VII. Overview of UNDRO disaster mitigation activities, 1990-1991	42
VIII. Regular budget: comparisons of the budget appropriations and expenses for the Office of the Disaster Relief Coordinator (including the New York Office) during the bienniums 1986-1987, 1988-1989 and 1990-1991, by object of expenditure	44
IX. Staffing table of the Office of the United Nations Disaster Relief Coordinator for 1990-1991	45

I. INTRODUCTION

1. The present report on the work of the Office of the United Nations Disaster Relief Coordinator (UNDRO) covers the biennium 1990-1991. It is presented to the General Assembly through the Economic and Social Council in accordance with General Assembly resolutions 2816 (XXVI) of 14 December 1971, 39/217 of 18 December 1984, 40/236 of 17 December 1985 and decision 43/447 of 20 December 1988, by which the Assembly endorsed Economic and Social Council resolution 1988/51 of 26 July 1988.

2. In view of the restructuring of the humanitarian sector as a result of General Assembly resolution 46/182, this will be the last report on the work and activities of UNDRO in the accustomed format. UNDRO has now been absorbed within the new Department of Humanitarian Affairs established in March this year in response to the provisions of General Assembly resolution 46/182 of 19 December 1991. This resolution aims at enabling the United Nations system to provide a rapid and well-coordinated response to emergencies both natural and man-made. The Department of Humanitarian Affairs is headed by the Under-Secretary-General for Humanitarian Affairs, who is also the Emergency Relief Coordinator. In his functions relating to emergencies, the Coordinator works in close cooperation with United Nations agencies and organizations involved, and in consultation with disaster-stricken countries, as well as the international donor community. A report on the work of the new Department and on the implementation of resolution 46/182, will be provided to the General Assembly at its forty-seventh session.

II. RELIEF COORDINATION

Major trends

3. In line with the trend of previous years, emergencies and disasters drew an increasing level of international solidarity in the course of the 1990-1991 biennium. International aid, both in cash and in kind, as reported to UNDRO by Governments, intergovernmental and non-governmental organizations and the United Nations, reached a total value of \$2.86 billion (see figure 1).

4. Along with financial support, greater public attention was paid to the cost-effectiveness of relief operations and within this context, relief coordination acquired renewed emphasis. As a result, UNDRO was entrusted even more than before with the task of channelling international aid. Total contributions through UNDRO amounted to \$207 million, corresponding to a fifteen-fold increase over the 1986-1987 biennium and a five-fold increase over the previous biennium (see figure 2).

Figure 1

Total contributions for humanitarian assistance as reported to UNDRO
 (United States dollars)

Figure 2

Total contributions channelled through UNDRO
 (United States dollars)

5. The Office was associated with providing assistance or support in the context of 106 disasters. UNDRO involvement was marked by the issuance of situation reports, describing the event, the damage and needs, and, if applicable, the international response. The issuance of 413 reports, that is one report every two days, is illustrative of the Office's heavy workload during the biennium.

6. Disaster situations varied greatly in scope and complexity, ranging from natural events, such as earthquakes and volcanic eruptions, to slow on-set natural catastrophes, such as drought, and man-made disasters such as civil strife and the movements of populations.

7. Man-made disasters, though limited in number, called for particularly sustained attention by the Office. This was true especially in the Iraq/Kuwait crisis, which tied up a very large portion of the Office's resources. The level of involvement of the Office is also apparent from a comparison of contributions through UNDRO for both types (natural versus man-made) of disasters/emergencies (see figures 3, 4 and 5).

Regional trends

8. In Africa, UNDRO efforts focused on sudden disasters and on man-made emergencies, such as the crisis in Liberia with its consequences for the neighbouring countries, and the situation in Mozambique. The sudden natural disasters which occurred in the Asian and Pacific regions imposed a particularly heavy workload on the resources of the Office. The Asian continent was afflicted notably by major disasters, such as the cyclone in Bangladesh (1991), the floods in China (1991), the eruption of the Mount Pinatubo volcano (Philippines, 1991) and the earthquake in the Islamic Republic of Iran (1990). In the Middle East, natural events were overshadowed by the Iraq/Kuwait crisis, while Eastern Europe suffered the impact of natural phenomena (for instance, earthquakes in the former USSR) and civil strife (Romania).

