to the law governing private commercial contracts. The differences between the two types of contract may be significant.

25. Under the concept of the administrative contract, the freedom and autonomy enjoyed by the parties to a private contract are subordinate to the public interest. In some legal systems, the Government has the right to modify the scope and terms of administrative contracts or even terminate them for reasons of public interest, usually subject to compensation for loss sustained by the private contracting party (see chap. V, "Duration, extension and termination of the project agreement", ___). Additional rights might include extensive monitoring and inspection rights, as well as the right to impose sanctions on the private operator for failure to perform. This is often balanced by the requirement that other changes may be made to the contract as may be necessary to restore the original financial equilibrium between the parties and to preserve the contract's general value for the private contracting party (see chap. IV, "Construction and operation of infrastructure", paras. 126-130). In some legal systems, disputes arising out of government contracts are subject to the exclusive jurisdiction of special tribunals dealing solely with administrative matters, which in some countries are separate from the judicial system (see chap. VI, "Settlement of disputes", ___).

26. The existence of a special legal regime applicable to infrastructure operators and public service providers is not limited to the legal systems referred to above. Although in other legal systems influenced by the tradition of common law no such categorical distinction is made between administrative contracts and private contracts, similar consequences may be achieved by different means. While under such systems of law it is frequently held that the rule of law is best maintained by subjecting the Government to ordinary private law, it is generally recognized that the administration cannot by contract fetter the exercise of its sovereign functions. It cannot hamper its future executive authority in the performance of those governmental functions which affect the public interest. Under the doctrine of sovereign acts, which is upheld in some common law jurisdictions, the Government as contractor is excused from the performance of its contracts if the Government as sovereign enacts laws, regulations or orders in the public interest that prevent that performance. Thus, the law may permit a public authority to interfere with vested contractual rights. Usually such action is limited so that the changes cannot be of such magnitude that the other party could not fairly adapt to them. In those circumstances, the private party is ordinarily entitled to some sort of compensation or equitable adjustment. In anticipation of such possibilities, in some countries a standard "changes" clause is included in a governmental contract that enables the Government to alter the terms on a unilateral basis or that provides for changes as a result of an intervening sovereign act.

27. Special prerogatives for governmental agencies are justified in those legal systems by reasons of public interest. It is however recognized that special governmental prerogatives, in particular the power to alter the terms of contracts unilaterally, may, if improperly used, adversely affect the vested rights of government contractors. For this reason, countries with a well-established tradition of private participation in infrastructure projects have developed a series of control mechanisms and remedies to protect government contractors against arbitrary or improper acts by public authorities, such as access to impartial dispute settlement bodies and full compensation schemes for governmental wrongdoing. Where protection of this nature is not afforded, rules of law providing public authorities with special prerogatives may be regarded by potential investors as an imponderable risk, which may discourage them from investing in particular jurisdictions. For this reason, some countries have reviewed their legislation on government contracts so as to provide the degree of protection needed to foster private investment and remove those provisions which gave rise to concern about the long-term contractual stability required for infrastructure projects.

7. Private contract law

28. The laws governing private contracts play an important role in connection with contracts entered into by the concessionaire with subcontractors, suppliers and other private parties. The domestic law on private contracts should provide adequate solutions to the needs of the contracting parties, including flexibility in devising the contracts needed for the construction and operation of the infrastructure facility. Apart from some essential elements of adequate contract law, such as general recognition of party autonomy, judicial enforceability of contract obligations and adequate remedies for breach of contract, the laws of the host country may create a favourable environment for privately financed infrastructure projects by facilitating contractual arrangements likely to be used in those projects. An adequate set of rules of private international law is also important, given the likelihood that contracts entered into by the concessionaire will include some international elements.

29. Where new infrastructure is to be built, the concessionaire may need to import large quantities of supplies and equipment. Greater legal certainty for such transactions will be ensured if the laws of the host country contain provisions specially adapted to international sales contracts. A particularly suitable legal framework may be provided by adherence to the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980)[4] or other international instruments dealing with specific contracts, such as the UNIDROIT Convention on International Financial Leasing (Ottawa, 1988),[5] drawn up by the International Institute for the Unification of Private Law (UNIDROIT).

8. Company law

30. In most projects involving the development of a new infrastructure, the project promoters will establish the project company as a separate legal entity in the host country (see chap. IV, "Construction and operation of infrastructure", paras. 12-18). It is recognized that the project company may take various forms in different countries, which may not necessarily entail a corporation. As in most cases it is a corporate form that is selected, it is particularly important for the host country to have adequate company laws with modern provisions on essential matters such as establishment procedures, corporate governance, issuance of shares and their sale or transfer, accounting and financial statements and protection of minority shareholders. Furthermore, the recognition of the investors' ability to establish separate entities to serve as special-purpose vehicles for raising financing and disbursing funds may facilitate the closing of project finance transactions (see chap. IV, "Construction and operation of infrastructure", para. 59).

31. Although various corporate forms may be used, a common characteristic is that the concessionaire's owners (or shareholders) will require that their liability be limited to the value of their shares in the company's capital. If it is intended that the concessionaire will offer shares to the public, limited liability will be necessary, as the prospective investors will usually only purchase those shares for their investment value and will not be closely involved in the operation of the concessionaire. It is therefore important that the laws of the host country provide adequately for the limitation of liability of shareholders. Furthermore, adequate provisions governing the issuance of bonds, debentures or other securities by commercial companies will enable the concessionaire to obtain funds from investors on the security market, thus facilitating the financing of certain infrastructure projects.

32. Legislation should establish the responsibilities of directors and administrators of the concessionaire, including the basis for criminal responsibility. It can also set out provisions for the protection of third parties affected by any breach of corporate responsibility. Modern company laws often contain specific provisions regulating the conduct of managers so as to prevent conflicts of interest. Provisions of this type require that managers act in good faith in the best interest of the company and do not use their position to foster their own or any other person's financial interests to the detriment of the company. Provisions intended to curb conflicts of interest in corporate management may be particularly relevant in connection with infrastructure projects, where the concessionaire may wish to engage its own shareholders, at some stage of the project, to perform work or provide services in connection with it (see chap. IV, "Construction and operation of infrastructure", paras. 100 and 101).

33. It is important for the law to regulate adequately the decision-making process both for meetings of the shareholders and meetings of management organs of the company (the board of directors or supervisory board, for example). Protection of shareholders' rights and, in particular, protection for minority shareholders from abuse by controlling or majority shareholders are important elements of modern company laws. Mechanisms for the settlement of disputes among shareholders are also critical. It is useful to recognize the right of the shareholders to regulate a number of additional matters concerning the management of the concessionaire through agreements among themselves or through management contracts with the directors of the concessionaire.

9. Tax law

34. In addition to possible tax incentives that may be generally available in the host country or that may be specially granted to privately financed infrastructure projects (see chap. II, "Project risks and government support", paras. 51-54), the general taxation regime of the host country plays a significant role in the investment decisions of private companies. Beyond an assessment of the impact of taxation in the project cost and the expected margin of profit, private investors consider questions such as the

[4] *Official Records of the United Nations Conference on Contracts for the International Sale of Goods, Vienna, 10 March-1 April 1980* (United Nations publication, Sales No. E.82.V.5), part I.

[5] *Acts and Proceedings of the Diplomatic Conference for the adoption of the draft Unidroit Conventions on International Factoring and International Financial Leasing, Ottawa, 9-28 May 1988*, vol. I.

overall transparency of the domestic taxation system, the degree of discretion exercised by taxation authorities, the clarity of guidelines and instructions issued to taxpayers and the objectivity of criteria used to calculate tax liabilities. This may be a complex matter, in particular in those countries where the authority to establish or increase taxes or to enforce tax legislation has been decentralized.

35. Privately financed infrastructure projects are typically highly leveraged and require a predictable cash flow. For that reason, it is crucial for all potential tax implications to be readily assessable throughout the life of the project. Unanticipated changes in the taxes that reduce that cash flow can have serious consequences for the project. In some countries, the Government is authorized to enter into agreements with the investors for the purpose of guaranteeing that the cash flow of the project will not be adversely affected by unexpected increases in taxation. Such arrangements are sometimes referred to as "tax stabilization agreements". However, the Government may be restrained, by constitutional law or for political reasons, from providing this type of guarantee, in which case the parties may agree on compensation or contractual revision mechanisms for dealing with cost increases due to tax changes (see also chap. IV, "Construction and operation of infrastructure", paras. 122-125).

36. Most national tax regimes fall into one of three general categories. One approach is worldwide taxation with credits, in which all income earned anywhere is taxed in the home country and double taxation is avoided through the use of a foreign tax credit system; home country taxes are reduced by the amount of foreign taxes already paid. If this approach is used by an investor's home country, the investor's tax liability can be no less than it would be at home. Under a different taxation approach, the foreign income that has already been subject to foreign tax is exempt from taxation by the home country of the investor. Under a territorial approach, foreign income is exempt from home country taxation altogether. Investors in home countries that use the latter two systems of taxation would benefit from tax holidays and lower tax rates in the host country, but such tax relief would offer no incentive to an investor located in a tax haven.

37. The parties involved in the project may have different concerns over potential tax liability. Investors are usually concerned about the taxation of profits earned in the host country, taxation on payments made to contractors, suppliers, investors and lenders, and tax treatment of any capital gains (or losses) when the concessionaire is wound up. Investors may find that payments used to reduce taxes under their home country regime (such as payments for interest on borrowed funds, investigation costs, bidding costs and foreign exchange losses) may not be available in the host country, or vice versa. Since foreign tax credits are only allowed for foreign income taxes, investors need to ensure that any income tax paid in the host country satisfies the definition of income tax of their own country's taxing authority. Similarly, the project company in the host country may be treated for tax purposes as a different type of entity in the home country. In projects where the assets become public property, this may preclude deductions for depreciation under the laws of the home country.

38. One particular problem of privately financed infrastructure projects involving foreign investment is the possibility that foreign companies participating in a project consortium may be exposed to double taxation, that is, taxation of profits, royalties and interests in their own home countries as well as in the host country. The timing of tax payments and requirements to pay withholding taxes can also pose problems. A number of countries have entered into bilateral agreements to eliminate or at least reduce the negative effects of double taxation and the existence of such agreements between the host country and the home countries of the project sponsors often plays a role in their tax considerations.

39. Ultimately, it is the cumulative effect of all taxes combined that needs to be taken into consideration. For example, there may be taxes imposed by more than one level of taxing authority; in addition to taxation by the national Government, the concessionaire may also face municipal or provincial taxes. There may also be certain levies other than income taxes, which often are due and payable before the concessionaire has earned any revenues. These include sales taxes, sometimes referred to as "turnover taxes", value-added taxes, property taxes, stamp duties and import duties. Sometimes special provisions can be made to offer relief from these payments as well.

10. Accounting rules and practices

40. In several countries, companies are required by law to follow internationally acceptable standard accounting practices and retain the services of professional accountants or accounting auditors. Among the reasons for this is that the adoption of standard accounting practices is a measure taken to achieve uniformity in the valuation of businesses. In connection with the selection of the concessionaire, the use of standard accounting practices may also facilitate the task of evaluating the financial standing of bidders in order to determine whether they meet the pre-selection criteria required by the contracting authority (see chap. III, "Selection of the concessionaire", paras. 38-40). Standard accounting practices are also essential for carrying out audits of the profits of companies, which may be required for the application of tariff structures and the monitoring of the concessionaire's performance by the regulatory body (see chap. IV, "Construction and operation of infrastructure", paras. 39-46).

41. Special accounting rules for infrastructure operators have also been introduced in some countries to take into account the particular revenue profile of infrastructure projects. Projects involving the construction of infrastructure facilities, in particular roads and other transportation facilities, are typically characterized by a relatively short investment period, with high financial cost and no revenue stream, followed by a longer period with increasing revenue and decreasing financial cost and, under normal circumstances, stable operating costs. Accordingly, if traditional accounting rules were applied, the particular financial structure of such projects would need to be recorded in the project company's accounts as a period of continuous negative results followed by a long period of net profit. This would not only have negative conse-

quences, for instance, for the project company's credit rating during the construction phase, but might also result in a disproportionate tax debt during the operational phase of the project. In order to avoid such a distortion, some countries have adopted special accounting rules for companies undertaking infrastructure projects that take into account the fact that the financial results of privately financed infrastructure projects may only become positive on a medium-term basis. Those special rules typically authorize infrastructure developers to defer part of the financial cost accrued during the deficit phase to the subsequent financial years, in accordance with financial schedules provided in the project agreement. However, the special accounting rules are typically without prejudice to other rules of law that may prohibit the distribution of dividends during financial years closed with negative results.

11. Environmental protection

42. Environmental protection encompasses a wide variety of issues, ranging from handling of wastes and hazardous substances to relocation of persons displaced by large land-use projects. It is widely recognized that environmental protection is a critical prerequisite to sustainable development. Environmental protection legislation is likely to have a direct impact on the implementation of infrastructure projects at various levels, and environmental matters are among the most frequent causes of disputes. Environmental protection laws may include various requirements, such as the consent by various environmental authorities, evidence of no outstanding environmental liability, assurances that environmental standards will be maintained, commitments to remedy environmental damage and notification requirements. These laws often require prior authorization for the exercise of a number of business activities, which may be particularly stringent for some types of infrastructure (for instance, waste water treatment, waste collection, the coal-fired power sector, power transmission, roads and railways).

43. It is therefore advisable to include in legislation measures that make obligations arising from environmental laws transparent. It is important to ensure the highest possible degree of clarity in provisions concerning the tests that may be applied by the environmental authorities, the documentary and other requirements to be met by the applicants, the conditions under which licences are to be issued and the circumstances that justify the denial or withdrawal of a licence. Particularly important are provisions that guarantee the applicant's access to expeditious appeals procedures and judicial recourse, as appropriate. It may also be advisable to ascertain to the extent possible, prior to the final award of the project, whether the conditions for obtaining the required environmental licences are met. In some countries, special public authorities or advocacy groups may have the right to institute legal proceedings to seek to prevent environmental damage, which may include the right to seek the withdrawal of a licence deemed to be inconsistent with applicable environmental standards. In some of those countries, it has been found useful to involve representatives of the public in the proceedings that lead to the issuance of environmental licences. The legislation may also establish the range of penalties that may be imposed and specify the parties that may be held responsible for the damage.

44. Adhering to treaties relating to the protection of the environment may help to strengthen the international regime of environmental protection. A large number of international instruments have been developed in the past decades to establish common international standards. These include the following: Agenda 21[6] and the Rio Declaration on Environment and Development,[7] adopted by the United Nations Conference on Environment and Development in 1992; the World Charter for Nature (General Assembly resolution 37/7, annex); the Basel Convention on the Control of Transboundary Movement of Hazardous Wastes and Their Disposal of 1989; the Convention on Environmental Impact Assessment in a Transboundary Context of 1991; and the Convention on the Protection and Use of Transboundary Watercourses and International Lakes of 1992.

12. Consumer protection laws

45. A number of countries have special rules of law on consumer protection. Consumer protection laws vary greatly from country to country, both in the way they are organized and in their substance. Nevertheless, consumer protection laws often include provisions such as favourable time limits for asserting claims and enforcing contractual rights; special rules for the interpretation of contracts whose terms are not usually negotiated with the consumer (sometimes referred to as "adhesion contracts"); extended warranties in favour of consumers; special termination rights; access to simplified dispute settlement instances (see also chap. VI, "Settlement of disputes", ___) or other protective measures.

46. From the concessionaire's perspective, it is important to consider whether the host country's laws on consumer protection may limit or hinder the concessionaire's ability to enforce, for instance, its right to obtain payment for the services provided, to adjust prices or to discontinue services to customers who breach essential terms of their contracts or violate essential conditions for the provision of the services.

13. Insolvency law

47. The insolvency of an infrastructure operator or public service provider raises a number of issues that have led some countries to establish special rules to deal with such situations, including rules that enable the contracting authority to take the measures required to ensure the continuity of the project (see chap. V, "Duration, extension and termination of the project agreement", ___). The continuity in the provision of the service may be achieved by means of a legal framework that allows for the rescue of enterprises facing financial difficulties, such as reorganization and similar proceedings. In the event that bankruptcy proceedings become inevitable, the secured lenders will be specially concerned about provisions concerning secured claims, in particular as to whether secured creditors may

[6]Report of the United Nations Conference on Environment and Development, Rio de Janeiro, 3-14 June 1992 (United Nations publication, Sales No. E.93.I.8 and corrigenda), vol. I, *Resolutions Adopted by the Conference*, resolution 1, annex II.

[7]Ibid., annex I.

foreclose on the security despite the opening of bankruptcy proceedings, whether secured creditors are given priority for payments made with the proceeds of the security and how claims of secured creditors are ranked. As noted earlier, a substantial portion of the concessionaire's debt takes the form of "senior" loans, with the lenders requiring precedence of payment over payment of the subordinated debt of the concessionaire (see "Introduction and background information on privately financed infrastructure projects", para. 58). The extent to which the lenders will be able to enforce such subordination arrangements will depend on the rules and provisions of the laws of the country that govern the ranking of creditors in insolvency proceedings. The legal recognition of party autonomy on the establishment of contractual subordination of different classes of loans may facilitate the financing of infrastructure projects.

48. Among the issues that the legislation should address are the following: the question of the ranking of creditors; the relationship between the insolvency administrator and creditors; legal mechanisms for reorganization of the insolvent debtor; special rules designed to ensure the continuity of the public service in case of insolvency of the concessionaire; and provisions on avoidance of transactions entered into by the debtor shortly before the opening of the insolvency proceedings.

49. In large infrastructure projects, the insolvency of the project company is likely to involve creditors from more than one country or affect assets located in more than one country. It may therefore be desirable for the host country to have provisions in place that facilitate judicial cooperation, court access for foreign insolvency administrators and recognition of foreign insolvency proceedings. A suitable model that may be used by countries wishing to adopt legislation for that purpose is provided in the UNCITRAL Model Law on Cross-Border Insolvency.

14. Anti-corruption measures

50. The investment and business environment in the host country may also be enhanced by measures to fight corruption in the administration of government contracts. It is particularly important for the host country to take effective and concrete action to combat bribery and related illicit practices, in particular to pursue effective enforcement of existing laws prohibiting bribery.

51. The enactment of laws that incorporate international agreements and standards on integrity in the conduct of public business may represent a significant step in that direction. Important standards are contained in two resolutions of the United Nations General Assembly: resolution 51/59 of 12 December 1996, by which the Assembly adopted the International Code of Conduct for Public Officials, and resolution 51/191 of 16 December 1996, by which it adopted the United Nations Declaration against Corruption and Bribery in International Commercial Transactions. Other important instruments include the Convention on Combating Bribery of Foreign Public Officials in International Business Transactions of 1997, which was negotiated under the auspices of the Organisation for Economic Cooperation and Development.

52. Furthermore, it is important that the rules covering the functioning of contracting authorities and the monitoring of public contracts ensure the required degree of transparency and integrity. Where such rules do not exist, appropriate legislation and regulations should be developed and adopted. Simplicity and consistency, coupled with the elimination of unnecessary procedures that prolong the administrative procedures or make them cumbersome, are additional elements to be taken into consideration in this context.

C. INTERNATIONAL AGREEMENTS

53. In addition to the internal legislation of the host country, privately financed infrastructure projects may be affected by international agreements entered into by the host country. The implications of certain international agreements is discussed briefly below, in addition to other international agreements mentioned throughout the *Legislative Guide*.

1. Membership in multilateral financial institutions

54. Membership in multilateral financial institutions such as the World Bank, the International Development Association, the International Finance Corporation, the Multilateral Investment Guarantee Agency and the regional development banks may have a direct impact on privately financed infrastructure projects in various ways. Firstly, the host country's membership in those institutions is typically a requirement in order for projects in the host country to receive financing and guarantees provided by those institutions. Secondly, the rules on financing and guarantee instruments provided by those institutions typically contain a variety of terms and conditions of direct relevance for the terms of the project agreement and the loan agreements negotiated by the concessionaire (for example, a clause of negative pledge of public assets and provision of counter-guarantees in favour of the multilateral financial institution). Lastly, multilateral financial institutions usually follow a number of policy objectives whose implementation they seek to ensure in connection with projects supported by them (such as adherence to internationally acceptable environmental standards, long-term sustainability of the project beyond the initial concession period and transparency and integrity in the selection of the concessionaire and the disbursement of their loans).

2. General agreements on trade facilitation and promotion

55. A number of multilateral agreements have been negotiated to promote free trade at the global level. The most notable of those agreements have been negotiated under the auspices of the General Agreement on Tariffs and Trade and later WTO. Those agreements may contain general provisions on trade promotion and facilitation of trade in goods (such as a most-favoured-nation clause or prohibition of the use of quantitative restrictions and other discriminatory trade barriers) and on the promotion of fair trade practices (such as prohibition of dumping and limita-

tions on the use of subsidies). Some specific agreements are aimed at the removal of barriers for the provision of services by foreigners in the contracting States or promoting transparency and eliminating discrimination of suppliers in public procurement. Those agreements may be relevant for national legislation on privately financed infrastructure projects that contemplates restrictions on the participation of foreign companies in infrastructure projects or establishes preferences for national entities or for the procurement of supplies on the local market.

3. International agreements on specific industries

56. In the context of the negotiations on basic telecommunications concluded as part of the General Agreement on Trade in Services (GATS), a number of States members of WTO representing most of the world market for telecommunication services have made specific commitments to facilitate trade in telecommunication services. It should be noted that all WTO member States (even those which have not made specific telecommunication commitments) are bound by the general GATS rules on services, including specific requirements dealing with most-favoured-nation treatment, transparency, regulation, monopolies and business practices. The WTO telecommunication agreement adds sector- and country-specific commitments to the overall GATS agreement. Typical commitments cover the opening of various segments of the market, including voice telephony, data transmission and enhanced services, to competition and foreign investment. Legislators of current or prospective WTO member States should thus ensure that the country's telecommunication laws are consistent with the GATS agreement and their specific telecommunication commitments.

57. Another important sector-specific agreement at the international level is the Energy Charter Treaty, concluded at Lisbon on 17 December 1994 and in force since 16 April 1998, which has been enacted to promote long-term cooperation in the energy field. The Treaty provides for various commercial measures, such as the development of open and competitive markets for energy materials and products and the facilitation of transit and access to and transfer of energy technology. Furthermore, the Treaty aims at avoiding market distortions and barriers to economic activity in the energy sector and promotes the opening of capital markets to encourage the flow of capital in order to finance trade in materials and products. The Treaty also contains regulations about investment promotion and protection: equitable conditions for investors, monetary transfers related to investments, compensation for losses due to war, civil disturbance or other similar events and compensation for expropriation.

A/CN.9/471/Add.9

CONSOLIDATED LEGISLATIVE RECOMMENDATIONS

CONTENTS

FOREWORD

Each chapter of the *Guide* contains a set of recommended legislative principles entitled "Legislative Recommendations". The Legislative Recommendations are intended to assist in the establishment of a legislative framework favourable to privately financed infrastructure projects. The Legislative Recommendations contained in the *Guide* are followed by notes which offer an analytical introduction with references to financial, regulatory, legal, policy, and other issues raised in the subject area. The full text of all Legislative Recommendations contained in the *Guide* is reproduced hereafter for ease of reference. The user is advised to read the Legislative Recommendations together with the notes, which provide background information to enhance the understanding of the Legislative Recommendations.

The Legislative Recommendations deal with matters that are important to address in legislation specifically concerned with privately financed infrastructure projects. They do not deal with other areas of law which, as discussed in notes to the Legislative Recommendations, also have an impact on privately financed infrastructure projects. Moreover, the successful implementation of privately financed infrastructure projects typically requires various measures beyond the establishment of an appropriate legislative framework, such as adequate administrative structures and practices, organizational capability, technical expertise, appropriate human and financial resources, and economic stability.

For host countries wishing to promote privately financed infrastructure projects it is recommended that the following principles should be implemented by the law:

I. GENERAL LEGISLATIVE AND INSTITUTIONAL FRAMEWORK

Constitutional and legislative framework (see chap. I, "General legislative and institutional framework", paras. 2-14)

Recommendation 1. The legislative and institutional framework for the implementation of privately financed infrastructure projects should ensure transparency, fairness, and the long-term sustainability of projects. Undesirable restrictions to private sector participation in infrastructure development and operation should be eliminated.

Scope of authority to award concessions (see chap. I, "General legislative and institutional framework", paras. 15-22)

Recommendation 2. The law should identify the public authorities of the host country (including, as appropriate, national, provincial and local authorities) which are empowered to enter into agreements for the implementation of privately financed infrastructure projects.

Recommendation 3. Privately financed infrastructure projects may include concessions for the construction and operation of new infrastructure facilities and systems or the maintenance, modernization, expansion and operation of existing infrastructure facilities and systems.

Recommendation 4. The law should identify the sectors or types of infrastructure in respect of which concessions may be granted.

Recommendation 5. The law should specify the extent to which a concession might extend to the entire region under the jurisdiction of the respective contracting authority, to a geographical subdivision thereof or to a discrete project, and whether it might be awarded with or without exclusivity, as appropriate, in accordance with rules and principles of law, statutory provisions, regulations and policies applying to the sector concerned. Contracting authorities might be jointly empowered to award concessions beyond a single jurisdiction.

Administrative coordination (see chap. I, "General legislative and institutional framework", paras. 23-29)

Recommendation 6. Institutional mechanisms should be established to coordinate the activities of the public authorities responsible for issuing approvals, licences, permits or authorizations required for the implementation of privately financed infrastructure projects in accordance with statutory or regulatory provisions on the construction and operation of infrastructure facilities of the type concerned.

Authority to regulate infrastructure services (see chap. I, "General legislative and institutional framework", paras. 30-53)

Recommendation 7. The authority to regulate infrastructure services should not be entrusted to entities which directly or indirectly provide infrastructure services.

Recommendation 8. Regulatory competence should be entrusted to functionally independent bodies with a sufficient level of autonomy to ensure that their decisions are taken without political interference or inappropriate pressures from infrastructure operators and public service providers.

Recommendation 9. The rules governing regulatory procedures should be published. Regulatory decisions should state the reasons on which they are based and be accessible to interested parties through publication or other means.

Recommendation 10. The law should establish transparent procedures whereby the concessionaire may request a review of regulatory decisions by an independent and impartial body and set forth the grounds on which a request for review may be based and the availability of court review.

Recommendation 11. Where appropriate, special procedures should be established for handling disputes among public service providers concerning alleged violations of laws and regulations governing the relevant sector.

II. PROJECT RISKS AND GOVERNMENT SUPPORT

Project risks and risk allocation (see chap. II, "Project risks and government support", paras. 8-29)

Recommendation 12. No unnecessary statutory or regulatory limitations should be placed upon the contracting authority's ability to agree on an allocation of risks that is suited to the needs of the project.

Government support (see chap. II, "Project risks and government support", paras. 30-60)

Recommendation 13. The law should clearly state which public authorities of the host country may provide financial or economic support to the implementation of privately financed infrastructure projects and which types of support they are authorized to provide.

III. SELECTION OF THE CONCESSIONAIRE

General considerations (see chap. III, "Selection of the concessionaire", paras. 1-33)

Recommendation 14. The law should provide for the selection of the concessionaire through transparent and ef-

ficient competitive procedures adapted to the particular needs of privately financed infrastructure projects.

Pre-selection of bidders (see chap. III, "Selection of the concessionaire", paras. 34-50)

Recommendation 15. The bidders should demonstrate that they meet the preselection criteria which the contracting authority considers appropriate for the particular project, including:

(a) Adequate professional and technical qualifications, human resources, equipment and other physical facilities, as necessary to carry out all the phases of the project, namely engineering, construction, operation and maintenance;

(b) Sufficient ability to manage the financial aspects of the project and capability to sustain the financing requirements for the engineering, construction and operational phases of the project;

(c) Appropriate managerial and organizational capability, reliability and experience, including previous experience in operating public infrastructure.

Recommendation 16. The bidders should be allowed to form consortia to submit proposals, provided that each member of a preselected consortium may participate, either directly or through subsidiary companies, in only one bidding consortium.

Recommendation 17. The contracting authority should elaborate a short list of the preselected bidders which will be subsequently invited to submit proposals upon completion of the preselection phase.

Procedure for requesting proposals (see chap. III, "Selection of the concessionaire", paras. 51-84)

Single-stage and two-stage procedure for requesting proposals

Recommendation 18. Upon completion of the preselection proceedings, the contracting authority should invite the preselected bidders to submit final proposals.

Recommendation 19. Notwithstanding the above, the contracting authority may use a two-stage procedure to request proposals from preselected bidders when it is not feasible for the contracting authority to formulate project specifications or performance indicators and contractual terms in a manner sufficiently detailed and precise to permit final proposals to be formulated. Where a two-stage procedure is used, the following provisions apply:

(a) The contracting authority should first call upon the preselected bidders to submit proposals relating to output specifications and other characteristics of the project as well as to the proposed contractual terms;

(b) The contracting authority may convene a meeting of bidders to clarify questions concerning the initial request for proposals;

(c) Following examination of the proposals received, the contracting authority may review and, as appropriate, revise the initial project specifications and contractual terms prior to issuing a final request for proposals.

Content of the final request for proposals

Recommendation 20. The final request for proposals should include at least the following:

(a) General information as may be required by the bidders in order to prepare and submit their proposals;

(b) Project specifications and performance indicators, as appropriate, including the contracting authority's requirements regarding safety and security standards and environmental protection;

(c) The contractual terms proposed by the contracting authority;

(d) The criteria for evaluating the proposals, the relative weight to be accorded to each such criterion and the manner in which they are to be applied in the evaluation of proposals.

Clarifications and modifications

Recommendation 21. The contracting authority may, whether on its own initiative or as a result of a request for clarification by a bidder, modify the final request for proposals by issuing addenda at a reasonable time prior to the deadline for submission of proposals.

Evaluation criteria

Recommendation 22. The criteria for the evaluation and comparison of the technical proposals should concern the effectiveness of the proposal submitted by the bidder in meeting the needs of the contracting authority, including the following:

(a) Technical soundness;

(b) Operational feasibility;

(c) Quality of services and measures to ensure their continuity;

(d) Social and economic-development potential offered by the proposals.

Recommendation 23. The criteria for the evaluation and comparison of the financial and commercial proposals may include, as appropriate:

(a) The present value of the proposed tolls, fees, and other charges over the concession period;

(b) The present value of the proposed direct payments by the contracting authority, if any;

(c) The costs for design and construction activities, annual operation and maintenance costs, present value of capital costs and operating and maintenance costs;

(d) The extent of financial support, if any, expected from the Government;

(e) Soundness of the proposed financial arrangements;

(f) The extent of acceptance of the proposed contractual terms.

Submission, opening, comparison and evaluation of proposals

Recommendation 24. The contracting authority may establish thresholds with respect to quality, technical and commercial aspects to be reflected in the proposals in accordance with the criteria as set out in the request for proposals. Proposals which fail to achieve the thresholds should be regarded as non-responsive.

Recommendation 25. Whether or not it has used preselection proceedings the contracting authority may retain the right to require the bidders to demonstrate again their qualifications in accordance with criteria and procedures set forth in the request for proposals or the preselection documents, as appropriate. Where preselection proceedings have been used, the criteria shall be the same as those used in the preselection proceedings.

Final negotiations

Recommendation 26. The contracting authority should rank all responsive proposals on the basis of the evaluation criteria set forth in the request for proposals and invite for final negotiation of the project agreement the bidder that has attained the best rating. Final negotiations may not concern those terms of the contract that were stated as non-negotiable in the final request for proposals.

Recommendation 27. If it becomes apparent to the awarding authority that the negotiations with the bidder invited will not result in a project agreement, the awarding authority should inform that bidder that it is terminating the negotiations and then invite for negotiations the other bidders on the basis of their ranking until it arrives at a project agreement or rejects all remaining proposals.

Direct negotiations (see chap. III, "Selection of the concessionaire", paras. 85-96)

Recommendation 28. The law should set forth the exceptional circumstances under which the contracting authority may be authorized by a higher authority to select the concessionaire through direct negotiations, such as:

(a) When there is an urgent need for ensuring continuity in the provision of the service, and engaging in a competitive selection procedure would therefore be impractical;

(b) In case of projects of short duration and with an anticipated initial investment value not exceeding a specified low amount;

(c) Reasons of national defence or national security;

(d) Cases where there is only one source capable of providing the required service (e.g. because it requires the use of patented technology or unique know-how);

(e) When an invitation to the preselection proceedings or a request for proposals has been issued but no applications or proposals were submitted or all proposals failed to meet the evaluation criteria set forth in the request for proposals, and in the judgement of the contracting authority issuing a new request for proposals would be unlikely to result in a project award;

(f) Other cases where the higher authority authorizes such an exception for compelling reasons of public interest.

Recommendation 29. The law may require that the following procedures be observed in direct negotiations:

(a) The contracting authority should publish a notice of the negotiation proceedings and engage in negotiations with as many companies judged capable of carrying out the project as circumstances permit;

(b) The contracting authority should establish and make known to bidders the qualification criteria and the criteria for evaluating the proposals and determine the relative weight to be accorded to each such criterion and the manner in which they are to be applied in the evaluation of the proposals;

(c) The contracting authority should treat proposals in a manner which avoids the disclosure of their contents to competing bidders;

(d) Any such negotiations between the contracting authority and bidders should be confidential and one party to the negotiations should not reveal to any other person any technical, price or other commercial information relating to the negotiations without the consent of the other party;

(e) Following completion of negotiations, the contracting authority should request all bidders remaining in the proceedings to submit, by a specified date, a best and final offer with respect to all aspects of their proposals;

(f) Proposals should be evaluated and ranked according to the criteria for the evaluation of proposals established by the contracting authority.

Unsolicited proposals (see chap. III, "Selection of the concessionaire", paras. 97-117)

Recommendation 30. By way of exception to the selection procedures described in legislative recommendations 12 to 25, the contracting authority may be authorized to handle unsolicited proposals pursuant to specific procedures established by the law for handling unsolicited proposals, provided that such proposals should not relate to a project for which selection procedures have been initiated or announced by the contracting authority.

Procedures for determining the admissibility of unsolicited proposals

Recommendation 31. Following receipt and preliminary examination of an unsolicited proposal, the contract-

ing authority should inform the proponent, within a reasonably short period, whether or not there is a potential public interest in the project. If the project is found to be in the public interest, the contracting authority should invite the proponent to submit a formal proposal in sufficient detail to allow the contracting authority to properly evaluate the concept or technology and determine whether the proposal meets the conditions set forth in the law and is likely to be successfully implemented at the scale of the proposed project.

Recommendation 32. The proponent should retain title to all documents submitted throughout the procedure, and those documents should be returned to it in the event the proposal is rejected.

Procedures for handling unsolicited proposals that do not involve proprietary concepts or technology

Recommendation 33. The contracting authority should initiate competitive selection procedures under recommendations 12 to 25 above if it is found that the envisaged output of the project can be achieved without the use of a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights or if the proposed concept or technology is not truly unique or new. The author of the unsolicited proposal should be invited to participate in such proceedings and might be given a premium for submitting the proposal.

Procedures for handling unsolicited proposals involving proprietary concepts or technology

Recommendation 34. If it appears that the envisaged output of the project cannot be achieved without using a process, design, methodology or engineering concept for which the author of the unsolicited proposal possesses exclusive rights, the contracting authority should seek to obtain elements of comparison for the unsolicited proposal. For that purpose, the contracting authority should publish a description of the essential output elements of the proposal with an invitation for other interested parties to submit alternative or comparable proposals within a certain reasonable period.

Recommendation 35. The contracting authority may engage in negotiations with the author of the unsolicited proposal if no alternative proposals are received, subject to approval by a higher authority. If alternative proposals are submitted, the contracting authority should invite all the proponents to negotiations in accordance with the provisions of legislative recommendation 28 *(b)* to *(f)*.

Review procedures (see chap. III, "Selection of the concessionaire", paras. 118-122)

Recommendation 36. Bidders who claim to have suffered, or who may suffer, loss or injury due to a breach of a duty imposed on the contracting authority by the law may seek review of the contracting authority's acts in accordance with the laws of the host country.

Notice of project award (see chap. III, "Selection of the concessionaire", para. 123)

Recommendation 37. The contracting authority should cause a notice of the award of the project to be published. The notice should identify the concessionaire and include a summary of the essential terms of the project agreement.

Record of selection and award proceedings (see chap. III, "Selection of the concessionaire", paras. 124-130)

Recommendation 38. The contracting authority should keep an appropriate record of key information pertaining to the selection and award proceedings. The law should set forth the public access requirements.

IV. CONSTRUCTION AND OPERATION OF INFRASTRUCTURE

General provisions on the project agreement (see chap. IV, "Construction and operation of infrastructure", paras. 1-11)

Recommendation 39. The law might identify the core terms to be provided in the project agreement which may include those terms referred to in recommendations 39 to 65 below.

Recommendation 40. Unless otherwise provided, the project agreement is governed by the law of the host country.

Organization of the concessionaire (see chap. IV, "Construction and operation of infrastructure", paras. 12-18)

Recommendation 41. The contracting authority should have the option to require that the selected bidders establish an independent legal entity with a seat in the country.

Recommendation 42. The project agreement should specify the minimum capital of the project company and the procedures for obtaining the approval of the contracting authority to its statutes and by-laws of the project company and fundamental changes therein.

The project site and easements (see chap. IV, "Construction and operation of infrastructure", paras. 19-32)

Recommendation 43. The project agreement should specify, as appropriate, which assets will be public property and which assets will be the private property of the concessionaire. The project agreement should identify which assets the concessionaire is required to transfer to the contracting authority or to a new concessionaire upon expiry or termination of the project agreement; which assets the contracting authority, at its option, may purchase from the

concessionaire; and which assets the concessionaire may freely remove or dispose of upon expiry or termination of the project agreement.

Recommendation 44. The contracting authority should assist the concessionaire in the acquisition of easements needed for the operation, construction and maintenance of the facility. The law might empower the concessionaire to enter upon, transit through, do work or fix installations upon, property of third parties, as required for the construction and operation of the facility.

Financial arrangements (see chap. IV, "Construction and operation of infrastructure", paras. 33-51)

Recommendation 45. The law should enable the concessionaire to collect tariffs or user fees for the use of the facility or the services it provides. The project agreement should provide for methods and formulas for the adjustment of those tariffs or user fees.

Recommendation 46. Where the tariffs or fees charged by the concessionaire are subject to external control by a regulatory body, the law should set forth the mechanisms for periodic and extraordinary revisions of the tariff adjustment formulas.

Recommendation 47. The contracting authority should have the power, where appropriate, to agree to make direct payments to the concessionaire as a substitute for, or in addition to, service charges to be paid by the users or to enter into commitments for the purchase of fixed quantities of goods or services.

Security interests (see chap. IV, "Construction and operation of infrastructure", paras. 52-61)

Recommendation 48. The concessionaire should be responsible for raising the funds required to construct and operate the infrastructure facility and, for that purpose, should have the right to secure any financing required for the project with a security interest in any of its property, with a pledge of shares of the project company, with a pledge of the proceeds and receivables arising out of the concession, or with other suitable security, without prejudice to any rule of law that might prohibit the creation of security interests in public property in the possession of the concessionaire.

Assignment of the concession (see chap. IV, "Construction and operation of infrastructure", paras. 62-63)

Recommendation 49. The project agreement should set forth the conditions under which the contracting authority might give its consent to an assignment of the concession, including the acceptance by the new concessionaire of all obligations under the project agreement and evidence of the new concessionaire's technical and financial capability as necessary for providing the service. The concession should not be assigned to third parties without the consent of the contracting authority .

Transfer of controlling interest in the project company (see chap. IV, "Construction and operation of infrastructure", paras. 64-68)

Recommendation 50. The transfer of a controlling interest in the capital of a concessionaire company may require the consent of the contracting authority.

Construction works (see chap. IV, "Construction and operation of infrastructure", paras. 69-79)

Recommendation 51. The project agreement should set forth the procedures for the review and approval of construction plans and specifications by the contracting authority, the contracting authority's right to monitor the construction of, or improvements to, the infrastructure facility, the conditions under which the contracting authority may order variations in respect of construction specifications and the procedures for testing and final inspection, approval and acceptance of the facility, its equipment and appurtenances.

Infrastructure operation (see chap. IV, "Construction and operation of infrastructure", paras. 80-97)

Recommendation 52. The project agreement should set forth, as appropriate, the extent of the concessionaire's obligations to ensure:

(a) The adaptation of the service so as to meet the actual demand for the service;

(b) The continuity of the service;

(c) The availability of the service under essentially the same conditions to all users;

(d) The non-discriminatory access, as appropriate, of other service providers to any public infrastructure network operated by the concessionaire.

Recommendation 53. The project agreement should set forth:

(a) The extent of the concessionaire's obligation to provide the contracting authority or a regulatory body, as appropriate, with reports and other information on its operations;

(b) The procedures for monitoring the concessionaire's performance and for taking such reasonable actions as the contracting authority or a regulatory body may find appropriate, to ensure that the infrastructure facility is properly operated and the services are provided in accordance with the applicable legal and contractual requirements.

Recommendation 54. The concessionaire should have the right to issue and enforce rules governing the use of the facility, subject to the approval of the contracting authority or a regulatory body.

General contractual arrangements (see chap. IV, "Construction and operation of infrastructure", paras. 98-150)

Recommendation 55. The contracting authority may reserve the right to review and approve major contracts to be entered into by the concessionaire, in particular contracts with the concessionaire's own shareholders or related persons. The contracting authority's approval should not normally be withheld except where the contracts contain provisions inconsistent with the project agreement or manifestly contrary to the public interest or to mandatory rules of a public law nature.

Recommendation 56. The concessionaire and its lenders, insurers and other contracting partners should be free to choose the law applicable to govern their contractual relations, except where such a choice would violate the host country's public policy.

Recommendation 57. The project agreement should set forth:

(a) The forms, duration and amounts of the guarantees of performance that the concessionaire may be required to provide in connection with the construction and the operation of the facility;

(b) The insurance policies that the concessionaire may be required to maintain;

(c) The compensation to which the concessionaire may be entitled following the occurrence of legislative changes or other changes in the economic or financial conditions that render the performance of the obligation substantially more onerous than originally foreseen. The project agreement should further provide mechanisms for revising the terms of the project agreement following the occurrence of any such changes;

(d) The extent to which either party may be exempt from liability for failure or delay in complying with any obligation under the project agreement due to circumstances beyond their reasonable control;

(e) Remedies available to the contracting authority and the concessionaire in the event of default by the other party.

Recommendation 58. The project agreement should set forth the circumstances under which the contracting authority may temporarily take over the operation of the facility for the purpose of ensuring the effective and uninterrupted delivery of the service in the event of serious failure by the concessionaire to perform its obligations.

Recommendation 59. The contracting authority should be authorized to enter into agreements with the lenders providing for the appointment, with the consent of the contracting authority, of a new concessionaire to perform under the existing project agreement if the concessionaire seriously fails to deliver the service required or if other specified events occur that could justify the termination of the project agreement.

V. DURATION, EXTENSION AND TERMINATION OF THE PROJECT AGREEMENT

Duration and extension of the project agreement (see chap. V, "Duration, extension and termination of the project agreement", paras. ___)

Recommendation 60. The duration of the concession should be specified in the project agreement.

Recommendation 61. The term of the concession should not be extended, except for those circumstances specified in the law, such as:

(a) Completion delay or interruption of operation due to the occurrence of circumstances beyond either party's reasonable control;

(b) Project suspension brought about by acts of the contracting authority or other public authorities;

(c) To allow the concessionaire to recover additional costs arising from requirements of the contracting authority not originally foreseen in the project agreement which the concessionaire would not be able to recover during the normal term of the project agreement.

Termination of the project agreement (see chap. V, "Duration, extension and termination of the project agreement", paras. ___)

Termination by the contracting authority

Recommendation 62. The contracting authority should have the right to terminate the project agreement:

(a) In the event that it can no longer be reasonably expected that the concessionaire will be able or willing to perform its obligations, due to insolvency, serious default or otherwise;

(b) For reasons of public interest, subject to payment of compensation to the concessionaire.

Termination by the concessionaire

Recommendation 63. The concessionaire should have the right to terminate the project agreement under exceptional circumstances specified in the law, such as:

(a) In the event of serious default by the contracting authority or other public authority as regards the fulfilment of their obligations under the project agreement;

(b) In the event that the concessionaire's performance is rendered substantially more onerous as a result of variation orders or other acts of the contracting authority, unforeseen changes in conditions or acts of other public authorities and that the parties have failed to agree on an appropriate revision of the project agreement.

Termination by either party

Recommendation 64. Either party should have the right to terminate the project agreement in the event that the performance of its obligations is rendered impossible by the occurrence of circumstances beyond either party's reasonable control. The parties should further have the right to terminate the project agreement by mutual consent.

Consequences of expiry or termination of the project agreement (see chap. V, "Duration, extension and termination of the project agreement", paras. ___)

Transfer of assets to the contracting authority or to a new concessionaire

Recommendation 65. The project agreement should lay down the criteria for establishing, as appropriate, the compensation to which the concessionaire may be entitled in respect of assets transferred to the contracting authority or to a new concessionaire or purchased by the contracting authority upon expiry or termination of the project agreement.

Financial arrangements upon termination

Recommendation 66. The project agreement should stipulate how compensation due to either party in the event of termination of the project agreement is to be calculated, providing, where appropriate, for compensation for the fair value of works performed under the project agreement, and for losses, including lost profits.

Wind-up and transfer measures

Recommendation 67. The project agreement should set out, as appropriate, the rights and obligations of the parties with respect to:

(a) The transfer of technology required for the operation of the facility;

(b) The training of the contracting authority's personnel or of a successor concessionaire in the operation and maintenance of the facility;

(c) The provision, by the concessionaire, of operation and maintenance services and the supply of spare parts, if required, for a reasonable period after the transfer of the facility to the contracting authority or to a successor concessionaire.

VI. SETTLEMENT OF DISPUTES

Disputes between the contracting authority and the concessionaire (see chap. VI, "Settlement of disputes", paras. ___)

Recommendation 68. The contracting authority should be free to agree to dispute settlement mechanisms regarded by the parties as suited to the needs of the project, including arbitration.

[*Recommendation 68*bis. The law should indicate whether, and, if so, to what extent the contracting authority may raise a plea of sovereign immunity, both as a bar to the commencement of arbitral or judicial proceedings as well as a defence against enforcement of the award or judgement.]

Disputes between the concessionaire and its lenders, contractors and suppliers (see chap. VI, "Settlement of disputes", paras. ___)

Recommendation 69. The concessionaire should be free to choose the appropriate mechanisms for settling commercial disputes among the project sponsors, or disputes between the concessionaire and its lenders, contractors, suppliers and other business partners.

Disputes between the concessionaire and its customers (see chap. VI, "Settlement of disputes", paras. ___)

Recommendation 70. The concessionaire may be required to make available simplified and efficient mechanisms for handling claims submitted by its customers or users of the infrastructure facility.

II. ASSIGNMENT IN RECEIVABLES FINANCING

A. Report of the Working Group on International Contract Practices on the work of its thirty-first session

(Vienna, 11-22 October 1999 (A/CN.9/466) [Original: English]

CONTENTS

*Only articles and issues discussed at this session are listed in this report. With the exception of the proposal with regard to the issue of location of the parties, issues are listed in the order they were discussed. The annex to this report contains the consolidated text of the draft Convention and the annex to the draft Convention as a whole, as adopted by the Working Group.

I. INTRODUCTION

1. At the present session, the Working Group on International Contract Practices continued its work on the preparation of a uniform law on assignment in receivables financing, pursuant to a decision taken by the Commission at its twenty-eighth session (Vienna, 2-26 May 1995).[1] This was the eighth session devoted to the preparation of this uniform law, tentatively entitled the draft Convention on Assignment in Receivables Financing.

2. The Commission's decision to undertake work on assignment in receivables financing was taken in response to suggestions made to it in particular at the UNCITRAL Congress, "Uniform Commercial Law in the 21st Century" (held in New York in conjunction with the twenty-fifth session, 17-21 May 1992). A related suggestion made at the Congress was for the Commission to resume its work on security interests in general, which the Commission at its thirteenth session (1980) had decided to defer for a later stage.

3. At its twenty-sixth to twenty-eighth sessions (1993 to 1995), the Commission discussed three reports prepared by the secretariat concerning certain legal problems in the area of assignment of receivables (A/CN.9/378/Add.3, A/CN.9/397 and A/CN.9/412). Having considered those reports, the Commission concluded that it would be both desirable and feasible to prepare a set of uniform rules, the purpose of which would be to remove obstacles to receivables financ-

[1] *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17* (A/50/17), paras. 374-381.

ing arising from the uncertainty existing in various legal systems as to the validity of cross-border assignments (in which the assignor, the assignee and the debtor would not be in the same country) and as to the effects of such assignments on the debtor and other third parties.[2]

4. At its twenty-fourth session (Vienna, 8-19 November 1995), the Working Group commenced its work by considering a number of preliminary draft uniform rules contained in a report of the Secretary-General entitled "Discussion and preliminary draft of uniform rules" (A/CN.9/412). At that session, the Working Group was urged to strive for a legal text aimed at increasing the availability of lower-cost credit (A/CN.9/420, para. 16).

5. At its twenty-ninth session (1996), the Commission had before it the report of the twenty-fourth session of the Working Group (A/CN.9/420). The Commission expressed appreciation for the work accomplished and requested the Working Group to proceed with its work expeditiously.[3]

6. At its twenty-fifth and twenty-sixth sessions (New York, 8-19 July and Vienna, 11-22 November 1996 respectively), the Working Group continued its work by considering different versions of the draft uniform rules contained in two notes prepared by the secretariat (A/CN.9/WG.II/WP.87 and A/CN.9/WG.II/WP.89 respectively). At those sessions, the Working Group adopted the working assumptions that the text being prepared would take the form of a convention (A/CN.9/432, para. 28) and would include conflict-of-laws provisions (A/CN.9/434, para. 262).

7. At its thirtieth session (1997), the Commission had before it the reports of the twenty-fifth and twenty-sixth sessions of the Working Group (A/CN.9/432 and A/CN.9/434). The Commission noted that the Working Group had reached agreement on a number of issues and that the main outstanding issues included the effects of the assignment on third parties, such as the creditors of the assignor and the administrator in the insolvency of the assignor.[4] In addition, the Commission noted that the draft Convention had aroused the interest of the receivables financing community and Governments, since it had the potential of increasing the availability of credit at more affordable rates.[5]

8. At its twenty-seventh and twenty-eighth sessions (Vienna, 20-31 October 1997 and New York, 2-13 March 1998 respectively), the Working Group considered two notes prepared by the secretariat (A/CN.9/WG.II/WP.93 and A/CN.9/WG.II/WP.96 respectively). At its twenty-seventh session, the Working Group had decided that basic priority rules of the draft Convention would be private international law rules and the substantive law priority rules of the draft Convention would be subject to an opt-in by States (A/CN.9/445, paras. 26-27), while, at its twenty-eighth session, the Working Group had adopted the substance of draft articles 14 to 16, dealing with the relationship between the assignor and the assignee, and 18 to 22, dealing with the relationship between the assignee and the debtor (A/CN.9/447, paras. 161-164).

9. At its thirty-first session (1998), the Commission had before it the report of the twenty-seventh and twenty-eighth sessions of the Working Group (A/CN.9/445 and A/CN.9/447). The Commission expressed appreciation for the work accomplished and requested the Working Group to proceed with its work expeditiously so as to complete its work in 1999 and submit the draft Convention for adoption by the Commission at its thirty-third session (2000).[6]

10. At its twenty-ninth and thirtieth sessions (Vienna, 5-16 October 1998 and New York, 1-12 March 1999 respectively), the Working Group considered three notes prepared by the secretariat (A/CN.9/WG.II/WP.96, A/CN.9/WG.II/WP.98 and A/CN.9/WG.II/WP.102), as well as a note containing the report of a group of experts prepared by the Permanent Bureau of the Hague Conference on Private International Law (A/CN.9/WG.II/WP.99). At those sessions, the Working Group adopted the substance of the preamble and draft articles 1(1) and (2), 5 *(g)* to *(j)*, 18 (5*bis*), 23 to 33 and 41 to 50 (A/CN.9/455, para. 17) and the title, the preamble and draft articles 1 to 24 (A/CN.9/456, para. 18).

11. At its thirty-second session (1999), the Commission had before it the report of the twenty-ninth and thirtieth sessions of the Working Group (A/CN.9/455 and A/CN.9/456). The Commission expressed appreciation for the work accomplished by the Working Group and requested the Working Group to proceed with its work expeditiously so as to make it possible for the draft Convention, along with the report of the next session of the Working Group, to be circulated to Governments for comments in good time and for the draft Convention to be considered by the Commission for adoption at its thirty-third session (2000). As regards the subsequent procedure for adopting the draft Convention, the Commission noted that it would have to decide at its next session whether it should recommend adoption by the General Assembly or by a diplomatic conference to be specially convened by the General Assembly for that purpose.[7]

12. The Working Group, which was composed of all States members of the Commission, held the present session at Vienna from 11 to 22 October 1999. The session was attended by representatives of the following States members of the Working Group: Algeria, Australia, Austria, Bulgaria, Cameroon, China, Colombia, Egypt, Finland, France, Germany, Honduras, Hungary, Iran (Islamic Republic of), Italy, Japan, Lithuania, Mexico, Nigeria, Romania, Russian Federation, Singapore, Spain, Thailand, United Kingdom of Great Britain and Northern Ireland, United States of America and Uruguay.

13. The session was attended by observers from the following States: Benin, Bolivia, Cambodia, Canada, Congo, Czech Republic, Gabon, Georgia, Greece, Guatemala, Indonesia, Iraq, Ireland, Lebanon, Libyan Arab Jamahiriya, Namibia, Netherlands, Poland, Republic of Korea, Saudi Arabia, Slovakia, Sweden, Switzerland, Tunisia and Turkey.

[4] Ibid., *Fifty-second Session, Supplement No. 17* (A/52/17), para. 254.

[5] Ibid., para. 256.

[6] Ibid., *Fifty-third Session, Supplement No. 17* (A/53/17), para. 230.

[7] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 330.

14. The session was attended by observers from the following international organizations: Association of the Bar of the City of New York (ABCNY), Commercial Finance Association (CFA), European Federation of National Factoring Associations (EUROPAFACTORING), Factors Chain International (FCI), Fédération bancaire de l'Union européenne, *Federacion Latinoamericana de Bancos* (FELABAN) and International Institute for the Unification of Private Law (Unidroit).

15. The Working Group elected the following officers:

Chairman: Mr. David MORÁN BOVIO (Spain)

Rapporteur: Ms. Victoria GAVRILESCU (Romania)

16. The Working Group had before it the following documents: the provisional agenda (A/CN.9/WG.II/WP.103), a note by the secretariat entitled "Draft Convention on Assignment in Receivables Financing: text with remarks and suggestions" (A/CN.9/WG.II/WP.104), and two other notes by the secretariat entitled "Commentary to the draft Convention on Assignment in Receivables Financing" (A/CN.9/WG.II/WP.105 and 106).

17. The Working Group adopted the following agenda:

1. Election of officers.
2. Adoption of the agenda.
3. Preparation of draft Convention on Assignment in Receivables Financing.
4. Other business.
5. Adoption of the report.

II. DELIBERATIONS AND DECISIONS

18. The Working Group considered pending issues identified in the text of the draft Convention with language in square brackets or in the remarks of the secretariat (A/CN.9/WG.II/WP.104). Noting that the provisions of the draft Convention dealing with conflicts of priority had not been sufficiently discussed at the previous session, the Working Group decided to begin its deliberations with draft articles 23 to 26 and to consider in that context the issue of "location". Also noting the importance of scope and exclusions, before continuing in the numerical order of the draft articles, the Working Group addressed exclusions in draft article 4.

19. The deliberations and conclusions of the Working Group, including its consideration of various draft provisions, are set forth below in chapters III to VII. The Working Group considered draft articles 1 (3), 2 to 5, 8, 10 to 12, 16, 19 to 29 and 33 to 42 of the draft Convention, as well as draft articles 1 to 7 of the annex to the draft Convention. With the exception of the wording within square brackets which was referred to the Commission, the Working Group adopted the draft Convention and the annex thereto as a whole. Having completed its work, the Working Group decided to submit the draft Convention to the Commission for adoption at its thirty-third session (New York, 12 June to 7 July 2000).

III. DRAFT CONVENTION ON ASSIGNMENT [IN RECEIVABLES FINANCING] [OF RECEIVABLES IN INTERNATIONAL TRADE]

Article 24. *Competing rights of several assignees*

20. The text of draft article 24 as considered by the Working Group was as follows:

"(1) Priority among several assignees of the same receivables from the same assignor is governed by the law of the State in which the assignor is located.

"(2) An assignee entitled to priority may at any time subordinate unilaterally or by agreement its priority in favour of any existing or future assignees."

21. In order to avoid leaving to the law of the assignor's location issues that were intended to be covered by the draft Convention (e.g. the question whether an assignee may give a notification with regard to future receivables so as to obtain priority under the law of the assignor's location), the Working Group decided to include at the beginning of paragraph (1) language along the opening words of draft article 27 (1): "With the exception of matters which are settled in this Convention".

22. Confirming its understanding that paragraph (1) applied to a conflict of priority between a foreign and a domestic assignee of the same domestic receivables from the same assignor (A/CN.9/445, para. 22), the Working Group decided to include at the end of paragraph (1) language along the following lines: "This rule applies even if one of the assignees is an assignee in a domestic assignment of domestic receivables".

23. The question was raised as to whether a conflict with an inventory financier or a supplier of goods with a retention of title, who had a right in the proceeds from the sale of the inventory or the goods, would be covered by draft article 24. In response, it was observed that the reference in draft article 25 (1) to "the assignor's creditors" was sufficient to encompass conflicts with inventory financiers and suppliers of goods on credit. In any case, it was stated, if the right of such persons in the proceeds was contractual, they should be treated as assignees.

24. After discussion, the Working Group adopted draft article 24 as amended and referred it to the drafting group.

"Location" of the parties

25. In the context of its discussion of draft article 24, the Working Group considered the meaning of the term "location" (defined in draft article 5 *(j)* and *(k)*). The Working Group based its discussion on a draft prepared by the secretariat, which was as follows:

"(i) a party is located in the State in which it has its place of business;

"(ii) if the assignor or the assignee have more than one place of business, the place of business is that which has the closest relationship to the contract of assignment. If the debtor has more than one place of business, the place of business is that which has the closest relationship to

the original contract. If a party does not have a place of business, reference is to be made to the habitual residence of that party;

"(iii) for the purposes of articles 24 to 26, the place where the central administration of an entity is exercised de facto is deemed to be the place of business with the closest relationship to the contract of assignment[;

"(iv) several assignors or assignees are located at the place in which their authorized agent or trustee is located]."

26. It was noted that that text was an attempt to build on the common points that emerged from the discussion at the previous session of the Working Group. Those points were: that the need for certainty was much stronger in the priority provisions than in the scope provisions; that the scope of application of the draft Convention should be as broad as possible; that, in order to achieve a sufficient degree of debtor-protection, at least, with regard to the debtor's location, reference should be made to the relevant place of business; and that a solution with regard to the priority provisions could be built around the concept of central administration/chief executive office of an entity (A/CN.9/456, paras. 35-37).

27. Support was expressed in favour of the above-mentioned text. However, the concern was expressed that the application of two different location rules could lead to inconsistent results. The concern was also expressed that adoption of a central-administration test would result in priority conflicts involving branch offices being inappropriately subjected to the law of the location of the head office, even if that jurisdiction had nothing to do with the transactions that gave rise to such conflicts. In order to address those concerns, a number of suggestions were made. One suggestion was that a more flexible rule along the lines of draft article 5 *(k)* (iv) should be established, allowing parties to prove that the place of central administration was not the place most closely connected to the relevant transaction. That suggestion was objected to on the ground that such a rule would introduce an unacceptable degree of uncertainty.

28. Another suggestion was to devise a rule along the lines of the above-mentioned text with an exception for branch offices of banks. In support of that suggestion, it was observed that, although branch offices had no separate legal personality from that of the head office, they were subject to the financial services regulations of the country in which they were located in respect of their activities in that country. It was also stated that the exception referred only to branch offices of banks, since it was normal practice for banks to operate through branch offices, while other industries operated more through subsidiaries, which were separate legal persons even if they operated under the instructions of the parent company. While that suggestion was met with interest, the view was expressed that there was no reason to limit the exception to branch offices of banks. It was also said that the formulation of such a limited exception would be a very difficult task since there was no universally acceptable definition of the term "bank". It was, therefore, suggested that the exception should apply to branch offices in general. That suggestion was objected to on the ground that such an exception would undermine the certainty achieved by a central administration-based rule, since third parties would need to do a factual search to establish which branch office a transaction was most closely connected to. It was stated that problems might arise from a double assignment of the same receivables by the head office and a branch office. It was also observed that a solution along the lines of the above-mentioned text, offering two different location rules, would be preferable to one rule with a broad exception for branch offices in general.

29. In the discussion, it was agreed that subparagraph (iv) of the above-mentioned text should be deleted. It was observed that assignments by multiple assignors were rare in practice and, in any case, the application of the draft Convention only to the assignment of an interest in receivables, which fell within the ambit of the draft Convention under chapter I, was an appropriate result. As to assignments to multiple assignees, it was stated that such assignments were part of well-developed practices in which parties normally settled the matter of location in their agreements. It was also agreed that the reference to a "de facto" central administration, contained in subparagraph (iii), was superfluous and could be deleted on the understanding that the actual place of central administration was meant. It was observed that use of the words "de facto" could inadvertently raise interpretation questions as to whether there was another "de jure" central administration (i.e. one artificially designated in the constitutive or other documents of a legal entity). It was also stated that the words "is exercised", which were intended to reflect a fact, were sufficient in clarifying that the actual place of central administration was meant.

30. After discussion, the Working Group decided that, for the continuation of the discussion, two alternatives should be included in the text of draft article 5 with regard to the definition of the term "location", one alternative along the lines of the text mentioned in paragraph 25 above and another that would read along the following lines:

"A person is located in the State in which it has its place of business. If an assignor or assignee has more than one place of business, it is located in the State in which it has its central administration. If a debtor has more than one place of business, it is located in the State in which it has that place of business which has the closest relationship to the original contract. [A branch of a person [engaged in the business of accepting deposits or providing other banking services] is deemed to be a separate person.] If a person does not have a place of business, it is located in the State of its habitual residence."

The Working Group left the specific formulation of those alternatives to the drafting group (for the continuation of the discussion on "location", see paras. 96-100).

Renvoi

31. In order to avoid the risk of renvoi (i.e. the application of the law designated by the private international law provisions—conflict of laws—of a State other than the forum State), the Working Group decided to include in draft article 5 a new subparagraph along the following lines: "'law' means the law in force in a State other than its rules of private international law".

Article 25. *Competing rights of assignee and creditors of the assignor or insolvency administrator*

32. The text of draft article 25 as considered by the Working Group was as follows:

"(1) Priority between an assignee and the assignor's creditors is governed by the law of the State in which the assignor is located.

"(2) In an insolvency proceeding, priority between the assignee and the assignor's creditors is governed by the law of the State in which the assignor is located.

"(3) Notwithstanding paragraphs (1) and (2), the application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

"(4) If an insolvency proceeding is commenced in a State other than the State in which the assignor is located, except as provided in this article, this Convention does not affect the rights of the insolvency administrator or the rights of the assignor's creditors.

"(5) If an insolvency proceeding is commenced in a State other than the State in which the assignor is located, any [non-consensual] [preferential] right or interest which under the law of the forum State would have priority over the interest of an assignee has such priority notwithstanding paragraph (2). [A State may deposit at any time a declaration identifying those [non-consensual] [preferential] rights or interests which have priority over the interests of an assignee notwithstanding application of the priority rule set out in paragraph (2).]

"(6) An assignee asserting rights under this article has no less rights than an assignee asserting rights under other law."

33. With regard to paragraphs (1) and (2), the Working Group confirmed its understanding that they were intended to apply irrespective of the place in which a proceeding commenced.

34. Recalling its decision to include at the beginning of draft article 24 the words "With the exception of matters which are settled in this Convention" (see para. 21), the Working Group decided that the same wording should be included in draft article 25 to apply to both paragraphs (1) and (2).

35. The Working Group noted that, in paragraph (2), the term "assignor's creditors" had been substituted for the term "insolvency administrator", since: in some legal systems, the insolvency administrator did not become the holder of the rights of the creditors; and, in some reorganization proceedings, there might be no insolvency administrator. However, in view of the fact that, in other legal systems, the insolvency administrator did become the holder of the creditors' rights, the Working Group decided that a reference to the insolvency administrator should be inserted in paragraph (2).

36. As to the policy underlying paragraph (3), it was noted that it was intended to strike a balance between the need to ensure certainty and the need to preserve fundamental policy decisions of the law of the forum State. Accordingly, the right of the forum State to set aside a provision of the law applicable was recognized and, at the same time, limited to cases in which that provision was manifestly contrary to the public policy of the forum State. It was observed that, by definition, paragraph (3) referred to international public policy, the application of which could result in setting aside a priority rule of the law applicable but not in the positive application of a priority rule reflecting the public policy of the forum State. The Working Group noted that the matter was appropriately explained in the commentary (see A/CN.9/WG.II/WP.106, paras. 89-90).

37. As to the scope of paragraph (3), a number of suggestions were made. One suggestion was that paragraph (3) should be revised to be made applicable only in the case of a conflict of priority arising in an insolvency proceeding. In support of that suggestion, it was stated that a broader public policy exception would create uncertainty and thus have a negative impact on the availability and the cost of credit. It was also observed that such an approach would be in line with paragraph (5), which was intended to preserve super-priority rights arising by operation of law only in an insolvency proceeding. That suggestion was objected to on the ground that the right of a court or other authority to apply its own public policy could not be limited. It was stated that such a limitation could reduce the acceptability of the draft Convention. It was also said that, in any case, it would be doubtful whether such a limitation, even if included in paragraph (3), would be implemented by courts. Another suggestion was that paragraph (3) should be revised to be made applicable only to cases in which a proceeding commenced in a State other than the State of the assignor's location. While it was agreed that a conflict between the applicable law and the public policy of the forum State could arise only if two jurisdictions were involved, it was generally felt that no change was necessary. Paragraphs (1) and (2) were generally thought to sufficiently reflect the understanding that, if the law applicable to priority and the law governing any insolvency or other proceeding were laws of a single jurisdiction, the internal rules of that jurisdiction would resolve any conflict. Yet another suggestion was that the words "notwithstanding paragraphs (1) and (2)" were superfluous and should be deleted. On the understanding that even without those words paragraph (3) sufficiently reflected the fact that it applied both within and outside an insolvency proceeding, the Working Group approved that suggestion.

38. With regard to paragraph (4), the Working Group noted that it was intended to preserve rights of the insolvency administrator or the assignor's creditors in a proceeding opened in a State other than the State of the assignor's location ("secondary insolvency proceeding"). Such rights, while falling short of reflecting the public policy of the forum State, were based on rules of mandatory law (e.g. the right to challenge the validity of an assignment on the ground that it was a preferential or fraudulent transfer). It was observed that, in view of the fact that paragraphs (1) and (2) dealt with priority questions without

affecting special rights based on insolvency law, paragraph (4) was superfluous and could be deleted. It was also stated that the words "except as provided in this article" raised doubts as to whether the rights that were intended to be preserved were in fact protected. After discussion, the Working Group decided that paragraph (4) should be deleted.

39. As to paragraph (5), it was noted that it was intended to preserve super-priority rights (e.g. in favour of the State for tax claims or of employees for wages) in the case of an insolvency proceeding commenced in a State other than the State of the assignor's location. A number of suggestions were made as to the appropriate term to reflect those super-priority rights. One suggestion was that those rights should be qualified as non-consensual rights. That suggestion was objected to on the ground that it might not sufficiently cover preferential rights which arose out of consensual relationships. Another suggestion was that the term "preferential" should be used. That suggestion was objected to on the ground that it would inadvertently result in broadening the scope of the exception from the rule of paragraph (2) and in giving priority to creditors of the assignor that had a property right in receivables recognized in a court judgement. Yet another suggestion was that no qualification of the rights arising under the law of the forum State was necessary. That suggestion too was objected on the ground that it would in effect overturn the rule of paragraph (2) and subject priority to the law of the forum State. Yet another suggestion was that the super-priority rights meant in paragraph (5) could be described as preferential rights arising by operation of the law of the forum and having priority status in an insolvency proceeding in the forum State. That suggestion received sufficient support.

40. With regard to paragraph (6), the Working Group noted that it was originally intended to ensure that an assignee asserting priority under the substantive law provisions of the draft Convention would not have less rights than if it asserted priority under substantive law outside the draft Convention (A/CN.9/455, para. 40; and A/CN.9/445, para. 44). It was also noted that, once the Working Group decided to turn the priority rules of the draft Convention into private international law rules (A/CN.9/445, para. 22), paragraph (6) did not appear to be appropriate. It was observed that paragraph (6) appeared suggesting that, although a conflict of priority was covered by the draft Convention, a law other than the law of the assignor's location might be applicable. After discussion, the Working Group decided that paragraph (6) should be deleted.

41. The Working Group adopted draft article 25 as amended and referred it to the drafting group.

Article 26. *Competing rights with respect to payments*

42. The text of draft article 26 as considered by the Working Group was as follows:

"[(1) If payment with respect to the assigned receivable is made to the assignee, the assignee has a property right in whatever is received in respect of the assigned receivable.

"(2) If payment with respect to the assigned receivable is made to the assignor, the assignee has a property right in whatever is received in respect of the assigned receivable if:

(a) what is received is money, cheques, wire transfers, credit balances in deposit accounts or similar assets ("cash receipts");

(b) the assignor has collected the cash receipts under instructions from the assignee to hold the cash receipts for the benefit of the assignee; and

(c) the cash receipts are held by the assignor for the benefit of the assignee separately from assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee.

"(3) With respect to the property rights referred to in paragraphs (1) and (2) of this article, the assignee has the same priority as it had in the assigned receivables.

"(4) If payment with respect to the assigned receivable is made to the assignor and the requirements of paragraph (2) are not met, priority with respect to whatever is received is determined as follows:

(a) if what is received is a receivable, priority is governed by the law of the State in which the assignor is located;

(b) if what is received is an asset other than a receivable, priority is governed by the law of the State in which it is located.

"(5) Paragraphs (3) to (5) of article 25 apply to a conflict of priority arising between an assignee and the insolvency administrator or the assignor's creditors with respect to whatever is received.]"

43. The Working Group noted that paragraphs (1) and (2) were intended to give the assignee a right in rem in proceeds, without affecting the order of priority established in paragraphs (3) and (4). It also noted that, in order to better reflect that understanding, the secretariat had separated the issue of priority in proceeds from the issue of the remedies available to an assignee with priority in such proceeds and addressed those issues in two separate provisions that were as follows:

"Article 26. *Priority in proceeds*

"(1) Priority among several assignees of the same receivables from the same assignor and between the assignee and the assignor's creditors or the insolvency administrator with respect to whatever is received in payment [, or other discharge,] of the assigned receivable is determined as follows:

(a) if what is received is a receivable, priority is governed by the law of the State in which the assignor is located;

(b) if what is received is an asset other than a receivable, priority is governed by the law of the State in which it is located.

"(2) Paragraphs (3) to (5) of article 25 apply to a conflict of priority arising between an assignee and the assignor's creditors or the insolvency administrator with respect to whatever is received in payment [, or other discharge,] of the assigned receivable.

"Article 26*bis*. *Rights in rem in proceeds*

"(1) With the exception of the cases foreseen in paragraphs (2) to (4) of this article, whether an assignee [has a right in rem or ad personam in] [is entitled to claim and retain] whatever is received in payment [, or other discharge,] of the assigned receivable is subject to the law governing priority under article 26 of this Convention.

"(2) If payment [, or other discharge,] with respect to the assigned receivable is made to the assignee, the assignee with priority over the assignor's creditors or the insolvency administrator under article 26 of this Convention has [a right in rem in] [the right to retain] whatever is received up to the value of its right in the receivable[, including interest].

"(3) If payment [, or other discharge,] with respect to the assigned receivable is made to the assignor, the assignee with priority over the assignor's creditors or the insolvency administrator under article 26 of this Convention has [a right in rem] [the right to retain] whatever is received up to the value of its right in the receivable [, including interest,] if:

(a) the assignor has received payment [, or other discharge,] under instructions from the assignee to hold whatever it received for the benefit of the assignee; and

(b) whatever the assignor received is held by the assignor for the benefit of the assignee separately and is reasonably identifiable from assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee."

44. The Working Group decided to use those draft articles as a basis for the continuation of its deliberations.

Priority in proceeds

45. It was generally agreed that priority in proceeds that were receivables, including receivables in the form of negotiable instruments, as well as balances in deposit and securities accounts, should be governed by the law of the assignor's location.

46. With regard to priority in other types of proceeds, such as goods, a number of suggestions were made. One suggestion was to retain draft article 26 (1) *(b)*, proposed by the secretariat, as it was or with the addition of language aimed at ensuring that the rights of third parties in goods were not affected. That suggestion did not receive sufficient support. Another suggestion was that priority in proceeds in the form of goods should be governed by the law of the assignor's location. In support of that view, it was observed that the application of the law of a single and easily determinable jurisdiction would enhance certainty. It was also stated that such an approach would be in line with the approach taken with regard to priority in receivables, which deviated from the traditional approach of the law of the "location" of a receivable (i.e. of the place in which it was payable). That suggestion was objected to on the ground that such an approach could frustrate the expectations of third parties in the country where the goods were located and reduce the acceptability of the draft Convention. Yet another suggestion was that a distinction should be drawn between goods received in total or partial satisfaction of the receivable and goods returned (e.g. because they were defective and the sale contract had been cancelled or because the sale contract allowed the buyer to return those goods after a trial period). It was stated that the former type of goods were another form of the same receivable and priority with respect to those goods should be subject to the same rule as priority with respect to receivables, while the latter type of goods had no relationship with the receivable and priority with respect to those goods should be subject to the law of their location. That suggestion attracted sufficient support. The Working Group requested that the commentary include an explanation of the notion of "returned goods".

47. In the discussion, the Working Group noted that the issue of proceeds arose also in the context of article 16 with respect to the relationship between the assignor and the assignee. The question was raised as to whether the assignee's right in proceeds as against the assignor should extend to goods given in total or partial satisfaction of the assigned receivable. The Working Group postponed discussion of that question until it had completed its review of draft article 16 (see para. 120).

48. It was agreed that the term "proceeds" should be defined, without prejudice to the question whether "returned goods" would be covered in draft article 16 (see para. 120). Language along the lines of draft article 16 (1) *(a)* was generally considered to be acceptable ("whatever is received with respect of the assigned receivable"), with the addition of the notions of payment and satisfaction of the assigned receivable, whether total or partial. As to the use of the term "discharge", objections were raised on the ground that that term implied payment in full.

49. After discussion, the Working Group adopted draft article 26 as amended and referred its formulation, as well as the formulation of the definition of the term "proceeds", to the drafting group.

Rights in rem in proceeds

50. With regard to draft article 26*bis*, a number of concerns were expressed. One concern was that draft article 26*bis* was complicated and inappropriately dealt with substantive law issues in paragraph (1) and private international law issues in paragraphs (2) and (3). Another concern was that in creating rights in rem in proceeds, draft article 26*bis* was inconsistent with fundamental notions of law in many countries that did not recognize such rights and yet provided sufficient protection for assignees. Yet another concern was that draft article 26*bis* was unnecessary since parties could structure their transactions so as to meet their needs.

51. In response, it was stated that a right in rem in the limited cases described in paragraphs (2) and (3) of draft article 26*bis* could significantly facilitate non-notification factoring transactions, securitization transactions and transactions involving sovereign receivables, in which assignors received payments on behalf of assignees and normally held such payments in separate accounts, since, with such

a right, assignees would be protected in the case of insolvency of assignors. If, in order to be protected, assignees would need to notify debtors and structure their transactions so as to receive payments themselves, non-notification and the other practices mentioned above would be hampered and the costs of those transactions would increase. It was also observed that, the estate of the assignor having been enriched through the credit provided by the assignee to the assignor in return for the receivables, allowing the insolvency administrator or the creditors of the assignor to receive payment of the receivables should be considered as unjust enrichment. Furthermore, it was stated that, while such in rem rights in proceeds of receivables might be foreign to many jurisdictions, fiduciary arrangements, on the basis of which assignors received payments on behalf of assignees and had certain obligations as against such assignees, were not unknown, if not in statutory, at least, in case law of those jurisdictions. It was, therefore, suggested that, if an assignee had priority in the assigned receivable, the assignee or the assignor received payment, payment was received by the assignor on behalf of the assignee and the proceeds of payment were held by the assignor separately, that assignee should be given priority with regard to those proceeds. That suggestion received sufficient support.

52. In the discussion, the suggestion was made that the rules to be prepared should also cover the extent of the assignee's right in the assigned receivable, the existence and the extent of the assignee's right in proceeds, as well as the existence and the extent of the right of a creditor, who had a right in other property of the assignor, which right was, by operation of law, extended to the assigned receivable. That suggestion too received sufficient support.

53. After discussion, the Working Group requested the drafting group to formulate a specific rule with regard to priority in proceeds along the lines mentioned in paragraphs 51 and 52 above, which would not address the question of the legal nature of rights in proceeds. The Working Group left to the drafting group the question of consolidating the priority rules contained in section III of chapter IV of the draft Convention in one or more rules.

Article 4. *Exclusions*

54. The text of draft article 4 as considered by the Working Group was as follows:

"[(1)] This Convention does not apply to assignments:

(a) made for personal, family or household purposes;

(b) to the extent made by the delivery of a negotiable instrument, with any necessary endorsement;

(c) made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

"[(2) This Convention does not apply to assignments listed in a declaration made under draft article 35 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]"

General remarks

55. Some doubt was expressed as to whether draft article 4 was necessary. The Working Group recalled its decision that the scope of application of the draft Convention should not be limited by reference to the commercial or financing purpose of a transaction. The Working Group also recalled its decision that assignments for consumer purposes and certain practices that did not need to be regulated should be excluded. The Working Group, therefore, confirmed its decision that draft article 4 should be retained and decided that the brackets in paragraph (2) should be removed on the understanding that draft article 35 would be reviewed at a later stage (as to the brackets around draft article 4 (2), see paras. 86, 199-201 and 211).

56. The Working Group went on to consider exclusions relating to assignments for consumer purposes, assignments of receivables arising from financial instruments, funds transfer orders, payment and securities settlement systems and from deposit accounts, as well as assignments of receivables arising from the sale and lease of aircraft and other types of mobile equipment.

Assignments for consumer purposes

57. It was noted that subparagraph *(a)* was intended to limit the scope of the draft Convention to commercial transactions, whether they related to trade or to consumer receivables. It was also noted, however, that, in its current formulation, subparagraph *(a)* might result in excluding inappropriately certain commercial transactions, such as: assignments of insurance policies from consumers to financing institutions; and assignments from consumers to financing institutions in return for loans used for consumer purposes. In order to address that problem, a number of suggestions were made. One suggestion was to ensure that only assignments "exclusively" for consumer purposes would be excluded. Another suggestion was to exclude transactions "made from an individual to an individual for personal, family or household purposes". Neither suggestion was found to be sufficient in reflecting the general understanding of the Working Group that only assignments from a consumer to a consumer should be excluded. Another suggestion was to make explicit reference to the term "consumer". That suggestion was objected to on the ground that the term "consumer" was not universally understood in the same way.

58. Yet another suggestion was that subparagraph *(a)* should be replaced by a general provision aimed at ensuring that the rights of consumers were not affected by the draft Convention. It was stated that that provision might be limited to consumer-protection legislation. That suggestion was objected to on the grounds that such a provision would be unnecessary in view of the fact that the draft Convention was not intended to override consumer-protection law; and would inadvertently result in excluding significant practices involving the assignment of consumer receivables. The Working Group confirmed its decision that, unlike the Unidroit Convention on International Factoring (Ottawa, 1988; hereinafter referred to as "the Ottawa Convention"), the application of which was limited to trade receivables, the draft Convention should cover commercial practices involving the assignment of consumer receivables.

59. After discussion, the Working Group decided that only assignments made from a business entity or a consumer to a consumer and only if made for consumer purposes should be excluded, adopted subparagraph *(a)* on that understanding and referred its exact formulation to the drafting group.

Assignments of receivables arising from financial instruments, funds transfer orders, payment and securities settlement systems, and deposit accounts

60. It was stated that financial instruments, such as money-market and stock-exchange instruments, swaps and derivatives, were traditionally governed by international standard agreements, such as the International Swaps and Derivatives Association (ISDA) Master Agreement and the International Securities Market Association (ISMA) Master Agreement, or other national standard agreements. It was also observed that those standard agreements usually included a clause under which a party could not assign its claim against the other party without that party's consent. In the case of a breach of such a clause, it was said, a party had the right to terminate not only the transaction in question but all the transactions governed by a master agreement. It was added that many master agreements contained a cross-default clause, under which, in the case of any such breach, all the transactions governed by all those master agreements could be terminated. In addition, it was observed that, under standardized arrangements existing with regard to the execution of funds transfer orders and payment of securities among participants of payments and securities settlement systems, the assignment of receivables from transfer orders was normally prohibited. Moreover, it was said that it was normal practice for financing institutions to preclude in their general terms and conditions their clients from assigning receivables arising from deposit accounts. It was explained that such receivables were regularly used as collateral for credit facilities offered by financing institutions to their clients.

61. It was observed that, contrary to such practices, draft article 10 (1) validated assignments made in violation of an anti-assignment clause, without, however, precluding the debtor from terminating the transactions in question or all transactions governed by a master agreement or more than one master agreement with a cross-default clause. It was also stated that such a result could undermine international financial markets. In addition, it was observed that validating the assignment of receivables arising from deposit accounts in violation of anti-assignment clauses could impair the relationship between financing institutions and their clients, pose problems in the use of those deposit accounts as collateral for credit facilities offered by such institutions and increase the risk of money laundering. Moreover, draft article 20 (3), under which the debtor could not raise against the assignee any claim that the debtor might have against the assignor for breach of an anti-assignment clause, was said to create serious problems for swaps and derivatives markets. It was explained that such a provision would render useless netting arrangements that formed a key component of such financial transactions. It was also stated that such a provision would run counter to normal practices existing under master repurchase and master netting agreements.

62. There was general agreement in the Working Group that the above-mentioned concerns should be addressed. Differing views were expressed, however, as to the most appropriate way to address them. One view was that, in order to avoid undermining well-functioning practices, transactions involving money market or stock exchange instruments, swaps and derivatives, and receivables arising from transfer orders or settlements through payment or securities settlement systems should be excluded from the scope of the draft Convention by way of a blanket exclusion in draft article 4. In support of that view, it was observed that an exclusion in draft article 4 was preferable for reasons of simplicity and predictability. Alternatively, if consensus could not be reached by the Working Group on such a blanket exclusion, such transactions could be covered by the draft Convention on the condition that an assignment made without the consent of the debtor would be treated as null and void. The suggestion was also made that the latter approach could be followed in any case with regard to receivables from deposit accounts.

63. In order to implement the first suggestion mentioned above, it was stated that a new paragraph should be added to the preamble in order to express the specificity of receivables arising from deposit accounts as well as receivables arising from transactions involving such financial instruments.

64. Concerning receivables arising from deposit accounts, language along the following lines was proposed:

"Article 1. *Scope of application*

"(1) This Convention applies to:

...

(d) receivables arising from deposit accounts subject to the conditions of article 8 (3)".

"Chapter III. *Validity and effects of assignment*

"Article 8. *Validity and effectiveness of bulk assignments, assignments of future receivables, partial assignments and assignments of receivables arising from deposit accounts*

...

"(3) An assignment of receivable(s) arising from deposit accounts is valid and effective subject to the prior explicit consent of the debtor. Any assignment made in breach of this provision shall be deemed null and void under the present Convention."

65. Concerning receivables arising from transactions involving financial instruments, language along the following lines was proposed:

"Article 4. *Exclusions*

"[(3)] This Convention does not apply to receivables arising from:

(a) transactions involving financial instruments such as money-market or stock exchange instruments, swaps and other derivatives,

(b) transactions involving the temporary assignment of securities for cash,

(c) transfer orders or settlements through a payment or securities settlement system."

