ABBREVIATIONS

The following abbreviations are used except where the context otherwise requires:

<i>Abbreviation</i>	<i>Full title</i>
Board	International Narcotics Control Board.
1912 Convention	International Opium Convention signed at The Hague on 23 January 1912.
1925 Agreement	Agreement concerning the Manufacture of, Internal Trade in and Use of, Prepared Opium, signed at Geneva on 11 February 1925, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1925 Convention	International Opium Convention signed at Geneva on 19 February 1925, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1931 Convention	Convention for limiting the manufacture and regulating the distribution of narcotic drugs, signed at Geneva on 13 July 1931, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1931 Agreement	Agreement for the Control of Opium Smoking in the Far East, signed at Bangkok on 27 November 1931, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1936 Convention	Convention for the suppression of the illicit traffic in dangerous drugs, signed at Geneva on 26 June 1936, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1946 Protocol	Protocol amending the Agreements, Conventions and Protocols on Narcotic Drugs concluded at The Hague on 23 January 1912, at Geneva on 11 February 1925 and 19 February 1925 and 13 July 1931, at Bangkok on 27 November 1931 and at Geneva on 26 June 1936, signed at Lake Success, New York, on 11 December 1946.
1948 Protocol	Protocol signed at Paris on 19 November 1948 bringing under international control drugs outside the scope of the Convention of 13 July 1931 for limiting the manufacture and regulating the distribution of narcotic drugs, as amended by the Protocol signed at Lake Success, New York, on 11 December 1946.
1953 Protocol	Protocol for limiting and regulating the cultivation of the poppy plant, the production of, international and wholesale trade in, and use of opium, signed at New York on 23 June 1953.
1961 Convention	Single Convention on Narcotic Drugs, signed at New York on 30 March 1961.

FOREWORD

In accordance with the provisions of the international narcotics treaties, the Board publishes the annexed tables giving the statistics which Governments are required to supply to it on the licit movement of narcotic drugs (annex B).

These statistics include figures on production, manufacture, international trade and consumption, as well as seizures in the illicit traffic. The statistics relate to 1969 and, in certain cases, the figures for the four previous years are also given for purposes of comparison.

In addition, the Board gives the list of countries which have furnished all their statistics for 1969, and that of countries which have furnished only partial information, or which have given no information (annex A).¹

These tables are preceded by a statement on the trends to be discerned from the statistics.

TRENDS IN THE LICIT MOVEMENT OF NARCOTIC DRUGS

General trends

1. The statistics supplied to the Board indicate the following general trends.

Opium

2. As a result of the plentiful harvests in India and the USSR, production in 1969 showed an increase of 50 per cent over 1968 and reached the high level of 1,219 tons (815 tons in 1968). Despite this increase, production was sufficient only for current needs, since the latter have also increased, although to a lesser degree.

3. Consequently, stocks, which had been heavily depleted during the five previous years, could not be reconstituted; at the end of 1969 they amounted to only 962 tons, less than one year's requirements.

Poppy straw and poppy straw concentrate

4. In 1969, the amount of morphine extracted either directly from poppy straw or indirectly through straw concentrate, remained at the same level as in 1968 (i.e. 58.4 and 58.9 tons respectively).

5. However, the proportion of the total manufacture of morphine represented by morphine extracted from poppy straw dropped from 38.6 per cent in 1968 to 35.8 per cent in 1969. This was probably due to the fact

that less poppy straw was available due to unfavourable climatic conditions.

Coca leaf

6. Peru and Bolivia, the only countries in which coca leaf was produced licitly in 1969, reported production totalling 15,000 tons.

7. Virtually the whole of this production was used for non-medical purposes, i.e. for chewing by the Indians of the Andean highlands. Only 319 tons were exported to cocaine-manufacturing countries, while 29 tons were used in Peru for the manufacture of cocaine.

Cannabis

8. There was an increase in the licit production of cannabis in 1969 both in India (from 79 to 92 tons) and in Pakistan (from 7.6 to 20.1 tons); non-medical consumption, on the other hand, increased only slightly in Pakistan (from 12.1 to 12.5 tons), while it decreased in India (from 89.1 to 86.7 tons). Consumption for therapeutic and scientific purposes reflected the fluctuations noted in India, where 1,816 kg were consumed in 1969 as against 3,133 kg in 1968; the other consuming countries absorbed only 162 kg.

Morphine

9. Manufacture increased in 1969 to reach a new maximum of 163 tons. The bulk of this morphine (97.6 per cent) was converted into other drugs, the most important of which was codeine; manufacture of codeine accounted for 89.5 per cent of the total quantity of morphine extracted from opium and poppy straw.

¹ In addition to the present document, the Board publishes annually a general report (document E/INCB/9 for 1970), a statement on the "Estimated World Requirements of Narcotic Drugs and Estimates of World Production of Opium" (document E/INCB/10 for 1971) and a Comparative Statement of Estimates and Statistics (E/INCB/12 for 1969).

Codeine

10. The manufacture of codeine (155 tons) rose by 6.7 per cent in 1969; on the other hand, consumption (143 tons) remained at the 1968 level.

Ethylmorphine

11. Manufacture of ethylmorphine (9,181 kg) declined slightly in 1969 compared with 1968, while consumption (9,303 kg) rose slightly.

Heroin

12. After a sharp increase in 1968, both the manufacture (79 kg) and consumption (54 kg) of heroin declined in 1969 by 29 kg and 14 kg respectively.

Cocaine

13. The manufacture of cocaine rose from 1,039 kg in 1968 to 1,216 kg in 1969 in order to meet export requirements. Consumption (714 kg), on the other hand, dropped by 32 per cent as a result of a sharp decrease in the United States.

Pethidine

14. Consumption of pethidine (15,167 kg) was 11 per cent lower than in 1968 as a result of a sizable decrease in the United States.

Methadone

15. The sharp increase in methadone manufacture (678 kg) and consumption (451 kg) in 1969 was due to the increases registered in the United States.

Normethadone

16. After being suspended in 1968, the manufacture of normethadone was resumed in the Federal Republic of Germany in 1969. In all, 381 kg were produced and 315 kg consumed.

Diphenoxylate

17. The manufacture and consumption of diphenoxylate have increased considerably during the last five years; manufacture in 1969 amounted to 977 kg and consumption to 917 kg.

* * *

18. The foregoing statement summarizes the general trends in the movement of narcotic drugs; it is based on a thorough study made separately for each drug, details of which follow.

Analysis of the data

RAW MATERIALS

Opium

19. Of the countries which reported opium production to the Board, all but one also declared the area under opium poppy cultivation. From the data so supplied the Board has prepared the following table showing the average yield per hectare in these countries.

Country/year		Area on which poppy was cultivated with a view to harvesting opium	Opium harvest ^a	Yield
<i>Bulgaria</i>

^a Where practicable, the opium harvested has been calculated to a consistency of 90%.

^b Figure taken from the annual report sent to the Secretary-General of the United Nations on the working of the international treaties on narcotic drugs.

^c This figure refers to the area sown with the opium poppy and not to the area on which opium was actually harvested.

^d Data not available.

20. In India, the country which obtains the highest yields, there has been a steady expansion of the area under cultivation from 12,064 hectares in 1966 to 35,035 hectares in 1969. It is striking that expansion of the area under cultivation in this country did not lead to a drop in yield in 1969 as has frequently occurred in the past, but rather to a slight increase. In Turkey, opium was harvested on an area of 12,926 hectares. In Iran, which resumed poppy cultivation after an interruption of thirteen years, the yield obtained was lower than in Turkey.

21. World production of opium reported to the Board rose in 1969 to 1,219 tons (10 per cent moisture content), a figure which has been exceeded only once since the end of the Second World War: in 1960, when production reached 1,261 tons. Despite increased requirements for the manufacture of morphine (1,083 tons in 1969 as against 921 tons in 1968), the crop was sufficient to meet opium requirements for the first time in five years. (See diagram 1, page xvii.)

22. In 1969, India produced 868 tons of opium; in other words, it alone produced more than the total output reported to the Board for each of the five previous years. This was the largest crop recorded in India since the 1920s, and was achieved not only by the extension of the area under cultivation but also by the maintenance of a high yield. In 1960, 1961 and 1962, although the areas sown were much larger, production was lower than in 1969. In 1969 the USSR obtained its largest crop (217 tons) since it started furnishing statistics under the treaties, but its production represented only a quarter of India's. Lastly, Turkey's reported crop of 117 tons was slightly larger than in the two previous years. (See diagram 2, page xviii.)

23. The three above-mentioned countries are responsible for almost all known world production; as for Iran, Pakistan, Yugoslavia and Japan, these countries together harvested only 16.7 tons.

24. The Board has no information as to possible production of opium in the People's Republic of China and the Democratic People's Republic of Korea. On the other hand, imports of opium from the Democratic Republic of Viet-Nam have been declared to the Board, but it has not been possible to ascertain whether this opium came from domestic production or from seizures.

25. In 1969, the opium-importing countries obtained 93 per cent of their supplies from India and Turkey, which exported 602 and 118 tons respectively.

26. In addition to the 1,083 tons of opium used for the manufacture of morphine, 37.6 tons of opium were consumed for medical purposes in the form of tinctures, extracts and other preparations in 1969. Some further 7.5 tons of opium were consumed in Pakistan for "quasi-medical" purposes. Lastly, in Burma, in the Shan states to the east of the Salween river, there is opium production for which the Government has not yet been able to give figures and which is consumed within the country for non-medical purposes.