Assessment of damage and needs

9. United Nations inter-agency missions represented an effective tool for multisectoral assessment of needs and resource mobilization. In line with its mandate for coordination, UNDRO led such missions following drought in Peru and floods in Malawi in 1990, and participated in others to Lebanon, Somalia and other countries. The designation of the Disaster Relief Coordinator as Special Representative of the Secretary-General in the Inter-Agency Missions to the Islamic Republic of Iran, Bangladesh and Jordan added weight to coordination efforts. Inter-Agency Missions led to the Office's issuance of United Nations consolidated appeals for concerted relief programmes and their presentation to the international donor community.

10. The assessment of damage and needs was also a fundamental component of the relief coordination missions which UNDRO undertook on its own after disasters such as the eruption of Mount Pinatubo in the Philippines.

(total number of disasters - 106 for the biennium 1990 - 1991)

Coordination of response/resource mobilization

11. The Office was particularly active in using information meetings as forums to alert the international community to disasters, to mobilize resources and to promote the exchange of information among donor Governments, the United Nations system and non-governmental organizations in Geneva. As a result, there was a three-fold increase in the number of UNDR0 information meetings (an average of virtually one per month), which were convened on a wide range of natural and man-made disasters.

12. Proven techniques, such as situation reports and consultations with donors and recipients of international assistance, continued to be employed and further developed. Donor reports to UNDR0 on their contributions and value, when they were timely and complete, greatly facilitated coordination efforts. It was encouraging to note an increasing tendency by donors to report according to the UNDR0 format; it is hoped that this trend would continue within the context of the newly created Department and that the timeliness of some donor reporting would be followed by others in the future.

13. UNDR0 field delegates were dispatched in order to provide support for the local UNDR0/United Nations Development Programme (UNDP) Resident Representative and the United Nations Disaster Management Team. Unfortunately, a shortage of staff resources obliged the Office to rely on missions by experts and consultants, which, among other things, deprived UNDR0 staff of opportunities for on-the-job training and field experience.

14. On the United Nations regular budget, the Office had at its disposal \$360,000 per year to provide immediate cash grants in case of disaster. These grants were in most cases channelled through the UNDP/UNDR0 Resident Representatives to enable them to meet part of the most urgent needs or to facilitate the development of concerted relief programmes through "seed money". Annex I provides a listing of emergency relief grants.

15. During the biennium UNDR0 was able to mobilize contributions for relief that were channelled through its trust funds totalling \$207 million (see annex V). Of this, an amount of \$200 million was earmarked for specific disasters/emergencies as outlined in annex III. The balance of \$7 million was granted on an unearmarked basis and for the Pisa warehouse operations/running costs. The global sum of relief contributions as reported for 106 emergencies/disasters is \$2.86 billion, which is outlined in annex II.

16. Of great support to the work of the Office was the decision of United Nations financial authorities in New York to grant UNDR0 a delegation of authority for emergency purchases in a (still limited) number of man-made and natural disasters.

17. Measures to strengthen coordination efforts taken in the context of the Iraq/Kuwait crisis not only provided a source of valuable experience for future operations, but also featured pioneering innovations. These included:

(a) The development of a plan of action for system-wide preparedness with regard to migrant populations, based on specific assumptions, and assigning roles and budgetary provisions to respective United Nations agencies;

(b) The attribution of tasks to agencies giving priority to their specific expertise more than to strict mandates;

(c) The immediate establishment of a United Nations Inter-Agency Working Group, rapidly extended to the League of Red Cross and Red Crescent Societies, the International Committee of the Red Cross and the Inter-governmental Organization for Migration, meeting on a weekly basis at UNDRO headquarters to coordinate actions and formulate consolidated appeals;

(d) The establishment of a central funding mechanism: donors were encouraged to contribute to this central point and to avoid earmarkings. This enabled UNDRO to distribute funds in accordance with priorities laid down by the Inter-Agency Working Group;

(e) The appointment of Senior United Nations Emergency Managers (SUNEMs) for the Islamic Republic of Iran, Jordan, the Syrian Arab Republic and Turkey, who supported Resident Coordinators in tasks regarding information, resource mobilization and coordination.