66. Alternatively, in the event that consensus could not be reached on the amendments mentioned in paragraph 65 above, language along the following lines was proposed:

"Article 1. *Scope of application*

"(1) This Convention applies to:

...

(e) receivables arising from transactions:

(i) involving financial instruments such as money-market and stock exchange instruments, swaps and other derivatives, receivables arising from transactions involving the temporary assignment of securities for cash and, in both cases, any collateral related to, under the express reservation of article 10 (2) (i),

(ii) transfer orders or settlements through a payment or securities settlement system under the express reservation of article 10 (2) (ii)."

"Article 10. *Contractual limitations on assignment*

"(2) Paragraph (1) shall not apply to receivables arising from:

(i) transactions involving financial instruments such as money-market and stock exchange instruments, swaps and other derivatives, receivables arising from transactions involving the temporary assignment of securities for cash, unless the debtor has explicitly consented to the assignment**,** whether or not there is a contractual clause limiting in any way the assignor's right to assign its receivables,

(ii) transfer orders or settlements through payment or securities settlement systems, unless the rules of such systems explicitly authorize such assignment."

67. Whether the Working Group preferred the wording mentioned above in paragraph 65 or in paragraph 66 above, the following definitions were proposed for addition to draft article 5:

"(...) 'Derivatives' means forward transactions related to stock exchange or market prices of [...] securities, money-market instruments, currencies, units of account, commodities, precious metals or interest rates or other income or to the creditworthiness of debtors, including spot and forward foreign exchange transactions and options on the above defined transactions or any combination thereof, or similar transactions.

"(...) 'Payment or securities settlement systems' means contractual arrangements between three or more participants with common rules for the settlement of payment or security transfer orders and any collateral related to between the participants, supported by a central counterparty, settlement agent or clearing house.

"(...) 'Temporary assignment of securities for cash' means repurchase and reverse repurchase transactions, as well as borrowing and lending transactions on financial instruments, such as securities or money-market instruments and similar transactions."

68. While the proposals mentioned above were met with great interest, the view was expressed that an outright exclusion or an invalidation of assignments not only as against the debtor but as against all parties would go far beyond what was needed to address the above-mentioned debtor-related concerns. It was stated that such an approach would unnecessarily deprive assignees of even a right in the proceeds after payment by the debtor of a financial receivable. In addition, it was observed that a blanket exclusion could result in excluding composite transactions involving the assignment of both trade and financial receivables. The suggestion was, therefore, made that it would be preferable to include those transactions in the scope of the draft Convention, while making the necessary adjustments so as to address the debtor-related concerns.

69. As to the types of adjustments that would need to be made, it was stated that rules dealing with payment to a new creditor (draft articles 17-19), rights of set-off of the debtor (draft article 20 (2) and (3)) and the right of the debtor to modify the original contract (draft article 22) should apply only to trade receivables (i.e. receivables arising from the sale of goods or the provision of services) and to transactions in which there was no restriction on assignment in the original contract. As a result, it was said, if there was a contractual restriction on the assignment of a receivable other than a trade receivable, the assignment would have no effect on the debtor's rights and obligations (i.e. the debtor would not need to pay the assignee and would not lose its rights of set-off or its right to modify the original contract), unless the debtor consented to the assignment. In view of that additional protection and in order to avoid the problems described above with regard to default and cross-default rules in master agreements (see paras. 60 and 61), the debtor of a receivable other than a trade receivable would not have the right to claim breach of, or terminate, the original contract on account of the assignment.

70. Such an approach was said to have several advantages, including the following: that it would address the special interests of debtors of financial receivables; that it would preserve an acceptable debtor-protection regime for debtors of trade and consumer receivables; that, in the case of an assignment of a financial receivable, it would allow the application of the draft Convention as between the assignor and the assignee and as against competing assignees, creditors of the assignor and the administrator in the insolvency of the assignor; and that it would avoid the difficulty in defining financial receivables, which would be difficult to define as indicated in the above-mentioned proposal (see para. 67).

71. Language along the following lines was proposed:

"Article 5. *Definitions and rules of interpretation*

"(...)"trade receivable" means a receivable arising under an original contract for the sale or lease of goods or the provision of services.

"Article ... *Special Provisions Relating to Debtors on Receivables that are not Trade Receivables*

"(1) This article applies only to a receivable that is not a trade receivable and only to the extent of a restriction on assignment provided in an agreement described in articles 10 (1) and 11 (2).

"(2) Notwithstanding articles 17, 18 and 19, an assignment of the receivable, and receipt by the debtor of a notification of the assignment or payment instruction, shall have no effect under this Convention on the debtor's rights or obligations except to the extent that the debtor consents.

"(3) Notwithstanding article 20 (2), nothing in this Convention limits any right of the debtor to raise against the assignee any defence or set-off available to the debtor, even if the defence or set-off became available to the debtor after the time notification of the assignment was received.

"(4) Notwithstanding article 22, nothing in this Convention limits the effectiveness against the assignee of an agreement concluded at any time between the assignor and the debtor to modify the original contract.

"(5) Notwithstanding articles 10 (2) and 11 (3), an assignor who assigns a receivable is not liable to the debtor for breach of the restriction on assignment and the breach shall have no effect."

72. It was also proposed that language along the following lines could be added at the end of articles 10, 11, 17, 18, 19, 20 and 22:

"(...) In the case of a receivable that is not a trade receivable, this article is subject to article ...."

It was stated that, if needed, a provision might also be added to article 4 directing attention to the special provisions mentioned above.

73. The proposal set forth in paragraphs 71 and 72 above was met with interest. As a matter of policy, it was widely felt that the Working Group should try to retain as broad a scope of application as possible, while ensuring that the concerns of the industry were addressed. If, after consultation with the industry, that approach were proven to be unworkable, a blanket exclusion could be considered. In response to a question as to the impact of the proposal on the legislative treatment of the assignment of financial receivables, it was stated that certain provisions of the draft Convention would not apply to debtor-related issues (e.g. discharge of the debtor or rights of set-off of the debtor), which would be left, as a result, to law applicable outside the draft Convention. However, it was said, the rest of the provisions of the draft Convention would apply (e.g. draft article 10 (1), and, as a result, the assignment would be effective as between the assignor or the assignor's creditors and the assignee). In addition, it was pointed out that paragraph (5) was based on the assumption that, once the debtor's rights were not affected by the assignment, the debtor did not need to terminate any agreement. It was explained that paragraph (5) was intended to address the problem raised with regard to systemic risks arising in the case of a breach of an anti-assignment clause in the case of master agreements with cross-default clauses.

74. As to the merits of an approach based on a definition of trade receivables, it was stated that, in defining the well-known notion of trade receivables, the proposed text avoided the need for a list of financial receivables, which could be neither homogeneous nor exhaustive. However, a number of concerns were expressed. One concern was that the reference to services in the definition of trade receivables could inadvertently result in financial receivables being treated as trade receivables. In order to address that concern, it was suggested that reference should be made to "services other than financial services". That suggestion received broad support. Another concern was that, in defining financial receivables in a negative way, the proposal might inadvertently result in subjecting inappropriately the assignment of certain types of trade receivables to a special regime (e.g. trade receivables held by a financing institution and assigned to another financing institution). In order to address that concern, it was suggested that the proposed text would need to be examined carefully in consultation with the relevant industry so as to ensure that all different practices were treated appropriately. That suggestion too received sufficient support. Yet another concern was that it might not be appropriate to define in essence the scope of the draft Convention in a negative way. In response, it was observed that such an approach was often followed in legislative texts and, in the present case, presented the obvious advantage of being based on the well-known notion of trade receivables.

75. As to the special regime for the assignment of financial receivables in the proposal, it was stated that it was in line with the policy of the Working Group to cover a range of transactions that would be as broad as possible, while addressing the concerns of the relevant industry. However, the concern was expressed that the proposed text did not make it sufficiently clear whether the special regime applying to the assignment of financial receivables was covered in the draft Convention or was left to law applicable outside the draft Convention. The concern was also expressed that paragraphs (1) to (4) of the proposed text might appear as conferring positive rights rather than creating a special regime under the draft Convention for debtors of financial receivables.

76. For those reasons, the proposal was made that draft articles 10, 11, 17, 18, 19, 20 and 22 should not apply to the assignment of receivables other than trade receivables and that, with respect to such assignments, the matters addressed in those provisions should be left to law outside the draft Convention. There was support for that proposal. It was stated that it might better address the concerns of the industry. It was also observed that that proposal was in line with the policy underlying the proposal mentioned above in paragraphs 64 to 67. The concern was expressed, however, that that proposal went beyond its intended purpose of protecting debtors of financial receivables to the extent that it would unnecessarily result in an anti-assignment clause invalidating an assignment even as between the assignor or the assignor's creditors and the assignee.

77. After discussion, the Working Group was unable to reach a conclusion on the matter and decided that a new article 4*bis* with two alternatives along the lines of the proposals mentioned in paragraphs 71, 72 and 76 above

should be included in the text of the draft Convention for the continuation of the discussion after consultation with the relevant industry. The formulation of new draft article 4*bis* was referred to the drafting group.

Assignments of receivables arising from the sale or lease of aircraft and other types of mobile equipment

78. It was noted that the International Institute for the Unification of Private International Law (Unidroit) was currently preparing, in cooperation with the International Civil Aviation Organization (ICAO), a draft convention on security and other interests in mobile equipment and an aircraft protocol, while further equipment-specific protocols were being prepared in cooperation with other organizations. It was also noted that those texts were aimed at reducing the cost of financing of mobile equipment, the application to which of the lex situs created uncertainty as to the effectiveness of security and similar interests in view of the movement of such equipment across borders and of certain mandatory aspects of national secured transactions law. Furthermore, it was noted that the draft convention and protocols addressed the assignment of receivables arising from the sale and lease of mobile equipment, as well as of insurance proceeds in the case of damage to or loss of such equipment. As to the main differences between the draft Convention and those texts, it was noted that, unlike the draft Convention, those texts: provided a system of self-help, which included the right of the financier to repossess the mobile equipment, even after the commencement of an insolvency proceeding; based priority in the equipment and the receivables arising from the sale and lease of equipment on the time of registration in an equipment-specific registry; and, in view of the high value of the equipment involved, provided that the secured obligation (the receivable for the price of the receivable) followed the legal regime of the accessory security or other similar right in the mobile equipment.

79. The Working Group considered ways to avoid conflicts between the draft Convention and those texts. It was noted that, in order to determine whether assignments of receivables arising from the sale and lease of mobile equipment could be excluded from the draft Convention or from the draft convention and protocols, the Working Group needed to either know the status of current law and practice or to be prepared to draw conclusions as to any generally acceptable new practices that, although they were not sufficiently accommodated under current law, could be accommodated by a new uniform law.

80. The view was expressed, however, that, at least, receivables arising from the sale and lease of aircraft and spacecraft should be excluded from the scope of the draft Convention. In support of that view, it was observed that the assignment of such receivables was an integral part of aircraft and spacecraft financing and should be left to aircraft and spacecraft financing law. Potential financiers of such receivables, it was said, would tend to look to the aircraft registry in order to determine their priority status and to decide whether to provide credit and at what cost. On the other hand, it was stated, receivables arising from ticket sales were normally part of securitization schemes and should not be excluded from the scope of the draft Convention. It was also observed that attempting to address the assignment of such receivables in the draft Convention might reduce the acceptability of the draft Convention to the aircraft industry. In that connection, it was suggested that the commercial financing industry, which included also aircraft financiers and was supporting a scope of the draft Convention that would be as broad as possible, could address that matter in consultation with the aircraft industry, with a view to achieving a more coordinated treatment of aircraft and receivables financing matters in the draft Convention.

81. After discussion, the Working Group generally felt that it did not have the specific information necessary to make a decision for a blanket exclusion of aircraft and spacecraft receivables from the scope of the draft Convention.

82. The Working Group next turned to the question whether any conflict between the draft Convention and those other texts could be left to treaty law. Differing views were expressed. One view was that draft article 33 (2), allowing a State to declare, in the case of a conflict, to which text it wished to give precedence and draft article 35, allowing States to exclude further practices, were sufficient. It was stated, however, that such an approach would result in disparity of legal treatment of the relevant matters and in uncertainty to the extent that States would take differing approaches. Another view was that the matter could be left to general principles of treaty law, under which the more specific or more recent text would prevail. It was stated, however, that that approach should be only the last resort if agreement could not be reached on another approach, since commercial transactions required a higher degree of certainty than could be achieved under such a treaty-law approach.

83. Yet another view was that the draft Convention should give, in a uniform way for all States, precedence to other texts dealing with secured transactions with respect, at least, to aircraft receivables secured by or associated with aircraft and registered in an aircraft registry. Language along the following lines was proposed:

> "This Convention does not prevail over any international convention or other multilateral or bilateral agreement which has been or may be entered into by a Contracting State and which contains provisions concerning security interests, conditional sales under reservations of title and leasing agreements with respect to aircraft and receivables arising from the sale or lease secured by or associated with such equipment."

84. The view was expressed that the same approach might need to be followed with respect to the assignment of receivables arising from the sale or lease of spacecraft, as well as with regard to the assignment of any insurance proceeds arising in the case of damage to or loss of spacecraft.

85. Yet another view was that the determination of whether a protocol would supersede the draft Convention could be made in each protocol on the basis of a decision as to whether receivables should be part of specific equipment rather than receivables financing. It was observed, however, that for the draft Convention to refer that matter to each protocol, those texts should be final and the Working Group would need to have sufficient knowledge of their contents. It was stated, that, in particular, the scope of those texts

should be sufficiently clear. In that connection, it was observed that the absence of a definite list of equipment to be covered created the concern that the creation of security and similar rights in "any uniquely identifiable object" might be covered. On the other hand, that concern was said to be unjustified, since it was generally understood among the members of the group preparing the draft convention and protocols that work would be limited to high-value mobile equipment only. It was stated, however, that the concern was legitimate, since the terms "high-value mobile equipment" were not sufficiently clear, or were, at least, not universally understood in the same way. In view of the above, it was suggested that the Working Group should not feel pressured to make a decision. It was pointed out that more information and consultation with the relevant sectors of the industry was necessary and that the matter was of a political nature and might need to be left to the Commission.

86. After discussion, the Working Group agreed that the text of draft article 4 (2) should remain unchanged and without square brackets (see, however, para. 211). It was also agreed that, for the continuation of the discussion, draft article 33 should include a third paragraph within square brackets along the lines mentioned in paragraph 83 above. That matter was referred to the drafting group. It was generally understood that, in any case, draft article 33 would need to be revisited with a view to ensuring that it addressed appropriately conflicts with other international texts (see paras. 192-195).

Article 2. *Assignment of receivables*

87. The text of draft article 2 as considered by the Working Group was as follows:

"For the purposes of this Convention:

(a) 'Assignment' means the transfer by agreement from one person ('assignor') to another person ('assignee') of the assignor's contractual right to payment of a monetary sum ('receivable') from a third person ('the debtor'). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

(b) In the case of an assignment by the initial or any other assignee ('subsequent assignment'), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee."

88. It was noted that, under subparagraph *(a)*, what constituted a "contractual" right was left to law applicable outside the draft Convention. In order to avoid the uncertainty that could result in view of the divergences existing between legal systems, it was noted that the term "contractual" right could be defined in the draft Convention in a negative way (e.g. "a right to payment of a monetary sum other than one arising by operation of law or determined in a court judgement"). It was also noted that the Working Group might wish to clarify whether the term "receivable" included: damages for breach of contract (liquidated or not); interest for late payment (contractual interest, statutory interest or interest liquidated in a court judgement); sums payable as dividends (present or future) arising from shares; and receivables based on arbitral awards.

89. In respect of damages for breach of contract, differing views were expressed. One view was that damages should not be treated as receivables. It was stated that the claim of the seller for the purchase price of goods sold under a contract of sale was a right to payment flowing directly from the contract. To the contrary, the claim for damages of the buyer, e.g. for delivery of non-conforming goods by the seller was the result of a contract violation and as such should not be considered as a "contractual right", unless it was liquidated in a settlement agreement. The prevailing view, however, was that damages for breach of contract should be treated in the same way as contractual receivables. In support of that view, it was said that the assignee should be entitled to all payment rights the assignor had been entitled to under the original contract. If damages were to be excluded, it was explained, in some cases the assignee's rights in the assigned receivables would be frustrated. In that connection, regret was expressed that the scope of the draft Convention was limited to contractual rights to payment, excluding contractual rights other than rights to payment and non-contractual receivables.

90. With regard to interest for late payment, it was widely felt that it was included in the term "receivable" if interest was owed under the original contract. In respect of dividends, it was agreed that they should be treated as contractual receivables, whether they were declared or were future, since they arose under a contractual relationship reflected in the share. As to receivables based on arbitral awards, it was generally thought that they should not be covered by the draft Convention.

91. After discussion, the Working Group adopted draft article 2 unchanged. It was agreed that all the matters mentioned above could usefully be explained in the commentary.

Article 3. *Internationality*

92. The text of draft article 3 as considered by the Working Group was as follows:

"A receivable is international if, at the time it arises, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States."

93. As a matter of drafting, it was noted that, in order to align the first with the second sentence of draft article 3 and to limit the references in the text to the time when a receivable arose, the words "at the time of the conclusion of the original contract" might be substituted for the words "at the time it arises". Subject to that change, the Working Group adopted draft article 3 and referred it to the drafting group.

Article 5. *Definitions and rules of interpretation*

94. The text of draft article 5 as considered by the Working Group was as follows:

"For the purposes of this Convention:

(a) 'original contract' means the contract between the assignor and the debtor from which the assigned receivable arises;

(b) a receivable is deemed to arise at the time when the original contract is concluded;

(c) 'existing receivable' means a receivable that arises upon or before the conclusion of the contract of assignment; 'future receivable' means a receivable that arises after the conclusion of the contract of assignment;

[*(d)* 'receivables financing' means any transaction in which value, credit or related services are provided for value in the form of receivables. Receivables financing includes factoring, forfaiting, securitization, project financing and refinancing;]

(e) 'writing' means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

(f) 'notification of the assignment' means a communication in writing which reasonably identifies the assigned receivables and the assignee;

(g) 'insolvency administrator' means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

(h) 'insolvency proceeding' means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(i) 'priority' means the right of a party in preference to another party;

[*(j)* [For the purposes of articles 24 and 25,] an individual is located in the State in which it has its habitual residence; a corporation is located in the State in which it is incorporated; a legal person other than a corporation is located in the State in which its constitutive document is filed and, in the absence of a filed document, in the State in which it has its chief executive office.]

[*(k)* [For the purposes of articles 1 and 3:]

(i) the assignor is located in the State in which it has that place of business which has the closest relationship to the assignment;

(ii) the assignee is located in the State in which it has that place of business which has the closest relationship to the assignment;

(iii) the debtor is located in the State in which it has that place of business which has the closest relationship to the original contract;

(iv) in the absence of proof to the contrary, the place of central administration of a party is presumed to be the place of business which has the closest relationship to the relevant contract. If a party does not have a place of business, reference is to be made to its habitual residence[;

(v) several assignors or assignees are located at the place in which their authorized agent or trustee is located]]."

95. On the understanding that direct reference would be made in draft articles 3 and 8 (2) to the time of the conclusion of the original contract, the Working Group decided to delete subparagraph *(b)*. With regard to subparagraph *(d)*, the Working Group decided to postpone discussion until it had completed its review of the title and the preamble of the draft Convention. As to subparagraphs *(j)* and *(k)*, the Working Group recalled its decision to replace them with a new provision (see paras. 25-30).

"Location" of the parties (continued)

96. Recalling its earlier discussion of the issue of location, addressed in subparagraphs *(j)* and *(k)* (see paras. 25-30), the Working Group reopened discussion on the basis of a text that was as follows:

"For the purposes of this Convention:

...

"*(j)* (i) a person is located in the State in which it has its place of business;

(ii) *Variant A*

if the assignor or the assignee has more than one place of business, the place of business is that which has the closest relationship to the contract of assignment. For the purposes of articles 24 to [...], the place of business with the closest relationship to the contract of assignment is deemed to be the place where the central administration of the assignor is exercised;

Variant B

if the assignor or the assignee has more than one place of business, the place of business is that place where its central administration is exercised [.A branch [of a person engaged in the business of accepting deposits or providing other banking services] is deemed to be a separate person];

(iii) if the debtor has more than one place of business, the place of business is that which has the closest relationship to the original contract;

(iv) if a person does not have a place of business, reference is to be made to the habitual residence of that person;"

97. On the grounds that a single location rule would be preferable, the Working Group decided to delete variant A of subparagraph *(j)* (ii). Discussion focused on the bracketed language contained in variant B. A number of concerns were expressed. One concern was that, in the case of an assignment of the same receivables by the head office and by a branch in another country, application of the bracketed language would result in priority between competing assignments of the same receivables from the same assignor being governed by the laws of two States. Another concern was that the bracketed language appeared to distin-

guish between place of business and place of a branch. Yet another concern was that use of the term "branch" appeared to be problematic in view of the fact that increasingly transactions were closed through regional offices, departments or units in different countries. Yet another concern was that relating each assignment to the branch from which it was made might create uncertainty, since third parties could not be aware of the internal structure of the assignor and determine the place in which decisions were made. Yet another concern was that, in view of the fact that no distinction was made between branches in the same country and branches in different countries, one legal entity risked to be treated as a group of separate legal entities.

98. In order to address those concerns, a number of suggestions were made. One suggestion was that the bracketed language in variant B should be replaced by wording along the following lines: "or, in the case of branches, where the branch with which the assignment has the closest relationship is located". A related suggestion was to have a location rule along the lines of variant B with the exception just mentioned as to branch offices of banks only. While some support was expressed in favour of those suggestions, they were objected to on the grounds that, in the case of assignments made from branches in different countries, they would result in priority between competing assignments being governed by different laws. Another suggestion was that, in order to avoid that problem, reference should be made to the place with which the original contract had the closest relationship. While that suggestion was met with some interest, it was also objected to on the grounds that, in the case of bulk assignments involving multiple original contracts, priority issues would be referred to a multiplicity of laws. Yet another suggestion was that reference should be made to the branch in whose books the assigned receivables were carried. Language along the following lines was proposed to replace the bracketed wording in subparagraph *(j)* (ii):

> "Notwithstanding the foregoing sentence, if, immediately prior to the assignment, the receivable is carried on the books of a branch of a financial services provider, the assignor is located in the State in which that branch is located. If, immediately after the assignment, the receivable is carried on the books of a branch of financial services provider, the assignee is located in the State in which that branch is located.

99. In addition, definitions along the following lines were proposed for inclusion in draft article 5:

> "(...) A 'financial service provider' is a bank or other financial institution that, in the ordinary course of its business, accepts deposits, makes loans or [provides other financial services'].
>
> "(...) A 'branch' of a financial service provider is a place of business of the financial service provider that is located in a different State than the financial service provider's place of central administration and that is separately regulated by the State in which the branch is located under the laws applicable to financial service providers in that State.
>
> "(...) A receivable 'is carried on the books' of a branch of a financial service provider if either:
>
> (i) under [accounting] [regulatory] standards applicable to the branch, the receivable is an asset of that branch; or
>
> (ii) in cases in which, because the financial service provider's interest in the receivable is only as security, the receivable is not [considered] an asset of the financial service provider, the rights for which the receivable is security are an asset of that branch."

100. Due to the lack of time, the Working Group was not able to discuss the proposed text. It was understood that the inclusion of the proposed text in the report would allow States to consider its merits in their preparations for the Commission session.

Form of assignment

101. It was noted that, after the deletion of the provision that dealt with form of an assignment, formal validity was left to the law applicable outside the draft Convention. In view of the fact that priority presupposed both substantive and formal validity, it was noted that an assignee would have to ensure that it had a valid assignment under the provisions of the draft Convention and under the law governing formal validity, as well as priority under the law of the assignor's location. In order to avoid such complications, it was suggested that the formal validity of the assignment as a transfer of property should be explicitly addressed in the draft Convention, perhaps by reference to the law of the assignor's location.

102. Differing views were expressed, however, as to the law that was most appropriate to govern formal validity. One view was that subjecting formal validity to the law of the assignor's location would enhance certainty and would simplify compliance on the part of the assignee, which might have an impact on whether priority would be vested in the assignee. Another view was that it would be more consistent with current trends in private international law to provide in the alternative that the assignment would be valid if it met the requirements of the law of the assignor's location or the law of the State in which the assignment was made. Yet another view was that a reference to the law of the assignor's location might run counter to private international law practice. It was also pointed out that such an approach might have a negative impact on international trade practices, since the law of the assignor's location might be irrelevant to the transaction in question.

103. After discussion, it was agreed that the draft Convention should not contain any provision in respect of formal validity and that that matter should be left to the law outside the draft Convention.

Article 10. *Contractual limitations on assignments*

104. The text of draft article 10 as considered by the Working Group was as follows:

> "(1) An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent

assignee, limiting in any way the assignor's right to assign its receivables.

"(2) Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement. A person who is not party to such an agreement is not liable under that agreement for its breach."

105. It was noted that the second sentence of paragraph (2) appeared to be stating the obvious (i.e. that the assignee could not have contractual liability for breach of a contract to which the assignee was not a party). In order to reflect the meaning intended by the Working Group (A/CN.9/455, paras. 50 and 51), it was suggested that the words "under that agreement for its breach" could be replaced by language along the following lines: "even if it had knowledge of such an agreement" or "on the sole ground that it had knowledge of such an agreement" or "unless that person acts with the specific intent to cause loss or recklessly and with actual knowledge that the loss would be likely to result".

106. It was agreed that the third alternative introduced an inappropriate limitation on any liability that the assignee might have under law applicable outside the draft Convention. After discussion, the second alternative was found to be preferable on the ground that it reflected in a clearer way that it was not intended to establish liability of the assignee if something more than knowledge was involved. Subject to that change and to any other changes the Working Group agreed upon so as to address issues of financial receivables (see para. 86), the Working Group adopted draft article 10 and referred it to the drafting group.

Article 12. *Limitations relating to Governments and other public entities*

107. The text of draft article 12 as considered by the Working Group was as follows:

"Articles 10 and 11 do not affect the rights and obligations of a debtor, or of any person granting a personal or property right securing payment of the assigned receivable, if that debtor or person is a governmental department[, agency, organ, or other unit, or any subdivision thereof, unless:

(a) the debtor or person is a commercial entity; or

(b) the receivable or the granting of the right arises from commercial activities of that debtor or person.]"

108. It was recalled that draft article 12 was the result of a decision made at the previous session of the Working Group to ensure that sovereign debtors were not affected by assignments made in violation of anti-assignment clauses included in public procurement and other similar contracts. The Working Group thought that any interference with the legal regime of such contracts should be avoided, since it could seriously affect the acceptability of the draft Convention (A/CN.9/456, para. 115).

109. The concern was expressed that the reference to "commercial entity" and "commercial activities" in subparagraphs *(a)* and *(b)* would result in draft article 12 failing to protect sovereign debtors in those countries where government entities and their activities did not normally operate under a specific body of public law but were governed by the same rules as "commercial" entities and activities. With a view to alleviating that concern, while reflecting even more strongly the above-mentioned policy decision, the following text was proposed as a substitute for draft article 12:

"(1) Articles 10 and 11 do not apply to the assignment of a receivable arising from a contract where the debtor is a public entity.

"(2) A 'public entity' includes a government department, a federal, regional or local authority or a body controlled by a public entity.

"(3) A 'body controlled by public entity' is any body

(a) established for the specific purpose of meeting needs in the general interest, not having an industrial or commercial character;

(b) having a legal personality; and

(c) financed for the most part or subject to management supervision by a public entity or having an administrative managerial or supervisory body more than half of whose members are appointed by a public entity."

110. Some support was expressed in favour of the proposal. The concern was expressed, however, that the proposed exception was excessively broad in that it would result in protecting inappropriately sovereign debtors who acted as commercial parties or in the context of commercial transactions. In order to address that concern, it was suggested that the exception should be limited to public entities acting in the exercise of their public functions. That suggestion was objected to on the ground that it was the prerogative of each State to determine which types of public entities it wished to protect.

111. It was widely felt, however, that both the proposed text and draft article 12, in establishing a rule that would be applicable to all sovereign debtors, might go beyond their intended purpose. It was observed that such a rule would result in protecting sovereign debtors who might not need such protection or who could be protected by other means (e.g. by a statutory anti-assignment limitation to the extent it was not affected by the draft Convention). It was stated that, while such sovereign debtors could decide whether to make use of the protection they were afforded by virtue of draft article 12 by determining whether to include an anti-assignment clause in their contracts, draft article 12 would still be seen as codifying generally acceptable good practice, a conclusion that the Working Group had never reached.

112. In addition, it was stated that the possibility of a contractual limitation to assignment invalidating the assignment as against a sovereign debtor might inadvertently raise the risk of non-collection from a sovereign debtor and thus raise the cost of credit to all sovereign debtors, irrespective of whether they needed the protection provided under draft article 12. Moreover, it was pointed out that allowing anti-assignment clauses in public procurement contracts to invalidate assignments as against a sovereign debtor could inadvertently raise the cost of credit to small-

and medium-size suppliers of goods and services, which would make it even harder for them to compete for public procurement contracts with large suppliers who normally had alternative sources of credit.

113. As a compromise, it was suggested that draft article 12 should be revised so as to allow States to freely determine which entities they wished to protect, but only by way of a reservation in respect of the application of draft articles 10 and 11 to sovereign debtors. It was widely felt that a new provision should be added to that effect to the final clauses of the draft Convention along the following lines: "A State may declare at any time that it will not be bound by draft articles 10 and 11 if the debtor or any person granting a personal or property right securing payment of the assigned receivable is located in that State at the time of the conclusion of the original contract and is a Government, central or local, any subdivision thereof, or any public entity. If a State has made such a declaration, articles 10 and 11 do not affect the rights and obligations of that debtor or person". The suggestion was also made that the declaration should specify the types of entities to be protected. That suggestion was objected to on the ground that it would inappropriately limit the ability of States in effectively making use of their right to make such a declaration.

114. In the discussion, some doubt was expressed as to whether powerful debtors, such as sovereign debtors deserved any special protection. The view was also expressed that sovereign debtors could be protected in the same way as debtors of financial receivables. In response, it was stated that issues concerning sovereign debtors were different from those arising with regard to debtors of financial receivables and included the need for special protection for public funds as well as the need of sovereign debtors to be able to determine that they were dealing with reliable institutions.

115. After discussion, the Working Group decided that draft article 12 should be deleted, adopted the new provision mentioned in paragraph 113 above and referred its specific formulation and exact placement in chapter VI (final provisions) to the drafting group.

Article 15. *Right to notify the debtor*

116. The text of draft article 15 as considered by the Working Group was as follows:

"(1) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

"(2) A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph (1) of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach."

117. It was noted that the first sentence of draft article 15 (2) appeared to deal with debtor-related issues and might be moved to draft article 18 or 19. The Working Group adopted draft article 15 and referred the matter to the drafting group.

Article 16. *Right to payment*

118. The text of draft article 16 as considered by the Working Group was as follows:

"(1) Unless otherwise agreed between the assignor and the assignee and whether or not a notification of the assignment has been sent:

(a) if payment with respect to the assigned receivable is made to the assignee, the assignee is entitled to retain whatever is received in respect of the assigned receivables;

(b) if payment with respect to the assigned receivable is made to the assignor, the assignee is entitled to payment of whatever has been received by the assignor.

"(2) If payment with respect to the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of whatever has been received by such person.

"(3) The assignee may not retain more than the value of its right in the receivable."

119. The concern was expressed that draft article 16 might appear as dealing with rights of third parties in proceeds. In order to alleviate that concern, it was suggested that: the chapeau of paragraph (1) should be reformulated along the following lines: "As between the assignor and the assignee, unless otherwise agreed, and whether or not ..."; and that paragraph (2) should be moved to the end of paragraph (1) as subparagraph *(c)*. Those suggestions received broad support.

120. Recalling its decision that "proceeds" in the case of competing third-party rights should not include returned goods (see paras. 46-48), the Working Group decided that, as between the assignor and the assignee, the assignee had the right to claim payment in cash or in kind, as well as any proceeds in the form of returned goods. It was stated that there was no reason to limit the ability of the assignor and the assignee to agree that the assignee could claim any returned goods. It was also observed that, even in the absence of an agreement, a default rule allowing the assignee to claim any returned goods could reduce the risks of non-collection from the debtor and thus have a positive impact on the cost of credit.

121. In response to questions raised, it was observed that paragraph (3) applied to both paragraphs (1) and (2) in that it was intended to reflect current practice in assignments by way of security. In line with such practice, paragraphs (1) and (2) allowed the assignee to claim full payment from the debtor, the assignor or a third party, while paragraph (3) provided that it could retain only an amount up to the value of its right in the assigned receivable, including any interest if interest was owed on the ground of contract or law. It was agreed that that matter could usefully be clarified in the commentary.

122. In addition, it was stated that no reference to contrary agreement of the parties was necessary in paragraph (3), since the right in the assigned receivable flowed from the contract and it was subject to party autonomy, which was recognized in a general way in draft article 13.

123. Subject to the changes mentioned in paragraphs 119 and 120 above, the Working Group adopted draft article 16 and referred it to the drafting group.

Article 19. *Debtor's discharge by payment*

124. The text of draft article 19 as considered by the Working Group was as follows:

"(1) Until the debtor receives notification of the assignment, the debtor is entitled to be discharged by paying in accordance with the original contract.

"(2) After the debtor receives notification of the assignment, subject to paragraphs (3) to (8) of this article, the debtor is discharged only by paying the assignee or as otherwise instructed.

"(3) If the debtor receives notification of more than one assignment of the same receivables made by the same assignor, the debtor is discharged by paying in accordance with the first notification received.

"(4) If the debtor receives more than one payment instruction relating to a single assignment of the same receivables by the same assignor, the debtor is discharged by paying in accordance with the last payment instruction received from the assignee before payment.

"(5) If the debtor receives notification of one or more subsequent assignments, the debtor is discharged by paying in accordance with the notification of the last of such subsequent assignments.

"(6) If the debtor receives notification of the assignment from the assignee, the debtor is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment has been made and, unless the assignee does so, the debtor is discharged by paying the assignor. Adequate proof includes, but is not limited to, any writing emanating from the assignor and indicating that the assignment has taken place.

"(7) This article does not affect any other ground on which payment by the debtor to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor.

"[(8) This article does not affect any ground on which the debtor may be discharged by paying a person to whom an invalid assignment has been made.]"

125. With regard to paragraph (2), it was agreed that it should make clear that after notification the debtor could be discharged only by paying the assignee or, if otherwise instructed, in accordance with the payment instructions given by the assignee. As a matter of drafting, it was agreed that paragraphs (1) and (2) could be consolidated in one provision.

126. As to paragraph (6), it was noted that, if the payment obligation became due during the time when the assignee was expected to provide adequate proof and the debtor failed to pay, the debtor could be in default and become liable to damages and interest for late payment. It was also noted that the understanding of the Working Group so far had been that the payment obligation would be suspended. In order to avoid any uncertainty, it was suggested that the matter be addressed explicitly in paragraph (6) by providing either that the payment obligation should be suspended or that the debtor could be discharged by paying the assignor.

127. The suggestion to allow the debtor to discharge its obligation by paying the assignor was objected to on the grounds that: it would result in codifying a rule that would be inappropriate in principle; and it could lead to abuses by debtors acting in bad faith or in collusion with the assignor and waiting until payment became due before requesting adequate proof, so as to continue paying the assignor or to delay payment. Some support was expressed in favour of a suspension of payments. It was stated that a debtor, in particular if it were a consumer debtor, would be in a difficult position if faced with a notification from an unknown, foreign assignee. In such a situation, it was pointed out, the debtor would not have sufficient time to examine the notification, would be subject to payment of damages and interest, if it delayed payment, and would not be discharged, if it paid an assignee who was not an assignee (i.e. the assignment was null and void, e.g. for fraud or duress). In order to address those concerns, a number of suggestions were made. One suggestion was to limit the application of paragraph (6) to cases in which the debtor had legitimate doubts. Another suggestion was that the assignee should be qualified as a "purported" assignee. Yet another suggestion was to define adequate proof by reference solely to a writing emanating from the assignor.

128. The prevailing view, however, was that the matter should not be explicitly addressed in the text of the draft Convention. It was stated that explicitly stating in paragraph (6) that the debtor could pay the assignor or that the payment obligation could be suspended might inadvertently result in encouraging abusive practices. In addition, it was observed that, if the debtor were able to continue to make payment to the assignor, even if the assignor had become insolvent or had ceased to exist, the assignee would find itself at a significant disadvantage. As to the problem of fraudulent assignees, it was widely felt that it rarely occurred in practice and, in any case, was sufficiently addressed in paragraph (7), which allowed debtors to obtain a valid discharge by paying in accordance with their own national law.

129. As to paragraph (7), it was noted that it might inadvertently result in a debtor ignoring a notification given under the draft Convention (e.g. because it related to future receivables, which might not be allowed under other law) and paying someone else in accordance with other law. It was, therefore, suggested that the paragraph be amended to validate payment under other law only if it were made to a legitimate assignee under the draft Convention, while limiting recourse to payment into court.

130. It was widely felt, however, that such an approach would actually narrow the protection available to the

debtor. It was stated that paragraph (7) was originally intended to ensure that if, under other law apart from the draft Convention, there was a mechanism that would enable the debtor to obtain a discharge, the debtor should not be precluded from resorting to that mechanism.

131. As to paragraph (8), it was suggested that it should be deleted, since it either stated an obvious rule or placed on the debtor the risk of having to determine the validity of the assignment in order to obtain a valid discharge.

132. After discussion and subject to the consolidation of paragraphs (1) and (2), the change to paragraph (2) mentioned in paragraph 125 above and the deletion of paragraph (8), the Working Group adopted draft article 19 and referred it to the drafting group.

Article 20. *Defences and rights of set-off of the debtor*

133. The text of draft article 20 as considered by the Working Group was as follows:

"(1) In a claim by the assignee against the debtor for payment of the assigned receivables, the debtor may raise against the assignee all defences or rights of set-off arising from the original contract of which the debtor could avail itself if such claim were made by the assignor.

"(2) The debtor may raise against the assignee any other right of set-off, provided that it was available to the debtor at the time notification of the assignment was received.

"(3) Notwithstanding paragraphs (1) and (2), defences and rights of set-off that the debtor could raise pursuant to article 10 against the assignor for breach of agreements limiting in any way the assignor's right to assign its receivables are not available to the debtor against the assignee."

134. The Working Group considered the question whether rights of set-off arising from contracts between the assignor and the debtor that were closely related to the original contract (e.g. a maintenance or other service agreement supporting the original sales contract) should be treated in the same way as rights of set-off arising from the original contract (i.e. the debtor should be able to raise them against the assignee irrespective of whether they arose before or after notification). It was generally agreed that such rights of set-off should receive the same treatment under the draft Convention as rights arising from the original contract. It was also agreed that, in expressing such a notion of "close connection" in the draft Convention, attention should be given to avoiding a formulation that would cover too wide a range of contracts. Language along the following lines was proposed: "rights of set-off arising from the same transaction as the original contract".

135. It was noted that paragraph (2) referred to rights of set-off being "available" at the time of notification for the notification to cut off such rights of set-off. In order to dispel any uncertainties and disparities that might exist with respect to the law applicable to set-off, it was suggested that reference should be made to the law governing the original contract. That suggestion was objected to on the grounds that it would not be appropriate to attempt addressing in the draft Convention such a general private international law issue. The suggestion was also objected since the law governing the original contract might not be the appropriate law and would, in any case, fail to cover non-contractual grounds of set-off (see paras. 155-156).

136. Subject to the change referred to in paragraph 134 above, the Working Group adopted draft article 20 and referred it to the drafting group.

Article 21. *Agreement not to raise defences or rights of set-off*

137. The text of draft article 21 as considered by the Working Group was as follows:

"(1) Without prejudice to the law governing the protection of the debtor in transactions made primarily for personal, family or household purposes in the State in which the debtor is located, the debtor may agree with the assignor in a signed writing not to raise against the assignee the defences and rights of set-off that it could raise pursuant to article 20. Such an agreement precludes the debtor from raising against the assignee those defences and rights of set-off.

"(2) The debtor may not exclude:

(a) defences arising from fraudulent acts on the part of the assignee;

(b) defences based on the debtor's incapacity.

"(3) Such an agreement may only be modified by an agreement in a signed writing. The effect of such a modification as against the assignee is determined by article 22 (2)."

138. It was noted that the reference to debtors in transactions for "personal, family or household purposes", contained in paragraph (1) (as well as in draft article 23), was qualified by the term "primarily", so as to ensure that the limitation would apply only to transactions for purely consumer purposes (i.e. transactions between consumers). It was widely felt, however, that, in order to be consistent with the purpose of protecting consumer debtors, that provision should apply to transactions serving consumer purposes with respect to one party and commercial purposes from the perspective of the other party (i.e. transactions between a consumer and a business entity).

139. It was also noted that paragraphs (1) and (3) referred to a signed writing, without clarifying whether the signature of the debtor only or both the debtor and the assignor was required. It was agreed that the provision should clarify that the writing needed to be signed only by the debtor, since the debtor was the party whose rights would be affected by a modification of an agreement to waive defences.

140. Subject to those changes, the Working Group adopted draft article 21 and referred it to the drafting group.

Article 22. *Modification of the original contract*

141. The text of draft article 22 as considered by the Working Group was as follows:

"(1) An agreement concluded before notification of the assignment between the assignor and the debtor that affects the assignee's rights is effective as against the assignee and the assignee acquires corresponding rights.

"(2) After notification of the assignment, an agreement between the assignor and the debtor that affects the assignee's rights is ineffective as against the assignee unless:

(a) the assignee consents to it; or

(b) the receivable is not fully earned by performance and either modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification.

"(3) Paragraphs (1) and (2) of this article do not affect any right of the assignor or the assignee for breach of an agreement between them."

142. It was noted that paragraph (1) referred to notification, without clarifying whether it was effective when sent to or received by the debtor. The Working Group agreed that the relevant point of time was the time when notification was received by the debtor, since as of that time the debtor could discharge its obligation only in accordance with the assignee's payment instructions. Noting that the matter was addressed in draft article 18, the Working Group adopted draft article 22 unchanged.

Article 23. *Recovery of payments*

143. The text of draft article 22 as considered by the Working Group was as follows:

"Without prejudice to the law governing the protection of the debtor in transactions made primarily for personal, family or household purposes in the State in which the debtor is located and the debtor's rights under article 20, failure of the assignor to perform the original contract does not entitle the debtor to recover from the assignee a sum paid by the debtor to the assignor or the assignee."

144. Subject to the deletion of the word "primarily", the Working Group adopted draft article 23 and referred it to the drafting group (see para. 138).

Scope and purpose of chapter V

145. Differing views were expressed as to the scope or the purpose of the private international law rules of the draft Convention, a matter addressed in paragraph (3) of draft article 1, the text of which as considered by the Working Group was as follows:

"[(3) The provisions of chapter V apply [to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs (1) and (2) of this article] [independently of the provisions of this chapter]. However, those provisions do not apply if a State makes a declaration under article 34.]"

146. One view was that the application of chapter V should only supplement the substantive law provisions of the draft Convention and thus apply only to the transactions falling within the ambit of the draft Convention as defined in chapter I. In support of that view, it was stated that, from a legislative policy point of view, it would not be appropriate to attempt, in essence, to prepare a mini private international law convention within a substantive law convention. If chapter V were to supplement the substantive law provisions of the draft Convention, it was stated, it might be sufficient to retain only draft article 28 in section II of chapter IV with the opening words that appeared within square brackets. It was stated that, in such a case, draft article 28 could address matters not covered in the substantive law part of the draft Convention, such as the question of the law applicable to set-off and to statutory assignability, and would not need to be subject to an opt-out clause. In addition, it was pointed out that draft article 27 could be deleted, since it addressed the contractual aspects of assignment, namely a matter which was not the main focus of the draft Convention and might already be sufficiently regulated by private international law (even though the principle of freedom of choice of the applicable law might not be common to all legal systems). Moreover, it was observed that draft articles 29 to 31 could be deleted, since the matters addressed in those provisions were already sufficiently covered in draft articles 24 to 26. On the other hand, if chapter V were to be retained, it was suggested that it should be subject to an opt-in rather than an opt-out clause. That suggestion received significant support.

147. The Working Group noted that, in principle, it would not be appropriate to limit the application of private international law rules on the basis of the substantive law notions contained in chapter I (i.e. only to assignments as defined in draft article 2, or only to international transactions as defined in draft article 3 or only if the assignor or the debtor was located in a Contracting State).

148. However, in an effort to reach consensus, the view was expressed that the application of chapter V could be limited to international transactions as defined in chapter I, irrespective of whether the assignor or the debtor had their location in a Contracting State or the law governing the receivable was the law of a Contracting State (an approach which had a precedence in article 1 (3) of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit). In support of that view, it was pointed out that such an approach would allow States that did not have adequate private international law rules on assignments or no rules at all to benefit from the rules contained in chapter V. While it was admitted that those rules reflected general principles which would need to be supplemented by other principles of private international law, it was observed that, in their generality, the provisions of chapter V introduced rules that might be useful for many States and usefully clarified matters (e.g. priority issues) over which a great degree of uncertainty prevailed in private international law. In addition, it was stated that, once the priority rules in draft articles 24 to 26 had become generally acceptable, there was no substantive reason to limit their application on the basis of the substantive law notions contained in chapter I. As to States that had adequate rules on assignment, it was pointed out that they

could always opt out of chapter V. Those suggestions also received significant support, although some delegations favoured retention of draft articles 28 and 29 only.

149. After discussion, the Working Group was not able to reach agreement. It was, therefore, decided that paragraph (3) of article 1 should be revised along the following lines and be retained within square brackets:

"[(3) The provisions of chapter V apply to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs (1) and (2) of this article. However, those provisions do not apply if a State makes a declaration under article 34.]"

It was also decided that the opening words in draft articles 27 and 28, as well as draft article 29 as a whole (with the exception of the opening words which could be deleted; see para. 160), should remain in square brackets, pending final determination of the issue of the scope of chapter V. Furthermore, the Working Group agreed that draft articles 30 and 31 raised questions that would need to be discussed further and decided that those provisions too should be placed within square brackets.

Article 27. *Law applicable to the contract of assignment*

150. The text of draft article 27 as considered by the Working Group was as follows:

"(1) [With the exception of matters which are settled in this Convention,] the contract of assignment is governed by the law expressly chosen by the assignor and the assignee.

"(2) In the absence of a choice of law by the assignor and the assignee, the contract of assignment is governed by the law of the State with which the contract of assignment is most closely connected. In the absence of proof to the contrary, the contract of assignment is presumed to be most closely connected with the State in which the assignor has its place of business. If the assignor has more than one place of business, reference is to be made to the place of business most closely connected to the contract. If the assignor does not have a place of business, reference is to be made to its habitual residence.

"(3) If the contract of assignment is connected with one State only, the fact that the assignor and the assignee have chosen the law of another State does not prejudice the application of the law of the State with which the assignment is connected if that law cannot be derogated from by contract."

151. In order to reflect more clearly the matters that should be subject to party autonomy, the Working Group decided to substitute for "the contract of assignment" the terms "the rights and obligations of the assignor and the assignee under the contract of assignment". A suggestion to also include a reference to the "conclusion and validity of the contract of assignment" was objected to on the grounds that those terms were not universally understood in the same way and their use could create uncertainty.

152. The Working Group also considered whether paragraphs (2) and (3) were necessary. It was noted that, if the thrust of draft article 27 was to recognize party autonomy without going into any detail, paragraph (2) might not be absolutely necessary, in particular in view of the fact that the transactions intended to be covered were likely to be negotiated by highly sophisticated parties who normally included a choice of law clause in their contracts. As to paragraph (3), it was noted that it might not be useful without any detailed rules as to the relevant connecting factors (e.g. characteristic performance under article 4 (2) of the Convention on the law Applicable to Contractual Obligations "the Rome Convention" with the fall-back position of article 4 (5) of the Rome Convention if the characteristic performance could not be determined). The prevailing view, however, was that paragraphs (2) and (3) reflected important rules that might not exist in all legal systems and should thus be retained.

153. Subject to the change mentioned in paragraph 151 above and to the final determination of the scope of chapter V, the Working Group adopted draft article 27 and referred it to the drafting group.

Article 28. *Law applicable to the rights and obligations of the assignee and the debtor*

154. The text of draft article 28 as considered by the Working Group was as follows:

"[With the exception of matters which are settled in this Convention,] the law governing the receivable to which the assignment relates determines its assignability, the relationship between the assignee and the debtor, the conditions under which the assignment can be invoked against the debtor and any question whether the debtor's obligations have been discharged."

155. The Working Group considered, once more, the issue of the law applicable to rights of set-off. It was noted that the general principle as to contractual rights of set-off was that they were governed by the law of the contract from which they arose. It was also noted that, in line with that approach, the law governing rights of set-off would be the same as the law governing the receivable, if such rights of set-off arose from the original contract, and different, if rights of set-off arose from another contract.

156. In support of addressing the question of the law applicable to rights of set-off, it was stated that such an approach would enhance certainty and could have a beneficial impact on the cost of credit, since rights of set-off arose often and were bound to increase the risk of non-payment by the debtor. However, it was stated that, in order to achieve that result, rights of set-off should be subjected to the law governing the receivable. In view of the difficulty of the matter and the lack of consensus as to the law applicable to set-off, the Working Group recalled and confirmed its decision not to address that matter (see para. 135).

157. The Working Group next considered the question whether draft article 28 should govern statutory assignability. It was noted that the application of the law governing

the receivable might not be appropriate in the case of statutory assignability. Such an approach could inadvertently result in allowing the assignor and the debtor to evade possible statutory limitations, which involved matters of mandatory law or public policy, by choosing a convenient law to govern the receivable.

158. The Working Group recalled its decision not to include any additional provisions in draft article 28 on the understanding that statutory limitations to assignability, which would normally flow from mandatory law, would be preserved under draft article 30 (A/CN.9/456, para. 117). However, upon reflection, the Working Group decided that draft article 28 should be limited to contractual assignability. Subject to that change and to the final determination of the scope of chapter V, the Working Group adopted draft article 28 and referred it to the drafting group.

Article 29. *Law applicable to conflicts of priority*

159. The text of draft article 29 as considered by the Working Group was as follows:

"[With the exception of matters which are settled in chapter IV:]

(a) priority among several assignees of the same receivables from the same assignor is governed by the law of the State in which the assignor is located;

(b) priority between an assignee and the assignor's creditors is governed by the law of the State in which the assignor is located;

(c) priority between an assignee and the insolvency administrator is governed by the law of the State in which the assignor is located;

[*(d)* if an insolvency proceeding is commenced in a State other than the State in which the assignor is located, any non-consensual right or interest which under the law of the forum would have priority over the interest of an assignee has such priority notwithstanding subparagraph *(c)*, but only to the extent that such priority was specified by the forum State in an instrument deposited with the depositary prior to the time when the assignment was made;]

(e) an assignee asserting rights under this article has no less rights than an assignee asserting rights under other law.]"

160. It was noted that draft article 29 appeared within square brackets since, if chapter V were to supplement the substantive law part of the draft Convention, draft article 29 would repeat the rules in draft articles 24 and 25 and should be deleted. It was also noted that, if chapter V were to apply whether or not the assignor or the debtor were located in a Contracting State, the opening words would not be necessary, since chapter V would apply to matters not addressed in the draft Convention, while draft articles 24 and 25 would apply to matters addressed in the draft Convention. Subject to that change, the alignment of draft article 29 with draft articles 24 and 25 and the final determination of the scope of chapter V, the Working Group adopted draft article 29 and referred it to the drafting group.

Article 30. *Mandatory rules*

161. The text of draft article 30 as considered by the Working Group was as follows:

"(1) Nothing in articles 27 and 28 restricts the application of the rules of the law of the forum State in a situation where they are mandatory irrespective of the law otherwise applicable.

"(2) Nothing in articles 27 and 28 restricts the application of the mandatory rules of the law of another State with which the matters settled in those articles have a close connection if and in so far as, under the law of that other State, those rules must be applied irrespective of the law otherwise applicable."

162. Pending final determination of the scope of chapter V (see paras. 145-149) , the Working Group decided that draft article 30 should be retained within square brackets.

Article 31. *Public policy*

163. The text of draft article 31 as considered by the Working Group was as follows:

"With regard to matters settled in this chapter, the application of a provision of the law specified in this chapter may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State."

164. Pending final determination of the scope of chapter V (see paras. 145-149), the Working Group decided that draft article 31 should be retained within square brackets.

IV. ANNEX TO THE DRAFT CONVENTION

A. *General comments*

165. It was noted that the annex could be replaced by two provisions along the following lines:

"Article X. *Revision and amendment*

"1. At the request of not less than one third of the Contracting States to this Convention, the depositary shall convene a conference of the Contracting States for revising or amending it.

"2. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended.

"Article Y. *Revision of the priority regime*

"1. Notwithstanding the provisions of article X, a conference of Contracting States only for the purpose of establishing an international regime for the public filing of notices to address issues of priority arising in the context of assignment of receivables under this Convention is to be convened by the depositary in accordance with paragraph 2 of this article.

"2. A revision conference is to be convened by the depositary when not less than one fourth of the Contracting States so request. The depositary shall request all Contracting States invited to the conference to submit such proposals as they may wish the conference to examine and shall notify all Contracting States invited of the provisional agenda and of all the proposals submitted.

"3. Any decision by the conference must be taken by a two-thirds majority of the participating States. The conference may adopt all measures necessary to establish an effective international regime for the public filing of notices to address priority issues arising in the context of the assignment of receivables under this Convention. No State shall be bound to participate directly or indirectly in the international regime so established.

"4. Any amendment adopted is communicated by the depositary to all the Contracting States for acceptance and to all the States signatories of the Convention for information. Such amendment enters into force on the first day of the month following one year after its acceptance by two thirds of the Contracting States. Acceptance is to be effected by the deposit of a formal instrument to that effect with the depositary.

"5. After entry into force of an amendment a Contracting State which has accepted the amendment is entitled to apply the Convention as amended in its relations with Contracting States which have not within six months after the adoption of the amendment notified the depositary that they are not bound by the amendment.

"6. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended."

166. It was generally agreed that the annex should be retained, since it could provide States with some guidance as to a substantive law priority regime. As to the registration regime envisaged in the annex, it was stated that it could enhance certainty as to rights of financiers, thus reducing the risks and the costs involved in financing transactions. With regard to draft articles X and Y, it was stated that draft article X would be better placed in the final clauses, while draft article Y paragraph (3) could be retained either in the final provisions or in draft article 3 of the annex, perhaps with a more flexible formulation, which would not refer to a diplomatic conference. In response to a question, it was noted that, under draft article 36, States could choose one or none of the options offered in the annex (see paras. 188-191 and 203). The Working Group proceeded to consider the substantive rules contained in the draft annex.

B. *Discussion of draft articles of the annex*

Section I. Priority rules based on registration

Article 1. *Priority among several assignees*

167. The text of draft article 1 of the annex as considered by the Working Group was as follows:

"As between assignees of the same receivables from the same assignor, priority is determined by the order in which certain information about the assignment is registered under this Convention, regardless of the time of transfer of the receivables. If no assignment is registered, priority is determined on the basis of the time of the assignment."

168. The Working Group was agreed that the registry meant in draft article 1 of the annex was a notice and not a document registry, in the sense that only certain information about the assignment needed to be registered and not the document of the assignment as a whole. It was widely felt that, for the operation of the registration system to be quick, simple and inexpensive, it would need to be based on registration of a limited amount of data. As a matter of drafting, a number of suggestions were made, including that reference should be made to "data", "notice" or "document". The suggestion to refer to "document of assignment" was objected to on the ground that it could inadvertently give the impression that a document-filing system was involved. Subject to that change, the Working Group adopted draft article 1 of the annex and referred it to the drafting group.

Article 2. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

169. The text of draft article 2 of the annex as considered by the Working Group was as follows:

"[Subject to articles 25 (3) and (4) of this Convention and 4 of this annex,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if:

(a) the receivables [were assigned] [arose] [were earned by performance], and information about the assignment was registered under this Convention, before the commencement of the insolvency proceeding or attachment; or

(b) the assignee has priority on grounds other than the provisions of this Convention."

170. As to the opening words, the Working Group decided that they should be deleted on the understanding that an explicit reference to the preservation of super-priority rights dealt with in draft article 25 (5) would be included in draft article 2 of the annex. That matter was referred to the drafting group. It was stated, however, that the opening words would not be necessary if the annex were to include an explicit statement to the effect that, should a State choose a system of priority rules based on sections I and II of the annex, draft articles 1 and 2 of the annex would operate as the priority rule for that State. The Working Group postponed discussion of that matter until it had completed its review of the annex (see paras.188-191). As to subparagraph *(a)*, the Working Group decided to retain the first set of bracketed words without the square brackets and to delete the second and third sets of bracketed words. The Working Group also decided to delete subparagraph *(b)*. It was recalled that that provision was part of a previous substantive law priority rule contained in the draft Convention that did not belong in draft article 2 of the annex since draft article 2 of the annex would be the sole basis on which an assignee could assert priority. Subject to those changes, the Working Group adopted draft article 2 of the annex and referred it to the drafting group.

Section II. Registration

Article 3. *Establishment of a registration system*

171. The text of draft article 3 of the annex as considered by the Working Group was as follows:

"A registration system will be established for the registration of data about assignments under this Convention and the regulations to be promulgated by the registrar and the supervising authority. The regulations will prescribe the exact manner in which the registration system will operate, as well as the procedure for resolving disputes relating to registration."

172. Support was expressed in favour of the policy underlying draft article 3. A number of suggestions were made. One suggestion was that the words "the exact manner" be replaced by the words "in detail" so as to avoid creating the impression that the regulations might need to be more detailed than was practically necessary and to give sufficient flexibility to the registrar and the supervising authority in preparing the regulations. Those suggestions received sufficient support. The suggestion was also made that draft article 3 needed to be more detailed in describing the registrar and the supervising authority. The Working Group postponed discussion of that matter until it had completed its review of the annex (due to the lack of sufficient time, the Working Group did not discuss that matter; see, however, the suggestion contained in para. 166). Subject to those changes, the Working Group adopted draft article 3 of the annex and referred it to the drafting group.

Article 4. *Registration*

173. The text of draft article 4 of the annex as considered by the Working Group was as follows:

"(1) Any person may register data with regard to an assignment at the registry in accordance with this Convention and the registration regulations. The data registered shall include the name and address of the assignor and the assignee and a brief description of the assigned receivables.

"(2) A single registration may cover:

(a) the assignment by the assignor to the assignee of more than one receivable;

(b) an assignment not yet made;

(c) the assignment of receivables not existing at the time of registration.

"(3) Registration, or its amendment, is effective from the time that the data referred to in paragraph (1) are available to searchers. Registration, or its amendment, is effective for the period of time specified by the registering party. In the absence of such a specification, a registration is effective for a period of [five] years. Regulations will specify the manner in which registration may be renewed, amended or discharged.

"(4) Any defect, irregularity, omission or error with regard to the name of the assignor that results in data registered not being found upon a search based on the name of the assignor renders the registration ineffective."

174. As to paragraph (1), the concern was expressed that allowing "any person" to register data with regard to an assignment might open the possibility of abuse and fraudulent registration. In order to address that concern, the suggestion was made that the basis on which a person might register data should be qualified. It was stated, however, that fraudulent registration did not pose a real problem, since registration under draft article 4 did not create any substantive rights. It was generally felt, however, that reference should be made to persons specified in the regulations. Language along the following lines was proposed: "any person authorized by the regulations". In order to accommodate electronic registration and to allow registration to function in a multilingual environment, it was agreed that the reference to "name and address" should be replaced by a reference to identification. It was stated that the regulations could provide that a person could be identified with a number and that more data than the identification of the parties and the assigned receivables might be required. It was also agreed that paragraph (1) should provide also for registration of any amendments.

175. With regard to paragraph (2) *(b)*, the suggestion was made that it should be deleted. In support, it was stated that allowing registration of an assignment before it was made ("advance booking") could lead to abuses. That suggestion was objected to. It was widely felt that the ability to register a future assignment was at the heart of significant transactions. In the absence of certainty as to priority, it was observed, financiers would not enter into such transactions. It was also said that the risk of abusive registration practices developing was not real, since registration did not vest any rights in the registering party, unless such rights existed under a valid contract.

176. As to paragraph (3), it was agreed that it should permit a choice of the length of time of effectiveness from a range of options to be set out in the regulations. It was also agreed that at the end of paragraph (3) language along the following lines should be included: "and, consistent with this annex, such other matters as are necessary for the operation of the registration system".

177. Support was expressed in favour of the policy underlying paragraph (4) that an error with regard to the identification of the assignor was so essential that it would render the registration ineffective. It was stated that paragraph (4) was based on the assumption that: if the error was made by the registering party, the registering party would suffer the consequences of the registration being ineffective; and that, if the error was made by the registrar, the regulations would address the issue of liability. It was also suggested that in the first line of paragraph (4), the word "result" should be replaced by the words "would result" to indicate that, even if no one was actually misled, the registration would be ineffective.

178. Subject to the changes mentioned above, the Working Group adopted draft article 4 of the annex and referred it to the drafting group.

Article 5. *Registry searches*

179. The text of draft article 5 of the annex as considered by the Working Group was as follows:

"(1) Any person may search the records of the registry according to the name of the assignor and obtain a search result in writing.

"(2) A search result in writing that purports to be issued from the registry is admissible as evidence and is, in the absence of evidence to the contrary, proof of the data to which the search relates, including:

(a) the date and time of registration; and

(b) the order of registration."

180. It was generally agreed that draft article 5 should make it clear that a public registry was meant and, for that reason, the use of the term "any person" in draft article 5 (1) was appropriate as reflecting the principle of public access to the registry for searching as opposed to registration purposes. In response to a concern expressed that the term "any person" might be too broad and undermine the confidentiality necessary in financing transactions, it was stated that that problem would not arise in view of the fact that registration would involve only a limited amount of data specified in draft article 4 of the annex and in the regulations and would not include information relating to the financial details of the transaction.

Section III. Priority rules based on the time of the contract of assignment

Article 6. *Priority among several assignees*

181. The text of draft article 6 of the annex as considered by the Working Group was as follows:

"(1) If a receivable is assigned several times, the right thereto is acquired by the assignee whose contract of assignment is of the earliest date.

"(2) The earliest assignee may not assert priority if it acted in bad faith at the time of the conclusion of the contract of assignment.

"(3) If a receivable is transferred by operation of law, the beneficiary of that transfer has priority over an assignee asserting a contract of assignment of an earlier date.

"(4) In the event of a dispute, it is for the assignee asserting a contract of assignment of an earlier date to furnish proof of such an earlier date."

182. There was sufficient support in the Working Group for the rule reflected in paragraph (1). As a matter of drafting, it was suggested that paragraph (1) should refer to several assignments of the same receivables by the same assignor.

183. With regard to paragraph (2), differing views were expressed as to whether the reference to "bad faith" would cover knowledge or notice of a previous assignment. One view was that, in line with current law in many legal systems, paragraph (2) would apply to cases in which the assignee had knowledge or notice of a previous assignment. Another view was that, in line with the decision of the Working Group that mere knowledge or notice should not affect the debtor's discharge, it should not affect the priority position of the assignee either. It was stated that the scope of paragraph (2) should be limited to cases of fraud or collusion. A related view was that, in its current formulation, paragraph (2) could not apply in the case of a second-in-time assignee who might lose its priority position on the grounds that it had knowledge or notice of a previous assignment because it referred to the earliest assignee losing its priority if it were in bad faith and because knowledge or notice of a previous assignment was not relevant to priority in the case of a first-in-time of assignment priority rule. It was, therefore, pointed out that, if the scope of paragraph (2) was limited to cases involving fraud, it might not be necessary, since such matters were likely to be covered sufficiently in most legal systems. It was also stated that, in the case of fraud, there might be no conflict of priority to which paragraph (2) could apply, since the assignment would be set aside as a fraudulent conveyance. After discussion, the Working Group decided to delete paragraph (2) on the understanding that questions of good faith were left to law applicable outside the draft Convention (as to the application of the principle of good faith under the draft Convention, see A/CN.9/WG.II/WP.105, para. 62).

184. As to paragraph (3), there was agreement that it reflected an inappropriate rule and should be deleted. The Working Group also decided to delete paragraph (4) on the understanding that the commentary would explain that the important question of who had the burden of proof was left to other law applicable outside the draft Convention.

185. After discussion, subject to the changes mentioned above, the Working Group adopted draft article 6 of the annex and referred it to the drafting group.

Article 7. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

186. The text of draft article 7 of the annex as considered by the Working Group was as follows:

"[Subject to articles 25 (3) and (4) of this Convention,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if:

(a) the receivables were assigned before the commencement of the insolvency proceeding or attachment; or

(b) the assignee has priority on grounds other than the provisions of this Convention."

187. As to the opening words, the Working Group decided that they should be deleted on the understanding that a reference should be included to the preservation of superpriority rights dealt with in draft article 25 (5). That matter was referred to the drafting group (as to the need for the addition of a reference to draft article 25 (5), see paras. 170 and 188-191). The question was raised whether reference should be added to the rights of the insolvency administrator or the assignor's creditors that should be preserved on

the grounds that they were based on mandatory law. In response, it was stated that draft article 25 (4) had been deleted on the understanding that priority did not cover those matters and that they were left to the law applicable outside the draft Convention. It was agreed that that matter should be clarified in the commentary. In line with its decision on draft article 2 of the annex (see para. 170), the Working Group decided that subparagraph *(b)* should be deleted.

C. *Proposal as to the application of the annex*

188. It was pointed out that, under the current formulation of draft article 36, it was contemplated that a State could choose the priority rules of section I and the registration system of section II. The view was expressed that there should be two additional alternatives: a State should be able to choose the priority rules of section I and a registration system other than that proposed in section II, or, alternatively, the registration system of section II and priority rules other than those proposed in section I. It was suggested that those three alternatives should be set out in a new draft article.

189. It was also suggested that an explicit statement should be included in a new draft article to the effect that, should a State choose a system of priority rules based on sections I and II of the annex, the priority rules under draft article 1 of the annex would operate as the priority rules for that State under draft article 24 of the draft Convention.

190. On the basis of those suggestions, language along the following lines was proposed for a new article:

"(1) A Contracting State may:

(a) (i) accept the priority rules based on registration set out in section I of this annex and (ii) choose to participate in the registration system established pursuant to section II of this annex; or

(b) (i) accept the priority rules based on registration set out in section I of this annex and (ii) agree to effectuate such rules by use of a registration system that fulfils the purposes of such rules [as set forth in regulations promulgated pursuant to section II]. For purposes of section I, registration pursuant to such system shall have the same effect as registration pursuant to section II.

"(2) For purposes of article 24, the law of a Contracting State that has acted pursuant to paragraph (1) *(a)* or (1) *(b)* is the set of rules set forth in section I of this annex. The Contracting State is entitled to apply those rules for all assignments made more than six months after the Contracting State notifies the depositary that it is has so acted. The Contracting State may establish rules pursuant to which assignments made before the effective date shall, within a reasonable time, become subject to the priority rules set forth in section I of this annex.

"(3) A Contracting State that does not act pursuant to paragraph (1) *(a)* or (1) *(b)* may, pursuant to its domestic priority rules, utilize the registration system established pursuant to section II of this annex."

191. Due to the lack of time, the Working Group was not able to discuss the proposed new article. It was stated, however, that the rule in paragraph (2) should apply also in the case where a State chose the priority rules set forth in section III of the annex. Subject to that change, the Working Group decided that the proposed new article should be introduced in the text of the draft Convention within square brackets. The specific formulation and the placement of the proposed new article in the text of the draft Convention were referred to the drafting group.

V. FINAL PROVISIONS OF THE DRAFT CONVENTION

Article 33. *Conflicts with international agreements*

192. The text of draft article 33 as considered by the Working Group was as follows:

"(1) Except as provided in paragraph (2) of this article, this Convention prevails over any international convention or other multilateral or bilateral agreement which has been or may be entered into by a Contracting State and which contains provisions concerning the matters governed by this Convention.

"(2) A State may declare at any time that the Convention will not prevail over international conventions or other multilateral or bilateral agreements listed in the declaration, which it has entered or will enter into and which contain provisions concerning the matters governed by this Convention."

193. It was noted that, at its twenty-ninth session, the Working Group had adopted draft article 33 in order to deal with situations in which various texts gave precedence to each other and, as a result, uncertainty arose as to which one was applicable ("negative conflicts", e.g. with the Ottawa Convention; see A/CN.9/455, paras. 126-129). It was also noted, however, that potential conflicts with the Ottawa Convention were minimal, since the scope of the Ottawa Convention was narrower than the scope of the draft Convention and, in any case, the provisions of the draft Convention were, to a large extent, similar to those of the Ottawa Convention (with the exception, e.g. of the reservation to the rule on contractual limitations to assignment and the rule on recovery from the assignee of payments made by the debtor). Furthermore, it was noted that potential conflicts with the Rome Convention were also minimal since draft articles 27 and 28 were almost identical with article 12 of the Rome Convention or the relevant provisions of other texts, such as the Inter-American Convention on the Law Applicable to Contractual Obligations ("the Inter-American Convention"). As to the law governing priority, it was noted that, according to the prevailing view, article 12 of the Rome Convention did not address that matter. However, it was noted, even if draft article 12 of the Rome Convention addressed issues of priority, neither of the laws applicable under article 12 (i.e. the law chosen by the parties or the law governing the receivable) was appropriate. It was also noted that no conflicts arose with the draft EU Insolvency Convention (which was likely to be issued as an EU regulation). The notion of central administration was almost identical with the centre of main

interests used in the draft EU Insolvency Convention and that draft Convention did not affect rights in rem in a main insolvency proceeding. While it was noted that the draft EU Insolvency Convention might affect rights in rem in a secondary insolvency proceeding (articles 2 *(g)*, 4, and 28), draft article 25 would be sufficient to preserve, for example, super-priority rights, and priority under the draft Convention was not intended to affect the rights of the assignor's creditors and the insolvency administrator to invalidate the assignment as a fraudulent or preferential transfer.

194. It was stated that, according to general principles of treaty law, the draft Convention would not prevail over the Ottawa Convention on the grounds that the Ottawa Convention was a more specific convention. It was also observed that, according to the same principles, the draft Convention would not prevail over the draft EU Insolvency Convention, the draft Convention on International Interests in Mobile Equipment, the United Nations Convention on Independent Guarantees and Stand-By Letters of Credit or the Convention on the International Recognition of Rights in Aircraft. On the other hand, it was stated that the draft Convention would prevail over the Rome Convention or the Inter-American Convention, since substantive law conventions prevailed over private international law conventions.

195. It was widely felt, however, that draft article 33 departed from generally acceptable principles as to conflicts among international texts, in particular in that it would result in the draft Convention superseding even future conventions. It was, therefore, agreed that a provision along the lines of article 90 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980; "the United Nations Sales Convention") which gave precedence to other texts, properly adjusted as to territorial connection, would be more appropriate. As a result of that decision, the Working Group agreed that paragraph (2) and new paragraph (3) (see paras. 88-91) were unnecessary and should be deleted.

Article 34. *Application of chapter V*

196. The text of draft article 34 as considered by the Working Group was as follows:

> "A State may declare at any time that it will not be bound by chapter V."

197. It was noted that the Working Group, at its twenty-ninth session, had adopted the working assumption that chapter V would be subject to a reservation by States (A/CN.9/455, paras. 72 and 148). The Working Group recalled the suggestions made at the current session that chapter V should be rather subject to an opt-in clause and decided that that matter should be left to the Commission.

Article 35. *Other exclusions*

198. The text of draft article 35 as considered by the Working Group was as follows:

> "[A State may declare at any time that it will not apply the Convention to certain practices listed in a declaration.]"

199. It was stated that allowing States to exclude further practices would make the draft Convention more acceptable to States that might be concerned with the application of the draft Convention to certain practices. It was also observed that the Working Group made significant progress in addressing such concerns by allowing States to make a reservation with regard to Government receivables. However, it was pointed out that the question whether draft article 35 would be necessary could not be answered before the final determination of the scope of the draft Convention and in particular before a final decision had been reached on the treatment of the assignment of financial receivables. On the other hand, it was observed that an approach based on declarations would detract from the certainty achieved by the draft Convention, since its scope of application could be different from State to State, a matter that might not be easy to determine in each particular case.

200. In the discussion, a number of suggestions were made. One suggestion was made that the term "specific" should be substituted for the term "certain" practices. Another suggestion was that reference should be made to the debtor's location with respect to the application of those provisions of the draft Convention that affected the debtor's rights and obligations. Yet another suggestion was that the exception as to sovereign receivables should be placed right after draft article 35.

201. After discussion, the Working Group decided that draft article 35 should be retained within square brackets and referred it to the drafting group.

Article 36. *Application of the annex*

202. The text of draft article 36 as considered by the Working Group was as follows:

> "A State may declare at any time that it will be bound either by [sections I and II or by section III] of the annex to this Convention."

203. It was agreed that draft article 36 should be aligned with the new article proposed to describe the options that States would have in making a declaration with respect to the annex and the effect of such declarations (see paras. 188-191). In view of the fact that the Working Group did not have the time to discuss the proposed new article dealing with that matter, it was also agreed that the options should be retained within square brackets. With that understanding, the Working Group referred draft article 36 to the drafting group.

Article 37. *Insolvency rules or procedures not affected by this Convention*

204. The text of draft article 37 as considered by the Working Group was as follows:

> "[A State may declare at any time that other rules or procedures governing the insolvency of the assignor shall not be affected by this Convention.]"

205. It was noted that draft article 37 related to matters addressed in draft article 25 (4). The Working Group recalled its decision to delete that provision and decided that draft article 37 also should be deleted.

Provisions for the transitional application of the draft Convention

206. The Working Group agreed that draft articles 40 (5), 42 (3) and 43 (3), which dealt with the effects of declarations, of the entry into force and of the denunciation of the draft Convention on rights of third parties, on transactions existing before the entry into force of the draft Convention and on transactions existing before denunciation respectively should be retained within square brackets for States to consider in their preparation for the next Commission session. As to draft article 42 (3), the concern was expressed that it might inappropriately restrict the sovereign right of States to denounce the draft Convention. In response, it was stated that draft article 42 (3) stated an important principle and, in the absence of a provision along the lines of draft article 42 (3), parties would be reluctant to enter into such transactions, a result that was said to be inconsistent with the main goal of the draft Convention.

Revision and amendment

207. The Working Group considered a provision dealing with revision and amendment of the draft Convention, which had been prepared by the secretariat and was as follows:

"Article X. *Revision and amendment*

"1. At the request of not less than one third of the Contracting States to this Convention, the depositary shall convene a conference of the Contracting States for revising or amending it.

"2. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended."

208. It was noted that the provision was based on article 32 of the United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg Rules). It was stated, however, that, in view of the budgetary restrictions under which the secretariat had to operate, the holding of a diplomatic conference should be left to the discretion of the depositary. It was, therefore, suggested that the words "may within existing resources" should be substituted for the word "shall". That suggestion was objected to on the grounds that, in its current formulation, draft article X reflected normal practice. In view of the lack of sufficient time to discuss that matter, the Working Group decided that draft article X should not be included in the text of the draft Convention, leaving that matter to the Commission.

VI. REPORT OF THE DRAFTING GROUP

209. The Working Group requested a drafting group established by the secretariat to review draft articles 1 (3), 2 to 5, 8, 10 to 12, 16, 19 to 29 and 33 to 42 of the draft Convention, as well as draft articles 1 to 7 of the annex to the draft Convention, with a view to ensuring consistency between the various language versions.

210. At the close of its deliberations, the Working Group considered the report of the drafting group and adopted draft articles 1(3), 2 to 5, 8, 10 to 12, 16, 19 to 29, 33 to 42 of the draft Convention and draft articles 1 to 7 of the annex to the draft Convention, as revised by the drafting group, as well as the rest of the draft articles of the draft Convention. The consolidated text of the draft Convention, as adopted by the Working Group, is reproduced in the annex to the present report.

211. Given that the new provision dealing with conflicts with other international agreements remained in brackets, it was agreed that paragraph (2) of draft article 4 also should remain in brackets. It was suggested that the title to draft article 5 should be revised to read only "definitions" as principles of interpretation were to be found elsewhere in the draft Convention. In response, it was noted that the title of draft article 5 had been adopted at the previous session of the Working Group and had not been considered by the drafting group at the current session. It was agreed that the bracketed text in variant B of subparagraph *(j)* (ii) of draft article 5 (see paras. 96-97) should be deleted. It was also agreed that, throughout subparagraphs *(a)* to *(c)* of draft article 16 (1), the appropriate term should be "in respect of". Furthermore, it was agreed that in draft article 19 the term "receivables" should be changed to "receivable" in the singular, for the sake of consistency. Concerning draft article 20, it was agreed that in paragraph (1) the reference should be to any other contract that "was" part of the same transaction, and that paragraph (3) should refer to defences and rights of set-off that the debtor "may raise". As to draft article 21, the reference in paragraph (1) was changed to "a writing signed by the debtor" for consistency with paragraph (3).

212. The concern was expressed that draft article 24 went beyond covering priority in receivables and proceeds and was, therefore, inconsistent with the policy decision of the Working Group. In response, it was noted that, while it was true that the issue of the extent and existence of an assignee's, as well as an inventory financier's, right in receivables and proceeds had not been discussed in any detail, it had been mentioned in the discussion. It was also noted that, responding to a query by the secretariat, the Working Group had confirmed that those matters should be covered, although they had not been discussed. As to draft article 24, it was suggested that the title should read "Law applicable to competing rights of other parties".

213. With regard to paragraph (2) of new draft article 26, it was agreed that it was necessary to specify that the assignee's "right" had priority over the right in the assigned receivable. The view was expressed that the whole of chapter V of the draft Convention should be retained in brackets. It was felt, however, that the report of the Working Group would adequately reflect the discussions that had been held concerning this chapter. As to draft article 27, the reference in paragraph (2) was changed to the habitual residence "of the assignor", and the language in paragraph (3) was changed to refer "to the extent" that law cannot be derogated from by contract. In line with its decision made after the preparation of the report of the drafting group (see para. 195), the Working Group agreed that new paragraph (3) of draft article 33 (see paras. 88-91) should be deleted

and paragraphs (1) and (2) should be revised to conform with the standard provisions for resolving conflicts with other international agreements that would be found in other international conventions, such as the United Nations Sales Convention. In response to a question raised, it was noted that the matter of the use of the term "data" or some other term in draft article 1 of the annex had been left to the drafting group, on the understanding that any term used should reflect the policy decision of the Working Group in favour of a notice-filing rather than a document-filing system. In respect of draft article 4 of the annex, it was suggested that: in paragraph (1), the term "assigned" should be replaced with "covered" to ensure that the description referred also to future receivables; in subparagraph (2) *(b)*, reference should be to an assignment "not yet concluded"; in paragraph (3), reference should be to a registration having been "extended", rather than "renewed"; and in paragraph (4), reference should be to the "correct" identification of the assignor. Those suggestions were objected to. It was widely felt that the language as prepared by the drafting group was satisfactory.

214. It was agreed that the latter part of new draft article 36 (see annex to this report), starting with the word "provided", should be placed within square brackets, so as to indicate that the matter addressed therein would need to be discussed further. It was also agreed that new draft articles 40 (3), 41 (5) and 43 (3) (see annex to this report) should be placed within square brackets so as to indicate that the issues addressed therein would need to be examined carefully and discussed further.

VII. FUTURE WORK

215. The Working Group noted that issues, such as the meaning of "location", the special regime with regard to financial receivables and the scope of the private international law provisions of the draft Convention, remained pending. However, on the understanding that such issues could only be resolved by the Commission, the Working Group decided to complete its work with the adoption of the draft Convention as a whole and to submit it to the Commission at its next session for final review and adoption (New York, 12 June to 7 July 2000). It was noted that the text of the draft Convention, as adopted by the Working Group, would be distributed to all States and interested international organizations for comments and that the secretariat would prepare an analytical compilation of those comments. It was also noted that the secretariat would finalize and distribute the commentary to the draft Convention. It was expected that the compilation of comments and the commentary would assist delegates at the Commission session in their deliberations and allow the Commission to finalize and adopt the draft Convention.

ANNEX I

Consolidated text of the draft Convention:

DRAFT CONVENTION ON ASSIGNMENT [IN RECEIVABLES FINANCING] [OF RECEIVABLES IN INTERNATIONAL TRADE]

PREAMBLE

The Contracting States,

Reaffirming their conviction that international trade on the basis of equality and mutual benefit is an important element in the promotion of friendly relations among States,

Considering [that] problems created by [the] uncertainties as to the content and choice of legal regime applicable to assignments [of receivables] in international trade [constitute an obstacle to financing transactions],

Desiring to establish principles and adopt rules [relating to the assignment of receivables] that would create certainty and transparency and promote modernization of law relating to [assignments of receivables] [receivables financing] [including but not limited to assignments used in factoring, forfaiting, securitization, project financing, and refinancing,] while protecting existing [financing] [assignment] practices and facilitating the development of new practices,

Also desiring to ensure the adequate protection of the interests of the debtor in the case of an assignment of receivables,

Being of the opinion that the adoption of uniform rules governing assignments [in] [of] receivables [financing] would facilitate the development of international trade and promote the availability of [capital and] credit at more affordable rates,

Have agreed as follows:

CHAPTER I. SCOPE OF APPLICATION

Article 1. *Scope of application*

(1) This Convention applies to:

(a) assignments of international receivables and to international assignments of receivables as defined in this chapter, if, at the time of the conclusion of the contract of assignment, the assignor is located in a Contracting State;

(b) subsequent assignments provided that any prior assignment is governed by this Convention; and

(c) subsequent assignments that are governed by this Convention under subparagraph *(a)* of this paragraph, notwithstanding that any prior assignment is not governed by this Convention.

(2) This Convention does not affect the rights and obligations of the debtor unless the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

[(3) The provisions of chapter V apply to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs (1) and (2) of this article. However, those provisions do not apply if a State makes a declaration under article 37.]

(4) The annex to this Convention applies in a Contracting State which has made a declaration under article 36.

Article 2. *Assignment of receivables*

For the purposes of this Convention:

(a) "assignment" means the transfer by agreement from one person ("assignor") to another person ("assignee") of the assignor's contractual right to payment of a monetary sum ("receivable") from a third person ("the debtor"). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

(b) in the case of an assignment by the initial or any other assignee ("subsequent assignment"), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee.

Article 3. *Internationality*

A receivable is international if, at the time of the conclusion of the original contract, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States.

Article 4. *Exclusions*

(1) This Convention does not apply to assignments:

(a) made to an individual for his or her personal, family or household purposes;

(b) to the extent made by the delivery of a negotiable instrument, with any necessary endorsement;

(c) made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

[(2) This Convention does not apply to assignments listed in a declaration made under article 39 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]

[Article 5. *Limitations on receivables other than trade receivables*

Variant A

(1) Articles 17, 18, 19, 20 and 22 do not affect the rights and obligations of the debtor in respect of a receivable other than a trade receivable except to the extent the debtor consents.

(2) Notwithstanding articles 11 (2) and 12 (3), an assignor who assigns a receivable other than a trade receivable is not liable to the debtor for breach of a limitation on assignment described in articles 11 (1) and 12 (2), and the breach shall have no effect.

Variant B

Articles 11 and 12 and section II of chapter IV apply only to assignments of trade receivables. With respect to assignments of receivables other than trade receivables, the matters addressed by these articles are to be settled in conformity with the law applicable by virtue of the rules of private international law.]