27. Between 1964 and 1968, opium production was consistently less than utilization. Each year, therefore, it was necessary to draw on stocks; this was the case even

in 1967, when the United States released 160 tons of opium from special stocks. As a result, stocks declined from 1,998 tons in 1963 to 950 tons in 1968. In 1969, the increase in production made it possible to meet requirements and to maintain stocks at the 1968 level.

Poppy straw and concentrate of poppy straw

28. There had been a steady increase since 1965 in the volume of poppy straw processed for the manufacture of concentrate and morphine but this trend was halted in 1969; there was, in fact, a decrease in the use of this raw material, only 28,275 tons having been used in 1969 as against 30,321 tons in 1968. This is assumed to be due to the fact that less poppy straw was available as a result of unfavourable climatic conditions.

29. In 1969, morphine obtained from poppy straw or from concentrate of poppy straw accounted for 35.8 per cent of the total amount of morphine manufactured; the corresponding proportion in 1968 was 38.6 per cent. In absolute figures, the amount of morphine extracted from poppy straw in 1969 (58,419 kg) was, however, only slightly less than in 1968 (58,914 kg). (See diagram 3, page xix.)

30. Five countries together processed 24,483 tons of straw, representing 86.6 per cent of the total quantity used. They were the USSR (7,153 tons), the Netherlands (5,198 tons), Czechoslovakia (5,177 tons), Hungary (3,912 tons) and Poland (3,043 tons). In each of the last two countries, the amount of straw used decreased by more than 1,000 tons compared with 1968.

31. In 1969, the highest yield was still obtained by Hungary (0.29 per cent), followed by the Netherlands (0.24 per cent), Yugoslavia (0.23 per cent) and Poland (0.21 per cent). Yields increased in Poland in 1969, both as regards concentrate and morphine extracted from the straw; average yields for the three previous years were 0.3 and 0.16 per cent respectively, while for 1969 they were 0.54 and 0.21 per cent. It should be noted that these yields vary, not only as a result of manufacturing processes, but also depending on the quality of the raw material used.

32. The poppy straw used for the manufacture of morphine comes mainly from domestic production. However, of the five large manufacturers mentioned above, the Netherlands depends entirely on the foreign market and Czechoslovakia imported 42.5 per cent of its straw requirements. In 1969, imports of poppy straw reached a new maximum: 13,667 tons (6,634 tons in 1968), or 48.3 per cent of the total amount of straw processed. Turkey remains the main exporting country (12,632 tons) and the Netherlands the largest importer (7,174 tons).

Coca leaf

33. The coca leaf production reported to the Board amounted to 14,603 tons in 1969, the highest figure since the end of the Second World War. It should be noted, however, that an increase in known production may merely represent a closer approximation to real production rather than a genuine increase. In Bolivia, for example, the figures declared by the Government represent only the share of production which is brought to the market

and they can therefore serve only as an indication of total production. In 1969, although this production (4,860 tons) was higher than in 1968, it remained lower than in 1966 and 1967. In Peru, production in 1969 (9,742 tons) was higher than in any year since 1957.

34. Almost the whole of this production was used for non-medical purposes: in Peru, 9,395 tons (96.4 per cent of production) were used for chewing, while in Bolivia consumption, which is not reported, was assessed by the Board at 4,806 tons on the basis of the production and export figures supplied by that country.

35. In Argentina, a non-producing country, the Indian population consumed 40 tons imported from Bolivia and 21 tons obtained from seizures.

36. Peru continued to be the main supplier of coca leaf for the manufacture of cocaine and in 1969 exported 318 tons, including 317 tons to the United States.

Cannabis

37. In 1969, nine countries reported to the Board use of cannabis for therapeutic purposes and for research in quantities of one kilogramme or more.

Cannabis (Kilogrammes)

Country	1966	1967	1968	1969
Belgium	45	31	28	12
Canada	—	—	1	—
Finland	—	—	—	3
Germany, Federal Republic of . .	33	41	65	15
India	166	532	3 133	1 816
Ireland	1	1	—	—
Japan	—	—	5	—

United Kingdom	12	31	66	88
Total	492	717	3 355	1 978

38. In India, consumption of cannabis for medical purposes has fluctuated greatly during the last four years, but still remains greater than in the rest of the world. In 1969, the eight remaining consuming countries used only 162 kg for these purposes and for research, 88 kg being used by the United Kingdom.

39. India and Pakistan, which have invoked the transitional provisions of the 1961 Convention (article 49), still continue to produce and to consume cannabis for non-medical purposes. This use is, however, authorized only in East Pakistan and in four Indian states.

40. The consumption of cannabis resin is completely prohibited in India and Pakistan.

41. In 1969, production increased both in India (92 tons as against 79 tons in 1968) and in Pakistan (20.1 tons as against 7.6 tons in 1968). Consumption did not keep pace with this increase; although it rose slightly in Pakistan (from 12.1 to 12.5 tons), it fell in India (from 89.1 to 86.7 tons), in order to conform to the provisions of the 1961 Convention, which provide for the discontinuation of such consumption by 1989.

^a Figure taken from the annual report sent to the Secretary-General of the United Nations on the working of the international treaties on narcotic drugs.

Manufactured drugs

OPIUM AND COCA-LEAF ALKALOIDS AND THEIR DERIVATIVES

Morphine

42. The quantity of morphine manufactured in 1969 was 163 tons, 11 tons more than in 1968. The addition was due to the increase in the amount of morphine extracted from opium: 105 tons in 1969 as against 94 tons in 1968.

43. The USSR, with a 1969 morphine production of 34.4 tons—21 per cent of the world total—holds first place among morphine-manufacturing countries, leaving the United Kingdom (26.3 tons) and the United States of America (23 tons) far behind.

44. In each of these countries, the amount of morphine extracted from opium exceeded the 1968 figure by more than 2 tons.

45. Over half (51.3 per cent) of the morphine manufactured in the world is produced by these three countries. With regard to the other manufacturing countries producing more than 10 tons, output in France (13.2 tons in 1969) showed an increase of 19 per cent over the previous year, whereas in Hungary it fell from 14.6 tons in 1968 to 11.5 tons in 1969.

46. The bulk of the morphine manufactured (97.6 per cent) was converted into other narcotic drugs, chief of which was codeine, since it accounted for 89.5 per cent of the morphine manufactured in 1969. Manufacture of ethylmorphine and pholcodine, having decreased slightly, absorbed less morphine than in 1968.

47. Morphine consumption showed a further decline in 1969 (2,356 kg as against 2,562 kg in 1968), and accounts for an increasingly small fraction of the quantity manufactured.

48. During the five-year period 1965-69, stocks of morphine at the end of each year varied within a very narrow range: from 19.8 to 21.8 tons. At the end of 1969 they stood at 20.5 tons.

Codeine

49. In 1969, the manufacture of codeine showed a further increase of 9.7 tons or 6.7 per cent over the 1968 figure, and amounted to 155 tons. Half of this quantity was produced by the three major morphine manufacturers: the USSR, the United Kingdom and the United States. The Federal Republic of Germany, whose codeine manufacture accounts for 9.9 per cent of the total, ranks fourth, although it is not one of the major morphine-manufacturing countries and therefore imports most of the morphine required for the manufacture of codeine from Czechoslovakia, Hungary, France and the Netherlands.

50. Total exports of codeine in 1969 amounted to 38.6 tons, an increase of 11 per cent over 1968. The United Kingdom, the USSR, the Netherlands and Hungary are the principal exporters of codeine in that order, the volume of their exports representing 76.5 per cent of the total. The Netherlands and Hungary produce mainly for the foreign market, having exported 77.3 and 89.6 per cent of their output respectively.

51. The export statistics for codeine do not include the so-called "exempted" preparations (preparations in Schedule III of the 1961 Convention), which absorbed 70 tons of codeine in 1969. Under the terms of the treaties, codeine used to manufacture such preparations is regarded as having been consumed in the manufacturing country, although a proportion of these preparations may have been exported. As a result, the consumption figures of the manufacturing and exporting countries are overstated, whereas consumption is underestimated in the countries importing these preparations.

52. World consumption of codeine in 1969 remained at the level of 1968 (143 tons).

53. During the five-year period 1965-69, codeine stocks rose from 49 tons at the end of 1965 to 66 tons at the end of 1967, but fell to 60 tons in 1968 and were only slightly higher at the end of 1969 (61 tons).

Ethylmorphine

54. In 1969, production of ethylmorphine (9,181 kg) fell below the 1968 level as a result of a general reduction in the principal manufacturing countries: France (from 3,047 to 2,917 kg), the United Kingdom (from 1,538 to 1,494 kg) and the USSR (from 1,194 to 1,050 kg).

55. Two countries produce mainly for export and cover 74 per cent of the importing countries' requirements; these are the United Kingdom, which exported 1,332 kg in 1969 or 89 per cent of its output, and the Federal

Republic of Germany, which exported 416 kg or 61 per cent of its output. However, France, which converted 2,956 kg of ethylmorphine (more than its entire output in 1969) into preparations in Schedule III, no doubt exported a certain quantity of ethylmorphine in that form.

56. Turkey dominates the international trade in ethylmorphine, its imports having accounted for 46.3 per cent of the total in 1969.

57. Over-all consumption of ethylmorphine rose from 8,995 kg in 1968 to 9,303 kg in 1969.

Heroin

58. The sharp rise in the manufacture and consumption of heroin in 1968 was followed by a substantial reduction in 1969. France did not manufacture any heroin in that year, the only producers being the United Kingdom (74 kg) and Belgium (5 kg). Consumption in the United Kingdom (49 kg or 91 per cent of the total) was lower than in any of the last six years, and the same applied to Belgium (4 kg). Consumption in France remained at 1 kg for the third year in succession. The United Kingdom converted 34 kg of heroin into nalorphine, a substance not covered by the 1961 Convention, or 20 kg more than in any of the three preceding years.