18. Lessons learned from the Iraq/Kuwait crisis were the subject of a full evaluation, which was reflected in a separate case study. 1/ These inspired the Office's own proposals to the forty-sixth General Assembly for the strengthening of its capacity to fulfil its mandate. 2/

III. RESPONSE FACILITATION - UNITED NATIONS SYSTEM AND INTERNATIONAL PREPAREDNESS

19. The Office developed its preparedness activities in order to provide a better international response to disasters. Some of these activities are mentioned below:

UNDRO warehouse, Pisa (Italy)

20. During the biennium, the UNDRO warehouse at Pisa continued to carry out its role of filling precise, limited gaps in the provision of assistance in the very first phase of various types of emergencies. About 20 different types of relief items were regularly kept in stock. Four donors continue to replenish the stocks: Finland, Italy, Japan and Norway. Emergency equipment donated by the former Soviet Union was also kept at Pisa. In late 1991, UNDRO signed an agreement with the Pisa airport authorities for the rental of two additional warehouses, thus increasing the storage capacity of its Pisa facility to 1,800 square metres (nearly the double of the initial space).

21. The increase in the 1991 operations is mainly due to the fact that the Government of Argentina put at UNDRO disposal a 35-ton airplane during parts

of the Gulf crisis. In cooperation with UNHCR, UNICEF, the United Nations (Headquarters), the Red Cross and the Governments of Italy and Japan, 19 flights (out of 25) were performed from Pisa during the months of February, March and April, to the countries involved in the Gulf crisis. Out of a total of 600,000 kilograms carried during this period, nearly half were gathered and assembled in the Pisa warehouse, thus underlining its usefulness as an international relief assembly centre (see figures 6, 7 and 8).

Search and rescue

22. Recognizing the need for a strengthened coordination of international search and rescue operations (SAR) (as shown during the Armenian earthquake), UNDR0 undertook two pilot projects. First, the first edition of a Directory of International Search and Rescue Teams, containing 23 entries of teams from 18 countries, was issued and distributed widely. Secondly, UNDR0 convened the International Search and Rescue Workshop 1991, which was hosted by the Austrian Government in Wattener, Lizum, Tyrol, between 8 and 13 April 1991, and was attended by government officials and leaders of search and rescue teams from 18 countries.

23. The Workshop adopted four international search and rescue protocols which, though not representing legally binding instruments, constituted an organized set of guidelines prepared by people with experience in international search and rescue operations, to facilitate and make future SAR operations more effective.

24. Further to the Workshop in Austria and to a subsequent meeting convened by UNDR0 and hosted by the German Government in Beuggen, Germany, from 11 to 13 December 1991, the International Search and Rescue Advisory Group (INSARAG) was created. INSARAG was destined to form a regularly based structure and platform for future cooperation in international relief operations, as well as in preparedness, by increasing and accelerating the availability of resources, local and international, for such operations. INSARAG consists of a steering committee, a secretariat (UNDR0), and regional and working groups.

25. The outcome of these initiatives and experience in disasters such as the Gulf crisis and the Bangladesh cyclone showed the importance of improving the tools available for operational coordination at the disaster site. In this regard, UNDR0 proposed the establishment of a specialized desk for operational coordination systems.

Communications

26. The International Conference on Telecommunications for Disaster Management, which was convened by UNDR0 at Geneva from 19 to 21 March 1990, with the support of the German Government, brought together manufacturers/suppliers of communications hardware/services and users from the international disaster management community, with a view to improving and speeding up the flow of vital information in disaster relief and mitigation activities. The Conference recommended measures to facilitate the entry, exit

not including Argentinian plane.

and operation of communications (notably satellite) equipment, including the establishment of internationally approved legal instruments for this purpose. Contacts were made with specialized experts to implement these recommendations.

27. UNDR0 cooperated with the International Institute of Communications, the International Telecommunication Union (ITU) and other organizations in organizing a Conference on Disaster Communications held from 20 to 22 May 1991 at Tampere, Finland, which issued the Tampere Declaration, identifying the needs for communications and remote-sensing in disaster management, and calling on the Office to convene, in 1993, a conference to negotiate an intergovernmental convention on disaster communications. Furthermore, the Office developed its own emergency communications capabilities by obtaining, with the support of the Norwegian Government, three INMARSAT Standard-C satellite terminals.

Fourth meeting of Officials in Charge of National Emergency Services and relations with non-governmental organizations

28. One important task is to provide opportunities for disaster management officials from donor and disaster-prone countries to exchange views and experiences, with a view to strengthening international disaster management relief and mitigation. It is with this objective in mind that UNDR0 convened in Geneva on 1 and 2 October 1991, a fourth meeting of Officials in Charge of National Emergency Relief Services (NERS IV). Some 90 participants from 34 countries and the European Economic Community reviewed the latest emergency situations and UNDR0 activities in relief coordination and mitigation. The meeting took note, *inter alia*, of developments concerning the UNDP/UNDR0 Disaster Management Training Programme and endorsed its continuation, while expressing a desire to broaden the donor base. The use of military assistance in relief operations was discussed, and UNDR0 was advised to consider holding a workshop in this regard. The Office was also asked to work out the details and criteria for establishing a register of relief stockpiles and to consider organizing a workshop for organizations operating stockpiles.