CHAPTER II. GENERAL PROVISIONS

Article 6. *Definitions and rules of interpretation*

For the purposes of this Convention:

(a) "original contract" means the contract between the assignor and the debtor from which the assigned receivable arises;

(b) "existing receivable" means a receivable that arises upon or before the conclusion of the contract of assignment; "future receivable" means a receivable that arises after the conclusion of the contract of assignment;

[*(c)* "receivables financing" means any transaction in which value, credit or related services are provided for value in the form of receivables. Receivables financing includes factoring, forfaiting, securitization, project financing and refinancing;]

(d) "writing" means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

(e) "notification of the assignment" means a communication in writing which reasonably identifies the assigned receivables and the assignee;

(f) "insolvency administrator" means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

(g) "insolvency proceeding" means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(h) "priority" means the right of a party in preference to another party;

(i) (i) a person is located in the State in which it has its place of business;

(ii) if the assignor or the assignee has more than one place of business, the place of business is that place where its central administration is exercised;

(iii) if the debtor has more than one place of business, the place of business is that which has the closest relationship to the original contract;

(iv) if a person does not have a place of business, reference is to be made to the habitual residence of that person;

(j) "law" means the law in force in a State other than its rules of private international law;

(k) "proceeds" means whatever is received in respect of an assigned receivable, whether in total or partial payment or other satisfaction of the receivable. The term includes whatever is received in respect of proceeds. The term does not include returned goods;

[*(l)* "trade receivable" means a receivable arising under an original contract for the sale or lease of goods or the provision of services other than financial services.]

Article 7. *Party autonomy*

The assignor, the assignee and the debtor may derogate from or vary by agreement provisions of this Convention relating to their respective rights and obligations. Such an agreement does not affect the rights of any person who is not a party to the agreement.

Article 8. *Principles of interpretation*

(1) In the interpretation of this Convention, regard is to be had to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.

(2) Questions concerning matters governed by this Convention which are not expressly settled in it are to be settled in conformity with the general principles on which it is based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law.

CHAPTER III. EFFECTS OF ASSIGNMENT

Article 9. *Effectiveness of bulk assignments, assignments of future receivables, and partial assignments*

(1) An assignment of existing or future, one or more, receivables, and parts of, or undivided interests in, receivables is effective, whether the receivables are described:

(a) individually as receivables to which the assignment relates; or

(b) in any other manner, provided that they can, at the time of the assignment or, in the case of future receivables, at the time of the conclusion of the original contract, be identified as receivables to which the assignment relates.

(2) Unless otherwise agreed, an assignment of one or more future receivables is effective at the time of the conclusion of the original contract without a new act of transfer being required to assign each receivable.

Article 10. *Time of assignment*

An existing receivable is transferred, and a future receivable is deemed to be transferred, at the time of the conclusion of the contract of assignment, unless the assignor and the assignee have specified a later time.

Article 11. *Contractual limitations on assignments*

(1) An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent assignee, limiting in any way the assignor's right to assign its receivables.

(2) Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement. A person who is not party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

Article 12. *Transfer of security rights*

(1) A personal or property right securing payment of the assigned receivable is transferred to the assignee without a new act of transfer, unless, under the law governing the right, it is transferable only with a new act of transfer. If such a right, under the law governing it, is transferable only with a new act of transfer, the assignor is obliged to transfer this right and any proceeds to the assignee.

(2) A right securing payment of the assigned receivable is transferred under paragraph (1) of this article notwithstanding an agreement between the assignor and the debtor or other person granting the right, limiting in any way the assignor's right to assign the receivable or the right securing payment of the assigned receivable.

(3) Nothing in this article affects any obligation or liability of the assignor for breach of an agreement under paragraph (2) of this article. A person who is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

(4) The transfer of a possessory property right under paragraph (1) of this article does not affect any obligations of the assignor to the debtor or the person granting the property right with respect to the property transferred existing under the law governing that property right.

(5) Paragraph (1) of this article does not affect any requirement under rules of law other than this Convention relating to the form or registration of the transfer of any rights securing payment of the assigned receivable.

CHAPTER IV. RIGHTS, OBLIGATIONS AND DEFENCES

Section I. Assignor and assignee

Article 13. *Rights and obligations of the assignor and the assignee*

(1) The rights and obligations of the assignor and the assignee as between them arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein.

(2) The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices which they have established between themselves.

(3) In an international assignment, the assignor and the assignee are considered, unless otherwise agreed, to have impliedly made applicable to the assignment a usage which in international trade is widely known to, and regularly observed by, parties to the particular [receivables financing] practice.

Article 14. *Representations of the assignor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of the conclusion of the contract of assignment that:

(a) the assignor has the right to assign the receivable;

(b) the assignor has not previously assigned the receivable to another assignee; and

(c) the debtor does not and will not have any defences or rights of set-off.

(2) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor has, or will have, the financial ability to pay.

Article 15. *Right to notify the debtor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor

a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

(2) A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph (1) of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Article 16. *Right to payment*

(1) As between the assignor and the assignee, unless otherwise agreed, and whether or not a notification of the assignment has been sent:

(a) if payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;

(b) if payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to the assignor in respect of the assigned receivable; and

(c) if payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to such person in respect of the assigned receivable.

(2) The assignee may not retain more than the value of its right in the receivable.

Section II. Debtor

Article 17. *Principle of debtor-protection*

(1) Except as otherwise provided in this Convention, an assignment does not, without the consent of the debtor, affect the rights and obligations of the debtor, including the payment terms contained in the original contract.

(2) A payment instruction may change the person, address or account to which the debtor is required to make payment, but may not:

(a) change the currency of payment specified in the original contract, or

(b) change the State specified in the original contract, in which payment is to be made, to a State other than that in which the debtor is located.

Article 18. *Notification of the debtor*

(1) A notification of the assignment and a payment instruction are effective when received by the debtor, if they are in a language that is reasonably expected to inform the debtor about their contents. It shall be sufficient if a notification of the assignment or a payment instruction is in the language of the original contract.

(2) A notification of the assignment or a payment instruction may relate to receivables arising after notification.

(3) Notification of a subsequent assignment constitutes notification of any prior assignment.

Article 19. *Debtor's discharge by payment*

(1) Until the debtor receives notification of the assignment, the debtor is entitled to be discharged by paying in accordance with the original contract. After the debtor receives notification of the assignment, subject to paragraphs (2) to (6) of this article, the debtor is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor, in accordance with such instructions.

(2) If the debtor receives notification of more than one assignment of the same receivable made by the same assignor, the debtor is discharged by paying in accordance with the first notification received.

(3) If the debtor receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, the debtor is discharged by paying in accordance with the last payment instruction received from the assignee before payment.

(4) If the debtor receives notification of one or more subsequent assignments, the debtor is discharged by paying in accordance with the notification of the last of such subsequent assignments.

(5) If the debtor receives notification of the assignment from the assignee, the debtor is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment has been made and, unless the assignee does so, the debtor is discharged by paying the assignor. Adequate proof includes, but is not limited to, any writing emanating from the assignor and indicating that the assignment has taken place.

(6) This article does not affect any other ground on which payment by the debtor to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor.

Article 20. *Defences and rights of set-off of the debtor*

(1) In a claim by the assignee against the debtor for payment of the assigned receivables, the debtor may raise against the assignee all defences or rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor could avail itself if such claim were made by the assignor.

(2) The debtor may raise against the assignee any other right of set-off, provided that it was available to the debtor at the time notification of the assignment was received.

(3) Notwithstanding paragraphs (1) and (2) of this article, defences and rights of set-off that the debtor may raise pursuant to article 11 against the assignor for breach of agreements limiting in any way the assignor's right to assign its receivables are not available to the debtor against the assignee.

Article 21. *Agreement not to raise defences or rights of set-off*

(1) Without prejudice to the law governing the protection of the debtor in transactions made for personal, family or household purposes in the State in which the debtor is located, the debtor may agree with the assignor in a writing signed by the debtor not to raise against the assignee the defences and rights of set-off that it could raise pursuant to article 20. Such an agreement precludes the debtor from raising against the assignee those defences and rights of set-off.

(2) The debtor may not exclude:

(a) defences arising from fraudulent acts on the part of the assignee;

(b) defences based on the debtor's incapacity.

(3) Such an agreement may be modified only by an agreement in a writing signed by the debtor. The effect of such a modification as against the assignee is determined by article 22 (2).

Article 22. *Modification of the original contract*

(1) An agreement concluded before notification of the assignment between the assignor and the debtor that affects the assignee's rights is effective as against the assignee and the assignee acquires corresponding rights.

(2) After notification of the assignment, an agreement between the assignor and the debtor that affects the assignee's rights is ineffective as against the assignee unless:

(a) the assignee consents to it; or

(b) the receivable is not fully earned by performance and either modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification.

(3) Paragraphs (1) and (2) of this article do not affect any right of the assignor or the assignee for breach of an agreement between them.

Article 23. *Recovery of payments*

Without prejudice to the law governing the protection of the debtor in transactions made for personal, family or household purposes in the State in which the debtor is located and the debtor's rights under article 20, failure of the assignor to perform the original contract does not entitle the debtor to recover from the assignee a sum paid by the debtor to the assignor or the assignee.

Section III. Other parties

Article 24. *Law applicable to competing rights of other parties*

With the exception of matters which are settled elsewhere in this Convention, and subject to articles 25 and 26, the law of the State in which the assignor is located governs:

(a) the extent of the right of an assignee in the assigned receivable and the priority of the right of the assignee with respect to competing rights in the assigned receivable of:

(i) another assignee of the same receivable from the same assignor, even if that receivable is not an international receivable and the assignment to that assignee is not an international assignment;

(ii) a creditor of the assignor; and

(iii) the insolvency administrator;

(b) the existence and extent of the right of the persons listed in paragraph (1) *(a)* (i) to (iii) in proceeds of the assigned receivable, and the priority of the right of the assignee in those proceeds with respect to competing rights of such persons; and

(c) whether, by operation of law, a creditor has a right in the assigned receivable as a result of its right in other property of the assignor, and the extent of any such right in the assigned receivable.

Article 25. *Public policy and preferential rights*

(1) The application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

(2) In an insolvency proceeding commenced in a State other than the State in which the assignor is located, any preferential right which arises under the law of the forum State and is given priority status over the rights of an assignee in insolvency proceedings under the law of that State has such priority notwithstanding article 24. A State may deposit at any time a declaration identifying those preferential rights.

Article 26. *Special proceeds rules*

(1) If proceeds of the assigned receivable are received by the assignee, the assignee is entitled to retain those proceeds to the extent that the assignee's right in the assigned receivable had priority over competing rights in the assigned receivable of the persons described in subparagraph *(a)* (i) to (iii) of article 24.

(2) If proceeds of the assigned receivable are received by the assignor, the right of the assignee in those proceeds has priority over competing rights in those proceeds of the persons described in subparagraph *(a)* (i) to (iii) of article 24 to the same extent as the assignee's right had priority over the right in the assigned receivable of those persons if:

(a) the assignor has received the proceeds under instructions from the assignee to hold the proceeds for the benefit of the assignee; and

(b) the proceeds are held by the assignor for the benefit of the assignee separately and are reasonably identifiable from the assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee.

Article 27. *Subordination*

An assignee entitled to priority may at any time subordinate unilaterally or by agreement its priority in favour of any existing or future assignees.

CHAPTER V. CONFLICT OF LAWS

Article 28. *Law applicable to the rights and obligations of the assignor and the assignee*

(1) [With the exception of matters which are settled in this Convention,] the rights and obligations of the assignor and the assignee under the contract of assignment are governed by the law expressly chosen by the assignor and the assignee.

(2) In the absence of a choice of law by the assignor and the assignee, their rights and obligations under the contract of assignment are governed by the law of the State with which the contract of assignment is most closely connected. In the absence of proof to the contrary, the contract of assignment is presumed to be most closely connected with the State in which the assignor has its place of business. If the assignor has more than one place of business, reference is to be made to the place of business most closely connected to the contract. If the assignor does not have a place of business, reference is to be made to the habitual residence of the assignor.

(3) If the contract of assignment is connected with one State only, the fact that the assignor and the assignee have chosen the law of another State does not prejudice the application of the law of the State with which the assignment is connected to the extent that law cannot be derogated from by contract.

Article 29. *Law applicable to the rights and obligations of the assignee and the debtor*

[With the exception of matters which are settled in this Convention,] the law governing the receivable to which the assignment relates determines the enforceability of contractual limitations on assignment, the relationship between the assignee and the debtor, the conditions under which the assignment can be invoked against the debtor and any question whether the debtor's obligations have been discharged.

[Article 30. *Law applicable to competing rights of other parties*

(1) The law of the State in which the assignor is located governs:

(a) the extent of the right of an assignee in the assigned receivable and the priority of the right of the assignee with respect to competing rights in the assigned receivable of:

(i) another assignee of the same receivable from the same assignor, even if that receivable is not an international receivable and the assignment to that assignee is not an international assignment;

(ii) a creditor of the assignor; and

(iii) the insolvency administrator;

(b) the existence and extent of the right of the persons listed in paragraph (1) *(a)* (i) to (iii) in proceeds of the assigned receivable, and the priority of the right of the assignee in those proceeds with respect to competing rights of such persons; and

(c) whether, by operation of law, a creditor has a right in the assigned receivable as a result of its right in other property of the assignor, and the extent of any such right in the assigned receivable.

(2) The application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

(3) In an insolvency proceeding commenced in a State other than the State in which the assignor is located, any preferential right which arises under the law of the forum State and is given priority status over the rights of an assignee in insolvency proceedings under the law of that State has such priority notwithstanding paragraph (1) of this article. A State may deposit at any time a declaration identifying those preferential rights.

Article 31. *Mandatory rules*

(1) Nothing in articles 28 and 29 restricts the application of the rules of the law of the forum State in a situation where they are mandatory irrespective of the law otherwise applicable.

(2) Nothing in articles 28 and 29 restricts the application of the mandatory rules of the law of another State with which the matters settled in those articles have a close connection if and in so far as, under the law of that other State, those rules must be applied irrespective of the law otherwise applicable.

Article 32. *Public policy*

With regard to matters settled in this chapter, the application of a provision of the law specified in this chapter may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.]

CHAPTER VI. FINAL PROVISIONS

Article 33. *Depositary*

The Secretary-General of the United Nations is the depositary of this Convention.

Article 34. *Signature, ratification, acceptance, approval, accession*

(1) This Convention is open for signature by all States at the Headquarters of the United Nations, New York, until ... .

(2) This Convention is subject to ratification, acceptance or approval by the signatory States.

(3) This Convention is open to accession by all States which are not signatory States as from the date it is open for signature.

(4) Instruments of ratification, acceptance, approval and accession are to be deposited with the Secretary-General of the United Nations.

Article 35. *Application to territorial units*

(1) If a State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at any time, declare that this Convention is to extend to all its territorial units or only one or more of them, and may at any time substitute another declaration for its earlier declaration.

(2) These declarations are to state expressly the territorial units to which the Convention extends.

(3) If, by virtue of a declaration under this article, this Convention does not extend to all territorial units of a State and the assignor or the debtor is located in a territorial unit to which the Convention does not extend, this location is considered not to be in a Contracting State.

(4) If a State makes no declaration under paragraph (1) of this article, the Convention is to extend to all territorial units of that State.

Article 36. *Conflicts with other international agreements*

This Convention does not prevail over any international agreement which has already been or may be entered into and which contains provisions concerning the matters governed by this Convention[, provided that the assignor is located in a State party to such agreement or, with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, the debtor is located in a State party to such agreement].

Article 37. *Application of chapter V*

A State may declare at any time that it will not be bound by chapter V.

Article 38. *Limitations relating to Governments and other public entities*

A State may declare at any time that it will not be bound by articles 11 and 12 if the debtor or any person granting a personal or property right securing payment of the assigned receivable is located in that State at the time of the conclusion of the original contract and is a Government, central or local, any subdivision thereof, or any public entity. If a State has made such a declaration, articles 11 and 12 do not affect the rights and obligations of that debtor or person.

[Article 39. *Other exclusions*

A State may declare at any time that it will not apply the Convention to specific practices listed in a declaration. In such a case, the Convention does not apply to such practices if the assignor is located in such a State or, with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, the debtor is located in such a State.]

Article 40. *Application of the annex*

(1) A Contracting State may at any time declare that [it will be bound either by sections I and/or II or by section III of the annex to this Convention.] [it:

(a) will be bound by the priority rules based on registration set out in section I of the annex and will participate in the international registration system established pursuant to section II of the annex;

(b) will be bound by the priority rules based on registration set out in section I of the annex and will effectuate such rules by use of a registration system that fulfils the purposes of such rules [as set forth in regulations promulgated pursuant to section II of the annex], in which case, for the purposes of section I of the annex, registration pursuant to such a system shall have the same effect as registration pursuant to section II of the annex; or

(c) will be bound by the priority rules based on the time of the contract of assignment set out in section III of the annex.

(2) For the purposes of article 24, the law of a Contracting State that has made a declaration pursuant to paragraph (1) *(a)* or (1) *(b)* of this article is the set of rules set forth in section I of the annex, and the law of a Contracting State that has made a declaration pursuant to paragraph (1) *(c)* of this article is the set of rules set forth in section III of the annex. The Contracting State may establish rules pursuant to which assignments made before the declaration takes effect shall, within a reasonable time, become subject to those rules.

(3) A Contracting State that has not made a declaration pursuant to paragraph (1) of this article may, pursuant to its domestic priority rules, utilize the registration system established pursuant to section II of the annex.]

Article 41. *Effect of declaration*

(1) Declarations made under articles 35 (1) and 37 to 40 at the time of signature are subject to confirmation upon ratification, acceptance or approval.

(2) Declarations and confirmations of declarations are to be in writing and to be formally notified to the depositary.

(3) A declaration takes effect simultaneously with the entry into force of this Convention in respect of the State concerned. However, a declaration of which the depositary receives formal notification after such entry into force takes effect on the first day of the month following the expiration of six months after the date of its receipt by the depositary.

(4) Any State which makes a declaration under articles 35 (1) and 37 to 40 may withdraw it at any time by a formal notification in writing addressed to the depositary. Such withdrawal takes effect on the first day of the month following the expiration of six months after the date of the receipt of the notification of the depositary.

[(5) A declaration or its withdrawal does not affect the rights of parties arising from assignments made before the date on which the declaration or its withdrawal takes effect.]

Article 42. *Reservations*

No reservations are permitted except those expressly authorized in this Convention.

Article 43. *Entry into force*

(1) This Convention enters into force on the first day of the month following the expiration of six months from the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession.

(2) For each State which becomes a Contracting State to this Convention after the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession, this Convention enters into force on the first day of the month following the expiration of six months after the date of the deposit of the appropriate instrument on behalf of that State.

[(3) This Convention applies only to assignments made on or after the date when the Convention enters into force in respect of the Contracting State referred to in article 1 (1).]

Article 44. *Denunciation*

(1) A Contracting State may denounce this Convention at any time by means of a notification in writing addressed to the depositary.

(2) The denunciation takes effect on the first day of the month following the expiration of one year after the notification is received by the depositary. Where a longer period is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary.

[(3) The Convention remains applicable to assignments made before the date on which the denunciation takes effect.]

ANNEX TO THE DRAFT CONVENTION

Section I. Priority rules based on registration

Article 1. *Priority among several assignees*

As between assignees of the same receivable from the same assignor, priority is determined by the order in which data about the assignment are registered under section II of this annex, regardless of the time of transfer of the receivable. If no such data are registered, priority is determined on the basis of the time of the assignment.

Article 2. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to article 25 of this Convention,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if the receivables were assigned, and data about the assignment were registered under section II of this annex, before the commencement of the insolvency proceeding or attachment.

Section II. Registration

Article 3. *Establishment of a registration system*

A registration system will be established for the registration of data about assignments under this Convention and the regulations to be promulgated by the registrar and the supervising authority. The regulations will prescribe in detail the manner in which the registration system will operate, as well as the procedure for resolving disputes relating to that operation.

Article 4. *Registration*

(1) Any person authorized by the regulations may register data with regard to an assignment at the registry in accordance with this Convention and the registration regulations. The data registered shall be identification of the assignor and the assignee, as provided in the regulations, and a brief description of the assigned receivables.

(2) A single registration may cover:

(a) the assignment by the assignor to the assignee of more than one receivable;

(b) an assignment not yet made;

(c) the assignment of receivables not existing at the time of registration.

(3) Registration, or its amendment, is effective from the time that the data referred to in paragraph (1) are available to searchers. The registering party may specify, from options provided in the regulations, a period of effectiveness for the registration. In the absence of such a specification, a registration is effective for a period of five years. Regulations will specify the manner in which registration may be renewed, amended or discharged, and, consistent with this annex, such other matters as are necessary for the operation of the registration system.

(4) Any defect, irregularity, omission or error with regard to the identification of the assignor that would result in data registered not being found upon a search based on the identification of the assignor renders the registration ineffective.

Article 5. *Registry searches*

(1) Any person may search the records of the registry according to identification of the assignor, as provided in the regulations, and obtain a search result in writing.

(2) A search result in writing that purports to be issued from the registry is admissible as evidence and is, in the absence of evidence to the contrary, proof of the data to which the search relates, including:

(a) the date and time of registration; and

(b) the order of registration.

Section III. Priority rules based on the time of the contract of assignment

Article 6. *Priority among several assignees*

As between assignees of the same receivable from the same assignor, the right to the receivable is acquired by the assignee whose contract of assignment is of the earliest date.

Article 7. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to article 25 of this Convention,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if the receivables were assigned before the commencement of the insolvency proceeding or attachment.

B. Working paper submitted to the Working Group on International Contract Practices at its thirty-first session: draft Convention on Assignment in Receivables Financing: text with remarks and suggestions: note by the secretariat (A/CN.9/WG.II/WP.104) [Original: English]

CONTENTS

INTRODUCTION

1. At the present session, the Working Group on International Contract Practices continued its work on the preparation of a uniform law on assignment in receivables financing, pursuant to a decision taken by the Commission at its twenty-eighth session (Vienna, 2-26 May 1995).[1] This was the eighth session devoted to the preparation of this uniform law, tentatively entitled the draft Convention on Assignment in Receivables Financing.

2. The Commission's decision to undertake work on assignment in receivables financing was taken in response to suggestions made to it in particular at the UNCITRAL Congress, "Uniform Commercial Law in the 21st Century" (held in New York in conjunction with the twenty-fifth session, 17-21 May 1992). A related suggestion made at the Congress was for the Commission to resume its work on security interests in general, which the Commission at its thirteenth session (1980) had decided to defer for a later stage.

3. At its twenty-sixth to twenty-eighth sessions (1993 to 1995), the Commission discussed three reports prepared by

[1] *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17* (A/50/17), paras. 374-381.

the secretariat concerning certain legal problems in the area of assignment of receivables (A/CN.9/378/Add.3, A/CN.9/397 and A/CN.9/412). Having considered those reports, the Commission concluded that it would be both desirable and feasible to prepare a set of uniform rules, the purpose of which would be to remove obstacles to receivables financing arising from the uncertaknty existing in various legal systems as to the validity of cross-border assignments (in which the assignor, the assignee and the debtor would not be in the same country) and as to the effects of such assignments on the debtor and other third parties.[2]

4. At its twenty-fourth session (Vienna, 8-19 November 1995), the Working Group commenced its work by considering a number of preliminary draft uniform rules contained in a report of the Secretary-General entitled "Discussion and preliminary draft of uniform rules" (A/CN.9/412). At that session, the Working Group was urged to strive for a legal text aimed at increasing the availability of lower-cost credit (A/CN.9/420, para. 16).

5. At its twenty-ninth session (1996), the Commission had before it the report of the twenty-fourth session of the Working Group (A/CN.9/420). The Commission expressed appreciation for the work accomplished and requested the Working Group to proceed with its work expeditiously.[3]

6. At its twenty-fifth and twenty-sixth sessions (New York, 8-19 July and Vienna, 11-22 November 1996 respectively), the Working Group continued its work by considering different versions of the draft uniform rules contained in two notes prepared by the secretariat (A/CN.9/WG.II/WP.87 and A/CN.9/WG.II/WP.89 respectively). At those sessions, the Working Group adopted the working assumptions that the text being prepared would take the form of a convention (A/CN.9/432, para. 28) and would include conflict-of-laws provisions (A/CN.9/434, para. 262).

7. At its thirtieth session (1997), the Commission had before it the reports of the twenty-fifth and twenty-sixth sessions of the Working Group (A/CN.9/432 and A/CN.9/434). The Commission noted that the Working Group had reached agreement on a number of issues and that the main outstanding issues included the effects of the assignment on third parties, such as the creditors of the assignor and the administrator in the insolvency of the assignor.[4] In addition, the Commission noted that the draft Convention had aroused the interest of the receivables financing community and Governments, since it had the potential of increasing the availability of credit at more affordable rates.[5]

8. At its twenty-seventh and twenty-eighth sessions (Vienna, 20-31 October 1997 and New York, 2-13 March 1998 respectively), the Working Group considered two notes prepared by the secretariat (A/CN.9/WG.II/WP.93 and A/CN.9/WG.II/WP.96 respectively). At its twenty-eighth session, the Working Group adopted the substance of draft articles 14 to 16 and 18 to 22 and requested the secretariat to revise draft article 17 (A/CN.9/447, paras. 161-164 and 68 respectively).

9. At its thirty-first session (1998), the Commission had before it the reports of the twenty-seventh and twenty-eighth sessions of the Working Group (A/CN.9/445 and A/CN.9/447). The Commission expressed appreciation for the work accomplished and requested the Working Group to proceed with its work expeditiously so as to complete its work in 1999 and submit the draft Convention for adoption by the Commission at its thirty-third session (2000).[6]

10. At its twenty-ninth and thirtieth sessions (Vienna, 5-16 October 1998 and New York, 1-12 March 1999 respectively), the Working Group considered three notes prepared by the secretariat (A/CN.9/WG.II/WP.96, A/CN.9/WG.II/WP.98 and A/CN.9/WG.II/WP.102), as well as a note containing the report of a group of experts prepared by the Permanent Bureau of the Hague Conference on Private International Law (A/CN.9/WG.II/WP.99) and a proposal by the United States of America (A/CN.9/WG.II/WP.100). At those sessions, the Working Group adopted respectively the substance of the preamble and draft articles 1 (1) and (2), 5 *(g)* to *(j)*, 18 (5*bis*), 23 to 33 and 41 to 50 (A/CN.9/455, para. 17) and, with the exception of the bracketed language, the title, the preamble and draft articles 1 to 24 (A/CN.9/456, para. 18).

11. At its thirty-second session (1999), the Commission had before it the reports of the twenty-ninth and thirtieth sessions of the Working Group (A/CN.9/455 and A/CN.9/456). The Commission expressed appreciation for the work accomplished by the Working Group and requested the Working Group to proceed with its work expeditiously so as to make it possible for the draft Convention, along with the report of the next session of the Working Group, to be circulated to Governments for comments in good time and for the draft Convention to be considered by the Commission for adoption at its thirty-third session (2000). As regards the subsequent procedure for adopting the draft Convention, the Commission noted that it would have to decide at its next session whether it should recommend adoption by the General Assembly or by a diplomatic conference to be specially convened by the General Assembly for that purpose.[7]

12. In order to facilitate the considerations of the Working Group, this note reproduces the text adopted by the Working Group at its thirtieth session (A/CN.9/456, Annex), as well the private international law provisions and the final provisions adopted by the Working Group at its twenty-ninth session (A/CN.9/455, Annex, draft articles 29-33 and 41-50) and text not yet adopted by the Working Group (A/CN.9/WG.II/WP.96, draft articles 34-40; the underlined wording comes from A/CN.9/WG.II/WP.102). The note also sets forth remarks on a number of draft articles and, where necessary, suggestions for alternative or additional provisions for consideration by the Working Group.

[DRAFT CONVENTION ON ASSIGNMENT IN RECEIVABLES FINANCING]

[DRAFT CONVENTION ON ASSIGNMENT OF RECEIVABLES [IN INTERNATIONAL TRADE]]

PREAMBLE

The Contracting States,

Reaffirming their conviction that international trade on the basis of equality and mutual benefit is an important element in the promotion of friendly relations among States,

Considering [that] problems created by [the] uncertainties as to the content and choice of legal regime applicable to assignments [of receivables] in international trade [constitute an obstacle to financing transactions],

Desiring to establish principles and adopt rules [relating to the assignment of receivables] that would create certainty and transparency and promote modernization of law relating to [assignments of receivables] [receivables financing] [including but not limited to assignments used in factoring, forfaiting, securitization, project financing, and refinancing,] while protecting existing [financing] [assignment] practices and facilitating the development of new practices,

Also desiring to ensure the adequate protection of the interests of the debtor in the case of an assignment of receivables,

Being of the opinion that the adoption of uniform rules governing assignments [in] [of] receivables [financing] would facilitate the development of international trade and promote the availability of [capital and] credit at more affordable rates,

Have agreed as follows:

Remarks

1. At its previous session, the Working Group noted that the title and the preamble of the draft Convention appeared to be inconsistent with the scope provisions, according to which the draft Convention could apply to assignments outside a strictly financing context (A/CN.9/456, para. 60). In an attempt to align the title and the preamble with the scope provisions and to avoid raising questions of interpretation as to the exact scope of the draft Convention, the deletion from the title and the preamble of any reference to financing was proposed (A/CN.9/456, para. 61).

2. At the same session, the Working Group noted that the approach taken by the Working Group at previous sessions that, while the main focus of the draft Convention would be on financing transactions, other related transactions should not be excluded, was consistent with the mandate given by the Commission to the Working Group (A/CN.9/456, para. 63). At its thirty-second session, in response to a question raised, the Commission reaffirmed the flexible mandate given to the Working Group to determine how broad or narrow the scope of application of the draft Convention should be.[8]

3. It will be recalled that the Working Group decided not to limit the scope of the draft Convention to transactions with a "financing" or "commercial" nature or context, since such a limitation: would inappropriately create yet another special regime on assignment, where one was in principle not justified, and thus inadvertently result in further disunification of the law on assignment; would raise uncertainty since the terms "financing" and "commercial" were not universally understood in the same way, nor was it feasible or desirable to attempt to define them in a uniform way in an international convention; and would unnecessarily exclude from the scope of the draft Convention important transactions such as, e.g. assignments in international factoring transactions in which insurance against debtor-default or book-keeping and collection services are provided. The Working Group rather preferred to start from a broad scope of application and to exclude transactions that were of a consumer nature or were already well regulated (A/CN.9/420, paras. 41-43; A/CN.9/432, paras. 14-18 and 66; A/CN.9/434, paras. 18 and 42-61).

4. Should the Working Group confirm its decision not to limit the scope of application of the draft Convention to assignments made for "financing" purposes, it might wish to delete the reference to "receivables financing" from the title and the preamble of the draft Convention and to include an explanation of the matter in the commentary to the draft Convention. Alternatively, a reference to receivables financing could be retained in the preamble, but not in the title, of the draft Convention, and explained in the commentary (see also remark 1 to draft article 5). Such a reference in the preamble could operate as a guidance with regard to the main objectives of the draft Convention, without limiting the scope of the draft Convention, a matter that could be usefully clarified in the commentary.

5. If the Working Group follows this approach, it may wish to consider the question whether the reference to international trade in the title of the draft Convention, which appears within square brackets, should be retained. The retention of a reference to international trade in the title presents a number of advantages, including that: it sufficiently reflects the overall objective of the draft Convention to facilitate the movement of goods and services across borders; and appropriately clarifies that the draft Convention applies to assignments with an international and commercial element, without attempting to regulate consumer assignments or domestic assignments of domestic receivables.

6. On the other hand, such a reference to international trade may inadvertently give the impression that the draft Convention applies only to assignments of receivables generated in international trade and not to: the assignment of consumer receivables; the international assignment of domestic receivables; or the assignment of receivables arising from loan or other transactions that may not involve the sale of goods or the provision of services. In addition, such a reference might fail to reflect the fact that the draft Convention might affect domestic assignments of domestic receivables in that it is intended to provide which law applies to a conflict between a domestic and a foreign assignee of domestic receivables (see remarks 3-5 to draft article 1). On balance, however, it would seem that, in line with practice followed in other UNCITRAL texts, a reference to

[8]Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17, para. 326).

international trade (or commerce) would be appropriate. As to the problems identified above, the Working Group may wish to address them in the commentary to the draft Convention, explaining that the term "international trade" is used in a broad sense and is intended to cover all the activities defined as "commercial" in the footnote to article 1 (1) of the UNCITRAL Model Law on International Commercial Arbitration.

CHAPTER I. SCOPE OF APPLICATION

Article 1. *Scope of application*

(1) This Convention applies to:

(a) assignments of international receivables and to international assignments of receivables as defined in this chapter, if, at the time of the conclusion of the contract of assignment, the assignor is located in a Contracting State;

(b) subsequent assignments provided that any prior assignment is governed by this Convention; and

(c) subsequent assignments that are governed by this Convention under subparagraph *(a)* of this paragraph, notwithstanding that any prior assignment is not governed by this Convention.

(2) This Convention does not affect the rights and obligations of the debtor unless the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

[(3) The provisions of chapter V apply [to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs (1) and (2) of this article] [independently of the provisions of this chapter]. However, those provisions do not apply if a State makes a declaration under article 34.]

(4) The annex to this Convention applies in a Contracting State which has made a declaration under article 36.

Remarks

1. Paragraph (3) appears within square brackets since it has not been adopted by the Working Group yet (A/CN.9/456, para. 26). The wording proposed by the secretariat in a previous paper (A/CN.9/WG.II/WP.102, remark 23 to draft article 1) has been slightly modified to allow States to opt out of chapter V as a whole, including draft articles 30 and 31 dealing with reservations as to the application of mandatory law and public policy. The secretariat had originally suggested that those provisions could be excluded from an opt-out, in order for them to apply to private law provisions outside chapter V (A/CN.9/WG.II/WP.102, remark 20 to draft article 1).

2. The modification is intended to avoid inadvertently subjecting the application of the substantive law provisions of the draft Convention to mandatory law or public policy, which could make it impossible to predict whether the draft Convention would apply or be set aside by a judge on the basis of not widely known or possibly surprising notions of mandatory law or public policy. However, the issue whether the law applicable by virtue of the private international law provisions of the draft Convention may be set aside if it is manifestly contrary to super-mandatory law (*loi de police*) and public policy remains to be resolved (see remarks to draft article 24).

3. So far, the Working Group has worked on the assumption that draft article 24 will apply to a conflict between a domestic and a foreign assignee of domestic receivables. One of the reasons for which the Working Group decided to turn the priority rules of the draft Convention into private international law rules was that such rules would not negatively affect the rights of domestic assignees of domestic receivables, since issues of priority would be left to substantive law applicable outside the draft Convention (A/CN.9/445, para. 22).

4. Should the Working Group confirm its assumption that conflicts of priority between a domestic and a foreign assignee of domestic receivables would be covered in draft article 24, the domestic assignee would have to meet the requirements of the same law it would probably expect to be applied anyway (since, by definition, in a domestic assignment of domestic receivables, the law of the assignor's, the assignee's and the debtor's jurisdiction would be the same, while in an international assignment only the assignee would be in a different State). If the Working Group defines "location" of the assignor for the purposes of the priority rules by reference to its central administration (but not for the purpose of the scope rules; see remark 4 to draft article 5), a different law might apply to a conflict between an assignment by a branch of an entity in the debtor's jurisdiction and a second assignment by the head office of the same entity in another jurisdiction (if one of those two States is not a Contracting State). However, even in such a case the domestic assignee could predict that the draft Convention could apply, since the domestic assignee: would be located in a Contracting State (i.e. the same State in which the assignor and the debtor would have their places of business); and would know that the assignor is a branch of a foreign entity. On the other hand, if draft article 24 did not apply to such a conflict, the foreign assignee may have no way to determine that a law other than the law of the assignor's central administration might apply. Depending on the frequency of such assignments by head and branch offices, the problem may be left to other law. In its consideration of this matter, the Working Group may also wish to take into account the need to avoid inadvertently interfering with domestic practices, a result which could reduce the acceptability of the draft Convention.

5. The Working Group may wish to consider for inclusion in draft article 1 or in draft article 24 wording along the following lines: "Article 24 of this Convention applies to a conflict of priority between an assignee in a domestic assignment of domestic receivables and an assignee in an international assignment of the same domestic receivables from the same assignor."

Article 2. *Assignment of receivables*

For the purposes of this Convention:

(a) "Assignment" means the transfer by agreement from one person ("assignor") to another person ("as-

signee") of the assignor's contractual right to payment of a monetary sum ("receivable") from a third person ("the debtor"). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

(b) In the case of an assignment by the initial or any other assignee ("subsequent assignment"), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee.

Remarks

1. The reference to "contractual" receivables is intended to ensure that the draft Convention applies, for example, to the assignment of receivables arising under contracts for the sale of goods or the provision of services, whether those contracts are commercial or consumer transactions, as well as to the assignment of receivables in the form of royalties arising from the licensing of intellectual property and of receivables in the form of credit balances in deposit accounts or securities transactions. The assignment of tort and tax receivables or receivables determined in court judgements is not covered, unless those receivables are confirmed in a settlement agreement.

2. The Working Group may wish to consider whether the assignment of receivables under the draft Convention would include: damages for breach of contract (liquidated or not); interest for late payment (contractual interest, statutory interest or interest liquidated in a court judgement); sums payable as dividends (present or future) arising from shares; and receivables based on arbitral awards.

3. Under subparagraph *(a)*, what constitutes a "contractual" right is left to law applicable outside the draft Convention. In view of the divergences existing between legal systems in this context, such an approach may, in some cases in which it may not be easy to distinguish between a contractual and an extra-contractual relationship, create uncertainty. In order to avoid this result, the Working Group may wish to consider defining the term "contractual" right in a negative way (e.g. "a right to payment of a monetary sum other than one arising by operation of law or determined in a court judgement"). Alternatively, the matter could be explained in the commentary.

Article 3. *Internationality*

A receivable is international if, at the time it arises, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States.

Remarks

Under draft article 3, once a receivable is international, its assignment is always covered by the draft Convention (whether it is domestic or international). However, once a receivable is domestic, its assignment may be covered by the draft Convention, if: it is international; or it is domestic but is also part of a chain of assignments which includes an international assignment (for an additional situation in which a domestic assignment of domestic receivables may be affected, see remarks 3-5 to draft article 1). In order to limit the references in the text to the time when a receivable arises (term defined in draft article 5 *(b)*) and to align the wording of the first sentence with that of the second sentence, the words "at the time of the conclusion of the original contract" may be substituted for the words "at the time it arises" (see remark 1 to draft article 5).

Article 4. *Exclusions*

[(1)] This Convention does not apply to assignments:

(a) made for personal, family or household purposes;

(b) to the extent made by the delivery of a negotiable instrument, with any necessary endorsement;

(c) made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

[(2) This Convention does not apply to assignments listed in a declaration made under draft article 35 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]

Remarks

1. In view of the broad scope of application of the draft Convention, the Working Group decided to list assignments that should not be covered. In particular, the exclusion of assignments for consumer purposes is intended to emphasize that only assignments for commercial purposes are to be covered (without referring to the commercial purposes in order to avoid creating uncertainty). However, it would seem that assignments made from an individual to a financing institution, i.e. for mixed, consumer and commercial purposes, should not be excluded. In addition, subparagraph *(a)* may need to be revised in order to avoid inadvertently giving the impression that it is intended to exclude the assignment of consumer receivables. Thus, the Working Group may wish to reformulate subparagraph *(a)* along the following lines "made from one individual to another for personal, family or household purposes common to both" (in draft articles 21 (1) and 23, the use of the term "primarily" for personal, family or household purposes is made, but in that context the term "purposes" relates to one party, the debtor). The commentary will explain that only assignments from one consumer to another consumer are excluded and that in all other cases the assignment of consumer receivables is covered. The Working Group may wish to consider that such consumer assignments are extremely rare in practice and that, in the absence of an explanation in the commentary, such an exclusion may be inadvertently misunderstood as relating to the assignment of consumer receivables. In such a case, subparagraph *(a)* may be deleted altogether, while the commentary could explain that assignments from one consumer to another are not covered.

2. As to assignments of receivables in the context of a sale of a business as a going concern, the commentary may explain that, while the assignment from the seller to the

buyer of the business is excluded, the assignment to an institution financing the sale is not excluded (A/CN.9/432, para. 66; and A/CN.9/434, paras. 42-61).

3. At the previous session of the Working Group, additional assignments were identified for possible exclusion, i.e. assignments of receivables arising in clearing-house, swaps and derivatives transactions and assignments of receivables arising from the sale or lease of high-value, highly mobile equipment (A/CN.9/456, paras. 48 and 49 and 232-239).

4. As to clearing-house, swaps and derivatives transactions, in order to avoid unsettling existing and well-functioning practices, the Working Group may wish to consider whether they should be excluded altogether or be dealt with differently. While it is a matter of discussion whether all of those transactions would create receivables the assignment of which would be covered by the draft Convention, it appears that the main concern in such transactions is that an assignment made without the consent of the debtor may inappropriately oblige the debtor to pay a third party, freeze the debtor's defences and rights of set-off and introduce an inappropriate priority regime.

5. Before deciding in favour of a blank exclusion of all those practices which may deprive parties thereto of the benefits to be derived from the draft Convention, the Working Group may wish to consider whether it can possibly address the relevant concerns in another way. For example, the Working Group may wish to include in the draft Convention a rule under which the debtor in such transactions (and possibly in insurance policies, which establish a strictly personal relationship between the insurer and the insured, and in loan syndications and participations, which normally involve the assignment of single, large-value receivables) will not be bound or affected in any way by an assignment. Such a rule would not prevent assignments, except that the assignee would not be able to collect from the debtor. The assignee would have priority over other claimants, but, as long as the debtor is not bound against its will and does not lose its defences and rights of set-off, the priority regime of the draft Convention would not affect the debtor. This result may be achieved by a general principle along the following lines: "Nothing in this Convention affects the rights and obligations of an intermediary in clearing house, swaps and derivatives transactions [, insurance policies and loan syndications and participations] without the intermediary's [, the insurer's or any lender's] consent." The same result may also be achieved by inserting in draft article 10 language along the following lines: "An assignment of receivables arising under clearing-house, swaps or derivatives transactions [, insurance policies or loan syndications and participations] is ineffective as against the debtor unless it is consented to by the debtor, whether or not there is a contractual limitation to such an assignment." Alternatively, the two provisions proposed above may be combined in one new provision.

6. In addition, the Working Group may wish to consider modifying draft article 20 to ensure that, in clearing-house, swaps and derivatives transactions, insurance policies and loan syndications and participations, notification does not freeze the defences and rights of set-off of the debtor, whether they arise from the original or any other contract. Such a modification of draft article 20 may not be necessary, since parties would have an opportunity to consider whether they wish to continue the transaction in view of the fact that the debtor would not be able to raise certain defences and rights of set-off arising after notification of an assignment. However, the application of draft article 20 may be problematic, since in some of those transactions it may not always be clear which is the original contract and which party is creditor or debtor, since any party may be debtor or creditor depending on the time one examines the transaction. Moreover, the Working Group may wish to consider a different priority regime from that embodied in draft articles 25 to 26, at least with regard to some of those practices. For example, in transactions involving investment property or deposit accounts, priority may need to be left to the law of the location of the securities intermediary or of the depositary institution, rather than to the law of the assignor's location.

7. If there is no agreement on the above-mentioned approach or if it is considered that it does not sufficiently address the relevant concerns, the Working Group may wish to consider excluding those practices altogether in draft article 4 (1) or leaving the matter to each State to settle by way of a declaration under draft articles 4 (2) and 35. The advantage of a draft article 4 (1) exclusion would lie in the certainty that may be achieved by a uniform rule applicable to all Contracting States. The disadvantage of such an approach would be that certain practices may have to be excluded for all Contracting States, even though their coverage in the draft Convention would raise concerns only in one or more Contracting States. Another possible disadvantage of such an approach is that it would not allow a State the flexibility to exclude practices if a concern with covering those practices in the draft Convention arises in the future. On the other hand, allowing each State to exclude practices by way of a declaration under draft articles 4 (2) and 35 may introduce an undesirable degree of uncertainty. If such an approach were to be followed, the scope of application of the draft Convention may differ from State to State and from time to time. As a result, parties to the relevant transactions may have to determine in each case the scope of application of the draft Convention.

8. As to transactions relating to mobile equipment, in order to avoid any conflicts with the draft convention and the equipment-specific protocols being prepared by the International Institute for the Unification of Private Law (Unidroit) in cooperation with the International Civil Aviation Organization (ICAO) and other organizations (hereinafter referred to as "the Unidroit draft Convention"), the Working Group may wish to consider whether the assignment of receivables arising from the sale or lease of and secured by mobile equipment should be excluded altogether (in the draft Convention or in the Unidroit draft Convention or relevant protocol) or be dealt with by way of a provision settling any conflicts that might arise between those texts (either in a uniform way for all Contracting States or by leaving it to each State to decide to which text it wishes to give precedence). Such conflicts may arise, since the Unidroit draft Convention, for example: requires consent of the debtor for an assignment to be effective;

subjects priority with respect to mobile equipment and receivables inextricably linked thereto to an equipment-specific system of international registration; and vests the equipment financier with wide self-help powers, in particular in the case of insolvency in which the financier has the power to repossess the equipment after the opening of the insolvency proceeding if the insolvent debtor does not cure the default within a certain period of time.

9. If it is agreed that the regime introduced by the draft Convention is not appropriate for the assignment of receivables arising, for example, from the sale or lease of aircraft, as it is practised under current law, and that the particular needs of the relevant practices cannot be addressed by introducing additional rules in the draft Convention, the Working Group may wish to consider excluding in draft article 4 (1) the assignment of receivables secured by such equipment (it should be noted though that, while a parallel may be drawn, in some legal systems, between high-value equipment and real estate, the assignment of receivables arising from the sale or lease of real estate cannot be excluded, since receivables secured with a mortgage in real estate are often part of securitization schemes). Certainty in the application of the draft Convention and avoidance of any undue interference with well-regulated practices would be the main advantages of such an approach. For the same reasons, article 2 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980; hereinafter referred to as the "Sales Convention") excludes the sale of certain types of goods (e.g. electricity, negotiable instruments, ships and aircraft).

10. As to the question of which types of practices should be excluded, the Working Group may wish to take into account, for example, that receivables arising from the sale or lease of and secured by aircraft are normally part of equipment, rather than receivables, financing transactions, at least to the extent that they are secured by the aircraft and the security interest is registered in the aircraft registry. In such situations, potential financiers of receivables secured by aircraft would know that they should have to look to the aircraft registry to determine their priority position and to decide on that basis whether to provide credit and at what cost. It should be noted, however, that receivables arising from ticket sales are normally part of securitization schemes, rather than equipment financing, and thus their assignments should not be excluded from the scope of the draft Convention.

11. While it may be appropriate to follow the same approach with regard to satellites, it remains to be established that it should be followed with regard to other types of space equipment (e.g. control panels located on earth), railway rolling stock, oil rigs, containers or similar types of equipment. Caution would need to be exercised, since this approach could inadvertently result in limiting excessively the scope of the draft Convention, if mobile equipment were defined in the Unidroit draft Convention, as is presently the case (art. 3), as including "any uniquely identifiable object", i.e. cars, trucks, computers, television sets and the like.

12. Should the Working Group decide to follow this approach, a new subparagraph *(d)* may be inserted in draft article 4 (1) along the following lines: "made as part of transactions relating to security interests, conditional sales under reservations of title or leasing agreements with respect to [aircraft] and receivables arising from the sale or lease secured by [or associated with] such equipment." The term "aircraft" is within square brackets pending determination by the Working Group of the exact formulation of the exception and of other practices in which receivables may be part of equipment, rather than receivables, financing. The words "or associated with", which come from the definition of "associated rights" contained in draft article 1 of the Unidroit draft Convention, are within square brackets since they appear to be vague and may inadvertently broaden excessively the scope of the exclusion.

13. If, on the other hand, the problem with covering such practices in the draft Convention does not lie in the risk that the draft Convention may unsettle current practices but in the risk of creating conflicts with a future text, such as the Unidroit draft Convention, or of unsettling practices that may develop in the future, it may be preferable to address this problem by way of a provision settling any conflicts between the two texts, preferably in a uniform way for all States. Such an approach would present certain advantages, including that: it would settle the matter of potential conflicts with an acceptable degree of certainty; and it would avoid leaving a gap in case one or the other text is not widely adopted in a timely fashion (the Unidroit draft Convention will enter into force in stages as soon as an equipment-specific protocol enters into force and an equipment-specific registration system is in place). The question as to which text should have precedence may need to be answered differently depending on the type of equipment involved. For example, precedence may be given to the aircraft protocol but not to any other protocol.

14. Should the Working Group decide to follow this approach, language along the following lines may be inserted in draft article 33 as a new paragraph (2): "This Convention does not prevail over any international convention or other multilateral or bilateral agreement which has been or may be entered into by a Contracting State and which contains provisions concerning security interests, conditional sales under reservations of title and leasing agreements with respect to [aircraft] and receivables arising from the sale or lease secured by [or associated with] such equipment."

15. Alternatively, the extent to which any other text dealing with similar matters may prevail over the draft Convention may be left to that other text. Under such an approach, in the preparation of each protocol, it would have to be determined whether receivables secured by the relevant type of equipment are part of equipment, rather than receivables, financing. The matter of the assignment of rights secured by mobile equipment, which is currently addressed in the base draft Unidroit Convention, would need to be left to each protocol to that draft Convention. In addition, the notion of "equipment" would have to be limited to certain high-value types of equipment and could not relate to "any uniquely identifiable object" since such a broad approach could inadvertently encompass consumer goods, such as cars and personal computers, and interfere with receivables financing practices, such as the securitization of consumer receivables. As a matter of drafting, if the Working Group agrees to insert a new provision in draft article 33, a refer-

ence to paragraphs (2) and (3) would need to be added in paragraph (1) of draft article 33 and the current paragraph (2) would need to be renumbered.

16. Paragraph (2) and draft article 35 foresee an additional way in dealing with the exclusion of practices, leaving the matter to each State. However, allowing each State to, in essence, define the scope of application of the draft Convention by excluding (or including) practices at any time would introduce an undesirable degree of uncertainty. If such an approach were to be followed, in view of the multiplicity of parties involved in assignment-related transactions, it may be very difficult to determine in each case which law applies. Thus, the Working Group may wish to consider deleting paragraph (2) and draft article 35.

CHAPTER II. GENERAL PROVISIONS

Article 5. *Definitions and rules of interpretation*

For the purposes of this Convention:

(a) "original contract" means the contract between the assignor and the debtor from which the assigned receivable arises;

(b) a receivable is deemed to arise at the time when the original contract is concluded;

(c) "existing receivable" means a receivable that arises upon or before the conclusion of the contract of assignment; "future receivable" means a receivable that arises after the conclusion of the contract of assignment;

[*(d)* "receivables financing" means any transaction in which value, credit or related services are provided for value in the form of receivables. Receivables financing includes factoring, forfaiting, securitization, project financing and refinancing;]

(e) "writing" means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

(f) "notification of the assignment" means a communication in writing which reasonably identifies the assigned receivables and the assignee;

(g) "insolvency administrator" means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

(h) "insolvency proceeding" means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(i) "priority" means the right of a party in preference to another party;

[*(j)* [For the purposes of articles 24 and 25,] an individual is located in the State in which it has its habitual residence; a corporation is located in the State in which it is incorporated; a legal person other than a corporation is located in the State in which its constitutive document is filed and, in the absence of a filed document, in the State in which it has its chief executive office.]

[*(k)* [For the purposes of articles 1 and 3:]

(i) the assignor is located in the State in which it has that place of business which has the closest relationship to the assignment;

(ii) the assignee is located in the State in which it has that place of business which has the closest relationship to the assignment;

(iii) the debtor is located in the State in which it has that place of business which has the closest relationship to the original contract;

(iv) in the absence of proof to the contrary, the place of central administration of a party is presumed to be the place of business which has the closest relationship to the relevant contract. If a party does not have a place of business, reference is to be made to its habitual residence[;

(v) several assignors or assignees are located at the place in which their authorized agent or trustee is located]].

Remarks

1. The Working Group may wish to consider whether subparagraph *(b)* is necessary. Currently, reference to the time at which a receivable arises is made in draft articles 3 and 8 (2) (in both provisions, a direct reference to the time of the conclusion of the original contract may be made). A reference to the fact of a receivable "arising" (without a reference to time) is made in draft articles 5 *(a)* and *(c)* and 12.

2. The Working Group may also wish to delete subparagraph *(d)* and to include a description of the practices to be covered by the draft Convention in the commentary (the reference to receivables financing could be retained in the preamble, if necessary; see remarks to the title and the preamble).

3. The Working Group may wish to insert at the end of the definition of "priority"in draft article 5 *(i)* wording along the following lines: "and includes the issue whether that party has a right in rem or ad personam" (see remark 1 to draft article 26).

4. Subparagraphs *(j)* and *(k)* reflect the divergence of views in the Working Group as to the issue of location of a legal person. The reference to draft articles 1, 3, 24 and 25 appears in square brackets, since the Working Group has not reached agreement on the question whether a different location rule should be adopted for the purpose of some of the provisions of the draft Convention in which the term "location" appears (i.e. draft articles 1, 3, 21 (1), 23-26, 27-29 and 39 (3)). However, at the previous session of the Working Group, there appeared to be agreement, at least: that the need for certainty was much stronger in the

priority provisions than in the scope provisions; that the scope of application of the draft Convention should be as broad as possible; that, in order to achieve a sufficient degree of debtor-protection, at least, with regard to the debtor's location, reference should be made to the relevant place of business; and that a solution with regard to the priority provisions could be built around the concept of central administration/chief executive office of an entity (A/CN.9/456, paras. 35-37). In view of the above, the Working Group may wish to consider a provision along the following lines:

"(i) a party is located in the State in which it has its place of business;

"(ii) if the assignor or the assignee have more than one place of business, the place of business is that which has the closest relationship to the contract of assignment. If the debtor has more than one place of business, the place of business is that which has the closest relationship to the original contract. If a party does not have a place of business, reference is to be made to the habitual residence of that party;

"(iii) for the purposes of articles 24 to 26, the place where the central administration of an entity is exercised de facto is deemed to be the place of business with the closest relationship to the contract of assignment[;

"(iv) several assignors or assignees are located at the place in which their authorized agent or trustee is located]."

5. The main difference between the proposed text and the current formulation of subparagraph *(k)* is that, with regard to the priority provisions of the draft Convention, the proposed text does not create a presumption that would almost certainly be rebutted in the case of branch offices, but a legal fiction that could not be rebutted. Such an approach would have the advantage of maintaining a balance between flexibility and certainty with regard to the application of the draft Convention, while giving precedence to certainty with regard to the priority provisions of the draft Convention.

6. Under such an approach, in the case of subsequent assignments under draft article 1 *(b)*, reference would be made to the place with which any prior assignment is most closely connected, and in the case of subsequent assignments under draft article 1 *(c)*, reference would be made to the place with which a subsequent assignment is most closely connected (similarly, internationality would have to be determined by reference to the place with the closest connection with the subsequent assignment).

7. As a matter of drafting, the Working Group may wish to avoid referring to "location" in draft articles 24 to 26 and to refer directly to the law of the State in which the assignor has its central administration. The need to subject priority issues in the case of an insolvency or other proceeding to the law of the assignor's main jurisdiction should be sufficient to justify referring to the place of the assignor's central administration as a connecting factor for the determination of the law governing such priority issues. As to conflicts among several assignees of the same receivables, while a place-of-business approach would be appropriate in the case of an assignor with a single place of business, it would be entirely unworkable if the assignor has more than one place of business (if, e.g. the same receivables are assigned by the head office and by a branch office, or by different branch offices, or by partners in a limited partnership located in different States, not all of which have adopted the draft Convention). In such a case, the application of a place-of-business approach could result in priority issues being governed by different laws and an assignee would have no way to know the circumstances under which the assignor assigned the same receivables several times.

8. A possible disadvantage of a bifurcated approach to the issue of location is that, if the place of business and the place of central administration do not coincide, assignees would have to check two different laws, the law of the place of business of the assignor for determining whether the draft Convention would apply and the law of the place of central administration of the assignor for determining the risk involved in the case of a double assignment or insolvency of the assignor (for another possible disadvantage, see remark 4 to draft article 1). However, this may be unavoidable, since a uniform approach appropriate in all circumstances does not seem to exist (as confirmed by the discussions in the Working Group and the UNCITRAL/Hague Conference group of experts; for the views of the latter group, see A/CN.9/WG.II/WP.99, part 3, definition of the concept of "location").

9. Compared with the place of incorporation, the place of central administration presents the advantage that it is a notion known in most legal systems and its application would not raise the possible problem of the application of an artificial jurisdiction without any developed laws as could be the case if reference were to be made to the place of incorporation. However, the place of central administration may not be as transparent as the place of incorporation, in particular: where the place of exercise of central authority is so evenly divided between two or more countries as to make the choice of one over the other impossible; and in the case of subsidiary companies where the real administrative control resides in the parent company. While revising new subparagraph *(j)* (iii) to create a rebuttable presumption ("in the absence of proof to the contrary") could provide a solution to this problem, it would seem that such an approach would not be appropriate, since it would inadvertently result in reducing the level of certainty achieved by this rule. In an effort to address this problem, the Working Group may wish to refer in new subparagraph *(j)* (iii) first to the place designated in the constitutive documents of an entity and, only in the absence of such a designation, to the de facto place of central administration (article 21 of the Swiss Private International Law Code).

10. As to the question whether the centre of main interests should be preferred for reasons of consistency with the European Union Convention on Insolvency Proceedings (hereinafter referred to as "the EU Insolvency Convention") and the UNCITRAL Model Law on Cross-Border Insolvency, it may be noted that the centre of main interests is akin to central administration, chief executive office or principal place of business. All those terms are understood as denoting the centre of management and control, the real

business centre from which the important activities of an entity are controlled, rather than the day-to-day management of the affairs and operations of such an entity. However, the rebuttable presumption established in those texts that the centre of main interests is the place of registration or, in the case of individuals, of the habitual residence of a party, may reduce the level of certainty necessary in a text, whose main focus is on the advance planning in the financing of a solvent debtor (A/CN.9/455, para. 27).

Article 6. *Party autonomy*

The assignor, the assignee and the debtor may derogate from or vary by agreement provisions of this Convention relating to their respective rights and obligations. Such an agreement does not affect the rights of any person who is not a party to the agreement.

Article 7. *Principles of interpretation*

(1) In the interpretation of this Convention, regard is to be had to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.

(2) Questions concerning matters governed by this Convention which are not expressly settled in it are to be settled in conformity with the general principles on which it is based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law.

CHAPTER III. EFFECTS OF ASSIGNMENT

Remarks

1. The provisions in chapter III deal with the substantive validity (more accurately, effectiveness erga omnes) of an assignment. They do not deal, however, with formal validity. After the deletion of the provision dealing with form (A/CN.9/WG.II/WP.102, draft article 9), formal validity is left to the law applicable outside the draft Convention (A/CN.9/456, para. 91). This law would presumably be the law of the contract of assignment (which could be the law of the assignor's or the assignee's place of business or, if the assignor or the assignee have more than one place of business, the place of business with the closest connection to the contract) or the law of the place in which the contract was concluded (which could be a place other than the place of business of the assignor or the assignee). As a result, in view of the fact that priority presupposes both substantive and formal validity, an assignee would have to ensure that it has a valid assignment under the provisions of chapter III and under the law governing formal validity, as well as priority under the law of the assignor's location. This result could reduce certainty and thus have a negative impact on the cost of credit.

2. In order to address this problem, the term "priority" could be defined as including formal validity so that priority and formal validity are made subject to the same law. Alternatively, a rule may be included, preferably, at the beginning of chapter III or, alternatively, in chapter V along the following lines: "The form of the assignment and the effect of any non-compliance with such form is governed by the law of the State in which the assignor is located." (A/CN.9/WG.II/WP.96, draft article 9, variant C).

3. In line with the approach of the Working Group to focus on the assignment, rather than on the contract of assignment, the above-mentioned provision makes reference to the assignment. Formal validity is subjected to the law of the assignor's location, in order to ensure: that the law of single jurisdiction would govern; and that law would be the same as the law governing priority (in order to achieve this result, the meaning of "location" in this context would have to be the same as in draft articles 24 to 26).

Article 8. *Effectiveness of bulk assignments, assignments of future receivables, and partial assignments*

(1) An assignment of existing or future, one or more, receivables, and parts of, or undivided interests in, receivables is effective, whether the receivables are described:

(a) individually as receivables to which the assignment relates; or

(b) in any other manner, provided that they can, at the time when the receivables arise, be identified as receivables to which the assignment relates.

(2) Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable when it arises.

Article 9. *Time of assignment*

An existing receivable is transferred, and a future receivable is deemed to be transferred, at the time of the conclusion of the contract of assignment, unless the assignor and the assignee have specified a later time.

Article 10. *Contractual limitations on assignments*

(1) An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent assignee, limiting in any way the assignor's right to assign its receivables.

(2) Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement. A person who is not party to such an agreement is not liable under that agreement for its breach.

Remarks

1. As already mentioned (see remark 5 to draft article 4), if practices, such as those involving clearing-house, swaps and derivatives transactions, insurance policies or loan syndications and participations, are to be covered by the draft Convention, a different rule may need to be included in draft article 10 with regard to those practices. Such a rule could provide that, in the absence of a consent by the debtor in those transactions, an assignment is not effective

as against the debtor (for potential additional changes in the draft Convention to address the particular needs of those practices, see remark 6 to draft article 4).

2. The second sentence of paragraph (2), stating that the assignee has no contractual liability for breach of an anti-assignment clause by the assignor, appears to be stating the obvious (the assignee cannot have contractual liability for breach of a contract to which the assignee is not a party). The original intention of the Working Group was that, while, obviously, the assignee would have no contractual liability, the issue of tort liability would be left to law applicable outside the draft Convention (A/CN.9/455, para. 51). The Working Group envisaged situations in which the assignee engages in manifestly improper behaviour (for example, induces the assignor to assign receivables in violation of an anti-assignment clause with the intent to harm the interests of the debtor). However, mere knowledge by the assignee of the existence of an anti-assignment clause should not give rise to liability of the assignee, since such a possibility might deter potential assignees from entering into receivables financing transactions (A/CN.9/455, para. 50).

3. While the matter can be explained in the commentary, the Working Group may wish to settle it explicitly by deleting the words "under that agreement for its breach"and inserting instead language along the following lines: "even if it had knowledge of such an agreement" or "on the sole ground that it had knowledge of such an agreement" or "unless that person acts with the specific intent to cause loss or recklessly *and* with actual knowledge that the loss would be likely to result" (in any of those cases, mere knowledge would not be sufficient to establish liability; see article 18 of the UNCITRAL Model Law on International Credit Transfers and article 8 of the United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg Rules)).

Article 11. *Transfer of security rights*

(1) A personal or property right securing payment of the assigned receivable is transferred to the assignee without a new act of transfer, unless, under the law governing the right, it is transferable only with a new act of transfer. If such a right, under the law governing it, is transferable only with a new act of transfer, the assignor is obliged to transfer this right and any proceeds to the assignee.

(2) A right securing payment of the assigned receivable is transferred under paragraph (1) notwithstanding an agreement between the assignor and the debtor or other person granting the right, limiting in any way the assignor's right to assign the receivable or the right securing payment of the assigned receivable.

(3) Nothing in this article affects any obligation or liability of the assignor for breach of an agreement under paragraph (2). A person who is not a party to such an agreement is not liable under that agreement for its breach.

(4) The transfer of a possessory property right under paragraph (1) of this article does not affect any obligations of the assignor to the debtor or the person granting the property right with respect to the property transferred existing under the law governing that property right.

(5) Paragraph (1) of this article does not affect any requirement under rules of law other than this Convention relating to the form or registration of the transfer of any rights securing payment of the assigned receivable.

Article 12. *Limitations relating to Governments and other public entities*

Articles 10 and 11 do not affect the rights and obligations of a debtor, or of any person granting a personal or property right securing payment of the assigned receivable, if that debtor or person is a governmental department[, agency, organ, or other unit, or any subdivision thereof, unless:

(a) the debtor or person is a commercial entity; or

(b) the receivable or the granting of the right arises from commercial activities of that debtor or person.]

Remarks

1. Draft article 12 is the result of a decision made at the previous session of the Working Group to ensure that sovereign debtors are not affected by assignments made in violation of anti-assignment clauses included in public procurement and other similar contracts. The Working Group thought that any interference with the legal regime of such contracts should be avoided, since it could seriously affect the acceptability of the draft Convention (A/CN.9/456, para. 115).

2. However, draft article 12 might go beyond its intended purpose of protecting sovereign debtors who do not need such protection or who can be protected by other means (e.g. by a statutory anti-assignment limitation to the extent it is not affected by the draft Convention; on this matter, see remark 4 below and remarks 3 and 4 to draft article 28; for a suggestion as to how to deal in draft article 10 with statutory limitations to the assignment, see A/CN.9/WG.II/WP.102, remark 7 to draft article 12). In addition, the possibility of a contractual limitation to assignment invalidating the assignment as against a sovereign debtor might inadvertently raise the risk of non-collection from a sovereign debtor and thus raise the cost of credit to all sovereign debtors, irrespective of whether they need the protection provided under draft article 12. Moreover, allowing anti-assignment clauses in public procurement contracts to invalidate assignments as against a sovereign debtor could inadvertently raise the cost of credit to small- and medium-size suppliers of goods and services, which would make it even harder for them to compete for public procurement contracts with large suppliers who normally have alternative sources of credit. The Working Group may, therefore, wish to consider revising draft article 12 in order to allow States to enter a reservation with regard to draft articles 10 and 11, if they so wish.

3. Should the Working Group prefer to take this approach, draft article 12 could be revised to read as follows: "If the State in which the debtor or any person granting a personal or property right securing payment of the assigned receivable is located at the time of the conclusion of the original contract has entered a reservation under draft article [...], articles 10 and 11 do not affect the rights and

obligations of that debtor or person." In addition, a new draft article could be added to the final provisions to read along the following lines: "A State may declare at any time that it will not be bound by draft articles 10 and 11 if the debtor or any person granting a personal or property right securing payment of the assigned receivable is located in that State at the time of the conclusion of the original contract and is a Government[, central or local, any subdivision thereof, or any public entity, unless: [insert subparagraphs *(a)* and *(b)*]]."

4. The title of the provision may need to be slightly revised so as to reflect more clearly the fact that it deals with contractual, and not statutory, assignability. The commentary will clarify that, while draft articles 10 and 11 do not deal with statutory limitations to assignment, the substantive law part of the draft Convention is not subject to any mandatory rules of the law applicable outside the draft Convention limiting assignments, since such a result would undermine the certainty achieved by the draft Convention. For example, draft article 8 overrides any rule of law applicable outside the draft Convention, under which an assignment of future receivables is invalid (on mandatory rules and rules reflecting public policy, see also remarks to draft articles 1 and 24). The wording used to reflect sovereign debtors has been modified so that sovereign loans, as well as transactions involving central and local Governments, any subdivisions thereof and public entities would be covered.

5. It may be noted that the Unidroit Convention on International Factoring (Ottawa, 1988; hereinafter referred to as "the Ottawa Convention") allows States to enter a reservation with regard to a rule very similar to draft article 10, but in relation to all types of debtors. Of the six States parties to the Ottawa Convention two have entered such a reservation. In one State party, the rule in the Ottawa Convention is said to have led to a change in the domestic law in the direction of validating assignments in a commercial context despite the existence of anti-assignment clauses in the relevant contracts.

CHAPTER IV. RIGHTS, OBLIGATIONS AND DEFENCES

Section I. Assignor and assignee

Remarks

Unlike the other provisions of the draft Convention which deal with assignment as a transfer of property rights (whether full property or security rights) in receivables, the provisions contained in this section deal with issues that are subject to party autonomy and are normally addressed in the contract of assignment. The usefulness of these provisions lies in the fact that they allocate risks and responsibilities in the absence of an agreement between the parties to the contract of assignment.

Article 13. *Rights and obligations of the assignor and the assignee*

(1) The rights and obligations of the assignor and the assignee as between them arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein.

(2) The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices which they have established between themselves.

(3) In an international assignment, the assignor and the assignee are considered, unless otherwise agreed, to have impliedly made applicable to the assignment a usage which in international trade is widely known to, and regularly observed by, parties to the particular [receivables financing] practice.

Article 14. *Representations of the assignor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of the conclusion of the contract of assignment that:

(a) the assignor has the right to assign the receivable;

(b) the assignor has not previously assigned the receivable to another assignee; and

(c) the debtor does not and will not have any defences or rights of set-off.

(2) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor has, or will have, the financial ability to pay.

Article 15. *Right to notify the debtor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

(2) A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph (1) of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Remarks

The Working Group may wish to consider moving the first sentence of 15 (2) to draft article 19, since this sentence deals with the debtor's discharge in the case of a notification sent in breach of an agreement between the assignor and the assignee.

Article 16. *Right to payment*

(1) Unless otherwise agreed between the assignor and the assignee and whether or not a notification of the assignment has been sent:

(a) if payment with respect to the assigned receivable is made to the assignee, the assignee is entitled to retain whatever is received in respect of the assigned receivables;

(b) if payment with respect to the assigned receivable is made to the assignor, the assignee is entitled to payment of whatever has been received by the assignor.

(2) If payment with respect to the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of whatever has been received by such person.

(3) The assignee may not retain more than the value of its right in the receivable.

Remarks

1. The commentary will explain that "payment" includes both payment in cash and in kind (e.g. returned goods). However, the Working Group may wish to consider the question whether this matter needs to be explicitly clarified in the text of draft articles 16 and 26 by referring to payment "or other discharge" with respect to the assigned receivable. In addition, the Working Group may wish to define proceeds by reference to whatever is received in payment or other discharge of the assigned receivables (which includes proceeds of receivables and proceeds of proceeds). The drafting of draft articles 16 and 26 may be substantially simplified if a definition of proceeds were to be adopted.

2. In order to align paragraph (2) with paragraph (1), the Working Group may also wish to consider reformulating paragraph (2) so as to state clearly that it deals with the right to payment as between the assignor and the assignee and is subject to contrary agreement between those parties. In its current formulation, it would appear that paragraph (2) does not belong in section I of chapter IV or draft article 16, dealing with the relationship between the assignor and the assignee (see remark 3 to draft article 26).

3. In order to ensure that the assignee has a right in any interest for late payment, and not the assignor (a matter that may not be clear in all legal systems), after the word "value" in paragraph (3) words along the following lines may be inserted: "including interest" (see remark 2 to draft article 2 and draft article 26*bis* (2) and (3)).

Section II. Debtor

Article 17. *Principle of debtor-protection*

(1) Except as otherwise provided in this Convention, an assignment does not, without the consent of the debtor, affect the rights and obligations of the debtor, including the payment terms contained in the original contract.

(2) A payment instruction may change the person, address or account to which the debtor is required to make payment, but may not:

(a) change the currency of payment specified in the original contract, or

(b) change the State specified in the original contract, in which payment is to be made, to a State other than that in which the debtor is located.

Article 18. *Notification of the debtor*

(1) A notification of the assignment and a payment instruction are effective when received by the debtor, if they are in a language that is reasonably expected to inform the debtor about their contents. It shall be sufficient if a notification of the assignment or a payment instruction is in the language of the original contract.

(2) A notification of the assignment or a payment instruction may relate to receivables arising after notification.

(3) Notification of a subsequent assignment constitutes notification of any prior assignment.

Article 19. *Debtor's discharge by payment*

(1) Until the debtor receives notification of the assignment, the debtor is entitled to discharge its obligation by paying in accordance with the original contract.

(2) After the debtor receives notification of the assignment, subject to paragraphs (3) to (8) of this article, the debtor is discharged only by paying the assignee or as otherwise instructed.

(3) If the debtor receives notification of more than one assignment of the same receivables made by the same assignor, the debtor is discharged by paying in accordance with the first notification received.

(4) If the debtor receives more than one payment instruction relating to a single assignment of the same receivables by the same assignor, the debtor is discharged by paying in accordance with the last payment instruction received from the assignee before payment.

(5) If the debtor receives notification of one or more subsequent assignments, the debtor is discharged by paying in accordance with the notification of the last of such subsequent assignments.

(6) If the debtor receives notification of the assignment from the assignee, the debtor is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment has been made and, unless the assignee does so, the debtor is discharged by paying the assignor. Adequate proof includes, but is not limited to, any writing emanating from the assignor and indicating that the assignment has taken place.

(7) This article does not affect any other ground on which payment by the debtor to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor.

[(8) This article does not affect any ground on which the debtor may be discharged by paying a person to whom an invalid assignment has been made.]

Remarks

1. Paragraph (1) implies that the debtor may discharge its debt by paying the assignee before notification (the debtor "is entitled to"). This result is also obtained under draft articles 8 (1), 9 and 16 (1), according to which the assignment is effective as against the debtor as of the time of the conclusion of the contract of assignment (although formal validity is left to law outside the draft Convention; see

remarks to chapter III). While such a rule may be appropriate in principle, it may negatively affect practices, such as undisclosed invoice discounting or securitization, in which the debtor is expected to continue paying the assignor (A/CN.9/420, paras. 106-108). Thus, the Working Group may wish: to consider introducing an exception to the rule embodied in paragraph (1) as to the practices mentioned; or to revise the basic rule to the effect that before notification the debtor would be discharged only by paying the assignor; or to leave the matter to other law applicable outside the draft Convention. With a view to achieving certainty, the last alternative should be avoided, if possible.

2. The Working Group may wish to provide in paragraph (6) that until the debtor receives the proof requested, it can discharge its debt by paying the assignor. Otherwise, if the debtor's obligation to pay becomes due shortly after notification, the payment obligation would need to be suspended or the debtor would be in default (and be liable to pay damages and interest). The effect of such a rule would be that the assignee would have to provide with the notification adequate proof to the debtor that an assignment took place (which includes a written confirmation from the assignor).

3. In addition, the Working Group may wish to reconsider paragraphs (7) and (8). Paragraph (7) seems to inadvertently allow a debtor who receives notification from an assignee under the draft Convention to pay the person entitled to payment under the law applicable outside the draft Convention (e.g. the assignor, who may be entitled to payment, since the assignment of future receivables or the assignment in violation of an anti-assignment clause may be invalid under that law). Such an approach may have the unintended effect of increasing the risk that the assignee may not be able to collect from the debtor and thus have a negative impact on the cost of credit.

4. The relevant provision of the Ottawa Convention, from which paragraph (7) originates, provides that the Ottawa Convention does not affect "other grounds" based on which the debtor is discharged by paying *the factor* (i.e. the person entitled to payment under the Ottawa Convention, if the notification does not meet the requirements of the Ottawa Convention; however, in factoring, notification is normally given by the assignor and the Ottawa Convention provides that the assignee may notify the debtor only if authorized by the assignor).

5. Thus, the Working Group may wish to revise paragraph (7) so as to ensure that, after notification under the draft Convention from the assignee and possibly subject to the provision of adequate proof, the debtor is discharged only by paying the person entitled to payment under the draft Convention. As to discharge by payment into court and the like, the Working Group may wish to retain it only if several notifications are involved. Such a provision would ensure that, if law outside the draft Convention provides this alternative and the debtor is faced with several notifications, the debtor would not be precluded from being discharged by paying into court or a deposit fund. In such a case, conflicts among several claimants would be settled in accordance with the law applicable to priority by virtue of draft articles 24 to 26.

6. As to paragraph (8), it may be noted that it either states the obvious or inappropriately places on the debtor the risk of the assignment being non-existent or null and void. If paragraph (8) is meant to state the rule that the debtor does not obtain a discharge if the debtor pays an assignee, the assignment to whom was null and void (e.g. because the assignor did not have the capacity to act or was under duress or was defrauded), it is not necessary. If no assignment exists, draft article 19 or the draft Convention as a whole does not apply and it is rather unlikely that any law would allow the debtor to be discharged if the assignment was non-existent or null and void and the draft Convention does not change anything in this regard. This matter may be explained in the commentary. In any case, with the suggested revision of paragraph (6) (see remark 2 above), the risk of the debtor paying an assignee, to whom the assignment was null and void would be substantially reduced. The exceptional cases where nullity of the assignment could result in the debtor having to pay twice may be left to other law (in particular the case of fraud which is not easily addressed in any trade law text). In the case of subsequent assignments, in which nullity would be particularly difficult to discover, the debtor should be able to recover the payment wrongfully made on the basis of breach of implied representations or unjust enrichment principles.

7. If, on the other hand, paragraph (8) is intended to introduce an additional, good faith requirement for the debtor to be discharged, it is inconsistent with the Working Group's decision not to make the debtor's discharge conditional upon the debtor's good faith or the debtor's knowledge of the validity of the assignment (A/CN.9/434, para. 180; for the various arguments, see also A/CN.9/432, paras. 167-172 and A/CN.9/420, paras. 99-104).

8. Thus, the Working Group may wish to delete paragraph (8) and to include in the commentary the explanation that the debtor is not discharged by way of payment to an assignee, the assignment to whom was null and void (on the understanding that this is a very rare case which can be left to other law). Wording along the following lines may be considered:

"(1) Until the debtor receives notification of the assignment, the debtor is entitled to be discharged by paying in accordance with the original contract. After the debtor receives notification of the assignment, subject to paragraphs (2) to (6) of this article, the debtor is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor, in accordance with such instructions.

[insert paragraphs (3) to (5) renumbering them (2) to (4)].

"(5) If the debtor receives notification of the assignment from a person who purports to be an assignee ("purported assignee"), the debtor is entitled to request the purported assignee to provide within a reasonable period of time adequate proof that an assignment has been made and, until such proof is received by the debtor, the debtor is discharged by paying in accordance with the original contract. Adequate proof includes, but is not limited to, any writing emanating from the assignor and indicating that the assignment has taken place.

"(6) Notwithstanding paragraphs (1) to (5), this article does not affect any other ground on which payment by the debtor to:

(a) the person entitled to payment under this Convention; or

(b) in the case of several notifications or payment instructions, to a competent judicial or other authority, or to a public deposit fund discharges the debtor."

Article 20. *Defences and rights of set-off of the debtor*

(1) In a claim by the assignee against the debtor for payment of the assigned receivables, the debtor may raise against the assignee all defences or rights of set-off arising from the original contract of which the debtor could avail itself if such claim were made by the assignor.

(2) The debtor may raise against the assignee any other right of set-off, provided that it was available to the debtor at the time notification of the assignment was received.

(3) Notwithstanding paragraphs (1) and (2), defences and rights of set-off that the debtor could raise pursuant to article 10 against the assignor for breach of agreements limiting in any way the assignor's right to assign its receivables are not available to the debtor against the assignee.

Article 21. *Agreement not to raise defences or rights of set-off*

(1) Without prejudice to the law governing the protection of the debtor in transactions made primarily for personal, family or household purposes in the State in which the debtor is located, the debtor may agree with the assignor in a signed writing not to raise against the assignee the defences and rights of set-off that it could raise pursuant to article 20. Such an agreement precludes the debtor from raising against the assignee those defences and rights of set-off.

(2) The debtor may not exclude:

(a) defences arising from fraudulent acts on the part of the assignee;

(b) defences based on the debtor's incapacity.

(3) Such an agreement may only be modified by an agreement in a signed writing. The effect of such a modification as against the assignee is determined by article 22 (2).

Remarks

The Working Group may wish to clarify whether the writing referred to in paragraph (3) needs to be signed by both the assignor and the debtor or only by the debtor.

Article 22. *Modification of the original contract*

(1) An agreement concluded before notification of the assignment between the assignor and the debtor that affects the assignee's rights is effective as against the assignee and the assignee acquires corresponding rights.

(2) After notification of the assignment, an agreement between the assignor and the debtor that affects the assignee's rights is ineffective as against the assignee unless:

(a) the assignee consents to it; or

(b) the receivable is not fully earned by performance and either modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification.

(3) Paragraphs (1) and (2) of this article do not affect any right of the assignor or the assignee for breach of an agreement between them.

Article 23. *Recovery of payments*

Without prejudice to the law governing the protection of the debtor in transactions made primarily for personal, family or household purposes in the State in which the debtor is located and the debtor's rights under article 20, failure of the assignor to perform the original contract does not entitle the debtor to recover from the assignee a sum paid by the debtor to the assignor or the assignee.

Section III. Other parties

Article 24. *Competing rights of several assignees*

(1) Priority among several assignees of the same receivables from the same assignor is governed by the law of the State in which the assignor is located.

(2) An assignee entitled to priority may at any time subordinate unilaterally or by agreement its priority in favour of any existing or future assignees.

Remarks

1. In order to avoid the risk of *renvoi*, the Working Group may wish to include in the text of the draft Convention (possibly in draft article 5) a provision along the following lines: "For the purposes of this Convention, "law" means the law in force in a State other than its rules of private international law" (see article 15 of the European Union Convention on the Law Applicable to Contractual Obligations, Rome, 1980; hereinafter referred to as "the Rome Convention"). Alternatively, the matter may be explained in the commentary.

2. The Working Group may wish to consider the question whether the forum should be able to set aside the rules applicable under draft article 24 if they are manifestly contrary to its mandatory law ("*loi de police*") or to public policy. Such an approach is consistent with normal practice in private international law texts. While it may be rather unlikely that an issue of mandatory law or public policy will arise in relation to a conflict of priority between several assignees receiving the same receivables from the same assignor, the possibility of such an issue arising cannot be excluded. If the Working Group approves this approach, draft articles 30 and 31 should be made applicable to draft article 24, as well as to all the private international law provisions of the draft Convention (which may be

placed in one chapter), draft articles 25 (3) and (4) and 26 (5) could be deleted. Draft article 25 (5) may also be deleted on the understanding that, while draft article 31 may operate only to set aside the applicable law, draft article 30 may have both a negative and a positive function in that it may result both in setting aside the applicable law and in the application of domestic rules as to preferential non-consensual rights.

Article 25. *Competing rights of assignee and creditors of the assignor or insolvency administrator*

(1) Priority between an assignee and the assignor's creditors is governed by the law of the State in which the assignor is located.

(2) In an insolvency proceeding, priority between the assignee and the assignor's creditors is governed by the law of the State in which the assignor is located.

(3) Notwithstanding paragraphs (1) and (2), the application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

(4) If an insolvency proceeding is commenced in a State other than the State in which the assignor is located, except as provided in this article, this Convention does not affect the rights of the insolvency administrator or the rights of the assignor's creditors.

(5) If an insolvency proceeding is commenced in a State other than the State in which the assignor is located, any [non-consensual] [preferential] right or interest which under the law of the forum State would have priority over the interest of an assignee has such priority notwithstanding paragraph (2). [A State may deposit at any time a declaration identifying those [non-consensual] [preferential] rights or interests which have priority over the interests of an assignee notwithstanding application of the priority rule set out in paragraph (2).]

(6) An assignee asserting rights under this article has no less rights than an assignee asserting rights under other law.

Remarks

1. In paragraph (2), the term "assignor's creditors" has been substituted for the term "insolvency administrator", since: in some legal systems, the insolvency administrator does not become the holder of the rights of the creditors; and, in some reorganization proceedings, there may be no insolvency administrator (A/CN.9/WG.II/WP.102, remark 1 to draft article 24). However, in view of the fact that, in other legal systems, the insolvency administrator does become the holder of the creditors' rights, a reference to the insolvency administrator should be inserted in paragraph (2).

2. If paragraphs (3) to (5) are retained (see remark 2 to draft article 24), they may need to be reformulated. The application of paragraph (3) should be limited to cases in which an insolvency or other proceeding is commenced in a jurisdiction other than the main jurisdiction of the assignor. If such a proceeding is commenced in the assignor's main jurisdiction, any conflict with the lex loci concursus or the lex fori will be resolved by the rules of that jurisdiction. In paragraph (4), it may need to be further clarified that the assignee with priority retains its priority, but the assignment may be challenged by the insolvency administrator, e.g. as a preferential or a fraudulent transfer (the words "except as provided in this article" may not reflect the intended effect of paragraph (4)). In paragraph (5), the second sentence may be deleted. It is rather unlikely that any State would make a declaration limiting the non-consensual preferential rights that it would wish to preserve.

3. Paragraph (6) may also be deleted. It appears suggesting that, although a conflict of priority is covered by the draft Convention, a law other than the law of the assignor's location may be applicable. Paragraph (6) was originally intended to ensure that an assignee asserting priority under the substantive law provisions of the draft Convention would not have less rights than if it asserted priority under substantive law outside the draft Convention (A/CN.9/455, para. 40; and A/CN.9/445, para. 44). Once the Working Group decided to turn the priority rules of the draft Convention into private international law rules (A/CN.9/445, para. 22), paragraph (6) does not appear to be appropriate.

[Article 26. *Competing rights with respect to payments*

(1) If payment with respect to the assigned receivable is made to the assignee, the assignee has a property right in whatever is received in respect of the assigned receivable.