Other derivatives of opium alkaloids

59. In terms of volume of manufacture and consumption, the four most important narcotic drugs under this heading are dihydrocodeine, pholcodine, hydrocodone and oxycodone.

60. In 1969, 24.4 per cent more dihydrocodeine was manufactured than in 1968: 8,465 kg as against 6,807 kg. Of the three countries which account for 92.3 per cent of the total manufactured, Japan and the United Kingdom increased their output while that of the Federal Republic of Germany remained at the same level. Most of the dihydrocodeine manufactured was converted into the so-called "exempted" preparations, consumption of which (8,140 kg) increased by 11 per cent.

61. Manufacture of pholcodine, which was 73 per cent higher in 1968 than in 1967, dropped by 104 kg in 1969 to 4,127 kg. More than three-quarters originated in the United Kingdom (1,843 kg) and France (1,533 kg). Since 1964, consumption of pholcodine has shown a steady increase and in 1969 amounted to 4,171 kg, or nearly double the 1964 consumption (2,127 kg).

62. Manufacture of hydrocodone (1,381 kg) rose by 58 per cent in 1969 as a result of an upward trend in the two main manufacturing countries, the United States and the Federal Republic of Germany, which contributed 66 per cent of the total.

63. This situation led to an increase in stocks in 1969 and enabled these two countries to use larger quantities of hydrocodone for the manufacture of other narcotic drugs.

64. In 1969, consumption amounted to 819 kg, whereas it averaged 810 kg in the five preceding years.

65. The United States accounted for 86.6 per cent of the total manufacture of oxycodone (939 kg) and for 81 per cent of total consumption (649 kg).

Cocaine

66. In 1969, 1,216 kg of cocaine were produced, of which 1,057 kg (87 per cent) originated in the United States and 158 kg in Peru. The 17 per cent increase in the output of cocaine over the 1968 figure was necessitated by export requirements. The United States exports in 1969 (895 kg) were in fact more than double those in 1968 (392 kg).

67. However, world consumption of cocaine continued to drop. This trend was more marked in 1969, only 714 kg having been consumed as against 1,061 kg in 1968 (-32 per cent).

68. The decline was due to a change in the United States, where consumption fell from 408 kg in 1968 to 59 kg in 1969. In absolute figures, the main consumer countries were the USSR (130 kg), the United Kingdom (90 kg) and Romania (88 kg). Romania also had the highest *per capita* consumption (4.4 kg per million inhabitants), followed by Belgium (3.21 kg per million).

"SYNTHETIC" NARCOTIC DRUGS

Pethidine-intermediates-A, -B and -C

69. The figures furnished on the manufacture and conversion of these substances are reproduced in the following table.

Pethidine

70. In 1969, the manufacture of pethidine (18.6 tons) remained at the same level as in 1968 (18.7 tons). Although output was higher in those two years than in 1967, it was lower than in 1965 (19.5 tons) and 1966 (20.6 tons). Almost the whole of the output came from three countries: the United States (63 per cent), the United Kingdom (20 per cent) and the Federal Republic of Germany (9.2 per cent).

71. The last two countries manufacture mainly for export, which absorbed 74.5 and 61.2 per cent of their output respectively.

72. After declining during the last three years—1966, 1967 and 1968—exports of pethidine again began to rise in 1969 as a result of larger exports by the United Kingdom and the Federal Republic of Germany.

73. Consumption of pethidine has been dropping steadily since 1966 (18,510 kg) and in 1969 fell to 15,167 kg, the lowest figure recorded since 1963. This trend largely reflects the development of the situation in the United States and the United Kingdom, whose 1969 consumption amounted to 56.5 and 5.9 per cent of the total respectively.

74. Consumption per million inhabitants declined in the United States from 57.89 kg in 1966 to 41.54 kg in 1969 and in the United Kingdom from 18.3 to 15.9 kg. The countries with the highest *per capita* consumption of pethidine in 1969 were Denmark, where consumption is nevertheless following the same downward trend, and the United States.

Trimeperidine

75. In the USSR, the manufacture and consumption of trimeperidine, which declined between 1964 and 1968, began to rise again in 1969. The USSR, which is the only country to manufacture trimeperidine, exported 20 kg in that year.

Manufacture and consumption of trimeperidine in USSR (Kilogrammes)

Year	Manufacture	Consumption
1965.	1 100	1 199
1966.	1 000	996
1967.	1 000	987
1968.	947	900
1969.	1 200	1 078

Methadone-intermediate

76. The only country to produce methadone-intermediate in 1969 was the United Kingdom. For the third year in succession, the Federal Republic of Germany did not interrupt its manufacture of methadone at the intermediate stage.

Manufacture and conversion of methadone-intermediate (Kilogrammes)

Country/year	Quantity manufactured	Quantity converted into methadone
<i>United Kingdom</i>		
1965.	138	102
1966.	70	119

<i>Federal Republic of Germany</i>		
1965.	426	315
1966.	484	595
1967.	—	—
1968.	—	—
1969.	—	—

Methadone

77. In 1969, methadone production reached the highest figure (678 kg) since this drug was placed under international control in 1951. The United States, which supplied 67.5 per cent of the total, produced more than twice as much (458 kg) as in 1968 (221 kg). Moreover, production in the United Kingdom and the Federal Republic of Germany, which had declined in 1968, regained the level of earlier years.

78. Last year, the Board reported that consumption had risen sharply in 1968. A similar rise occurred in 1969, bringing total consumption up to 451 kg. This trend is due to an increase in consumption in the United States, where it has tripled in five years. It should be borne in mind in this connexion that methadone is being increasingly used in the treatment of drug addiction due to abuse of opiates.

Normethadone

79. After being discontinued in 1968, the manufacture of normethadone was resumed in the Federal Republic of Germany, where 354 kg were produced in 1969. The other two producing countries are the German Democratic Republic ² (24 kg) and Finland (3 kg).

80. In 1969, as in 1967, consumption of normethadone in the Federal Republic of Germany (144 kg) was lower than in the rest of the world (171 kg), whereas the situation had usually been the reverse. Apart from the Federal Republic of Germany, fifteen other countries had a methadone consumption of 1 kg or more and four of them a consumption of over 20 kg—the German Democratic Republic ² (40 kg), Belgium (35 kg), Argentina (26 kg) and Canada (22 kg).

² See introduction to the annexes, p. 2, second paragraph.

*Moramide-intermediate, racemoramide,
dextromoramide and levomoramide*

81. Moramide-intermediate is converted into racemoramide, which is used in the manufacture of dextromoramide. The latter substance is produced solely in the Netherlands and mainly for export. In 1969, 139 kg were manufactured and 141 kg exported. In the same year, total consumption (157 kg) was slightly lower than in the two preceding years. France remains the largest consumer (63 kg or 40 per cent of the total), with the United Kingdom (26 kg) some way behind.

**Moramide-intermediate, racemoramide, dextromoramide
and levomoramide**
(Kilogrammes)

1968.	713	373	174	186
1969.	787	527	139	140

Other " synthetic " narcotic drugs

82. Apart from the synthetic narcotic drugs considered in the preceding paragraphs, a large number of others were manufactured and consumed in 1969. However, only four of them warrant particular mention because of the scale of their production or consumption, namely, diphenoxylate, anileridine, dipipanone and ketobemidone.

83. Between 1966 and 1969, the manufacture of diphenoxylate almost tripled, rising from 356 kg to 977 kg. The increase between 1968 and 1969 was 24.8 per cent. Two countries between them accounted for 89 per cent of the total: the United States (618 kg) and Belgium (254 kg). Consumption totalled 917 kg in 1969 as against only 405 kg in 1966. It increased to 619 kg in the United States (67.5 per cent of the total) and to 119 kg in the United Kingdom. These two countries rank first and second respectively in terms of consumption in absolute figures.

84. Only the United States manufactures anileridine. In 1969, output of this substance (220 kg) decreased in line with the trend of consumption, which has been falling steadily for three years, from 333 kg in 1967 to 202 kg in 1969. Although United States consumption in 1969 (160 kg) was the lowest figure on record, it still represents four-fifths of the total. Canada is the only other country consuming anileridine (42 kg).

85. Dipipanone is produced only in the United Kingdom (140 kg in 1969 as against 65 kg in 1968). There are four consuming countries—the United Kingdom (80 kg), South Africa (10 kg), Belgium (7 kg) and Ireland (1 kg).

86. In 1969, Switzerland and Denmark manufactured 54 kg and 47 kg respectively of ketobemidone. Consumption has always been very stable, with the same countries consuming almost the same quantity each year to within 1 kg. Consumption in two of them, Denmark (34 kg) and the Federal Republic of Germany (17 kg) represents 78 per cent of the total (65 kg).

ANNEXES

INTRODUCTORY NOTE

The following annexes contain the principal statistical information for 1969 furnished to the Board by Governments in accordance with the 1925, 1931 and 1961 Conventions and the 1948 and 1953 Protocols. For purposes of comparison, statistics for the previous four years have been indicated in the tables. The annexes also include data on the maximum level of opium stocks which each country or territory may hold under the 1953 Protocol. The statistics for 1969 will be published in greater detail together with the corresponding estimates of requirements as Document E/INCB/12.