29. The working relationship with non-governmental organizations continued to expand further during the biennium. The Joint Consultative Meeting on UNDR0/NGO Cooperation held at Geneva from 1 to 2 March 1990, reviewed a wide range of topics of common concern to disaster managers, such as relief corridors, communications, search and rescue, training, the United Nations International Emergency Network (UNIENET) and registers of experts and stockpiles. As shown in the final report, 3/ the invaluable role of non-governmental organizations in disaster management, and areas for an intensification of their collaboration with the Office, were highlighted at the meeting.

UNDP/UNDR0 Disaster Management Training Programme

30. Based on a comprehensive study by two consultants with specific experience in the field of emergency management and training, the Disaster Management Training Programme (DMTP) was launched in July 1990 under the joint management of UNDP and UNDR0 and with the assistance of a joint advisor.

31. The DMTP provides a framework and a series of catalytic activities for the global development of disaster management training. Some of the more specific DMTP objectives which aim at improving response facilitation include:

- (a) Strengthening international as well as country preparedness;
- (b) Improving international coordination in response situations;
- (c) Improving the United Nations performance in disasters/emergencies;
- (d) Clarifying disaster policies, operational models and terminology;
- (e) Assisting in the building of disaster management teams.

32. Up to the end of 1991, the following activities had been undertaken within the framework of DMTP implementation:

(a) Appointment of a technical coordinating body, technical operating partners, regional collaborating centres for Latin America, the Caribbean, Asia and the Pacific, and Africa. Initial negotiation for regional collaborating centres for the Middle East;

(b) Drafting, review and production of 14 training modules and trainer's guides and production of two training videos;

(c) One inter-agency "train-the-trainers" course;

(d) Three subregional courses for Latin America, the Caribbean, and the Middle East;

(e) Three country courses for Chile, El Salvador and Guatemala;

(f) Elaboration of an internal UNDR0 policy, appointment of a permanent group on staff and organizational development, and adoption of a 1992 plan for training activities.

UNDP/UNDR0 Disaster Management Manual

33. Based on initial consultations with United Nations agencies (core members of the Disaster Management Team), and in order to improve the outdated guidelines to field offices on the above issue, two consultants prepared, with initial inputs from UNDP and UNDR0, the first version of the joint Disaster Management Manual, in May 1991.

34. The Manual sets out policies and procedures for coordinated inter-agency "operational preparedness and response".

In the context of preparedness

35. It describes what the Resident Coordinator and the team of United Nations agencies at the country level should do, collectively, to be ready and able to respond rapidly and appropriately when a disaster occurs.

In the context of response

36. It describes actions to be taken by the Resident Coordinator and the United Nations Disaster Management Team at the country level when an emergency arises or when a disaster threatens or occurs.

37. In addition, the Manual devotes a major chapter to promoting the awareness of disaster risks and the incorporation of mitigation strategies in development planning, through general policies, specific procedures and actions.

38. The draft format of the UNDP/UNDRO Disaster Management Manual is being reviewed by UNDRO/UNDP including 65 field offices of the most disaster-prone countries, as well as the concerned United Nations agencies. It has been used also in the context of the Disaster Management Training Programme both at the regional and national courses level. It will have to be reviewed in the context of the new situation arising out of the establishment of the Department of Humanitarian Affairs of which UNDRO is now part.

UNDRO/International Decade for Natural Disaster Reduction terminology project

39. The UNDRO/International Decade for Natural Disaster Reduction terminology project is divided into two stages: the first consists of the preparation of a multilingual glossary of basic terms most frequently used in field and office activities. The second stage is to establish a recommended methodology for the preparation of glossaries in different specialized subjects of disaster management.

40. In the first stage, an inventory and review of published and non-published terminology material was made and about 350 basic terms with definitions were selected to be included in the first draft of the basic glossary. The selection was guided by a flow-chart of all disaster-related activities.

41. This list together with the definitions was proposed at an UNDRO convened meeting of international experts and representatives of international organizations, held at Prague from 23 to 27 September 1991.

42. The meeting noted that the definitions proposed by different organizations, for example with regard to the term "disaster mitigation", are not necessarily contradictory, but have a different scope.