(2) If payment with respect to the assigned receivable is made to the assignor, the assignee has a property right in whatever is received in respect of the assigned receivable if:

(a) what is received is money, cheques, wire transfers, credit balances in deposit accounts or similar assets ("cash receipts");

(b) the assignor has collected the cash receipts under instructions from the assignee to hold the cash receipts for the benefit of the assignee; and

(c) the cash receipts are held by the assignor for the benefit of the assignee separately from assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee.

(3) With respect to the property rights referred to in paragraphs (1) and (2) of this article, the assignee has the same priority as it had in the assigned receivables.

(4) If payment with respect to the assigned receivable is made to the assignor and the requirements of paragraph (2) are not met, priority with respect to whatever is received is determined as follows:

(a) if what is received is a receivable, priority is governed by the law of the State in which the assignor is located;

(b) if what is received is an asset other than a receivable, priority is governed by the law of the State in which it is located.

(5) Paragraphs (3) to (5) of article 25 apply to a conflict of priority arising between an assignee and the insolvency administrator or the assignor's creditors with respect to whatever is received.]

Remarks

1. Unlike draft articles 24 and 25, according to which the issue of priority in receivables and the remedies available to an assignee are left to the law of the assignor's location, paragraphs (1) and (2) are intended to give to the assignee, in certain cases, a proprietary right (right in rem) in proceeds. They are not meant, however, to change the order of priority, which is established in paragraphs (3) and (4). The operation of draft article 26 may be better illustrated with the following examples. In a conflict with respect to proceeds among several assignees of the same receivables, the order of priority will be established according to the law applicable by virtue of paragraphs (3) and (4). In such a case, priority does not depend upon whether any assignee has a right in rem or ad personam (i.e. the senior assignee with a personal claim prevails over a junior assignee with a proprietary claim). In a conflict with respect to proceeds between an assignee and the assignor's creditors or the administrator of the insolvency of the assignor, the order of priority will still be determined by the law applicable by virtue of paragraphs (3) and (4). Whether the assignee with priority in proceeds has a proprietary or a personal claim in such proceeds is also subject to the law governing priority in proceeds under paragraphs (3) and (4), with the exception of the situations addressed in paragraphs (1) and (2), in which the assignee with priority in proceeds is given a proprietary claim in such proceeds.

2. In order to better reflect this understanding, the Working Group may wish to separate issues of priority in proceeds from the question of the remedies available to an assignee with priority and to address the former in a provision containing paragraphs (3), (4) and (5) and the latter in another provision containing paragraphs (1) and (2). The Working Group may also wish to consider the question whether the rule embodied in paragraph (2) could be extended to proceeds other than cash proceeds provided that they meet the requirements of paragraph (2). If such an approach were to be adopted, subparagraph *(a)* could be deleted along with any reference to cash proceeds in subparagraphs *(b)* and *(c)*. In subparagraph *(c)*, the requirement that the proceeds need to be "reasonably identifiable", which is already implied, may need to be stated explicitly.

3. In addition, the Working Group may wish to align paragraphs (1) and (2) with draft article 16 to ensure that the assignee's right to the proceeds will not exceed the value of its right in the receivable. However, complete consistency with draft article 16 (2) may not be feasible, since so far the Working Group has not agreed to give the assignee in the case of payment to a person other than the assignee or the assignor (e.g. a competing assignee or a creditor of the assignor) a right in rem in the proceeds (thus, introducing in draft article 26 a rule along the lines of draft article 16 (2) would not be appropriate). Wording along the following lines may be considered:

"Article 26. *Priority in proceeds*

"(1) Priority among several assignees of the same receivables from the same assignor and between the assignee and the assignor's creditors or the insolvency administrator with respect to whatever is received in payment [, or other discharge,] of the assigned receivable is determined as follows:

(a) if what is received is a receivable, priority is governed by the law of the State in which the assignor is located;

(b) if what is received is an asset other than a receivable, priority is governed by the law of the State in which it is located.

"(2) Paragraphs (3) to (5) of article 25 apply to a conflict of priority arising between an assignee and the assignor's creditors or the insolvency administrator with respect to whatever is received in payment [, or other discharge,] of the assigned receivable.

"Article 26*bis*. *Rights* in rem *in proceeds*

"(1) With the exception of the cases foreseen in paragraphs (2) to (4) of this article, whether an assignee [has a right in rem or ad personam in] [is entitled to claim and retain] whatever is received in payment [, or other discharge,] of the assigned receivable is subject to the law governing priority under article 26 of this Convention.

"(2) If payment [, or other discharge,] with respect to the assigned receivable is made to the assignee, the assignee with priority over the assignor's creditors or the insolvency administrator under article 26 of this Convention has [a right in rem in] [the right to retain] whatever is received up to the value of its right in the receivable[, including interest].

"(3) If payment [, or other discharge,] with respect to the assigned receivable is made to the assignor, the assignee with priority over the assignor's creditors or the insolvency administrator under article 26 of this Convention has [a right in rem] [the right to retain] whatever is received up to the value of its right in the receivable[, including interest,] if:

(a) the assignor has received payment [, or other discharge,] under instructions from the assignee to hold whatever it received for the benefit of the assignee; and

(b) whatever the assignor received is held by the assignor for the benefit of the assignee separately and is reasonably identifiable from assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee."

CHAPTER V. CONFLICT OF LAWS

Remarks

1. The Working Group may wish to consider the scope or the purpose of the private international law rules of the draft Convention (on this matter, see A/CN.9/WG.II/WP.102, remarks 18-20 to draft article 1). In principle, it would not be

appropriate to limit the application of private international law rules on the basis of the substantive law notions contained in chapter I (i.e. only to assignments as defined in draft article 2, or only to international transactions as defined in draft article 3 or only if the assignor is located in a Contracting State). If the forum State is a Contracting State, it should be allowed to apply chapter V if the transaction at hand has any international element and irrespective of whether the assignor or the debtor are located in Contracting States or whether the transaction involves an assignment of contractual or non-contractual receivables.

2. Such an approach would allow States that do not have adequate private international law rules on assignments or no rules at all to benefit from the rules contained in chapter V. Admittedly, those rules reflect general principles which would need to be supplemented by other principles of private international law. However, in their generality the provisions of chapter V introduce rules that may be useful for many States and clarify matters (e.g. priority issues) over which a great degree of uncertainty prevails in private international law. Those States that have adequate rules on assignment may always opt out of chapter V.

3. As to the question of whether it is a correct legislative policy to include private international law provisions in a substantive law text, the Working Group may wish to note that complex financing transactions, such as those involving assignments, can only be regulated in a meaningful way if they are regulated in a text that addresses in an as consistent and comprehensive way as possible both substantive and private international law aspects. Unless private international law issues are addressed in chapter V, a great degree of uncertainty will remain with regard to all those issues that the draft Convention has, by necessity, left to law outside the draft Convention (for a list of those issues, see A/CN.9/WG.II/WP.98, remark 2 to draft article 8). In addition, once the priority rules in draft articles 24 to 26 have become generally acceptable, there is no reason to limit their application on the basis of the substantive law notions contained in chapter I, thus missing the opportunity to clarify a matter on which great uncertainty prevails in current private international law texts.

4. Should the Working Group decide to follow this approach, the opening words in draft articles 27 to 29 should be deleted and draft article 1 (3) (which may be placed at the beginning of chapter V) should be revised to read along the following lines: "The provisions of chapter V apply independently of the provisions of chapter I. However, those provisions do not apply if a State makes a declaration under article 34."

5. The hierarchy between the substantive and the private international law rules of the draft Convention, namely that a Contracting State would apply first the substantive law provisions and, only if the matter is not settled by the substantive law provisions, the private international law provisions, may also need to be addressed. Wording along the following lines may be considered for inclusion at the beginning of chapter V: "If the provisions of this Convention outside chapter V do not apply to an assignment, the provisions of chapter V apply". Thus, if the forum is a Contracting State, it would apply chapter V instead of its own private international law rules.

6. Alternatively, the Working Group may wish to consider retaining chapter V, without draft article 27. Draft article 27 addresses the contractual aspects of assignment, which is not the main focus of the draft Convention and may already be sufficiently regulated (even though the principle of freedom of choice of applicable law may not be common to all systems). The Working Group may wish to consider other alternatives, including: to limit the application of chapter V to international transactions as defined in chapter I, without the other limitations of chapter I (for a precedence, see articles 21 and 22 of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit), or only to international transactions with all the limitations as to substantive and territorial application set forth in chapter I. In the latter case: for the reasons mentioned, draft article 27 may be deleted; draft article 29 may also be deleted, since the matter of priority would be sufficiently covered in draft articles 24 to 26; and draft articles 30 and 31 may be cast in the context of draft articles 24 to 26. In such a case, the Working Group may wish to consider whether draft article 28 should be placed in the context of section II of chapter IV, without being subject to an opt-out, since it reflects generally acceptable principles.

Article 27[29].[9] *Law applicable to the contract of assignment*

(1) [With the exception of matters which are settled in this Convention,] the contract of assignment is governed by the law expressly chosen by the assignor and the assignee.

(2) In the absence of a choice of law by the assignor and the assignee, the contract of assignment is governed by the law of the State with which the contract of assignment is most closely connected. In the absence of proof to the contrary, the contract of assignment is presumed to be most closely connected with the State in which the assignor has its place of business. If the assignor has more than one place of business, reference is to be made to the place of business most closely connected to the contract. If the assignor does not have a place of business, reference is to be made to its habitual residence.

(3) If the contract of assignment is connected with one State only, the fact that the assignor and the assignee have chosen the law of another State does not prejudice the application of the law of the State with which the assignment is connected if that law cannot be derogated from by contract.

Remarks

In order to more clearly reflect the matters that should be subject to party autonomy, the Working Group may wish to consider substituting for "the contract of assignment" the terms "the conclusion, validity and the rights and obligations of the assignor and the assignee arising under the contract of assignment". In addition, the Working Group may wish to consider whether paragraph (2) is necessary.

[9]The number in square brackets indicates the number of this provision in the annex to document A/CN.9/455, from which the provisions in chapter V and chapter VI, with the exception of the underlined wording in chapter VI, originate.

If the thrust of draft article 27 is to recognize party autonomy without going into any detail, paragraph (2) may not be absolutely necessary, in particular in view of the fact that the transactions intended to be covered are highly negotiated by highly sophisticated parties who normally include a choice of law clause in their contracts. If paragraph (2) is retained and a definition of location is adopted along the lines suggested above (see remark 4 to draft article 5), the third and the fourth sentence of paragraph (2) could be deleted. As to paragraph (3), the Working Group may wish to consider whether it is useful without any detailed rules as to the relevant connecting factors (e.g. characteristic performance under article 4 (2) of the Rome Convention with the fall-back position of article 4 (5) of the Rome Convention if the characteristic performance cannot be determined). Moreover, the Working Group may wish to consider dealing in chapter V with the issue of the form of the assignment (paragraph (1) is intended to deal with substantive validity only; see remarks to chapter III).

Article 28[30]. *Law applicable to the rights and obligations of the assignee and the debtor*

[With the exception of matters which are settled in this Convention,] the law governing the receivable to which the assignment relates determines its assignability, the relationship between the assignee and the debtor, the conditions under which the assignment can be invoked against the debtor and any question whether the debtor's obligations have been discharged.

Remarks

1. The Working Group may wish to reconsider its decision not to deal with the issue of the law applicable to rights of set-off (A/CN.9/456, 197). Rights of set-off of the debtor against the assignee arise often and are bound to affect the availability and the cost of credit.

2. The general principle as to contractual rights of set-off is that they are governed by the law of the contract from which they arise. This means that the law governing the right of set-off will be the same as the law governing the receivable, if the right of set-off arises from the original contract, and different, if the right of set-off arises from another contract. A rule along those lines would enhance certainty and may have a beneficial impact on the cost of credit. Wording along the following lines may be considered: "Rights of set-off arising from the original contract are governed by the law governing the receivable. Rights of set-off arising from any other contract are governed by the law governing that contract."

3. As to the statutory assignability, it should be noted that the application of the law governing the receivable would not be appropriate in the case of statutory assignability. Such an approach could inadvertently result in allowing the assignor and the debtor to evade possible statutory limitations, which involves matters of mandatory law or public policy, by choosing a convenient law to govern the receivable. Statutory limitations may be aimed at protecting the assignor (as, e.g. in the case of a statutory limitation as to the assignability of wages and pensions) or the debtor (as, e.g. in the case of a limitation as to the assignment of receivables owed by a sovereign debtor). The Working Group will recall that it decided not to include any additional provisions in draft article 28 on the understanding that statutory limitations to assignability, which would normally flow from mandatory law, would be preserved under draft article 30 (A/CN.9/456, para. 117).

4. Whether or not the opening words are retained, if chapter V has a scope beyond chapter I, draft article 28 would cover statutory assignability and contractual assignability for transactions beyond those covered in the draft Convention, while draft article 10 would cover contractual assignability with regard to the transactions falling under the draft Convention. If the opening words are retained and chapter V is subject to chapter I, draft article 10 would cover contractual assignability and draft article 28 would cover statutory assignability (A/CN.9/456, para. 95).

[Article 29[31]. *Law applicable to conflicts of priority*

[With the exception of matters which are settled in chapter IV:]

(a) priority among several assignees of the same receivables from the same assignor is governed by the law of the State in which the assignor is located;

(b) priority between an assignee and the assignor's creditors is governed by the law of the State in which the assignor is located;

(c) priority between an assignee and the insolvency administrator is governed by the law of the State in which the assignor is located;

[*(d)* if an insolvency proceeding is commenced in a State other than the State in which the assignor is located, any non-consensual right or interest which under the law of the forum would have priority over the interest of an assignee has such priority notwithstanding subparagraph *(c)*, but only to the extent that such priority was specified by the forum State in an instrument deposited with the depositary prior to the time when the assignment was made;]

(e) an assignee asserting rights under this article has no less rights than an assignee asserting rights under other law.]

Remarks

If chapter V, including draft article 29, is retained, subparagraph *(d)* has to be aligned with draft article 25 (5) (provided also that that provision is retained). As was suggested with regard to draft article 25 (5), subparagraph *(e)* may need to be deleted (see remark 3 to draft article 25).

Article 30[32]. *Mandatory rules*

(1) Nothing in articles 27 and 28 restricts the application of the rules of the law of the forum State in a situation where they are mandatory irrespective of the law otherwise applicable.

(2) Nothing in articles 27 and 28 restricts the application of the mandatory rules of the law of another State with which the matters settled in those articles have a close connection if and in so far as, under the law of that other State, those rules must be applied irrespective of the law otherwise applicable.

Article 31[33]. *Public policy*

With regard to matters settled in this chapter, the application of a provision of the law specified in this chapter may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

CHAPTER VI. FINAL PROVISIONS

Article 32[41]. *Depositary*

The Secretary-General of the United Nations is the depositary of this Convention.

Article 33[42]. *Conflicts with international agreements*

(1) Except as provided in paragraph (2) of this article, this Convention prevails over any international convention or other multilateral or bilateral agreement which has been or may be entered into by a Contracting State and which contains provisions concerning the matters governed by this Convention.

(2) A State may declare at any time that the Convention will not prevail over international conventions or other multilateral or bilateral agreements listed in the declaration, which it has entered or will enter into and which contain provisions concerning the matters governed by this Convention.

Remarks

Conflicts may arise with the Ottawa Convention, the Rome Convention and the EU Insolvency Convention (as to potential conflicts with the Unidroit draft Convention, see remarks 8 to 16 to draft article 4). The potential conflicts with the Ottawa Convention are minimal, since the scope of the Ottawa Convention is narrower than the scope of the draft Convention and, in any case, the provisions of the draft Convention are, to a large extent, similar to those of the Ottawa Convention (with the exception, e.g. of the reservation to the rule on contractual limitations to assignment and the rule on recovery from the assignee of payments made by the debtor). Potential conflicts with the Rome Convention are also minimal since draft articles 27 and 28 are almost identical with article 12 of the Rome Convention. As to the law governing priority, the prevailing view is that article 12 does not address this matter. However, even if draft article 12 addresses issues of priority, neither of the laws applicable under article 12 (i.e. the law chosen by the parties or the law governing the receivable) is appropriate (perhaps with the exception of the assignment of single, present receivables). No significant conflicts appear to arise with the EU Insolvency Convention. The notion of central administration is almost identical with the centre of main interests used in the EU Insolvency Convention (see remark 10 to draft article 5) and that Convention does not affect rights in rem in a main insolvency proceeding (article 5). While the EU Insolvency Convention may affect rights in rem in a secondary insolvency proceeding (articles 2 *(g)*, 4, and 28), draft article 25 (4) would be sufficient to preserve, for example, the right of the assignor's creditors and the insolvency administrator to invalidate the assignment as a fraudulent or preferential transfer. In any case, the rights of the assignor's creditors and the insolvency administrator would be preserved if draft articles 30 and 31 were to replace draft articles 25 (3) and (4). In such a case, the law of the assignor's location could be displaced by the lex concursus or the lex fori (see remark 2 to draft article 24).

Article 34[42*bis*]. *Application of chapter V*

A State may declare at any time that it will not be bound by chapter V.

Remarks

If the Working Group decides to delete draft articles 27 and 29-31, and to move draft article 28 to section II of chapter IV, draft article 34 may be deleted (a new article providing for a reservation to draft articles 10 and 11 with regard to sovereign debtors may be inserted here; see remarks to draft article 12).

[Article 35[42*quater*]. *Other exclusions*

A State may declare at any time that it will not apply the Convention to certain practices listed in a declaration.][10]

Article 36[43]. *Application of the annex*

A State may declare at any time that it will be bound either by [sections I and II or by section III] of the annex to this Convention.

Remarks

If the Working Group substitutes the provisions on the revision and amendment of the draft Convention for the annex (see remarks to the annex below), draft article 36 may be deleted. If the annex is retained, draft article 36 may need to be revised to ensure that a State may opt into the registration-based priority rules (section I), or into the registration rules (section II) or into both (A/CN.9/455, paras. 122 and 131).

[Article 37[44]. *Insolvency rules or procedures not affected by this Convention*

A State may declare at any time that other rules or procedures governing the insolvency of the assignor shall not be affected by this Convention.]

[10]The text underlined in the provisions of chapter VI reflects suggestions made by the secretariat in document A/CN.9/WG.II/WP.102.

Remarks

In view of the general formulation of draft article 25 (4), the Working Group may wish to consider that draft article 37 is not necessary and may be deleted.

Article 38[45]. *Signature, ratification, acceptance, approval, accession*

(1) This Convention is open for signature by all States at the Headquarters of the United Nations, New York, until ... .

(2) This Convention is subject to ratification, acceptance or approval by the signatory States.

(3) This Convention is open to accession by all States which are not signatory States as from the date it is open for signature.

(4) Instruments of ratification, acceptance, approval and accession are to be deposited with the Secretary-General of the United Nations.

Remarks

The Working Group may wish to consider the length of the period during which the draft Convention should be open for signature by States. It may be noted that in conventions prepared by UNCITRAL this period ranges between one and two years. In its considerations, the Working Group may take into account: the need to allow sufficient time for States to consider signing the draft Convention, indicating their intention to ratify; and the need not to have a very long period of time which may inadvertently give the impression that there is no urgency in the draft Convention being promptly ratified and entering into force.

Article 39[46]. *Application to territorial units*

(1) If a State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at *any time*, declare that this Convention is to extend to all its territorial units or only one or more of them, and may at any time substitute another declaration for its earlier declaration.

(2) These declarations are to state expressly the territorial units to which the Convention extends.

(3) If, by virtue of a declaration under this article, this Convention does not extend to all territorial units of a State and the assignor or the debtor is located in a territorial unit to which the Convention does not extend, this location is considered not to be in a Contracting State.

(4) If a State makes no declaration under paragraph (1) of this article, the Convention is to extend to all territorial units of that State.

Article 40[47]. *Effect of declaration*

(1) Declarations made under articles 34 to 37 and 39 (1) at the time of signature are subject to confirmation upon ratification, acceptance or approval.

(2) Declarations and confirmations of declarations are to be in writing and to be formally notified to the depositary.

(3) A declaration takes effect simultaneously with the entry into force of this Convention in respect of the State concerned. However, a declaration of which the depositary receives formal notification after such entry into force takes effect on the first day of the month following the expiration of six months after the date of its receipt by the depositary.

(4) Any State which makes a declaration under articles 34 to 37 and 39 (1) may withdraw it at any time by a formal notification in writing addressed to the depositary. Such withdrawal takes effect on the first day of the month following the expiration of six months after the date of the receipt of the notification of the depositary.

[(5) *A declaration or its withdrawal does not affect the rights of parties arising from assignments made before the date on which the declaration or its withdrawal takes effect*.]

Article 41[48]. *Reservations*

No reservations are permitted except those expressly authorized in this Convention.

Article 42[49]. *Entry into force*

(1) This Convention enters into force on the first day of the month following the expiration of six months from the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession.

(2) For each State which becomes a Contracting State to this Convention after the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession, this Convention enters into force on the first day of the month following the expiration of six months after the date of the deposit of the appropriate instrument on behalf of that State.

(3) This Convention applies only to assignments made on or after the date when the Convention enters into force in respect of the Contracting State referred to in paragraph (1) of article 1.

Article 43[50]. *Denunciation*

(1) A Contracting State may denounce this Convention at any time by means of a notification in writing addressed to the depositary.

(2) The denunciation takes effect on the first day of the month following the expiration of one year after the notification is received by the depositary. Where a longer period is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary.

[(*3*) *The Convention remains applicable to assignments made before the date on which the denunciation takes effect*.]

ANNEX

Remarks

1. The Working Group may wish to consider whether the annex serves its intended purpose to provide States with some guidance as to a substantive law priority regime. It would appear that, in view of the fact that the annex does not contain one but two recommended priority regimes, both of which need to be supplemented by a substantial number of additional provisions, the annex may not achieve its stated purpose.

2. The Working Group may, therefore, wish to further expand the annex into a more comprehensive set of model legislative rules or, alternatively, if expanding the annex appears to be an exercise beyond the current project, to reformulate it into one or more provisions which would leave the development of an international registration system to a procedure normally foreseen for the revision and amendment of an international convention.

3. Such provisions, which could be added to the final provisions, could read along the lines of articles 32 and 33 of the United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg Rules) as follows (changes to the articles mentioned are in italic):

"Article *X*. *Revision and amendment*

"1. At the request of not less than one third of the Contracting States to this Convention, the depositary shall convene a conference of the Contracting States for revising or amending it.

"2. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended.

"Article *Y*. *Revision of the priority regime*

"1. Notwithstanding the provisions of article *X*, a conference *of Contracting States* only for the purpose of *establishing an international regime for the public filing of notices to address issues of priority arising in the context of assignment of receivables under this Convention* is to be convened by the depositary in accordance with paragraph 2 of this article.

"2. A revision conference is to be convened by the depositary when not less than one fourth of the Contracting States so request. *The depositary shall request all Contracting States invited to the conference to submit such proposals as they may wish the conference to examine and shall notify all Contracting States invited of the provisional agenda and of all the proposals submitted.*

"3. Any decision by the conference must be taken by a two-thirds majority of the participating States. *The conference may adopt all measures necessary to establish an effective international regime for the public filing of notices to address priority issues arising in the context of the assignment of receivables under this Convention. No State shall be bound to participate directly or indirectly in the international regime so established.*

"4. Any amendment adopted is communicated by the depositary to all the Contracting States for acceptance and to all the States signatories of the Convention for information. Such amendment enters into force on the first day of the month following one year after its acceptance by two thirds of the Contracting States. Acceptance is to be effected by the deposit of a formal instrument to that effect with the depositary.

"5. After entry into force of an amendment a Contracting State which has accepted the amendment is entitled to apply the Convention as amended in its relations with Contracting States which have not within six months after the adoption of the amendment notified the depositary that they are not bound by the amendment.

"6. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended."

Section I. Priority rules based on registration

Article 1[34].[11] *Priority among several assignees*

As between assignees of the same receivables from the same assignor, priority is determined by the order in which certain information about the assignment is registered under this Convention, regardless of the time of transfer of the receivables. If no assignment is registered, priority is determined on the basis of the time of the assignment.

Article 2[35]. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to articles 25(3) and (4) of this Convention and 4 of this annex an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if:

(a) the receivables [were assigned] [arose] [were earned by performance], and information about the assignment was registered under this Convention, before the *commencement* of the insolvency proceeding or attachment; or

(b) the assignee has priority on grounds other than the provisions of this Convention.

Section II. Registration

Article 3[36]. *Establishment of a registration system*

A registration system will be established for the registration of data about assignments under this Convention and the regulations to be promulgated by the registrar and the supervising authority. The regulations will prescribe the exact manner in which the registration system will operate, as well as the procedure for resolving disputes relating to registration.

Article 4[37]. *Registration*

(1) Any person may register data with regard to an assignment at the registry in accordance with this Convention and the registration regulations. The data registered shall include the name and address of the assignor and the assignee and a brief description of the assigned receivables.

[11]The numbers in square brackets indicate the numbers of the relevant provisions in document A/CN.9/WG.II/WP.96, from which the provisions of the annex originate. The underlined part of the text reflects suggestions by the secretariat explained in that document.

(2) *A single registration may cover:*

(a) the assignment by the assignor to the assignee of more than one receivable;

(b) an assignment not yet made;

(c) the assignment of receivables not existing at the time of registration.

(3) Registration, *or its amendment,* is effective from the time that the data referred to in paragraph (1) are available to searchers. Registration, *or its amendment,* is effective for the period of time specified by the registering party. *In the absence of such a specification, a registration is effective for a period of [five] years. Regulations will specify the manner in which registration may be renewed, amended or discharged.*

(4) Any defect, irregularity, omission or error with regard to the name of the assignor that results in data registered not being found upon a search based on the name of the assignor renders the registration ineffective.

Article 5[38]. *Registry searches*

(1) Any person may search the records of the registry according to the name of the assignor and obtain a search result in writing.

(2) A search result in writing that purports to be issued from the registry is admissible as evidence and is, in the absence of evidence to the contrary, proof of the data to which the search relates, including:

(a) the date and time of registration; and

(b) the order of registration.

Section III. Priority rules based on the time of the contract of assignment

Article 6[39]. *Priority among several assignees*

(1) If a receivable is assigned several times, the right thereto is acquired by the assignee whose contract of assignment is of the earliest date.

(2) The earliest assignee may not assert priority if it acted in bad faith at the time of the conclusion of the contract of assignment.

(3) If a receivable is transferred by operation of law, the beneficiary of that transfer has priority over an assignee asserting a contract of assignment of an earlier date.

(4) In the event of a dispute, it is for the assignee asserting a contract of assignment of an earlier date to furnish proof of such an earlier date.

Article 7[40]. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to articles 25(3) and (4) of this Convention and 4 of this annex,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if:

(a) the receivables were assigned before the commencement of the insolvency proceeding or attachment; or

(b) the assignee has priority on grounds other than the provisions of this Convention.

C. Working paper submitted to the Working Group on International Contract Practices at its thirty-first session: Commentary to the draft Convention on Assignment in Receivables Financing (Part I): note by the secretariat

(A/CN.9/WG.II/WP.105) [Original: English]

CONTENTS

INTRODUCTION

1. The United Nations Commission on International Trade Law, at its twenty-eighth session (1995), decided to entrust the Working Group on International Contract Practices with the task of preparing a uniform law on assignment in receivables financing.[1] The Commission, at that session, had before it a report of the Secretary-General entitled "Assignment in receivables financing: Discussion and preliminary draft of uniform rules" (A/CN.9/412). It was agreed that this report, setting forth the concerns and the purposes underlying this project and the possible contents of the uniform law, would provide a useful basis for the deliberations of the Working Group.[2]

2. The Working Group commenced its work at its twenty-fourth session (November 1995) by considering this report of the Secretary-General.[3] At its twenty-fifth through thirty-first sessions, the Working Group considered revised draft articles prepared by the secretariat,[4] and, at its twenty-ninth through thirty-first sessions, it adopted the draft Convention on Assignment of Receivables in International Trade (exact title remains to be determined).[5]

3. The Commission, at its thirty-second session (1999), expressed appreciation for the work accomplished by the Working Group and requested the Working Group to proceed with its work expeditiously so as to make it possible for the draft Convention, along with the report of the next session of the Working Group, to be circulated to Governments for comments in good time and for the draft Convention to be considered by the Commission for adoption at its thirty-third session (2000). As regards the subsequent procedure for adopting the draft Convention, the Commission noted that it would have to decide at that session whether it should recommend adoption by the General Assembly or by a diplomatic conference to be specially convened by the General Assembly for that purpose.[6]

4. The Working Group proceeded with its work on the understanding that the secretariat would prepare a commentary on the draft Convention which would assist Governments in preparing their comments on the draft text and later in their consideration of the draft Convention for adoption.[7]

5. The present note, which for reasons relating to the timely translation and distribution contains only the first part of the commentary, has been prepared pursuant to that understanding (the second part will be prepared soon after the first part). It provides a summary as to the reasons for the adoption of a certain provision, its main objectives, along with explanations and interpretations of particular terms. It does not give a complete account of the *travaux préparatoires*, including the various proposals and draft provisions that were not retained. For the benefit of those seeking fuller information on the history of a given provision, the commentary lists the references to the relevant portions of the eight session reports of the Working Group.[8]

6. In preparing the commentary, the secretariat has taken into account the fact that it is not a commentary on a final text but that its foremost and immediate purpose is to assist the Working Group in reviewing and finalizing the text. After finalization of the text, the secretariat will prepare a revised commentary to assist Governments in preparing their comments on the draft Convention and later in their consideration of the draft Convention for adoption. In line with the applicable instructions relating to stricter control and limitation of United Nations documents, the text of the

[1] *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17* (A/50/17), paras. 374-381.

[2] Ibid., para. 379. At its twenty-sixth and twenty-seventh sessions, the Commission had considered two other reports of the Secretary-General (A/CN.9/378/Add.3 and A/CN.9/397). For the Commission's discussion of those reports, see ibid. *Forty-eighth Session, Supplement No. 17* (A/48/17), paras. 297-301 and *Forty-ninth Session, Supplement No. 17* (A/49/17), paras. 208-214 respectively.

[3] Report of the Working Group on International Contract Practices on the work of its twenty-fourth session (A/CN.9/420).

[4] The draft articles prepared by the Secretariat are contained in documents A/CN.9/WG.II/WP.87, A/CN.9/WG.II/WP.89, A/CN.9/WG.II/WP.93, A/CN.9/WG.II/WP.96, A/CN.9/WG.II/WP.98, A/CN.9/WG.II/WP.102 and A/CN.9/WG.II/WP.104. The reports of the Working Group are contained in documents A/CN.9/420, A/CN.9/432, A/CN.9/434, A/CN.9/445, A/CN.9/447, A/CN.9/455, A/CN.9/456 and A/CN.9/466.

[5] A/CN.9/455, para. 17; A/CN.9/456, para. 18; and A/CN.9/466, para. [...].

[6] Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 330.

[7] See, e.g. A/CN.9/456, paras. 40, 58-59, 143, 150 and 215; and A/CN.9/455, paras. 80, 84, 87 and 103.

[8] In order to avoid confusion, no special reference is made to previous article numbers which, in the course of the preparation of the draft Convention, were altered several times. However, any earlier number will be apparent from the relevant discussion in the session report.

draft Convention, commented upon, is not reproduced here. It is reproduced in document A/CN.9/WG.II/WP.104, along with the secretariat's remarks and suggestions as to how pending issues could be addressed. Such issues are marked in the text of the draft Convention by square brackets around the relevant provisions. The secretariat has taken the liberty of noting in the commentary additional issues and of making additional suggestions as to how those issues might be addressed.

TITLE AND PREAMBLE

References:

A/CN.9/420, paras. 14-18
A/CN.9/434, paras. 14-16
A/CN.9/445, paras. 120-124
A/CN.9/455, paras. 157-159
A/CN.9/456, paras. 19-21 and 60-65

Commentary

7. The title and the preamble of the draft Convention have not been adopted yet. The main question is whether the reference to financing will be retained (for arguments in favour of one or the other solution, see A/CN.9/WG.II/WP.104, remarks to the title and the preamble).

8. The preamble is intended to serve as a statement of the general principles on which the draft Convention is based and which, under draft article 7, may be used to fill gaps left in the draft Convention. These principles include: the facilitation of both commercial and consumer credit at more affordable rates, which is in the interest of all parties involved, assignors, assignees and debtors; the principle of debtor-protection, according to which the debtor's legal position is not affected unless expressly stated otherwise in the draft Convention; the promotion of the movement of goods and services across borders; the enhancement of certainty and predictability as to the rights of parties involved in assignment-related transactions; the modernization and harmonization of domestic and international laws on assignment, both at the substantive and the private international law level; the facilitation of new practices and the avoidance of interference with current practices; the avoidance of interference with competition.

Commentary

Structure of chapter I

9. In chapter I, scope-related issues are dealt with in different provisions for the sake of clarity and simplicity in the text; a single provision on scope would be very long and complicated. Draft article 1 defines the substantive scope, only in general terms, as well as the territorial scope of application of the draft Convention. Draft articles 2 and 3 define the substantive scope in more detailed terms (definitions of assignment and internationality respectively). Draft article 5 is not part of chapter I, since the terms defined in this article do not raise scope-related issues but matters of interpretation of various provisions of the draft Convention.

Substantive scope of application

10. Under draft article 1, assignments of international receivables are covered, whether or not the assignments are international or domestic, while assignments of domestic receivables are covered only if the assignments are international. In other words, the assignment of receivables is covered whether or not those receivables arise in the context of international or domestic trade, as long as the assignment itself is international (for comments on internationality, see paras. 40 and 41). Thus, transactions such as factoring and forfaiting of international receivables, as well as securitization of domestic receivables, would be covered (for a non-exhaustive list and a brief description of the practices covered, see paras. 31-39).

11. The draft Convention applies also to subsequent assignments made, for example, in the context of international factoring, securitization and refinancing transactions, provided that any prior assignment is governed by the draft Convention (principle of continuatio juris). Under the principle of continuatio juris, even a domestic assignment of domestic receivables may be brought into the ambit of the draft Convention if it is subsequent to an international assignment. However, unless all assignments in a chain of assignments were made subject to one and the same legal regime, it would be very difficult indeed to address assignment-related issues in a consistent manner. The draft Convention also applies to subsequent assignments that in themselves fall under draft article 1 *(a)*, whether or not any prior assignment is governed by the draft Convention. As a result, the draft Convention may apply only to some of the assignments in a chain of assignments. This result is a departure from the principle of continuatio juris. However, the Working Group considered it necessary to follow this approach since parties to assignments in securitization transactions, in which the first assignment may be a domestic one, should not be deprived of the benefits that may be derived from the application of the draft Convention. This approach is based on the assumption that it would not unduly interfere with domestic practices (on this matter, see paras. 12, 18, 20 and 30). The Working Group did not adopt a suggestion to limit the principle of continuatio juris to those cases in which the internationality would be apparent, since such an approach could introduce an unacceptable degree of uncertainty as to the application of the draft Convention.

12. As a result of covering in the draft Convention international assignments of domestic receivables or even domestic assignments of domestic receivables made in the context of subsequent assignments, business parties in domestic transactions could benefit from increased access to international financial markets and thus to potentially lower-cost credit. At the same time, the interests of domestic assignees would not be interfered with, since, for a conflict between a domestic and a foreign assignee to be covered by the draft Convention, the assignor would need to be located in a Contracting State (draft article 1 *(a)*) and that State, by definition in a domestic assignment of a domestic receivable (draft article 3) would be the State in which both the domestic debtor and the domestic assignee would be located (for a problem that might arise if reference is made in draft article 24 to the place of central administration rather than to the place of business, see A/CN.9/WG.II/WP.104, remarks 3-5 to draft article 1). In addition, the fact that the assignor chose to assign the receivables to a foreign assignee would not bring the debtor under a new and potentially unknown legal regime, since the draft Convention could apply to the debtor's rights and obligations only if the debtor has its place of business in a Contracting State (draft article 1 (3); for the meaning of location of a debtor, see A/CN.9/WG.II/WP.104, remark 4 to draft article 5). In any case, the debtor's rights would not be prejudiced since the draft Convention establishes a sufficiently high standard of debtor protection (i.e. draft articles 17-23).

Territorial scope of application

13. The territorial scope of application of the draft Convention is defined by reference to the assignor's location (whether place of business, place of incorporation or place of central administration has not been decided yet; for the secretariat's suggestions on this matter, see A/CN.9/WG.II/WP.104, remarks 4-19 to draft article 5). The provisions dealing with the rights and obligations of the debtor (i.e. chapter IV, section II) have a different territorial scope to the extent that, for those provisions to apply, the debtor too needs to be located in a Contracting State. In order to ensure sufficient predictability with regard to the application of the draft Convention as far as the debtor is concerned, the Working Group has agreed that the debtor's location needs to be defined by reference to the debtor's place of business (A/CN.9/WG.II/WP.104, remark 4 to draft article 5).

14. This approach to the issue of the territorial scope of the draft Convention is based on the assumption that the main disputes that the draft Convention would be called upon to resolve would be addressed if the assignor (and, only for the application of the debtor-related provisions, the debtor too), is located in a Contracting State. Such disputes could arise with regard to: rights of the assignee against the assignor flowing from the breach of a warranty; enforcement of the receivables by the assignee against the debtor; discharge of the debtor; defences of the debtor towards the assignee; relative rights of the assignee and the administrator in the insolvency of the assignor; relative priority rights of the assignee and a competing assignee; and the effectiveness of subsequent assignments. Additional reasons justifying this approach include: that enforcement would normally be sought in the place of the assignor's or the debtor's location and thus there is no need to make reference to the assignee's location; and that application of the provisions of the draft Convention other than those contained in section II of chapter IV would not affect the debtor and thus there is no need to preclude the application of all the provisions of the draft Convention if the debtor is not located in a Contracting State.

15. As a result of this approach, the territorial scope of application of the draft Convention is sufficiently broad and thus it is not necessary to extend it to cases in which no party may be located in a Contractting State. Such an extension of the territorial scope may be achieved if it is the law of a Contracting State applicable by virtue of the private international law rules of the forum. The Working Group thought that extending the territorial scope in such a way might create uncertainty to the extent that private international law on assignment is not uniform. The Working Group also felt that, in any case, certainty would not be served by such a reference to private international law rules, since parties would not know at the time of the conclusion of a transaction where a dispute might arise and, as a result, which private international law rules might apply. However, the situation is different with regard to the law governing debtor-related issues, since there is a sufficient degree of consensus that those issues should be governed by the law governing the receivable (i.e. the law governing the contract from which the receivable arises). Thus, draft article 1 (3) includes a reference to that law, extending the territorial scope of the debtor-protection provisions of the draft Convention to cover situations in which the debtor might not be located in a Contracting State.

16. Draft article 1 (4) and (5) has not been adopted yet (for the secretariat's comments on these provisions, see A/CN.9/WG.II/WP.104, remarks 1-6 to chapter V and 1-3 to the annex of the draft Convention).

Form of the instrument being prepared

17. The Working Group agreed that a convention would be preferable to a model law since it would result in greater certainty. It was generally felt that such certainty was necessary in achieving the draft Convention's main objective, namely increased access to lower-cost credit. In addition, it was agreed that a convention could better achieve the goal of establishing, along with the Convention on International Factoring (which was prepared by the International Institute for the Unification of Private Law—hereinafter referred to as "Unidroit"—and adopted at a diplomatic conference called by the Government of Canada, Ottawa, 1988—hereinafter referred to as "the Ottawa Convention"), a more comprehensive legal regime with regard to assignment-related transactions.

"Opting-in"/"opting-out"

18. The Working Group decided not to limit the application of the draft Convention to cases in which the assignor and the assignee chose to subject their relationship to the draft Convention. It was generally felt that such a limitation of the scope of the draft Convention was unnecessary. The draft Convention is not aimed at replacing national assignment-related rules but rather at facilitating international

practices, which are currently not sufficiently developed in view of the uncertainty prevailing under national laws (as to the potential effect of the draft Convention on national practices, see paras. 11, 12, 20 and 30). The Working Group may wish to consider the question whether the parties to an assignment, not falling under the ambit of the draft Convention, may choose to apply the draft Convention. Such an opting-in right may or may not exist under private international law rules applicable to the draft Convention, at least to the extent that such a choice of law might affect third parties, a situation that might create uncertainty (for a precedence of an express opting-in provision, see article 1 (2) of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit).

19. Draft article 6 recognizes the right of the parties to the assignment or to the contract giving rise to a receivable to exclude the application of the draft Convention or derogate from or vary the effect of any of its provisions, as long as the rights of third parties are not affected. This approach is based on the assumption that the effects of assignment-related transactions on third parties would normally be governed by national rules of mandatory law that could not be derogated from or varied by agreement of the parties (as to the issue of party autonomy, see paras. 59-60).

Article 2. *Assignment of receivables*

Commentary

"Transfer by agreement"

20. Assignment is defined as a "transfer by agreement". This means that the main focus of the draft Convention is on assignment as a way of transfer of property rights in receivables. The contract of assignment or the financing contract is not covered, except where expressly otherwise provided (e.g. draft articles 13-16 and 27; the Working Group may wish to confirm that chapter III addresses the effectiveness of the assignment as a transfer of property rights but not of the contract of assignment). However, other practices involving the transfer of property rights in receivables, such as contractual subrogation or pledge, are covered. Such an approach is appropriate in particular in view of the fact that, in certain legal systems, significant receivables financing transactions, such as factoring, involve a contractual subrogation or pledge rather than the assignment of receivables. An explicit reference to such transactions, contained in an earlier version of draft article 2 (A/CN.9/WG.II/WP.93), was deleted on the understanding that listing such related practices might inadvertently result in excluding some of them (A/CN.9/445, para. 151). As already mentioned above (see paras. 11, 12 and 18), the draft Convention, rather than creating a new type of assignment, is aimed at providing uniform rules on assignment and assignment-related practices with an international element, which, although covered in theory by currently existing national law, could not be sufficiently developed in view of the uncertainty prevailing in national laws. The reference to agreement is intended to exclude assignments by operation of law (e.g. statutory subrogation).

21. In order to avoid any ambiguity as to whether the term "transfer" includes assignments by way of security, the matter is expressly clarified in the second sentence of draft article 2 *(a)*, which creates the legal fiction that, for the purposes of the draft Convention, the creation of security rights in receivables is deemed to be a transfer. However, the draft Convention does not define outright assignments and assignments by way of security. This matter is left to other law applicable outside the draft Convention, since, in view of the wide divergences existing among legal systems as to the classification of transfers, an assignment by way of security could in fact possess attributes of a sale, while a sale might be used as a security device (for a list of issues left to other law, see para. 64).

"From one person to another person"

22. Both the assignor and the assignee can be legal entities or individuals, whether merchants or consumers. Thus, the assignment between individuals is covered, unless they are both consumers and the assignment is made for consumer purposes common to both (draft article 4 *(a)*). As a result, the assignment of credit card receivables in securitization transactions, which has the potential of making lower-cost credit available to manufacturers, retailers and consumers, is covered. The assignment of loans secured by real estate in securitization of mortgages is also covered. In view of the fact that in the draft Convention the singular includes the plural and vice versa, an assignment made by many persons (e.g. joint owners of receivables) to many persons (e.g. a syndicate of financiers) is also covered. In the determination, however, of the territorial scope of application or internationality, the multiplicity of assignors or assignees should be ignored and the assignment by each assignor or to each assignee should be examined independently from assignments by or to another person (the question whether the location of several assignors or assignees could be defined by reference to the location of an authorized agent remains to be considered by the Working Group, see A/CN.9/WG.II/WP.102, remark 14 to draft article 1; as to cases involving multiple debtors, see para. 26).

"Contractual right to payment of a monetary sum"

23. The term "contractual" is intended to ensure that receivables arising from any type of contract are covered, while receivables arising by operation of law, such as tort receivables, tax receivables, or receivables determined in court judgements, are excluded, unless they are confirmed in a settlement agreement. Contractual receivables, the assignment of which is covered by the draft Convention, include receivables arising under contracts for the sale of goods or the provision of services, whether those contracts are commercial or consumer transactions, as well as receivables in the form of royalties arising from the licensing of intellectual property and receivables in the form of credit

balances in deposit accounts or securities transactions (for a brief description of practices, see paras. 31-39).

24. The assignment of other, non-monetary, contractual rights is not covered (e.g. the assignment of the right to performance or the right to declare the contract avoided; as to the right of the assignor to claim damages for breach of contract or interest for late payment, see A/CN.9/WG.II/WP.104, remarks 2 and 3). While the right to performance, e.g. the right of the seller to any goods returned, is not a receivable, the assignee obtains it to the extent that any goods returned by the buyer take the place of the assigned receivable. The matter is addressed in draft articles 16 and 26, according to which payment includes payment both in cash and in kind. However, in order to make this point clearer, the Working Group may wish to insert a reference in draft articles 16 and 26 to a right of the assignee in whatever is received in payment "or other discharge" of the assigned receivable (see A/CN.9/WG.II/WP.104, remark 1 to draft article 16). Assignments of contracts, which involve an assignment of contractual rights and a delegation of obligations, are not covered either. While such transactions may form part of financial arrangements, the financier would normally rely mainly on the receivables. As to the delegation of obligations, the Working Group thought that it goes far beyond the desirable scope of the draft Convention.

"[Owed by] a third person"

25. Apart from the assignor and the assignee, the debtor too could be a legal entity or an individual, a merchant or a consumer. To the extent they are contractual, consumer receivables are covered by the draft Convention, unless they are assigned from one consumer to another and they are thus intended to serve only personal, family or household purposes (draft articles 2 and 4 *(a)*; on this matter, see also paras. 35 and 43).

26. The assignment of receivables, whether whole receivables or parts of receivables, owed jointly (i.e. fully) and severally (i.e. independently) by multiple debtors is also covered, provided that the contract from which the assigned receivables arise (hereinafter referred to as "the original contract") is governed by the law of a Contracting State. If, however, the original contract is not governed by the law of a Contracting State and one or more, but not all, debtors are located in a Contracting State, each transaction should be viewed as an independent transaction and thus debtors who are not located in a Contracting State should not be affected by the draft Convention. Otherwise, the predictability as regards the application of the draft Convention to rights and obligations of debtors, which is one of the main objectives of the draft Convention, could be compromised.

Contract of assignment, financing or other service contract, original contract

27. The draft Convention recognizes the right of the parties to structure their contractual relationship freely so as to meet their various financing needs with a view to remaining competitive in a rapidly changing global marketplace (draft article 6). Thus, the draft Convention does not affect: the contract of assignment, unless it expressly states otherwise (e.g. draft articles 13-16 and 27); the financing or other service contract (which may be the same as the contract of assignment, as, e.g. in factoring transactions, or a separate contract, as, e.g. in securitization transactions); or the original contract between the assignor and the debtor, from which the assigned receivables arise, unless the draft Convention expressly provides otherwise (e.g. draft article 19).

28. The reference to "value, credit or services being given or promised" in return for the receivables assigned, which was contained in an earlier version of the definition of "assignment" (A/CN.9/WG.II/WP.96, draft article 2), has been deleted, since "value, credit or services" are part of the financing contract rather than the assignment. However, the deletion of those words does not change the fact that assignments are covered whether they are outright assignments in which value is given or promised by the assignee to the assignor or to another person affiliated with the assignor or to whom the assignor owed a debt, or assignments by way of security in which credit is given or promised, or assignments in which no financing is offered but services (e.g. book-keeping, collection or insurance against debtor-default, which is often the main or the only element in international factoring transactions). Assignments of receivables would be covered, whether such "value, credit or services" is given or promised not only at the time of the assignment but also at an earlier time. As a result, assignment-related transactions which involve the restructuring of debts of a debtor, being in financial difficulties short of insolvency, would also be covered by the draft Convention.

29. At an early stage in its work, the Working Group considered the question whether the application of the draft Convention should be limited to assignments with a commercial or financing nature or context. The Working Group decided that such a limitation would not be appropriate, since such a limitation: would inappropriately create yet another special regime on assignment, even though one was not needed, and thus inadvertently result in further disunification of the law on assignment; would raise uncertainty since the terms "financing" and "commercial" were not universally understood in the same way, nor was it feasible or desirable to attempt to define them in a uniform way in an international convention; and would unnecessarily exclude from the scope of the draft Convention important transactions such as assignments in international factoring transactions in which only service may be provided (e.g. book-keeping, collection services or insurance against debtor-default). The Working Group preferred to start from a broad scope of application and to exclude transactions that were already well regulated.

30. With regard to the possible impact of such an approach on national law, as already mentioned (see paras. 11, 12, 18 and 20), the draft Convention is intended to cover assignments with an international element and does not adversely affect domestic assignments of domestic receivables (on this matter, see also A/CN.9/WG.II/WP.104, remarks 3-5 to draft article 1; on potential conflicts with the Ottawa Convention, see A/CN.9/WG.II/WP.104, remarks to draft article 33).

Transactions covered

31. The draft Convention covers a wide array of financial transactions. First of all, included are such traditional financing techniques such as factoring, forfaiting and invoice discounting. In these types of transactions, assignors assign to a financier their rights in receivables arising from the sale of the assignors' goods or services. The assignment in such transactions may either be for security or by way of outright transfer with an adjustment in the purchase price depending on the risk and the time involved in the collection of the underlying receivable. Beyond their traditional forms, those transactions have developed a number of variants tailored to meet the various needs of parties to international trade transactions. For example, in addition, or in the place of financing, a number of services may be provided, including collection, book-keeping and insurance against debtor-default. Insurance services are often provided in international factoring, where receivables are assigned to a factor in the country of the assignor ("export factor") and then from the export factor to another factor in the country of the debtor ("import factor") for collection purposes, while the factors do not have recourse against the assignor in the case of debtor-default (non-recourse factoring). All those transactions are covered in the draft Convention regardless of their form.

32. In view of the broad definition of a "receivable" in draft article 2 *(a)* ("contractual right to payment of a monetary sum"), the Convention also covers many other forms of financial transactions used in modern international commerce. These include innovative financing techniques such as securitization, project finance and swaps, as well as transactions involving the financed sale of high-value mobile equipment (on whether some of those practices should be treated differently or excluded altogether from the scope of the draft Convention, see A/CN.9/WG.II/WP.104, remarks 3-16 to draft article 4).

33. In a securitization transaction, an assignor creates receivables through its own efforts. The assignor could be a manufacturing concern selling goods; it could also be a bank extending loans. The assignor assigns, usually by way of an outright transfer, these receivables to an entity specially created for the purpose of buying the receivables and paying their price with the money received from investors to whom it sells the receivables or securities backed by the receivables. This "special purpose vehicle" ("SPV") thus has as its only assets those receivables transferred to it. The segregation of the receivables from the assignor's other assets allows the credit given for the transfer from the assignor to the SPV to be priced solely on the credit of the receivables assigned, and without regard for the assignor's other assets. Immediately after, or concurrently with, such transfer, the SPV assigns an undivided interest in the receivables to investors or issues securities backed by the receivables. As indicated above, the price paid by investors for this interest (or the money lent, which is used to pay back the initial assignor) is linked to the financial strength of the receivables assigned, and not to the creditworthiness of the assignor. Thus, the assignor may be able to obtain more credit than would be warranted on the basis of its own credit-rating. In addition, by gaining access to international securities markets, the assignor may be able to obtain credit at a cost that would be lower than the average cost of commercial bank-based credit. Moreover, the assignment of the receivables by the initial assignor to an entity established for the sole purpose of issuing securities backed by the receivables reduces the risk of insolvency and thus the cost of credit.

34. The draft Convention will similarly apply to an assignment of a project's future cash-flow. In large-scale, revenue-generating infrastructure projects, sponsors raise the initial capital costs by borrowing against the future revenue stream of the project. Thus, hydroelectric dams are financed by the future obligation of payers to pay for electricity, telephone systems are paid for by the future revenues from telecommunications charges and highways are constructed with funds raised through the assignment of future toll-road receipts. Given the draft Convention's applicability to future receivables, these types of project finance may be reduced to transfers, usually for purposes of security, of the future receivables to be generated by the project being financed.

35. In this context, it should be emphasized that the draft Convention's exclusion of assignments made for personal, family or household purposes will not act to exclude consumer receivables (the transaction by which the receivable arises, e.g. the creation of an obligation by a consumer such as that represented by a utility bill, is not an assignment). Only the transfer of the right to receive that payment is an assignment, and the transfer by the utility company to a financier or SPV would not be for personal, family or household purposes (on this matter, see paras. 25 and 43). In addition, it should be noted that toll-road receipts would be contractual receivables falling under the ambit of the draft Convention since they arise from contracts concluded de facto between operators and users of highways.

36. Swaps and derivatives transactions will also come within the draft Convention's ambit. A "swap" is basically a two-party transaction in which different parties' creditworthiness and willingness to take financial risks are exploited. In the traditional case, a creditworthy entity borrows money at a fixed rate. A less-secure entity borrows a similar sum, but its financial standing only permits it to borrow in credit markets at a variable rate. Through a financial intermediary, the two entities "swap" their respective obligations, and agree to indemnify and hold each other harmless, should either party default. There is a fee paid for the swap, with the end result that the less-creditworthy entity, for a fee, can obtain credit at a fixed rate. In view of the fact that the financiers lending the money are invariably part of these transactions (otherwise the swapping would likely be an event of default), their transfer of these rights to receive money brings these types of transactions within the ambit of the draft Convention.

37. Derivatives are similar to swaps in that obligations of debtors are divided and sold among financial and other entities. For example, the first five years of interest payments on a 30-year bond might be packaged and sold to investors, as might be the last five years of such payments. Given the different periods of time, these payment streams present different risks which attract investors, creating a market for such instruments. The trading of such rights to money is directly within the ambit of the draft Convention.

38. Even less traditional transactions are covered by the draft Convention. Loan syndications and participations, for example, are complex forms of assigning the debtor's contractual obligation to pay the debt. All forms of loan syndications, in which the participant receives some right to the debtor's contractual obligation to pay, come within the scope of the draft Convention. The transaction may take the common form of a bank loan, or it may take the form of public financing of some project or equipment acquisition. Thus, transfers of certificates of indebtedness (being contractual obligations to pay) secured by aircraft would be covered by the draft Convention, as would participations in equipment trusts. Indeed, if the initial financing of mobile equipment, such as aircraft, is secured by future revenues, the draft Convention will also apply since the transfer of those receivables by way of security will effectively be a transfer of the customer's contractual obligation to pay. In this context, it should be noted that, if negotiable bonds represent the obligation to pay, their transfer is not covered by the draft Convention by virtue of the exclusion of the transfer of negotiable instruments contained in draft article 5.

39. Similarly, assignments of bank accounts (representing the depository bank's obligation to pay out on such accounts) or assignments of insurance policies (representing the insurance company's contingent obligation to pay upon loss) will also be covered. Again, such transfers may be outright transfers, such as when portfolios of bank accounts or insurance policies are transferred between firms or within a corporate structure. They may also be transfers by way of security, such as insurance premium loans or loans secured by a deposit in a commercial bank.

Article 3. *Internationality*

References:

A/CN.9/420, paras. 26-29
A/CN.9/432, paras. 19-25
A/CN.9/445, paras. 154-167
A/CN.9/456, paras. 44 and 45 and 226-227

Commentary

40. Under the draft Convention, once a receivable is international, its assignment is always covered by the draft Convention. However, even if a receivable is domestic, its assignment may be covered by the draft Convention, if it is international or it is part of a chain of assignments which includes an earlier international assignment (on this matter, see para. 10, as well as A/CN.9/WG.II/WP.104, remarks to draft article 3). The meaning of the term "location" and the issue of location of multiple assignors and assignees have not been decided yet (for the secretariat's suggestions with regard to this matter, see A/CN.9/WG.II/WP.104, remarks 3-10 to draft article 5).

41. Internationality of a receivable is determined at the time of the conclusion of the original contract. This approach is based on the assumption that at that time the creditor (potential assignor) would need to know which law might apply in order to be able to assess the risks involved in a transaction and to determine whether to extend credit to the debtor and on what terms. However, as a result of this approach, parties to an assignment may not be able to determine at the time of the assignment whether the draft Convention will apply if future receivables are involved (i.e. receivables arising from contracts not in existence at the time of assignment). On the other hand, internationality of an assignment is determined at the time it is made. Thus, the parties will always be able to predict at the time of the assignment whether the draft Convention will apply or not.

Article 4. *Exclusions*

References:

A/CN.9/432, paras. 18, 47-52, 106 and 234-238
A/CN.9/434, paras. 42-61
A/CN.9/445, paras. 168-179
A/CN.9/456, paras. 46-52

Commentary

42. In view of its decision that the scope of application of the draft Convention should be as broad as possible, the Working Group agreed that certain practices that did not need to be regulated should be excluded.

Assignments for consumer purposes

43. Subparagraph *(a)* is intended to exclude from the scope of the draft Convention assignments from a consumer to a consumer, since such assignments are of no practical significance (as to a secretariat suggestion to rephrase subparagraph *(a)* or even to delete it, see A/CN.9/WG.II/WP.104, remark 1 to draft article 4). However, subparagraph *(a)* does not exclude assignments from a consumer to a merchant. Such assignments of consumer receivables form part of significant practices, such as securitization of credit card receivables, the facilitation of which has the potential of increasing access to lower-cost credit by manufacturers, retailers and consumers and, as a result, could facilitate international trade in consumer goods. While covering the assignment of consumer receivables, the draft Convention is not intended to override consumer-protection law. Where necessary, the draft Convention makes explicit reference to this principle. For example, under draft articles 21 (1) and 23, a consumer-debtor cannot waive any defences and rights of set-off and has a right to recover payments from the assignee, if the consumer-protection law applicable in the country of the debtor so provides (for anti-assignment clauses in a consumer context, see paras. 83 and 86).

Assignments of negotiable instruments

44. Subparagraph *(b)* excludes assignments made by endorsement and delivery of a negotiable instrument, such as a bill of exchange or a promissory note or a cheque, or by mere delivery of an instrument, such as a bearer document. The underlying reason for this exclusion is the need to avoid interfering with practices well regulated in national

law and international texts. The draft Convention refers to the form of transfer rather than to the documentary nature of the receivable since: such a reference is adequate in protecting the negotiability of an instrument and the interests of a protected holder; it would be very difficult to reach agreement on a uniform definition of the term "documentary receivable"; and there is no need to exclude the assignment of contractual receivables on the sole ground that they have been incorporated in a negotiable instrument for the purpose of obtaining payment by way of summary proceedings in court, if necessary.

Assignments of receivables in corporate buyouts

45. Subparagraph *(c)* is aimed at excluding assignments made in the context of the sale of a business as a going concern, if they are made from the seller to the buyer. Such assignments are excluded as they are normally regulated differently by national laws dealing with corporate buyouts and are not of a financing nature. However, assignments made to an institution financing the sale are not excluded.

Other assignments

46. In the course of its work, the Working Group considered for exclusion other types of assignments such as assignments by operation of law, assignments as gifts, assignments of wages, assignments of contractual rights in general, assignments of insurance premiums, assignments of rents from real estate and equipment and assignments of balances in deposit accounts. As to assignments by operation of law, it should be noted that they are excluded in view of the definition of "assignment" by reference to a "transfer by agreement". In view of the fact that consideration was thought to be part of the contract of assignment, which, with the exception of draft articles 13 to 16 and 27, is not addressed in the draft Convention, the Working Group decided not to address assignments as gifts. As to the assignment of wages, the Working Group decided to leave the matter to other law. If such assignments are prohibited under national law, the draft Convention does not affect such a prohibition. If, however, such assignments are not prohibited under national law, with a view to preserving significant practices, such as the financing of temporary employment services, the draft Convention does not do anything to invalidate them (as to the law applicable to statutory assignability, see A/CN.9/WG.II/WP.104, remarks 3-4 to draft article 28). The Working Group decided to cover assignments of insurance premiums and of rents arising from leases of real estate and equipment, as well as assignments of credit balances in deposit accounts (however, as to the exact treatment of some of those transactions and possible exceptions, see A/CN.9/WG.II/WP.104, remarks 3-16 to draft article 4).

47. In the interest of enhancing the acceptability of the draft Convention, paragraph (2), which appears within square brackets since it has not been adopted yet by the Working Group, is intended to ensure that States are given a possibility to exclude further practices. Such an approach may be necessary if no agreement is reached on the practices to be excluded in paragraph (1) or in order to address concerns that might arise in the future. However, a possible disadvantage of such an approach would be that the scope of the draft Convention could vary from State to State, with the result that, in view of the multiplicity of parties involved and the possibility that one or more but not all possibly relevant States might have made a declaration, the exact scope of the draft Convention would not be easy to ascertain. This result in itself could increase the legal cost and thus the final cost of a transaction (on this matter, see A/CN.9/WG.II/WP.104, remarks 7 and 16 to draft article 4).

CHAPTER II. GENERAL PROVISIONS

Article 5. *Definitions and rules of interpretation*

Commentary

"original contract"

48. The term is defined since it is referred to in draft articles 5 *(b)*, 5 *(k)* (iii), 17 (1), 17 (2) *(a)* and *(b)*, 18 (1), 19 (1), 20 (2), 22 (2) *(b)* and (23). With the contract of assignment and the financing or other service contract, which may be the same or a different contract, the original contract is part of the basic chain of contractual relationships involved in an assignment-related transaction. With the exception of those provisions which expressly state otherwise (e.g. draft article 19), the draft Convention does not affect the rights and obligations of the debtor as they are stipulated in the original contract (draft article 17).

"deemed to arise when the original contract is concluded"

49. With a view to enhancing certainty, the draft Convention provides a uniform rule on the time when a receivable is deemed to arise. Such a rule is essential in order to determine the internationality of a receivable and the effectiveness of a bulk assignment. The time when the original contract is concluded is the most appropriate point of time because at that point the identity of the creditor and the debtor, as well as the legal source of the receivable and its amount, are known. The time at which a receivable becomes due or the original contract becomes enforceable were thought to be inappropriate in this regard, since delaying the time at which a receivable arose and could be used for obtaining credit could have an adverse impact on the availability of credit. The term "concluded" refers to the conclusion of the contract, the exact meaning of which is left to law applicable outside the draft Convention. In any case, "conclusion" does not refer to the performance of the contract (for a secretariat drafting suggestion to delete subparagraph *(b)* and to refer in draft articles 3 and 8 (1) *(b)* and (2) directly to the time of the conclusion of the original contract, see A/CN.9/WG.II/WP.104, remark 1 to draft article 5).

"existing" and "future" receivable

50. The terms "existing" and "future" receivable are referred to in draft articles 8 (effectiveness of an assignment) and 9 (time of assignment). The draft Convention does not introduce any limitation with regard to the types of future receivables the assignment of which is covered. Thus, the entire range of future receivables is covered in the definition, including conditional (i.e. receivables that might arise subject to a future event that might take place or not) and purely hypothetical receivables (i.e. receivables that might arise from an activity not initiated by the assignor at the time of the assignment). However, draft article 8 introduces a limitation as to the effectiveness of the assignment of a future receivable, by requiring that the future receivable should be identifiable, at the time of the conclusion of the original contract, as a receivable to which the assignment relates. Once this requirement is met, the future receivable is considered as transferred at the time of the conclusion of the contract of assignment. However, this result should not prejudice the rights of third parties (see para. 70).

"receivables financing"

51. This definition, which appears in square brackets, has not been adopted by the Working Group (for a secretariat suggestion to delete this definition and to, possibly, refer to receivables financing in the preamble, see A/CN.9/WG.II/WP.104, remark 1 to draft article 5).

"writing"

52. The definition is intended to include other than paper-based means of communications which can perform the same functions as a paper communication (e.g. provide tangible evidence, serve as a warning to the parties with regard to the consequences, provide a legible communication, authentication and sufficient assurances as to its integrity). It is inspired by articles 6 and 7 of the UNCITRAL Model Law on Electronic Commerce and reflects the two distinct notions of "writing" and "signature" (or "signed writing").

53. The draft Convention requires a writing for the notification of the assignment and a signed writing for the waiver of the debtor's defences (draft article 21 (3), however, may need to clarify whether the signature of both the assignor and the debtor is required or only that of the debtor; see A/CN.9/WG.II/WP.104, remark to draft article 21). Writing is also required for declarations by States and for certain registration-related acts. This approach is based on the assumption that the need for higher assurances as to the authenticity of communications should be assessed differently depending on the context in which the communication is made.

54. "Accessible" is meant to imply that the communication is readable and interpretable; "usable" refers not only to use by a physical person but also by a computer; and "subsequent reference" establishes a standard which is akin to that implied by a notion such as durability (while not referring to the strict interpretation given to the notion of durability in certain legal systems as equivalent to non-alterability) but more objective than that implied by notions such as readability or intelligibility (see Guide to Enactment of the Model Law, para. 50). Signature is defined by reference to the identification of the signer and indication of the signer's approval of the content of the communication.

"notification of the assignment"

55. Under subparagraph *(f)*, a notification meets the requirements of the draft Convention if it is in writing and provides a reasonable description of the assigned receivables. What is a reasonable description is a matter to be determined in view of the circumstances. However, reasonable would include descriptions along the following lines: "all my receivables from my car business" and "all my receivables as against my clients in countries A, B and C". There is no requirement that the notification identify the person to whom or for whose account or the address to which the debtor is to pay. As a result, a notification containing no payment instruction is effective under the draft Convention. However, in view of the fact that, under the draft Convention, a notification changes the way in which the debtor may discharge its debt, parties notifying the debtor would be encouraged to include in their notification such a payment instruction. The Working Group based the discharge of the debtor on the notification rather than on the payment instructions in order to avoid confusing the debtor in cases in which the two communications might be sent separately or in which several communications might be sent to the debtor by several persons.

"insolvency administrator" and "insolvency proceeding"

56. Subparagraphs *(g)* and *(h)* have been inspired by the definitions of "foreign proceeding" and "foreign administrator" contained in article 2 *(a)* and *(d)* of the UNCITRAL Model Law on Cross-Border Insolvency. They are also consistent with articles 1 (1), 2 *(a)* and *(b)* of the European Convention on Insolvency Proceedings. By referring to the purpose of a proceeding or to the function of a person, rather than using technical expressions that may have different meanings in legal systems, the definitions are sufficiently broad to encompass a wide range of insolvency proceedings, including interim proceedings. This approach is intended to avoid that a Contracting State recognizes as an insolvency proceeding or administrator a proceeding or person which does not have that character under the lex loci concursus, or is unable to recognize as an insolvency proceeding or administrator a proceeding or person which has that character under the lex loci concursus.

"priority"

57. Priority under the draft Convention means that a party may satisfy its claim in preference to other claimants, under the implicit conditions that there is a valid assignment as between the assignor and the assignee and that the assignee has extended credit to the assignor (as to whether "priority" covers the question whether an assignee has a claim in rem or ad personam, see A/CN.9/WG.II/WP.104, remark 3 to draft article 5). Whether the person with priority may retain all the proceeds of payment or turn over any remaining balance after payment of its claim to the next person in the

line of priority or to the assignor depends on whether an outright assignment or an assignment by way of security is involved; this matter is left to law applicable outside the draft Convention. The definition does not refer to the right to payment since, while this expression might be appropriate for assignments by way of security, it might be restrictive in outright assignments in which the assignee may, for example, have a right to receive any goods returned by the debtor to the assignor. However, the Working Group may wish to consider whether this matter might be better addressed if wording along the following lines is inserted in subparagraph *(i)*: "the right to payment or other discharge".

"location"

58. The Working Group has not reached a decision yet as to the meaning of the notion of "location" (for the secretariat's suggestions, see A/CN.9/WG.II/WP.104, remarks 4-10 to draft article 5).

Article 6. *Party autonomy*

References:

A/CN.9/432, paras. 33-38
A/CN.9/434, paras. 35-41
A/CN.9/445, paras. 191-194
A/CN.9/456, paras. 79 and 80

Commentary

59. Article 6, which is modelled on article 6 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980; hereinafter referred to as "the United Nations Sales Convention") provides broad recognition of the principle of party autonomy. Unlike article 6 of the United Nations Sales Convention, however, draft article 6 does not allow the assignor and the assignee to exclude the draft Convention as a whole. The reason for this approach is that, as the draft Convention deals with the rights of parties other than the assignor and the debtor, an exclusion of the application of the draft Convention would affect the rights of third parties (i.e. in the context of an agreement between the assignor and the assignee, the debtor, the assignor's creditors and the insolvency administrator and, in the context of an agreement between the assignor and the debtor, the assignee, the assignor's creditors and the insolvency administrator). Such a result would not only go beyond any acceptable notion of party autonomy but would also introduce an undesirable degree of uncertainty and could thus frustrate the main objective of the draft Convention to facilitate increased access to lower-cost credit and to provide, at the same time, an adequate debtor-protection system. Thus, the assignor and the assignee may only vary or derogate from draft articles 13 to 16 and 27, while the assignor and the debtor are free to vary or derogate from draft articles 17 to 23, as long as the rights of the assignee or other third parties are not prejudiced.

60. Like article 6 of the United Nations Sales Convention, draft article 6 requires an agreement, i.e. two corresponding declarations of intent, for the effective derogation from the draft Convention. Such an agreement may be explicit or implicit. A typical example of an implicit derogation is where the parties refer to the law of a non-Contracting State or to the national law of a Contracting State. The derogation is effective, if the choice of law by the parties is valid under the private international law rules of the forum. If the choice of law is invalid, in the absence of any indications, it cannot be generally assumed that the parties intended to derogate from the Convention, regardless of whether or not their choice of law was valid. It cannot be generally assumed either that, had the parties known that their choice of law would be invalid, they would wish that the proper law of the contract would apply to their contract. An effective derogation does not require that the parties reach an agreement on the law applicable to the matters on which they derogated from the provisions of the draft Convention. In such a case, it should be assumed that the parties do not wish to have recourse to national law but wish any gaps to be filled in accordance with draft article 7 (2). If parties have agreed on the law applicable to the issues on which they derogated from the draft Convention, that law should be applied in a way consistent with the draft Convention, unless the derogation is so great that a particular matter can no longer be regarded as falling under the draft Convention.

Article 7. *Principles of interpretation*

References:

A/CN.9/432, paras. 76-81
A/CN.9/434, paras. 100 and 101
A/CN.9/445, paras. 199 and 200
A/CN.9/456, paras. 82-85

Commentary

61. This article, inspired by article 7 of the United Nations Sales Convention, deals with the interpretation of and the filling of gaps in the draft Convention. With regard to the interpretation of the draft Convention, draft article 7 (1) refers to three principles, i.e. the international character of the text, uniformity and good faith in international trade. These principles are common to most UNCITRAL texts. The reference to the international character or source of the text should lead a court to avoiding to interpret the draft Convention on the basis of notions of national law, unless the meaning of a term used in the draft Convention is clearly identical with its meaning under a particular national law. The need to preserve uniformity can be served only if courts or arbitral tribunals apply the general principles underlying the draft Convention and have regard to decisions of courts or tribunals in other countries. The Case Law on UNCITRAL Texts (CLOUT), a system of reporting case law on UNCITRAL texts, has been established by UNCITRAL exactly with the need to preserve uniformity in mind (CLOUT is available in paper form in the six official languages of the United Nations and through the UNCITRAL website, http:\\www.uncitral.org, in English, Spanish and French; depending on the resources available, the other language versions will also be made available in the future).

62. The reference to good faith may apply not only to the interpretation of the draft Convention but also to the conduct of the parties. However, while the principle of good faith would appropriately be applied to the contractual relationship between the assignor and the assignee or the assignor and the debtor, it could undermine the certainty of the draft Convention if applied to the relationship between the assignee and the debtor or the assignee and any other claimant. For example, if the principle of good faith prevailing in the forum State were to apply to the assignee-debtor or the assignee-third party relationship: the debtor, who might have paid the assignee after notification, may have to pay again if, e.g. the debtor knew about a previous assignment; and the law applicable under draft article 24 might be disregarded if it does not respect the principle of good faith as it may be understood in the forum State.

63. As to gap-filling, the rule is that, if matters are governed by the draft Convention (chapter I) but not expressly settled in it, they are to be decided in accordance with the general principles on which the draft Convention is based. Such principles include notably the principles expressly mentioned in the preamble or enshrined in a number of provisions of the draft Convention (e.g. the principle of facilitation of increased access to lower-cost credit and the principle of debtor protection). Recourse to private international law rules is permitted only if: there is no principle on the basis of which a particular matter could be resolved; or the matter is not governed by the draft Convention at all.

64. Matters not governed by the draft Convention and left to other law include: the meaning of an outright assignment and an assignment by way of security; the question of the form of the contract of assignment; the accessory or independent character of a security right, which is the basis for determining whether it is transferred automatically with the receivables the payment of which it secures, or whether a new act of transfer is needed; the consequences of a breach of representations by the assignor; to a large extent, the assignability of a receivable (the draft Convention covers it to some extent in that it specifies a number of receivables that are assignable, including future receivables and receivables not identified individually, and in that it deals with contractual limitations to assignment, but leaves other types of receivables and other statutory limitations to assignment unaddressed); the question whether the assignor is liable towards the debtor for assigning its receivables in violation of an anti-assignment clause; the debtor's obligation to pay (the draft Convention deals with the debtor's discharge only); the discharge of the debtor on grounds other than those specified in the draft Convention (e.g. by paying the rightful claimant if the notification received does not meet the requirements of the draft Convention); the defences and rights of set-off that the debtor may raise against the assignee (the draft Convention provides that the debtor has against the assignee the same defences and rights of set-off that it would have against the assignor, without, however, specifying them); agreements between the debtor and the assignee by which the debtor waives its defences and rights of set-off towards the assignee; questions of priority among several assignees of the same receivables, between the assignee and the insolvency administrator and between the assignee and the assignor's creditors; and the question whether the right of the assignee in proceeds is a right ad personam or in rem.

65. In view of the possibility that it may be difficult to determine whether a matter is governed but not expressly settled in the draft Convention or not governed at all, the Working Group may wish to consider the question whether a provision along the lines of article 4 of the United Nations Sales Convention, listing expressly the matters covered therein, would be appropriate for inclusion in the draft Convention.

66. The Working Group may also wish to clarify whether gaps left in the private international law provisions of the draft Convention are to be filled in accordance with the substantive or the private international law principles underlying the draft Convention. In the absence of such principles, such gaps would be filled in accordance with the private international law of the forum.

CHAPTER III. EFFECTS OF ASSIGNMENT

Form of assignment

References:

A/CN.9/420, paras. 75-79
A/CN.9/432, paras. 82-86
A/CN.9/434, paras. 102-106
A/CN.9/445, paras. 204-210
A/CN.9/456, paras. 86-92

Commentary

67. The Working Group considered a wide variety of form requirements, ranging from written form (with or without any signature requirements) to the absence of any form (the possibility of leaving the matter to law applicable outside the draft Convention was also considered). While the widely prevailing view was that purely oral assignments should be invalidated, at least as against third parties, the Working Group was not able to reach agreement on this matter and decided to delete the provision dealing with form. The Working Group took this decision on the understanding that the matter is addressed: with respect to the mutual interests of the assignor and the assignee, in draft article 6, which enshrines party autonomy; with respect to the interests of the debtor, in draft article 19 (in the absence of written notification of the assignment, the debtor's right to discharge its obligation in accordance with the original contract is not affected) and in draft article 19 (general principle of debtor-protection); and with respect to the interests of third parties, in draft articles 24 to 26 (priority rules).

68. However, in draft articles 24 to 26 it is not clear that the law of the assignor's location governs form. As a result and in view of the fact that formal validity is a prerequisite for priority, the assignee, in order to ensure priority, would have to meet the requirements of the law of the assignor's location and the law governing formal validity, which may be difficult to determine (for a secretariat suggestion to include in the text a private international law provision on form, see A/CN.9/WG.II/WP.104, remarks to chapter III).

Specifying the law applicable to formal validity would provide a degree of certainty. However, it would leave to the law applicable: the question whether purely oral assignments would be valid, thus allowing possible abuse or fraudulent collusion between an assignee and the assignor, particularly in situations where the assignor might become insolvent; the question whether stamp duties are payable for the contract of assignment to be valid, which would affect the overall cost of the transaction; and the question of form of an assignment of receivables backed by a security right, which might be subject to the law governing the security right (on this matter, see para. 93).

Article 8. *Effectiveness of bulk assignments, assignments of future receivables and partial assignments*

References:

A/CN.9/420, paras. 45-60
A/CN.9/432, paras. 93-112 and 254-258
A/CN.9/434, paras. 122 and 124-127
A/CN.9/445, paras. 211-214
A/CN.9/456, paras. 93-97

Commentary

Paragraph (1)

69. As a matter of principle, draft article 8 validates assignments (i.e. transfers, not contracts of assignment) of future receivables, bulk assignments and assignments of parts of or undivided interests in receivables. There are certain qualifications to this principle. While the assignment is effective as against the debtor as of the time it is made, before receiving notification in writing, the debtor may refuse to pay the assignee and discharge its debt by paying in accordance with the original contract (the debtor may discharge its debt by paying the assignee, even before receiving written notification; in such a case, however, the debtor takes the risk of having to pay twice, if it is later proven that no assignment took place).

70. A second qualification to the above-mentioned principle is that the effectiveness of an assignment as against third parties is left to the law applicable to priority under draft articles 24 to 26. Thus, draft article 8 is not intended to: validate the first assignment in time while invalidating any further assignment of the same receivables by the same assignor; or to ensure that the assignee will prevail over an insolvency administrator on the sole ground that the assignment took place before the effective date of the insolvency proceeding. In order to avoid inadvertently leaving the effectiveness of future assignments altogether to the law applicable to priority, the Working Group decided to delete language in draft article 8 that would have made draft article 8, as well as draft article 9, subject to draft articles 24 to 26. This decision was taken on the understanding that the combined application of draft articles 8 to 12 and 24 to 26 would lead to the same result, namely that the provisions of chapter III are not intended to affect priority issues, since those issues are dealt with in draft articles 24 to 26.

"existing or future receivables"

71. The assignment of future receivables in bulk is at the heart of modern receivables financing practices. Yet great uncertainty exists as to the validity of such assignments. The draft Convention, therefore, places significant emphasis on the effectiveness of the assignment of future receivables and of bulk assignments in particular. At an early stage in its work, the Working Group noted that the validation of the assignment of conditional receivables and of purely hypothetical receivables might result in a business entity assigning all its claims for the entire duration of its existence, a practice that might run counter to public policy in certain countries (as to the range of future receivables covered, see para. 49). However, the Working Group considered that a blanket exclusion of conditional or hypothetical receivables from the scope of the draft Convention could hamper significant practices, such as those involving the assignment of the cash-flow of a public-infrastructure project for financing purposes. Having carefully considered the matter, the Working Group decided to introduce the requirement, contained in draft article 8 (1), that the receivables should be identifiable when they arise (i.e. when the original contract is concluded) as receivables to which the assignment relates. This requirement is intended to provide appropriate recognition, on the one hand, of the economic need to allow bulk assignments of various types of future receivables and, on the other hand, of the need to protect assignors against the risks that might result from unlimited freedom to assign all conceivable future receivables.

"one or more"

72. While the focus of the draft Convention is on the assignment of a large volume of low-value receivables (involved, e.g. in factoring of trade receivables or in securitization of credit card receivables), the assignment of single, large-value receivables (involved, e.g. in loan syndication) is also validated (as to the question whether anti-assignment clauses and priority issues should be treated differently in the case of an assignment of single receivables, see A/CN.9/WG.II/WP.104, remarks 3-7 to draft article 4).

"is effective"

73. The result of the effectiveness of an assignment depends on whether an outright assignment or an assignment by way of security is involved, which is a matter left to law applicable outside the draft Convention. In the case of an outright assignment, "is effective" means that the assignment transfers full property in the receivable. This means: that the assignee is entitled to retain any surplus remaining after the satisfaction of its claim against the assignor; and that, in the case of debtor-default, the assignee has no recourse against the assignor. In the case of an assignment by way of security, "is effective" means: that the assignee has to turn over to the next claimant in line of priority or to the assignor any remaining surplus; and that, if the debtor fails to pay, the assignee can turn against the assignor and demand payment for the credit or the services extended to the assignor in return for the assigned receivables.

74. As a matter of expression, the term "effective" was thought to be preferable to the term "valid", since: "effective" more accurately reflects the idea of effectiveness *erga*

omnes; and "valid" is not universally understood in the same way.

"described"

75. The term "described" is intended to establish a standard lower than that which would be established by the term "specified". Under this standard, a generic description of the receivable, without any specification of the identity of the debtor or the amount of the receivable, would be sufficient (e.g. "all my receivables from my car business").

"individually"/"in any other manner"

76. These words are intended to ensure that an assignment of existing and future receivables is effective, whether the receivables are described one by one or in any other manner that is sufficient to relate the receivables to the assignment.

Paragraph (2)

77. With a view to expediting the lending process and reducing the cost of the transaction, paragraph (2), in effect, provides that a master agreement is sufficient to transfer rights in a pool of future receivables. If a new document were to be required each time a new receivable would arise, the costs of administering a lending programme would increase considerably and the time needed to obtain properly executed documents and to review those documents would slow down the lending process to the detriment of the assignor.

78. Under paragraph (2), which provides that the master agreement is sufficient to transfer a pool of future receivables, and draft article 9, which provides that a future receivable is transferred at the time of the conclusion of the contract of assignment, rights in future receivables are transferred directly to the assignee without passing through the estate of the assignor. However, the question whether the assignment is effective as against the assignor's creditors or the insolvency administrator is a matter to be settled in accordance with the law governing priority under draft articles 24 to 26.

Article 9. *Time of assignment*

References:

A/CN.9/420, paras. 51 and 57
A/CN.9/432, paras. 109-112 and 254-258
A/CN.9/434, paras. 107 and 108 and 115-121
A/CN.9/445, paras. 221-226
A/CN.9/456, paras. 76-78 and 98-103

Commentary

79. Draft article 9 is intended: to recognize the right of the assignor and the assignee to agree on the time at which a receivable is transferred, as long as their agreement does not negatively affect the rights of third parties; to set a default rule that, in the absence of contrary agreement between the assignor and the assignee, the time at which a receivable is transferred is the time of the conclusion of the contract of assignment; and to clarify the meaning of other relevant provisions, such as draft articles 6, 8, 19 and 24 to 26.

80. Draft article 9 recognizes and, at the same time, limits party autonomy. The time specified by the assignor and the assignee binds third parties, a matter that may not be sufficiently clear in draft article 6. However, for such an agreement to be binding on third parties, it has to set a time of transfer which is not earlier than the time of the conclusion of the contract of assignment. This approach is in line with the principle, enshrined in draft article 6, since an agreement setting an earlier time could affect the order of priority between several claimants.

81. In the absence of an agreement between the assignor and the assignee setting the time of transfer of rights in the assigned receivables, the time of such transfer is the time of the conclusion of the contract of assignment, which is a fact that cannot be changed. While this approach is obvious with regard to receivables existing at the time they are assigned, a legal fiction is created with regard to future receivables (i.e. receivables arising from contracts not in existence at the time of the assignment). In practice, the assignee would acquire rights in future receivables only if they would in fact be created, but, in legal terms, the time of transfer would go back to the time of the conclusion of the contract of assignment. Such an approach is intended to facilitate the mobilization of future receivables by the assignor for the purpose of obtaining lower-cost credit or related services.

82. While draft article 9 sets the time of transfer of a receivable, it is not intended to set forth a priority rule, stating that an assignment is effective as against third parties as of the time it is made, since such a rule would be inconsistent with draft articles 24 to 26. If future receivables were transferred effectively as against third parties as of the time they were assigned, they would be removed from the insolvency estate or become subject to a security right irrespective of any publicity act required by the law governing priority.