The Board, in referring to political entities, is guided by the rules governing the practice of the United Nations. The nomenclature used by the Board does not imply the expression of any opinion whatsoever concerning the legal status of any country or territory or of its authorities, or concerning the delimitation of its frontiers.

The unit of weight used in the tables is the kilogramme; a blank space separates the hundreds from the thousands. A question mark signifies that the relevant figure or in some cases the factors required for calculating it are not available. The sign “—” signifies “nil” or “an amount under 1 kilogramme”.

Index of countries and territories mentioned in the tables (continued)

Index of countries and territories mentioned in the tables (concluded)

NARCOTIC DRUGS FALLING UNDER THE INTERNATIONAL CONVENTIONS

This list shows the narcotic drugs which, at the date of this Report, fell under international control. It is subdivided into two sections, the first enumerating the drugs included in Schedule I of the 1961 Convention (Group I of the 1931 Convention), and the second those in Schedule II thereof (Group II of the 1931 Convention), both as amended. The names and descriptions used are those given in the 1961 Convention or in the official notifications of the Secretary-General of the United Nations. International non-proprietary names selected by the World Health Organization are printed in bold type; in many cases the chemical formulæ, and in some cases additional names, are given to facilitate identification.

The series of names given in italics include other designations for the basic drug and its salts and also names of preparations containing the drug. For further information on the names, chemical and structural formulæ of the drugs see document E/CN.7/513 — Narcotic Drugs under International Control — Multilingual List.

1. Drugs included in Schedule I of the 1961 Convention (Group I of the 1931 Convention)

- Acetorphine** (*O*³-acetyl-7,8 dihydro-7 α -[1(*R*)-hydroxy-1-methylbutyl]-*O*⁶-methyl-6,14-endoethenomorphine or 3-*O*-acetyltetrahydro-7 α -(1-hydroxy-1-methylbutyl-6,14-endoetheno-orpavine or 5-acetoxy-1,2,3a,8,9-hexahydro-2 α -[1(*R*)-hydroxy-1-methylbutyl]-3-methoxy-12-methyl-3,9a-etheno-9,9b-iminoethanophenanthro[4,5-*bcd*]furan) — *M. 183*
- Acetylmethadol** (3-acetoxy-6-dimethylamino-4,4-diphenylheptane) — *Methadyl acetate*
- Allylprodine** (3-allyl-1-methyl-4-phenyl-4-propionoxypiperidine) — *Alperidine*
- Alphacetylmethadol** (alpha-3-acetoxy-6-dimethylamino-4,4-diphenylheptane)
- Alphameprodine** (alpha-3-ethyl-1-methyl-4-phenyl-4-propionoxypiperidine)
- Alphamethadol** (alpha-6-dimethylamino-4,4-diphenyl-3-heptanol)
- Alphaprodine** (alpha-1,3-dimethyl-4-phenyl-4-propionoxypiperidine) — *Nisentil, Prisilidene*
- Anileridine** (1-*para*-aminophenethyl-4-phenylpiperidine-4-carboxylic acid ethyl ester or 1-[2-(*para*-aminophenyl)-ethyl]-4-phenylpiperidine-4-carboxylic acid ethyl ester) — *Lertine*
- Benzethidine** (1-(2-benzyloxyethyl)-4-phenylpiperidine-4-carboxylic acid ethyl ester)
- Benzylmorphine** (3-benzylmorphine) — *Peronine*
- Betacetylmethadol** (beta-3-acetoxy-6-dimethylamino-4,4-diphenylheptane)
- Betameprodine** (beta-3-ethyl-1-methyl-4-phenyl-4-propionoxypiperidine)
- Betamethadol** (beta-6-dimethylamino-4,4-diphenyl-3-heptanol)
- Betaprodine** (beta-1,3-dimethyl-4-phenyl-4-propionoxypiperidine)
- Bezitramide** (1-(3-cyano-3,3-diphenylpropyl)-4-(2-oxo-3 propionyl-1-benzimidazolinyl)-piperidine)
- Cannabis** (Indian Hemp) and Cannabis resin (Resin of Indian Hemp)
- Clonitazene** (2-*para*-chlorbenzyl-1-diethylaminoethyl-5-nitrobenzimidazole)
- Coca Leaf**
- Cocaine** (methyl ester of benzoylecgonine)
- Codoxime** (dihydrocodeinone-6-carboxymethyloxime)
- Concentrate of poppy straw (the material arising when poppy straw has entered into a process for the concentration of its alkaloids, when such material is made available in trade)
- Desomorphine** (dihydrodeoxymorphone) — *Permonid, Scopermid*
- Dextromoramide** ((+)-4-[2-methyl-4-oxo-3,3-diphenyl-4-(1-pyrrolidinyl) butyl] morpholine or (+)-3-methyl-2,2-diphenyl-4-morpholinobutyl-pyrrolidine) — *Alcicid, Errecalma, Jetrium, Palfium, Pyrrolamidol, R.875*
- Diampromide** (N-[(2-methylphenethylamino) propyl] propionanilide)
- Diethylthiambutene** (3-diethylamino-1,1-di-(2'-thienyl)-1-butene) — *Diethylbutin, Diethylthiambutene, Themalon*
- Dihydromorphine** — *Paramorfan*
- Dimenoxadol** (2-dimethylaminoethyl-1-ethoxy-1,1-diphenylacetate or dimethylaminoethyl 1-ethoxy-1,1-diphenylacetate or dimethylaminoethyl diphenyl-alpha-ethoxyacetate) — *Lokarin*
- Dimepheptanol** (6-dimethylamino-4,4-diphenyl-3-heptanol) — *Amidol, Methadol, Pangerin*
- Dimethylthiambutene** (3-dimethylamino-1,1-di-(2'-thienyl)-1-butene) — *Aminobutene, Dimethithibutin, Ohton*
- Dioxaphetyl butyrate** (ethyl 4-morpholino-2,2-diphenylbutyrate) — *Amidalgol, Spasmoxale*
- Diphenoxylate** (1-(3-cyano-3,3-diphenylpropyl)-4-phenylpiperidine-4-carboxylic acid ethyl ester or 2,2-diphenyl-4[(4-carbethoxy-4-phenyl) piperidino] butyronitrile) — *Diphenoxyle, R.1132*
- Dipipanone** (4,4-diphenyl-6-piperidine-3-heptanone) — *Diconal, Fenpidon, Pamedone, Phenylpiperone, Pipadone, Piperidylamidone, Piperidylmethadone, Pipidone*
- Ecgone, its esters and derivatives which are convertible to ecgonine and cocaine
- Ethylmethylthiambutene** (3-ethylmethylamino-1,1-di-(2'-thienyl)-1-butene) — *Emethibutin, Ethylmethylthiambutene*
- Etonitazene** (1-diethylaminoethyl-2-*para*-ethoxybenzyl-5-nitrobenzimidazole)
- Etorphine** (7,8-dihydro-7 α -[1(*R*)-hydroxy-1-methylbutyl]-*O*⁶-methyl-6,14-endoethenomorphine or tetrahydro-7 α -(1-hydroxy-1-methylbutyl)-6,14-endoetheno-orpavine or 1,2,3,3a,8,9-hexahydro-5-hydroxy-2 α -[1(*R*)-hydroxy-1-methylbutyl]-3-methoxy-12-methyl-3,9a-etheno-9,9b-imino-ethanophenanthro [4,5-*bcd*]furan) — *M. 53, M. 99*
- Etoxeridine** (1-[2-hydroxyethoxy] ethyl]-4-phenylpiperidine-4-carboxylic acid ethyl ester) — *Atenorax, Atenos, Carbetidine*
- Fentanyl** (1-phenethyl-4-N-propionylanilinopiperidine) — *Hypnorm, Innovar, Ional, R 4263, Sublimaze, Thalamontal*
- Furethidine** (1-(2-tetrahydrofurfuryloxyethyl)-4-phenylpiperidine-4-carboxylic acid ethyl ester)
- Heroin** (diacetylmorphine) — *Acetomorphine, Diamorphine, Diaphorm, Eclorion*
- Hydrocodone** (dihydrocodeinone) — *Ambenyl, Assicodid, Biatos, Biocodone, Broncodid, Calmodid, Codesona, Codimal, Codinovo, Cofacodide, Cosil, Curadol, Dicodide, Dicodinon Diconone, Dicotrate, Dihydrokon, Dosicodid, Duodin, Hubacodid, Hycodan, Hycomine, Hydrocodin, Hydrokon, Kolikodal, Lisoferin, Mercodal, Multacodin, Neocode, Novahistine-DH, Nyodid, Padrina, Recindal, Resulin, Synkonin, Tucodil, Tuscodin, Tussionex, Uquicodid, Ydrocod*
- Hydromorphone** (14-hydroxydihydromorphine)

Hydromorphone (dihydromorphinone) — *Assilaudid, Blomorphyl, Cofalaudide, Cormorphin, Dilaudide, Dimorphid, Dimorphinon, Dimorphone, Hymorphan, Laudacon, Laudadin, Laudamed, Lucodan, Morfikon, Morphodid, Novolaudon, Percoral, Scolaudol*

Hydroxypethidine (4-meta-hydroxyphenyl-1-methylpiperidine-4-carboxylic acid ethyl ester or 1-methyl-4-(3-hydroxyphenyl)-piperidine-4-carboxylic acid ethyl ester) — *Bemidone, Hydropethidine, Oxy-dolantin, Oxypetidin*

Isomethadone (6-dimethylamino-5-methyl-4,4-diphenyl-3-hexanone) — *Isoadanon, Isoamidone*

