GENERAL  
ASSEMBLY

DISC.  
GENERAL

A/9544/Add.1 + Corr. 1, 2  
4 April 1974

ORIGINAL: ENGLISH

Sixth special session  
Item 7 of the provisional agenda\*

STUDY OF THE PROBLEMS OF RAW MATERIALS AND DEVELOPMENT

The significance of basic commodities in world trade in 1970

Note by the Secretary-General 1/

1. In 1970, exports of basic commodities accounted for 35 per cent of the total of all goods entering into world trade. 2/ The selected commodities for which price quotations are shown in table 2 of the report on the evolution of basic commodity prices (see A/9544, annex) accounted for over 75 per cent of the exports of all basic commodities.

2. Petroleum and petroleum products alone accounted for nearly 30 per cent of the exports of the selected list of basic commodities and about 7.7 per cent of the total world exports of all goods. Trade in the next most important commodity - copper - was less than one fourth of the trade in petroleum, and the trade in wheat and coffee combined was not much higher than that in copper. The importance of petroleum and petroleum products can, perhaps, best be appreciated when it is realized that their value in world exports in 1970 was approximately equal to the sum of the value of the exports of more than two thirds of the basic commodities in the selected list of commodities for which price data have been shown. Included among the food-stuffs in this comparison is trade in pig meat, mutton, poultry, fresh fish, rice, barley, milk, cheese, butter, eggs, animal fats and oils, soybeans and soybean oil, ground nuts and groundnut oil, olive oil,

\* A/9543.

1/ This document is issued as an addendum to the note by the Secretary-General on the evolution of basic commodity prices since 1950. A second addendum on the hypothetical impact of the price movements on trade will be issued separately. (A/9544/Add.2).

2/ Because of the inadequacy of reported detail, approximately 4 per cent of all exports of goods in 1970 could not be allocated by commodity. All of the exports of the developed countries and over one fourth of the exports of the centrally planned economies could not be allocated. On the import side, 5.6 per cent of the total could not be allocated by commodity. Again the trade of developed countries was virtually completely allocated, and 7 per cent of the trade of developing countries could not be allocated, but for the centrally planned economies more than half the imports remained unallocated.

cottonseed oil, cocoa, tea, tobacco and wine. Among the agricultural raw materials included in this comparison are natural rubber, hides, furskins, wool, jute, flax, sisal, linseed and linseed oil, palm nuts and palm oil, copra and copra oil. Among the mineral raw materials included are nickel and nickel ores, tin and tin ores, copper ores, lead and lead ores, zinc and zinc ores, bauxite, manganese ores, chrome ores and crude fertilizers. The exports of all these commodities taken together fell somewhat short of the value of world exports of petroleum and petroleum products alone in 1970.

3. Paradoxical as it may seem, the developing countries accounted for only 38 per cent of the total exports of basic commodities, and the developed countries for about 55 per cent. If the commodities are considered in the order of importance of the developing countries in their trade, it is found that for a number of commodities, accounting for more than 20 per cent of the exports of the selected list, the developing countries were responsible for less than 5 per cent of the total exports. These include among the food-stuffs such items as wheat, barley, poultry, pig meat, mutton, soybeans, milk, cheese, butter and wine, and among the raw materials such items as wood pulp, aluminium, coal, furskins, flax and linseed. The basic commodities for which the developing countries are responsible for 50 per cent or more of the total exports account for only 35 per cent of the total trade in the selected basic commodities.

4. Although the developing countries accounted for only 38 per cent of the total world exports of basic commodities in 1970, the export of such commodities is, of course, far more important to them than to the developed countries. Whereas for the developed countries the exports of basic commodities accounted for just over 25 per cent of their total export value in 1970, for the developing countries the trade in basic commodities accounted for more than 75 per cent of their total export value.

5. Only a handful of commodities account for the bulk of all of the exports by the developing countries of the selected list of basic commodities. At the top of the list is petroleum and its products, which alone accounted for nearly half the total in 1970, followed by coffee, copper, sugar, cotton and rubber, which together accounted for just over another fourth of the total. Another small group of commodities, including iron ore, cocoa, fruit, lumber, tin, maize, beef, fish, oilseed cake, rice and tea bring the sum up to over 90 per cent of the total exports by the developing countries of the selected list of basic commodities.

6. As might be expected, the developing countries play a smaller role in the imports of basic commodities than they do in the imports of manufactured goods. Whereas they accounted for approximately one sixth of the total imports of all goods in 1970, and their share in the total import of manufactured goods was nearly one fifth, their share in the imports of basic commodities was only about one eighth. Nevertheless, in a number of commodities, including wheat, milk, soybean oil, and cottonseed oil, the imports of the developing countries ranged from about one third to one half of the total imports, and in rice the proportion was nearly three fourths. In a significant number of commodities, the developing countries are, in fact, net importers from the developed countries, rather than net exporters

/...

to them. These include wheat, rice and soybean oil, where the deficit of the developing countries in 1970 was about one third of the total world trade in the commodities concerned, and milk, where it was nearly 50 per cent of the total world trade. Also included, however, are a number of commodities such as pig meat, butter, cheese, eggs, barley, wine, animal fats and oils, wood pulp, coal, aluminium and zinc, where the deficits range from about 2 per cent to 15 per cent of the world trade in these commodities.

7. In the case of exports of the developing countries, as well as in the case of their imports, the major commodity is petroleum and its products, which alone accounted for over 7 per cent of the total imports of the developing countries. This was followed by wheat, which accounted for over 2 per cent, and rice, which accounted for over 1 per cent of the total imports of the developing countries in 1970. Altogether, these three commodities accounted for nearly 50 per cent of the total imports of the developing countries of the selected basic commodities shown in the table. The imports of the entire selected list of commodities amounted to over 20 per cent of the total imports of the developing countries, and the imports of all basic commodities to just under 30 per cent of their total imports.

8. In the aggregate, the developing countries in 1970 had an export surplus in basic commodities (including manufactured food-stuffs, fuel and non-ferrous metals) of about \$25,000 million or nearly half the value of their total exports. This surplus was just about the same as their trade deficit in manufactured goods (other than food-stuffs, fuels and non-ferrous metals), so that their total trade was virtually in balance.

9. The virtual balance in aggregate trade of all developing countries reflects strongly contrasting balances in the trade of the petroleum and metal exporting countries, on the one hand, and the rest of the developing countries, on the other. The petroleum exporting countries had an export balance of over \$8,000 million, or more than 40 per cent of their exports. The major metal exporting countries had an export balance of another \$1,500 million or nearly 30 per cent of their exports. The remaining countries, accounting for about 55 per cent of the total trade of the developing countries, on the other hand, had a total deficit of nearly \$10,000 million, or approximately 35 per cent of their total exports.

10. Twelve tables on the significance of basic commodities in world trade in 1970 are annexed to the present document.

ANNEX

The significance of basic commodities in world trade in 1970

CONTENTS