Article 10. *Contractual limitations on assignments*

References:

A/CN.9/420, paras. 61-68
A/CN.9/432, paras. 113-126
A/CN.9/434, paras. 128-137
A/CN.9/445, paras. 49-51 and 227-231
A/CN.9/447, paras. 148-152
A/CN.9/455, paras. 47-51
A/CN.9/456, paras. 104-116

Commentary

83. The main objective of draft article 10 is to validate assignments made despite the existence of an anti-assignment clause in the original contract, in the assignment contract or in any subsequent assignment contract. The underlying policy is that it is more beneficial for everyone to facilitate the assignment of receivables and to reduce the transaction cost rather than to ensure that the debtor would

not have to pay a person other than the original creditor (assignor). Anti-assignment clauses may either defeat the purpose of a financing or service-related transaction altogether since they may invalidate assignments, or, at least, raise the cost of a transaction to the extent that financiers would need to check a potentially large number of contracts in order to ensure that no anti-assignment clauses are contained therein. In its considerations, the Working Group took into account that small debtors, such as consumers, would not be adversely affected by such a rule, since normally they do not have the bargaining power to insert anti-assignment clauses in their contracts and, in any case, they would often continue paying to the same bank account or post-office box, the control of which would switch from the assignor to the assignee without the debtors' knowledge. The Working Group also considered that, in any case, draft article 10 would not affect the interests of consumer-debtors to the extent that they were addressed by statutory limitations contained in consumer-protection law, since draft article 10 did not deal with statutory limitations. With regard to large debtors, the Working Group considered that they would not be adversely affected by the rule contained in draft article 10, since they have sufficient bargaining power and could take care of their own interests. The Working Group also thought that draft article 10 established an appropriate rule by not allowing such large debtors to preclude small- and medium-size enterprises from obtaining lower-cost credit or services on the basis of their receivables. Draft article 12 introduces an exception with regard to sovereign debtors (see paras. 94-96; for possible additional exceptions, see A/CN.9/WG.II/WP.104, remarks 3-7 to draft article 4).

84. Draft article 10 is thus intended to give the assignee a priority position as against the assignor's creditors in the case of default by the assignor and to enable the assignee to collect directly from the debtor, without, however, depriving the debtor of its rights and defences or of any cause of action the debtor may have against the assignor for breach of contract or even against the assignee based on tort. This approach constitutes a compromise between legal systems which invalidate assignments made in violation of anti-assignment clauses and legal systems which invalidate anti-assignment clauses. It thus attempts to counterbalance the need to preserve party autonomy and the need to facilitate financing and service-related transactions in the interest of trade in general. The Working Group recognized that invalidating anti-assignment clauses would preserve the interests of the assignee more effectively in that the assignee would be protected from the risk of accruing any liability and from the risk that the original contract might be declared avoided by the debtor for breach of an anti-assignment clause. However, it was widely felt that an approach based on the invalidation of anti-assignment clauses would excessively interfere with party autonomy and tilt the balance of interests in favour of the assignee to an inappropriate degree. On other hand, in an effort to make a step further in the direction of the protection of the debtor, the Working Group considered also the possibility of allowing the debtor to continue making payments in accordance with the original contract. Such an approach would allow the assignee to prevail in a conflict of priority with creditors of the assignor, but would deprive the assignee of the right to demand payment from the debtor. The Working Group noted that, under article 16 of the International Factoring Customs promulgated by Factors Chain International, in the case of an anti-assignment clause, the assignor is allowed to receive payments as an agent of the assignee. While recognizing that such a rule could be acceptable within groups of institutions subscribing to the same code of conduct, the Working Group decided not to extend its application to other practices, since depriving the assignee of the right to claim payment from the debtor would increase the risk of non-payment and thus the cost of credit.

85. Any contractual liability the assignor may have as against the debtor, under law applicable outside the draft Convention, for making an assignment in violation of an anti-assignment clause is not interfered with. By definition, the assignee cannot have contractual liability for breach of a contract to which the assignee is not a party. Any tortious liability that the assignee may have as against the debtor, under other law, is not interfered with either. In this context, the Working Group agreed that it should sanction malicious behaviour on the part of the assignee and that mere knowledge of the existence of an anti-assignment clause should not be sufficient to establish the assignee's liability. Penalizing the assignee for accepting an assignment while having knowledge of the anti-assignment clause would inadvertently result in encouraging the assignee to avoid a due-diligence test. If the assignee were diligent, it would find out about the anti-assignment clause and would not accept the receivables or would accept them at a substantially reduced value in view of the high risk of non-payment (for a secretariat suggestion as to ways in which this idea could be expressly stated in draft article 10, see A/CN.9/WG.II/WP.104, remarks 2-3 to draft article 10).

86. Draft article 10 is supplemented by a legal regime introducing sufficiently high standards for the debtor protection in the draft Convention. Other than having to pay the assignee (in the country and currency stipulated in the original contract), the legal position of the debtor is not affected by the draft Convention (draft article 17). Notification of the assignment may cut off only those rights of set-off of the debtor that arise from contracts other than the original contract. This result would be acceptable, since the debtor would be aware of this consequence of a notification and may plan accordingly. For example, the debtor may avoid incurring further obligations. In exceptional situations, in which, for example, an assignment in violation of an anti-assignment clause is a fundamental breach of the original contract, the debtor may even declare the original contract avoided. Such avoidance of the contract, however, which would deprive the assignee of the right to demand payment from the debtor, should be available only in exceptional circumstances. Otherwise, the risk of the contract being avoided might in itself have a negative impact on the cost of credit. In such situations, the debtor would be able to recover payments from the assignor but not from the assignee (draft article 23). This result is appropriate since, even in the absence of an assignment, the debtor would bear the risk of insolvency of its contractual partner. Furthermore, any goods returned by the debtor subsequent to the avoidance of the original contract would go to the assignee who would have offered value to the assignor in return for the receivables which were cancelled. On the

basis of the understanding that the draft Convention introduced a legal regime with sufficiently high debtor-protection standards, the Working Group decided that no reservation should be allowed to be made by States with regard to draft article 10 (for an exception with regard to sovereign debtors, see a secretariat suggestion with regard to draft article 12 in A/CN.9/WG.II/WP.104, remarks to draft article 12). In reaching this conclusion, the Working Group took into account that States considering the adoption of the draft Convention would need to weigh the potential inconvenience to the debtor of having to pay a different person against the advantage of increased availability of lower-cost credit to debtors and assignors, which could stimulate the economy at large.

87. Draft article 10 applies to any contractual clauses limiting the assignment in any way (and not only to clauses prohibiting assignment) but does not apply to statutory limitations to assignment or to limitations relating to the assignment of rights other than receivables (e.g. confidentiality clauses). As to statutory limitations, the Working Group considered the possibility of addressing them by validating the assignment, while allowing the debtor to discharge by paying in accordance with the original contract. Such an approach would allow the assignee to prevail over other creditors of the assignor in the case of assignor-default, while protecting the interests of the debtor. However, the Working Group was unable to reach agreement, since it could not find a way to distinguish between statutory limitations aimed at protecting the debtor (e.g. prohibiting the assignment of receivables owed by sovereign debtors) and statutory limitations aimed at protecting the assignor (e.g. prohibiting the assignment of wages).

88. The draft Convention, however, has already set aside statutory limitations to assignment to the extent that they refer to future receivables or to bulk assignments. Thus, the Working Group may wish to ensure, for example, that draft article 8 does not refer to future wages. In addition, the Working Group may wish to consider a limited rule dealing with statutory limitations aimed at protecting the debtor. Such a rule could, for example, validate an assignment as between the assignor and the assignee and as against third parties, but not as against the debtor. Moreover, the Working Group may wish to consider introducing the same rule for assignments of single receivables (which would normally be large-value receivables), in which a due-diligence test might not risk to increase the cost of credit. Such an approach might address the need to make, for example, assignments in loan syndications and participations subject to the consent of the debtor (for an analysis of possible approaches with regard to such practices, see A/CN.9/WG.II/WP.104, remarks 3-7 to draft article 4 and remark 1 to draft article 10).

Article 11. *Transfer of security rights*

References:

A/CN.9/432, paras. 127-130
A/CN.9/434, paras. 138-147
A/CN.9/445, paras. 232-235
A/CN.9/456, paras. 117-126

Commentary

89. Draft article 11 reflects the generally accepted principle that accessory security rights are transferred automatically with the receivables which they secure. The question of the accessory or independent character of the security right and the substantive or procedural requirements to be met for the creation of such a security right are left to the law governing that right. Draft article 11 does not attempt to specify the law applicable to security rights, in view of the wide range of rights it is intended to cover (including, e.g. guarantees, pledges and mortgages) and of the wide divergences existing among the various legal systems in this regard.

90. The provision also recognizes the right of the assignor and the assignee to agree that an accessory right is not transferred to the assignee and is thus extinguished. Such an agreement may reflect the lack of willingness on the part of the assignee to accept the responsibility and the cost involved in the maintenance and safekeeping of collateral (e.g. taxation and insurance costs in the case of real estate or storage and insurance costs in the case of equipment). Draft article 11 also creates an obligation for the assignor to transfer to the assignee any independent right securing payment of the assigned receivables as well as the proceeds of such a right. With regard to independent guarantees or stand-by letters of credit, this provision is based on the understanding that the right to demand payment from the guarantor/issuer is not a receivable. As a result, the rights of the guarantor/issuer are not affected by the assignment of the independent undertaking, while the assignee has a right in the proceeds, which is of particular importance in the case of insolvency of the assignor.

91. Paragraph (2) is intended to ensure that any anti-assignment clause agreed upon between the assignor and the debtor or other person granting a security right does not invalidate the assignment. Under paragraph (3), any liability that the assignor may have for breach of contract, under law applicable outside the draft Convention, is not affected but is not extended to the assignee (this approach is consistent with the approach taken in draft article 10). The underlying policy is that security rights should be treated with regard to anti-assignment clauses in the same way as receivables, since often the value relied upon by the assignee lies in the security right and not in the receivable itself. For example, in securitization in which receivables are assigned from the original creditor to a special purpose vehicle ("SPV") fully owned by the original creditor, the value relied upon by investors buying securities issued by the SPV and backed by the receivables might be in the guarantee of the assignor. However, in the case of sovereign third-party guarantors, in line with draft article 12, the anti-assignment clause renders the assignment ineffective but only as against the sovereign third-party guarantor.

92. Whether or not the transfer of a security right is prohibited by agreement, if the transfer involves transfer of possession of the collateral and such transfer causes damage to the debtor or the person granting the right, any liability that may exist under law applicable outside the draft Convention is not affected. Paragraph (4) envisages, for example, a transfer of pledged shares which might em-

power a foreign assignee to exercise the rights of a shareholder to the detriment of the debtor or any other person who might have pledged the shares.

93. Under paragraph (5), the requirements of the law applicable outside the draft Convention to the form of transfer of security rights are not affected. As a result, a notarized document and registration may be necessary for the effective transfer of a mortgage, while delivery of possession or registration may be required for the transfer of a pledge. The draft Convention is not intended to affect either any requirements as to the form of an assignment of receivables secured by a certain asset (e.g. registration of an assignment secured by real estate). However, if the Working Group includes a rule on the form of assignment, subjecting the form of the assignment to the law of the assignor's location (see secretariat suggestion in A/CN.9/WG.II/WP.104, remarks to chapter III), that rule would need to be aligned with paragraph (5) (e.g. by providing that the law of the assignor's location would govern form, unless the receivables are backed by a security right in which case the law governing that right would govern form).

Article 12. *Limitations relating to Governments and other public entities*

References:

A/CN.9/432, para. 117
A/CN.9/455, para. 48
A/CN.9/456, paras. 115 and 116

Commentary

94. Draft article 12 is intended to ensure that sovereign debtors are not affected by assignments made in violation of anti-assignment clauses contained in public procurement or other similar contracts. The Working Group decided to take this approach so as not to reduce the acceptability of the draft Convention to States that may not be able to protect their interests by way of a statutory limitation.

95. As a result of draft article 12, an assignment of receivables owed by a sovereign debtor is not effective as against the sovereign debtor who can continue paying in accordance with the original contract. In addition, the defences and rights of set-off of the sovereign debtor are not affected, whether they arise from the original contract or any other contract. However, the assignment remains effective as against the assignor and the assignor's creditors, which is of particular importance in the case of the insolvency of the assignor.

96. The exact scope of draft article 12, namely whether it is going to apply to assignments of receivables arising from contracts concluded by the central Government, the local authorities, publicly owned commercial entities or governmental authorities acting in a commercial capacity, remains to be determined by the Working Group (on this matter, as well as on the question of turning draft article 12 into a reservation, see the secretariat's suggestions in A/CN.9/WG.II/WP.104, remarks to draft article 12).

D. Working paper submitted to the Working Group on International Contract Practices at its thirty-first session: Commentary to the draft Convention on Assignment in Receivables Financing (Part II): note by the secretariat

(A/CN.9/WG.II/WP.106) [Original: English]

CONTENTS

INTRODUCTION

This document contains the second part of the commentary to the draft Convention on Assignment in Receivables Financing (the title of the draft Convention has not been adopted yet by the Working Group; see A/CN.9/WG.II/WP.104, remarks to the title and the preamble). The second part of the commentary begins where the first part ended, i.e. with draft article 13, and goes up to draft article 31 (the first part of the commentary is contained in document A/CN.9/WG.II/WP.105). The commentary on the final provisions and the annex, if retained (see A/CN.9/WG.II/WP.104, remarks to the annex), will be prepared after the adoption of the draft Convention as a whole by the Working Group.

CHAPTER IV. RIGHTS, OBLIGATIONS AND DEFENCES

Section I. Assignor and assignee

Commentary

1. Unlike the other provisions of the draft Convention which deal with assignment as a transfer of property rights in receivables, the provisions contained in this section deal with issues that are normally addressed in the contract of assignment or other agreement between the assignor and the assignee. The usefulness of these provisions lies in the fact that they recognize party autonomy and allocate risks in the absence of an agreement between the assignor and the assignee.

Article 13. *Rights and obligations of the assignor and the assignee*

References:

A/CN.9/432, paras. 131-144
A/CN.9/434, paras. 148-151
A/CN.9/447, paras. 17-24
A/CN.9/456, paras. 127 and 128

Commentary

2. The primary purpose of draft article 13 is to restate in the context of the relationship between the assignor and the assignee the principle of party autonomy, a principle already enshrined in general terms in draft article 6. The assignor and the assignee are free to structure their mutual rights and obligations so as to meet their particular needs. They are also free to incorporate into their agreement any rules or conditions by referring to them in a general manner, rather than reproducing them in their agreement. The conditions under which the parties may exercise their freedom and the relevant legal consequences are left to the law governing their agreement.

3. Inspired by article 9 of the United Nations Convention on Contracts for the International Sales of Goods (hereinafter referred to as "the United Nations Sales Convention"), draft article 13 also states in paragraphs (2) and (3) a principle that may not be recognized in all legal systems, namely that, in the interpretation of assignment contracts, trade usages and practices must be taken into account. Paragraph (2) draws a clear distinction between trade usages and practices to the extent that the former need to be agreed upon so as to bind the parties, while the latter are binding without a specific agreement unless parties agree not to be bound. Such usages and practices produce rights and obligations for the assignor and the assignee. They cannot bind, however, third parties, such as the debtor or creditors of the assignor. They cannot bind subsequent assignors or assignees either. All those parties would not be necessarily aware of usages and practices agreed upon by the initial assignor and the initial assignee.

4. In view of the fact that paragraph (1) recognizes party autonomy, parties would always have the right to agree otherwise as to the binding nature of practices established between themselves. The words "unless otherwise agreed", contained in paragraph (2), may, therefore, not be necessary. These words, which do not appear in article 9 (1) of the United Nations Sales Convention, had been initially included in paragraph (2), since, as opposed to the hierarchy of legal rules established in the United Nations Sales

Convention, the draft Convention prevails over the parties' agreement. After the limitation of paragraph (1) to the mutual rights and obligations of the assignor and the assignee, the rule about the prevalence of the draft Convention has been deleted and the reason for deviating from the wording of article 9 (1) of the United Nations Sales Convention has been eliminated.

5. Paragraph (3) defines the scope of the matters covered by an international usage. Under paragraph (3), international usages bind only the parties to international assignments. Such a limitation was not thought to be necessary in article 9 since the United Nations Sales Convention applies only to international sales. It was thought, however, to be necessary in draft article 13 in view of the fact that the draft Convention may apply to domestic assignments of international receivables. In addition, under paragraph (3), as under article 9 (2) of the United Nations Sales Convention, usages are applicable only to the relevant practice. This means that an international factoring usage cannot apply to an assignment in a securitization transaction. However, unlike draft article 9 (2) of the United Nations Sales Convention, paragraph (3) does not refer to the subjective, actual or constructive, knowledge of the parties but only to the objective requirements that the usages must be widely known and regularly observed. The Working Group felt that, while such a reference to the subjective knowledge of the parties might be useful in a two-party relationship, it would be inappropriate in a tripartite relationship, since it would be extremely difficult for third parties to determine what the assignor and the assignee knew or ought to have known.

Article 14. *Representations of the assignor*

References:

A/CN.9/420, paras. 80-88
A/CN.9/432, paras. 145-158
A/CN.9/434, paras. 152-161
A/CN.9/447, paras. 25-40
A/CN.9/456, paras. 129 and 130

Commentary

6. Representations undertaken by the assignor are intended to reduce the risk involved in a transaction as to whether the assignee will be able to collect the receivables from the debtor, if necessary (in an assignment by way of security, the assignee does not need to collect unless the assignor defaults and in securitization or undisclosed invoice discounting the assignor continues to collect from the debtor as an agent of the assignee). As a result, representations constitute a significant factor for the assignee to determine the amount of credit to be made available to the assignor and the cost of credit.

7. In view of their importance for the pricing of a transaction, representations are highly negotiated and explicitly settled between the assignor and the assignee. Recognizing this reality, draft article 14 enshrines the principle of party autonomy with regard to representations of the assignor. Such representations may stem from the financing contract, the contract of assignment (if it is a separate contract), or from any other contract between the assignor and the assignee. In accordance with draft article 13 (2) and (3), they may also stem from trade usages and practices.

8. In addition to recognizing the principle of party autonomy, draft article 14 is intended to set forth a default rule allocating risks between the assignor and the assignee in the absence of an agreement of the parties as to this matter. In the allocation of risks, the overall aim of draft article 14 is to counterbalance the need for fairness and the need to facilitate increased access to lower-cost credit. Fairness is served to the extent that draft article 14 reflects a balance often established by the agreement of the parties. Normally, in financing agreements the assignor guarantees the existence of the assigned receivable but not the solvency of the assignor. On the other hand, increased access to lower-cost credit is served in so far as, if the parties have not agreed on representations, in the absence of a rule along the lines of draft article 14, the risk of non-payment would be higher. This situation could defeat a transaction (if the risk is too high) or, at least, reduce the amount of credit offered and raise the cost of credit. To the extent that the assignor is able to pass the cost to the debtor, the assignor's goods or services would be more expensive or even inaccessible to the debtor.

9. Under paragraph (1), the assignor represents that it has the right to assign the receivable, it has not assigned it already and that the debtor does and will not have any defences. In view of the need for the assignee to be able to estimate the risk involved in a transaction before extending credit, paragraph (1) provides that the representations have to be made, and take effect, at the time of the conclusion of the contract of assignment. Such representations are considered as being given not only to the immediate assignee but also to any subsequent assignee. As a result, any subsequent assignee may turn against the assignor for breach of representations. If representations were considered as being undertaken only as against the immediate assignee, any subsequent assignee would have recourse only against its immediate assignor, a process that would increase the risk and thus the cost of transactions involving subsequent assignments.

10. Subparagraphs *(a)* to *(c)* introduce representations that could be broadly described as representations relating to "the existence" of the receivable (or its assignability). If the assignor does not have the power to assign, has already assigned, or has deprived the receivables of any value by improperly performing the contract with the debtor, the receivable does not "exist". In this regard, during the deliberations of the Working Group, the concern was expressed that, by allowing the parties to modify representations relating to the very existence of the assigned receivables, draft article 14 might run counter to good faith standards. In order to address that concern, the suggestion was made that draft article 14 should be deleted altogether, or should not be subject to party autonomy or, at least, should be made subject to modification only by way of an explicit agreement of the parties. However, the Working Group agreed to retain draft article 14 unchanged. It was widely felt that, while making business practice conform to good

faith standards is an important goal, this should not be at the expense of the parties' ability to agree on risk- and thus cost-allocation in financing transactions. As a result, it was agreed that party autonomy should not be restricted, while contract interpretation in the case of an implicit agreement should be left to the law governing the contract.

11. The assignor is in violation of the representation as to its right to assign, introduced in subparagraph *(a)*, if the assignor does not have the capacity or the authority to act, or if there is any statutory limitation on assignment. This approach is justified by the fact that the assignor is in a better position to know whether the assignor has the right to assign. However, the assignor is not liable for breach of representations if the original contract contains an anti-assignment clause. The Working Group decided that no explicit reference to that rule was necessary in subparagraph *(a)*, since it is implicit in draft article 10, under which the assignment is effective even if it is in breach of an anti-assignment clause.

12. The representation, contained in subparagraph *(b)*, that the assignor has not already assigned the receivable is aimed at holding the assignor accountable to the assignee if, as a result of a previous assignment by the assignor, the assignee does not have priority. This result may occur if the assignee has no objective way to determine whether a previous assignment has occurred. Subparagraph *(b)*, however, does not require the assignor to represent that it will not assign the receivables to another assignee after the first assignment. Such a representation would run counter to modern financing practice in which the right of the assignor to offer to different lenders parts of the same receivables as security for obtaining credit is absolutely essential. Such negative-pledge type of representation is normally part of certain exceptional transactions, such as subordination agreements by way of which claimants of the same receivables settle conflicts of priority.

13. Subparagraph *(c)* places on the assignor the risk of hidden defences or rights of set-off of the debtor that may defeat in whole or in part the assignee's claim. This provision is premised on the fact that, by performing its contract with the debtor properly, the assignor will be able to preclude such defences from arising. In particular in the context of the sale of goods in which service and maintenance elements are included, such an approach would result in a greater degree of accountability of the assignor for performing properly its contract with the debtor. The provision is also based on the assumption that, in any case, the assignor will be in a better position to know whether the contract will be properly performed, even if the assignor is just the seller of goods manufactured by a third person. In all those cases, there is no need that the assignor has actual knowledge of any defences.

14. Subparagraph *(c)* has a wide scope, encompassing defences and rights of set-off whether they have a contractual or non-contractual source and whether they relate to existing or to future receivables. It also covers rights of set-off arising from contracts unrelated to the original contract. With regard to representations relating to the absence of defences against future receivables assigned in bulk by way of security, the Working Group thought that the representation contained in subparagraph *(c)* properly reflects current practice. According to such practice, in bulk assignments of defence-free and defence-ridden receivables assignors normally receive credit only in the amount of those receivables that are not likely to be subject to defences, while they have to repay a higher amount. In addition, in the case of non-payment by the debtor, the assignor has to take back the receivables for which the assignee is not able to obtain payment from the debtor and replace them with other receivables or to pay back the price of the unpaid receivables ("recourse financing").

15. The legal consequences of a breach of representations by the assignor are left to law applicable outside the draft Convention. The Working Group considered, in particular, the question whether, in the case of breach of representations by the assignor, the receivables are automatically retransferred to the assignor or whether, in such a case, an act of retransfer is necessary. The practical importance of this question lies in the fact that, if the receivables that the assignee is not able to collect are automatically retransferred and the assignor has in the meantime become insolvent, the assignee may have a better chance of separating the price paid for the receivables from the insolvency estate or, at least, of being paid from the proceeds of the receivables before unsecured creditors. If, on the other hand, an act of transfer is needed and the assignor has become insolvent, the retransfer will not be accepted by the insolvency administrator. The Working Group decided not to deal with the legal consequences of a breach of representations, holding that this matter involves a breach of the financing contract or the contract of assignment (if it is a different contract) and should be left to the law governing that contract. Reasons cited by the Working Group in support of this approach include that: matters relating to the underlying financing contract are beyond the scope of the draft Convention; and, in any case, it would be very difficult for the Working Group to reach agreement on issues such as liability for breach of representations.

16. Paragraph (2) reflects the generally accepted principle that the assignor does not guarantee the solvency of the debtor. As a result, the risk of debtor-default is on the assignee, a fact that the assignee takes into account in determining whether to extend credit and on what conditions. Recognizing the right of the parties to financing transactions to agree on a different risk-allocation, with a view to pricing the transaction in a different way, paragraph (2) allows the assignor and the assignee to agree otherwise. Paragraph (2) also provides that such an agreement may be implicit or explicit. The question of what constitutes an implicit agreement is left to the contract interpretation rules of the law governing the contract.

Article 15. *Right to notify the debtor*

References:

A/CN.9/420, paras. 89-94 and 119-122

A/CN.9/434, paras. 162-165
A/CN.9/447, paras. 41-47
A/CN.9/456, paras. 131-144 and 193

Commentary

17. Draft article 15 deals with the question of who as between the assignor and the assignee has the right to notify the debtor and to request payment. It is not intended to address the conditions for a notification to be effective as against the debtor, which is dealt with in draft article 18, or the question of whom the debtor has to pay in order to obtain a valid discharge, which is dealt with in draft article 19, or other legal consequences of notification, dealt with in draft articles 20 and 22 (as to those matters, see para. 33).

18. The main objective of draft article 15 is to recognize the right of the assignee to notify the debtor and to request payment, without the cooperation or the authorization of the assignor. The Working Group recognized that, in some practices, it is normal for the assignor to notify the debtor at the time an assignment is made and to request that payment be made to the assignee (e.g. in factoring). At the same time, however, the Working Group was mindful of the fact that, in other practices, it was important for the assignee to be able to notify independently of the assignor, whether in the event of default or not. It was widely felt that, as a matter of principle, the assignee as the new creditor should have, as against the assignor, the right to notify the debtor and to request payment. The protection of the debtor against the risk of being notified and being asked to pay a potentially unknown person was thought to be a different matter which could be addressed by allowing the debtor in the case of notification by the assignee to request adequate proof (see paras. 47).

19. Granting the assignee an autonomous right to notify the debtor was considered to be practically important, in particular since the assignor might be unwilling or, in the case of insolvency, unable to cooperate with the assignee. Furthermore, it was thought that, at least in those legal systems in which priority was determined on the basis of the time of notification of the debtor, the assignor, acting in collusion with one claimant against the interests of another claimant, could determine the order of priority, unless each claimant had the right to notify the debtor independently of the assignor. The Working Group confirmed that the assignor may always notify the debtor independently of any assignee, even if such notification would constitute a breach of an agreement between the assignor and the assignee. It was widely felt that the debtor should be able to discharge its obligation as directed by the assignor in the notification and should not concern itself with the private arrangements existing between the assignor and the assignee (however, after notification of the assignment, the debtor is discharged by paying the assignee or as instructed by the assignee; see change to draft article 19 (2) suggested by the secretariat in A/CN.9/WG.II/WP.104, remark 8 to draft article 19).

20. With a view to accommodating non-notification practices, notification is formulated in paragraph (1) as a right and not as an obligation. In such practices, normally the debtor is not notified of the assignment and the assignor receives payment on behalf of the assignee. Draft article 15 is also intended to recognize practices in which the debtor keeps paying as before the assignment, while the assignor and the assignee agree on the control of the account or address (e.g. a post office box) to which payment is made. In those practices, in order to avoid any inconvenience to the debtor that might result in an interruption to the normal flow of payments, the debtor is either not notified at all or is notified and instructed to continue paying the assignor (such a notification is normally intended to preclude the debtor from acquiring rights of set-off after notification from contracts unrelated to the original contract). Only in exceptional situations (e.g. in the case of default), the debtor is notified and given different payment instructions (i.e. to pay the assignee or another person or to a different account or address).

21. While draft article 15 grants the assignee an autonomous right to notify the debtor and to request payment, it also recognizes the right of the assignor and the assignee to negotiate and agree on the matter of notification of the debtor so as to meet their particular needs. For example, the assignor and the assignee may agree that no notification would be given to the debtor as long as the flow of payments is not interrupted (as, e.g. in undisclosed invoice discounting). In order to ensure that there is no need for a specific agreement, the opening words of paragraph (1) are formulated in a negative way (“unless otherwise agreed”).

22. The definition of “notification” contained in draft article 5 does not include any reference to the identification of the payee and draft article 15 makes separate reference to notification and request of payment. This approach is intended to recognize the difference, both in purpose and in time, between a notification and a payment instruction and to validate practices in which notification is given without any payment instructions. Under this approach, a mere notification of an assignment is valid for the purpose of cutting off the debtor’s rights of set-off arising from contracts unrelated to the original contract, as well as for the purpose of changing the way in which the assignor and the debtor may amend the original contract. However, in order to avoid complicating the debtor’s discharge, the Working Group decided not to define “payment instruction” nor to base the debtor’s discharge on the receipt of a payment instruction. Under paragraph (1), a payment instruction may be sent either by the assignor with the notification or, subsequent to a notification, by the assignee. Paragraph (1), unlike draft article 19, refers to the time notification is “sent” (and not “received”), since neither the assignor nor the assignee has a way to assess the time of receipt. That matter may be important for the discharge of the debtor, dealt with in draft article 19, but not for the determination of who as between the assignor and the assignee has the right to give a payment instruction.

23. Paragraph (2) deals with the effectiveness of a notification given in breach of an agreement between the assignor and the assignee. The rule, introduced in the first sentence of paragraph (2), is that, if notification is given in violation of such an agreement and the debtor pays, the debtor is discharged (as this is a matter of the debtor’s discharge, the Working Group may wish to consider moving the first sentence of paragraph (2) to draft article 19; see A/CN.9/WG.II/WP.104, remarks to draft article 15). Whether the person violating such an agreement is liable for breach of contract, under law applicable outside the draft Convention, is a separate matter and should not affect the discharge of the debtor, who is not a party to that agree-

ment. A notification given in violation of an agreement between the assignor and the assignee, however, does not: cut off any rights of set-off of the debtor from contracts unrelated to the original contract (draft article 20); trigger a change in the way the assignor and the debtor may amend the original contract (draft article 22); or create a basis for the determination of priority under the law applicable to priority issues (draft articles 24-26). The Working Group thought that such results would give an undue advantage to the assignee who wrongfully notified the debtor. The negative formulation in paragraph (2) "is not ineffective" is intended to ensure that the mere violation of an agreement between the assignor and the assignee, on the one hand, does not invalidate the notification for the purpose of debtor-discharge, but, on the other hand, does not interfere with contract law as to the conditions required for such an agreement to be effective.

Article 16. *Right to payment*

Commentary

24. Draft articles 2, 8 and 15 establish, as between the assignor and the assignee, the assignee's right to request payment. It is, therefore, subject to the general principle of party autonomy embodied in draft article 6 and is formulated as a default rule applicable in the absence of an agreement between the assignor and the assignee. It is also subject to the debtor-protection and the priority provisions of the draft Convention. While draft article 16 does not define proceeds, it is formulated in a broad way so as to encompass both proceeds of receivables and proceeds of proceeds, as well as payment both in cash and in kind, e.g. returned goods (for a suggestion to define "proceeds" and to refer to "payment or other discharge", see A/CN.9/WG.II/WP.104, remark 1 to draft article 16).

25. The assignee's right in proceeds is independent of any notification of the assignment. The reason for this approach is the need to ensure that: if payment is made to the assignee before notification, the assignee may retain the proceeds of payment; and if payment is made to the assignor after notification (which does not discharge the debtor's debt), the assignee would have a right in such payments. Such a right is of particular importance, if the assignor or the debtor becomes insolvent. If payment is made to the assignor after notification, in principle, the assignee could claim payment from the assignor, under draft article 16 (1) *(b)*, or from the debtor, under draft article 19 (2). In practice, however, the assignee would not claim a second payment from the debtor, unless the assignor has become insolvent. In such a case, any claim that the debtor might have against the estate of the insolvent assignor (e.g. on the basis of the principles of unjust enrichment) would normally be meaningless, since it is unlikely that claimants with personal claims would be able to obtain payment. However, this result is appropriate in that the debtor, who pays the assignor after notification, takes the risk of having to pay twice.

26. Draft article 16 covers the situations in which payment has been made to the assignee, the assignor or another person. In the latter case, the assignee's right is subject to priority. In this context, the Working Group decided not to make a broad reference to any "superior right under applicable law" which would encompass the right of a depositary institution in payments received in good faith. The Working Group thought that the assignee should not be able to claim from the depositary institution such payments received in good faith and commingled with other assets (for a suggestion to clarify in paragraph (2) that the right to claim payment from a third person is a right as between the assignor and the assignee which is subject to party autonomy, see A/CN.9/WG.II/WP.104, remark 2 to draft article 16).

27. Under paragraph (2), while the assignee may claim all the proceeds of payment, it may only retain an amount equal to the amount owed plus any interest (the assignor's right to interest may need to be addressed explicitly; see A/CN.9/WG.II/WP.104, remark 3 to draft article 16). This approach is intended to reflect normal practice in assignments by way of security, under which the assignee may have the right to collect the full amount of the receivable but has to account for and return to the assignor or its creditors any balance remaining after payment of the assignee's claim. The Working Group may wish to reconsider whether the expression "value of its right" adequately reflects the intent of paragraph (2).

28. As to the interplay between draft articles 12 and 16, it should be noted that the sovereign debtor could discharge its debt by paying the assignor, while the assignee would have a right to claim the proceeds of payment from the assignor. The question whether that right is a right in rem or ad personam is left to the law applicable to priority.

Section II. Debtor

Article 17. *Principle of debtor protection*

A/CN.9/456, paras. 21, 81 and 168-176

Commentary

29. The primary goal of any assignment-related law may be to strike an appropriate balance between, on the one hand, the need to allow parties to mobilize their receivables for the purpose of obtaining credit and services and, on the other hand, to ensure that the legal position of the debtor is not adversely affected. In order to highlight the importance of the need to protect the debtor in a prominent manner, the Working Group decided to include a reference in the preamble and a general statement of this principle of para-

mount importance for the draft Convention in draft article 17. The debtor-protection principle finds more specific application in the provisions of section II of chapter IV. It is also the reason for the requirement contained in draft article 1 (3) that, for the provisions of the draft Convention that affect the debtor's rights and obligations to apply (i.e. chapter III and section II of chapter IV), the debtor needs to be in a Contracting State. The same principle is the reason for the limitation of the right of the assignor and the assignee to opt out of the draft Convention as a whole (draft article 6). Such an opting out could set aside the debtor-protection system introduced by the draft Convention. The need to introduce a special protection for sovereign debtors is also the underlying policy in draft article 12. Draft article 28, subjecting a number of debtor-related issues to the law governing the receivable is also a special application of the general principle enshrined in draft article 17. This law will be the law governing the original contract, which is likely to be the law chosen by the assignor and the debtor at the time they undertook their original obligations.

30. The basic rule of paragraph (1) is that the draft Convention is not intended to adversely affect the debtor's rights and obligations. The draft Convention is, in particular, not designed to change the payment terms stipulated in the original contract (e.g. the amount owed, the time and the place of payment). There are three exceptions to this basic rule. First, the debtor may negotiate with the assignor or the assignee and agree to waive its defences or rights of set-off. Such an agreement may allow the debtor to obtain a benefit, such as a higher amount of credit, a longer repayment period or a lower interest rate. Draft article 21 deals with such an agreement between the assignor and the debtor and introduces certain limitations. It does not deal, however, with waivers of defences agreed upon by the assignee and the debtor, which are left to other law. Whether a waiver of defences is to be construed as a consent or confirmation of the debtor's consent to the assignment is also left to other law (see para. 56).

31. The second exception lies in those provisions of the draft Convention that do affect the debtor's legal position. Those provisions include: draft article 10 (an assignment is effective even if it is made despite the existence of an anti-assignment clause); draft article 19 (after notification, the debtor may discharge its obligation by paying as instructed in the notification or in a subsequent payment instruction given by the assignee); draft article 20 (2) (after notification, the debtor may not raise against the assignee any right of set-off arising from contracts unrelated to the original contract); draft article 20 (3) (the debtor may not raise against the assignee any claim for breach of an anti-assignment clause by the assignor); draft article 22 (after notification, the debtor's right to modify the original contract without the consent of the assignee is limited); and draft article 23 (the debtor cannot recover from the assignee any payments despite the fact that the assignor may have failed to perform; the debtor will have to recover such payments from the assignor and thus bear the risk of insolvency of its contractual partner).

32. The third exception to the rule established in paragraph (1) is contained in paragraph (2). Under paragraph (2), a payment instruction, whether given with the notification or subsequently, may change the person, address or account to which payment is to be made. However, a payment instruction may not change the currency of payment. It may not change the country of payment either, unless the change is beneficial to the debtor and results in payment being allowed in the country in which the debtor is located. Such a change of the country of payment is often allowed in factoring contracts with a view to facilitating payment by debtors.

Article 18. *Notification of the debtor*

Commentary

33. As already mentioned (para. 17), the draft Convention deals with the various aspects of notification of assignment in several articles. Draft article 5 *(f)* defines notification for the purposes of the draft Convention. Draft article 15 deals with notification as a right of the assignor and the assignee. Draft article 18 addresses notification issues that are relevant to the legal position of the debtor in general. It also refers to a payment instruction, which, while not defined in the draft Convention, is generally described in draft article 17 (2). Draft articles 19, 20 and 22 deal with the legal consequences of notification.

34. The primary purpose of draft article 18 is to restate the "receipt rule", i.e. that a notification and a payment instruction become effective when received by the debtor. The main reason for the adoption of this rule by the Working Group is that a notification, whether accompanied by a payment instruction or not, has significant consequences for the legal position of the debtor (it triggers a change in the way in which the debtor may discharge its debt, it cuts off rights of set-off arising from contracts unrelated to the original contract and it changes the way in which the debtor may amend the original contract in agreement with the assignor). Such consequences may occur only when a notification or a payment instruction is in a language that is "reasonably expected to inform the debtor about its contents". For example, when the notification is in electronic form and is not readily readable, the debtor should be able to decode it easily. In order to avoid creating uncertainty, paragraph (1) introduces a " safe harbour" rule, according to which the language of the original contract meets the required standard.

35. Upon receipt of a notification, if the debtor is not prepared to accept any change that may result from an assignment, the debtor, knowing that it will not be able to accrue additional rights of set-off, may avoid to enter into further contractual relationships with the assignor. In ex-

ceptional cases, in which the assignment is a fundamental breach of an anti-assignment agreement, the debtor may even be able to avoid the original contract. However, such a radical remedy should be exercised only when an assignment results in extreme hardship to the debtor. Otherwise, the risk of the contract being avoided might in itself have a negative impact on the cost and the availability of credit (see para. 50; see also A/CN.9/WG.II/WP.105, para. 86). In order to avoid this result, the Working Group may wish to consider clarifying in draft article 10 that any relief available to the debtor against the assignor for breach of an anti-assignment clause would be limited to a claim for compensatory damages (or that the debtor may not declare the original contract avoided on the sole ground that the assignor violated an anti-assignment clause). This result could be obtained anyway, since draft articles 10, 20 (3) and 22 could be construed as precluding such a radical remedy, at least after notification of the assignment. Allowing the debtor to declare the contract avoided on the sole ground of the violation of an anti-assignment clause would run counter to the principle that the assignment is effective even if it is made in violation of an anti-assignment clause and to the principle that, in such a case, the debtor may not raise against the assignee any claim it might have against the assignor for breach of contract. In addition, if the minimum, i.e. a modification of the original contract, is not allowed after notification of the debtor without the consent of the assignee, the maximum, i.e. the cancellation of the contract, could not be allowed either.

36. Under paragraph (2), a notification may relate to future receivables. This rule is of paramount importance. If a notification or a payment instruction relating to future receivables could not be effectively given, the debtor could refuse to pay the assignee despite a notification or a payment instruction. Furthermore, if the law applicable to priority issues under draft articles 24 to 26 settles priority conflicts on the basis of the time of notification, assignees would not be able to effectively notify the debtor and thus to establish priority as to future receivables (see para. 78). Such a result could virtually defeat the availability of credit on the basis of future receivables.

37. The Working Group considered the question whether, in order to protect the assignor against the risk of being deprived of all its receivables, the effectiveness of a notification relating to future receivables should be limited to a fixed period of time, which could possibly be extended by way of a second notification. The Working Group decided not to introduce such a limitation. It was thought that such restrictions were a matter for the financing contract, with which the draft Convention should avoid any interference. It was also considered that any fixed time period would be arbitrary and disruptive of commercial practices based on long-term relationships. In particular in long-term contracts, a requirement for the renewal of a notification at the expiry of a fixed period could be overly burdensome both for the assignee and the debtor. The assignee would find it difficult to establish the date of receipt of the notification by the debtor, when the fixed time period would start running. The debtor would be overly burdened with the obligation to verify the date in the past when notification had been received in order to assess whether it could obtain a discharge by paying the assignee.

38. Paragraph (3) is one of the most important provisions of the draft Convention, in particular for international factoring transactions. In such transactions, the assignor normally assigns the receivables to an assignee in its own country (export factor) and the export factor subsequently assigns the receivables to an assignee in the debtor's country (import factor). Under such an arrangement, collection from the debtor is facilitated to the extent that the import factor is able to take all the necessary measures for the second assignment to be effective as against the debtor. The efficient operation of such transactions is based on the assumption that the first assignment is also effective as against the debtor. In view of the fact that the debtor is normally notified only of the second assignment, it is essential to ensure that that notification of the second assignment covers the first assignment as well. Otherwise, the first assignment might be rendered ineffective as against the debtor, a situation which might affect the effectiveness of the second assignment as well. In order to address situations in which more than one subsequent assignment is made, paragraph (3) provides that a notification covers any prior, and not only the immediately preceding, assignment (as to the issue of discharge of the debtor in the case of several notifications relating to subsequent assignments, see para. 45).

Commentary

39. Draft article 19 has a twin goal, to provide a clear mechanism for the discharge of the debtor's obligation by payment and to ensure payment of the debt. It is not intended to deal with the discharge of the debtor in general or with the payment obligation as such, since that obligation is subject to the original contract and to the law governing that contract. The basic rule is that, until the debtor receives notification of an assignment, it may be discharged by paying in accordance with the original contract, while, after notification, discharge is obtained only by payment in accordance with the instructions given by the assignor or by the assignee with the notification, or subsequently by the assignee. Draft article 19 deals also with a number of particular situations in which: several notifications are involved; the debtor is notified by the assignee and is in doubt as to whether the assignee is the rightful claimant; discharge by payment under law applicable outside the draft Convention; and discharge by payment in the case of an assignment that is null and void.

40. Under paragraph (1), until the time of receipt of a notification, the debtor is entitled, not obliged, to discharge by paying in accordance with the original contract (i.e. by paying the assignor or another person or to an account or

address indicated in the original contract). In view of the fact that the assignment is effective as of the time of the conclusion of the contract of assignment, the debtor, having knowledge of the assignment, may choose to discharge its debt by paying the assignee. However, in such a case the debtor takes the risk of having to pay twice, if it is later proven that no assignment took place. The Working Group decided not to refer explicitly to the possibility of the debtor being able to pay either the assignor or the assignee in order to avoid undermining practices, such as securitization, in which the debtor is normally expected to continue paying the assignor (however, the problem may not be resolved in this way; for the secretariat's suggestion in this regard, see A/CN.9/WG.II/WP.104, remark 1 to draft article 19). The reference to payment "in accordance with the original contract", rather than to payment to the assignor, is intended to preserve the right of the assignor and the debtor to agree to any type of payment suitable to meet their needs (e.g. payment to a bank account without identification of the account owner, or payment to a third person).

41. The Working Group considered at some length the question whether knowledge of an assignment should be treated as a notification and trigger a change in the way in which the debtor could discharge its obligation. It was argued that it would run counter to good faith to allow the debtor to discharge its debt by paying the assignor, in particular if the debtor had actual knowledge of the assignment, or by paying the assignee, in particular if the debtor knew that someone else had a superior right. The Working Group decided that knowledge of an assignment should not affect the discharge of the debtor. It was widely felt that, while making business practice conform to good faith standards is an important goal, this should not be at the expense of certainty. Certainty would be reduced if knowledge of the assignment were to trigger a change in the way in which the debtor could discharge its obligation. In such a case, the assignor or the person with a superior right, who would not be in control of the relevant evidence, would need to establish what the debtor knew. If the burden of proof were to be placed on the debtor, the debtor would not be able to obtain a valid discharge unless it was able to establish that it had no knowledge of the assignment. In such a case, it would need to be determined what constitutes knowledge (e.g. general knowledge of the fact that an assignment took place or knowledge of the details of the assignment, such as the exact amount of the receivables assigned and, in the case of an assignment by way of security, of the debt secured). This process would be particularly cumbersome in the case of several conflicting assignments. As a result, the certainty necessary in a debtor-discharge rule would be seriously compromised. The Working Group also took into account that in certain cases (e.g. in securitization and undisclosed invoice discounting) it is normal business practice for the debtor to continue paying the assignor even though the debtor knows of the assignment, since the assignee does not have the business structure necessary to receive payments.

42. The Working Group also considered the question whether the nullity (e.g. for fraud or duress or lack of capacity to act) or the knowledge of the nullity of an assignment should be taken into account in the debtor's discharge. At an early stage in its work, the Working Group considered a provision, according to which the debtor should be able to discharge its obligation even if any of the assignments in a chain of assignments was null and void (A/CN.9/WG.II/WP.96, draft article 27). It was thought that the debtor should not be exposed to the risk of having to pay twice merely because parties unknown to the debtor chose to engage in subsequent assignments. Ultimately, the Working Group decided that the issue of payment to a person the assignment to whom was null and void arose only in exceptional situations and could be left to law applicable outside the draft Convention (this is the thrust of draft article 19 (8); for the secretariat suggestions with regard to this matter, see A/CN.9/WG.II/WP.104, remarks 6-8 to draft article 19).

43. Unlike paragraph (1), paragraph (2) does not allow the debtor a choice as to how to discharge its debt. After notification, the debtor can only discharge its obligation by paying the assignee or as instructed by the assignee. The reference to payment instructions is intended to address the needs of various practices. The assignee may, for example, notify the debtor, so as to freeze the debtor's rights of set-off, without requesting payment or requesting the debtor to continue paying the assignor (this is the case, e.g. with undisclosed invoice discounting or securitization). The Working Group may wish to explicitly state in paragraph (2) what is already stated in draft article 15 (1), namely that such instructions may be given by the assignor or the assignee with the notification or only by the assignee subsequent to a notification (see A/CN.9/WG.II/WP.104, remark 8 to draft article 19).

44. Paragraphs (3) and (5) are intended to provide simple and clear discharge rules in the case of several notifications. Paragraph (3) deals with situations in which the debtor receives several notifications relating to more than one assignment of the same receivables by the same assignor ("duplicate assignments"). Such situations do not necessarily involve fraud. They may, for example, involve several assignments of different parts of the receivables by way of security, in which the main issue is who will obtain payment first (i.e. who has priority). Having agreed that the assignment should not adversely affect the legal position of the debtor, the Working Group drew a clear distinction between the issue of the debtor's discharge and the issue of priority. Thus, payment under paragraph (3) in accordance with the first notification discharges the debtor, even if the person receiving payment does not have priority. The underlying rationale is that it would be unfair and inconsistent with the policy of debtor protection to require the debtor to determine who among several claimants has priority and that the debtor pays a second time if it pays the wrong person. The debtor would most likely have a cause of action against that person, but the debtor's rights may be frustrated if that person becomes insolvent. The risk of insolvency of the debtor receiving payment should be on the various claimants of the receivables and not on the debtor. Such claimants would have to settle among themselves their rights in the proceeds of payment in accordance with the law governing priority under the draft Convention.

45. Paragraph (5) deals with notifications relating to more than one subsequent assignment. Such situations are rare in

practice, since normally only the last in a chain of assignees notifies the debtor and requests payment. In any case, in order to avoid any uncertainty as to how the debtor may discharge its debt, paragraph (5) provides that the debtor has to follow the instructions contained in the notification of the last assignment in a chain of assignments. For that rule to apply, the notifications received by the debtor have to be readily identifiable as notifications relating to subsequent assignments. Otherwise, the rule contained in paragraph (3) would apply and the debtor would be discharged by payment in accordance with the first notification received. In any case, under paragraph (6), the debtor, if in doubt, could request adequate proof from the assignees notifying (for a secretariat suggestion that, until such proof is offered, the debtor could discharge its debt by paying the assignor, see A/CN.9/WG.II/WP.104, remark 2 to draft article 19). If the debtor receives several notifications relating to several assignments of the same receivables by the same assignor and to subsequent assignments, under a combined application of paragraphs (3) and (5), the debtor is discharged by paying in accordance with the first notification of the last assignment.

46. Paragraph (4) is intended to ensure that the assignee may change or correct its payment instructions. Whether the debtor is notified by the assignor or the assignee, if a new payment instruction is sent with regard to one and the same assignment, the debtor may discharge its debt only in accordance with that instruction. The only condition is that, in line with the policy underlying draft article 15 (1), that payment instruction, which is given subsequent to the notification, has to be given by the assignee, who is the only person entitled to dispose of the receivables. In order to protect the debtor against the risk of having to pay twice, paragraph (4) expressly provides that a payment instruction received by the debtor after payment is to be disregarded.

47. Under draft article 15, notification may be given by the assignor or by the assignee independently of the assignor. As a result, the debtor receiving notification of the assignment from a possibly unknown person may be in doubt as to whether that person is a legitimate claimant, payment to whom would discharge the debtor. In order to protect the debtor from uncertainty as to how to discharge its debt in such cases, paragraph (6) gives the debtor a right to request the assignee to provide adequate proof of the assignment within a reasonable period of time. Paragraph (6) does not introduce an obligation of the debtor, since requesting additional proof in all cases would unnecessarily delay payment and add to the cost of the notification. The determination of what constitutes "adequate" proof and "reasonable" period of time is a matter of interpretation for the courts or arbitral tribunals taking into account the particular circumstances. The Working Group thought that the flexibility introduced with these terms was necessary, since no rule could be found which would be suitable for all possible cases. In addition, in order to avoid any uncertainty that might ensue as a result of the use of these terms, the Working Group decided to include a "safe harbour" rule, according to which a written confirmation from the assignor constitutes adequate proof.

48. The notification does not trigger the obligation to pay, which remains subject to the original contract and the law applicable thereto. This means that the debtor does not have to pay upon notification and does not owe interest for late payment while it awaits the adequate proof requested. If, however, the debt becomes payable within that period in accordance with the original contract, the question arises whether the payment obligation is suspended until the debtor receives such proof and has a reasonable time to assess it and act thereon. If the payment obligation is not suspended, the significance of the protection afforded to the debtor by paragraph (6) may be reduced to the extent that the debtor delaying payment, even for good reasons, would have to pay interest. The Working Group proceeded on the understanding that the payment obligation would be suspended in such cases, but chose not to include any explicit wording in paragraph (6), since that result could be reached without any explicit wording anyway and any additional wording could inadvertently interfere with national law on interest. The Working Group may wish to reconsider this approach. Any uncertainty as to this matter might reduce the usefulness of paragraph (6). It may be preferable to explicitly state that the payment obligation is suspended. In order to avoid suspension of payment which could disadvantage both the assignor and the assignee, the Working Group may wish to consider that, if the debt becomes payable during the period when the debtor awaits proof of the assignee from the assignee, the debtor should discharge its debt by paying the assignor (see A/CN.9/WG.II/WP.104, remark 2 to draft article 19).

49. Paragraph (7) is intended to ensure that draft article 19 does not exclude other ways of discharge of the debtor's obligation that may exist under national law applicable outside the draft Convention. However, paragraph (7) may inadvertently result in a debtor ignoring a notification given under the draft Convention (e.g. because it relates to future receivables, which may not be allowed under other law) and paying someone else in accordance with other law. For that reason, the Working Group may wish to consider validating payment under other law only if it is made to a legitimate assignee under the draft Convention, while limiting recourse to payment into court and the like to cases involving several notifications (see A/CN.9/WG.II/WP.104, remarks 3-5 to draft article 19) and, possibly, notification by the assignee. If such an approach were to be followed, paragraph (8) may not be necessary, since, if the debtor, being notified by the assignee, is in doubt as to the validity of an assignment, it could discharge its debt by paying into court.

Article 20. *Defences and rights of set-off of the debtor*

Commentary

50. Draft article 20 is another particular application of the general principle that the debtor's legal position should not

be unduly affected as a result of the assignment. The debtor has against the assignee all the defences and rights of set-off that the debtor could raise against the assignor. What those defences and rights of set-off are is a matter not addressed in the draft Convention but left to other law.

51. Under paragraph (1), the debtor may raise against the assignee all the defences that arise from the original contract, without any limitation, including: contractual claims, which, in some legal systems, might not be considered "defences"; rights for contract avoidance, e.g. for mistake, fraud or duress; exemption from liability for non-performance, e.g. because of an unforeseen impediment beyond the control of the parties; and counter-claims under the original contract. Such defences and rights of set-off may be raised irrespective of whether they are available at the time of notification of the assignment or become available only after such notification. The Working Group may wish to consider the question whether rights of set-off arising from contracts between the assignor and the debtor that are closely related to the original contract (e.g. a maintenance or other service agreement supporting the original sales contract) should be treated in the same way as rights of set-off arising from the original contract.

52. Paragraph (2) introduces a time limitation with regard to rights of set-off arising from any source other than the original contract, i.e. a separate contract between the assignor and the debtor, a rule of law (e.g. a tort rule) or a judicial or other decision. Such rights may not be raised against the assignee if they become available after notification of the assignment. The rationale underlying this rule is that the rights of a diligent assignee who notifies the debtor should not be made subject to rights of set-off arising at any time from separate dealings between the assignor and the debtor or other events, of which the assignee could not be reasonably expected to be aware. On the other hand, the interests of the debtor are not unduly affected, since, if the fact that the debtor cannot accumulate rights of set-off constitutes an unacceptable hardship for the debtor, the debtor can avoid entering into new dealings with the assignor (as to the question whether the debtor could declare the original contract avoided, see para. 35). In view of the above-mentioned rationale of paragraph (2), rights of set-off arising from separate contracts between the debtor and the assignee are not affected. Such rights can be asserted against the assignee even after notification of the assignment, like rights of set-off arising from the original contract. It should also be noted that a notification results in freezing the debtor's rights of set-off, whether it contains a payment instruction or not. This approach is intended to accommodate practices in which a bare notification is given for the purpose of exactly precluding the debtor from accruing rights of set-off from acts or omissions of the assignor that are beyond the assignee's control, while the debtor is expected to continue paying the assignor. As a result of draft article 12, according to which an assignment made despite an anti-assignment clause would be ineffective as against a sovereign debtor, draft article 20 would not affect the rights of a sovereign debtor.

53. The Working Group considered a suggestion to elaborate on the meaning of the term "available" by stating that a defence or right of set-off cannot be excluded if at the time of notification it is "actual and ascertained". That suggestion was not adopted since it would result in limiting inappropriately the rights of set-off available to the debtor to those that were quantified at the time of the notification. In order to avoid leaving the matter completely unresolved, the Working Group also considered various suggestions as to the law applicable to rights of set-off. Reference was made to the law governing the receivable and to the law of the assignor's location. The Working Group may wish to consider referring instead, at least with regard to contractual rights of set-off, to the law governing the contract from which the right of set-off might arise (see A/CN.9/WG.II/WP.104, remarks 1-2 to draft article 28).

54. Paragraph (3) is intended to ensure that the debtor may not raise against the assignee by way of defence or set-off the breach of an anti-assignment clause by the assignor. The debtor may have a cause of action against the assignor, if, under law applicable outside the draft Convention, the assignment constitutes a breach of contract which results in a loss to the debtor. However, the mere existence of an anti-assignment clause is not a violation of the representation contained in draft article 14 (1) *(a)*. In the absence of a provision along the lines of paragraph (3), draft article 10 (3), holding the assignee harmless for breach of contract by the assignor, could be deprived of any meaning.

Article 21. *Agreement not to raise defences or rights of set-off*

Commentary

55. In order to obtain more value for their receivables and at a lower cost, assignors normally guarantee as against assignees the absence of defences and rights of set-off by the debtor. Recognizing this practice, draft article 14 (1) *(c)* provides that such a guarantee exists even in the absence of an agreement between the parties in this regard. In practice, if such representations cannot be given and the receivables are likely to be subject to defences, such receivables are either not accepted by assignees, or are accepted at a significantly reduced value or are accepted only on a recourse basis (i.e. if the assignee cannot collect from the debtors, it has the right to return the receivables to and collect from the assignor). In order to avoid those adverse effects, assignors, as a matter of practice, negotiate with debtors waivers of the defences and rights of set-off that debtors may raise against any future assignee. On the basis of such waivers, assignees determine the credit terms offered to assignors, which in turn are likely to affect the credit terms assignors offer to debtors.

56. With a view to allowing assignors to obtain lower-cost credit, draft article 21 validates such waivers of defences and rights of set-off. Furthermore, in order to avoid uncertainty as to the legal consequences of a waiver and that a court may override it as being unfair to the debtor, paragraph (1) states what may appear obvious in some legal systems, namely that a waiver precludes the debtor from raising defences and rights of set-off against the assignee. In recognition of the fact that in practice a waiver may be agreed upon at the time of the conclusion of the original contract, as well as at an earlier or later time, paragraph (1) does not make specific reference to the point of time at which a waiver may be agreed upon. Paragraph (1) does not make explicit reference to the acceptance of an assignment by the debtor operating as a waiver or as a confirmation of a waiver either. The matter is left to other law. Paragraph (1) does not require either that the defences are known to the debtor or are explicitly stated in the agreement by which the defences are waived. The Working Group thought that such a requirement would introduce an element of uncertainty, since the assignee would need to establish what the debtor knew or could have known in each particular case.

57. While aimed at facilitating increased access to lower-cost credit, which is in the interest of trade in general, draft article 21 does not neglect the protection of the debtor. In order to protect debtors from undue pressure by creditors so as to waive their defences, paragraph (2) introduces reasonable limitations with respect to such waivers of defences. Such limitations refer to the form in which such waivers can be made, to certain types of debtors and to certain types of defences. In view of the fact that the scope of paragraph (1) is limited to waivers agreed upon by the assignor and the debtor, the limitations contained in paragraph (2) do not apply to waivers agreed upon by the debtor and the assignee. The Working Group thought that the draft Convention should not limit the debtor's ability to negotiate with the assignee in order to obtain a benefit, such as a lower interest rate or a longer payment period. At the same time, the Working Group also thought that, in view of the fact that agreements between assignees and debtors are outside the scope of the draft Convention, the draft Convention should not empower the debtor to negotiate waivers with assignees, if, under the law applicable, the debtor would not have such a power.

58. Paragraph (1) introduces further limitations. A waiver cannot be a unilateral act or an oral agreement; it has to take the form of a signed written agreement, so as to ensure that both parties are well informed about the fact of the waiver and its consequences, including the benefits offered to the debtor in return, and to facilitate evidence. In addition, a waiver cannot override the consumer-protection law prevailing in the country in which the debtor has its location (which in this context is to be understood as the place of business). In order to avoid terminological and other differences existing among the various legal systems, paragraph (1) refers to debtors in transactions for "personal, family or household purposes". Such reference is qualified by the term "primarily", so as to ensure that the limitation would apply only to transactions for purely consumer purposes (i.e. transactions between consumers) and not to transactions for both consumer and commercial purposes (i.e. transactions between a consumer and a business entity). The Working Group may wish to reconsider this approach. It would appear to be consistent with the purpose of protecting consumer debtors to apply this provision to a transaction serving consumer purposes with respect to one party and commercial purposes from the perspective of the other party (the same would be true in the context of draft article 23 but not in the context of draft article 4; see para. 70 and A/CN.9/WG.II/WP.105, para. 43).

59. Moreover, under paragraph (2), a waiver cannot relate to defences arising from fraudulent acts committed by the assignee. Such a result would run counter to basic good faith standards. With a view to protecting an assignee who accepts an assignment in good faith, the Working Group decided not to apply the same limitation to defences relating to fraud by the assignor. If the debtor could not waive such defences, the assignee would have to investigate in order to ensure that no fraud was committed by the assignor in the context of the original contract. The limitation under paragraph (2), however, applies not only to defences relating to fraud by the assignee alone but also to defences relating to fraud by the assignee in collusion with the assignor. In this context, the Working Group considered other defences that should not be waived. In order to accommodate certain export transactions, the Working Group decided that the defence relating to the invalidity of the original contract should be made subject to a waiver. As to defences against the protected holder of a negotiable instrument, relating to signature requirements and agency (article 30 (1) *(c)* of the United Nations Convention on International Bills of Exchange and International Promissory Notes), the Working Group thought that no parallel should be drawn between a receivable and a negotiable instrument. Such a parallelism would not be in line with draft article 4 (1) *(b)* which excluded the transfer of instruments by endorsement and delivery or by mere delivery. It would also be inconsistent with the will of the parties who chose not to incorporate their receivables into a negotiable instrument.

60. In line with paragraph (1), paragraph (3) requires for the modification of a waiver the form of a signed written agreement. Parties need to be warned of the legal consequences of such a modification, which should be easily proven, if necessary. With a view to ensuring that a modification, which may be agreed upon by the assignor and the debtor, does not affect the rights of the assignee, paragraph (3) subjects a modification to the procedure foreseen in draft article 22 (2) for the modification of the original contract after notification of the assignment (i.e. to actual or constructive consent by the assignee; see para. 65).

Article 22. *Modification of the original contract*

Commentary

61. The modification of the original contract is an issue that arises frequently in practice. A modification may be necessary for various reasons. For example: a substantial change in the main circumstances under which the contract was concluded may make it unfair for the assignor to deliver the goods as promised; equipment or materials different from the ones agreed may be necessary in the construction of a project; or a change in the general circumstances may require an extension of the deadline for payment agreed upon in the original contract. To the extent that such contract modifications raise issues relating to rights and obligations as between the assignor and the debtor or as between the assignor and the assignee, they are generally addressed in the relevant contract or in legislation. However, to the extent that such contract modifications raise the question of the rights and obligations as between the assignee and the debtor, the relevant issues may not be fully addressed either in the contract or in legislation.

62. The primary goal of draft article 22, therefore, is to ensure that the debtor has as against the assignee the right to modify the original contract in the sense that, in the case of reduction in the price, the debtor is discharged by paying the reduced price and does not owe the price of the original receivable. However, draft article 22 is not intended to interfere with the relationship between the assignor and the debtor. For this reason, the requirements and the legal consequences of an effective modification agreement as between the assignor and the debtor remain subject to the law governing that agreement. A secondary goal of draft article 22 is to protect the assignee by ensuring that the assignee acquires rights under the modified original contract. This means that, if the price of the goods or services offered under the original contract is modified, the debtor may not raise the modification of the contract as a defence, asserting that the assignee has no rights under the new modified contract, and refuse to pay even the reduced price (any rights that the assignee might have against the assignor, however, for breach of contract are not affected; see para. 67).

63. The basic rule introduced by draft article 22 is that, before notification, the assignor and the debtor may freely modify their contract. They do not need to obtain the consent of the assignee, even though the assignor may have undertaken in the assignment contract to abstain from any contract modifications without the consent of the assignee or may be under the good faith obligation to inform the assignee about a contract modification. The breach of such an undertaking may give rise to liability of the assignor as against the assignee. It does not, however, invalidate an agreement modifying the original contract, since such an approach would inappropriately affect the rights of the debtor. After notification, a modification of the original contract becomes effective as against the assignee only subject to the actual or constructive consent of the assignee. The underlying rationale is that, after notification, the assignee becomes a party to a triangular relationship and any change in that relationship which affects the assignee's rights should not bind the assignee against its will. This approach is in line with draft article 19, according to which, before notification, the debtor may discharge its obligation in accordance with the original contract.

64. Paragraph (1) requires an agreement between the assignor and the debtor, which is concluded before notification of the assignment and affects the assignee's rights. If the agreement does not affect the rights of the assignee, paragraph (1) does not apply. If the agreement is concluded after notification, paragraph (2) applies. The Working Group may wish to specify that the relevant point of time is the time when notification is received by the debtor, since as of that time the debtor may discharge its obligation only in accordance with the assignee's payment instructions.

65. Paragraph (2) is formulated in a negative way, since the rule is that, after notification, a modification is ineffective as against the assignee, unless an additional requirement is met. "Ineffective" means that the assignee may claim the original receivable and the debtor is not fully discharged by paying less than the value of the original receivable. Paragraph (2) requires actual or constructive consent of the assignee. Actual consent is required if the receivable has been fully earned by performance and the assignee has thus the reasonable expectation that it will receive payment of the original receivable. For the purposes of the draft Convention, a receivable is considered as being fully earned when an invoice is issued, even if the relevant contract has only partially been performed. As a result, for such partially performed contracts to be modified, the actual consent of the assignee is required. Constructive consent exists if the original contract allows modifications or a reasonable assignee would have given its consent. Such a consent is sufficient if the receivable is not fully earned and the modification is foreseen in the original contract or a reasonable assignee would have consented to such a modification. In requiring actual or constructive consent, the Working Group intended to combine certainty with flexibility. If a receivable is fully earned, its modification affects the reasonable expectations of the assignee and has thus to be subject to the consent of the assignee. If, on the other hand, a receivable is not fully earned, there is no need to overburden the parties with requirements that may affect the efficient operation of a contract. In particular, in long-term contracts, such as project financing or debt-restructuring arrangements (in which receivables are offered as security in return for a reduction in the interest rate or an extension of the maturity date), a requirement that the assignor would have to obtain the assignee's consent to every little contract modification could slow down the operations while creating an unwelcome burden for the assignee. This problem, however, would normally not arise, since in practice parties tend to resolve such issues through an agreement as to which types of modifications require the assignee's consent. In the absence of such an agreement or in the case of breach of such an agreement by the assignor, paragraph (2) would provide an adequate degree of protection to the debtor.

66. The Working Group chose not to refer to general principles, such as good faith or reasonable commercial standards, in order to justify a modification. Those standards were thought to be introducing an undesirable degree of uncertainty, since there is no uniform understanding as to their meaning. The Working Group was not favourable either to limiting the situations in which the assignee's consent would be necessary to those in which a modifica-

tion of the original contract would result in "material adverse effects" to the assignee.

67. Paragraph (3) is intended to preserve any right of the assignee as against the assignor if a modification of the original contract violates an agreement between the assignor and the assignee. This means that, if a modification is effective as against the assignee, without the assignee's consent, the debtor is discharged by paying in accordance with the contract as modified. The assignee, however, may turn against the assignor and claim the balance of the original receivable and compensation for any additional damage suffered, if the modification is in breach of an agreement between the assignor and the assignee.

Article 23. *Recovery of payments*

Commentary

68. In practice, the debtor may pay the assignee before the assignor performs its obligations under the original contract. If the assignee does not perform, the question arises whether the debtor may recover from the assignee the sums paid. This question is of particular importance if the assignor becomes insolvent and thus recovery of payments from the assignor is impossible.

69. As a complement to the principle that the debtor's legal position should not be worsened as a result of the assignment, draft article 23 provides that the debtor's position should not be improved either. If the debtor pays the assignee and the assignor does not properly perform the original contract, the debtor has recourse against the assignor under the original contract and the law governing that contract, but not against the assignee. This means that the debtor bears the risk of insolvency of its contractual partner, which would be the case anyway in the absence of an assignment. Noting that a different approach is followed in the Ottawa Convention, the Working Group thought that the difference was justified. A guarantee of performance of the original contract by the assignee may be appropriate in the specific factoring situations addressed in the Ottawa Convention, but was thought to be inappropriate in the context of other financing or service transactions, including factoring transactions which had a predominant service element.

70. There are certain limitations to the rule contained in draft article 23. Under consumer-protection law, the consumer debtor might have the right to declare the original contract avoided and to recover from the assignee any payments made to the assignee. The Working Group thought that the draft Convention should not override the consumer-protection law prevailing in the country in which the debtor is located (i.e. has its place of business; as to the meaning of the term "primarily" and the problem arising in this context, see para. 58). The Working Group also thought that a general reference to public policy in this context would not be necessary. The notions of public policy and mandatory law would apply under draft articles 30 and 31 through the mechanism of private international law rules, providing wide recognition of law applicable outside the draft Convention. The Working Group also thought that multiple references to public policy and mandatory law could inappropriately widen the scope of the limitation and detract from the certainty achieved in the draft Convention.

71. A second limitation is introduced to the rule contained in draft article 23 through the reference to draft article 20. This reference is intended to ensure that the debtor's defences and rights of set-off are preserved with regard to payment in installments, where some installments have been made while other installments are outstanding. Such rights would only apply where the debtor would need to reduce or avoid payment of outstanding installments.

Commentary

72. In practice, receivables may be assigned several times. Such "duplicate assignments" are normal practice in the case of assignments by way of security in which different parts of the same receivables are offered as security for credit. In such a case, the question arises what is the order of priority in payment among the various claimants. Priority does not mean validity. It presupposes a valid assignment (substantive or material validity is dealt with in chapter III, while formal validity is left to law applicable outside the draft Convention; for a secretariat suggestion to deal in the draft Convention with formal validity as well, see A/CN.9/WG.II/WP.104, remarks to chapter III). Priority does not prejudge either the issue whether the assignee with priority will retain all the proceeds of payment or turn over any remaining balance to the assignor or to the next claimant in the order of priority. This matter depends on whether an outright assignment or an assignment by way of security is involved, a matter left to law applicable outside the draft Convention. Priority does not affect the discharge of the debtor either. The debtor paying in accordance with draft article 19 (or, if draft article 19 is not applicable, in accordance with the law applicable under draft article 28) is dis-

charged, even if payment is made to an assignee who does not have priority (under draft article 24 or, if draft article 24 is not applicable, under draft article 29). Whether that assignee will retain the proceeds of payment is a matter of priority to be resolved among the various claimants in accordance with the law applicable under draft article 24 (or draft article 29).

73. However, several outright assignments of the same receivables made by the same assignor may be a fraudulent or an unconscionable act. While fraud is a rare occurrence, simple inadvertence on the part of the assignor, or ignorance of the legal effects of a previous assignment, occurs frequently. A typical example is the assignment to a receivables financier in return for working capital and to an inventory financier or to a supplier of materials on credit with a retention of title or other security interest until full payment of the price of the inventory or of the materials. In such a case, the conflict may be between a global assignment (an assignment of all present and future receivables) to the receivables financier and an assignment to the inventory financier or the supplier of the proceeds from the sale of the inventory or materials. With a view to achieving certainty with regard to the rights of the various creditors of the assignor and thus facilitating the assignor's access to credit, the Working Group proceeded with its work on the assumption that such conflicts would be addressed. If the assignment to the inventory financier or to the supplier is contractual, such conflicts are clearly within the scope of the draft Convention. However, this may not be the case, if the assignment occurs by operation of law, since, under draft article 2 (1), the draft Convention covers only assignments by way of agreement and not by operation of law. The Working Group may, therefore, wish to clarify that any conflicts of priority between an inventory financier or a supplier with a statutory right in any proceeds and an assignee come under the ambit of the draft Convention. In this context, the Working Group may wish to consider whether the priority rules in the draft Convention would be appropriate, since the inventory financier or the supplier might expect that priority issues would be governed by the law of the location of the inventory or the materials supplied.

74. Draft article 24 is intended to apply to a conflict between a Convention and a non-Convention assignee (e.g. between a domestic and a foreign assignee of domestic receivables). Such an approach would not affect domestic practices. In fact, one of the reasons for which the Working Group decided to turn the priority rules into private international law rules was that such rules would not negatively affect domestic practices. The domestic assignee would have to meet the requirements of the same law, since by definition, in a conflict with a foreign assignee, the domestic assignee, the assignor and the debtor would be located in the same jurisdiction. Assuming that the draft Convention defines "location" of a legal entity by reference to its place of incorporation or place of central administration and that that place is different from the place of business, the applicable law may be different. However, even in such a case the domestic assignee could predict that the draft Convention could apply, since: the domestic assignee would be located in a Contracting State (the same State in which the assignor is located; otherwise the draft Convention would not apply); and the domestic assignee would know that the assignor is, for example, a branch of a foreign entity. The Working Group may wish to confirm this understanding (see also A/CN.9/WG.II/WP.104, remarks 3-5 to draft article 1).

75. In the case of several outright assignments of the same receivables by the same assignor the issue may not be who will receive payment first (i.e. an issue of priority) but who will receive payment at all (i.e. an issue of effectiveness). In such assignments, the assignee with "priority" takes all the proceeds (provided that it has a valid claim) and no other assignee can obtain payment. However, the draft Convention does not differentiate between outright assignments and assignments by way of security, since: third parties may have no way of knowing whether an assignment by way of security or an outright assignment is involved in a particular case; and, in any case, such differentiation would be very difficult in view of the wide divergences existing among the various legal systems with regard to security rights.

76. Draft article 24 contains a private international law rule subjecting priority issues to the law of the assignor's location (the meaning of the term "location" has not been decided yet by the Working Group; for the secretariat's suggestions, see A/CN.9/WG.II/WP.104, remarks 4-10 to draft article 5). The Working Group recognized that a private international law rule cannot lead to uniformity in terms of commercial results, since one law may give priority to the first assignee in time, while another law may give priority to the first assignee to notify the debtor or to register certain data about the assignment. However, the Working Group also recognized that there is clear commercial value in a private international law rule that would subject priority issues to the law of a single and easily determinable jurisdiction. Such a rule would constitute a significant improvement of the present situation in which assignees tend to either reject international receivables as security for credit or to accept them at a low value, since they either cannot determine which law may govern priority or they have to meet the requirements of several jurisdictions in order to ensure that they will have priority.

77. If, under the applicable law, priority is based on the time of assignment, an assignee considering whether to finance certain receivables has to rely on the assignor's representations and possibly on representations made by other parties or on information available in a certain market. If the applicable law determines priority based on priority in notification of the debtor, again a prospective assignee has to rely on representations by the assignor and by the debtor, as well as on information available from other sources. In such jurisdictions: priority with regard to future receivables will not be obtainable at all at the time of assignment (at that time the identity of the debtors is not known); and priority with regard to receivables assigned in bulk will only be obtainable at the additional cost of notifying all the debtors. If, on the other hand, under the law applicable, priority is obtained by way of making certain data part of a public record, beyond representations by the assignor or other parties, prospective assignees would have that public record to rely on. In addition, assignees filing the required data would have an objective way of acquiring priority.

78. In this context, the Working Group may wish to clarify that, if, under the law of the assignor's location (which must be in a Contracting State for the draft Convention to apply), priority is determined on the basis of the time of notification of the debtor, the notification needs to be given in accordance with the draft Convention. If notification were to be given in accordance with the domestic law of the assignor's location and that law invalidates notifications relating to future receivables, assignees would be unable to establish priority with regard to future receivables, a result that would have a negative impact on the availability and the cost of credit (see para. 36).

79. Departing from the approach traditionally followed in many legal systems, subjecting priority issues to the lex situs of the receivable (the law of the country where payment is due or the debtor is located), the Working Group decided to subject priority issues to the law of the assignor's location. The Working Group took this approach, considering that the traditional rule is no longer regarded as a workable or efficient rule. In the increasingly common case of a global assignment of present and future receivables (e.g. under factoring, invoice discounting or securitization agreements) application of the law of the lex situs of the receivable fails to yield a single governing law. It also exposes prospective assignees to the burden of having to determine the notional situs of each receivable separately. Application of the law governing the receivable or of the law chosen by the parties produces similar results. Different priority rules would govern priority with regard to the various receivables in a pool of receivables and, in the case of future receivables, the parties would not be able to determine with any certainty the law applicable to priority, a factor that may defeat a transaction or, at least, raise the cost of credit. Application of the law chosen by the assignor and the assignee in particular could allow the assignor, acting in collusion with a claimant in order to obtain a special benefit, to determine the priority among several claimants. In addition, the law chosen by the parties would be completely unworkable in the case of several assignments of the same receivables either by the same or by different assignees, since different laws could apply to the same priority conflicts.

80. Whether location is defined by reference to the place of incorporation or of the place of central administration of a legal entity, application of the law of the assignor's location will result in the application of the law of a single jurisdiction and one that can be easily determined at the time of assignment. It will thus eliminate the difficulties mentioned above. Furthermore, application of the law of the assignor's location will be particularly compatible with the law of jurisdictions with public registration requirements in which third parties would normally look at the law of the assignor's location to determine the manner in which they could establish priority.

81. The Working Group considered the question of the point of time which should be taken into account in the determination of the location of the assignor. If the assignor relocated after one and before another assignment, the assignee with priority under the law of the initial location should not lose its priority. On the other hand, the right of claimants in the new location should not be forever subject to the rights of claimants from other jurisdictions. However, it was widely felt that relocation of the assignor between duplicate assignments occurred rarely in practice and a rule aimed at addressing the issue would make draft article 24 unnecessarily complex. The Working Group, therefore, decided to leave the matter to other law applicable outside the draft Convention.

82. As mentioned above, the Working Group decided to depart from the traditional approach in order to accommodate the most common practices that involve bulk assignments of all present and future receivables. The Working Group decided that no exception should be made for assignments of single, high-value, existing receivables. Introducing a different priority rule with regard to the assignment of such receivables would detract from the certainty achieved in draft article 24. It would be very difficult to clearly define "high-value receivables". In addition, in a bulk assignment containing both "high-value"and "low-value" receivables, priority would be subject to different laws.

83. In the context of its discussion of the law applicable to priority issues, the Working Group considered the question of potential conflicts with the Convention on the Law Applicable to Contractual Obligations (Rome, 1980; hereinafter referred to as "the Rome Convention"), whose article 12 deals with the law applicable to assignment. The Working Group thought that the reference to a regional instrument applicable to contractual obligations should not prevent the preparation of a specialized legal regime for universal application to financing and service transactions. The Working Group also took note of the fact that great uncertainty exists as to whether article 12 of the Rome Convention addresses priority issues and, if so, whether the law applicable is the law chosen by the parties or the law governing the receivable. The Working Group thought that it would be useful to resolve this uncertainty and that, in any case, priority issues (i.e. the proprietary effects of an assignment) should not be made subject to the law governing the receivable or to the law chosen by the parties (see paras. 79 and 80 and 88). It was agreed, however, that States should have the right to opt out of chapter V (draft article 34) and that, in any case, they could settle any conflict between the draft Convention and the Rome Convention by determining which text they wish to give precedence to (draft article 33).

84. While draft article 24 subjects priority conflicts between several assignees who obtain the same receivables from the same assignor to the law of the assignor's location, it recognizes the interest of the parties involved in a conflict to negotiate and to relinquish priority in favour of a subordinate claimant where commercial considerations so warrant. In order to afford maximum flexibility and to reflect prevailing business practices, paragraph (2) was drafted to make it clear that a valid subordination need not take the form of a direct subordination agreement between the assignee with priority and the beneficiary of the subordination agreement. It can also be effected unilaterally, e.g. by way of an undertaking of the first ranking assignee to the assignor (whether in the contract of assignment or an independent, written or oral, agreement), empowering the assignor to make a second assignment ranking first in pri-

ority. The term "unilaterally" is further intended to clarify that the beneficiary of the subordination (the second assignee) need not offer consideration in exchange for the priority granted by the unilateral subordination. Furthermore, paragraph (2) clarifies that an effective subordination need not specifically identify the intended beneficiary or beneficiaries ("any existing or future assignees") and can instead employ generic language.

85. The Working Group also considered several alternatives of a substantive law priority rule but failed to reach agreement. For this reason, two alternative substantive law priority rules are offered in the annex to the draft Convention for States to choose from. As a result, States might be confused as to what is the recommended approach. In addition, if a State does not choose any of those two alternatives (e.g. because its priority regime is based on priority in time of notification of the debtor), the full range of alternatives will, in effect, be reproduced. Moreover, the annex would need further development so as to be workable. In view of the above, the Working Group may wish to consider replacing the annex with a few general principles referring the matter of preparing model priority provisions to the procedure for the revision and amendment of the draft Convention (see A/CN.9/WG.II/WP.104, remarks to the annex).

Article 25. *Competing rights of assignee and creditors of the assignor or insolvency administrator*

Commentary

86. Draft article 25 is intended to settle conflicts of priority between an assignee and creditors of the assignor or the administrator in the insolvency of the assignor. The draft Convention is not intended to address issues arising in the case of insolvency of the assignee, unless the assignee makes a subsequent assignment and becomes an assignor. The Working Group thought that such issues are beyond the scope of the draft Convention. The draft Convention is not intended to address issues arising in the context of the debtor's insolvency either. It is assumed that the assignee would have in the receivables the same rights that the assignor would have in the case of insolvency of the debtor. As already mentioned, priority is defined as a preference (in payment or other discharge; see A/CN.9/WG.II/WP.105, para. 57). The exact legal consequences of such preference depend on whether an assignment by way of security or an outright assignment is involved, a matter left to law applicable outside the draft Convention. In any case, preference established under the draft Convention is not intended to interfere with special preference or super-priority rights existing under national insolvency law (see para. 93).

87. Conflicts of priority covered by draft article 25 may arise if the assignment is made before attachment or commencement of an insolvency proceeding (if the assignment is made thereafter, no conflict arises; any rights that the assignee may obtain are subordinate to the rights of the assignor's creditors or the insolvency administrator). If priority is based on the time of assignment, the fact that the assignment is made before attachment or commencement of the insolvency proceeding is sufficient to establish that the receivables are separated from the assignor's estate (if an outright assignment is involved) or that the assignee may satisfy its claim in preference to unsecured creditors (if an assignment by way of security is involved). If, however, priority is determined on the basis of notification of the debtor or registration of certain data about the assignment in a public registry, the fact that the assignment is made before attachment or commencement of the insolvency proceeding is not sufficient for the purpose of establishing priority. Notification of the debtor or registration needs also to take place before attachment or commencement of the insolvency proceeding.

88. Draft article 25 subjects such priority conflicts to the law of the assignor's location (the issue of the meaning of the assignor's location has not been decided yet; see A/CN.9/WG.II/WP.104, remarks 4-10 to draft article 5). As already mentioned (see paras. 79 and 80), the location of the assignor as a connecting factor presents the advantage of simplicity and predictability for a number of reasons, including that: it provides a single point of reference; it could be ascertained at the time of even a bulk assignment of future receivables; it would be suitable even for legal systems in which registration is practised; and it would result in the application of the law of the jurisdiction in which any insolvency proceeding with regard to the assignor would be most likely to commence. This last aspect of the application of the law of the assignor's location is essential, since it appropriately addresses the issue of the relationship between the draft Convention and the applicable insolvency law. Indeed the thrust of draft article 25 is to ensure that, in most cases, the law governing priority under draft article 25 and the law governing the insolvency of the assignor are the laws of one and the same jurisdiction (the assignor's main jurisdiction, whether place of incorporation or of central administration). In such a situation, any conflict between the draft Convention and the applicable insolvency law would be resolved by the rules of law of that jurisdiction. In all other cases in which an insolvency proceeding with regard to the assets and affairs of the assignor is commenced in a State other than the State of the assignor's main jurisdiction (e.g. a jurisdiction in which the assignor has assets), the draft Convention gives way to rules of law that reflect the public policy of the State in which a dispute is adjudicated, either before a court or an arbitral tribunal (draft article 25 (3)). In addition, in such cases, the draft Convention is intended to avoid any interference with certain rights of the assignor's creditors or of the insolvency administrator, which, although not reflective of public policy, are part of mandatory law (draft article 25 (4)). The Working Group may wish to extend the application of those two limitations to court proceedings outside insolvency. In any case, non-consensual, preferential rights would not be affected (draft article 25 (5)).

89. The public policy meant in paragraph (3) is the international public policy of the forum State. Recourse to such public policy has only a negative effect in the sense that it may defeat the application of a provision of the law applicable under draft article 25 which is manifestly contrary to the public policy of the forum State (e.g. a rule giving priority to a foreign State for taxes). As a result, a certain person may be bypassed in the determination of priority, while priority will be determined by other provisions of the applicable law. The public policy of draft article 25, however, may not have a positive effect; it may not result in the positive application of a priority rule of the forum State which reflects public policy (e.g. a rule giving priority to employees in the forum State). For that reason, the Working Group decided to include paragraph (5) in draft article 25, specifically preserving non-consensual, super-priority rights (see para. 93).

90. For a priority rule to be set aside under paragraph (3), it must be "manifestly contrary" to the public policy of the forum State. The notion of "manifestly contrary" is used in international texts (including article 6 of the UNCITRAL Model Law on Cross-Border Insolvency, article 16 of the Rome Convention and article 18 of the Inter-American Convention on the Law Applicable to International Contracts) as a qualification of public policy. The purpose of such a qualification is to emphasize that public policy exceptions should be interpreted restrictively and paragraph (3) should be invoked only in exceptional circumstances concerning matters of fundamental importance for the forum State. Otherwise, the certainty achieved by draft article 25 could be seriously compromised, a result that would have a negative impact on the availability and the cost of credit on the basis of receivables (the term "manifestly contrary" is used also in draft article 31; see para. 114).