Ketobemidone (4-met-hydroxyphenyl-1-methyl-4-propionylpiperidine or 4-(3-hydroxyphenyl)-1-methyl-4-piperidyl ethyl ketone or 1-methyl-4-metahydroxyphenyl-4-propionyl piperidine) — *Cliradon, Ketogan, Ketogin*

Levomethorphan * ((—)-3-methoxy-N-methylmorphinan)

Levomoramide ((—)-4-[2-methyl-4-oxo-3,3-diphenyl-4-(1-pyrrolidinyl) butyl] morpholine or (—)-3-methyl-2,2-diphenyl-4-morpholino-butryrl-pyrrolidine)

Levophenacylmorphan ((—)-3-hydroxy-N-phenacylmorphinan)

Levorphanol * ((—)-3-hydroxy-N-methylmorphinan) — *Dromoran, Levo-dromoran, Levorphan*

Metazocine (2'-hydroxy-2,5,9-trimethyl-6,7-benzomorphan or 1,2,3,4,5,6-hexahydro-8-hydroxy-3,6,11-trimethyl-2,6-methano-3-benzozocine) — *Methobenzorphan*

Methadone (6-dimethylamino-4,4-diphenyl-3-heptanone) — *Adanon, Adolan, Afuol, Algidon, Algolysin, Algoxale, Amidone, Amidosan, Butalgin, Depridol, Deptadol, Diamiton, Dianone, Disipan, Dolafin, Dolamid, Dolamina, Dolcsona, Doloheptan, Dolophine, Dolorex, Dorexol, Fenadone, Heptadol, Heptalon, Heptanal, Heptanon, Hes, Ketalgyn, Levadone, Mecodin, Mepecton, Mephemon, Metasedin, Methidone, Midadone, Moheptan, Optalgin, Panalgen, Parasidin, Petalgyn, Phenadon, Physopente, Polanidon, Polamivet, Porfolan, Quotidine, Quotidol, Sedamidone, Septa-Om, Sin-algin, Spasmo-algolysin, Symoron, Synthalan, Turanone, Vemonlyl, Zefalgyn*

Methadone-Intermediate (4-cyano-2-dimethylamino-4,4-diphenylbutane or 2-dimethylamino-4-diphenyl-4-cyano butane)

Methyldesorphine (6-methyl-delta-6-deoxymorphine) — *Methyldesomorphine*

Methyldihydromorphone (6-methyldihydromorphine)

Metopon (5-methyldihydromorphinone)

Moramide-Intermediate (2-methyl-3-morpholino-1,1-diphenylpropanecarboxylic acid or 1-diphenyl-2-methyl-3-morpholinopropanecarboxylic acid)

Morphericine (1-(2-morpholinoethyl)-4-phenylpiperidine-4-carboxylic acid ethyl ester) — *Morpholinoethylmorphethidine*

Morphine

Morphine Methobromide and other pentavalent nitrogen morphine derivatives, including in particular the morphine-N-oxide derivatives, one of which is Codeine-N-Oxide

Morphine-N-Oxide — *Genomorphine, Morphinaminooxyde*

Myrophone (myristylbenzylmorphine)

Nicodicodine (6-nicotinylidihydrocodeine or nicotinic acid ester of dihydrocodeine)

Nicomorphine (3,6-dnicotinylmorphine or di-nicotinic acid ester of morphine) — *Dinicotinyl morphine, Nicophine, Nocophine, Vendavilan*

Noracymethadol ((±)-alpha-3-acetoxy-6-methylamino-4,4-diphenylheptane)

Norlevorphanol ((—)-3-hydroxymorphinan)

Normethadone (6-dimethylamino-4,4-diphenyl-3-hexanone or 1,1-diphenyl-1-dimethylaminoethyl-butanone-2 or 1-dimethylamino-3,3-diphenyl-hexanon-(4)) — *Deatussan, Extussin, Mepidone, Nicarao, Normedon, Phenyldimazone, Taurocolo, Ticarda, Tikapect, Tinafon, Vetyl*

Normorphine (demethylmorphine or N-demethylated morphine)

Norpipanone (4,4-diphenyl-6-piperidine-3-hexanone) — *Hexagon*

Opium

Oxycodone (14-hydroxydihydrocodeinone or dihydrohydroxycodeinone) — *Blonin, Bionone, Boncodal, Cardanon, Codeinon, Cofacodal, Dihydron, Dinarcon, Dolodorm, Dolordorm, Equimorphine, Escofedal, Eubine, Eucodal, Eucodamine, Eucosan, Eudin, Eukdin, Eumorphal, Hydrocodal, Hydrolaudin, Medicodal, Narcobasina, Narcodal, Narcopheidrin, Narcostin, Nargenol, Nargevet, Nucodan, Octyonargenol, Opton, Oxikon, Oxycodyl, Oxykodal, Pancodine, Pancodone, Pavinal, Penumbrol, Percodan, Proladone, Pronarcin, Sanasmol, Scodoline, Scopederon, Scophedal, Scophol, Sintiodal, Stupenol, Stupenone, Tebodal, Tecodine, Valbine*

Oxymorphone (14-hydroxydihydromorphanone or dihydrohydroxymorphanone) — *Numorphan*

Pethidine (1-methyl-4-phenylpiperidine-4-carboxylic acid ethyl ester) — *Adolens, Algantine, Algil, Alodan, Amphosedal, Antidol, Antidol-ibsa, Antiduo, Antispasmin, Asmalina, Bellalgina, Biphenal, Centralgin, Demerol, Dispadol, Dodonal, Dol, Dolanquifa, Dolantin, Dolantol, Dolaren, Dolarenil, Dolargin, Dolarin, Dolatol, Dolcontral, Dolenal, Dolental, Dolestine, Doleval, Dolin, Dolinal, Dolsin, Dolineurin, Doloperthin, Dotor, Doloridine, Dolormin, Dolosal, Dolsol, Dolsin, Dolvanol, Dosilantine, Eudolak, Feldin, Gratidlna, Isonipecaine, Lorfalgyl, Lydol, Maperidina, Medrinol, Mefedina, Mendelgina, Meperidine, Merperidin, Methedrine, Mitzan, Narcosor, Neo-mohin, Operidine, Opystan, Pamergan, Pantalgine, Pethanal, Pethilorfan, Piperidinethanol, Piridosal, Precedyl, Sauteralgyl, Simesalgina, Spasmekine, Spasmekine, Spasmomedalin, Suppolosal, Supralol, Syllaudine.*

Pethidine-Intermediate-A (4-cyano-1-methyl-4-phenylpiperidine or 1-methyl-4-phenyl-4-cyanopipеридине)

Pethidine-Intermediate-B (4-phenylpiperidine-4-carboxylic acid ethyl ester or ethyl 4-phenyl-4-piperidinecarboxylate) — *Norpethidine*

Pethidine-Intermediate-C (1-methyl-4-phenylpiperidine-4-carboxylic acid)

Phenadoxone (6-morpholino-4,4-diphenyl-3-heptanone) — *Hepagin, Heptalgin, Heptalin, Heptazone, Heptone*

Phenampromide (N-(1-methyl-2-piperidinoethyl) propionanilide or N-[2-(1-methylpiperid-2'-yl)ethyl]-propionanilide)

Phenazocine (2'-hydroxy-5,9-dimethyl-2-phenethyl-6,7-benzomorphan or 1,2,3,4,5,6-hexahydro-8-hydroxy-6,11-dimethyl-3-phenethyl-2,6-methano-3-benzazocine) — *Narcidine, Narphen, Phenobenzorphan, Prinadol*

Phenomorphan (3-hydroxy-N-phenylmorphinan)

Phenoperidine (1-(3-hydroxy-3-phenylpropyl)-4-phenylpiperidine-4-carboxylic acid ethyl ester or 1-phenyl-3-(4-carbethoxy-4-phenyl-piperidine)-propanol) — *Phenopropidine, R.1406*

Piminodine (4-phenyl-1-(3-phenylaminopropyl) piperidine-4-carboxylic acid ethyl ester) — *Alvodine, Anopridine, Cimadon*

Piritramide (1-(3-cyano-3,3-diphenylpropyl)-4-(1-piperidino) piperidine-4-carboxylic acid amide or 2,2-diphenyl-4-[1-(4-carbamoyl-4-piperidino)- butyronitrile) — *ARC I-D-21, Dipidolor, R.3365*

Proheptazine (1,3-dimethyl-4-phenyl-4-propionoxyazacycloheptane or 1,3-dimethyl-4-phenyl-4-propionoxyhexamethyleneimine) — *Dimephepramine*

Properidone (1-methyl-4-phenylpiperidine-4-carboxylic acid isopropyl ester) — *Gevelina, Ipropethidine, Isopidine, Spasmo-dolista*

Racemethorphan ((±)-3-methoxy-N-methylmorphinan)

Racemoramide ((±)-4-[2-methyl-4-oxo-3,3-diphenyl-4-(1-pyrrolidinyl) butyl] morpholine or (±)-3-methyl-2,2-diphenyl-4-morpholino-butryrl-pyrrolidine)

Racemorphan ((±)-3-hydroxy-N-methylmorphinan) — *Citarin, Methorphanin*

Thebacon (acetylhydrocodeinone or acetyldemethylhydrothebaïne) — *Acedicon, Cofadicon, Negadol, Novocodon, Thebacetyl*

Thebaïne

Trimeperidine (1,2,5-trimethyl-4-phenyl-4-propionoxypiperidine) — *Isopromedol, Promedol; and*

* **Dextromethorphan** ((+)-3-methoxy-N-methylmorphinan) and **dextrorphan** ((+)-3-hydroxy-N-methylmorphinan) are specifically excluded from this Schedule.