91. If the rule, with which the priority rule of the law applicable conflicts, falls short of being reflective of public policy but is a rule of mandatory law, under paragraph (4) special rights of creditors of the assignor and of the insolvency administrator are not affected "except as provided by this article". These words mean that the priority rule of the law applicable is not set aside; it applies to the extent that it does not affect certain special rights. The rationale underlying this approach is that the priority rules of the law applicable are themselves mandatory rules and setting them aside in favour of mandatory rules of the forum would result in uncertainty and thus have a negative impact on the availability and the cost of credit. At the same time, however, the Working Group recognized that an exception should be made for cases in which special rights of the assignor's creditors or of the insolvency administrator are affected.

92. Such special rights include, but are not limited to, any right of creditors of the assignor to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assignment as a fraudulent or preferential transfer. They also include any right of the insolvency administrator: to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assignment as a fraudulent or preferential transfer; to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assignment of receivables that have not arisen at the time of the commencement of the insolvency proceeding; to encumber the assigned receivables with the expenses of the insolvency administrator in performing the original contract, or to encumber the assigned receivables with the expenses of the insolvency administrator in maintaining, preserving or enforcing the receivables at the request and for the benefit of the assignee. If the assigned receivables constitute security for indebtedness or other obligations, the special rights protected under paragraph (4) include any rights existing under insolvency rules or procedures generally governing the insolvency of the assignor that: permit the insolvency administrator to encumber the assigned receivables; provide for a stay of the right of individual assignees or creditors of the assignor to collect the receivables during the insolvency proceeding; permit the substitution of the assigned receivables for new receivables of at least equal value; provide for the right of the insolvency administrator to borrow using the assigned receivables as security to the extent that their value exceeds the obligations secured. They also include other rules and procedures of similar effect and of general application in the insolvency of the assignor specifically described by a Contracting State in a declaration (draft article 25 (5)).

93. As already mentioned, the forum State may, under paragraph (3), refuse to give priority, for example, to a foreign State for taxes, but may not apply its own priority rule giving priority to employees in the forum State. Paragraph (5) is intended to achieve exactly this result, namely to allow the forum State to apply its own priority rules, in the case where a priority rule applicable under paragraphs (1) and (2) is manifestly contrary to the forum's public policy, and to give priority to non-consensual rights reflecting the forum's public policy (for paragraphs (5) and (6), see A/CN.9/WG.II/WP.104, remarks 2-3 to draft article 25). Paragraph (5) goes a step further. It allows a State to list in a declaration the non-consensual, super-priority rights that should prevail over the rights of an assignee under the draft Convention. This possibility for declarations is intended to enhance certainty in that it provides a mechanism for assignees to know which super-priority rights would prevail over their rights. It is formulated as a possibility (not as an obligation) and it appears within square brackets, since the Working Group thought that it might reduce the acceptability of the draft Convention, in particular to the extent that a declaration would have the effect of limiting the national super-priority rights that would be preserved (for a secretariat suggestion to delete the bracketed language in paragraph (5), see A/CN.9/WG.II/WP.104, remark 2 to draft article 25).

[Article 26. *Competing rights with respect to payments*

References:

A/CN.9/447, paras. 63-68
A/CN.9/456, paras. 160-167

Commentary[1]

94. Draft article 26 has a twin goal, to ensure that the assignee has with respect to proceeds the same priority as in the receivables and, at the same time, to grant the assignee with respect to a limited type of proceeds and under certain conditions the same in rem rights that the assignee has in the receivables. Proceeds are described as everything that is given in payment of the receivables. They include proceeds of proceeds, while payment includes both payment in cash and in kind (e.g. goods returned by the debtor to the assignor).

95. The in rem nature of the right in proceeds is an issue that is distinct from the issue of priority. A claimant with priority in accordance with the law applicable under the draft Convention will obtain payment first and will prevail over another claimant (other than a claimant with a super-priority, non-consensual right; see draft article 25 (5)) whether that other claimant has a right in rem or ad personam (for this reason the secretariat suggests to treat those issues in separate provisions; see A/CN.9/WG.II/WP.104, remarks to draft article 26). However, the in rem nature of the right of a claimant with respect to proceeds may be decisive in the case of insolvency. If the claimant with priority has a right in rem with respect to proceeds, that claimant will be able to separate the proceeds from the insolvency estate (if an outright assignment is involved) or be treated as a secured creditor and receive payment before unsecured creditors (if an assignment by way of security is involved). If, on the other hand, a claimant with priority has a right ad personam, it will receive payment proportionately with other unsecured creditors, if there is any balance left after payment of any creditors with special privileges and security rights.

96. Under paragraph (1), the assignee with priority who receives payment may retain that payment. The implicit limitation, which may need to be stated explicitly, is that the assignee may not retain more than the value of its receivable (as to this matter and the question of interest, see A/CN.9/WG.II/WP.104, remark 3 to draft article 26). Paragraph (2) is intended to grant the assignee an in rem right in certain types of proceeds (i.e. cash proceeds) and only under certain conditions (i.e. if the assignor receives payment on behalf of the assignee and keeps those proceeds separated from its own assets). This limited provision is aimed at facilitating practices, such as undisclosed invoice discounting and securitization, to the extent that a right in rem with respect to proceeds will increase certainty as to payment to the assignee, in particular in the case of insolvency. Such a provision could have a significantly positive impact on the availability and the cost of credit (for a secretariat suggestion to extend the application of this provision to other types of proceeds if the conditions set forth in paragraph (2) are met, see A/CN.9/WG.II/WP.104, remark 2 to draft article 26).

97. Paragraphs (3) to (5) deal with the issue of priority in proceeds. They are based on a distinction between proceeds that are receivables and other types of proceeds (e.g. goods). The rule embodied in those paragraphs is that priority in proceeds that are receivables is governed by the law of the assignor's location, while priority in other types of assets is governed by the lex rei sitae. With regard to receivables, the Working Group has been able to replace the lex situs of the receivable with the law of the assignor's location. The main reason for this approach is that the application of the lex situs of the receivable would produce unworkable results, since: in the case of future receivables, the lex situs would not be known at the time of the assignment; and, in the case of bulk assignments, priority issues with regard to the same pool of receivable would be subject to different laws. As to proceeds in the form of tangible assets, the Working Group has not found it possible to depart from the lex rei sitae, since such an approach could frustrate the expectations of third parties in the country where the asset is located.

[1]In view of the tentative character of draft article 26, the commentary on this provision is brief. The complete commentary will be written after the finalization of this provision by the Working Group.

CHAPTER V. CONFLICT OF LAWS

References:

A/CN.9/420, paras. 185-187
A/CN.9/445, paras. 52-55
A/CN.9/455, paras. 67-73

Commentary

98. Chapter V is intended to state a few general principles that are widely adopted but not recognized in all legal systems. It is not intended to deal with all assignment-related issues in an exhaustive way, or to displace or to contradict any international legislative text existing in this field of law. In particular, draft articles 27 and 28 reflect the generally accepted principles: that the assignment contract is subject to the law chosen by the assignor and the assignee; and that the relationship between the assignee and the debtor is subject to the law governing the receivable. Draft articles 30 and 31 also reflect generally accepted principles that the applicable law may be set aside if it is manifestly contrary to mandatory law or public policy.

99. If the Working Group decides that this chapter may apply irrespective of the scope provisions of the draft Convention, if the forum is in a Contracting State (see A/CN.9/WG.II/WP.104, remarks to chapter V), chapter V would broaden the scope of application of the innovative priority rules of the draft Convention. Unlike draft articles 27, 28, 30 and 31, the priority rule contained in draft article 29 breaks new ground in that it addresses an issue which is not clearly or appropriately resolved in current law. In line with draft articles 24 to 26, draft article 29 subjects priority issues to the law of a single and easily determinable jurisdiction, i.e. the law of the assignor's location (for an analysis of the advantages of this approach, see paras. 79 and 80 and 88).

Article 27. *Law applicable to the contract of assignment*

References:

A/CN.9/420, paras. 188-196
A/CN.9/445, paras. 52-74
A/CN.9/455, paras. 67-119

Commentary

100. Draft article 27 is intended to reflect the principle of party autonomy with the respect to the law applicable to the contract of assignment. While being widely recognized, this principle is not known in all legal systems. Under paragraph (1), the assignor and the assignee may agree on the law applicable to the contract of assignment. The conclusion, the validity and the rights and obligations of the assignor and the assignee arising under the contract of assignment are intended to be covered by the expression "contract of assignment" (for a suggestion to state this result explicitly, see A/CN.9/WG.II/WP.104, remarks to draft article 27). However, if the assignment is just a clause in the financing contract, this expression is not intended to cover the financing contract as a whole.

101. Paragraph (1) provides that the choice of law must be express. The Working Group recognized that an implicit choice would be in line with current trends in private international law. However, it was widely felt that a different approach is warranted in the case of financing transactions, in which certainty is of utmost importance and may determine whether a transaction will take place and at what cost.

102. Paragraph (2) deals with the exceptional situations in which the parties have not agreed on the law applicable to the contract of assignment or in which the parties have agreed but their agreement is later found to be invalid. It refers to the closest-connection test, which may result in the application of the law of the assignor's location (e.g. in the case of an assignment by way of sale) or of the law of the assignee's location (e.g. in an assignment by way of security made in the context of a credit transaction). In an attempt to combine flexibility with certainty, paragraph (2) introduces a rebuttable presumption that the State with the closest connection to the contract is the law of the assignor's location. Location in this context means place of business. In view of the limited scope of application of paragraph (2), the Working Group thought that such a reference to the place of business would not undermine the certainty necessary for financing transactions.

103. Paragraph (3) is intended to reflect the generally accepted principle that the parties to a contract may not set aside mandatory rules of the law applicable in the absence of a choice of law by the parties, if the contract is connected with one other State only.

Article 28. *Law applicable to the rights and obligations of the assignee and the debtor*

References:

A/CN.9/420, paras. 197-200
A/CN.9/445, paras. 65-69
A/CN.9/455, paras. 92-104 and 117

Commentary

104. In line with the principle that the draft Convention should not change the legal position of the debtor, draft article 28 reflects a generally acceptable rule, providing that the relationship between the assignee and the debtor is subject to the law governing the receivable. In the case of contractual receivables, that law would be the law governing the original contract, which is likely to be the law chosen by the assignor and the debtor and, in the absence of a choice of law, the law of the country with the closest connection to the original contract. The Working Group decided to avoid including detailed rules as to the law governing the receivable. It was widely felt that such elaborate rules are not necessary in a chapter which is intended to set forth some general rules, without addressing all assignment-related private international law issues. It was also generally thought that it would be inappropriate to attempt to determine the law governing the receivable in the wide variety of contracts that might be at the origin of a receivable (e.g. contracts of sale, insurance contracts, contracts relating to financial markets operations).

105. Inspired by article 12 (2) of the Rome Convention, draft article 28 refers to the relationship between the assignee and the debtor. The assignment does not create a contractual relationship between the assignee and the debtor. The assignor remains the contractual partner of the debtor and the debtor retains its rights as against the assignor. However, a de facto relationship is established between the assignee and the debtor based on the fact that the assignee may notify the debtor and request payment. In order to avoid leaving any doubt, draft article 28 explicitly states that it covers the conditions under which the assignment can be invoked as against the debtor and the debtor's discharge (as to rights of set-off, see A/CN.9/WG.II/WP.104 remarks 1-2 to draft article 28).

106. Draft article 28 also covers assignability as an issue relating to payment by and discharge of the debtor. Whether both contractual and statutory assignability is covered depends on the scope of chapter V, an issue not yet decided by the Working Group. If chapter V applies to transactions falling within the scope of the draft Convention, contractual assignability will be subject to draft article 10, while statutory assignability will be governed by the law specified in draft article 28 under the condition that the forum is in a Contracting State. If, on the other hand, chapter V applies even to transactions falling outside the scope of the draft Convention, contractual assignability with respect to such transactions and statutory assignability with respect to transactions falling both within and outside the scope of the draft Convention will be subject to the law applicable under draft article 28 (in such a case, contractual assignability with respect to transactions falling within the scope of the draft Convention will be subject to draft article 10). The Working Group considered that draft article 28 would govern statutory prohibitions aimed at the protection of the debtor (e.g. restrictions on the assignment of sovereign receivables) or at the protection of the assignor (e.g. restrictions on the assignment of wages, pensions and payments under life insurance policies). The Working Group's considerations were based on the assumption that if the application of the law governing the receivable was contrary to a statutory prohibition contained in a public-policy or mandatory-law rule of the forum and aimed at the protection of the assignor, it could be set aside or even replaced by the mandatory law rule of the forum or another

State (see A/CN.9/WG.II/WP.104, remark 3 to draft article 28). The Working Group may wish to reconsider the matter. Statutory prohibitions aimed at the protection of the assignor result in the invalidation of assignments as between the parties thereto and, consequently, as against the debtor. As a result, the issue of the relationship between the assignee and the debtor does not even arise in this context. Thus, it may be more appropriate to subject such statutory prohibitions to the law of the assignor's location than the to law governing the receivable.

[Article 29. *Law applicable to conflicts of priority*

References:

A/CN.9/445, paras. 70-74
A/CN.9/455, paras. 105-110

Commentary[2]

107. Draft article 29 appears within square brackets pending determination by the Working Group of the scope or purpose of chapter V. Retention of draft article 29 is meaningful only if chapter V is to apply to transactions beyond those falling within the scope of the draft Convention under chapter I. If chapter V has the same scope as the other parts of the draft Convention, draft article 29 repeats rules reflected in draft articles 24 to 26 and may thus be deleted. If retained, draft article 29 would need to be aligned with draft articles 24 to 26 (see A/CN.9/WG.II/WP.104, remarks to draft article 29). If chapter V is to apply irrespective of chapter I, it may need to be specified that it applies also to conflicts involving a subsequent assignment as if the subsequent assignee is the initial assignee (this matter is addressed in chapter I, draft article 2 *(b)*).

108. As a private international law rule, draft article 29 has the goal of providing certainty with regard to the law applicable to conflicts of priority. Such certainty is dependent upon making reference to the law of a single and easily determinable jurisdiction (the law of the assignor's incorporation or place of central administration; see A/CN.9/WG.II/WP.104, remarks 4-10 to draft article 5).

109. Priority is defined in draft article 5 *(i)* as a preference (in payment or other discharge) and draft article 29 specifies the parties between which such conflicts may arise. In view of the fact that the debtor is not one of those parties, priority does not relate to the debtor's discharge. Therefore, the debtor being discharged under the law governing the receivable cannot be asked to pay again the party with priority under the law of the assignor's location.

Article 30. *Mandatory rules*

Reference:

A/CN.9/455, paras. 111-117

[2]Depending on the decision of the Working Group as to the scope or purpose of chapter V, draft article 29, which is intended to reproduce the rules contained in draft articles 24 to 26, may be retained or deleted. For this reason, only a brief commentary is provided at this stage.

Commentary

110. Paragraph (1) is intended to reflect a generally accepted principle in private international law, according to which mandatory law of the forum may be applied irrespective of the law otherwise applicable. Mandatory law in this context does not refer to law that cannot be derogated from by agreement but to law of fundamental importance, such as consumer-protection law or criminal law (*loi de police*).

111. Paragraph (2) introduces a different rule, namely that a court in a Contracting State may apply neither its own law nor the law applicable under draft articles 27 and 28, but the law of a third country on the grounds that the matters settled in those provisions have a close connection with that country.

112. Departing from the approach followed in private international law texts, the Working Group decided to limit the scope of draft article 30 to the application of the law applicable to the contract of assignment and to the relationship between the assignee and the debtor. It was generally thought that such an approach is warranted with regard to the law applicable to priority issues, since priority rules are of a mandatory nature themselves and setting them aside in favour of the mandatory rules of the forum or another State would inadvertently result in uncertainty as to the rights of third parties, a result that would have a negative impact on the availability and the cost of credit.

Article 31. *Public policy*

Reference:

A/CN.9/455, paras. 118 and 119

Commentary

113. Draft article 31 differs from draft article 30 in that draft article 31 has only a negative effect, i.e. that of setting aside a rule of the applicable law if it is manifestly contrary to the public policy of the forum. Unlike draft article 30, draft article 31 does not have a positive effect, i.e. does not result in the positive application of the public policy of the forum. In other terms, public policy in the context of draft article 31 means international public policy and not the domestic public policy of the forum.

114. In line with the approach followed in other international legal texts, the qualification "manifestly" has been added before the words "contrary to public policy" (see para. 90). It should be noted that it is the application of the applicable law to a particular case and not the applicable law itself which needs to be manifestly contrary to the public policy of the forum. The application of a foreign law, therefore, cannot be refused on the grounds that the law itself, in general, is considered to be inimical to the public order of the forum but only if the application of a particular rule in a concrete case would be repugnant to the public policy of the forum.

E. Analytical Commentary to the Convention on Assignment [in Receivables Financing] [of Receivables in International Trade]: note by the secretariat

(A/CN.9/470) [Original: English]

CONTENTS

INTRODUCTION

1. The United Nations Commission on International Trade Law (UNCITRAL), at its twenty-eighth session, in 1995, decided to entrust the Working Group on International Contract Practices with the task of preparing a uniform law on assignment in receivables financing.[1] The Commission, at that session, had before it a report of the Secretary-General entitled "Assignment in receivables financing: discussion and preliminary draft of uniform rules" (A/CN.9/412). It was agreed that the report, setting forth the concerns and the purposes underlying the project and the possible contents of the uniform law, would provide a useful basis for the deliberations of the Working Group.[2]

2. The Working Group commenced its work at its twenty-fourth session, in November 1995, by considering the report of the Secretary-General.[3] At its twenty-fifth to thirty-first sessions, the Working Group considered revised draft articles prepared by the secretariat,[4] and, at its twenty-ninth to thirty-first sessions, it adopted a draft Convention, the exact title of which remains to be determined.[5] At its thirty-first session, the Working Group had before it a preliminary commentary on the draft Convention prepared by the secretariat.[6] At that session, the Working Group agreed that the secretariat would finalize and distribute the commentary with a view to assisting the Commission in reviewing and finalizing the draft Convention at its thirty-third session, to be held in New York from 12 June to 7 July 2000.[7]

3. The present note has been prepared pursuant to that agreement of the Working Group. It is intended to provide a summary of the reasons for the adoption of a certain provision and its main objectives, along with explanations and interpretations of particular terms, without, however, giving a complete account of the *travaux préparatoires* or of all proposals and provisions that were not retained. For the benefit of those seeking fuller information on the history of a given provision, the commentary lists the references to the relevant portions of the reports of the eight sessions of the Working Group.[8] After finalization of the draft Convention, the Commission may wish to request the secretariat to prepare the final version of the commentary, which would serve as an unofficial legislative guide and a tool for interpretation.

[1] *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17* (A/50/17), paras. 374-381.

[2] Ibid., para. 379. At its twenty-sixth and twenty-seventh sessions, the Commission had considered two other reports of the Secretary-General (A/CN.9/378/Add.3 and A/CN.9/397). For the Commission's discussion of those reports, see ibid., *Forty-eighth Session, Supplement No. 17* (A/48/17), paras. 297-30,1 and *Forty-ninth Session, Supplement No. 17* (A/49/17), paras. 208-214, respectively.

[3] The report of the Working Group is contained in document A/CN.9/420.

[4] The draft articles prepared by the secretariat are contained in documents A/CN.9/WG.II/WP.87, A/CN.9/WG.II/WP.89, A/CN.9/WG.II/WP.93, A/CN.9/WG.II/WP.96, A/CN.9/WG.II/WP.98, A/CN.9/WG.II/WP.102 and A/CN.9/WG.II/WP.104. The reports of the Working Group are contained in documents A/CN.9/420, A/CN.9/432, A/CN.9/434, A/CN.9/445, A/CN.9/447, A/CN.9/455, A/CN.9/456 and A/CN.9/466.

[8] In order to avoid confusion, no special reference is made to previous article numbers, which, in the course of the preparation of the draft Convention, were altered several times. However, any earlier number will be apparent from the relevant discussion in the reports of the Working Group. Annex II to A/CN.9/466 contains an index to the final renumbering of articles.

ANALYTICAL COMMENTARY

Draft Convention on Assignment [in Receivables Financing] [of Receivables in International Trade]

Preamble

The Contracting States,

Reaffirming their conviction that international trade on the basis of equality and mutual benefit is an important element in the promotion of friendly relations among States,

Considering [that] problems created by [the] uncertainties as to the content and choice of legal regime applicable to assignments [of receivables] in international trade [constitute an obstacle to financing transactions],

Desiring to establish principles and adopt rules [relating to the assignment of receivables] that would create certainty and transparency and promote modernization of law relating to [assignments of receivables] [receivables financing] [including but not limited to assignments used in factoring, forfaiting, securitization, project financing, and refinancing,] while protecting existing [financing] [assignment] practices and facilitating the development of new practices,

Also desiring to ensure the adequate protection of the interests of the debtor in the case of an assignment of receivables,

Being of the opinion that the adoption of uniform rules governing assignments [in] [of] receivables [financing] would facilitate the development of international trade and promote the availability of [capital and] credit at more affordable rates,

Have agreed as follows:

Commentary

Title

4. The Commission may wish to consider whether the reference to receivables financing or to international trade should be retained in the title of the draft Convention (for a non-exhaustive list and a brief description of the practices covered by the draft Convention, see paras. 6-12). A reference to financing could be misleading in that it could give the impression that the scope of the draft Convention is limited to purely financing transactions, excluding impor-

tant service transactions (e.g. assignments in international factoring transactions in which insurance against debtor-default, book-keeping or collection services is provided; chapter I does not exclude such transactions in that it does not refer to the financing purpose or context of the assignment; see para. 25). A reference to international trade may sufficiently reflect the overall objective of the draft Convention to facilitate the movement of goods and services across borders and appropriately clarify that the draft Convention applies to assignments with an international and commercial element, without attempting to regulate consumer assignments or domestic assignments of domestic receivables. On the other hand, such a reference to international trade may inadvertently give the impression that the draft Convention applies only to assignments of receivables generated in international trade and not to the assignment of consumer receivables; the international assignment of domestic receivables; or the assignment of receivables arising from loan or other transactions that may not involve the sale of goods or the provision of services. In addition, such a reference might fail to reflect the fact that the draft Convention might affect domestic assignments of domestic receivables, for example, in that it is intended to provide which law applies to a conflict between a domestic and a foreign assignee of domestic receivables (on this matter, see also paras. 21 and 169). On balance, it may be preferable to include a reference to international trade in the title and to explain the matter in the commentary.

Preamble

5. The preamble is intended to serve as a statement of the general principles on which the draft Convention is based and which, under article 8, may be used to fill gaps left in the draft Convention. These principles include the facilitation of both commercial and consumer credit at more affordable rates, which is in the interest of all parties involved, assignors, assignees and debtors; the principle of debtor protection, according to which the debtor's legal position is not affected unless expressly stated otherwise in the draft Convention; the promotion of the movement of goods and services across borders; the enhancement of certainty and predictability as to the rights of parties involved in assignment-related transactions; the modernization and harmonization of domestic and international laws on assignment, both at the substantive and the private international law level; the facilitation of new practices and the avoidance of interference with current practices; the avoidance of interference with competition. As to the reference to financing, which appears in the preamble within square brackets, the Commission may wish to consider retaining it, since it could usefully clarify the main objectives of the draft Convention, without limiting the scope of the draft Convention, a matter that could be further explained in the commentary.

Transactions covered

6. In view of the broad definition of a "receivable" in article 2 *(a)* ("contractual right to payment of a monetary sum"), the draft Convention applies to a wide array of transactions. In particular, the draft Convention covers the assignment of trade receivables (arising from the sale of goods or services between businesses), consumer receivables (arising from consumer transactions), financial receivables (arising from financial transactions, such as loans, deposit accounts, swaps and derivatives) and sovereign receivables (arising from transactions with a governmental authority). With a view to clarifying the context of application of the draft Convention, those practices are described briefly in the following paragraphs. The list of practices cannot be exhaustive, in particular in view of the fact that new practices are rapidly developing which the draft Convention cannot ignore.

7. First of all, included are traditional financing techniques relating to trade receivables, such as factoring (the outright sale of a large number of receivables with or without recourse) and forfaiting (the outright sale of single, large-value receivables, whether they are documentary or not, without recourse). In these types of transactions, assignors assign to financiers their rights in receivables arising from the sale of the assignors' goods or services. The assignment in such transactions is normally an outright transfer but may also, for various reasons (e.g. stamp duty), be for security purposes. The purchase price is adjusted depending on the risk and the time involved in the collection of the underlying receivable. Beyond their traditional forms, those transactions have developed a number of variants tailored to meet the various needs of parties to international trade transactions. For example, in invoice discounting, there is an outright sale of a large number of receivables without debtor-notification but with full recourse against the assignor in the case of debtor default; in maturity factoring, there is full administration of the sales ledger, collection from debtors and protection against bad debts, but without any financial facility; in international factoring, receivables are assigned to a factor in the country of the assignor ("export factor") and then from the export factor to another factor in the country of the debtor ("import factor") for collection purposes, while the factors do not have recourse against the assignor in the case of debtor default (non-recourse factoring). All those transactions are covered in the draft Convention regardless of their form.

8. The draft Convention also covers innovative financing techniques, such as securitization and project finance, which may relate to a wide range of receivables, including consumer receivables. In a securitization transaction, an assignor, creating receivables through its own efforts ("originator"), assigns, usually by way of an outright transfer, these receivables to an entity ("special purpose vehicle" or "SPV"), fully owned by the assignor and specially created for the purpose of buying the receivables and paying their price with the money received from investors to whom the SPV sells the receivables or securities backed by the receivables. The segregation of the receivables from the originator's other assets allows the price paid by investors (or the money lent) to be linked to the financial strength of the receivables assigned and not to the creditworthiness of the assignor. It also insulates the receivables from the risk of the insolvency of the originator. Accordingly, the originator may be able to obtain more credit than would be warranted on the basis of its own credit rating. In addition, by gaining access to international securities markets, the originator may be able to obtain credit at a cost that would be lower than the average cost of commercial bank-based credit. In large-scale, revenue-generating infrastructure

projects, sponsors raise the initial capital costs by borrowing against the future revenue stream of the project. Thus, hydroelectric dams are financed on the security of the future income flow from electricity fees, telephone systems are paid for by the future revenues from telecommunications charges and highways are constructed with funds raised through the assignment of future toll-road receipts. Given the draft Convention's applicability to future receivables, these types of project finance may be reduced to transfers, usually for purposes of security, of the future receivables to be generated by the project being financed. In this context, it should be emphasized that the draft Convention's exclusion of assignments made for personal, family or household purposes will not act to exclude consumer receivables.

9. Many other forms of traditional transactions relating to the assignment of a receivable generated in the context of a financial transaction will also be covered. These include the opening of a credit line on the security of the balance in a deposit account; the refinancing of loans for improving capital to obligations ratio or for portfolio diversification purposes; the assignment of the insurance company's contingent obligation to pay upon loss; and the assignment of rights arising under a letter of credit. Also covered are less traditional transactions, such as loan syndications and participations, swaps and other derivatives, repurchase agreements ("repos") and interbank payments.

10. A "swap" is a transaction in which two parties agree to exchange one stream of obligations for another. The first swaps related to interest payments involved currencies, commodities, energy and credit obligations, and the range continues to expand. The underlying rationale for entering into a swap is to transfer the risks involved with a particular obligation to another party better able or willing to manage them. In a traditional interest swap, a creditworthy entity borrowing money at a fixed interest rate exchanges that interest with a variable interest rate at which a less secure entity borrows a similar sum. As a result, a less creditworthy entity, for a fee, in effect borrows money at a fixed rate. No payment of capital occurs between the parties to the swap (that comes from the underlying loan transactions). Between such parties, only interest payments take place. In practice, the interest payments are offset against each other and only a net payment is made by the party with the larger payment due. This residual payment is a contractual right to a monetary sum and is, therefore, within the broad definition of article 2. There are several variations of a simple interest rate swap. For example, an investor may buy a fixed rate bond and swap the fixed rate for a floating rate from a bank; the bank may take security over the bond to secure the investor's obligations to pay amounts equal to the fixed rate.

11. Derivatives are a more general class of transaction of which swaps are a specific instance. They share the common characteristic of creating payment obligations that are determined by the price of an underlying transaction (this is why they are described as being "derived" from those transactions). With the exception of interest swaps, most derivative contracts relate to the difference between the agreed future price of an asset on a future date and the actual market price on that date. For example, in a futures contract, one party agrees to deliver to the other party on a specified future date ("the maturity date") a specified asset (e.g. a commodity, currency, a debt, equity security or basket of securities, a bank deposit or any other category of property) at a price agreed at the time of the contract and payable on the maturity date. Futures are usually performed by the payment of the difference between the price agreed upon at the time of the contract and the market price on the maturity date, and not by physical delivery and payment in full on that date (they are called derivatives because settlement is not by actual performance of the sale or deposit contract but by a difference payment derived from an actual asset and an actual price; the contract is derived from an ordinary commercial contract). In options, the buyer has the right (but not the obligation) to acquire ("call option") or to sell ("put option") an asset in the future at a price fixed when the option is entered into. Repurchase agreements (or repos) are contracts under which one party sells a (usually fixed interest) security to another and simultaneously agrees to repurchase the security at a future date at an agreed price that includes allowance for the interest on the cash consideration and the accrued interest on the security. The payments are contingent upon the delivery or return of security. Within inter-bank payment systems and securities settlement systems, participants have obligations to make a large number of individual payments and also rights to receive similar numbers of payments from other participants. These obligations and rights are resolved into payments due to or from the system as a whole (typically using a central counter-party) or due between each pair of participants.

12. Derivatives, including swaps and repos, are usually transacted within a master netting agreement (e.g. the Master Netting Agreement prepared by the International Swaps and Derivatives Association ("ISDA")), which provides for the net settlement of payments due in the same currency on the same date. The agreement may also make provision, upon the default by a party, for the termination of all outstanding transactions at their replacement or fair market cost, conversion of such sums into a single currency and netting into a single payment by one party to the other (issues relating to netting are addressed in the ISDA Model Netting Act, adopted by 21 States). Set off (the discharge of reciprocal claims to the extent of the smaller claim) and netting (at its simplest, the ability to set off reciprocal claims on the insolvency of a counter-party) may come within the ambit of the draft Convention to the extent that the net obligation arising under a derivatives contract may be assigned.

CHAPTER I. SCOPE OF APPLICATION

Commentary

Structure of chapter I

13. In chapter I, scope-related issues are dealt with in different provisions for the sake of clarity and simplicity in the text. Article 1 defines the substantive scope in general terms, as well as the territorial scope of application of the draft Convention. Articles 2 and 3 define the substantive scope in more detailed terms (definitions of assignment, receivable and internationality of an assignment or a re-

ceivable). Articles 4 and 5 deal with excluded transactions and transactions treated differently. Article 6 appears in chapter II of the draft Convention since the terms defined therein do not raise mainly or only scope-related issues. The Commission may wish, however, to consider whether, in view of the importance of the term "location", its definition in article 6 *(i)* should be moved to article 2 or 3 or to a new article in chapter I.

Article 1. *Scope of application*

(1) This Convention applies to:

(a) Assignments of international receivables and to international assignments of receivables as defined in this chapter, if, at the time of the conclusion of the contract of assignment, the assignor is located in a Contracting State;

(b) Subsequent assignments provided that any prior assignment is governed by this Convention; and

(c) Subsequent assignments that are governed by this Convention under subparagraph *(a)* of this paragraph, notwithstanding that any prior assignment is not governed by this Convention.

(2) This Convention does not affect the rights and obligations of the debtor unless the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

[(3) The provisions of chapter V apply to assignments of international receivables and to international assignments of receivables as defined in this chapter independently of paragraphs (1) and (2) of this article. However, those provisions do not apply if a State makes a declaration under article 37.]

(4) The annex to this Convention applies in a Contracting State which has made a declaration under article 40.

Commentary

Substantive and territorial scope of application

14. Under article 1, the draft Convention applies to assignments of receivables (for a definition of the terms "assignment" and "receivable", see paras. 26, 27, 29 and 30). There are two conditions for the draft Convention to apply. There needs to be an element of internationality (for an exception, see para. 18) and an element of a territorial connection between certain parties and a Contracting State. The element of internationality may relate to the assignment or to the receivable. Accordingly, the draft Convention applies to assignments of international receivables, whether or not the assignments are international or domestic, and to international assignments of receivables, even if the receivables are domestic. As a result, the assignment of receivables is covered whether or not those receivables arise in the context of international or domestic trade, as long as the assignment itself is international (for comments on internationality, see paras. 38-40). The element of territorial connection may relate to the assignor only or to the assignor and the debtor. For the application of the provisions of the draft Convention other than the debtor-related provisions (e.g. chapter IV, section II), only the assignor needs to be located in a Contracting State. For the application of the draft Convention as a whole, the debtor too needs to be located in a Contracting State (or the law governing the receivable needs to be the law of a Contracting State; for a discussion of the term "location", see paras. 66-70).

15. This approach to the issue of the territorial scope of the draft Convention is based on the assumption that the main disputes that the draft Convention would be called upon to resolve would be addressed if the assignor (and, only for the application of the debtor-related provisions, the debtor too) is located in a Contracting State. Such disputes could arise with regard to rights of the assignee against the assignor flowing from the breach of a warranty; enforcement of the receivables by the assignee against the debtor; discharge of the debtor; defences of the debtor towards the assignee; relative rights of the assignee and the administrator in the insolvency of the assignor; relative priority rights of the assignee and a competing assignee; and the effectiveness of subsequent assignments. The Working Group also considered that enforcement would normally be sought in the place of the assignor's or the debtor's location and there is thus no need to make reference to the assignee's location; and that application of the provisions of the draft Convention other than those contained in section II of chapter IV would not affect the debtor and there is thus no need to preclude the application of all the provisions of the draft Convention if the debtor is not located in a Contracting State.

16. As a result of this approach, the territorial scope of application of the draft Convention is sufficiently broad and thus it is not necessary to extend it to cases in which no party may be located in a Contracting State but the law of a Contracting State is applicable by virtue of the private international law rules of the forum. The Working Group thought that such an approach might introduce uncertainty, at least, to the extent that private international law on assignment is not uniform and, in any case, parties would not know at the time of the conclusion of a transaction where a dispute might arise and, as a result, which private international law rules might apply. However, if the forum is located in a non-Contracting State, the courts are not bound by the draft Convention. Therefore, despite the fact that article 1 does not refer to the application of the draft Convention by virtue of private international law rules, the courts of a non-Contracting State may not be precluded from applying the draft Convention as part of the law designated by their private international law rules. In this connection, the particular question arises as to whether the courts of a non-Contracting State would apply the draft

Convention only if the courts of a Contracting State would apply it (i.e. if the substantive and territorial requirements of the draft Convention are met) or even if the courts of a Contracting State would not apply it (i.e. if the requirements of chapter I are not met). The Commission may wish to address this question.

17. Under article 1 (2), the debtor-related provisions of the draft Convention may apply to situations in which the debtor might not be located in a Contracting State but the law of a Contracting State governs the assigned receivable. In this context, a different approach to the territorial scope of application of the draft Convention is followed, since the Working Group felt that certainty as to the application of the draft Convention would not be unduly compromised. Furthermore, unlike paragraph (1), paragraph (2) of article 1 does not specify the time at which the debtor needs to be located in a Contracting State or the receivable needs to be governed by the law of a Contracting State (on this matter, see also paras. 202 and 219). The Commission may wish to specify that time. The time of the conclusion of the original contract may be preferable from a debtor protection point of view, since it would enhance predictability of the application of the draft Convention to the debtor-related issues. Such an approach would also be consistent with article 39, which refers to the location of the debtor in a State making a declaration at the time of the original contract. However, such an approach would result in the assignor, the assignee and third parties not being able to determine, in the case of future receivables, whether the draft Convention would apply to the rights and obligations of the debtor (for a related problem with regard to future receivables assigned domestically, see paras. 39 and 40).

Subsequent assignments

18. In line with the principle of continuatio juris, the draft Convention applies also to subsequent assignments made, for example, in the context of international factoring, securitization and refinancing transactions, provided that any prior assignment is governed by the draft Convention (and irrespective of whether there is an element of internationality). Accordingly, even a domestic assignment of domestic receivables may be brought into the ambit of the draft Convention if it is subsequent to an international assignment. The reason for such an approach is that, unless all assignments in a chain of assignments were made subject to one and the same legal regime, it would be very difficult to address assignment-related issues in a consistent manner. The Commission may wish to consider whether the draft Convention should apply to subsequent assignments only if the assignor is located in a Contracting State.

19. The draft Convention also applies to subsequent assignments that in themselves fall under article 1 *(a)*, whether or not any prior assignment is governed by the draft Convention (as this is not a separate type of assignment, the Commission may wish to reconsider the placement of article 1 (1) *(c)*). As a result, the draft Convention may apply only to some of the assignments in a chain of assignments. This result is a departure from the principle of continuatio juris. However, the Working Group considered it necessary to follow this approach since parties to assignments in securitization transactions, in which the first assignment is a domestic one and relates to domestic receivables, should not be deprived of the benefits that may be derived from the application of the draft Convention. This approach is based on the assumption that it would not unduly interfere with domestic practices (on this matter, see para. 20).

Relationship with national law

20. As a result of covering in the draft Convention international assignments of domestic receivables or even domestic assignments of domestic receivables made in the context of subsequent assignments, business parties in domestic transactions could benefit from increased access to international financial markets and thus to potentially lower-cost credit. The interests of assignors, protected, for example, by national law prohibitions of assignments of future receivables or of global assignments, would not be unduly interfered with to the extent that the draft Convention does not preclude the assignor from offering its receivables to different lenders for credit (e.g. to a supplier of materials on credit and to a financing institution for working capital) in that it does not give priority to one over the other. The interests of debtors, protected by national legislation, would not be unduly interfered with either, at least to the extent that the draft Convention requires that the debtor be located in a Contracting State and limits the effects of an assignment on the debtor to mainly payment to another creditor in the country and in the currency stipulated in the original contract. The interests of domestic assignees would not be unduly interfered with either, because the draft Convention does not give priority to a foreign over a domestic assignee. It merely specifies which national law would govern priority. In addition, for a conflict between a domestic and a foreign assignee to be covered by the draft Convention (article 24 *(a)* (i)), the assignor would need to be located in a Contracting State (article 1 *(a)*) and that State, by definition in a domestic assignment of a domestic receivable (article 3), would be the State in which both the domestic debtor and the domestic assignee would be located. However, as a result of the central-administration location rule, different laws might apply to a conflict between an assignment by a branch office and an assignment by the head office, if the branch or the head office is not located in a Contracting State.

Scope of chapter V

21. Under article 1 (3), the private international law provisions of chapter V apply to assignments with an international element as defined in article 3, whether or not the assignor or the debtor is located in a Contracting State. The justification for limiting the scope of application of chapter V lies in the wish to reduce any conflicts with other conventions, dealing with private international law issues of assignment (e.g. the European Union Convention on the Law Applicable to Contractual Obligations, Rome, 1980 ("the Rome Convention") and the Inter-American Convention on the Law Applicable to International Contracts, Mexico City, 1994 ("the Mexico City Convention")). The Commission may wish to reconsider this approach. Defining the scope of application of private international law provisions by reference to substantive or even artificial notions of internationality would not appear to be appropri-

ate. In any case, the question of conflicts with other private international law texts is already sufficiently addressed in articles 36 (giving precedence to any other international legislative text that deals with the same matters) and 37 (allowing States to opt out of chapter V).

22. The Commission may also wish to consider dealing with the issue of the hierarchy between the substantive and the private international law provisions of the draft Convention with a view to ensuring that the substantive law provisions apply first (the matter is addressed in article 24 by the words "with the exception of matters which are settled elsewhere in this Convention"). A new provision could be inserted at the beginning of chapter V that would deal with the scope of chapter V, the hierarchy between chapter V and the rest of the draft Convention and with the right of States to opt out of chapter V. Such a provision could read along the following lines: "Chapter V applies to assignments independently of the provisions of chapter I. In the case of an assignment to which this Convention applies in accordance with chapter I, chapter V applies to matters that are not settled elsewhere in this Convention. If a State makes a declaration under article 37, chapter V does not apply." Article 37 would serve to explain the effect of such a declaration (for further comments on the scope and purpose of chapter V, see paras. 187-189). If such an approach were to be followed, article 1 (3) could be deleted or refer only to the possibility for a reservation by States with respect to the application of chapter V.

Application of the annex

23. Article 24 of the draft Convention refers priority issues to the law of the assignor's location (as to the meaning of "location", see article 6 *(i)*). In recognition of the fact that some States may need to modernize or adjust their priority rules, article 1 (4) allows States to opt into one of the two substantive law priority rules set forth in the annex. Article 40 (2) clarifies the effect of a declaration under article 1 (4), namely, that, for the purposes of article 24, the law of the assignor's location is the priority rule of the annex chosen by the Contracting State in which the assignor is located (for the choices given to States and effects of declarations, see para. 216). Once article 40 is finalized, the Commission may wish to reconsider the formulation and the proper place of article 1 (4) in the draft Convention.

Article 2. *Assignment of receivables*

For the purposes of this Convention:

(a) "assignment" means the transfer by agreement from one person ("assignor") to another person ("assignee") of the assignor's contractual right to payment of a monetary sum ("receivable") from a third person ("the debtor"). The creation of rights in receivables as security for indebtedness or other obligation is deemed to be a transfer;

(b) in the case of an assignment by the initial or any other assignee ("subsequent assignment"), the person who makes that assignment is the assignor and the person to whom that assignment is made is the assignee.

Commentary

Assignment and contract of assignment or financing contract

24. Like most legal systems, the draft Convention recognizes the distinction between the assignment itself as a transfer of property and the contract of assignment as a transaction creating personal obligations (in other words, between the assignment and its causa, that is, a sale, security agreement, gift or payment). This distinction may be apparent where the contract of assignment and the assignment take place at different points of time and are part of separate agreements (as, e.g. in securitization and project finance transactions). It may not be as apparent where the two transactions take place simultaneously and are embodied in a single contract (as, e.g. in factoring transactions). While the main focus of the draft Convention is on assignment as a transfer of property rights in receivables, the draft Convention deals also with contractual matters in articles 13 to 16 and 28. However, the draft Convention does not address the issue of the relationship between the assignment and the contract of assignment. This relationship is treated differently from one legal system to another. In some legal systems, the effectiveness of an assignment depends on the validity of the contract. In other legal systems, the assignment is treated as an "abstract transaction", that is, legally independent of the underlying contract in the sense that defects in the underlying contract do not automatically affect the validity of the assignment and vice versa. In yet other legal systems, the assignment is a separate act but may be affected by the invalidity of the contract. In practice, a defect in the contract of assignment will often lead to the nullification of the assignment itself. However, in those limited cases in which only the contract may be invalid, the assignor will have only a personal claim against the assignee limited to restitution of any unjust enrichment and will not be able to have the assigned receivable separated from the assignee's insolvency estate or to oppose the attachment of the assigned receivable in the hands of the assignee.

25. In particular, the draft Convention does not refer to the purpose of an assignment, that is whether an assignment is made for purely financing purposes or for book-keeping, collection, insurance, risk-management, portfolio diversification or other purposes. Such qualifications interfere with the purpose of the contract of assignment or the financing contract and would result in: inappropriately limiting the scope of the draft Convention to purely financing transactions and in creating a special regime on assignments for financing purposes, even though one is not needed; uncertainty, since there is no universal understanding of the terms "financing" and "commercial", and a uniform definition is neither feasible nor desirable; and in unnecessarily exclud-

ing from the scope of the draft Convention important transactions in which only services may be provided (with regard to the possible impact of such an approach on national law, see para. 20; as to potential conflicts with the Convention on International Factoring, Ottawa, 1980 ("the Ottawa Convention"), see paras. 204-206).

"Transfer by agreement"

26. With the intention of bringing within the ambit of the draft Convention, in addition to assignments, other practices involving the transfer of property rights in receivables, such as contractual subrogation or pledge, article 2 defines "assignment" as a transfer. This approach takes into account the fact that significant receivables financing transactions, such as factoring, take place, in some legal systems, by way of a contractual subrogation or pledge. Rather than creating a new type of assignment, the draft Convention is aimed at providing uniform rules on assignment and assignment-related practices with an international element, which, although covered in theory by currently existing national law, could not be sufficiently developed in view of the inherent limitations on the application of national law to matters of mandatory law in an international context. The reference to transfers "by agreement" is intended to exclude transfers by operation of law (e.g. statutory subrogation).

27. Both outright transfers, including those made for security purposes, and assignments by way of security are intended to be covered, whether "value, credit or services" is given or promised at the time of the assignment or at an earlier time (consideration is not mentioned in article 2, since it is a matter for the contract of assignment or the financing contract). In order to avoid any ambiguity as to whether an assignment by way of security is covered, the matter is addressed explicitly in article 2 *(a)*, which creates the legal fiction that, for the purposes of the draft Convention, the creation of security rights in receivables is deemed to be a transfer. However, the draft Convention does not define outright assignments and assignments by way of security. This matter is left to other law applicable outside the draft Convention, since, in view of the wide divergences existing among legal systems as to the classification of transfers, an assignment by way of security could in fact possess attributes of a sale, while a sale might be used as a security device.

"From one person to another person"

28. Both the assignor and the assignee can be legal entities or individuals, whether merchants or consumers. In particular, the assignment between individuals is covered, unless the assignee is a consumer and the assignment is made for his/her own consumer purposes (article 4 (1) *(a)*). As a result, the assignment of credit card receivables or of loans secured by real estate in securitization transactions and of toll-road receipts in project financing arrangements fall within the ambit of the draft Convention. In view of the fact that in the draft Convention the singular includes the plural and vice versa, an assignment made by many persons (e.g. joint owners of receivables) or to many persons (e.g. a syndicate of financiers) is also covered (so is the assignment of more than one receivable). In the determination, however, of the territorial scope of application or internationality, each assignment should be considered a separate assignment and meet the conditions of chapter I for the draft Convention to apply (as to cases involving multiple debtors, see para. 38). In an assignment to a trustee acting on behalf of several persons, whether there are one or several assignees depends on the exact authority of the trustee, that is, whether the trustee was a mere agent or had the authority to make substantive decisions. This matter is left to law outside the draft Convention.

"Contractual right to payment of a monetary sum"

29. Receivables arising from any type of contract are intended to be covered, whether the contract exists at the time of assignment or not. The transfer of receivables arising by operation of law, such as tort receivables, receivables arising in the context of unjust enrichment, tax receivables or receivables determined in court judgements or arbitral awards, are excluded, unless they are confirmed in a settlement agreement. What is a "contractual" right is a matter of interpretation in accordance with the law governing that right. However, contractual receivables, the assignment of which is covered by the draft Convention, include receivables arising under contracts for the sale of goods or the provision of services, whether those contracts are commercial or consumer transactions; receivables in the form of royalties arising from the licensing of intellectual property; damages for breach of contract; interest if it was owed under the original contract; dividends arising from shares, whether they were declared at, or arose after, the time of the assignment; the right to receive payment of the proceeds of an independent guarantee or a letter of credit; and receivables in the form of credit balances in deposit accounts or securities transactions.

30. While, in principle, the right of the assignor/seller to any goods returned by the buyer (debtor) is not a receivable under the draft Convention, as between the assignor and the assignee, it is treated as a receivable to the extent that any goods returned by the buyer take the place of the assigned receivable (article 16; but, as against third parties, the assignee does not have a right to any returned goods, since they are excluded from the definition of "proceeds" in article 6 *(k)*). Furthermore, non-monetary rights convertible into a monetary sum (e.g. the assignment of rights arising in a commodity swap) are receivables the assignment of which is covered. To the extent that the conversion is foreseen in the original contract, this result is implicit in article 2; to the extent that such a conversion is not foreseen in the original contract, it is in line with the Working Group's decision to cover the assignment of non-monetary rights converted into damages for breach of contract. This result is also implicit in article 5, which relates to swaps and derivatives transactions. The Commission may wish to reflect this understanding explicitly in the draft Convention. The Commission may also wish to consider whether unilateral assignments should be covered, although such assignments are rare in practice. In addition, after acceptance of the proceeds of the assigned receivable a de facto assignment would exist. However, in the few situations where a unilateral assignment is made and a conflict arises with a Convention assignment before any implicit agreement by way of the assignee's acceptance of payment, it may be desirable to ensure that the conflict is resolved under article 24 on the basis of the law of the assignor's location.

Non-monetary performance rights

31. The assignment of other, non-monetary, contractual rights (e.g. the right to performance, the right to declare the contract avoided or the right to request delivery of a commodity or a security under a swap or repurchase agreement) or of composite rights (e.g. the right to present documents and demand payment under an independent guarantee or a letter of credit) is not covered. The Commission may wish to reconsider the exclusion of assignment of non-monetary contractual rights to performance. Such an approach may result in parts of one and the same assignment transaction being submitted to different legal regimes, since in practice assignments often relate to all rights arising under a contract and assignees rely on non-monetary performance rights as well (draft article 12.101 of the European Contract Principles refers to "rights to payment or other performance";[9] however, draft article 1.1 of the Principles on Assignment of the International Institute for the Unification of Private Law ("Unidroit") is modelled on article 2).[10] Assignments of contracts, which involve an assignment of contractual rights and a delegation of obligations, are not covered either. While such transactions may form part of financial arrangements, the financier would normally rely mainly on the receivables. As to the delegation of obligations, the Working Group thought that it should not be covered because it raises issues going far beyond the desirable scope of the draft Convention.

Parts or undivided interests in receivables

32. Important practices that are intended to be covered by the draft Convention involve the assignment of parts or undivided interests in receivables (e.g. securitization, loan syndication and participation). The effectiveness of such partial assignments is not common ground in all legal systems. Article 9, therefore, validates such assignments. However, in view of the fact that there is no explicit reference in chapter I to such partial assignments, it is not clear whether the draft Convention as a whole applies to them (including the debtor protection provisions, the application of which is important if the receivable is partially assigned to several assignees and the debtor incurs expenses to pay to more than one person). The Commission may, therefore, wish to clarify this matter in article 2 *(a)*, by adding, for example, before the words "of the assignor's contractual right" the words "all or part" (the matter is addressed in draft article 12.103 of the European Contract Principles and draft article 1.3 of the Unidroit Principles on Assignment).

33. With regard to monetary rights that are divisible, the debtor will normally be able to make partial payment. This may not be the case with non-monetary performance rights, since dividing performance rights could change the relationship between performance and counter-performance and have a negative impact on the legal position of the debtor. Therefore, if the Commission decides to include assignments of non-monetary performance rights within the ambit of the draft Convention, it may wish to clarify that a partial assignment of such rights is permitted only if they may be divided (e.g. if the debtor is entitled to make a separate payment for the part of the performance assigned; see draft article 12.103 (2) of the European Contract Principles). In addition, the Commission may wish to consider the position of the debtor in the case of a partial assignment of a monetary receivable. In practice, creditors are interested in a normal flow of payments and it is, therefore, unlikely that a debtor would be requested to pay more than one assignee. In addition, under article 17, such a request could only involve different payees in the same country and could not result in any additional cost to the debtor.

34. However, the matter may need to be addressed explicitly. The Commission may wish to consider, for example, that, at the discretion of the debtor, a notification should be treated as ineffective if the related payment instruction instructs the debtor to pay to a designated payee less than the amount due under the original contract. Such an approach would result in covering all combinations of single or multiple assignments of parts or undivided interests in receivables, whether they involve lump-sum or periodic payments. It would also result in protecting the debtor in a sufficient but flexible way, without prescribing, in a regulatory manner, what the assignor, the debtor or the assignee ought to do and without creating liability. If the debtor is prepared to comply with an instruction to pay multiple assignees, there is no reason to prevent parties from doing what they all want to do. On the other hand, if the debtor pays while being unaware of its right to ignore such a payment instruction, the optional character of the ineffectiveness of the notification would preserve the pro tanto discharge of the debtor as a result of the payment in accordance with payment instructions. Alternatively, in the case of a partial assignment, the identification of a single payee could be made a condition of the effectiveness of a notification and the related payment instruction. In such a case, if the debtor is faced with instructions to pay more than one assignee of parts of a receivable, the debtor could be allowed to obtain a discharge by paying the assignor or the first assignee to notify (additional wording may need to be included in articles 18 and 19). A third alternative may be to establish the debtor's right to seek from the assignor compensation of any additional costs incurred by the debtor as a result of a partial assignment or even a right of set-off against the assignee. In cases where a right to compensation may not adequately protect the debtor against exposure to separate proceedings commenced by the assignor and one or more assignees, the debtor may be given a right to apply for an order for all claimants to be joined in one proceeding, in which a decision will be binding to all (draft article 12.103 (3) and (4) of the European Contract Principles).

Personal rights/statutory assignability

35. Article 2 does not refer to personal rights that by law are not assignable (e.g. wages, pensions, insurance policies and sovereign receivables). It is assumed, however, that statutory limitations on assignment, other than those addressed in article 9, are not intended to be covered (see paras. 84 and 85). The Commission may wish to state this understanding explicitly in article 2 (draft article 12.302 of the European Contract Principles refers to "a performance

[9]Reference is made to the draft available in December 1999, prepared for the Commission on European Contract Law by Professor Roy Goode.

[10]Reference is made to Unidroit 1999, Study L—Doc.65 of December 1999, Working Group for the preparation of Principles on International Commercial Contracts, chapter [...], Assignment of rights, transfer of duties and assignment of contracts, Section I: assignment of rights (draft and explanatory notes prepared by Professor Marcel Fontaine).

which the debtor, by reason of the nature of the performance or the relationship of the debtor and the assignor, could not reasonably be required to render to anyone except the assignor"; and draft article 1.3 of the Unidroit Principles on Assignment refers to rights that have "a personal character or the assignment [of which] is prohibited by the applicable law").

"[Owed by] a third person"

36. Apart from the assignor and the assignee, the debtor too could be a legal entity or an individual, a merchant or a consumer, a governmental authority or financial institution (or there could be a multiplicity of debtors). Unlike the Ottawa Convention, the draft Convention does not exclude commercial practices involving the assignment of contractual receivables owed by consumers, unless the assignment is to a consumer for his/her consumer purposes (articles 4 (1) *(a)*). Assignments of consumer receivables form part of significant practices, such as securitization of credit card receivables, the facilitation of which has the potential to increase access to lower-cost credit by manufacturers, retailers and consumers and, as a result, could facilitate international trade in consumer goods. However, while covering the assignment of consumer receivables, the draft Convention is not intended to override consumer-protection law. This principle flows from the general debtor protection principle enshrined in article 17 (1). It is also reflected in a number of provisions of the draft Convention, as, for example, in articles 21 (1) and 23, under which a consumer-debtor cannot waive any defences and rights of set-off and has a right to recover payments from the assignee, if the consumer protection law applicable in the country of the debtor so provides (for anti-assignment clauses in a consumer context, see para. 100).

37. The assignment of receivables owed by a Government or a public entity is covered, unless they are unassignable by law (a matter that may need to be explicitly clarified; as to statutory limitations, see paras. 84 and 85). However, the State in which the sovereign debtor is located may enter a reservation as to the rule of article 11 that assignments are effective notwithstanding a contractual limitation on assignment (see paras. 213 and 214). Receivables owed by debtors in financial contracts, such as loans, deposit accounts, swaps and derivatives, are also covered by the draft Convention. However, the effectiveness of an assignment in general or only as to the debtor of such a receivable may be left to law outside the draft Convention (article 5). Furthermore, the assignment of one or more than one receivable, whether in whole or in part, owed jointly (i.e. fully) and severally (i.e. independently) by multiple debtors is also covered, provided that the contract from which the assigned receivables arise (hereinafter referred to as "the original contract") is governed by the law of a Contracting State. If, however, the original contract is not governed by the law of a Contracting State and one or more, but not all, debtors are located in a Contracting State, each transaction should be viewed as an independent transaction and thus debtors who are not located in a Contracting State should not be affected by the draft Convention. Otherwise, the predictability as regards the application of the draft Convention to rights and obligations of debtors, which is one of the main objectives of the draft Convention, could be compromised.

Article 3. *Internationality*

A receivable is international if, at the time of the conclusion of the original contract, the assignor and the debtor are located in different States. An assignment is international if, at the time of the conclusion of the contract of assignment, the assignor and the assignee are located in different States.

Commentary

38. With a view to achieving certainty in the application of the draft Convention, article 3, following the example of other texts prepared by UNCITRAL or other organizations, defines internationality by reference to the location of the parties (under article 6 *(i)*, "location" means place of business or, in the case of more than one place of business of the assignor and the assignee, the place of central administration or, in the case of no place of business, the habitual residence). In the case of more than one assignor, assignee or debtor, internationality is to be determined for each of those parties separately (see paras. 28 and 37). As a result of article 3, once a receivable is international, its assignment is covered by the draft Convention, whether the receivable is assigned to a domestic or to a foreign assignee. On the other hand, even if a receivable is domestic, its assignment may come within the ambit of the draft Convention if it is international or it is part of a chain of assignments that includes an earlier international assignment (see para. 19).

39. The international character of an assignment is determined at the time it is made, while internationality of a receivable is determined at the time of the conclusion of the original contract ("at the time it arises"). Determining the internationality of a receivable at the time it arises is justified by the need for a potential assignor to know at the time of the conclusion of the original contract which law might apply to a potential assignment. Such knowledge is important for a potential assignor to be able to determine whether and at what cost the assignor may obtain credit and, on that basis, to decide whether to extend credit to the debtor and on what terms. As a result of this approach to the relevant time for determining internationality, however, in the case of a domestic bulk assignment of domestic and international future receivables, the parties may not be able to predict at the time of the assignment whether the draft Convention will apply (this problem would not arise, however, in the case of international assignments of domestic or international receivables, since the internationality of an assignment could be determined at the time it is made). Furthermore, in the case of a domestic assignment of both domestic and international receivables, the draft Convention would apply to the assignment of the international receivables but not to the assignment of the domestic receivables. This means that, depending on whether the draft

Convention applies, implied representations as between the assignor and the assignee, as well as the legal position of the debtor may be different (e.g. as to defences and rights set-off, but not as to discharge, since the debtor may discharge under law applicable outside the draft Convention). However, the applicable priority rules would not be different, since the draft Convention would cover in any case all possible conflicts of priority, including conflicts with a domestic assignee of domestic receivables.

40. Parties to domestic assignments will, therefore, need to structure their transactions in a certain way to avoid this problem (e.g. by avoiding to assign in one transaction both domestic and international receivables). Where parties are not able to do so, they will be exposed to the possibility that one law may apply to domestic receivables while another law, the draft Convention, would apply to international receivables. This problem, however, is not created by the draft Convention; it exists already outside the draft Convention in cases where domestic and international receivables are assigned. Furthermore, structuring a transaction under the draft Convention would be easier than under other law, at least, to the extent that parties to a domestic assignment will be faced with only two laws that may possibly apply to their assignment, the law of the country, in which the assignor and the assignee are located, and the draft Convention. In addition, a debtor's legal position would not be changed, unless the debtor is located in a Contracting State or the law governing the receivable is the law of a Contracting State.

Article 4. *Exclusions*

(1) This Convention does not apply to assignments:

(a) Made to an individual for his or her personal, family or household purposes;

(b) To the extent made by the delivery of a negotiable instrument, with any necessary endorsement;

(c) Made as part of the sale, or change in the ownership or the legal status, of the business out of which the assigned receivables arose.

[(2) This Convention does not apply to assignments listed in a declaration made under article 39 by the State in which the assignor is located, or with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, by the State in which the debtor is located.]

Commentary

41. In view of the broad scope of application of the draft Convention, article 4 is intended to exclude certain practices that are either distinct from assignment-related practices or are already sufficiently regulated.

Assignments for consumer purposes

42. Subparagraph *(a)* is intended to exclude from the scope of the draft Convention assignments from a business entity or a consumer to a consumer but only if they are made for the assignee's personal, family or household purposes. The Working Group agreed that such assignments were of no practical significance. As a result, assignments of consumer receivables were not excluded, unless made to a consumer for his/her consumer purposes.

Assignments of negotiable instruments

43. Subparagraph *(b)* is intended to exclude transfers of negotiable instruments. Such transfers are distinct from assignments and are regulated by specific rules of national and international law (e.g. there is no requirement for the notification of a transfer; if the debtor pays a transferee who is not the holder, the debtor is still liable to the holder; a person who takes the instrument for value and without knowledge of any hidden defences against the transferor is not subject to those defences). Rather than referring to the documentary nature of a receivable, subparagraph *(b)* focuses on the form of the transfer. Such an approach is sufficient to preserve the negotiability of an instrument, while it avoids the need to define "negotiable instrument", a term on which there is no universal understanding. Excluded are transfers of receivables made by endorsement and delivery or by mere delivery of an instrument. Such instruments include bills of exchange, promissory notes, cheques and bearer documents (e.g. negotiable securities).

44. Receivables arising under a contract are often incorporated into a negotiable instrument for the sole purpose of obtaining payment by way of summary proceedings in court, if necessary. In such cases, both the receivable arising under a contract and the receivable incorporated into a negotiable instrument may be transferred. The words "to the extent made by the delivery ... with any necessary endorsement" are intended to ensure that only the transfer of the receivable in the form of a negotiable instrument and not of the receivable in its contractual form is excluded from the scope of application of the draft Convention. The Commission may wish to consider whether article 4 *(b)* should refer to transfers of dematerialized (i.e. electronic) negotiable instruments.

Assignments of receivables in corporate buyouts

45. Subparagraph *(c)* is aimed at excluding assignments made in the context of the sale of a business as a going concern, if they are made from the seller to the buyer. Such assignments are excluded since they are normally regulated differently by national laws dealing with corporate buyouts and are not of a financing nature. However, assignments made to an institution financing the sale are not excluded.

Other types of assignments or receivables

46. In the course of its work, the Working Group considered the exclusion of other types of assignments, such as assignments by operation of law, assignments as gifts, assignments of wages, contractual rights in general, insurance premiums, rights under independent guarantees and letters of credit ("independent undertakings"), assignments of

rents from real estate and equipment and assignments of balances in deposit accounts. As to assignments by operation of law, it should be noted that they are excluded in view of the definition of "assignment" by reference to a "transfer by agreement" (article 2 *(a)*). In view of the fact that consideration was thought to be part of the contract of assignment, which, with the exception of articles 13 to 16 and 28, is not addressed in the draft Convention, the Working Group decided not to address assignments as gifts.

47. As to the assignment of wages (or pensions), the Working Group decided to leave the matter to other law. If such assignments are prohibited under national law, the draft Convention does not affect that prohibition. If, however, such assignments are not prohibited under national law, with a view to preserving significant practices, such as the financing of temporary employment services, the draft Convention does not do anything to invalidate them. However, that result may not be achieved, unless a specific reference to statutory limitations relating to personal or similar receivables is included in article 9, which validates assignments of future receivables, without any exception as to personal rights that may not be assignable under national law (on this matter, see also paras. 84 and 85).

48. The assignment of the right to present an independent undertaking along with any documents it requires and demand payment is not intended to be covered by the draft Convention (the Commission may wish to state this result explicitly in article 4). However, the assignment of the proceeds of payment of an independent undertaking is covered by the draft Convention, with the additional protection introduced in article 5 for the guarantor/issuer of such an independent undertaking. As to the assignment of receivables arising from the sale or lease of mobile equipment, the Working Group decided that it should not be excluded. Article 36 was thought to be sufficient to address any conflicts with a preliminary draft Convention currently being prepared (see para. 211; as to the assignment of receivables other than trade receivables, see paras. 50-54). In order to reduce the potential for such conflicts, the Commission may wish to consider whether the assignment of receivables arising from the sale or lease of high-value mobile equipment should be treated in the same way as assignments of receivables other than trade receivables (i.e. whether contractual limitations on assignment need to be given effect to the extent of invalidating the assignment in general or only as against the debtor). Article 12 (5) would be sufficient to preserve any form or registration requirements relating to security and other supporting rights in high-value mobile equipment and article 24 would be sufficient to ensure that any conflicts of priority would be subject to the preliminary draft Convention if the assignor is located in a State party to the preliminary draft Convention.

49. In the interest of enhancing the acceptability of the draft Convention, paragraph (2), which appears within square brackets since it has not been adopted yet by the Working Group, is intended to ensure that States are given the option to exclude further practices. Such an approach may be necessary if no agreement is reached on the practices to be excluded in paragraph (1) or in order to address concerns that might arise in the future. However, a possible disadvantage of such an approach would be that the scope of the draft Convention could vary from State to State, with the result that, in view of the multiplicity of parties involved and the possibility that one or more but not all potentially relevant States might have made a declaration, the exact scope of the draft Convention would not be easy to ascertain.

[Article 5. *Limitations on [assignments of] receivables other than trade receivables*

Variant A

(1) Articles 17, 18, 19, 20 and 22 do not affect the rights and obligations of the debtor in respect of a receivable other than a trade receivable except to the extent the debtor consents.

(2) Notwithstanding articles 11 (2) and 12 (3), an assignor who assigns a receivable other than a trade receivable is not liable to the debtor for breach of a limitation on assignment described in articles 11 (1) and 12 (2), and the breach shall have no effect.

Variant B

Articles 11 and 12 and section II of chapter IV apply only to assignments of trade receivables. With respect to assignments of receivables other than trade receivables, the matters addressed by these articles are to be settled in conformity with the law applicable by virtue of the rules of private international law.]

A/CN.9/466, paras. 60-77

Commentary

50. Article 5, which appears within square brackets since it has not been adopted by the Working Group, is intended to address special needs of practices involving, for example, swaps and derivatives, repos, receivables in clearing-house transactions, deposit accounts, securities accounts, as well as insurance receivables and receivables arising from independent undertakings. In those practices, it is essential to ensure that the position of the debtor is not changed as a result of an assignment, without the debtor's consent (i.e. that the debtor may ignore any notification, discharge its debt as stipulated in the original contract, retain all its defences and rights of set-off, as well as the right to amend the original contract without the consent of the assignee).

51. With regard to swaps and derivatives in particular, the approach of article 5 appears to be justified by the fact that, in such financial transactions, it is inherent that any party may be debtor or creditor and, by definition, payments net against each other. As a result, if one payment is pulled out, the whole transaction may be unravelled. In other words, an assignment may increase the credit risk on the basis of which a party entered into the transaction. In view of the importance of such transactions for international financial markets and their volume, such a situation may create a systemic risk that may affect the financial system as a whole. The same two-way flow of payments and the need to preserve the

mutual character of payments may exist with regard to clearing-house transactions. As to repos, it would need to be ensured that a party does not find its obligation to pay assigned to and pursued by another party while the original counter-party refuses to return the security.

52. As to other types of receivables (assignments of balances in deposit accounts, insurance receivables and proceeds of independent undertakings), an article 5 approach may be required for different reasons. With regard to independent undertakings, for example, there is a need to avoid upsetting well established practices or contradicting the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit, New York, 1995 ("the Guarantee and Standby Convention")). Articles 11 (1) and 12 (2) would contradict article 10 of the Guarantee and Standby Convention, under which the beneficiary may not assign any proceeds without the consent of the guarantor/issuer. As to deposit accounts and securities accounts, it is essential to ensure that rights of set-off of the depositary institution or the securities broker are not affected.

53. In both variants A and B, receivables are defined by reference to the well-known notion of "trade receivable". This approach has the advantage that it avoids the need to define the term "financial receivable", a term that is not universally understood in the same way and whose meaning keeps changing with the creation of new practices. On the other hand, by referring to any receivable other than a trade receivable, article 5 may inadvertently result in excluding transactions that should not be excluded. The Commission may, therefore, wish to define the excluded practices in a more specific way. The main difference between variants A and B lies in the fact that, under variant A, the assignment may be valid as between the assignor and the assignee and only its effects as against the debtor are left to law applicable outside the draft Convention, while, under variant B, the validity and effectiveness of an assignment altogether is left to law applicable outside the draft Convention. Another difference is that, unlike variant B, variant A gives the debtor the right to consent to the application of the draft Convention to the debtor's rights and obligations. Yet another difference between variants A and B is that, under variant A, the debtor would not have the right to terminate the original contract for breach of a contractual limitation on assignment.

54. The value of preserving the validity of the assignment as between the assignor and the assignee lies in the fact that such validity is a condition for obtaining priority. If the debtor pays the assignor, the assignee has a property claim in the assigned receivable. Such an approach is intended to facilitate practices in which the assignor receives payments on behalf of the assignee and holds the proceeds separate from its other assets (e.g, securitization or undisclosed invoice discounting). In addition, such an approach is intended to preserve for assignors, assignees, third-party creditors and consenting debtors, in practices involving the assignment of financial receivables, or of both trade and financial receivables, the main benefits of the draft Convention, which cannot be ensured by way of contract as they are normally part of mandatory law (e.g. the validity of assignments of future receivables and of bulk assignments, as well as the priority rules of the draft Convention).

CHAPTER II. GENERAL PROVISIONS

Article 6. *Definitions and rules of interpretation*

For the purposes of this Convention:

(a) "Original contract" means the contract between the assignor and the debtor from which the assigned receivable arises;

(b) "Existing receivable" means a receivable that arises upon or before the conclusion of the contract of assignment; "future receivable" means a receivable that arises after the conclusion of the contract of assignment;

[*(c)* "Receivables financing" means any transaction in which value, credit or related services are provided for value in the form of receivables. Receivables financing includes factoring, forfaiting, securitization, project financing and refinancing;]

(d) "Writing" means any form of information that is accessible so as to be usable for subsequent reference. Where this Convention requires a writing to be signed, that requirement is met if, by generally accepted means or a procedure agreed to by the person whose signature is required, the writing identifies that person and indicates that person's approval of the information contained in the writing;

(e) "Notification of the assignment" means a communication in writing which reasonably identifies the assigned receivables and the assignee;

(f) "Insolvency administrator" means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or liquidation of the assignor's assets or affairs;

(g) "Insolvency proceeding" means a collective judicial or administrative proceeding, including an interim proceeding, in which the assets and affairs of the assignor are subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(h) "Priority" means the right of a party in preference to another party;

(i) A person is located in the State in which it has its place of business. If the assignor or the assignee has more than one place of business, the place of business is that place where its central administration is exercised. If the debtor has more than one place of business, the place of business is that which has the closest relationship to the original contract. If a person does not have a place of business, reference is to be made to the habitual residence of that person;

(j) "Law" means the law in force in a State other than its rules of private international law;

(k) "Proceeds" means whatever is received in respect of an assigned receivable, whether in total or partial payment or other satisfaction of the receivable. The term includes whatever is received in respect of proceeds. The term does not include returned goods;

[*(l)* "Trade receivable" means a receivable arising under an original contract for the sale or lease of goods or the provision of services other than financial services.]

Commentary

"Original contract"

55. The original contract, which is used as a point of reference in articles 6 *(i)*, 17, 18 (1), 19 (1), 20 (1), 22 (2) *(b)* and 23, is the source of the assigned receivable. With the exception of those provisions which expressly state otherwise (e.g. articles 9-12 and 17-23), the draft Convention is not intended to affect the original contract.

"Existing" and "future" receivable

56. The terms "existing" and "future" receivable are referred to in articles 9 (effectiveness of an assignment) and 10 (time of assignment). The distinction between an existing and a future receivable is based on the time of the conclusion of the original contract. A receivable arising under a contract, which has been concluded before or at the time of assignment, is considered to be an existing receivable, even though it does not become due until a future date or is dependent upon counter-performance or some other stated event. The definition covers the entire range of future receivables, including conditional receivables (i.e. receivables that might arise subject to a future event that may or may not take place) and purely hypothetical receivables (i.e. receivables that might arise from an activity not initiated by the assignor at the time of the assignment; for a limitation introduced in article 9, see para. 89). The exact meaning of the term "conclusion of the contract" is left to law applicable outside the draft Convention. In any case, "conclusion" is not intended to refer to the performance of the contract.

"Receivables financing"

57. The term appears within square brackets in the preamble and in article 13 (3). The Commission may wish to delete this definition and, possibly, to refer to receivables financing only in the preamble (see para. 5).

"Writing"

58. The term is referred to in articles 6 *(e)*, 19 (1) and (5), 21 (1) and (3), 41 (2) and (4), 44 (1) of the draft Convention and in article 5 of the annex. Its definition is intended to include other than paper-based means of communications that can perform the same functions as a paper communication (e.g. provide tangible evidence, serve as a warning to the parties with regard to the consequences or provide a legible communication, authentication and sufficient assurances as to its integrity). It is inspired by articles 6 and 7 of the UNCITRAL Model Law on Electronic Commerce and reflects the two distinct notions of "writing" and "signature".

59. On the assumption that the need for higher assurances as to the authenticity of communications should be assessed differently depending on the context in which the communication is made, the draft Convention requires a writing for the notification of the assignment and a writing signed by the debtor for the waiver of the debtor's defences. Writing is also required for declarations by States and for certain registration-related acts. "Accessible" is meant to imply that the communication is readable and interpretable; "usable" refers not only to use by a physical person but also by a computer; and "subsequent reference" establishes a standard that is akin to that implied by a notion such as durability (while not referring to the strict interpretation given to the notion of durability in certain legal systems as equivalent to non-alterability) but more objective than that implied by notions such as readability or intelligibility (see Guide to Enactment of the Model Law, para. 50). Signature is defined by reference to the identification of the signer and indication of the signer's approval of the content of the communication.

"Notification of the assignment"

60. The term is used in articles 15, 16, 18, 19, 20 (2) and 22. A notification meets the requirements of the draft Convention if it is in writing and reasonably identifies the assigned receivables and the assignee. If a notification does not meet those requirements, it is not effective under the draft Convention (i.e. it does not trigger a change in the way in which the debtor may discharge its obligation or does not affect the debtor's rights of set-off or the debtor's right to modify the original contract in agreement with the assignor). However, the question whether such a notification is valid under law applicable outside the draft Convention is subject to that law. In particular, if pursuant to such a non-conforming notification the debtor pays the person entitled to payment (whether under the draft Convention or other applicable law), under article 19 (6), the debtor is discharged (see para. 142).

61. What is a reasonable description in each particular case is a matter to be determined in view of the circumstances. In general, it would not be necessary to state whether an outright assignment or an assignment by way of security is involved or to specifically identify the debtor or the amount. A general identification along the lines "all my receivables from my car business to X" or "all my receivables as against my clients in countries A, B and C to Y" would be reasonable. However, in the case of a partial assignment, the amount assigned may need to be specified in the notification (on partial assignments, see paras. 32-34 and 91). Furthermore, while the notification must reasonably identify the assignee for it to be an effective notification under the draft Convention, it does not need to identify the payee (i.e. the person to whom or for whose account or the address to which the debtor is to pay). As a result, a notification containing no payment instruction is effective under the draft Convention (article 19 (2)). However, in view of the fact that, under the draft Convention, a notification changes the way in which the debtor may discharge its debt, parties notifying the debtor would be encouraged to include in their notification such a payment instruction. The Working Group based the discharge of the debtor on

the notification rather than on the payment instruction in order to avoid confusing the debtor in cases where the two communications might be sent separately or in which several communications might be sent to the debtor by several persons.

"Insolvency administrator" and "insolvency proceeding"

62. The term "insolvency administrator" is used in articles 24 *(a)* (iii) and 30 (1) *(a)* (iii) of the draft Convention and articles 2 and 7 of the annex. The term "insolvency proceeding" is used in article 25 of the draft Convention and articles 2 and 7 of the Annex. Their definitions have been inspired by the definitions of "foreign proceeding" and "foreign administrator" contained in article 2 *(a)* and *(d)* of the UNCITRAL Model Law on Cross-Border Insolvency. They are also consistent with articles 1 (1) and 2 *(a)* and *(b)* of the European Union draft Regulation on Insolvency Proceedings. By referring to the purpose of a proceeding or to the function of a person, rather than using technical expressions that may have different meanings in different legal systems, the definitions are sufficiently broad to encompass a wide range of insolvency proceedings, including interim proceedings. This approach is intended to avoid a Contracting State recognizing as an insolvency proceeding or administrator a proceeding or person who does not have that character under the lex loci concursus or is unable to recognize as an insolvency proceeding or administrator a proceeding or person who has that character under the lex loci concursus.

"Priority"

63. The term "priority" is used in articles 16, 24, 25 (2), 26, 27, 30 and 40 of the draft Convention, as well as in articles 1, 2, 6 and 7 of the annex. Priority under the draft Convention means that a party may satisfy its claim in preference to other claimants. Priority does not mean validity (in the draft Convention, the term "effectiveness" is used instead, to denote the proprietary effects of the assignment). It presupposes a valid assignment (substantive or material validity is dealt with in chapter III, while formal validity is left to law applicable outside the draft Convention; for a secretariat suggestion to deal with the law applicable to formal validity, see paras. 80-82).

64. In addition, priority does not mean that a claimant has a proprietary (in rem) rather than a personal right (ad personam) with respect to the assigned receivable or any proceeds. This matter is left to the law of the assignor's location (articles 24 and 26). Moreover, priority does not prejudge the issue of whether the assignee with priority will retain all the proceeds of payment or turn over any remaining balance to the assignor or to the next claimant in the order of priority. This matter depends on whether an outright assignment or an assignment by way of security is involved, a matter left to law applicable outside the draft Convention (article 24). Priority does not affect the discharge of the debtor either. The debtor paying in accordance with article 19 (or, if article 19 is not applicable, in accordance with the law applicable under article 29) is discharged, even if payment is made to an assignee who does not have priority (under article 24 or, if article 24 is not applicable, under article 30). Whether that assignee will retain the proceeds of payment is a matter of priority to be resolved among the various claimants in accordance with the law applicable under article 24 (or article 30).

65. The definition does not refer to the right to payment since, while this expression might be appropriate for assignments by way of security, it might be restrictive in outright assignments in which the assignee may, for example, have a right to receive any goods returned by the debtor to the assignor. After the Working Group's decision to exclude returned goods from the definition of proceeds for the purposes of the priority rules of the draft Convention, the Commission may wish to revise the definition of priority to refer to a right to payment. The Commission may also wish to consider whether the combined application of articles 6 *(h)*, 9 and 24 *(a)* (i) is sufficient to ensure that more than one assignment of the same receivables by the same assignor may be effective. This result is assumed in article 24 *(a)* (i), which refers to a conflict of priority between several assignees of the same receivables assigned by the same assignor. However, in some legal systems, this matter does not raise a question of priority at all but one of effectiveness (nemo dat quod non habet). As a result, in such jurisdictions, the first assignment may be considered effective under article 9 and any subsequent assignment ineffective under national law, for lack of title (a matter not addressed in article 9, dealing with the proprietary effects of assignment, although addressed in article 14, dealing with the contract of assignment). In such cases, article 24 may never come into play.

"Location"

66. This term is referred to in several provisions of the draft Convention (i.e. articles 1 (1) *(a)* and (2), 3, 4 (2), 17 (2), 21 (1), 23, 24, 25, 30, 35 (3), 36, 37 and 39). The two main subjects, however, in which the term "location" is referred to, are the scope of application and questions of priority. The definition is intended to strike a balance between flexibility and certainty. The place of business is a well-known term, widely used in UNCITRAL and other international legislative texts, and on which abundant case law exists. It is used to denote a place in which the professional activities of a person or an entity are conducted. For the purpose of the application of the law of a State, several places of business in one and the same State are considered one place of business. In order to ensure a sufficient degree of predictability of the application of the draft Convention with regard to the debtor, in the case of multiple places of business of the debtor, reference is made to the place with the closest connection to the original contract. On the other hand, with a view to ensuring that priority issues are referred to a single jurisdiction (and one in which any main insolvency proceeding is most likely to be opened), article 6 *(i)* provides that, if the assignor (or the assignee) has more than one place of business, "place of business" means the place of central administration. The rule contained in article 6 *(i)* is applied throughout the draft Convention in order to avoid defining "place of business" differently for different purposes. Such an approach could complicate the application of the draft Convention or even lead to inconsistent results.

67. Place of central administration is akin to the centre of main interests (a term used in the UNCITRAL Model Law on Cross-Border Insolvency), chief executive office or principal place of business. All those terms are understood as denoting the centre of management and control, the real business centre, from which in fact, not as a matter of form, the important activities of an entity are controlled and ultimate decisions at the highest level are actually made (without regard to the place where most assets are located or books and records are kept), rather than the day-to-day management of the affairs and operations of such an entity. However, unlike the UNCITRAL Model Law, in which a rebuttable presumption is established that the centre of main interests is the place of registration (article 16 (3)), the draft Convention does not introduce such a "safe harbour" rule. The reason for this approach is that, unlike the UNCITRAL Model Law whose main focus is on insolvency, the draft Convention focuses mainly on the advance planning in the financing of a solvent debtor and for that planning to be facilitated it is absolutely necessary to define location by reference to a single and easily determinable jurisdiction.

68. In most cases, the place of central administration would be easy to determine. However, the place of central administration may not be as transparent as the place of incorporation (formal location), for example, where the place of exercise of central authority is so evenly divided between two or more countries as to make the choice of one over the other impossible or in the case of subsidiary companies where the real administrative control resides in the parent company. However, the place of incorporation presents the disadvantage that it is not a notion known in many legal systems and that its use would raise the problem of the application of the law of a jurisdiction without a close connection to the contract of assignment, which may not have any developed laws. Referring to place of central administration and creating a rebuttable presumption in favour of the place of incorporation could provide a solution to this problem, but it would inadvertently result in reducing the level of certainty achieved by a place-of-central-administration location rule (since there may be more than one place of registration). In any case, in the exceptional situations in which the place of central administration did not readily point to a single jurisdiction, parties would be left in no worse situation than they were to begin with and would endeavour to ensure that their interest was effective and enforceable in each jurisdiction in which the assignor might possibly be located.

69. The definition of "location" does not address the problem of subjecting transactions of branch offices to the law of the head office (in particular priority issues, which may arise in cases where the same receivables are assigned by one or more branch offices and the head office, or by different branch offices to different assignees). In order to address that problem, the Working Group, at its thirty-first session, considered an exception for branch offices in the banking industry only or in other industries as well, but was not able to reach consensus (see A/CN.9/466, paras. 25-30, 96 and 97). At the end of the thirty-first session, a suggestion was made with respect to branch offices of financial service providers, which the Working Group, for lack of sufficient time, was not able to consider (see A/CN.9/466, paras. 98 and 99). The justification for such a limited exception is that financing institutions tend to do business abroad through branch offices so that they are able to draw on their capital as a whole (and not only the capital deposited, e.g. for the business of a separate entity, a subsidiary) and their branch offices tend to be subject to the law of the State in which they do business.

70. Under the proposed text, in the case of a branch of a financial service provider with more than one place of business, "place of business" of the assignor and the assignee means the place where the branch on whose books a receivable is carried immediately prior to the assignment is located. "Financial service provider" is defined by reference to a "bank or other financial institution" (e.g. a securities dealer) and "deposits, loans or other financial services". The exact meaning of those terms is left to law outside the draft Convention. "Branch" is defined by reference to a place of business other than the place of central administration. The words "is carried on the books" are defined by reference to "[accounting] [regulatory] standards", the exact meaning of which is also left to law outside the draft Convention. If an exception is introduced to the location rule with respect to branch offices of financial institutions, it would need to be made also with respect to other industries in which a branch-based structure is used (e.g. the insurance industry). The broader the exception is, the more the appropriateness of the central administration rule is put into doubt. In its deliberations on the issue of "location" of branch offices, the Commission may wish to take into account article 1 (3) of the UNCITRAL Model Law on International Credit Transfers ("for the purpose of determining the sphere of application of this law, branches and separate offices of a bank in different States are separate banks"). The Commission may wish to consider the placement of article 6 *(i)* in the text of the draft Convention (see para. 13).

"Law"

71. The term "law" appears in the preamble and in articles 1 (2), 5, variant B, 8 (2), 12 (1), (4) and (5), 21, 23 to 25, 28 to 32, 35 and 40 (2). The definition of "law" is intended to ensure that renvoi is avoided. If "law" included private international law provisions, any matter could be referred to a law other than the law applicable by virtue of the private international law provisions of the draft Convention. Such a result would defeat the certainty of applicable law sought by the private international law provisions of the draft Convention. The Commission may wish to define "law" for the case of a federal State with more than one legal system (for the application of the draft Convention in the case of a federal State, 202). Language along the following lines may be considered: "In the case of a State with two or more territorial units in which different systems of law are applicable in relation to matters dealt with in this Convention, 'law' means the law of the territorial unit identified in the rules in force in such a State identifying which territorial unit's law is applicable. In the absence of such rules, 'law' means the law of the territorial unit with the relevant connection". The Commission may also wish to consider whether any other federal-State interpretation clause would be necessary (e.g. with respect to the meaning of "location").