— II —

The isomers, unless specifically excepted, of the drugs in this Schedule whenever the existence of such isomers is possible within the specific chemical designation;

The esters and ethers, unless appearing in another Schedule, of the drugs in this Schedule whenever the existence of such esters or ethers is possible;

The salts of the drugs listed in this Schedule, including the salts of esters, ethers and isomers as provided above whenever the existence of such salts is possible.

2. Drugs included in Schedule II of the 1961 Convention (Group II of the 1931 Convention)

Acetyldihydrocodeine

Codeine (3-methylmorphine)

Dihydrocodeine

Ethylmorphine (3-ethylmorphine) — *Dionine*

Nicocodeine (6-nicotinylcodeine or 6-(pyridine-3-carboxylic acid)-codeine ester) — *Nicotinoylcodeine*

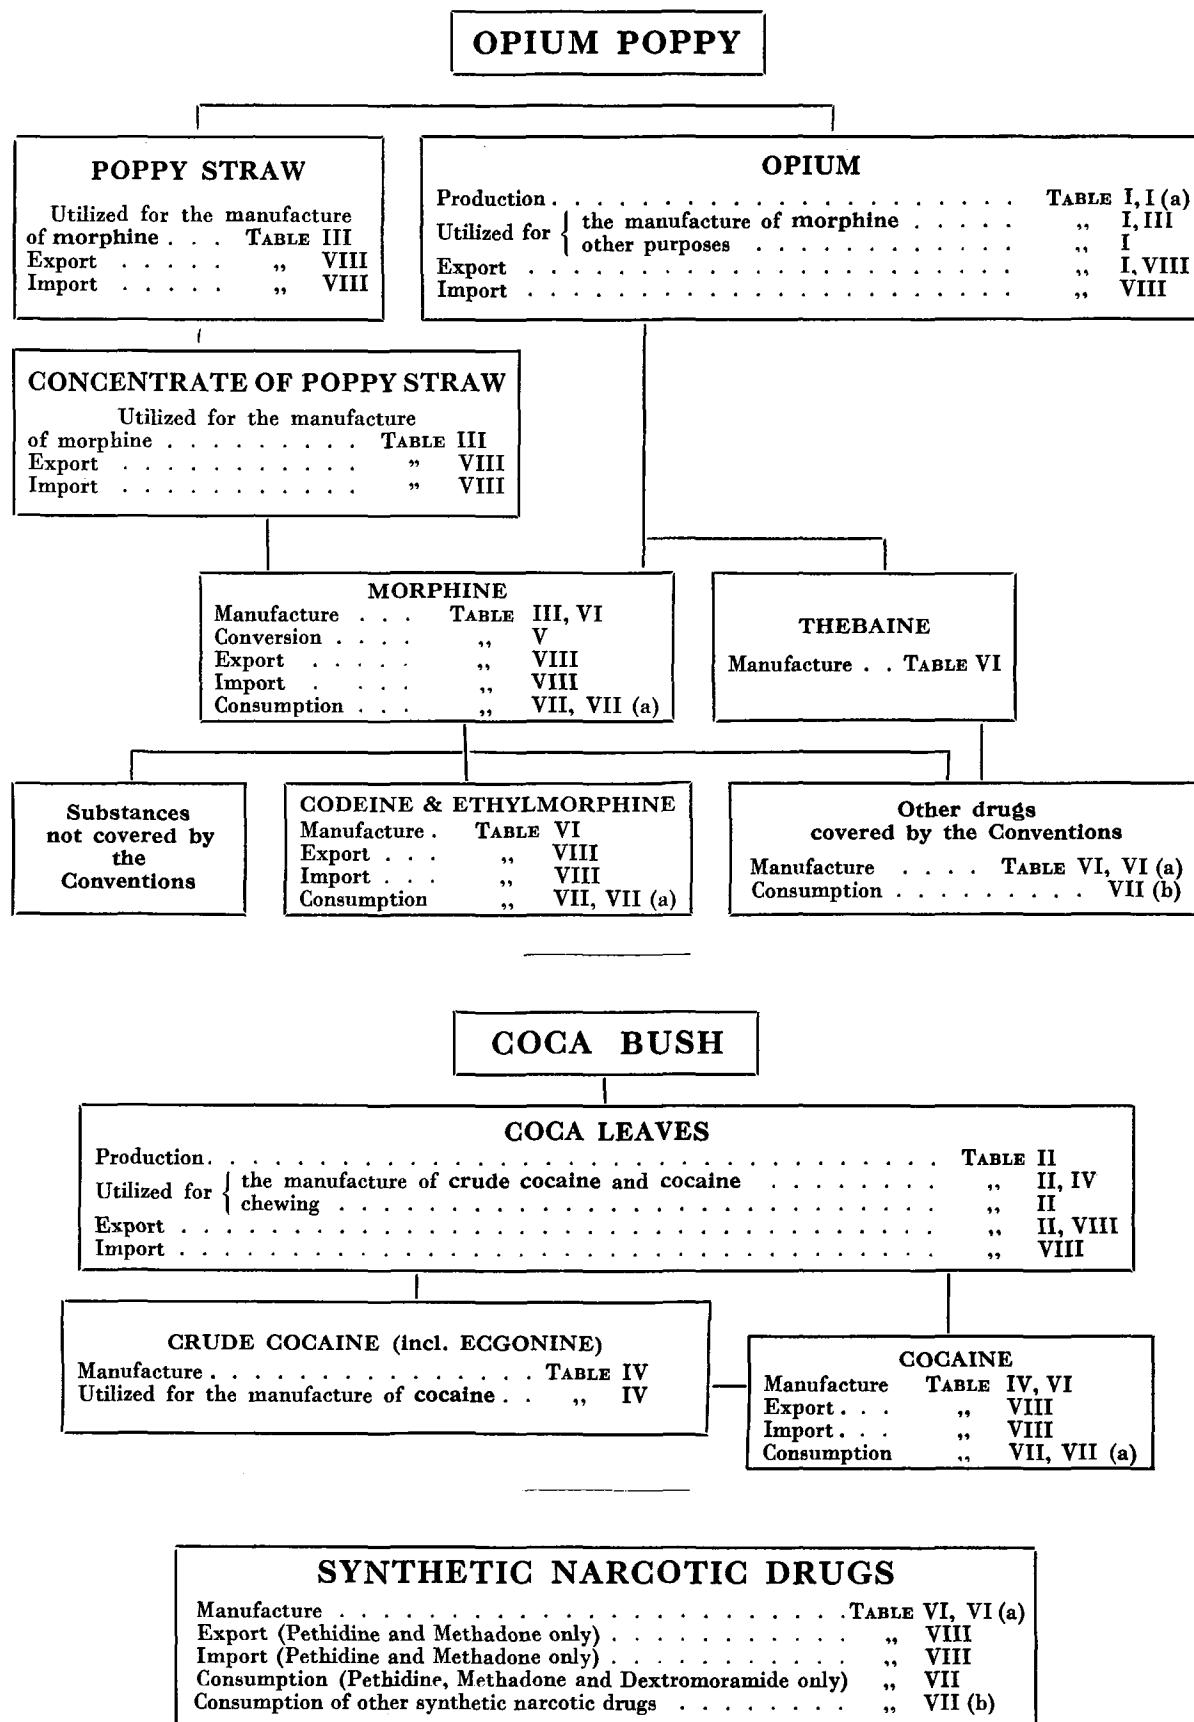

Norcodeine (N-demethylcodeine)

Pholcodine (morpholinylethylmorphine or beta-morpholinylethylmorphine); and

The isomers, unless specifically excepted, of the drugs in this Schedule whenever the existence of such isomers is possible within the specific chemical designation;

The salts of the drugs listed in this Schedule, including the salts of the isomers as provided above whenever the existence of such salts is possible.

CHART SHOWING SUCCESSIVE PHASES FROM THE PRODUCTION OF THE RAW MATERIAL TO THE CONSUMPTION OF THE FINISHED PRODUCT, WITH REFERENCES TO TABLES

EXPLANATORY NOTE
for Tables I to VII

1. *Scope.* — The seven synoptic tables which follow show the principal phases in the *licit* movement of narcotic drugs, from the production of the raw material to the consumption of the finished product, during 1969 and the preceding four years.

2. *Substances appearing in the tables.* — Among the substances falling under the International Conventions on Narcotic Drugs, the following appear separately in view of the importance of their production, trade and utilization: (a) opium, opium alkaloids and their derivatives: morphine, thebaine, codeine, ethylmorphine (dionine); (b) poppy straw and concentrate of poppy straw; (c) coca leaves and cocaine; (d) synthetic narcotic drugs: pethidine, methadone and dextromoramide. Each of these substances is dealt with individually in separate tables or columns.

With regard to the other derivatives of opium alkaloids and other synthetic narcotic drugs, the quantities manufactured have been grouped in two columns under the heading "Other" derivatives of opium alkaloids, and "Other" synthetic narcotic drugs, and are enumerated in footnotes. To amplify this information, two further tables have been added, showing the total manufacture and total consumption of each of these drugs. Wherever the production or consumption of one of these drugs, whether a derivative of opium alkaloids or a synthetic narcotic drug, reaches one kilogramme in at least one country, the drug appears in these tables.