"Proceeds"

72. The term "proceeds" appears in articles 12 (1), 16 (1), 24 *(b)* and 26. Its definition is intended to cover both proceeds of receivables and proceeds of proceeds (e.g. if the receivable is paid by way of a cheque, the cheque is "proceeds of the receivable" and cash received by the payee of the cheque is "proceeds of proceeds"). It is also intended to cover, proceeds in cash ("payment") and proceeds in kind ("other satisfaction"), whether received in total or partial satisfaction of the assigned receivable. In particular, it is intended to cover goods received in total or partial discharge of the assigned receivable but not returned goods (e.g. because they were defective and the sales contract was cancelled or because the sales contract allowed the buyer to return the goods after a trial period). However, as between the assignor and the assignee, the assignee has a right in returned goods (see para. 126).

"Trade receivable"

73. The definition of "trade receivable", a term that appears in article 5, is in line with the general understanding with regard to this term as codified in the Ottawa Convention. Unlike the Ottawa Convention, however, subparagraph *(l)* excludes receivables arising from financial services.

Article 7. *Party autonomy*

The assignor, the assignee and the debtor may derogate from or vary by agreement provisions of this Convention relating to their respective rights and obligations. Such an agreement does not affect the rights of any person who is not a party to the agreement.

A/CN.9/445, paras. 191-194
A/CN.9/456, paras. 79 and 80

Commentary

74. Article 7, which is modelled on article 6 of the United Nations Convention on Contracts for the International Sale of Goods, Vienna, 1980 ("the United Nations Sales Convention"), provides broad recognition of the principle of party autonomy. The assignor, the assignee and the debtor may vary or derogate from the provisions of the draft Convention. Unlike article 6 of the United Nations Sales Convention, however, article 7 does not allow parties to vary, or derogate from, provisions that affect the legal position of third parties, or to exclude the draft Convention as a whole. Accordingly, the assignor and the assignee may only vary or derogate from articles 13 to 16 and 28, while the assignor and the debtor are free to vary or derogate from articles 17 to 23, as long as the rights of third parties are not prejudiced. The reason for this different approach is that, while the United Nations Sales Convention deals with the mutual rights and obligations of the seller and the buyer, the draft Convention deals mainly with the proprietary effects of assignment and may, therefore, have an impact on the legal position of the debtor and other third parties. Allowing parties to an agreement to affect the rights and obligations of third parties would not only go beyond any acceptable notion of party autonomy but would also introduce an undesirable degree of uncertainty and could thus frustrate the main objectives of the draft Convention, that is, to facilitate increased access to lower-cost credit and to provide, at the same time, an adequate debtor protection system.

75. Like article 6 of the United Nations Sales Convention, article 7 requires an agreement, that is two corresponding declarations of intent, for the effective derogation from the draft Convention. Such an agreement may be explicit or implicit. A typical example of an implicit derogation is where the parties refer to the law of a non-Contracting State or to the domestic law of a Contracting State. Article 7 is intended to apply to an agreement between the assignor and the assignee ("third parties" are the debtor, the creditors of the assignor and the insolvency administrator) and to an agreement between the assignor and the debtor ("third parties" are the assignee, the assignor's creditors and the insolvency administrator). The Commission may wish to clarify whether article 7 should apply also to an agreement between the assignee and the debtor (e.g. an agreement whereby the debtor would waive its defences as against the assignee in return for a concession, such as a reduction of the interest rate or extension of the date of payment. Such agreements are not covered and, therefore, not limited by article 21 (see para. 150).

Article 8. *Principles of interpretation*

(1) In the interpretation of this Convention, regard is to be had to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.

(2) Questions concerning matters governed by this Convention which are not expressly settled in it are to be settled in conformity with the general principles on which it is based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law.

A/CN.9/456, paras. 82-85

Commentary

76. Article 8, inspired by article 7 of the United Nations Sales Convention, deals with the interpretation of and the filling of gaps in the draft Convention. With regard to the interpretation of the draft Convention, article 8 (1) refers to three principles, namely, the international character of the text, uniformity and good faith in international trade. These

principles are common to most UNCITRAL texts. The reference to the international character or source of the text should lead a court to avoiding interpretation of the draft Convention on the basis of notions of national law, unless the meaning of a term used in the draft Convention is clearly identical with its meaning under a particular national law or is clearly left to law applicable outside the draft Convention. The need to preserve uniformity can be served only if courts or arbitral tribunals apply the draft Convention on its merits and have regard to decisions of courts or tribunals in other countries. The Case Law on UNCITRAL Texts (CLOUT), a system of reporting case law on UNCITRAL texts, has been established by UNCITRAL exactly with the need to preserve uniformity in mind. CLOUT is available in paper form in the six official languages of the United Nations and through the UNCITRAL home page on the World Wide Web (http:\\www.uncitral.org) in English, French and Spanish (depending on the resources available, the other language versions will also be made available in the future).

77. The reference to good faith relates only to the interpretation of the draft Convention. If as a result of a contra legem interpretation it is applied to the conduct of the parties, caution should be exercised. While the principle of good faith would appropriately be applied to the contractual relationship between the assignor and the assignee, or the assignor and the debtor, it could undermine the certainty of the draft Convention if applied to the relationship between the assignee and the debtor or the assignee and any other claimant. For example, if the principle of good faith prevailing in the forum State were to apply to the assignee-debtor or the assignee-third party relationship, the debtor, who might have paid the assignee after notification, may have to pay again if, for example, the debtor knew about a previous assignment; and the law applicable under article 24 might be disregarded if it does not respect the principle of good faith as it may be understood in the forum State.

78. As to gap-filling, the rule is that, if matters fall within the scope of the draft Convention under chapter I but are not expressly settled in it, they are to be decided in accordance with the general principles on which the draft Convention is based. Such principles include notably the principles expressly mentioned in the preamble or enshrined in a number of provisions of the draft Convention (e.g. the principle of facilitation of increased access to lower-cost credit and the principle of debtor protection). Recourse to private international law rules is permitted only if, with respect to a matter governed by, but not explicitly settled in, the draft Convention, there is no principle on the basis of which it could be resolved or the matter is not governed by the draft Convention at all. Gaps left in the private international law provisions of the draft Convention are to be filled in accordance with the private international law principles underlying the draft Convention. In the absence of such principles, such gaps would be filled in accordance with the private international law rules of the forum.

79. Matters not governed by the draft Convention and left to law applicable outside the draft Convention by virtue of private international law rules include, but are not limited to, the requirements and the legal consequences of an outright assignment, an outright assignment for security purposes and an assignment by way of security; the question of the form of the contract of assignment; the accessory or independent character of a security right, which is the basis for determining whether it is transferred automatically with the receivables the payment of which it secures, or whether a new act of transfer is needed; and the consequences of a breach of representations by the assignor. The draft Convention covers statutory assignability to the extent that it specifies a number of receivables that are assignable, including future receivables and receivables not identified individually, but leaves other statutory limitations (relating, e.g. to pensions or wages) to other law. Matters left to law applicable outside the draft Convention also include: the question whether the assignor is liable towards the debtor for assigning trade receivables in violation of an anti-assignment clause; the debtor's obligation to pay (the draft Convention deals with the debtor's discharge only); the discharge of the debtor on grounds other than those specified in the draft Convention (e.g. by paying the rightful claimant if the notification received does not meet the requirements of the draft Convention); the defences and rights of set-off that the debtor may raise against the assignee; and agreements between the debtor and the assignee by which the debtor waives its defences and rights of set-off towards the assignee. Beyond those matters, the draft Convention explicitly refers certain matters (e.g. questions of priority) to law applicable outside the draft Convention, while specifying that law. Whether the law applicable to all the matters mentioned above, as well as to other matters not governed by the draft Convention, is to be determined on the basis of the private international law provisions of the draft Convention or of the forum, depends on whether the forum is in a Contracting State and on whether that Contracting State has opted out of chapter V.

CHAPTER III. EFFECTS OF ASSIGNMENT

Form of assignment

References:

A/CN.9/456, paras. 86-92
A/CN.9/466, paras. 101-103

Commentary

80. Chapter III settles issues of material validity of an assignment under the draft Convention. However, not all matters relating to material validity are settled in the draft Convention. Matters that are not addressed and are left to law outside the draft Convention include, for example, statutory limitations on assignment, other than those dealt with in articles 9, 11 and 12, and issues relating to capacity and authority. Matters of formal validity (e.g. whether writing, notification, registration or payment of a stamp duty is required for an assignment to be valid/effective) are

not dealt with at all in the draft Convention. The Working Group considered a wide variety of form requirements, ranging from written form (with or without any signature requirements) to the absence of any form. The widely prevailing view was that written form should be required for the assignment to be effective, at least as against third parties. However, in order to avoid invalidating oral practices in some countries, the Working Group decided to avoid introducing a written form requirement. The Working Group also considered the question of the law applicable to form, but was not able to reach consensus. The difficulty in dealing with form lies in the fact that form is designed to perform various functions. As between parties, a form requirement may function as a warning to the assignor with regard to the seriousness of the undertaking or as evidence minimizing the risk of disputes. As against third parties, in particular third-party creditors, a form requirement is designed to operate as a protection against the risk of fraudulent collusion in oral assignments (e.g. collusive ante-dating of an assignment or collusion as to the scope of the receivables intended to be assigned).

81. However, failing to address the issue of form in the draft Convention will create uncertainty. The absence of any rule on form may be interpreted by users of the draft Convention in different ways. It may either result in referring issues of form to law applicable outside the draft Convention or in validating any assignment irrespective of form. In the former case, uncertainty will arise with regard to the formal validity of an assignment under the draft Convention, which is a requirement of priority (as to the meaning of "priority", see paras. 63-65; this is reinforced by the fact that, unlike article 24 *(b)*, article 24 *(a)* does not deal with "existence" of a right; see paras. 165 and 170). In the latter case, the assignor, in return for a concession granted by an assignee, in particular before commencement of insolvency, may be able to grant priority to that assignee by ante-dating or enlarging the scope of the assignment. The Commission may, therefore, wish to reconsider the issue of form. A substantive law rule would be preferable. However, it would seem that it would not be feasible to achieve consensus on such a rule. Therefore, a private international law approach may be considered.

82. The Commission may wish to consider the following alternatives: either introduce a flexible rule in line with current practice in private international law with regard to formal validity of the contract between the assignor and the assignee (the proper law of the contract, the law of the country where the contract is concluded or, in the case of contracts between persons in different countries, the law of one of those countries; see article 9 of the Rome Convention or article 13 of the Mexico City Convention), combining this rule with a different rule with regard to effects as against third parties (the law of the assignor's location); or establish a "safe harbour" rule along the following lines: "An assignment is effective as against third parties if it meets, *at least*, the form requirements of the law of the State in which the assignor is located" (for a special rule in the case of a receivable supported by a security right, see para. 108). A rule referring form as against third parties to the law of the assignor's location would not necessarily run counter to current practice in private international law, since such practice relates to the contract of assignment, not to the proprietary transfer itself, and form requirements for an assignment to be in writing, notified to the debtor or registered, are intended to provide a temporal link for competing claims and thus touch upon issues of priority. In any case, a "safe harbour" rule would allow third parties to determine the formal effectiveness of an assignment as a basis for priority and would be in line with the approach followed in article 24, without interfering with prevailing trends in private international law.

Article 9. *Effectiveness of bulk assignments, assignments of future receivables and partial assignments*

(1) An assignment of existing or future, one or more, receivables and parts of, or undivided interests in, receivables is effective, whether the receivables are described:

(a) Individually as receivables to which the assignment relates; or

(b) In any other manner, provided that they can, at the time of the assignment, or, in the case of future receivables, at the time of the conclusion of the original contract, be identified as receivables to which the assignment relates.

(2) Unless otherwise agreed, an assignment of one or more future receivables is effective at the time of the conclusion of the original contract without a new act of transfer being required to assign each receivable.

Commentary

83. Assignments of future receivables, bulk assignments and assignments of parts of or undivided interests in receivables are at the heart of significant financing practices (e.g. factoring, securitization, project financing, loan syndication and participation, swaps and derivatives). Yet their effectiveness as a matter of property law is not recognized in all legal systems. Article 9 is intended to validate such transfers of property rights in receivables.

Statutory assignability

84. In validating the assignments to which reference is made in paragraph (1), article 9 may set aside statutory prohibitions that might exist in national law with respect to such assignments. While setting aside such statutory limitations, the draft Convention is not intended to interfere with national policies. Such policies are aimed at protecting the assignor from alienating its future property and potentially depriving itself of means of subsistence. They are often articulated by means of a requirement for specificity, which may not be possible in the case of an assignment of future receivables or a bulk assignment. With a view to counterbalancing the need to validate the assignments men-

tioned in paragraph (1) and the need to protect assignors, article 9 (1) requires that the receivables be identifiable when they arise (i.e. when the original contract is concluded) as receivables to which the assignment relates. Furthermore, in order to avoid limiting the assignor's right to transfer future receivables, the draft Convention does not give priority to one creditor over another (e.g. to a global assignee over a small supplier of materials on credit with a retention of title extending to the receivables from the sale of the assignor's final products), but leaves matters of priority to national law. As to statutory limitations aimed at protecting the debtor in assignments mentioned in paragraph (1) (as, e.g. in the case of limitations relating to partial assignments), the draft Convention does not interfere with national policies underlying such limitations to the extent that the debtor needs to be located in a Contracting State and, under the draft Convention, does not have to incur any additional cost as a result of the assignment (see paras. 32-34 and 128).

85. The draft Convention is not intended to affect any other statutory limitations, whether aimed at protecting the assignor (e.g. wage claimants or owners of retirement annuities) or at protecting debtors (e.g. sovereign or consumer debtors). This matter is left to national law applicable outside the draft Convention. This result is implicit in article 11, which deals only with contractual limitations on assignment (with regard to sovereign debtors, see paras. 213 and 214; for consumer debtors, see para. 100). As a result of the fact that this result is not stated explicitly in the draft Convention, it would be a matter for interpretation whether such matters are governed by the draft Convention but not explicitly settled, in which case article 8 (2) would apply (i.e. reference would be made first to the general principles underlying the draft Convention and then to private international law rules), or not governed at all (i.e. they would be subject to the law applicable by virtue of the private international law rules of the forum). In any case, uncertainty would arise that could have a negative impact on the availability and the cost of credit. The Commission may, therefore, wish to consider whether statutory assignability should be expressly addressed in the draft Convention. This result could be achieved by a new provision on statutory limitations along the following lines: "This Convention does not affect any statutory limitations on assignment other than those referred to in article 9." Alternatively, this result could be achieved by the exclusion of certain receivables in article 4 ("personal receivables, such as wages, pensions, receivables under transactions for personal, family or household purposes and sovereign receivables, to the extent they are not assignable under the law governing those receivables").

Effectiveness

86. The term "effective" is intended to reflect the proprietary effects of an assignment (the term "valid" could not have that effect and, in any case, is not universally understood in the same way). The exact meaning of such effectiveness, that is, whether the assignee may retain any surplus and the conditions under which the assignee may seek to enforce the receivable as against the debtor or have recourse against the assignor, depends on whether an outright assignment or an assignment by way of security is involved, which is a matter left to law applicable outside the draft Convention. In any case, the assignee may claim and (if the debtor does not raise the absence of notification as a defence and pays) retain payment (the debtor may obtain a valid discharge under article 9, irrespective of whether it paid the person with priority). If the debtor pays someone else, the receivable is extinguished and the in rem or ad personam nature of the assignee's right and the priority of this right with respect to proceeds is to be determined in accordance with the law of the assignor's location (article 24 *(b)*; see paras. 165 and 170).

87. While the assignee acquires a proprietary right in the assigned receivable, the effect of such a right is limited to the relationship between the assignor and the assignee and as against the debtor. Effectiveness as against third parties touches upon issues of priority and the draft Convention treats such issues as distinct issues, subjecting them to the law of the assignor's location (article 24). As a result, article 9 should set aside a statutory limitation on the assignment of future receivables or of receivables not identified specifically, for example, but not a rule dealing with priority between competing claims (or with statutory form requirements). Furthermore, in view of this interplay between effectiveness under article 9 and priority under article 24, article 9 would not validate the first assignment in time while invalidating any further assignment of the same receivables by the same assignor or result in the assignee prevailing over an insolvency administrator on the sole ground that the assignment took place before the effective date of the insolvency proceeding, even if the receivables arose or were earned after commencement of the insolvency proceeding. In order to reflect this interplay between effectiveness as between the assignor and the assignee and as against the debtor (as a condition for priority) and effectiveness as against third parties other than the debtor (priority) and to avoid inadvertently leaving the effectiveness of the assignments referred to in paragraph (1) altogether to the law applicable to priority, the Working Group decided to delete language in article 9 that would have made article 9, as well as article 10, subject to articles 24 to 27. For the same reason, the Working Group decided to include in article 24 wording ("with the exception of ...") clarifying that certain matters, including the effectiveness of an assignment as a matter of general law, are not left to the law governing priority (see para. 163).

88. However, the distinction between effectiveness and priority, which the draft Convention draws, may not be known in the law of the assignor's location, which may express limitations on assignment by way of a rule dealing with effectiveness in general. As a result, it may not be easy to determine, for example, whether a rule of the law of the assignor's location, limiting the effectiveness of an assignment of future receivables, is a rule dealing with effectiveness inter partes or with effectiveness as against third parties (i.e. priority). The Commission may, therefore, wish to state explicitly in the chapeau of article 9 (1) that an assignment is effective " as between the assignor and the assignee and as against the debtor". The Commission may also wish to state in a new paragraph (3) that: "The effectiveness of an assignment of the receivables referred to in paragraphs (1) and (2) of this article as against third parties other than the debtor is governed by the law applicable

under article 24. However, such an assignment is not ineffective as against such third parties on the sole ground that the law of the assignor's location does not recognize its effectiveness." Such a rule would ensure that an assignment of future receivables would not be invalidated on the sole ground that it relates to future receivables, without, however, interfering with the effectiveness of such an assignment as a matter of priority between competing claimants.

"Existing or future receivables"

89. The terms are defined in article 6 *(b)* by reference to the time of the conclusion of the original contract. All future receivables are intended to be covered, including conditional receivables and purely hypothetical receivables (see para. 56). With a view to protecting the interests of the assignor, paragraph (1) introduces an element of specificity (receivables have to be identifiable at the time they arise).

"One or more"

90. The focus of the draft Convention is on the bulk assignment of a large volume of low-value receivables (e.g. factoring of trade receivables or securitization of credit card receivables) in view of their importance and practice and the fact that their effectiveness is not common ground to all legal systems. For reasons of consistency, the assignment of single, large-value receivables (e.g. the assignment of a loan for refinancing or portfolio diversification purposes) is also covered.

"Parts of or undivided interests in receivables"

91. Partial assignments are involved in significant transactions, such as securitization (in which the special purpose vehicle (SPV) may assign to investors undivided interests in the receivables purchased from their originator as security for the SPV's obligations to investors) or loan syndication and participation (in which the leading lender may assign undivided interests in the loan to a number of other lenders; for partial assignments, see paras. 32-34 and 61).

"Described"

92. The term "described" is intended to establish a standard lower than that which would be established by the term "specified". Under this standard, a generic description of the receivable, without any specification of the identity of the debtor or the amount of the receivable, would be sufficient (e.g. "all my receivables from my car business").

"Individually"/"in any other manner"

93. These words are intended to ensure that an assignment of existing and future receivables is effective, whether the receivables are described one by one or in any other manner that is sufficient to relate the receivables to the assignment.

Time of identification of receivables

94. Existing receivables are to be identified as receivables relating to the assignment at the time of the assignment. Future receivables should be identifiable at the time they arise (which is, by definition, after the time of the assignment). As a result of article 7, which enshrines party autonomy, the assignor and the assignee may agree on the time when future receivables should be identifiable to the assignment, as long as they do not affect the rights of the debtor and other third parties.

Master agreements

95. With a view to expediting the lending process and reducing the cost of the transaction, paragraph (2), in effect, provides that a master agreement is sufficient to transfer rights in a pool of future receivables. If a new document were to be required each time a new receivable arose, the costs of administering a lending programme would increase considerably and the time needed to obtain properly executed documents and to review those documents would slow down the lending process to the detriment of the assignor. Under paragraph (2), which provides that the master agreement is sufficient to transfer a pool of future receivables, and article 10, which provides that a future receivable is deemed to be transferred at the time of the conclusion of the contract of assignment, rights in future receivables are transferred directly to the assignee without passing through the estate of the assignor. As a result, the assignee would have a proprietary right and, if the assignee also has priority, its right would not be subject to the personal claims of the assignor's creditors or the insolvency administrator. In its original formulation, paragraph (2) referred to the time a future receivable "arises" with a view to clarifying that an assignment of a future receivable could be effective only if that receivable arises. In view of the deletion of the provision explaining the meaning of the word "arises", the Working Group, at its thirty-first session, decided to substitute the words "at the time of the conclusion of the original contract" for the word "arises". As a result, paragraph (2) deals with the time of assignment in a way that is inconsistent with article 10, under which the assignment of future receivables is effective at the time of the conclusion of the contract of assignment and parties may agree only on a later time. The Commission may, therefore, wish to delete the reference to the time of the conclusion of the original contract of assignment and leave the matter to the commentary on article 10 (see para. 96). Alternatively, paragraph (2) could be aligned with article 10 and refer to the time of the conclusion of the contract of assignment.

Article 10. *Time of assignment*

An existing receivable is transferred, and a future receivable is deemed to be transferred, at the time of the conclusion of the contract of assignment, unless the assignor and the assignee have specified a later time.

Commentary

96. Article 10 is intended to recognize and, at the same time, limit the right of the assignor and the assignee to agree on the time at which a receivable is transferred; to set a default rule that, in the absence of contrary agreement between the assignor and the assignee, the time at which a receivable is transferred is the time of the conclusion of the contract of assignment; and to clarify the meaning of other relevant provisions, such as articles 7, 9, 19 and 24 to 27. The time of assignment agreed between the assignor and the assignee binds third parties, a matter that may not be sufficiently clear in article 7. However, for such an agreement to be binding on third parties, it has to set a time of transfer that is not earlier than the time of the conclusion of the contract of assignment. This approach is in line with the principle of party autonomy enshrined in article 7, since an agreement setting an earlier time of assignment could affect the order of priority between several claimants (however, neither article 7 nor article 10 precludes the parties from agreeing to ante-date the coming into force of their mutual contractual obligations).

97. In the absence of an agreement between the assignor and the assignee setting the time of transfer of rights in the assigned receivables, the time of such transfer is the time of the conclusion of the contract of assignment, which is a fact that cannot be changed. While this approach is obvious with regard to receivables existing at the time they are assigned, a legal fiction is created with regard to future receivables (i.e. receivables arising from contracts not in existence at the time of the assignment). In practice, the assignee would acquire rights in future receivables only if they were in fact created, but, in legal terms, the time of transfer would go back to the time of the conclusion of the contract of assignment. Giving the assignee a proprietary right in the assigned receivable as of the time of the conclusion of the contract of assignment would result in protecting an assignee with priority under the law of the assignor's location. Without such a proprietary right, even the right of an assignee with priority may be subject to the rights of secured and preferential creditors in the case of insolvency.

Article 11. *Contractual limitations on assignments*

(1) An assignment of a receivable is effective notwithstanding any agreement between the initial or any subsequent assignor and the debtor or any subsequent assignee limiting in any way the assignor's right to assign its receivables.

(2) Nothing in this article affects any obligation or liability of the assignor for breach of such an agreement. A person who is not party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

Commentary

98. The main objective of article 11, which is inspired by article 6 of the Ottawa Convention, is to establish a balance between the need to protect the debtor, on the one hand, and the need to protect the assignor and the assignee, on the other. The debtor may have good commercial reasons for limiting the ability of the assignor to assign the receivable (e.g. concern of incurring additional expenses). On the other hand, the assignor may need to assign its receivables to obtain financing or a service, and the assignee may have no way of knowing about the existence of a contractual limitation on assignment (as, e.g. in the case of future receivables or bulk assignments).

Substantive and territorial scope

99. Article 11 is intended to apply to contractual limitations, whether contained in the original contract or other agreement between the assignor and the debtor or in the initial or any subsequent assignment contract. It is also intended to apply to any contractual clauses limiting the assignment (e.g. by making it subject to the debtor's consent) and not only to clauses prohibiting assignment. It is not designed to apply, however, to statutory limitations to assignment or to limitations relating to the assignment of rights other than receivables (e.g. confidentiality clauses). As a result, if an assignment is made in violation of a statutory limitation or a confidentiality clause, article 11 does not apply to validate such an assignment or limit any liability existing under law outside the draft Convention. Depending on the approach the Commission decides to take with regard to assignments of financial receivables, the scope of the rule in article 11 may be different and the effectiveness of an assignment in general or only as against the debtor may be left to law applicable outside the draft Convention (see article 5 and paras. 50-54).

100. Article 5 is also intended to apply to assignments of receivables owed by sovereign debtors, unless a State in which that debtor is located makes a reservation under article 38 as to the application of article 11 (see paras. 213 and 214). In such a case too, whether an assignment is effective as against a sovereign debtor would be left to law outside the draft Convention. Furthermore, article 11 is intended to apply to assignments of receivables owed by consumer debtors. It is not intended, however, to override consumer-protection legislation (although, in practice, with the exception of wealthy individuals, who may not need statutory protection, consumers do not have the bargaining power to include such limitations in their contracts; for consumer receivables and consumer protection, see paras. 36, 128, 152, 160 and 196). In any case, consumers would either not even be notified of any assignment or would be

notified and asked to continue paying to the same bank account or post office box. In such a case, a debtor concerned about losing rights of set-off that may arise from contracts unrelated to the original contract could discontinue its relationship with the assignee.

101. In effect, with the limited application of article 11 to consumer situations and with the exclusion of financial service providers (article 5) and the possible exclusion of Governments and public entities (article 38), article 11 would apply mainly to cases where the debtor is a large supplier who may not be in need of statutory protection. In any case, the Commission may wish to consider further limiting the scope of the rule in article 11 to assignments of future receivables or receivables assigned in bulk, in which validating contractual limitations would have a negative impact on the cost of credit. In other assignments (e.g. of single, existing receivables), a contractual limitation would render the assignment ineffective as against the debtor (draft article 12.301 of the European Contract Principles). Such an approach would preserve the free transferability of receivables in important financing transactions, while limiting any undue interference with party autonomy. The Commission may also wish to deal with assignments that are not true assignments but rather take-over bids (i.e. where a competitor obtains an assignment of the debts of an entity in order to obtain access to confidential business information, although if such information is covered by a confidentiality clause and an assignment provides to the assignee access to confidential information, article 11 would not apply to validate such an assignment).

The rule

102. The thrust of the rule in article 11 is that both the contractual limitation on assignment and the assignment are effective. However, unlike the assignment, which is effective as against the debtor, the contractual limitation does not produce any effects as against the assignee. The underlying policy is that it is more beneficial for everyone to facilitate the assignment of receivables and to reduce the transaction cost rather than to ensure that the debtor would not have to pay a person other than the original creditor (assignor). Under article 11 (1), the debtor is bound by the assignment. The question whether there is any liability for breach of contract is left to law applicable outside the draft Convention. If there is any such liability, under article 11 (2), it is not extended to the assignee and cannot be based solely on the assignee's knowledge of the contractual limitation (knowledge may be relevant in the case of tortious liability of the assignee, e.g. for malicious interference with advantageous contractual relations). Penalizing the assignee for having mere knowledge of the anti-assignment clause would inadvertently result in encouraging the assignee either to avoid a due-diligence test or to proceed with such a test and refuse to accept the receivables or accept them at a much lower price. Other rights that the debtor may have under law outside the draft Convention such as, for example, the right to terminate the original contract for breach of contract, are not affected either, unless a financial receivable is involved (see, article 5, variant A, paragraph (2); for a secretariat suggestion to limit the rights of the debtor to a claim for compensatory damages, see para. 104).

Justification

103. Contractual limitations have a negative impact on the value of receivables, whether they relate to all receivables assigned in bulk or only to some. If contractual limitations were enforceable as against assignees, assignees would have to examine the documentation of each receivable. As a result, a small number of receivables that are subject to contractual limitations would raise the cost on a much larger number of receivables that are not subject to any such restriction. In addition, unless they are aimed at preserving legitimate interests, contractual limitations may constitute an undue interference with market economy principles. To the extent that the payment obligation has the same effect on the debtor, irrespective of the identity of the creditor, a contractual restriction would run counter to the principle against restraints of alienation of property. Furthermore, an economy in which receivables are freely transferable yields substantial benefits to debtors. The cost savings achieved for creditors through the free transferability of their receivables can be passed along to debtors in the form of lower costs for goods and services or lower cost for credit.

104. In any case, the draft Convention provides a high level of protection to the debtor (articles 17-22). In addition, under law applicable outside the draft Convention, the debtor may even declare the original contract avoided (with the exception of debtors of financial receivables; article 5, variant A, para. (2)). Such avoidance of the contract, however, which could deprive the assignee of the contractual right to demand payment from the debtor, should be available only in exceptional circumstances (the assignor may have an unjust enrichment claim or other claims arising by operation of law against the debtor but any assignment of such rights would not be covered by the draft Convention). Otherwise, the risk of the contract being avoided might in itself have a negative impact on the cost of credit. In order to avoid this result, the Commission may wish to consider clarifying in article 11 that any relief available to the debtor against the assignor for breach of an anti-assignment clause would be limited to a claim for compensatory damages (or that the debtor may not declare the original contract avoided on the sole ground that the assignor violated an anti-assignment clause; see article 5, variant A, paragraph (2)). Articles 11, 20 (3) and 22 could be construed as precluding such a radical remedy anyway, at least after notification of the assignment. Allowing the debtor to declare the contract avoided on the sole ground of the violation of an anti-assignment clause would run counter to the principle that the assignment is effective even if it is made in violation of an anti-assignment clause and to the principle that, in such a case, the debtor may not raise against the assignee any claim it might have against the assignor for breach of contract. In addition, if the minimum, that is, a modification of the original contract, is not allowed after notification of the debtor without the consent of the assignee, the maximum, that is the cancellation of the contract, could not be allowed either. Such a limitation of the debtor's cancellation rights may be combined with the approach taken in article 5, variant B, paragraph (2). If the assignment is ineffective as against the debtor, the debtor would not need to cancel the original contract simply because of a violation of a contractual limitation on assignment (see para. 102).

Article 12. *Transfer of security rights*

(1) A personal or property right securing payment of the assigned receivable is transferred to the assignee without a new act of transfer, unless, under the law governing the right, it is transferable only with a new act of transfer. If such a right, under the law governing it, is transferable only with a new act of transfer, the assignor is obliged to transfer this right and any proceeds to the assignee.

(2) A right securing payment of the assigned receivable is transferred under paragraph (1) of this article notwithstanding an agreement between the assignor and the debtor or other person granting the right, limiting in any way the assignor's right to assign the receivable or the right securing payment of the assigned receivable.

(3) Nothing in this article affects any obligation or liability of the assignor for breach of an agreement under paragraph (2) of this article. A person who is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.

(4) The transfer of a possessory property right under paragraph (1) of this article does not affect any obligations of the assignor to the debtor or the person granting the property right with respect to the property transferred existing under the law governing that property right.

(5) Paragraph (1) of this article does not affect any requirement under rules of law other than this Convention relating to the form or registration of the transfer of any rights securing payment of the assigned receivable.

Commentary

Accessory and independent rights

105. Paragraph (1) reflects the generally accepted principle that accessory security rights (e.g. a suretyship, pledge or mortgage) are transferred automatically, while independent security rights (e.g. an independent guarantee or a standby letter of credit or a real security right of an abstract nature) are transferable only with a new act of transfer (the words "right securing payment" are used in order to ensure that rights that may not be security rights, for example, rights arising from independent guarantees and standby letters of credit, would be covered). Under article 7, the assignor and the assignee may agree that an accessory right is not transferred to the assignee and is thus extinguished. Such an agreement may reflect the lack of willingness on the part of the assignee to accept the responsibility and the cost involved in the maintenance and safekeeping of collateral (e.g. taxation and insurance costs in the case of real estate or storage and insurance costs in the case of equipment). The question of the accessory or independent character of the right and the substantive or procedural requirements to be met for the creation of such a right are left to the law governing that right. In view of the wide range of rights covered by article 12 and the divergences existing among the various legal systems in this regard, article 12 does not attempt to specify the law applicable to such rights. Paragraph (1) also creates an obligation for the assignor to transfer to the assignee any independent right securing payment of the assigned receivables as well as the proceeds of such a right. As a result, if an independent right and its proceeds are assignable, the assignee will be able to obtain them. If such rights are not assignable or not assigned for any reason, the assignee will have a personal claim against the assignor. As to the formulation of paragraph (1), the Commission may wish to consider deleting the second part of the first sentence (i.e. the words "unless ... transfer") as superfluous (the first part of the second sentence may be sufficient).

Contractual limitations

106. Paragraph (2) is intended to ensure that any limitation agreed upon between the assignor and the debtor or other person granting a security right does not invalidate the assignment. Under paragraph (3), any liability that the assignor may have for breach of contract, under law applicable outside the draft Convention, is not affected but is not extended to the assignee (this approach is consistent with the approach taken in article 11). The underlying policy is that, with regard to limitations on assignment, security rights should be treated in the same way as receivables, since often the value relied upon by the assignee lies in the security right and not in the receivable itself. However, a limitation included in a contract with a sovereign third-party guarantor located in a State that has made a declaration under article 38 would render the assignment ineffective but only as against the sovereign third-party guarantor. Similarly, a limitation in a contract with a third-party guarantor of a financial receivable may invalidate the assignment in general or only as against the third-party guarantor, depending on whether the Commission adopts variant A or variant B of article 5.

Possessory rights

107. Whether or not the transfer of a security right is prohibited by agreement, if it involves the transfer of possession of the collateral and such transfer causes damage to the debtor or the person granting the right, any liability that may exist under law applicable outside the draft Convention is not affected. Paragraph (4) envisages, for example, a transfer of pledged shares that might empower a foreign assignee to exercise the rights of a shareholder to the detriment of the debtor or any other person who might have pledged the shares.

Form requirements

108. Under paragraph (5), any requirements of the law applicable outside the draft Convention relating to the form of the transfer of security rights are not affected. As a result, a notarized document and registration may be necessary for the effective transfer of a mortgage, while delivery of possession or registration may be required for the transfer of a pledge. In addition, the draft Convention is not intended to affect any requirements as to the form of an

assignment of receivables secured by a certain asset (e.g. registration of an assignment secured by real estate or by aircraft). However, if the Commission includes a rule on the form of assignment, subjecting the form of the assignment to the law of the assignor's location (see paras. 80-82), that rule would need to be aligned with paragraph (5) (e.g, by providing that the law of the assignor's location would govern form, unless the receivables are backed by a security right, in which case the law governing that right would govern form).

CHAPTER IV. RIGHTS, OBLIGATIONS AND DEFENCES

Section I. Assignor and assignee

Commentary

Purpose of section I

109. Unlike the other provisions of the draft Convention that deal with the proprietary aspects of assignment, the provisions contained in this section deal with contractual issues. The usefulness of these provisions lies in the fact that they recognize party autonomy, a principle enshrined in a general way in article 7, and provide default rules applicable in the absence of an agreement between the assignor and the assignee. Such default provisions offer important benefits. They reduce transaction costs by allocating risks and by eliminating the need for parties to replicate standard terms and conditions in their contract. They also reduce dispute resolution costs by providing a clear-cut rule for both the courts and the parties in the event the parties have not addressed a particular issue. Furthermore, they perform a useful educative function by offering a checklist of matters for parties to address at the time of the initial contract negotiations. Most significantly, they enhance uniformity and certainty by reducing the need for courts to look to national solutions offered by the proper law of the contract. However, the role of the proper law of the contract is not wholly eliminated in section I of chapter IV. The effect of mistake, fraud or illegality on the validity of the contract is left to the proper law of the contract, as are remedies available for breach of contract (in so far as they are not characterized as procedural and are, therefore, subject to the lex fori).

Article 13. *Rights and obligations of the assignor and the assignee*

(1) The rights and obligations of the assignor and the assignee as between them arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein.

(2) The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices which they have established between themselves.

(3) In an international assignment, the assignor and the assignee are considered, unless otherwise agreed, to have impliedly made applicable to the assignment a usage which in international trade is widely known to, and regularly observed by, parties to the particular [receivables financing] practice.

Commentary

110. The primary purpose of article 13 is to restate in the context of the relationship between the assignor and the assignee the principle of party autonomy, a principle already reflected in general terms in article 7. The assignor and the assignee are free to structure their mutual rights and obligations so as to meet their particular needs. They are also free to incorporate into their agreement any rules or conditions by referring to them in a general manner, rather than reproducing them in their agreement. The conditions, under which the parties may exercise their freedom, and the relevant legal consequences are left to the law governing their agreement. In line with article 9 of the United Nations Sales Convention, article 13 also states in paragraphs (2) and (3) a principle that may not be recognized in all legal systems, namely, that, in the interpretation of assignment contracts, trade usages and practices must be taken into account. Paragraph (2) draws a clear distinction between trade usages and practices established between the assignor and the assignee. Such usages and practices may produce rights and obligations for the assignor and the assignee. However, they cannot bind third parties, such as the debtor or creditors of the assignor. They cannot bind subsequent assignors or assignees either. All those parties would not necessarily be aware of usages agreed upon by, and practices established between, the initial assignor and the initial assignee.

111. In view of the recognition of party autonomy in paragraph (1), parties will always have the right to agree otherwise as to the binding nature of practices established between themselves. The words "unless otherwise agreed" contained in paragraph (2) may therefore not be necessary. These words, which do not appear in article 9 (1) of the United Nations Sales Convention, had initially been included in paragraph (2), since, as opposed to the hierarchy of legal rules established in the United Nations Sales Convention, the draft Convention prevails over the parties' agreement. After the limitation of paragraph (1) to the mutual rights and obligations of the assignor and the assignee, the rule about the prevalence of the draft Convention has been deleted and the reason for deviating from the wording of article 9 (1) of the United Nations Sales Convention has been eliminated.

112. Paragraph (3) defines the scope of the matters covered by an international usage. Under paragraph (3), international usages bind only the parties to international assignments. Such a limitation was not thought to be necessary in article 9 of the United Nations Sales Conven-

tion since this Convention applies only to international transactions. It is, however, necessary in article 13 in view of the fact that the draft Convention may apply to domestic assignments of international receivables. In addition, under paragraph (3), as under article 9 (2) of the United Nations Sales Convention, usages are applicable only to the relevant practice. This means that an international factoring usage cannot apply to an assignment in a securitization transaction. However, unlike article 9 (2) of the United Nations Sales Convention, paragraph (3) does not refer to the subjective, actual or constructive knowledge of the parties but only to the objective requirements that the usages must be widely known and regularly observed. The Working Group felt that, while such a reference to the subjective knowledge of the parties might be useful in a two-party relationship, it would be inappropriate in a tripartite relationship, since it would be extremely difficult for third parties to determine what the assignor and the assignee knew or ought to have known. In view of the fact that article 13 has been revised to make clear that it refers to the rights and obligations of the assignor and the assignee as between themselves and that, under article 7, agreements between parties do not affect third parties, the Commission may wish to reconsider this matter.

Article 14. *Representations of the assignor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of the conclusion of the contract of assignment that:

(a) The assignor has the right to assign the receivable;

(b) The assignor has not previously assigned the receivable to another assignee; and

(c) The debtor does not and will not have any defences or rights of set-off.

(2) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor has, or will have, the financial ability to pay.

Commentary

Party autonomy/default rules

113. Representations undertaken by the assignor are intended to reduce the risk of whether the assignee will be able to collect the receivables from the debtor, if necessary. Because of their purpose, representations constitute a significant factor in the assignee's determination of the amount of credit to be made available to the assignor and the cost of credit. In view of their importance, representations are highly negotiated and explicitly settled between the assignor and the assignee. Recognizing this reality, article 14 embodies the principle of party autonomy with regard to representations of the assignor. Such representations may stem from the financing contract, the contract of assignment (if it is a separate contract) or any other contract between the assignor and the assignee. In accordance with article 13 (2) and (3), they may also stem from trade usages and practices. Article 14 allows parties to modify the representations, whether explicitly or implicitly, even those which relate to the very existence of the assigned receivable.

114. In addition to recognizing the principle of party autonomy, article 14 is intended to set forth a default rule allocating risks between the assignor and the assignee in the absence of an agreement of the parties as to this matter. In the allocation of risks, the overall aim of article 14 is to counterbalance the need for fairness and the need to facilitate increased access to lower-cost credit. Article 14 is consistent with normal practice in which the assignor guarantees the existence of the assigned receivable but not the solvency of the debtor. If the parties have not agreed on representations, in the absence of a rule along the lines of article 14, the risk of non-payment would be higher. This situation could defeat a transaction (if the risk is too high) or, at least, reduce the amount of credit offered and raise the cost of credit. Furthermore, to the extent that the assignor has to bear a certain risk, the assignor's goods or services would be more expensive or even inaccessible to the debtor.

Representations as to the "existence" or assignability of a receivable

115. Under paragraph (1), the assignor represents that it has the right to assign the receivable, that it has not assigned it already and that the debtor does not and will not have any defences. In view of the need for the assignee to be able to estimate the risk involved in a transaction before extending credit, paragraph (1) provides that the representations have to be made, and take effect, at the time of the conclusion of the contract of assignment. Such representations are considered as being given not only to the immediate assignee but also to any subsequent assignee. As a result, any subsequent assignee may turn against the assignor for breach of representations. If representations were considered as being undertaken only as against the immediate assignee, any subsequent assignee would have recourse only against its immediate assignor, a process that would increase the risk and thus the cost of transactions involving subsequent assignments. Subparagraphs *(a)* to *(c)* introduce representations that could be broadly described as representations relating to "the existence" of the receivable (or its assignability). If the assignor does not have the power to assign, has already assigned or has deprived the receivable of any value by improperly performing the contract with the debtor, the receivable does not "exist". The Commission may wish to consider whether other existence-related representations, such as the factual basis of the claim, its formal and substantive validity and enforceability are sufficiently covered (see draft article 12.204 of the European Contract Principles).

116. The assignor is in violation of the representation as to its right to assign, introduced in subparagraph *(a)*, if it does not have the capacity or the authority to act, or if there

is any statutory limitation on assignment. This approach is justified by the fact that the assignor is in a better position to know whether it has the right to assign. However, the assignor is not liable for breach of representations if the original contract contains a limitation on assignment. The Working Group decided that no explicit reference to that rule was necessary in subparagraph *(a)*, since it is implicit in article 11, under which the assignment is effective even if it is in breach of an agreement limiting assignment. The representation, contained in subparagraph *(b)*, that the assignor has not already assigned the receivable is aimed at holding the assignor accountable to the assignee if, as a result of a previous assignment by the assignor, the assignee does not have priority. This result may occur if the assignee has no objective way of determining whether a previous assignment has occurred. Subparagraph *(b)*, however, does not require the assignor to represent that it will not assign the receivables to another assignee after the first assignment. Such a representation would run counter to modern financing practice in which the right of the assignor to offer to different lenders parts of the same receivables as security for obtaining credit is absolutely essential. The Commission may wish to consider whether subparagraph *(b)* should cover also assignments or other transfers by law (see draft article 12.204 *(c)* of the European Contract Principles).

117. Subparagraph *(c)* places on the assignor the risk of hidden defences or rights of set-off of the debtor that may defeat in whole or in part the assignee's claim. This provision is premised on the fact that, by performing its contract with the debtor properly, the assignor will be able to preclude such defences from arising. In particular in the context of the sale of goods in which service and maintenance elements are included, such an approach would result in a greater degree of accountability of the assignor for performing properly its contract with the debtor. The provision is also based on the assumption that, in any case, the assignor will be in a better position to know whether the contract will be properly performed, even if the assignor is just the seller of goods manufactured by a third person (there is no need for the assignor to have actual knowledge of any defences). Furthermore, subparagraph *(c)* is premised on the fact that placing on the assignor the risk of hidden defences normally has a beneficial impact on the cost of credit. Subparagraph *(c)* has a wide scope, encompassing defences and rights of set-off whether they have a contractual or non-contractual source and whether they relate to existing or to future receivables. It also covers rights of set-off, whether they arise from the original or any related contract or from contracts unrelated to the original contract (with the exception of rights of set-off from unrelated contracts that become available after notification, which under article 20 (2) the debtor cannot raise against the assignee). With regard to representations relating to the absence of defences against future receivables assigned in bulk by way of security, the Working Group thought that the representation contained in subparagraph *(c)* properly reflected current practice. According to such practice, in bulk assignments of defence-free and defence-ridden receivables assignors normally receive credit only in the amount of those receivables which are not likely to be subject to defences, while they have to repay a higher amount. In addition, in the case of non-payment by the debtor, the assignor has to take back the receivables for which the assignee is not able to obtain payment from the debtor and replace them with other receivables or to pay back the price of the unpaid receivables ("recourse financing").

Representations as to the solvency of the debtor

118. Paragraph (2) reflects the generally accepted principle that the assignor does not guarantee the solvency of the debtor. As a result, the risk of debtor default is on the assignee, a fact that the assignee takes into account in determining whether to extend credit and on what conditions. Recognizing the right of the parties to financing transactions to agree on a different risk-allocation, paragraph (2) allows the assignor and the assignee to agree otherwise. Paragraph (2) also provides that such an agreement may be implicit or explicit. The question of what constitutes an implicit agreement is left to the contract interpretation rules of the law governing the contract.

Additional representations

119. The Commission may wish to consider adding to the representations listed in paragraph (1) that the assignor will not modify the original contract without the actual or constructive consent of the assignee (article 22) and that the assignor will transfer to the assignee any non-accessory security or other supporting rights (article 12; see also article 12.204 *(d)* and *(e)* of the European Contract Principles).

Breach of representations

120. The Working Group decided to leave the legal consequences of a breach of representations to other law. Reasons cited by the Working Group in support of this approach include that matters relating to the underlying financing contract were beyond the scope of the draft Convention and, in any case, it would be very difficult to reach agreement on issues such as liability for breach of representations. The Commission may wish to consider addressing, at least, any consequences a breach of representations may have on the assignment (i.e. whether the receivables are automatically re-transferred to the assignor or whether a new act of transfer is necessary). This issue is of particular importance if the assignor becomes insolvent after a breach of representations.

Article 15. *Right to notify the debtor*

(1) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor a notification of the assignment and a payment instruction, but after notification is sent only the assignee may send a payment instruction.

(2) A notification of the assignment or payment instruction sent in breach of any agreement referred to in paragraph (1) of this article is not ineffective for the purposes of article 19 by reason of such breach. However, nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Commentary

Independent right of the assignee to notify the debtor and request payment

121. The main objective of article 15 is to recognize the right of the assignee to notify the debtor and to request payment, even without the cooperation or the authorization of the assignor. It is not intended to define notification (article 6) or to address the conditions for a notification to be effective as against the debtor (article 18) or the legal consequences of notification (articles 19, 20 and 22). Granting the assignee an autonomous right to notify the debtor is considered important, in particular since the assignor might be unwilling or, in the case of insolvency, unable to cooperate with the assignee. Furthermore, at least in those legal systems in which priority is determined on the basis of the time of notification of the debtor, the assignor, acting in collusion with one claimant against the interests of another claimant, could determine the order of priority, unless each claimant had the right to notify the debtor independently of the assignor. The Working Group recognized that, in some practices, it was normal for the assignor to send a bill to the debtor requesting payment and notifying the debtor about the assignment (e.g. in factoring). At the same time, however, the Working Group was mindful of the fact that, in other practices, it was important for the assignee to be able to notify and to request payment independently of the assignor, whether in the event of default or not. The protection of the debtor against the risk of being notified and being asked to pay a potentially unknown person was thought to be a different matter, which could be addressed by allowing the debtor in the case of notification by the assignee to request adequate proof (by definition, a notification has to identify the assignee; see para. 60; see also draft article 12.303 of the European Contract Principles, under which, in such a case the assignment has to be in writing and the debtor has to have a chance to inspect it).

Notification as a right, not an obligation

122. With a view to accommodating non-notification practices, notification is formulated in paragraph (1) as a right and not as an obligation. In such practices, normally the debtor is not notified of the assignment and the assignor receives payment on behalf of the assignee. Article 15 is also intended to recognize practices in which the debtor keeps paying as before the assignment, while the assignor and the assignee agree on the control of the bank account or post office box to which payment is made. In those practices, in order to avoid any inconvenience to the debtor that might result in an interruption to the normal flow of payments, the debtor is either not notified at all or is notified and instructed to continue paying the assignor (such a notification is normally intended to preclude the debtor from acquiring rights of set-off after notification from contracts unrelated to the original contract). In those practices, the debtor is notified and given different payment instructions (i.e. to pay the assignee or another person or to a different account or address) only in exceptional situations (e.g. in the case of default).

Notification and payment instruction

123. In line with the approach followed in article 6 *(e)* (which defines notification without any reference to a payment instruction), paragraph (1) draws a clear distinction between a notification and a payment instruction. This approach is intended to recognize the difference, both in purpose and in time, between a notification and a payment instruction and to validate practices in which notification is given without any payment instructions. Under this approach, a mere notification of an assignment is valid for the purpose of cutting off the debtor's rights of set-off arising from contracts unrelated to the original contract, as well as for the purpose of changing the way in which the assignor and the debtor may amend the original contract. However, in order to avoid complicating the debtor's discharge, the Working Group decided not to base the debtor's discharge on the receipt of a payment instruction. Under paragraph (1), a payment instruction may be sent either by the assignor or the assignee with the notification or, subsequent to a notification, by the assignee. Paragraph (1), unlike article 19, refers to the time notification is "sent" (and not "received"), since neither the assignor nor the assignee has a way to assess the time of receipt. That matter may be important for the discharge of the debtor, dealt with in article 19, but not for the determination of who has the right to give a payment instruction as between the assignor and the assignee.

Agreements as to notification

124. While paragraph (1) grants the assignee an autonomous right to notify the debtor and to request payment, paragraph (2) recognizes the right of the assignor and the assignee to negotiate and agree on the matter of notification of the debtor so as to meet their particular needs. For example, the assignor and the assignee may agree that no notification would be given to the debtor as long as the flow of payments is not interrupted (as, e.g. in undisclosed invoice discounting). In order to ensure that there is no need for a specific agreement, the opening words of paragraph (1) are formulated in a negative way ("unless otherwise agreed"). The rule introduced in paragraph (2) is that, if notification is given in violation of such an agreement and the debtor pays, the debtor is discharged. The underlying rationale is that the debtor should be able to discharge its obligation as directed in the notification and should not concern itself with the private arrangements existing between the assignor and the assignee. Whether the person violating such an agreement is liable for breach of contract under law applicable outside the draft Convention is a separate matter and should not affect the discharge of the debtor, who is not a party to that agreement. A notification given in violation of an agreement between the assignor

and the assignee, however, does not cut off any rights of set-off of the debtor from contracts unrelated to the original contract (article 20), trigger a change in the way the assignor and the debtor may amend the original contract (article 22), or create a basis for the determination of priority under the law applicable to priority issues (articles 24-26). The Working Group thought that such results would give an undue advantage to the assignee who wrongfully notified the debtor. The negative formulation in paragraph (2) "is not ineffective" is intended to ensure that the mere violation of an agreement between the assignor and the assignee, on the one hand, does not invalidate the notification for the purpose of debtor-discharge, but, on the other hand, does not interfere with contract law as to the conditions required for such an agreement to be effective.

Article 16. *Right to payment*

(1) As between the assignor and the assignee, unless otherwise agreed, and whether or not a notification of the assignment has been sent:

(a) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;

(b) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to the assignor in respect of the assigned receivable; and

(c) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and is also entitled to goods returned to such person in respect of the assigned receivable.

(2) The assignee may not retain more than the value of its right in the receivable.

Commentary

Objective and scope

125. Article 16 is intended to state explicitly what is already implicit in articles 2 and 9, namely, that, as between the assignor and the assignee, the assignee has a proprietary right in the assigned receivable and any proceeds (as against third parties, this matter is left to the law governing priority under article 24 *(b)*). As the scope of article 16 is limited to the relationship between the assignor and the assignee, it is subject to the general principle of party autonomy embodied in article 7 and is intended to operate as a default rule applicable in the absence of an agreement between the assignor and the assignee. It is not intended to affect the debtor's legal position or issues of priority.

Rights in proceeds and returned goods

126. As between the assignor and the assignee, the assignee's right extends to proceeds (which, under article 6 *(k)*, includes both proceeds of receivables and proceeds of proceeds), as well as to returned goods. In this context, the Working Group considered that there was no reason to limit the ability of the assignor and the assignee to agree that the assignee could claim any returned goods and that, even in the absence of an agreement, a default rule allowing the assignee to claim any returned goods could reduce the risks of non-collection from the debtor and thus have a positive impact on the cost of credit. Paragraph (1) covers situations in which payment has been made to the assignee, the assignor or another person. In the latter case, the assignee's right is, under paragraph (1) *(c)*, subject to priority. Paragraph (2) reflects normal practice in assignments by way of security, under which the assignee may have the right to collect the full amount of the receivable owed, plus interest owed on the ground of contract or law, but has to account for and return to the assignor or its creditors any balance remaining after payment of the assignee's claim. Paragraph (2) does not repeat the reference to a contrary agreement of the parties, which is included in the chapeau of paragraph (1), since the assignee's right in the assigned receivable flows from the assignment contract and is, under article 13, subject to party autonomy anyway. As to the interplay between articles 16 and 38, it should be noted that a sovereign debtor, located in a State that has made a reservation under article 38, could discharge its debt by paying the assignor, while the assignee would have a right to claim the proceeds of payment from the assignor.

Notification of the debtor

127. The assignee's right in proceeds is independent of any notification of the assignment. The reason for this approach is the need to ensure that, if payment is made to the assignee before notification, the assignee may retain the proceeds of payment, and if payment is made to the assignor after notification (which does not discharge the debtor's debt), the assignee would have a right in such payment. Such a right is of particular importance if the assignor or the debtor becomes insolvent. If payment is made to the assignor after notification, in principle the assignee could claim payment from the assignor, under article 16 (1) *(b)*, or from the debtor, under article 19 (2). This result is appropriate in that the debtor, who pays the assignor after notification, takes the risk of having to pay twice. In practice, however, the assignee would not claim a second payment from the debtor, unless the assignor has become insolvent. In such a case, any claim that the debtor might have against the estate of the insolvent assignor (e.g. on the basis of the principles of unjust enrichment) would normally be meaningless, since it is unlikely that claimants with personal claims would be able to obtain payment.

Section II. Debtor

Article 17. *Principle of debtor protection*

(1) Except as otherwise provided in this Convention, an assignment does not, without the consent of the debtor, affect the rights and obligations of the debtor, including the payment terms contained in the original contract.

(2) A payment instruction may change the person, address or account to which the debtor is required to make payment, but may not:

(a) Change the currency of payment specified in the original contract, or

(b) Change the State specified in the original contract, in which payment is to be made, to a State other than that in which the debtor is located.

Commentary

Principle of debtor protection

128. The principle of debtor protection is one of the main general principles of the draft Convention. It is referred to in a general manner in the preamble and in article 17. Furthermore, it is reflected in a number of provisions of the draft Convention (e.g. articles 1 (3), 5, 7, 19-23, 28 and 38). The thrust of the rule set forth in paragraph (1) is that there are no implied effects of the draft Convention on the legal position of the debtor (any doubt as to whether an assignment changes the debtor's legal position should be resolved in favour of the debtor). The draft Convention is, in particular, not designed to change, without the consent of the debtor, the payment terms stipulated in the original contract (e.g. the amount owed, whether for principal or interest; the date of payment; and any conditions precedent to the debtor's obligation to pay), the defences or rights of set-off that the debtor may raise under the original contract, or to increase expenses in connection with payment. A principle flowing from article 17 is that the draft Convention is not intended to have an adverse effect on the rights of consumer debtors and, in particular, to override consumer-protection legislation (articles 21 (1) and 23; for consumer receivables and consumer protection, see paras. 36, 100, 152, 160 and 196).

Country and currency risk

129. Whatever change is effected in the debtor's legal position as a result of an assignment under the draft Convention, under paragraph (2), a payment instruction, whether given with the notification or subsequently, may not change the currency of payment. It may not change the country of payment either, unless the change is beneficial to the debtor and results in payment being allowed in the country in which the debtor is located. Such a change of the country of payment is often allowed in factoring contracts with a view to facilitating payment by debtors. The Commission may wish to make even that change subject to the debtor's consent so as to cover those exceptional cases in which the debtor may have an interest in paying in the country identified in the original contract and not in its own country.

Article 18. *Notification of the debtor*

(1) A notification of the assignment and a payment instruction are effective when received by the debtor, if they are in a language that is reasonably expected to inform the debtor about their contents. It shall be sufficient if a notification of the assignment or a payment instruction is in the language of the original contract.

(2) A notification of the assignment or a payment instruction may relate to receivables arising after notification.

(3) Notification of a subsequent assignment constitutes notification of any prior assignment.

Commentary

Time of effectiveness of notification: the receipt rule

130. The primary purpose of article 18 is to restate the "receipt rule" with regard to the time of effectiveness of a notification, that is, that a notification and a payment instruction become effective when received by the debtor. A notification, whether accompanied by a payment instruction or not, has significant consequences for the legal position of the debtor (it triggers a change in the way in which the debtor may discharge its debt, it cuts off rights of set-off arising from contracts unrelated to the original contract and it changes the way in which the debtor may amend the original contract in agreement with the assignor). Such consequences may occur only when a notification or a payment instruction is in a language that is "reasonably expected to inform the debtor about its contents". For example, when the notification is in electronic form and is not readily readable, the debtor should be able to decode it easily. In order to avoid creating uncertainty, paragraph (1) introduces a "safe harbour" rule, according to which the language of the original contract meets the required standard.

Notification with respect to receivables not existing at the time of notification

131. Unlike article 8 (1) *(c)* of the Ottawa Convention, which provides that notification may be given only with respect to receivables existing at the time of notification (and which reflects current factoring practice), paragraph (2) allows a notification to be given with respect to receivables not existing at the time of notification. Such a notification may not have an impact on the debtor's discharge until the original contract is concluded and the payment obligation becomes due. However, it simplifies and reduces the cost of notification in that it ensures that the assignee does not need to give a notification each time a receivable

arises. It also ensures that, once a receivable arises, the debtor cannot accumulate rights of set-off from unrelated contracts with the assignor or modify the original contract without the consent of the assignee. More importantly, such a notification allows the assignee to obtain priority, once the receivable arises, as of the time notification is received by the debtor, if, under the law of the assignor's location, priority is determined on the basis of the time of notification (in order to achieve this result, draft article 24 provides that matters settled in the draft Convention, including notification-related matters, are excluded from the law of the assignor's location; see para. 163). The time when a receivable arises is left to law applicable outside the draft Convention.

Notification in subsequent assignments

132. Paragraph (3), which is inspired by article 11 (2) of the Ottawa Convention, is one of the most important provisions of the draft Convention, in particular for international factoring transactions. In such transactions, the assignor normally assigns the receivables to an assignee in its own country (export factor) and the export factor subsequently assigns the receivables to an assignee in the debtor's country (import factor). Under such an arrangement, collection from the debtor is facilitated to the extent that the import factor is able to take all the necessary measures for the second assignment to be effective as against the debtor. The efficient operation of such transactions is based on the assumption that the first assignment is also effective as against the debtor. In view of the fact that the debtor is normally notified only of the second assignment, it is essential to ensure that notification of the second assignment covers the first assignment as well. Otherwise, the first assignment might be rendered ineffective as against the debtor, a situation that might affect the effectiveness of the second assignment as well. In order to address situations in which more than one subsequent assignment is made, paragraph (3) provides that a notification covers any prior, and not only the immediately preceding, assignment (with regard to the issue of the discharge of the debtor in the case of several notifications relating to subsequent assignments, see para. 138). The Commission may wish to consider whether a notification should indicate that it relates to a subsequent assignment, even if it does not list all the subsequent assignments. Such an approach would allow the debtor to determine, in the case of multiple notifications, whether it should pay in accordance with the first notification received (article 19 (2)) or in accordance with the notification of the last of such subsequent assignments (article 19 (4)).

Article 19. *Debtor's discharge by payment*

(1) Until the debtor receives notification of the assignment, the debtor is entitled to be discharged by paying in accordance with the original contract. After the debtor receives notification of the assignment, subject to paragraphs (2) to (6) of this article, the debtor is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor, in accordance with such instructions.

(2) If the debtor receives notification of more than one assignment of the same receivable made by the same assignor, the debtor is discharged by paying in accordance with the first notification received.

(3) If the debtor receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, the debtor is discharged by paying in accordance with the last payment instruction received from the assignee before payment.

(4) If the debtor receives notification of one or more subsequent assignments, the debtor is discharged by paying in accordance with the notification of the last of such subsequent assignments.

(5) If the debtor receives notification of the assignment from the assignee, the debtor is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment has been made and, unless the assignee does so, the debtor is discharged by paying the assignor. Adequate proof includes, but is not limited to, any writing emanating from the assignor and indicating that the assignment has taken place.

(6) This article does not affect any other ground on which payment by the debtor to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor.

Commentary

133. Article 19 has a twin goal, to provide a clear mechanism for the discharge of the debtor's obligation by payment and to ensure payment of the debt. It is not intended to deal with the discharge of the debtor in general or with the payment obligation as such, since that obligation is subject to the original contract and to the law governing that contract. It is not intended to address issues of priority either. The basic rule is that, until the debtor receives notification of an assignment, it may be discharged by paying in accordance with the original contract, while, after notification, discharge is obtained only by payment in accordance with the instructions given by the assignor or by the assignee with the notification, or subsequently by the assignee. Article 19 deals also with a number of particular situations in which several notifications are involved, the debtor is notified by the assignee and is in doubt as to whether the assignee is the rightful claimant, and with discharge effected by payment under law applicable outside the draft Convention.

Debtor's discharge by payment before and after notification

134. Under paragraph (1), until the time of receipt of a notification, the debtor is entitled to discharge by paying in accordance with the original contract (i.e. by paying the assignor or another person or to an account or address indicated in the original contract). In view of the fact that the assignment is effective as of the time of the conclusion of the contract of assignment, the debtor, having knowledge of the assignment, may choose to discharge its debt by paying the assignee. However, in such a case the debtor takes the risk of having to pay twice, if it is later proved that no assignment took place. The Working Group decided not to refer explicitly to the possibility of the debtor being able to pay either the assignor or the assignee in order to avoid undermining practices, such as securitization, in which the debtor is normally expected to continue paying the assignor. The reference to payment "in accordance with the original contract", rather than to payment to the assignor, is intended to preserve the right of the assignor and the debtor to agree to any type of payment suitable to meet their needs (e.g. payment to a bank account without identification of the account owner, or payment to a third person).

135. After notification, the debtor does not have a choice as to how to discharge its debt. The debtor may only discharge its obligation by paying the assignee or as instructed by the assignee. The reference to payment instructions is intended to address the needs of various practices. The assignee may, for example, notify the debtor, so as to freeze the debtor's rights of set-off, without requesting payment or requesting the debtor to continue paying the assignor (this is the case, e.g. with undisclosed invoice discounting or securitization). To avoid leaving any uncertainty, paragraph (1) repeats what is already stated in article 15 (1), namely, that such instructions may be given by the assignor or the assignee with the notification or only by the assignee subsequent to a notification.

Knowledge/good faith

136. Knowledge of an assignment is not to be treated as a notification and to trigger a change in the way in which the debtor could discharge its obligation. While making business practice conform to good faith standards is an important goal, this should not be at the expense of certainty. Certainty would be reduced if knowledge of the assignment were to trigger a change in the way in which the debtor could discharge its obligation. Knowledge should not be treated as a notification, since, in certain cases in which the assignee does not have the business structure necessary to receive payments (e.g. in securitization), it is normal business practice for the debtor to continue paying the assignor even though the debtor knows of the assignment. With regard to whether the nullity (e.g. for fraud or duress or lack of capacity to act) or whether the knowledge of the nullity of an assignment should be taken into account in the debtor's discharge, the Working Group decided that the issue of payment to a person, the assignment to whom was null and void, arose only in exceptional situations and could be left to law applicable outside the draft Convention. The Commission may wish to reconsider this matter. Even if fraudulent notifications do not pose a problem in practice, the fact that a debtor could not rely on a prima facie legitimate notification may undermine the certainty necessary for the debtor to obtain a discharge. A rule that would protect a debtor paying in good faith in the case of a "purported assignment" would be consistent with the overall policy to protect the debtor (draft article 12.308 of the European Contract Principles refers to a debtor who performs in good faith and neither knows nor ought to know of such invalidity).

Debtor's discharge and priority/knowledge of superior claims

137. Unlike article 8 (1) of the Ottawa Convention, article 19 does not require the debtor to pay the person with priority so as to obtain a valid discharge. Having agreed that the assignment should not adversely affect the legal position of the debtor, the Working Group drew a clear distinction between the issue of the debtor's discharge and the issue of priority. Thus, payment under article 19 discharges the debtor, even if the person receiving payment does not have priority. It would be unfair and inconsistent with the policy of debtor protection to require the debtor to determine who among several claimants has priority and that the debtor pay a second time if, in the first instance, it has paid the wrong person. The debtor would most likely have a cause of action against that person, but the debtor's rights may be frustrated if that person becomes insolvent. The risk of insolvency of the person who received payment should be on the various claimants of the receivables and not on the debtor. Such claimants would have to settle among themselves their rights in the proceeds of payment in accordance with the law governing priority under the draft Convention.

Multiple notifications

138. Paragraphs (2) and (4) are intended to provide simple and clear discharge rules in the case of several notifications. Paragraph (2) deals with situations in which the debtor receives several notifications relating to more than one assignment of the same receivables by the same assignor ("duplicate assignments"). Such situations do not necessarily involve fraud. They may, for example, involve several outright assignments for security purposes of receivables for credit not exceeding the value of the receivables. In such assignments, the main issue is who will obtain payment first (i.e. who has priority). Paragraph (4) deals with notifications relating to more than one subsequent assignment. Such situations are rare in practice, since normally only the last in a chain of assignees notifies the debtor and requests payment. In any case, in order to avoid any uncertainty as to how the debtor may discharge its debt, paragraph (4) provides that the debtor has to follow the instructions contained in the notification of the last assignment in a chain of assignments. For that rule to apply, the notifications received by the debtor have to be readily identifiable as notifications relating to subsequent assignments. Otherwise, the rule contained in paragraph (2) would apply and the debtor would be discharged by payment in accordance with the first notification received (for a secretariat suggestion in this regard, see para. 132). In any case, under paragraph (5), the debtor, if in doubt, could request adequate proof from the assignees notifying. If the debtor receives several notifications relating to several as-

signments of the same receivables by the same assignor and to subsequent assignments, under a combined application of paragraphs (2) and (4), the debtor is discharged by paying in accordance with the first notification of the last assignment (as to the debtor's discharge in the case of partial subsequent assignments, see paras. 32-34).

Change or correction of payment instructions

139. Paragraph (3) is intended to ensure that the assignee may change or correct its payment instructions. Whether the debtor is notified by the assignor or the assignee, if a new payment instruction is sent with regard to one and the same assignment, the debtor may discharge its debt only in accordance with that instruction. The only condition is that, in line with the policy underlying article 15 (1), subsequent to the notification, a payment instruction be given by the assignee. In order to protect the debtor against the risk of having to pay twice, paragraph (3) expressly provides that a payment instruction received by the debtor after payment is to be disregarded.

Right of the debtor to request additional information

140. Under article 15, notification may be given not only by the assignor but also by the assignee independently of the assignor. As a result, the debtor may receive notification of the assignment from a possibly unknown person and may be in doubt as to whether that person is a legitimate claimant, payment to whom would discharge the debtor. In order to protect the debtor from uncertainty as to how to discharge its debt in such cases, paragraph (5) gives the debtor a right to request the assignee to provide adequate proof of the assignment within a reasonable period of time. Paragraph (5) does not introduce an obligation of the debtor, since requesting additional proof in all cases would unnecessarily delay payment and add to the cost of the notification. The determination of what constitutes "adequate" proof and a "reasonable" period of time is a matter of interpretation for the courts or arbitral tribunals taking into account the particular circumstances. The Working Group thought that the flexibility introduced with these terms was necessary, since no rule could be found that would be suitable for all possible cases. In addition, in order to avoid any uncertainty that might ensue as a result of the use of these terms, the Working Group decided to include a "safe harbour" rule, according to which a written confirmation from the assignor constituted adequate proof (in such a case, under draft article 12.303 of the European Contract Principles, the assignment has to be in writing and the debtor should have a chance to inspect it).

141. The notification does not trigger the obligation to pay, which remains subject to the original contract and the law applicable thereto. This means that the debtor does not have to pay upon notification and does not owe interest for late payment while it awaits the adequate proof requested. If, however, the debt becomes payable within that period in accordance with the original contract, the question arises as to whether the payment obligation is suspended until the debtor receives such proof and has a reasonable time to assess and act on it. If the payment obligation is not suspended, the significance of the protection afforded to the debtor by paragraph (5) may be reduced to the extent that the debtor delaying payment, even for good reasons, would have to pay interest. The Working Group proceeded on the understanding that the payment obligation would be suspended in such cases, but chose not to include any explicit wording in paragraph (5), since that result could be reached, in any event, without any additional wording and such wording could inadvertently interfere with national law on interest.

Debtor's discharge under other law

142. Paragraph (6) is intended to ensure that article 19 does not exclude other ways of discharge of the debtor's obligation that may exist under national law applicable outside the draft Convention (e.g. a notification not conforming with the requirements of article 6 *(f)*, 15 or 18).

Article 20. *Defences and rights of set-off of the debtor*

(1) In a claim by the assignee against the debtor for payment of the assigned receivables, the debtor may raise against the assignee all defences or rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor could avail itself if such claim were made by the assignor.

(2) The debtor may raise against the assignee any other right of set-off, provided that it was available to the debtor at the time notification of the assignment was received.

(3) Notwithstanding paragraphs (1) and (2) of this article, defences and rights of set-off that the debtor may raise pursuant to article 11 against the assignor for breach of agreements limiting in any way the assignor's right to assign its receivables are not available to the debtor against the assignee.

Commentary

143. Article 20 is another particular application of the general principle that the debtor's legal position should not be unduly affected as a result of the assignment. The debtor has against the assignee all the defences and rights of set-off that the debtor could raise against the assignor (for an exception, see article 20 (3)). What those defences and rights of set-off are is a matter not addressed in the draft Convention but left to other law. However, the assignee is not a party to the original contract and incurs, therefore, no positive contractual liability for non-performance by the assignor. In such a case, the debtor can raise the non-performance to defeat the assignee's claim, but needs to make a separate claim against the assignor to obtain, for example, compensation for any loss suffered as a result of the assignor's non-performance.

Defences and rights of set-off under the original and related contracts: no limitation

144. Under paragraph (1), the debtor may raise against the assignee all the defences that arise from the original contract, without any limitation, including contractual claims, which, in some legal systems, might not be considered "defences"; rights for contract avoidance, for example, for mistake, fraud or duress; exemption from liability for non-performance, for example, because of an unforeseen impediment beyond the control of the parties; and counterclaims under the original contract. The debtor may also raise defences and rights of set-off arising from contracts between the assignor and the debtor that are closely related to the original contract (e.g. a maintenance or other service agreement supporting the original sales contract) and should be treated in the same way as rights of set-off arising from the original contract. Such defences and rights of set-off may be raised irrespective of whether they are available at the time of notification of the assignment or become available only after such notification.

Other rights of set-off: available up to notification of the debtor

145. Paragraph (2) introduces a time limitation with regard to rights of set-off arising from any source other than the original contract, that is, a separate contract between the assignor and the debtor, a rule of law (e.g. a tort rule) or a judicial or other decision. Such rights may not be raised against the assignee if they become available after notification of the assignment. The rationale underlying this rule is that the rights of a diligent assignee who notifies the debtor should not be made subject to rights of set-off arising at any time from separate dealings between the assignor and the debtor or other events, of which the assignee could not reasonably be expected to be aware. On the other hand, the interests of the debtor are not unduly affected, since, if the fact that the debtor cannot accumulate rights of set-off constitutes an unacceptable hardship for the debtor, the debtor can avoid entering into new dealings with the assignor (on the question whether the debtor could declare the original contract avoided, see paras. 102 and 104). In view of the above-mentioned rationale of paragraph (2), rights of set-off arising from separate contracts between the debtor and the assignee are not affected. Such rights can be asserted against the assignee even after notification of the assignment, like rights of set-off arising from the original contract. It should also be noted that a notification results in freezing the debtor's rights of set-off, whether it contains a payment instruction or not. This approach is intended to accommodate practices in which a bare notification is given exactly for the purpose of precluding the debtor from accruing rights of set-off from acts or omissions of the assignor that are beyond the assignee's control, while the debtor is expected to continue paying the assignor.

"Available"

146. The exact meaning of the term "available" (e.g. whether the right of set-off has to be "actual and ascertained" at the time notification is received by the debtor) is left to other law. The Working Group was not able to agree on introducing such a clarification in the text of article 20, since it considered that it would result in limiting inappropriately the rights of set-off available to the debtor to those which are quantified at the time of the notification. The Working Group was not able to agree on the law governing issues relating to rights of set-off either (see, however, para. 195). The Commission may wish to consider clarifying, at least, that the relevant cross-claim of the debtor does not need to have matured at the time of notification. Otherwise, a debtor's potential cross-claim, due to mature at the same time as the creditor's claim, would be extinguished by the creditor's assignment of its claim. Such a result would run counter to the principle that an assignment should not prejudice the debtor's legal position.

Defences and rights of set-off in the case of breach of a contractual limitation

147. Paragraph (3) is intended to ensure that the debtor may not raise against the assignee by way of defence or set-off the breach of a contractual limitation by the assignor. The debtor may have a cause of action against the assignor, if, under law applicable outside the draft Convention, the assignment constitutes a breach of contract that results in a loss to the debtor. However, the mere existence of a contractual limitation is not a violation of the representation contained in article 14 (1) *(a)*. In the absence of a provision along the lines of paragraph (3), article 11 (2), holding the assignee harmless for breach of contract by the assignor could be deprived of any meaning.

Article 21. *Agreement not to raise defences or rights of set-off*

(1) Without prejudice to the law governing the protection of the debtor in transactions made for personal, family or household purposes in the State in which the debtor is located, the debtor may agree with the assignor in a writing signed by the debtor not to raise against the assignee the defences and rights of set-off that it could raise pursuant to article 20. Such an agreement precludes the debtor from raising against the assignee those defences and rights of set-off.

(2) The debtor may not exclude:

(a) Defences arising from fraudulent acts on the part of the assignee;

(b) Defences based on the debtor's incapacity.

(3) Such an agreement may be modified only by an agreement in a writing signed by the debtor. The effect of such a modification as against the assignee is determined by article 22 (2).

Commentary

Waivers of defences agreed between the assignor and the debtor

148. In order to obtain more value for their receivables and at a lower cost, assignors normally guarantee as against assignees the absence of defences and rights of set-off by the debtor. Recognizing this practice, article 14 (1) *(c)* provides that such a guarantee exists even in the absence of an agreement between the parties in this regard. In practice, if such representations cannot be given and the receivables are likely to be subject to defences, such receivables are either not accepted by assignees, or are accepted at a significantly reduced value or only on a recourse basis (i.e. if the assignee cannot collect from the debtors, it has the right to return the receivables to and collect from the assignor). In order to avoid those adverse effects, assignors, as a matter of practice, negotiate with debtors waivers of the defences and rights of set-off that debtors may raise against any future assignee. On the basis of such waivers, assignees determine the credit terms offered to assignors, which in turn are likely to affect the credit terms assignors offer to debtors.

149. With a view to allowing assignors to obtain lower-cost credit, article 21 validates such waivers of defences and rights of set-off. Furthermore, in order to avoid uncertainty as to the legal consequences of a waiver and that a court may override it as being unfair to the debtor or as being enforceable only as between the assignor and the debtor, paragraph (1) states what may appear obvious in some legal systems, namely, that a waiver agreed upon between the assignor and the debtor may benefit the assignee. In recognition of the fact that in practice a waiver may be agreed upon at the time of the conclusion of the original contract, as well as at an earlier or later time, paragraph (1) does not make specific reference to the point of time at which a waiver may be agreed upon. Paragraph (1) does not require either that the defences are known to the debtor or are explicitly stated in the agreement by which the defences are waived. The Working Group thought that such a requirement would introduce an element of uncertainty, since the assignee would need to establish in each particular case what the debtor knew or ought to have known. Whether the acceptance of an assignment by the debtor should be construed as a waiver or as a confirmation of a waiver or whether a waiver of defences is to be construed as a consent or confirmation of the debtor's consent to the assignment is left to other law.

Waivers of defences agreed between the assignor and the debtor

150. Paragraph (1) is limited to waivers agreed upon by the assignor and the debtor. As a result, the limitations contained in paragraph (2) do not apply to waivers agreed upon by the debtor and the assignee. The Working Group thought that the draft Convention should not limit the debtor's ability to negotiate with the assignee in order to obtain a benefit, such as a lower interest rate or a longer payment period. At the same time, the Working Group also thought that, in view of the fact that agreements between assignees and debtors were outside the scope of the draft Convention, the draft Convention should not empower the debtor to negotiate waivers with assignees, if, under the law applicable, the debtor would not have such a power (see para. 75).

Limitations on waivers

151. While aimed at facilitating increased access to lower-cost credit, which is in the interest of trade in general, article 21 does not neglect the protection of the debtor. In order to protect debtors from undue pressure by creditors to waive their defences, paragraphs (1) and (2) introduce reasonable limitations with respect to such waivers of defences. Such limitations refer to the form in which such waivers can be made, to certain types of debtors and to certain types of defences.

152. Under paragraph (1), a waiver cannot be a unilateral act or an oral agreement; it has to take the form of a written agreement signed by the debtor, so as to ensure that both parties, and in particular the debtor who is waiving rights, are well informed about the fact of the waiver and its consequences, including the benefits offered to the debtor in return, and to facilitate evidence. In addition, a waiver cannot override the consumer-protection law prevailing in the country in which the debtor has its place of business (for consumer receivables and consumer protection, see paras. 36, 100, 128 and 196). In cases where the draft Convention applies, this provision in effect substitutes a specific applicable law reference to the debtor's location for the general rule set forth in article 29. In order to avoid terminological and other differences existing among the various legal systems, paragraph (1) refers to debtors in transactions for "personal, family or household purposes". Furthermore, under paragraph (2), a waiver cannot relate to defences arising from fraudulent acts committed by the assignee. Such a result would run counter to basic good faith standards. With a view to protecting an assignee who accepts an assignment in good faith, the Working Group decided not to apply the same limitation to defences relating to fraud by the assignor. If the debtor could not waive such defences, the assignee would have to investigate in order to ensure that no fraud was committed by the assignor in the context of the original contract. The limitation under paragraph (2), however, applies not only to defences relating to fraud by the assignee alone but also to defences relating to fraud by the assignee in collusion with the assignor.

Modifications of waivers

153. In line with paragraph (1), paragraph (3) requires the form of a written agreement signed by the debtor for the modification of a waiver. Parties need to be warned of the legal consequences of such a modification, which should be easily proved, if necessary. With a view to ensuring that a modification, which may be agreed upon by the assignor and the debtor, does not affect the rights of the assignee, paragraph (3) subjects a modification to the procedure foreseen in article 22 (2) for the modification of the original contract after notification of the assignment (i.e. to actual or constructive consent by the assignee; see para. 157).

Article 22. *Modification of the original contract*

(1) An agreement concluded before notification of the assignment between the assignor and the debtor that affects the assignee's rights is effective as against the assignee and the assignee acquires corresponding rights.

(2) After notification of the assignment, an agreement between the assignor and the debtor that affects the assignee's rights is ineffective as against the assignee unless:

(a) The assignee consents to it; or

(b) The receivable is not fully earned by performance and either modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification.

(3) Paragraphs (1) and (2) of this article do not affect any right of the assignor or the assignee for breach of an agreement between them.

Commentary

154. In practice, the original contract may often need to be modified, for various reasons (e.g. equipment or materials different from the ones agreed may be necessary in the construction of a project). The effects of such contract modifications as between the assignor and the debtor, or as between the assignor and the assignee, are addressed in the relevant contract. In recognition of party autonomy in this regard, article 22 does not interfere with the relationship between the assignor and the debtor or between the assignor and the assignee. Accordingly, the requirements and the legal consequences of an effective modification agreement as between the assignor and the debtor remain subject to the law governing that agreement and any rights that the assignee might have against the assignor for breach of contract are not affected (see para. 158). However, article 22 deals with the third-party effects of such contract modifications that may be addressed only by way of legislation and are regulated only in a few jurisdictions. To address those third-party effects, article 22 provides, on the one hand, that the debtor has as against the assignee the right to modify the original contract and, on the other hand, that the assignee acquires rights as against the debtor under the modified original contract. Accordingly, if the price of the goods or services offered under the original contract is modified, the debtor may not raise the modification of the contract as a defence, asserting that the assignee has no rights under the new modified contract, and refuse to pay even the reduced price. Similarly, payment of the reduced price would discharge the debtor's obligation.

155. The basic rule introduced by article 22 is that, before notification, the assignor and the debtor may freely modify their contract. They do not need to obtain the consent of the assignee, even though the assignor may have undertaken in the assignment contract to abstain from any contract modifications without the consent of the assignee or may be under the good faith obligation to inform the assignee about a contract modification. The breach of such an undertaking may give rise to liability of the assignor as against the assignee. It does not, however, invalidate an agreement modifying the original contract, since such an approach would inappropriately affect the rights of the debtor. After notification, a modification of the original contract becomes effective as against the assignee subject only to the actual or constructive consent of the assignee. The underlying rationale is that, after notification, the assignee becomes a party to a triangular relationship and any change in that relationship that affects the assignee's rights should not bind the assignee against its will. This approach is in line with article 19, according to which, before notification, the debtor may discharge its obligation in accordance with the original contract.

Modification before notification of the debtor

156. Paragraph (1) requires an agreement between the assignor and the debtor, which is concluded before notification of the assignment and affects the assignee's rights. If the agreement does not affect the rights of the assignee, paragraph (1) does not apply. If the agreement is concluded after notification, paragraph (2) applies. Under article 18, the relevant point in time is the time when notification is received by the debtor, since as of that time the debtor may discharge its obligation only in accordance with the assignee's payment instructions.

Modification after notification of the debtor

157. Paragraph (2) is formulated in a negative way, since the rule is that, after notification, a modification is ineffective as against the assignee, unless an additional requirement is met. "Ineffective" means that the assignee may claim the original receivable and the debtor is not fully discharged by paying less than the value of the original receivable. Paragraph (2) requires actual or constructive consent of the assignee. Actual consent is required if the receivable has been fully earned by performance and the assignee has thus the reasonable expectation that it will receive payment of the original receivable. For the purposes of the draft Convention, a receivable is considered as being fully earned when an invoice is issued, even if the relevant contract has only partially been performed. As a result, for such partially performed contracts to be modified, the actual consent of the assignee is required. Constructive consent exists if the original contract allows modifications or a reasonable assignee would have given its consent. Such a consent is sufficient if the receivable is not fully earned and the modification is foreseen in the original contract or a reasonable assignee would have consented to such a modification. In requiring actual or constructive consent, the Working Group intended to establish an appropriate balance between certainty and flexibility. If a receivable is fully earned, its modification affects the reasonable expectations of the assignee and has thus to be subject to the actual consent of the assignee. If, on the other hand, a receivable is not fully earned, there is no need to overburden the parties with requirements that may affect the efficient operation of a contract. In particular, in long-term

contracts, such as project financing or debt-restructuring arrangements (in which receivables are offered as security in return for a reduction in the interest rate or an extension of the maturity date), a requirement that the assignor would have to obtain the assignee's consent to every little contract modification could slow down the operations while creating an unwelcome burden for the assignee. This problem would normally not arise, since in practice parties tend to resolve such issues through an agreement as to which types of modifications require the assignee's consent. In the absence of such an agreement or in the case of breach of such an agreement by the assignor, paragraph (2) would provide an adequate degree of protection to the debtor.

Assignor's liability for breach of contract

158. Paragraph (3) is intended to preserve any right the assignee may have under other law as against the assignor if a modification of the original contract violates an agreement between the assignor and the assignee. This means that, if, under article 22, a modification is effective as against the assignee without its consent, the debtor is discharged by paying in accordance with the contract as modified. The assignee, however, may turn against the assignor and claim the balance of the original receivable and compensation for any additional damage suffered, if the modification is in breach of an agreement between the assignor and the assignee under the law applicable to the agreement.

Article 23. *Recovery of payments*

Without prejudice to the law governing the protection of the debtor in transactions made for personal, family or household purposes in the State in which the debtor is located and the debtor's rights under article 20, failure of the assignor to perform the original contract does not entitle the debtor to recover from the assignee a sum paid by the debtor to the assignor or the assignee.

Commentary

The rule: no recovery of payments from the assignee

159. In practice, the debtor may pay the assignee before the assignor performs its obligations under the original contract. If the assignee does not perform, the question arises whether the debtor may recover from the assignee the sums paid. This question is of particular importance if the assignor becomes insolvent and thus recovery of payments from the assignor is impossible. Article 23 provides that, if the debtor pays the assignee and the assignor does not properly perform the original contract, the debtor cannot turn against the assignee; it is left with any cause of action it might have against the assignor under the original contract and the law governing that contract. As a result, the debtor bears the risk of insolvency of its contractual partner, which would be the case anyway in the absence of an assignment. Noting that article 10 of the Ottawa Convention follows this approach only if the debtor has a cause of action against the assignor and provides for exceptions in the case of unjust enrichment or bad faith on the part of the assignee, the Working Group thought that the difference was justified. A right of the debtor to recover payments from the assignee operates as a guarantee by the assignee that the assignor will perform the original contract. Such a guarantee may be appropriate in the specific factoring situations addressed in the Ottawa Convention, but was thought to be inappropriate in the context of the wide range of financing or service transactions covered by the draft Convention.

Exceptions

160. In line with the principle that the draft Convention is not intended to override consumer protection law, article 23 preserves any right that the consumer debtor might have, under the law of the country in which it is located, to declare the original contract avoided and to recover from the assignee any payments made to the assignee (for consumer receivables and consumer protection, see paras. 36, 100, 128, 152 and 196). The reference to article 20 appears to introduce a second exception. In the case of payments in instalments, the debtor's defences and rights of set-off with respect to outstanding instalments are preserved. The Commission may wish to consider whether this result is already sufficiently clear in article 20.

Section III. Other parties

Commentary

Structure of section III

161. Articles 24 (law applicable to priority issues) and 25 (public policy) are private international law rules. Article 26 (special proceeds rules) is a mixed private international law and substantive law rule and article 27 (subordination) is a substantive law rule. Articles 25, 26 and 27 are intended to qualify the application of article 24. Article 25 appears before article 26 not because it does not equally apply to situations dealt with in article 26, but because article 26, with respect to private international law matters, refers back to article 24 and, with respect to substantive law matters, it is a self-standing rule. Article 25 is not intended to limit the application of the special substantive law priority rule in article 27.

Article 24. *Law applicable to competing rights of other parties*

With the exception of matters which are settled elsewhere in this Convention, and subject to articles 25 and 26, the law of the State in which the assignor is located governs:

(a) The extent of the right of an assignee in the assigned receivable and the priority of the right of the

assignee with respect to competing rights in the assigned receivable of:

(i) Another assignee of the same receivable from the same assignor, even if that receivable is not an international receivable and the assignment to that assignee is not an international assignment;

(ii) A creditor of the assignor; and

(iii) The insolvency administrator;

(b) The existence and extent of the right of the persons listed in paragraph (1) *(a)* (i) to (iii) in proceeds of the assigned receivable, and the priority of the right of the assignee in those proceeds with respect to competing rights of such persons; and

(c) Whether, by operation of law, a creditor has a right in the assigned receivable as a result of its right in other property of the assignor, and the extent of any such right in the assigned receivable.

Commentary

162. Article 24 is one of the most important provisions of the draft Convention. It is intended to serve the main goal of the draft Convention to facilitate increased access to lower-cost credit by enhancing certainty as to the relative rights of competing claimants. This result is achieved not by way of a substantive law priority rule (as to the meaning of the term "priority", see paras. 63-65), since the Working Group was not able to reach consensus on such a rule (for substantive law priority rules, see, however, articles 26 and 27, the annex and article 40). Rather it is achieved by way of a private international law rule subjecting conflicts of priority to the law of a single and easily determinable jurisdiction (the law of the assignor's location; for the meaning of the term "location", see paras. 66-70). Such a rule constitutes a significant improvement of the present situation in which assignees tend either to reject international receivables as security for credit or accept them at a low value or only with additional security, since they either cannot determine which law may govern priority or have to meet the requirements of several jurisdictions in order to ensure priority.

"With the exception of matters which are settled elsewhere in this Convention"

163. The opening words of article 24 are intended to ensure that article 24 would apply only to matters that are not settled by way of a substantive law rule of the draft Convention. For example, the general effectiveness of an assignment of future receivables or notification of the assignment is addressed in article 9; the question whether, in the case of receivables arising or being earned after the commencement of an insolvency proceeding with respect to the assignor, the assignee has priority is left to the law of the assignor's location. As a result, an assignment of a receivable not existing at the time of notification is effective as between the assignor and the assignee. Similarly, an assignment is effective as against the debtor, even in the absence of a notification, and, if national law requires notification for priority reasons, notification has to be given under the draft Convention (it may thus relate to receivables not existing at the time of notification, even if national law does not allow notification with respect to such receivables). Furthermore, an assignment is effective in the absence of registration (even if national law makes registration a condition of effectiveness and requires a specific description of the assigned receivable). However, priority will be determined on the basis of registration, if the law of the assignor's location so provides (whether the receivable needs to be specifically described for the purpose of obtaining priority through registration is left to the law of the assignor's location). Issues of formal validity (e.g. whether a writing, notification or registration is required for the assignment to be effective inter partes) are left to law outside the draft Convention (for a secretariat suggestion to address this matter, see para. 82); as are issues of material validity other than those addressed in articles 9 to 12.

"Subject to articles 25 and 26"

164. The matters mentioned in article 24 are referred to the law of the assignor's location unless a rule of that law is manifestly contrary to the public policy of the forum or there is a super-priority right under the law of the forum. In the former case, the balance of the law of the assignor's location applies. In the latter case, the super-priority right, which under the law of the forum has priority, is given priority. The Commission may wish to consider whether the application of article 24 should also be subject to the absence of a subordination agreement (article 27). Alternatively, the Commission may wish to consider that, in view of the fact that article 27 is a substantive law rule, the opening words of article 24 ("With the exception of ...") are sufficient to cover matters settled in article 27 (although article 26 is also a substantive law rule and the application of article 24 is made subject to article 26).

Extent of a right and priority in receivables

165. Article 24 *(a)* draws a clear distinction between priority and the extent of the assignee's rights. The words "extent of a right" are intended to reflect whether an assignment by way of security or an outright assignment is involved and the in rem or ad personam nature of a right as against third parties (the proprietary effects of an assignment as between the assignor and the assignee are settled in article 9). Priority, on the other hand, deals with the question of who obtains payment first. In a conflict between a claimant with priority, who has a personal right, and a claimant, with a right in rem, the claimant with priority will prevail. However, in the case of insolvency, such a prevailing claimant would be paid pari passu with other creditors with a personal right, while it would be paid before those creditors if it had a right in rem.

Conflicts between assignees in the case of duplicate assignments

166. Conflicts between assignees of the same receivables from the same assignor arise in the case of "duplicate assignments". Such assignments are normal practice in the case of assignments by way of security in which the same receivables are offered to different lenders as security for various amounts of credit. However, duplicate outright assignments may be a fraudulent or an unconscionable act. While fraud may be a rare occurrence, simple inadvertence on the part of the assignor, or ignorance of the legal effects of a previous assignment, occurs frequently. A typical example is the assignment to a receivables financier in return for working capital and to an inventory financier or to a supplier of materials on credit with a retention of title or other security interest until full payment of the price of the inventory or of the materials. In such a case, the conflict may be between a global assignment (an assignment of all present and future receivables) to the receivables financier and an assignment to the inventory financier or the supplier of the proceeds from the sale of the inventory or materials.

Conflicts between Convention and non-Convention assignees

167. Article 24 *(a)* (i) explicitly provides that a conflict between a Convention and a non-Convention assignee (e.g. between a foreign and a domestic assignee of domestic receivables) is also covered (however, a conflict between an assignee in a Contracting State and an assignee in a non-Contracting State is not covered). Such an approach avoids any negative impact on domestic law and practice. In fact, one of the reasons for which the Working Group decided to turn the priority rules into private international law rules was that such rules would not negatively affect domestic practices. The draft Convention does not give priority to a foreign assignee over a domestic assignee. It merely refers conflicts of priority to the law of the assignor's location. With one possible exception (see para. 20), that law would be the law the requirements of which the domestic assignee of a domestic receivable would have to meet to obtain priority, whether the draft Convention applies or not.

Conflicts with the assignor's creditors or the insolvency administrator

168. A creditor of the assignor or the insolvency administrator may have a competing right with the assignee, if, after the assignment, that creditor obtains a court judgement attaching the receivables in the hands of the assignor (if the assignment is made after attachment or the commencement of an insolvency proceeding, no conflict arises; any rights that the assignee may obtain are subordinate to the rights of the assignor's creditors or the insolvency administrator). If priority is based on the time of assignment, the fact that the assignment is made before attachment or commencement of the insolvency proceeding is sufficient to establish that the receivables are separated from the assignor's estate (if an outright assignment is involved) or that the assignee may satisfy its claim in preference to unsecured creditors (if an assignment by way of security is involved). If, however, priority is determined on the basis of notification of the debtor or registration of certain data about the assignment in a public registry, the fact that the assignment is made before attachment or commencement of the insolvency proceeding is not sufficient for the purpose of establishing priority. Notification of the debtor or registration also needs to take place before attachment or commencement of the insolvency proceeding.

Insolvency of the assignee or the debtor

169. Issues arising in the case of insolvency of the assignee are beyond the scope of the draft Convention and are not addressed, unless the assignee makes a subsequent assignment and becomes an assignor. The draft Convention is not intended to address issues arising in the context of the debtor's insolvency either. It is assumed that the assignee would have in the receivables the same rights that the assignor would have in the case of insolvency of the debtor.

"The existence and extent of the right ... and the priority of a right" in proceeds

170. In line with subparagraph *(a)*, subparagraph *(b)* provides that the law of the assignor's location governs the extent of the rights of the persons mentioned above and the priority of such rights with respect to proceeds. Proceeds include, under article 6 *(k)*, proceeds of receivables and proceeds of proceeds. Therefore, the words "of the assigned receivable" may need to be deleted, so as to avoid creating the impression that only proceeds of receivables are covered in article 24 *(b)*. The words "the extent of the right" relate to the in rem or ad personam nature of the assignee's rights in proceeds. The Commission may wish to consider whether the word "existence", which was added at the thirty-first session of the Working Group without any discussion, should be retained (see A/CN.9/466, para. 212). It would seem that subparagraph *(b)* goes far beyond subparagraph *(a)*, in that it covers, with respect to proceeds, issues that the draft Convention does not address even with respect to receivables, namely, substantive validity in every respect and formal validity matters. If article 24 *(b)* is retained unchanged, the title of the article may need to be revised.

The existence and the extent of rights in receivables that are proceeds of other property

171. The extent of any rights and the priority of such rights in receivables that are proceeds of other receivables is subject to the law of the assignor's location by virtue of article 24 *(a)* (i), if such rights are created by agreement, or by virtue of article 24 *(a)* (ii), if such rights are created by operation of law. Depending on whether the Commission decides to retain the reference to the "existence" of such rights, it may wish to merge subparagraph *(c)* into subparagraph *(a)* (ii) or to delete subparagraph *(c)* altogether and include a clarification of the matter in the commentary (for the meaning of the words "the extent of the right", see para. 165).

Applicable law

172. Departing from the approach traditionally followed in many legal systems, subjecting priority issues to the lex situs of the receivable (the law of the country where payment is due or the debtor is located), the Working Group

decided to subject priority issues to the law of the assignor's location. The Working Group took this approach, considering that the traditional rule is no longer regarded as a workable or efficient rule. In the increasingly common case of a global assignment of present and future receivables, application of the law of the situs of the receivable fails to yield a single governing law. It also exposes prospective assignees to the burden of having to determine the notional situs of each receivable separately. Application of the law governing the receivable or of the law chosen by the parties produces similar results. Different priority rules would govern priority with regard to the various receivables in a pool of receivables and, in the case of future receivables, the parties would not be able to determine with any certainty the law applicable to priority, a factor that might defeat a transaction or, at least, raise the cost of credit. Application of the law chosen by the assignor and the assignee in particular could allow the assignor, acting in collusion with a claimant in order to obtain a special benefit, to determine the priority among several claimants. In addition, the law chosen by the parties would be completely unworkable in the case of several assignments of the same receivables either by the same or by different assignees, since different laws could apply to the same priority conflicts.

173. While the Working Group decided to depart from the traditional approach in order to accommodate the most common practices that involve bulk assignments of all present and future receivables, it decided that no exception should be made for assignments of single, high-value, existing receivables. It was widely felt that introducing a different priority rule with regard to the assignment of such receivables would detract from the certainty achieved in article 24. In addition, it would be very difficult to clearly define "high-value receivables". Moreover, in a bulk assignment containing both "high-value"and "low-value" receivables, priority would be subject to different laws.

174. In view of the fact that, in the case of more than one place of business, location is defined by reference to the place of central administration of a legal entity, application of the law of the assignor's location will result in the application of the law of a single jurisdiction and one that can be easily determined at the time of the assignment. It will thus eliminate the difficulties mentioned above. In particular, the location of the assignor as a connecting factor presents the advantage that it provides a single point of reference; it can be ascertained at the time of even a bulk assignment of future receivables; it would be suitable even for legal systems in which registration is practised; and it would result in the application of the law of the jurisdiction in which any main insolvency proceeding with regard to the assignor would be most likely to commence. This last aspect of the application of the law of the assignor's location is essential, since it appropriately addresses the issue of the relationship between the draft Convention and the applicable insolvency law.

175. With respect to insolvency, the thrust of article 24 is to ensure that, in most cases, the law governing priority under article 24 and the law governing the insolvency of the assignor are the laws of one and the same jurisdiction (the assignor's main jurisdiction). In such a situation, any conflict between the draft Convention and the applicable insolvency law would be resolved by the rules of law of that jurisdiction. In all other cases in which an insolvency proceeding with regard to the assets and affairs of the assignor is commenced in a State other than the State of the assignor's main jurisdiction (e.g. a jurisdiction in which the assignor has assets), the draft Convention gives way to rules of law that reflect the public policy of the State in which a dispute is adjudicated (article 25). Other special rights of the assignor's creditors or the insolvency administrator are not affected (see para. 182).

176. The Commission may wish to consider whether the application of the law of the assignor's location to priority issues in the case of receivables arising from deposit, securities or commodities accounts would be appropriate. In such practices, priority issues are normally subject to the law of the financial service provider's location. Introducing a different priority rule with regard to such practices may be in line with the normal expectations of parties. On the other hand, such an approach may introduce uncertainty, at least, to the extent that parties, in order to determine which priority rule applies, would need to discover the source of the assigned receivables, which would not be possible with respect to future receivables and would only be possible at some cost with respect to receivables assigned in bulk.

Limitations of applicable law rules

177. As a private international law provision, article 24 does not settle priority conflicts; it merely refers them to the law of the assignor's location. If, under that law, priority is based on the time of assignment, an assignee considering whether to finance certain receivables has to rely on the assignor's representations and possibly on representations made by other parties or on information available in a certain market. If the applicable law determines priority based on priority in notification of the debtor, again a prospective assignee has to rely on representations by the assignor and by the debtor, as well as on information available from other sources. In such jurisdictions, priority with regard to future receivables will not be obtainable at all at the time of assignment (at that time the identity of the debtors is not known), and priority with regard to receivables assigned in bulk will only be obtainable at the additional cost of notifying all the debtors. If, on the other hand, under the law applicable, priority is obtained by way of making certain data part of a public record, beyond representations by the assignor or other parties, prospective assignees would have that public record to rely on. In addition, assignees filing the required data would have an objective way of acquiring priority (for additional limitations to the application of the priority rules of the draft Convention, see paras. 177-180).

Time relevant for the determination of the location of the assignor

178. For the draft Convention, including article 24, to apply, the assignor has to be located in a Contracting State at the time of the conclusion of the contract of assignment. This approach enhances predictability as to the application of the draft Convention and facilitates decisions as to entering into and establishing the cost of a transaction. How-

ever, if the assignor makes an assignment in one country and another assignment in another country to which the assignor relocates, the draft Convention may not apply if the new location of the assignor is not in a Contracting State (article 24 *(a)* (i) is not intended to cover such situations) and, even if the draft Convention applies, the application of article 24 would be problematic since there would be two laws of the assignor's location. The Commission may, therefore, wish to consider that, in the case of relocation of the assignor or the receivable, a grace period should be introduced, during which the assignee with priority under the law of the initial location would not lose its priority. Such an approach would ensure that the rights of claimants in the new location would not for ever be subject to the rights of claimants from other jurisdictions. Such a transition rule would be necessary, since, with the current pace of mergers, moving the place of central administration of an entity may not be a rare occurrence. Dealing with the issue of relocation would be necessary, in particular, if location of an entity is defined by reference to the place where a receivable is booked. Moving receivables is certainly easier than moving places of central administration.

Article 25. *Public policy and preferential rights*

(1) The application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

(2) In an insolvency proceeding commenced in a State other than the State in which the assignor is located, any preferential right that arises under the law of the forum State and is given priority status over the rights of an assignee in insolvency proceedings under the law of that State has such priority notwithstanding article 24. A State may deposit at any time a declaration identifying those preferential rights.

Commentary

Public policy

179. The policy underlying article 25 is to strike a balance between the need to ensure certainty as to the application of the law of the assignor's location and the need to preserve the fundamental policy decisions of the law of the forum. Accordingly, paragraph (1) recognizes the right of a court or other authority, whether in the context of insolvency or not, to set aside a provision of the law of the assignor's location and, at the same time, limits that right to cases in which that provision is "manifestly contrary" to the public policy of the forum State. The public policy meant in paragraph (1) is the international public policy of the forum State. Recourse to such public policy has only a negative effect in the sense that it may defeat the application of a provision of the law applicable under article 24 that is manifestly contrary to the public policy of the forum State (e.g. a rule giving priority to a foreign State for taxes). As a result, a certain person may be by-passed in the determination of priority, while priority will be determined by other provisions of the applicable law.

180. For a priority rule to be set aside under paragraph (1), it must be "manifestly contrary" to the public policy of the forum State. It is assumed that two jurisdictions are involved (i.e the forum is in a State other than that of the assignor's location). If only one jurisdiction is involved, the rules of that jurisdiction would resolve the matter. The notion of "manifestly contrary" is used in international texts as a qualification of public policy (see, e.g. article 6 of the UNCITRAL Model Law on Cross-Border Insolvency, article 16 of the Rome Convention and article 18 of the Mexico City Convention). The purpose of such a qualification is to emphasize that public policy exceptions should be interpreted restrictively and paragraph (1) should be invoked only in exceptional circumstances concerning matters of fundamental importance for the forum State. Otherwise, the certainty achieved by article 24 could be seriously compromised, a result that would have a negative impact on the availability and the cost of credit on the basis of receivables (the term "manifestly contrary" is used also in article 32; see para. 199).

181. As mentioned above, the public policy of article 25 may not have a positive effect; it may not result in the positive application of a priority rule of the forum State that reflects public policy (e.g. a rule giving priority to employees in the forum State). For that reason, paragraph (2) specifically allows the forum State to apply its own priority rules, in the case where a priority rule applicable under paragraphs (1) and (2) is manifestly contrary to the forum's public policy, and to give priority to super-priority rights reflecting the forum's public policy (e.g. claims of the State for taxes or of employees for wages, but not security rights arising by contract or other property rights recognized in a court judgement). Paragraph (2) goes a step further. It allows (but creates No obligation for) a State to list in a declaration the super-priority rights that should prevail over the rights of an assignee under the draft Convention. This possibility for declarations is intended to enhance certainty in that it provides a mechanism for assignees to know which super-priority rights would prevail over their rights. The Commission may wish to reconsider the use of the term "preferential" (it may be broader than intended and confused with normal priority, which is defined in article 6 *(h)* as a preference).

Special insolvency rights

182. Article 25 makes no reference to special rights of creditors of the assignor or of the insolvency administrator that may prevail over the rights of an assignee under law governing insolvency. The reason is that priority established under the draft Convention is not intended to interfere with such special rights. Such special rights include, but are not limited to, any right of creditors of the assignor to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assign-

ment as a fraudulent or preferential transfer. They also include any right of the insolvency administrator to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assignment as a fraudulent or preferential transfer; to avoid or otherwise render ineffective, or to initiate an action to avoid or otherwise render ineffective, an assignment of receivables that have not arisen at the time of the commencement of the insolvency proceeding; to encumber the assigned receivables with the expenses of the insolvency administrator in performing the original contract; or to encumber the assigned receivables with the expenses of the insolvency administrator in maintaining, preserving or enforcing the receivables at the request and for the benefit of the assignee. If the assigned receivables constitute security for indebtedness or other obligations, the special rights protected include any rights existing under insolvency rules or procedures generally governing the insolvency of the assignor that permit the insolvency administrator to encumber the assigned receivables; provide for a stay of the right of individual assignees or creditors of the assignor to collect the receivables during the insolvency proceeding; permit the substitution of the assigned receivables for new receivables of at least equal value; or provide for the right of the insolvency administrator to borrow using the assigned receivables as security to the extent that their value exceeds the obligations secured.

Article 26. *Special proceeds rules*

(1) If proceeds of the assigned receivable are received by the assignee, the assignee is entitled to retain those proceeds to the extent that the assignee's right in the assigned receivable had priority over competing rights in the assigned receivable of the persons described in subparagraph *(a)* (i) to (iii) of article 24.

(2) If proceeds of the assigned receivable are received by the assignor, the right of the assignee in those proceeds has priority over competing rights in those proceeds of the persons described in subparagraph *(a)* (i) to (iii) of article 24 to the same extent as the assignee's right had priority over the right in the assigned receivable of those persons if:

(a) The assignor has received the proceeds under instructions from the assignee to hold the proceeds for the benefit of the assignee; and

(b) The proceeds are held by the assignor for the benefit of the assignee separately and are reasonably identifiable from the assets of the assignor, such as in the case of a separate deposit account containing only cash receipts from receivables assigned to the assignee.

Commentary

183. Article 26 is intended to introduce a limited substantive law priority rule with respect to proceeds. Proceeds include proceeds of proceeds (the words "of the assigned receivable" may, therefore, need to be deleted), but not returned goods (as between the assignor and the assignee, rights in proceeds and returned goods are settled in article 16 (1) *(c)*).

Proceeds received by the assignee

184. Under paragraph (1), the assignee may retain any proceeds received by the assignee (in other words, the assignee has a right in rem), if the assignee has priority with respect to the assigned receivable. The implicit limitation, which may need to be stated explicitly (as in article 16 (3)), is that the assignee may not retain more than the value of its receivable. Paragraph (1), however, may inadvertently result in granting an assignee priority with respect to proceeds of proceeds even if another person has priority with respect to proceeds of the assigned receivable under the law of the assignor's location. For example, if the debtor pays the assignor with a cheque, the assignor deposits the cheque in its bank account and then pays the assignee, under paragraph (1), the first assignee has a right to retain the cash (proceeds of proceeds) even if the depositary institution has priority in the balance in the deposit account (proceeds of the assigned receivable). The same inappropriate result may arise if the assignor receives payment by way of a security (e.g. a bond), the security is pledged to a second assignee and then its proceeds are paid to the first assignee. The first assignee could retain the proceeds of proceeds, even though the second assignee would normally have priority with respect to the proceeds of the assigned receivable under the law of the assignor's location. The Commission may, therefore, wish to introduce language in article 26 to ensure that an assignee's right in proceeds of proceeds does not affect the rights of another person in proceeds of the assigned receivable under the law of the assignor's location.

Proceeds received by the assignor

185. Under paragraph (2), the assignee has priority with respect to proceeds received by the assignor, if it has priority with respect to the assigned receivable and if the assignor receives payment on behalf of the assignee and keeps those proceeds separated from its own assets. This limited provision is aimed at facilitating practices, such as undisclosed invoice discounting and securitization, to the extent that such priority with respect to proceeds will increase certainty as to payment to the assignee, in particular in the case of insolvency. The Commission may wish to consider whether paragraph (2) is sufficient to achieve its objectives, since it does not clearly refer the extent of a right (i.e. its in rem or ad personam nature) to the law of the assignor's location, as does article 24 (the in rem nature and the priority of a right are two distinct issues; see para. 165).

Article 27. *Subordination*

An assignee entitled to priority may at any time subordinate unilaterally or by agreement its priority in favour of any existing or future assignees.

A/CN.9/445, para. 29
A/CN.9/455, para. 31
A/CN.9/456, para. 210

Commentary

186. Article 27 is intended to recognize the interest of the parties, involved in a conflict in negotiating and relinquishing priority in favour of a subordinate claimant where commercial considerations so warrant. In order to afford maximum flexibility and to reflect prevailing business practices, article 27 makes it clear that a valid subordination need not take the form of a direct subordination agreement between the assignee with priority and the beneficiary of the subordination agreement. It can also be effected unilaterally, for instance, by means of an undertaking of the first ranking assignee to the assignor (whether in the contract of assignment or an independent, written or oral, agreement), empowering the assignor to make a second assignment ranking first in priority. The term "unilaterally" is further intended to clarify that the beneficiary of the subordination (the second assignee) need not offer consideration in exchange for the priority granted by the unilateral subordination. Furthermore, article 27 clarifies that an effective subordination need not specifically identify the intended beneficiary or beneficiaries ("any existing or future assignees") and can instead employ generic language. Such unilateral subordination may take place in an assignment between entities in the same corporate group or may be a service offered by a lender to a borrower for commercial considerations.

CHAPTER V. CONFLICT OF LAWS

References:

A/CN.9/420, paras. 185-187

A/CN.9/466, paras. 145-149

Scope and purpose of chapter V

Commentary

187. Chapter V is intended to state a few general principles that are widely adopted but not recognized in all legal systems. It is not intended to deal with all assignment-related issues in an exhaustive way, or to displace or to contradict any existing international legislative text. Articles 28, 29, 31 and 32 reflect generally accepted principles (e.g. the Mexico City Convention or article 12 of the Rome Convention, with the exception of the requirement for an express choice in article 28 (1) and the rebuttable presumption in favour of the assignor's location in article 28 (2)). The fact that those principles may already be accepted in the law of some States does not reduce their usefulness for other States. Furthermore, in the absence of those provisions, a great degree of uncertainty would remain with regard to the law applicable to all those issues that are left, by necessity, to law other than the draft Convention (for a non-exhaustive list of those issues, see para. 79).

188. Article 30, which is intended to extend the application of the principles embodied in articles 24 to 26 to transactions falling outside the ambit of the draft Convention, breaks new ground in addressing an issue that is not clearly or appropriately resolved in current law. In this respect, the Working Group carefully considered article 12 of the Rome Convention and concluded that, in view of the uncertainty as to whether article 12 covers priority issues and, if it does, as to which is the applicable law, it is necessary to address this matter in the draft Convention. The basic premise of article 30, namely, that priority issues are to be referred to the law of the assignor's location, has been adopted by consensus in articles 24 to 26. The question pending relates to the exact scope of this rule. While chapter V seems to be more or less acceptable in substance, it appears to be objectionable to some States for general legislative policy reasons (relating, e.g. to the questions whether it is good policy to have general private international law rules in a primarily substantive law text, whether UNCITRAL is the appropriate body to prepare private international law rules or whether that matter should be left to other international or regional organizations). In order to address those policy concerns, chapter V has been made subject to an opt-out. The deletion of chapter V or the limitation of its scope, however, would reduce the benefits to be derived from it by States that need it, without providing any additional protection to States that do not need it. Similarly, making chapter V subject to an opt-in could inadvertently result in limiting its scope of application, since an opt-in approach might discourage States from adopting chapter V.

189. As a matter of drafting, the Commission may wish to consider whether article 1 (3), specifying the scope of chapter V and providing for an opt-out by States, should be placed at the beginning of chapter V, along with a provision dealing with the hierarchy between the substantive and the private international law provisions of the draft Convention (see para. 22). The Commission may also wish to consider whether the title of chapter V should be revised to read along the following lines: "Other conflict-of-laws rules" (articles 24 to 26 are also conflict-of-laws rules). Alternatively, the Commission may wish to place all conflict-of-laws rules in one chapter. If such an approach were to be adopted, article 30 could be deleted and articles 24 to 26 would need to be made subject to an opt-out but only to the extent they would apply irrespective of whether the assignor was located in a Contracting State.

Article 28. *Law applicable to the rights and obligations of the assignor and the assignee*

(1) [With the exception of matters that are settled in this Convention,] the rights and obligations of the assignor and the assignee under the contract of assignment are governed by the law expressly chosen by the assignor and the assignee.

(2) In the absence of a choice of law by the assignor and the assignee, their rights and obligations under the contract

of assignment are governed by the law of the State with which the contract of assignment is most closely connected. In the absence of proof to the contrary, the contract of assignment is presumed to be most closely connected with the State in which the assignor has its place of business. If the assignor has more than one place of business, reference is to be made to the place of business most closely connected to the contract. If the assignor does not have a place of business, reference is to be made to the habitual residence of the assignor.

(3) If the contract of assignment is connected with one State only, the fact that the assignor and the assignee have chosen the law of another State does not prejudice the application of the law of the State with which the assignment is connected to the extent that that law cannot be derogated from by contract.

Commentary

190. Article 28 is intended to reflect the principle of party autonomy with respect to the law applicable to the contract of assignment (a principle reflected in articles 12 of the Rome Convention and 7 of the Mexico City Convention). While being widely recognized, this principle is not universally accepted. Pending final determination by the Commission of the exact scope of chapter V, the opening words of article 28 appear within square brackets (if the suggestion made by the secretariat in para. 23 is adopted, these words could be deleted). Paragraph (1) provides that the choice of law must be express. The Working Group recognized that an implicit choice would be in line with current trends in private international law (see articles 3 (1) of the Rome Convention and 7 of the Mexico City Convention). However, it was widely felt that a an express choice should be required in the case of financing transactions, in which certainty was of utmost importance and might determine whether a transaction would take place and at what cost. The Commission may wish to reconsider this matter. It would appear that validating a choice of law that could be "clearly implied from the contract" would not seriously compromise certainty, while it would make article 28 more acceptable to some States.

191. Under paragraph (1), the proper law of the contract governs the purely contractual aspects of the contract of assignment (e.g. conclusion and the substantive validity, the interpretation of its terms, the assignee's obligation to pay the price or to render the promised credit, the existence and effect of representations as to the validity and enforceability of the debt). Paragraph (1), however, is not intended to cover the substantial validity aspects addressed in the draft Convention with respect to assignments falling within its ambit (this is the purpose of the opening words) or other substantive validity aspects, such as capacity or authority to act. The issue is important, since, in some countries, the capacity to effect a bulk assignment is confined to corporations or to assignments made in the course of business of the assignor. It is not sufficiently clear whether article 9 would override such statutory prohibitions relating to capacity. Nor is it clear which law would apply to such statutory prohibitions. While most assignments under the draft Convention should be made by assignors in the course of business, leaving this matter unaddressed leaves a residual area of uncertainty (for a suggestion by the secretariat to address the question of the law applicable to statutory assignability, see para. 196). Paragraph (1) is not intended to cover the financing contract either, if the contract of assignment is just a clause in the financing contract, unless the parties agree otherwise. Furthermore, paragraph (1) does not cover the proprietary aspects of assignment (for this reason, reference is made to "the contract of assignment" as opposed to "the assignment" itself; for this distinction, see paras. 24 and 25). The Working Group agreed that it would not be appropriate to submit the transfer of property rights to the proper law of the contract. With respect to assignments falling within the ambit of the draft Convention, such proprietary aspects are, to a large extent, dealt with in the provisions of the draft Convention outside chapter V.

192. Paragraph (2) is intended to deal with the exceptional situations in which the parties have not expressly agreed on the law applicable to the contract of assignment or in which the parties have agreed but their agreement is later found to be invalid. It refers to the closest-connection test, which may result in the application of the law of the assignor's location (e.g. in the case of an assignment by way of sale) or of the law of the assignee's location (e.g. in an assignment by way of security made in the context of a credit transaction). In an attempt to combine flexibility with certainty, paragraph (2) introduces a rebuttable presumption that the State with the closest connection to the contract is the law of the assignor's location. Location in this context means place of business. In view of the limited scope of application of paragraph (2), the Working Group thought that such a reference to the place of business would not undermine the certainty necessary for financing transactions. In creating a specific presumption in favour of the law of the assignor's location, article 28 is not necessarily in conflict with the practice followed in other private international law texts that refer, for example, to the place where the party who is to effect the characteristic performance has its habitual residence or place of business (article 4 (2) of the Rome Convention) or to "all subjective and objective elements of the contract" (article 9 of the Mexico City Convention). Such conflicts could arise in those cases in which application of the characteristic-performance test would not yield a presumption in favour of the law of the assignor's location. In complex financing transactions, however, where the payment of money and the provision of services or reciprocal obligations are involved, the characteristic-performance test may not be as effective in determining the most closely connected law in any realistic sense. In any case, the parties can select the applicable law. Furthermore, the presumption may be rebutted if the circumstances show that the contract is more closely connected with another country.

193. Paragraph (3) is intended to restrict party autonomy in the sense that the parties to a purely domestic contract

may not set aside the mandatory rules of the law of the State with which the contract is connected. If the contract is not purely domestic, restrictions to party autonomy are to be found in articles 31 and 32. If chapter V is to apply to international assignments or to assignments of international receivables as defined in chapter I, the scope of this rule would be limited to cases where a domestic assignment of a domestic receivable may fall within the ambit of the draft Convention (i.e. in the case of a subsequent assignment in a chain of assignments in which a prior assignment is governed by the draft Convention). Even if chapter V applies independently of chapter I, its scope would be limited, since there would always need to be an international element for the application of private international law provisions to be triggered in the first place. The international element could relate to the contract of assignment as such or to the assigned receivable. The Commission may wish to consider whether this matter should be explicitly clarified in paragraph (3) (e.g. article 3 (3) of the Rome Convention refers, not only to "the contract", but to "all elements relevant to the situation at the time of the choice of a foreign law"). The Commission may also wish to consider whether paragraph (3) should refer consistently to the connection between a State and the contract of assignment (and not the assignment).

Article 29. *Law applicable to the rights and obligations of the assignee and the debtor*

[With the exception of matters that are settled in this Convention,] the law governing the receivable to which the assignment relates determines the enforceability of contractual limitations on assignment, the relationship between the assignee and the debtor, the conditions under which the assignment can be invoked against the debtor and any question whether the debtor's obligations have been discharged.

A/CN.9/455, paras. 92-104 and 117
A/CN.9/466, paras. 154-158

Commentary

194. In line with the approach that an assignment should not change the legal position of the debtor, article 29 refers issues arising in the context of the relationship between the assignee and the debtor to the law governing the receivable. The proper law of the original contract is meant, not the notional lex situs of the debt. The Commission may wish to clarify this matter explicitly in article 29 (and in article 1 (2)). Such an approach would be justified, since, unlike article 12 (2) of the Rome Convention on which article 29 was modelled and which may apply to non-contractual rights, article 29 covers only contractual receivables. The Working Group decided to avoid specifying how the proper law of the original contract should be determined. It was widely felt that such elaborate rules were not necessary in a chapter that was intended to establish some general rules, without addressing all assignment-related private international law issues. It was also generally thought that it would be inappropriate to attempt to determine the law governing the wide variety of contracts that might be at the origin of a receivable (e.g. contracts of sale, insurance contracts or contracts relating to financial markets operations). Pending final determination by the Commission of the exact scope of chapter V, the opening words of article 29 appear within square brackets (if the secretariat suggestion in para. 23 is adopted, these words could be deleted).

195. It would appear that article 29 also applies to transaction set-off (i.e. a cross-claim arising out of the original contract or a related contract), since a transaction set-off would fall either under the "relationship between the assignor and the debtor" or "the conditions under which the assignment can be invoked against the debtor". The Commission may wish to clarify this matter. Independent set-off (i.e. claims arising from sources that are unrelated to the original contract), however, is not covered. Such claims may arise from a variety of sources (e.g. a separate contract between the assignor and the debtor, a rule of law or a judicial or arbitral decision). Their availability and the conditions governing availability (e.g. liquidity, same currency and maturity) are left to other law. The Working Group considered the law governing the original contract or the contract from which a contractual independent right of set-off might arise, but was unable to reach consensus.

196. Article 29 also covers contractual, but not statutory, assignability as an issue relating to payment by and discharge of the debtor. As a result, in cases where the debtor's rights and obligations are governed by the draft Convention, the assignment is effective as against the debtor, even if there is a limitation on assignment in the original contract (article 11 (1)) and the debtor will not have a defence as against the assignee (article 20 (3)). If the draft Convention does not apply with regard to the debtor, the effects of a contractual limitation on the relationship between the assignee and the debtor are left to the law governing the receivable. The term "enforceability" is intended to reflect both the effectiveness of a contractual limitation both as between the parties thereto and as against third parties (i.e. to validity inter partes and effectiveness erga omnes). For consistency reasons and in order to avoid questions of interpretation (the term "enforceability" appears to exclude the notion of validity inter partes), the Commission may wish to consider substituting the term "effectiveness" for the term "enforceability". The Commission may wish to reconsider the issue of the law applicable to statutory assignability. The law of the assignor's location or the law governing the receivable may be considered. The restriction as to the mandatory rules or the public policy of the forum would be sufficient to ensure that the applicable law would not apply to cases to which it should not apply (e.g. the law governing the receivable may not be appropriate in the case of statutory prohibitions aimed at protecting the assignor). Article 29 does not refer consumer-protection issues to the law of the debtor's location. Article 31, which gives a court the discretion to apply any mandatory rules of the forum or of a closely connected law, should be sufficient to preserve the application of con-

sumer-protection law (for consumer receivables and consumer protection, see paras. 36, 100, 128, 152 and 160).

[Article 30. *Law applicable to competing rights of other parties*

(1) The law of the State in which the assignor is located governs:

(a) The extent of the right of an assignee in the assigned receivable and the priority of the right of the assignee with respect to competing rights in the assigned receivable of:

(i) Another assignee of the same receivable from the same assignor, even if that receivable is not an international receivable and the assignment to that assignee is not an international assignment;

(ii) A creditor of the assignor; and

(iii) The insolvency administrator;

(b) The existence and extent of the right of the persons listed in paragraph (1) *(a)* (i) to (iii) in proceeds of the assigned receivable, and the priority of the right of the assignee in those proceeds with respect to competing rights of such persons; and

(c) Whether, by operation of law, a creditor has a right in the assigned receivable as a result of its right in other property of the assignor, and the extent of any such right in the assigned receivable.

(2) The application of a provision of the law of the State in which the assignor is located may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.

(3) In an insolvency proceeding commenced in a State other than the State in which the assignor is located, any preferential right which arises under the law of the forum State and is given priority status over the rights of an assignee in insolvency proceedings under the law of that State has such priority notwithstanding paragraph (1) of this article. A State may deposit at any time a declaration identifying those preferential rights.]

A/CN.9/445, paras. 70-74
A/CN.9/455, paras. 105-110
A/CN.9/466, paras. 159 and 160

Commentary

197. Like articles 31 and 32, article 30 appears within square brackets pending determination by the Commission of the scope or purpose of chapter V. Retention of article 30 is meaningful only if chapter V is to apply to transactions beyond those falling within the scope of the draft Convention under chapter I. If chapter V has the same scope as the other parts of the draft Convention, article 30 repeats rules reflected in articles 24 to 27 and may thus be deleted. If chapter V is to apply irrespective of chapter I, article 30 would need to be retained. In addition, article 30 may need to specify that it applies also to conflicts involving a subsequent assignment as if the subsequent assignee is the initial assignee (this matter is addressed in chapter I, article 2 *(b)*). Furthermore, paragraph (2) may be deleted as superfluous, since the matter dealt with in paragraph (2) is addressed in article 32. As a private international law rule, article 30 has the goal of providing certainty with regard to the law applicable to conflicts of priority. Such certainty is dependent upon making reference to the law of a single and easily determinable jurisdiction (see paras. 172-176). Priority is defined in article 5 *(i)* as a preference (in payment or other discharge) and article 30 specifies the parties between which such conflicts may arise. In view of the fact that the debtor is not one of those parties, priority does not relate to the debtor's discharge. Therefore, the debtor being discharged under the law governing the receivable cannot be asked to pay again the party with priority under the law of the assignor's location.

[Article 31. *Mandatory rules*

(1) Nothing in articles 28 and 29 restricts the application of the rules of the law of the forum State in a situation where they are mandatory irrespective of the law otherwise applicable.

(2) Nothing in articles 28 and 29 restricts the application of the mandatory rules of the law of another State with which the matters settled in those articles have a close connection if and in so far as, under the law of that other State, those rules must be applied irrespective of the law otherwise applicable.]

References:

A/CN.9/455, paras. 111-117
A/CN.9/466, paras. 161 and 162

Commentary

198. Paragraph (1) is intended to reflect a generally accepted principle in private international law, according to which the mandatory law of the forum may be applied irrespective of the law otherwise applicable (see article 7 of the Rome Convention and article 11 of the Mexico City Convention). Mandatory law in this context does not refer to law that cannot be derogated from by agreement (as in article 28 (3)), but to law of fundamental importance, such as consumer protection law or criminal law (*loi de police*). Paragraph (2) introduces a different rule, namely, that a court in a Contracting State may apply neither its own law nor the law applicable under articles 28 and 29, but the law of a third country, on the ground that the matters settled in those provisions have a close connection with that country (it is derived from article 7 (1) of the Rome Convention, which is subject to a reservation, while more recent private international law texts include no such reservation). The scope of article 31 is limited to cases involving the law applicable to the contract of assignment and to the relationship between the assignee and the debtor. As to whether the law applicable to priority issues may be set aside as contrary to mandatory law rules of the forum State, it was generally thought that article 30 (3), under which a priority

rule of the law applicable may be set aside for the purpose of protecting, for example, a right of the forum State for taxes, was sufficient. Such a limitation of the mandatory-law exception was thought to be warranted, since priority rules are of a mandatory nature and setting them aside in favour of the mandatory rules of the forum or another State would inadvertently result in uncertainty as to the rights of third parties, a result that would have a negative impact on the availability and the cost of credit.

[Article 32. *Public policy*

With regard to matters settled in this chapter, the application of a provision of the law specified in this chapter may be refused by a court or other competent authority only if that provision is manifestly contrary to the public policy of the forum State.]

References:

A/CN.9/455, paras. 118 and 119
A/CN.9/466, paras. 163 and 164

Commentary

199. Article 32 differs from article 31 in that article 32 has only a negative effect, namely, that of setting aside a rule of the applicable law, if it is manifestly contrary to the international public policy of the forum (on this matter, see para. 180; see also article 16 of the Rome Convention and article 18 of the Mexico City Convention). In line with the approach followed in other international legal texts, the qualification "manifestly" has been added before the words "contrary to public policy". It should be noted that it is the application of the applicable law to a particular case and not the applicable law itself that needs to be manifestly contrary to the public policy of the forum. The application of a foreign law, therefore, cannot be refused on the ground that the law itself, in general, is considered to be inimical to the public policy of the forum, but only if the application of a particular rule in a concrete case would be repugnant to the public policy of the forum.

CHAPTER VI. FINAL PROVISIONS

Article 33. *Depositary*

The Secretary-General of the United Nations is the depositary of this Convention.

Reference:

A/CN.9/455, paras. 124 and 125

Commentary

200. The Treaty Section of the Office of Legal Affairs of the United Nations, located at United Nations Headquarters in New York, performs the depositary functions of the Secretary-General. Treaties deposited with the depositary are accessible through the home page of the Treaty Section on the World Wide Web (http:\\www.un.org\depositary).

Article 34. *Signature, ratification, acceptance, approval, accession*

(1) This Convention is open for signature by all States at the Headquarters of the United Nations, New York, until ... .

(2) This Convention is subject to ratification, acceptance or approval by the signatory States.

(3) This Convention is open to accession by all States which are not signatory States as from the date it is open for signature.

(4) Instruments of ratification, acceptance, approval and accession are to be deposited with the Secretary-General of the United Nations.

Reference:

A/CN.9/455, paras. 141 and 142

Commentary

201. The Commission may wish to consider the length of the time period during which the draft Convention should be open for signature by States. In conventions prepared by UNCITRAL, this period ranges from one year (in the case of the United Nations Convention on the Carriage of Goods by Sea, 1978 and the United Nations Convention on the Liability of Operators of Transport Terminals in International Trade) to two and a half years (in the case of the United Nations Convention on International Bills of Exchange and International Promissory Notes).

Article 35. *Application to territorial units*

(1) If a State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at any time, declare that this Convention is to extend to all its territorial units or only one or more of them, and may at any time substitute another declaration for its earlier declaration.

(2) These declarations are to state expressly the territorial units to which the Convention extends.

(3) If, by virtue of a declaration under this article, this Convention does not extend to all territorial units of a State and the assignor or the debtor is located in a territorial unit to which the Convention does not extend, this location is considered not to be in a Contracting State.

(4) If a State makes no declaration under paragraph (1) of this article, the Convention is to extend to all territorial units of that State.

Reference:

A/CN.9/455, paras. 143 and 144

Commentary

202. Article 35 is intended to ensure that a federal State may adopt the draft Convention, even if, for any reason, it does not wish to have it apply to one or more territorial units. Such a right is particularly important for States with more than one legal system. The declaration may be made at any time, including before or after ratification, approval or accession (reference is made to a "State" and not to a "Contracting State", since a declaration may be made by a signatory State). The effect of a declaration under article 35 is that a party located in a territorial unit, to which the draft Convention is not to be applied by virtue of the declaration, is not considered to be located in a Contracting State (paragraph (3)). If that party is the assignor, the draft Convention would not apply at all. If that party is the debtor, the provisions of the draft Convention dealing with the rights and obligations of the debtor would not apply. The time when the debtor needs to be located in a Contracting State or when the law governing the assigned receivable needs to be the law of a Contracting State is not clear (article 1 (2)). Unless this time is specified in article 1 (2) (and possibly in article 35), if the debtor is located in a Contracting State at the time of the conclusion of the contract of assignment but, as a result of a declaration under article 35, not at the time a future receivable arises or at the time of notification, it would not be clear whether the draft Convention would apply in respect of such a debtor (for a secretariat suggestion in favour of the time of the conclusion of the original contract, see para. 17).

Article 36. *Conflicts with other international agreements*

This Convention does not prevail over any international agreement which has already been or may be entered into and which contains provisions concerning the matters governed by this Convention[, provided that the assignor is located in a State party to such agreement or, with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, the debtor is located in a State party to such agreement].

References:

A/CN.9/445, paras. 52-55, 75, 76 and 201-203
A/CN.9/455, paras. 67-73 and 126-129
A/CN.9/456, paras. 232-239
A/CN.9/466, paras. 192-195

Commentary

203. Reflecting generally acceptable principles as to conflicts among international legislative texts (see, e.g. article 30 of the Vienna Convention on the Law of Treaties, 1969 ("the Vienna Convention"); and article 90 of the United Nations Sales Convention), article 36 gives precedence to other texts that contain provisions that deal with matters covered by the draft Convention. Texts with which the draft Convention may be in conflict include the Ottawa Convention, the Rome Convention, the Mexico City Convention, the Guarantee and Standby Convention, the draft European Union Insolvency Regulation and the preliminary draft Convention on International Interests in Mobile Equipment.

Ottawa Convention

204. The substantive and territorial scope of the Ottawa Convention is narrower than the scope of the draft Convention (transactions not covered include factoring contracts, in which only one of the three services mentioned in article 1 of the Ottawa Convention is offered; no notification is given; the assignor, the assignee or the debtor is not located in a Contracting State). In addition, parties may exclude the application of the Ottawa Convention as a whole. Moreover, the Ottawa Convention does not address certain issues (e.g. priority issues). However, to the extent that the two Conventions apply to a factoring contract, their application may lead to conflicting results in a number of respects (e.g. the scope of the reservation to the rule on contractual limitations to assignment, notification relating to receivables not existing at the time of notification, discharge of the debtor by payment to the assignee with knowledge of another person's superior right and recovery from the assignee of payments made by the debtor). In such instances, the question would arise whether the draft Convention as a whole was set aside or whether it could apply, at least, with respect to matters not addressed in the Ottawa Convention (e.g. priority issues). The matter is not explicitly addressed in article 36, although the argument could be made that, with respect to such issues there would be no conflict and the draft Convention would apply, if the requirements for its application were met. The Commission may wish to address this matter explicitly in article 36. As to matters covered in the draft Convention and in the Ottawa Convention, to the extent any conflicts would arise, the Ottawa Convention would prevail. However, in view of the fact that the Ottawa Convention also contains a provision along the lines of article 36, it may not be clear which of the two Conventions would apply in a particular case. If the result is that the Ottawa Convention applies, a different problem arises. If the two conventions apply to a particular factoring contract, the Ottawa Convention prevails and the parties to the factoring contract or to the contract from which the assigned receivables arise, exclude the application of the Ottawa Convention (article 3 of the Ottawa Convention), the draft Convention would not apply by virtue of article 36 and the Ottawa Convention would not apply as its application would have been excluded by the parties. In such a case, again it would not be clear which law applied.

205. There are different ways in which these matters could be addressed. One way would be to leave the matter to party autonomy. If parties exclude the application of the Ottawa Convention and opt into the draft Convention, the draft Convention should apply, at least, if all the conditions for its application that are set forth in chapter I are met (although, in some States, the draft Convention may apply by virtue of their private international law rules even if it would not be applicable in the absence of a choice by the parties). Such a choice of law would normally be effective, unless it ran contrary to the public policy or mandatory law of the forum. This result, however, would run counter to the policy underlying articles 24 to 26 and 30 of the draft Convention, which do not allow parties to choose the law applicable to priority issues. Another way would be to

leave it to each State to decide which text it wishes to give precedence to (see, e.g. article 33 (2) in A/CN.9/WG.II/WP.104; see also article 20 of the Mexico City Convention; for critical remarks on this provision, see A/CN.9/466, paras. 192-195). Such an approach, however, could have a negative effect on certainty of law. Parties would need to examine each declaration and to determine its exact content, the connection with the location of the assignor or the debtor and the relevant time for the declaration to affect the interests of the assignor, the assignee and third-party creditors, on the one hand, and the interests of the debtor, on the other hand. Yet another way to address these matters would be to provide explicitly in article 36 that the draft Convention would apply to factoring contracts and issues not addressed in the Ottawa Convention. The possible disadvantage of such an approach is that, in order to determine whether the draft Convention would apply to a particular factoring contract, parties would have to examine the Ottawa Convention. This result might complicate the application of the draft Convention and raise the cost of the transaction. A fourth way to address conflicts with the Ottawa Convention would be for the draft Convention to supersede the Ottawa Convention. Such an approach would raise a question of legislative policy that States would need to address. From a substantive point of view, however, such an approach seems to provide the highest possible degree of certainty. Language along the following lines could be considered for insertion in article 36:

Variant A

"(2) If this Convention is set aside by virtue of paragraph (1) of this article and the application of the Ottawa Convention is excluded by the parties to the factoring contract or to the original contract, such parties may opt into this Convention [if the conditions of chapter I are met]."

Variant B

"(2) A State may declare at any time that the Convention will not prevail over international conventions or other multilateral or bilateral agreements listed in the declaration, which it has entered or will enter into and which contain provisions concerning the matters governed by this Convention."

Variant C

"(2) If the Ottawa Convention does not apply or with respect to an issue not addressed in the Ottawa Convention, this Convention applies."

Variant D

"(2) Notwithstanding paragraph (1) of this article, this Convention supersedes the Ottawa Convention."

206. Variant A would be consistent with the principle of party autonomy. Variants B to D would be in line with article 30 (2) of the Vienna Convention, which allows for a treaty to specify which treaty prevails in the case of conflicts. If the Commission decides to retain the bracketed language in article 36, it would need to be supplemented by a reference to the application of the draft Convention with respect to the rights and obligations of the debtor in cases where the law governing the receivable is the law of a Contracting State (article 1 (2)).

Mexico City and Rome Conventions

207. There are no conflicts between the draft Convention and the Mexico City Convention, which addresses the law applicable to contracts in general (not assignment in particular) and in a way that is consistent with article 28 of the draft Convention. Any conflicts between article 12 of the Rome Convention and articles 28 and 29 of the draft Convention are minimal, since those articles are identical with article 12 of the Rome Convention (with the exception of the express choice required in article 28 (1) and the rebuttable presumption foreseen in article 28 (2)). Furthermore, normally, no conflicts should arise between article 12 of the Rome Convention and article 30 of the draft Convention, since, according to the prevailing view, article 12 of the Rome Convention does not address this matter. However, in the literature and in case law, the view has been expressed that article 12 of the Rome Convention addresses issues of priority, either in paragraph (1) (the law chosen by the parties) or in paragraph (2) (the law governing the receivable). The Working Group has taken the position that neither of those two laws is appropriate. In any case, in order to avoid any conflict with the Rome Convention, article 37 provides that a State may opt out of chapter V. As a result, if all States parties to the Rome Convention opt out of chapter V, no conflict would arise. However, an opt-out of articles 24 to 26 is not allowed. Therefore, conflicts may arise between articles 24 to 26 of the draft Convention and article 12 of the Rome Convention. Neither article 36 nor its equivalent article 21 of the Rome Convention would sufficiently clarify which convention applies in the case of conflicts, since they both give way in favour of another text. As a result, uncertainty might prevail. The matter could be left to the principles of public international law, under which the more specific or the substantive law text (i.e. the draft Convention) would prevail. However, addressing the matter explicitly in article 36 would enhance certainty. The Commission may wish to consider leaving the matter to party autonomy or to each State, or allowing the draft Convention to supplement or supersede the Rome Convention (see the variants presented in para. 205).

208. The Commission may wish to consider whether article 36 should also address conflicts with supra-national law that is not in the form of an international agreement (e.g. EU regulations). Addressing the matter in article 36 and giving precedence to such supra-national law could remove a possible obstacle to some States adopting the draft Convention.

European Union draft Insolvency Regulation

209. No conflicts arise with the draft European Union Insolvency Regulation (approved by the Council of the Union and pending before the European Parliament). The notion of central administration is identical with the centre of main interests used in the draft Insolvency Regulation and that Regulation does not affect rights in rem in a main insolvency proceeding. While the draft Insolvency Regulation might affect rights in rem in a secondary insolvency proceeding (articles 2 *(g)*, 4 and 28), article 25 would be sufficient to preserve, for example, super-priority rights and, in any case, the draft Convention should not affect special insolvency rights (see paras. 179-182).

Guarantee and Standby Convention

210. If the assignment of the right to demand payment of an independent undertaking is excluded from the draft Convention and the assignment of proceeds of such an undertaking is subject to article 5, no conflicts arise with the Guarantee and Standby Convention (see paras. 48 and 52).

Preliminary draft Convention on International Interests in Mobile Equipment

211. Conflicts may arise with the preliminary draft Convention on International Interests in Mobile Equipment, currently being prepared by a group of experts in the context of the International Civil Aviation Organization (ICAO), Unidroit and other organizations. This preliminary draft Convention is intended to apply to high-value mobile equipment, although it contains no definite list of types of equipment to be covered and in article 2 it refers to a "uniquely identifiable object". It does, however, require the preparation of a protocol for the draft Convention to apply to a particular type of equipment (article 7). The main characteristic of this preliminary draft Convention with respect to an assignment of receivables is that it treats the principal obligation, that is, the receivable arising from the sale or lease of mobile equipment, as an accessory right of the security right in mobile equipment. As a result, an assignee who registers its security right in the mobile equipment with the international equipment-specific register of the preliminary draft Convention would automatically obtain the principal obligation. An assignee of the principal obligation without a security right in the mobile equipment could not register or obtain priority. Under article 36, any conflicts with the preliminary draft Convention would be resolved in favour of the application of the preliminary draft Convention (a matter that may be further clarified in the preliminary draft Convention). The same result would be reached, even in the absence of article 36, since according to general principles of customary treaty law the more specific text prevails (lex specialis derogat legi generali).

Article 37. *Application of chapter V*

A State may declare at any time that it will not be bound by chapter V.

References:

A/CN.9/455, paras. 72 and 148
A/CN.9/466, paras. 196 and 197

Commentary

212. In order to make the draft Convention more acceptable to States parties to existing private international law texts, such as the Rome Convention, article 37 allows States to opt out of chapter V. Such an opt-out is consistent with the decision of the Working Group that chapter V should form an integral part of the draft Convention. Unlike an opt-out, an opt-in could have the unintended effect of discouraging States from adopting chapter V.

Article 38. *Limitations relating to Governments and other public entities*

A State may declare at any time that it will not be bound by articles 11 and 12 if the debtor or any person granting a personal or property right securing payment of the assigned receivable is located in that State at the time of the conclusion of the original contract and is a Government, central or local, any subdivision thereof, or any public entity. If a State has made such a declaration, articles 11 and 12 do not affect the rights and obligations of that debtor or person.

References:

A/CN.9/432, para. 117
A/CN.9/455, para. 48
A/CN.9/456, paras. 115 and 116
A/CN.9/466, paras. 107-115

Commentary

213. Article 38 is intended to ensure that sovereign debtors are not affected by assignments made in violation of contractual limitations on assignment contained in public procurement or other similar contracts. As a result of article 38, an assignment of receivables owed by a sovereign debtor located in a State that has made a declaration at the time of the conclusion of the original contract is not effective as against the sovereign debtor. However, the assignment remains effective as against the assignor and the assignor's creditors. The Working Group decided to take this approach so as to avoid reducing the acceptability of the draft Convention to States that may not be able to protect sovereign debtors by way of a statutory limitation. The Working Group recognized that most States would protect sovereign debtors by way of a statutory limitation, which the draft Convention would not affect. It was also widely felt that a substantive rule giving full effect to a contractual limitation and invalidating the assignment as against a sovereign debtor, would raise the cost of credit for sovereign debtors irrespective of whether they wished or needed to be protected in such a way. Furthermore, the Working Group recognized that, once the sovereign debtor was protected, there was no reason to invalidate the assignment in general. Preserving the validity of the assignment as between the assignor and the assignee would allow the assignee to obtain priority by meeting the requirements of the law of the assignor's location.

214. Unlike article 6 of the Ottawa Convention, which allows a reservation with regard to any debtor, article 38 allows a reservation only with respect to sovereign debtors. In taking this approach, the Working Group was of the view that States considering the adoption of the draft Convention would need to weigh the potential inconvenience to the debtor of having to pay a different person against the advantage of increased availability of lower-cost credit to debtors and assignors, which could stimulate the economy at large. Article 38 is intended to allow a State to exclude the application of articles 11 and 12 in the case of any entity of the central or local Government or any subdivision thereof. As to public entities, article 38 leaves a wide

flexibility to States to determine the types of entities they wish to exclude from the application of articles 11 and 12 (without limiting the application of article 38 to publicly owned commercial entities or to governmental authorities acting in a commercial capacity). The Working Group recognized that it was the prerogative of each State to determine which type of public entity it wished to protect. Such an approach is particularly necessary in those countries in which government entities and their activities are not governed by a special body of public law but are subject to the rules governing "commercial" entities and activities.

[Article 39. *Other exclusions*

A State may declare at any time that it will not apply the Convention to specific practices listed in a declaration. In such a case, the Convention does not apply to such practices if the assignor is located in such a State or, with respect to the provisions of this Convention which deal with the rights and obligations of the debtor, the debtor is located in such a State.]

Reference:

A/CN.9/466, paras. 198-201

Commentary

215. With a view to making the draft Convention more acceptable to States that might be concerned with its application to certain practices, article 39 provides the possibility for States to exclude further practices. Article 39 appears within square brackets pending final determination of the exact scope of the draft Convention. Once the scope of the draft Convention and, in particular, article 5 is finalized, the Commission may wish to consider whether article 39 would be necessary. If article 39 is retained, reference would have to be included in the second sentence to the law governing the receivable and to the time of the original contract at which the debtor would need to be located in a Contracting State or the law governing the assigned receivable would need to be the law of a Contracting State (article 1 (2); see also para. 17). As a substitute for the second sentence of article 39, a new second paragraph could be considered along the following lines:

"(2) If a State makes a declaration under paragraph (1) of this article:

"*(a)* The Convention does not apply to such practices if the assignor is located at the time of the conclusion of the contract of assignment in such a State; and

"*(b)* The provisions of the Convention that affect the rights and obligations of the debtor do not apply if, at the time of the conclusion of the original contract, the debtor is located in such a State or the law governing the receivable is the law of such a State."

Article 40. *Application of the annex*

(1) A Contracting State may at any time declare that

Variant A

it will be bound either by sections I and/or II or by section III of the annex to this Convention.

Variant B

it:

(a) Will be bound by the priority rules based on registration set out in section I of the annex and will participate in the international registration system established pursuant to section II of the annex;

(b) Will be bound by the priority rules based on registration set out in section I of the annex and will effectuate such rules by use of a registration system that fulfils the purposes of such rules [as set forth in regulations promulgated pursuant to section II of the annex], in which case, for the purposes of section I of the annex, registration pursuant to such a system shall have the same effect as registration pursuant to section II of the annex; or

(c) Will be bound by the priority rules based on the time of the contract of assignment set out in section III of the annex.

(2) For the purposes of article 24, the law of a Contracting State that has made a declaration pursuant to paragraph (1) *(a)* or *(b)* of this article is the set of rules set forth in section I of the annex, and the law of a Contracting State that has made a declaration pursuant to paragraph (1) *(c)* of this article is the set of rules set forth in section III of the annex. The Contracting State may establish rules pursuant to which assignments made before the declaration takes effect shall, within a reasonable time, become subject to those rules.

(3) A Contracting State that has not made a declaration pursuant to paragraph (1) of this article may, pursuant to its domestic priority rules, utilize the registration system established pursuant to section II of the annex.

A/CN.9/455, paras. 122 and 130-132
A/CN.9/466, paras. 188-191, 202 and 203

Commentary

216. Article 40 is intended to list the choices available to States with regard to the annex and the effects of any such choice made by way of a declaration (permitted under article 1 (4); see para. 23). It contains two alternatives. Variant A briefly presents the choices available to States, without addressing their effects (its content and formulation and, in particular, the words "and/or" have not been approved by the Working Group). Variant B is a more elaborate version of variant A and sets forth the various choices and their effects. Under variant B, States would have four alternative choices with regard to the annex, namely, to adopt the priority rules of section I and the registration system proposed in section II (paragraph (1) *(a)*); to adopt the priority rules of section I and a registration system other

than that proposed in section II (paragraph (1) *(b)*); to adopt the priority rules of section III (paragraph (1) *(c)*); or to adopt the registration system of section II and priority rules other than those set forth in section I (paragraph (3)). The difference between the choices in paragraph (1) and the choice in paragraph (3) is that, a State would not need to make a declaration to exercise the choice given in paragraph (3) of the second alternative. Under paragraph (2) of variant B, depending on which section of the annex a State has opted into, section I or section III of the annex is the law of the assignor's location, provided that the State that has made the declaration is the State of the assignor's location at the time of the conclusion of the contract of assignment (a matter that would need to be stated explicitly in article 40). In line with articles 35 to 39 and 41, article 40 should refer to a State (not a Contracting State), since a declaration may be made "at any time", including at the time of signature but before ratification, acceptance or approval.

Article 41. *Effect of declaration*

(1) Declarations made under articles 35 (1) and 37 to 40 at the time of signature are subject to confirmation upon ratification, acceptance or approval.

(2) Declarations and confirmations of declarations are to be in writing and to be formally notified to the depositary.

(3) A declaration takes effect simultaneously with the entry into force of this Convention in respect of the State concerned. However, a declaration of which the depositary receives formal notification after such entry into force takes effect on the first day of the month following the expiration of six months after the date of its receipt by the depositary.

(4) Any State which makes a declaration under articles 35 (1) and 37 to 40 may withdraw it at any time by a formal notification in writing addressed to the depositary. Such withdrawal takes effect on the first day of the month following the expiration of six months after the date of the receipt of the notification by the depositary.

[(5) A declaration or its withdrawal does not affect the rights of parties arising from assignments made before the date on which the declaration or its withdrawal takes effect.]

References:

A/CN.9/445, paras. 79 and 80
A/CN.9/455, paras. 145 and 146
A/CN.9/466, para. 206

Commentary

217. Paragraphs (1) to (4) reflect standard treaty law practice. Under paragraphs (1) and (2), declarations made at the time of signature must be confirmed at the time of ratification, approval or accession; and declarations and confirmations must be in writing and formally notified to the depositary. Under paragraph (3), a declaration takes effect at the same time the Convention enters into force in respect of the State making the declaration. There is a six-month delay if the depositary is notified of the declaration after the entry into force. The six-month period starts at the time of receipt of the formal notification by the depositary and ends on the first day after the expiry of the six-month period. Under paragraph (4), withdrawals of declarations take effect on the first day after the expiry of six months after the receipt of the formal notification by the depositary.

218. Paragraph (5) deals with an issue relating to the transitional application of the draft Convention. Like the transitional application rules in articles 43 (3) and 44 (3), it appears within square brackets, since the Working Group decided to leave this matter to the Commission (see A/CN.9/466, para. 206). Issues relating to the transitional application of the draft Convention are made more complex by the fact that an assignment may affect the interests of more than the parties thereto and different points of time may need to be taken into account for the protection of the various parties. Paragraph (5) is intended to ensure that, if a State makes or withdraws a declaration under articles 35, 37, 38, 39 or 40, the declaration or withdrawal does not affect rights acquired before the declaration or its withdrawal takes effect.

219. Paragraph (5) would need to refer also to obligations and to specify the effect on all parties, assignors, assignees and debtors. Like article 39, paragraph (5) would also need to clarify whose rights and obligations are affected, depending on whose State makes or withdraws a declaration and when. A declaration or its withdrawal made by the State in which the assignor is located at the time of the conclusion of the contract of assignment should not be allowed to affect the rights and obligations of the debtor. A declaration made by the State in which the debtor is located or whose law governs the receivable (at the time of the conclusion of the original contract; see articles 1 (2) and 35, as well as paras. 17 and 202) should not affect the priority among competing claimants. Only a declaration or its withdrawal made by the State or States in which the assignor and the debtor are located could affect the rights and obligations of all parties (this is practically possible only if the assignor and the debtor are located in the same State or at the initial entry into force of the draft Convention when it enters into force at the same time for all five Contracting States (articles 41 (3) and 43 (1)). Paragraph (5) may also need to deal with the issue of assignments of receivables arising after a declaration or its withdrawal takes effect but before the debtor receives notification of the assignment. It would appear that, in such a case, the declaration or its withdrawal could be allowed to affect the debtor's rights and obligations. Such a result would not frustrate any legitimate expectations of the debtor relating to the application of the draft Convention, since before notification is received the debtor does not know whether the draft Convention would apply and, therefore, cannot have expectations as to the exact effect of the draft Convention on its rights and obligations.

Article 42. *Reservations*

No reservations are permitted except those expressly authorized in this Convention.

Reference:

A/CN.9/455, paras. 147 and 148

Commentary

220. Article 42, which reflects standard treaty law practice, is intended to ensure that no reservation is made other than those expressly authorized in articles 35 (1) and 37 to 40.

Article 43. *Entry into force*

(1) This Convention enters into force on the first day of the month following the expiration of six months from the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession.

(2) For each State which becomes a Contracting State to this Convention after the date of the deposit of the fifth instrument of ratification, acceptance, approval or accession, this Convention enters into force on the first day of the month following the expiration of six months after the date of the deposit of the appropriate instrument on behalf of that State.

[(3) This Convention applies only to assignments made on or after the date when the Convention enters into force in respect of the Contracting State referred to in article 1 (1).]

References:

A/CN.9/455, paras. 149 and 150
A/CN.9/466, para. 206

Commentary

221. Paragraphs (1) and (2) reflect standard treaty law practice. In determining that six months and five ratifications are required for the draft Convention to enter into force, the Working Group took into account the need for the draft Convention to enter into force as soon as possible, provided that it has received support from a sufficient number of States. Paragraph (3) is intended to ensure that rights acquired before the entry into force are not affected by the draft Convention. Like articles 41 (5) and 44 (3), it appears within square brackets, since the Working Group decided to leave to the Commission issues relating to the transitional application of the draft Convention (see A/CN.9/466, para. 206).

Article 44. *Denunciation*

(1) A Contracting State may denounce this Convention at any time by means of a notification in writing addressed to the depositary.

(2) The denunciation takes effect on the first day of the month following the expiration of one year after the notification is received by the depositary. Where a longer period is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary.

[(3) The Convention remains applicable to assignments made before the date on which the denunciation takes effect.]

References:

A/CN.9/455, paras. 151-155
A/CN.9/466, para. 206

Commentary

222. Article 44 is intended to ensure that a Contracting State may denounce the draft Convention. The second sentence of paragraph (2) may not be necessary. If a State wishes to prolong the time for the denunciation to take effect, it may postpone notifying the depositary. Allowing States to vary the time at which denunciations take effect may result in uncertainty as to the application of the draft Convention or, at least, to raising the cost of transactions, to the extent that parties would need to check declarations made by States so as to determine the time when the denunciation takes effect. Furthermore, such an approach would be inconsistent with article 41 (3), which does not allow States to vary the time at which a declaration takes effect. With a view to ensuring certainty, paragraph (3) provides that a denunciation does not affect rights acquired before it takes effect. Such an approach is particularly necessary to protect rights of third parties, who might have extended credit against future receivables, while relying on the application of the draft Convention. Without such a uniform rule, third parties would need to rely on substantive rules on supervening changes of law provided under various legal systems, which might provide conflicting or unsatisfactory solutions for the situations under consideration. Such a result would be inconsistent with the main objective of the draft Convention to facilitate access to lower-cost credit.

Additional final provisions

223. The Commission may wish to consider including in the final provisions the following provision, which the Working Group, at its thirty-first session, did not have sufficient time to discuss (see A/CN.9/466, paras. 207 and 208):

"Article X. *Revision and amendment*

"1. At the request of not less than one third of the Contracting States to this Convention, the depositary shall convene a conference of the Contracting States for revising or amending it.

"2. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended."

ANNEX TO THE DRAFT CONVENTION

References:

A/CN.9/420, paras. 155-164
A/CN.9/434, paras. 239-258
A/CN.9/445, paras. 18-44 and 83-93
A/CN.9/455, paras. 18-32 and 120-123

Commentary

224. In view of the fact that the Working Group was not able to reach agreement on a substantive law priority rule, articles 24 to 26 refer priority issues to national law (the law of the assignor's location). However, national priority

rules may not exist, be outdated or not fully adequate in addressing all relevant problems. For that reason, the Working Group decided to include in an optional annex to the draft Convention two alternative substantive law priority rules, one based on the time of assignment and another based on registration. In order to determine whether their priority rules need revision, States may wish to compare them with the rules set forth in the annex.

225. While the rules set forth in the annex are intended to serve as a model for national legislation, they do not form a complete model law (and their application is limited to receivables). States would, therefore, need to prepare additional provisions. For example, if a registration-based system is chosen, some practices may need to be excluded from a registration-based priority regime and subjected to a different priority regime; and the registration rules would need to be supplemented by appropriate regulations. In general, the annex may apply only in a State that has made a declaration under article 40 (article 1 (4); see para. 23). The choices available to States and their effects are set forth in article 40 (see para. 216).

Section I. Priority rules based on registration

Article 1. *Priority among several assignees*

As between assignees of the same receivable from the same assignor, priority is determined by the order in which data about the assignment are registered under section II of this annex, regardless of the time of transfer of the receivable. If no such data are registered, priority is determined on the basis of the time of the assignment.

References:

A/CN.9/445, paras. 88-90
A/CN.9/466, paras. 167 and 168

Commentary

226. The registration system envisaged in article 1 involves the voluntary entering of certain data about an assignment in the public record. The purpose of such registration is not to create or constitute evidence of property rights, but to protect third parties by putting them on notice about assignments made and to provide a basis for settling conflicts of priority between competing, equally effective claims. Because of its limited function and for it to be simple, quick and inexpensive, the registration envisaged in article 1 requires a very limited amount of data (specified in article 4 of the annex) to be placed on public record. If no data are filed, the first-in-time assignee prevails.

227. The policy underlying article 1 (and sections I and II) is that giving potential financiers notice about assignments and determining priority in receivables on the basis of a public filing system will enhance certainty as to the rights of financiers and, as a result, have a beneficial impact on the availability and the cost of credit on the basis of receivables. In order to ensure that the priority rules in section I operate with an existing national registration system, article 1 (which refers to a system under section II that would need to be established under article 3 of the annex) may need to be revised.

Article 2. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to article 25 of this Convention,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if the receivables were assigned, and data about the assignment were registered under section II of this annex, before the commencement of the insolvency proceeding or attachment.

Reference:

A/CN.9/466, paras. 169 and 170

Commentary

228. Article 2 is intended to reflect the principle that, if registration takes place before the commencement of an insolvency proceeding with regard to the assets and affairs of the assignor or before attachment of the receivables in the hands of the assignor, the assignee has priority. As a result, the assignee may receive payment before unsecured creditors (special preferential rights existing under insolvency law, however, are not affected, see para. 182) . Furthermore, with a view to preserving any super-priority rights (e.g. claims of the State for taxes, of employees for wages or of the insolvency administrator for the costs of insolvency), the application of article 2 is made subject to article 25.

Section II. Registration

Article 3. *Establishment of a registration system*

A registration system will be established for the registration of data about assignments under this Convention and the regulations to be promulgated by the registrar and the supervising authority. The regulations will prescribe in detail the manner in which the registration system will operate, as well as the procedure for resolving disputes relating to that operation.

References:

A/CN.9/445, paras. 94-103
A/CN.9/466, paras. 171 and 172

Commentary

229. The policy underlying article 3 is that, while the annex should include some basic provisions about registration, the mechanics of the registration process should be left to regulations to be prepared by the registrar and the supervising authority. In order to avoid creating the impression that the regulations might need to be more detailed than is practically necessary and to give sufficient flexibility to the registrar and the supervising authority in preparing the regulations, article 3 refers to the regulations prescribing “in detail” (but not “exactly”) the operation of the registration system.

230. The registrar (who may, presumably, be a private entity) and the supervising authority (which is intended to be an intergovernmental organization) would have significant powers in settling, in addition to the mechanics of registration, substantial issues, such as court jurisdiction over, duties, liability, privileges and immunities of, the registrar. The Commission may, therefore, wish to consider ways in which the appointment of a supervising authority and a registrar should be effected. As the registrar and the supervising authority would be given wide powers with regard to the implementation of the draft Convention, it would seem that a process similar to the revision process involving a conference of Contracting States would be appropriate (see A/CN.9/466, paras. 165 and 166). Alternatively, the Commission may wish to identify in the annex an international, intergovernmental organization as the supervising authority and, possibly, the first registrar; and to deal in the annex with certain key issues, such as court jurisdiction over, duties and liability, as well as privileges and immunities of, the registrar and costs for establishing and operating the system (this is the approach followed in the ICAO/Unidroit preliminary draft Convention on International Interests in Mobile Equipment and in the preliminary draft Aircraft Protocol; see articles XVI and XIX of the preliminary draft Aircraft Protocol and articles 26, 26*bis* and 40 of the preliminary draft Convention).

Article 4. *Registration*

(1) Any person authorized by the regulations may register data with regard to an assignment at the registry in accordance with this Convention and the registration regulations. The data registered shall be identification of the assignor and the assignee, as provided in the regulations, and a brief description of the assigned receivables.

(2) A single registration may cover:

(a) The assignment by the assignor to the assignee of more than one receivable;

(b) An assignment not yet made;

(c) The assignment of receivables not existing at the time of registration.

(3) Registration, or its amendment, is effective from the time that the data referred to in paragraph (1) are available to searchers. The registering party may specify, from options provided in the regulations, a period of effectiveness for the registration. In the absence of such a specification, a registration is effective for a period of five years. Regulations will specify the manner in which registration may be renewed, amended or discharged and, consistent with this annex, such other matters as are necessary for the operation of the registration system.

(4) Any defect, irregularity, omission or error with regard to the identification of the assignor that would result in data registered not being found upon a search based on the identification of the assignor renders the registration ineffective.

Commentary

231. The purpose of article 4 is to establish the basic parameters for an efficient registration system. Those basic parameters include the public character of the registry, the type of data that need to be registered, the ways in which the registration-related needs of modern financing practices may be accommodated and the time of effectiveness of registration. The registry envisaged is a public registry. However, in order to avoid any abuses, some limitations may have to be introduced as to the persons who may register (e.g. only persons with a legitimate interest or with the authorization of the assignor) and the assignor may need to be given the right to demand deregistration. Paragraph (1) leaves those issues to the regulations. The regulations could also deal with abusive and fraudulent registration, although this matter should normally not pose a problem, since registration under article 4 does not create any substantive rights. In any case, the issue of any loss caused as a result of an unauthorized or fraudulent registration could be addressed by general tort, fraud or even criminal law rules. The data to be registered, under paragraph (1), include identification of the assignor and the assignee and a brief description of the assigned receivables. The type of identification required is left to the regulations. It is meant to include, however, identification by number. The words “brief description” are intended to include a generic description, such as “all my receivables from my car business” or “all my receivables from countries A, B and C”. Paragraph (2) is a key provision in that it is intended to ensure the efficient operation of the registration system and to accommodate the needs of significant transactions. Under subparagraphs *(a)* and *(c)*, a single notice could cover a large number of receivables, existing or future, arising from one or several contracts, as well as a changing body of receivables and a constantly changing amount of secured credit (revolving credit). Without these features, registration would be expensive, slow and inefficient. Any abuse, which could harm the assignor without, however, creating substantive rights, is left to other legislation.

232. Under paragraph (3), registration is effective when searchers obtain access to the data registered. This means that, if the assignor becomes insolvent after registration but before the data become available to searchers, the risk of any events that may affect the interests of the registering party is placed on that party. With the exception of cases involving the restructuring of troubled credits, in which prompt disbursement of funds is essential, the registering party may protect itself by withholding disbursements until registered data become available. Such a risk would be significantly reduced if there was no time gap between data being registered and becoming available to searchers, which is possible in the case of electronic registration systems. Paragraph (3) permits registering parties to choose the length of time of effectiveness from a range of options set out in the regulations. In the absence of a choice, the time of effectiveness is five years. Renewals, discharges and amendments, as well as any other matters necessary for the operation of the registry, are left to the regulations. With a view to preserving registrations with minor errors, paragraph (4) invalidates a registration only if there is a defect, irregularity or omission in the identification of the assignor that would preclude searchers from finding the data registered. The underlying rationale is that: if the error

is made by the registering party, that party should suffer the consequences; and if the error is committed by the registrar, the registrar should be held liable (an issue to be addressed in the regulations). The words "would result" are intended to ensure that the registration would be ineffective, in the case of a significant error in the identification of the assignor, even if no one was actually misled. Minor errors or omissions in the identification of the assignor, or any errors or omissions in the identification of the assignee or the description of the assigned receivables, do not render the registration ineffective.

Article 5. *Registry searches*

(1) Any person may search the records of the registry according to identification of the assignor, as provided in the regulations, and obtain a search result in writing.

(2) A search result in writing that purports to be issued from the registry is admissible as evidence and is, in the absence of evidence to the contrary, proof of the data to which the search relates, including:

(a) The date and time of registration; and

(b) The order of registration.

A/CN.9/466, paras. 179 and 180

Commentary

233. Article 5 is intended to enshrine the principle of public access to the registry for searching purposes as opposed to registration purposes. Only a publicly accessible registry could provide the transparency necessary to enhance certainty with regard to the rights of third parties. Such public access to the registry does not infringe upon the confidentiality necessary in financing transactions, since only a limited amount of data would be available in the registry. Article 5 also provides for the admissibility and the general evidential value of a search record in a court or other tribunal. A search record is, in particular, evidence of the data necessary to establish priority, that is, the date and the time of registration and the order of registration.

Section III. Priority rules based on the time of the contract of assignment

Article 6. *Priority among several assignees*

As between assignees of the same receivable from the same assignor, the right to the receivable is acquired by the assignee whose contract of assignment is of the earliest date.

References:

A/CN.9/445, paras. 83-87
A/CN.9/466, paras. 181-185

Commentary

234. Under article 6, the first-in-time assignee acquires the assigned receivable. Any subsequent assignee obtains nothing, since the assignor has nothing more to transfer (nemo dat quod non habet). If there cannot be more than one effective assignment of the same receivables by the same assignor, no conflict of priority can arise as between several assignees of those receivables. In addition, article 6 may not address a priority conflict as between several assignees, if the assignor assigns different parts of the same receivables to different assignees, since, assuming that national legislation allows the assignment of parts of receivables, different "receivables" would be involved. Moreover, article 6 would not address a conflict of priority between several assignees, if the same receivables are assigned by the assignor to different assignees to secure different amounts of credit not exceeding the value of the receivable. If that is the intended meaning of article 6, the title of section III and article 6, which refer to "priority", would need to be revised. If, under article 6, more than one assignment of the same receivables may be effective, article 6 would need to be revised, for example, along the following lines: "As between assignees of the same receivable from the same assignor, priority is determined on the basis of the time of assignment". In its deliberations, the Commission may wish to consider the priority system introduced by draft articles 12.401 of the European Contract Principles. Under that article, priority is to be determined on the basis of time of notification of the debtor and, in the absence of a notification, on the basis of the time of assignment. In either case, the requirements of the law applicable to insolvency have to be met.

Article 7. *Priority between the assignee and the insolvency administrator or the creditors of the assignor*

[Subject to article 25 of this Convention,] an assignee has priority over an insolvency administrator and creditors of the assignor, including creditors attaching the assigned receivables, if the receivables were assigned before the commencement of the insolvency proceeding or attachment.

A/CN.9/445, paras. 83-87
A/CN.9/466, paras. 186 and 187

Commentary

235. Unlike article 6 of the annex, article 7 refers to priority. However, if the receivable is effectively transferred before commencement of an insolvency proceeding or attachment, at least in the case of an outright assignment, no issue of priority arises (the receivable is not part of the insolvency estate). Such a priority issue may arise in the case of an assignment by way of security, where the assignee would seek to be paid first out of the proceeds of the receivable. Depending on the correct understanding of article 7, the Commission may wish to revise it. As in article 2 of the annex priority is not intended to affect special insolvency rights (see para. 182); and the opening words are intended to preserve super-priority rights under the law of the forum State (see para. 181).

A/CN.9/472

F. Draft Convention on Assignment [in Receivables Financing] [of Receivables in International Trade]: compilation of comments by Governments (A/CN.9/472 and Add.1-4) [Original: English]

CONTENTS

INTRODUCTION

1. At its thirty-first session, held in Vienna from 11 to 22 October 1999, the Working Group on International Contract Practices adopted the draft Convention on Assignment [in Receivables Financing] [of Receivables in International Trade] and requested the secretariat to transmit the draft Convention to all States and interested international organizations for comments. With a view to assisting delegates in finalizing the draft Convention at the thirty-third session of the Commission, to be held in New York from 12 June to 7 July 2000, the Working Group also requested the secretariat to prepare an analytical compilation of those comments (A/CN.9/466, para. 215)

2. This note sets forth, with minimal editorial modifications, the first comments received from Governments. Any further comments will, upon receipt by the secretariat, be included in an addendum to this note.

COMPILATION OF COMMENTS

Czech Republic

[Original: English]

I. General comments

We highly appreciate all activities and work done by the UNCITRAL with a view to increasing the availability of lower-cost credit in assignments of receivables in international trade. In our country, legal regulation of assignments of receivables is very general. Nevertheless, it differs in some aspects from the draft Convention.