Prior to the coming into force of the 1961 Convention, Governments were not required to furnish statistics on production and main utilizations of cannabis and cannabis resin. In accordance with the provisions of the 1961 Convention, however, Gov-

ernments were requested to furnish this information for the first time for 1966. The statistical information on cannabis is presented in the narrative part of this document.

3. *Totals.* — When most, but not all, countries have furnished statistics, the total has been inserted in the columns with a statement to the effect that it is incomplete; in such columns question marks will indicate the countries for which statistics are lacking. When the statistics of too many countries are lacking for such a total to have any significance, a question mark has been inserted in its place.

4. *Relation between production and utilization.* — In examining the relation between production or manufacture on the one hand and utilization on the other, allowance must be made for the fact that the quantities utilized in any one year are not always derived entirely from amounts produced or manufactured during that same year; some part may have been drawn from stocks or imported. This explains why the figures for utilization are sometimes higher than those for production or manufacture.

5. *Yield from manufacture.* — It will be noted that the yield from manufacture varies from one year to another, sometimes to a considerable extent. This is often due to the fact that the yield for any given year includes a certain proportion of finished products obtained from raw materials the processing of which was begun in the previous year. An average for several successive years will provide a much more reliable indication of the actual yields.

**TABLE I. — OPIUM: PRODUCTION, UTILIZATION, CONSUMPTION
AND EXPORT DECLARED BY PRODUCING COUNTRIES**

Country (in alphabetical order)	Year	1	2	3	4	5	6	7	8	9	10

^a According to the Peruvian authorities, this figure has been calculated on the basis of the taxes collected on the leaves.

^b Used for the manufacture of crude cocaine.

^c According to the Peruvian authorities, this figure has been calculated by deducting from the quantities which were produced the amounts which were exported and used for the manufacture of crude cocaine.

* Before 1966, concentrate of poppy straw was considered to be crude morphine. As from 1966, however, in accordance with Schedule I of the Single Convention on Narcotic Drugs, 1961, concentrate of poppy straw is considered as a separate drug. Consequently, for the years 1964 and 1965, the figures relating to the poppy straw utilized in the manufacture of morphine take into account the quantities of straw used for the manufacture of concentrate, and the quantities of morphine manufactured include the amount of morphine contained in the concentrate of poppy straw thus obtained.

See introductory note, page 2, second paragraph.

a Including 28 kg. recuperated.

b Statistics incomplete.

* Before 1966, concentrate of poppy straw was considered to be crude morphine. As from 1966, however, in accordance with Schedule I of the Single Convention on Narcotic Drugs, 1961, concentrate of poppy straw is considered as a separate drug. Consequently, for the years 1964 and 1965, the figures relating to the poppy straw utilized in the manufacture of morphine take into account the quantities of straw used for the manufacture of concentrate, and the quantities of morphine manufactured include the amount of morphine contained in the concentrate of poppy straw thus obtained.

^a Including 18 kg. obtained from the conversion of heroin.

^b Including 6 kg. obtained from the conversion of heroin.

^c Incomplete.

* As from 1966, in accordance with the provisions of the Single Convention of 1961, separate figures for crude cocaine are no longer requested; therefore since 1966 the quantities of coca leaves indicated as having been used for the manufacture of cocaine include also those used for the manufacture of crude cocaine, and the figures of cocaine manufactured include the pure cocaine content of crude cocaine manufactured from these coca leaves.

^a Obtained from raw materials processed before 1965.

^b This total does not represent the sum of the figures shown in this column, but has been adjusted to allow for the fact that the figures of manufacture of the United States include crude cocaine exported for refining, while the countries which imported the crude cocaine have also included in their figures the quantities of crude cocaine utilized and the quantities of pure cocaine obtained therefrom.

* See introductory note, page 2, second paragraph.

† Including 19 kg. converted into dihydrocodeine and 10 kg. converted into acetyl-dihydrocodeine.

‡ Including 19 kg. converted into dihydrocodeine and 1 kg. converted into acetyl-dihydrocodeine.

§ Including 15 kg. converted into dihydrocodeine.

d This ratio has not been calculated since the major part of the morphine converted was imported and not manufactured in the country.

e This ratio has not been calculated since the morphine converted was imported and not manufactured in the country.

f Statistics incomplete.

TABLE V. — CONVERSION OF MORPHINE (*concluded*)

Country (in alphabetical order)	Year	Morphine manufactured	A	1	2	3	4	5	6	7	8	9	10	B	11	C	12
			Morphine utilized for conversion													Morphine unconverted (A minus B)	
			into drugs of Schedule I of the Single Convention of 1961			into drugs of Schedule II of the Single Convention of 1961						into substances not covered by the Conventions		Total (1 + 3 + 5 + 7 + 9)			
		Kg.	Kg.	% of A	Kg.	% of A	Kg.	% of A	Kg.	% of A	Kg.	% of A	Kg.	% of A	Kg.	% of A

^a This ratio has not been calculated since the major part of the morphine converted was imported and not manufactured in the country.

^b This ratio has not been calculated since the morphine converted was imported and not manufactured in the country.

^c The totals in columns A and C are not necessarily the totals of the figures shown under these headings. Those in column A were taken from Table III, column 17; they include manufacture, if any, in countries—not shown in the present table—where no conversion has taken place. Those in column C represent the difference between the totals in columns A and B (A minus B).

^d Incomplete.

^e Including 1874 kg. of morphine converted into codeine, ethylmorphine and pholcodine, which South Africa declared without stating the amounts of morphine converted into each of these substances.

^f This percentage takes into account the morphine converted into codeine, ethylmorphine and pholcodine, which South Africa declared without stating the amounts of morphine converted into each of these substances.

^f See introductory note, page 2, second paragraph.

* As from 1966, the figures of manufacture include the pure cocaine contained in crude cocaine.

^a The figures shown in this column represent the net manufacture of morphine; they do not include the amounts used for conversion into other drugs. The totals were taken from Table V column C, and are not necessarily the totals of the figures shown in the present table (see note ^c, page 27). Gross manufacture, including the amounts used for conversion, is shown in Table III, column 17.

^b Acetylhydrocodeine, benzylmorphine, codeine-N-oxide, codoxime, dihydrocodeine, dihydromorphine, heroin, hydrocodone, hydromorphone, nicocodine, nicomorphine, normorphine, oxycodone, oxymorphone, pholcodine and thebacon. The totals of the manufacture of each of these drugs are given in Table VI (a).

^c Alphaprodine, anileridine, bezitramide, diethylthiambutene, diphenoxylate, dipipanone, fentanyl, ketobemidone, levorphanol, methadone intermediate, moramide intermediate (from which

racemoramide, dextromoramide and levomoramide may be manufactured), normethadone, pethidine intermediates A, B and C, phenazocine, phenoperidine, piminodine, properidine, racemoramide (from which are manufactured dextromoramide and levomoramide) and trimeperidine. The totals of the manufacture of each of these drugs are given in Table VI (a).

^d Statistics incomplete.

^e Methadone intermediate (426 kg.), normethadone (325 kg.) and pethidine intermediate A (1560 kg.).

^f Methadone intermediate (484 kg.) normethadone (276 kg.) and pethidine intermediate A (3527 kg.).

^g Normethadone (356 kg.) and pethidine intermediate A (1482 kg.).

^h Pethidine intermediate A.

ⁱ Normethadone (354 kg.) and pethidine intermediate A (2325 kg.).

* As from 1966, the figures of manufacture include the pure cocaine contained in crude cocaine.

a The figures shown in this column represent the net manufacture of morphine; they do not include the amounts used for conversion into other drugs. The totals were taken from Table V column C, and are not necessarily the totals of the figures shown in the present table (see note c, page 27). Gross manufacture, including the amounts used for conversion, is shown in Table III, column 17.

b Acetyldihydrocodeine, benzylmorphine, codeine-N-oxide, codoxime, dihydrocodeine, dihydromorphine, heroin, hydrocodone, hydromorphone, nicocodeine, nicomorphine, normorphine, oxycodone, oxymorphone, pholcodine and thebacon. The totals of the manufacture of each of these drugs are given in Table VI (a).

c Alphaprodine, anileridine, bezitramide, diethylthiambutene, diphenoxylate, dipipanone, fentanyl, ketobemidone, levorphanol, methadone intermediate, moramide intermediate (from which racemoramide, dextromoramide and levomoramide may be manufactured), normethadone, pethidine

intermediates A, B and C, phenazocine, phenoperidine, piminodine, piritramide, properidine, racemoramide (from which are manufactured dextromoramide and levomoramide) and trimeperidine. The totals of the manufacture of each of these drugs are given in Table VI (a).

d Racemoramide (753 kg.) and moramide intermediate (892 kg.).

e Racemoramide (703 kg.) and moramide intermediate (36 kg.).

f Racemoramide (576 kg.), moramide intermediate (826 kg.) and pethidine intermediate A (1285 kg.).

g Racemoramide (373 kg.), moramide intermediate (713 kg.) and pethidine intermediate A (332 kg.).

h Racemoramide (527 kg.) and moramide intermediate (787 kg.).

i 428 kg. of crude cocaine were manufactured in 1965.

j Trimeperidine.

TABLE VI. — MANUFACTURE OF THE NARCOTIC DRUGS FALLING UNDER THE CONVENTIONS
 (concluded)

* As from 1966, the figures of manufacture include the pure cocaine contained in crude cocaine.

^a The figures shown in this column represent the net manufacture of morphine; they do not include the amounts used for conversion into other drugs. The totals were taken from Table V column C, and are not necessarily the totals of the figures shown in the present table (see note ^c, page 27). Gross manufacture, including the amounts used for conversion, is shown in Table III, column 17.

^b Acetyldihydrocodeine, benzylmorphine, codeine-N-oxide, codoxime, dihydrocodeine, dihydromorphine, heroin, hydrocodone, hydromorphone, nicocodeine, nicomorphine, normorphine, oxycodeone, oxymorphone, pholcodine and thebacon. The totals of the manufacture of each of these drugs are given in Table VI (a).

^c Alphaprodine, anileridine, bezitramide, diethylthiambutene, diphenoxylate, dipipanone, fentanyl, ketobemidone, levorphanol, methadone intermediate, moramide intermediate (from which racemoramide, dextromoramide and levoramide may be manufactured), normethadone, pethidine intermediates A, B and C, phenazocine, phenoperidine, piminodine, piritramide, properidine, racemoramide (from which are manufactured dextromoramide and levoramide) and trimeperidine. The totals of the manufacture of each of these drugs are given in Table VI (a).

^d Including 138 kg. of methadone intermediate, 4 544 kg. of pethidine intermediate A and 94 kg. of pethidine intermediate B.

^e Including 70 kg. of methadone intermediate, 3 704 kg. of pethidine intermediate A and 40 kg. of pethidine intermediate C.

^f Including 109 kg. of methadone intermediate, 5 575 kg. of pethidine intermediate A and 94 kg. of pethidine intermediate C.

^g Including 49 kg. of methadone intermediate, 4 259 kg. of pethidine intermediate A and 85 kg. of pethidine intermediate C.

^h Including 150 kg. of methadone intermediate, 4 692 kg. of pethidine intermediate A and 54 kg. of pethidine intermediate C.

ⁱ This total does not represent the sum of the figures shown in this column, but has been adjusted to allow for the fact that the figures of manufacture of the United States include crude cocaine exported for refining, while the countries which imported the crude cocaine have also included in their figures the quantities of pure cocaine obtained therefrom.

^a Brought under control in November 1968.

^b Brought under control in August 1965.

TABLE VII. — CONSUMPTION OF THE PRINCIPAL NARCOTIC DRUGS FALLING UNDER THE CONVENTIONS

Note: ^a Under the terms of the 1931 Convention, Governments are not bound to declare consumption of codeine and ethylmorphine (dionine), but where Governments volunteered this information their own figures have been inserted in the table. Those figures bearing asterisks have been calculated by the Board on the basis of other statistics furnished by the Governments in respect of these two drugs. Under the terms of the 1961 Convention, however, Governments are required to declare their consumption of codeine and ethylmorphine (dionine).

^b The quantities which countries reported as having been used in the manufacture of preparations for the export of which authorizations are not required, whether such preparations are intended for domestic consumption or for export, were included in the figures of consumption reproduced in this table. It may be assumed that in the case of countries which did not report the quantities of codeine or ethylmorphine so used, the figures of consumption of these drugs, whether furnished by Governments or computed by the Board, generally also include quantities used in this manufacture.

The quantities which Governments reported as having been used in the manufacture of such preparations, and which were added by the Board to the figures on consumption, are reproduced separately in Table VII (a).

TABLE VII (a). — UTILIZATION OF MORPHINE, CODEINE, ETHYLMORPHINE AND COCAINE IN THE MANUFACTURE OF PREPARATIONS FOR THE EXPORT OF WHICH AUTHORIZATIONS ARE NOT REQUIRED

Note: In accordance with the usual interpretation of Article 22, paragraph 1, of the 1931 Convention, Governments generally did not declare the quantities of codeine and ethylmorphine used in such manufacture. In accordance with the provisions of the 1961 Convention, however, Governments are required to furnish this information.

TABLE VII (c). — CONSUMPTION OF NARCOTIC DRUGS*: NUMBER OF THERAPEUTIC DOSES CONSUMED ANNUALLY PER 1000 INHABITANTS

The following table indicates the number of therapeutic doses of analgesic and anti-tussive narcotic drugs consumed per 1000 inhabitants in the fifty countries with the highest consumption rates. The figures also include quantities used in the manufacture of exempted preparations, whether intended for home consumption or for export. This may to some extent affect the data of the countries exporting such preparations.

(Average of the years 1965-1969 for all countries listed)

Denmark	18 072	Japan	2 641
Finland	15 051	Romania	2 592
Australia	12 944	Argentina	2 562

See introductory note, page 2, second paragraph.

TABLE VIII
WORLD TRADE (IMPORTS-EXPORTS) IN 1969

EXPLANATORY NOTE

1. The figures given in the tables have been furnished by the Governments in *Statistical Form A/S* (Quarterly Statistics of Imports and Exports). Where no return has been furnished or where returns are lacking for one or more quarters, the figures are necessarily incomplete and apply only to the period for which returns have been received. When it occurs, this fact is mentioned in a footnote.

2. In any table, a country appears under the heading "Importing countries" only if the annual total of its imports of the substance in question amounts to:

A thousand kilogrammes in the case of OPIUM, POPPY STRAW, CONCENTRATE OF POPPY STRAW and COCA LEAVES;

A hundred and fifty kilogrammes in the case of CODEINE;

Twenty kilogrammes in the case of PETHIDINE;

Ten kilogrammes in the case of MORPHINE, COCAINE, and ETHYLMORPHINE (DIONINE); and

Five kilogrammes in the case of METHADONE.

Otherwise, the country's imports are included under the heading "Other countries", at the foot of the table.

Similarly, a country appears under the heading "Exporting countries" only if the annual total of its exports of the substance in question amounts to the figure shown above; otherwise, the country's exports are included under the heading "Other countries", on the right of the table.

3. The names of the exporting countries which themselves produce the substance in question are given in bolder type, and both the exporting and the importing countries appear in order of the magnitude of their trade.

4. The figures appearing *in italics* in the upper half of the divisions have been supplied by the importing country, and those appearing in the lower half by the exporting country.

5. As there are many more importing than exporting countries, the amounts below one kilogramme which are omitted from the tables add up to much more in the case of imports than in the case of exports. Hence the apparent discrepancies in the figures shown against the heading "Other countries", at the foot of the tables.

ANNEX C

MAXIMUM LEVELS OF OPIUM STOCKS

In document INCB/7 (December 1969) the Board published the maximum opium stocks which States authorized to produce opium for export and States permitting the manufacture of opium alkaloids may hold on 31 December 1970 under the terms of the 1953 Protocol.

The Board was unable at that time to calculate the

quantities which the other States may hold at that date since the statistics for 1969 were not then available. Each of these "consuming States" is authorized to hold in stock on 31 December 1970 a quantity of opium which must not exceed the sum of the quantities it consumed in the years 1965 to 1969. These maximum stocks are shown in the following table.

Maximum quantities of opium stocks which States may hold on 31 December 1970

*States other than those listed in article 6, paragraph 2 (a),
of the 1953 Protocol and those permitting the manufacture of opium alkaloids
("consuming States")*

* The Board does not possess the complete data required for computing the stock (paragraph 1 (c) of article 5 of the 1953 Protocol).

** The Board does not possess the data required for computing the stock (paragraph 1 (c) of article 5 of the 1953 Protocol).

In accordance with the procedure laid down in article 5 of the 1953 Protocol the Board has already called for the data required for calculation of the maximum quantities which may be held in stock on 31 December 1971 in States authorized to produce opium for export and in States permitting the manufacture of opium alkaloids. The maximum quantities in question are shown in the following tables:

Maximum quantities of opium stocks which States may hold on 31 December 1971

* Computed by reference to base years chosen by the Board in virtue of the authority conferred on it by the Government of the country concerned.

** Computed by reference to base years indicated by the Government of the country concerned.

*** Computed by reference to base years chosen by the Board under article 5, paragraph 3 (d) of the 1953 Protocol.

^a Greece has discontinued opium production. If maximum stocks were computed according to the rules applicable to "consuming countries" (article 5, paragraph 1 (c), of the 1953 Protocol), the maximum stocks which it would be authorized to hold on 31 December 1971 would be equal to consumption in the preceding five years—i.e. 309 kg. plus the quantities consumed in 1970.

^b Opium having a consistency of 70°.

* Determined on the basis of information furnished by the Government of the country concerned.

** Determined by the Board in accordance with its authority under article 5, paragraph 3 (d), of the 1953 Protocol.

See the introductory note, page 2, second paragraph.

HOW TO OBTAIN UNITED NATIONS PUBLICATIONS

United Nations publications may be obtained from bookstores and distributors throughout the world. Consult your bookstore or write to: United Nations, Sales Section, New York or Geneva.

COMMENT SE PROCURER LES PUBLICATIONS DES NATIONS UNIES

Les publications des Nations Unies sont en vente dans les librairies et les agences dépositaires du monde entier. Informez-vous auprès de votre librairie ou adressez-vous à: Nations Unies, Section des ventes, New York ou Genève.

КАК ПОЛУЧИТЬ ИЗДАНИЯ ОРГАНИЗАЦИИ ОБЪЕДИНЕННЫХ НАЦИЙ

Издания Организации Объединенных Наций можно купить в книжных магазинах и агентствах во всех районах мира. Наводите справки об изданиях в вашем книжном магазине или пишите по адресу: Организация Объединенных Наций, Секция по продаже изданий, Нью-Йорк или Женева.

COMO CONSEGUIR PUBLICACIONES DE LAS NACIONES UNIDAS

Las publicaciones de las Naciones Unidas están en venta en librerías y casas distribuidoras en todas partes del mundo. Consulte a su librero o diríjase a: Naciones Unidas, Sección de Ventas, Nueva York o Ginebra.