43. The meeting reviewed the terms and their definitions and recommended a list of terms and definitions in English. The French and Spanish equivalents are at present being established and it is planned that a small editorial group coordinate and prepare the final draft of the glossary in the second half of 1992.

44. In a parallel effort, UNDR0 has developed a model computerized terminology database system into which the multilingual glossaries described here could be incorporated once they are finalized. This would provide an interactive retrieval system for those disaster management terms and their definitions, while at the same time providing the equivalent terms and definitions in the several languages under consideration.

IV. DISASTER MITIGATION - PREVENTION AND PREPAREDNESS AT THE NATIONAL AND REGIONAL LEVELS

45. The biennium 1990-1991, corresponding to the first two years of the International Decade for Natural Disaster Reduction, has been one in which the opportunities for successful disaster mitigation and growing confidence in its cost-effectiveness have led to a considerably increased demand from the developing countries for technical assistance. In close parallel with this expanding demand, and in response to UNDR0 requests, there has been growing interest on the part of the many donors to increase contributions in cash or in kind towards the wider promotion of disaster prevention and preparedness (see annex VI). The main difficulty was the shortage of experienced manpower with which to meet the new demands. To distribute its attention as widely as possible and to make its support for mitigation programmes as cost-effective as possible, UNDR0 has initiated several new subregional projects, for example in the South Pacific and southern Africa, and has promoted wider international exchange of experience and methodologies within the Latin American, Asian and Mediterranean regions.

46. A special effort has also been made to carry out scenario studies focused on the potential events of highest risks in these disaster-prone areas of the world, and involving a fully and carefully integrated sequence of mitigation activities maximizing the involvement of all available local skills. Even where the initial requirement for guidance and training at the local level has been a heavy burden, the ultimate advantages in increased commitment to the tasks of mitigation and the permanent residence of such local officials within the zones of high risk, have provided much longer-lasting benefits through the growth of a local disaster mitigation "culture" with indigenous roots. Also, the presence of a higher level of on-the-spot competence in disaster management has led to greatly enhanced effectiveness from the earliest onset of each new emergency. The benefits of this higher degree of local professionalism in disaster mitigation have been clearly demonstrated; for example, in recent emergencies in Colombia, in certain Caribbean countries and in the Philippines.

47. Because of the proven effectiveness of this transfer of technology, and in order to enhance UNDR0 capabilities in this area, the Office has also introduced a new and increasingly popular programme of fellowships, providing training opportunities for disaster management officials from a wide range of disaster-prone developing countries to attend overseas training courses, either according to their own preferences, or following suitable options identified and arranged by UNDR0. The Office has also actively contributed to numerous seminars of most of the other international agencies involved in disaster mitigation. It has jointly participated in the disaster mitigation programmes of UNDP, the United Nations Educational, Scientific and Cultural Organization (UNESCO), the World Health Organization/Pan-American Health Organization (WHO/PAHO), the World Meteorological Organization (WMO), the Organization of American States (OAS), the Economic Commission for Latin America and the Caribbean (ECLAC), the Economic and Social Commission for Asia and the Pacific (ESCAP) and other international or regional entities.

48. The range of UNDR0 publications has been widened with a new, comprehensive manual on the methods and practice of disaster mitigation, aimed primarily at public officials and planners. UNDR0 has published comprehensive surveys of risks and corresponding mitigation measures for disaster-prone countries, new training guidebooks, comprehensive seminar proceedings on earthquake hazard and risk assessment as applied in the Mediterranean region, studies on the whole spectrum of disaster risks and mitigation measures for the Republic of Armenia, and on earthquake risks to large cities in Latin America. It has carried out world-wide statistical studies of the economic impact of disasters as a basis for quantifying the disaster-proneness of individual countries. UNDR0 has also actively contributed to publications related to the numerous disaster management seminars of the other international agencies in which it participated, as mentioned previously.

49. The launching of the Decade has also led to new initiatives to rethink and reinforce the strategy of disaster mitigation. Based on its various experiments over the years and a careful analysis of the effectiveness of different approaches to prevention and preparedness, this strategy can be summarized in the following eight basic objectives; namely to:

(a) Stimulate wider investigation and understanding of the full range of potential hazards;

(b) Integrate all competent national know-how in risk-assessment and mitigation measures;

(c) Promote the practice of scenario studies and ensure that a properly linked sequence of measures (investigation, prescription, training) are applied to each scenario;

(d) Take active steps to investigate the disaster potential of all major new development projects;

(e) Create at the national level a permanent service responsible for initiating and supervising a continuously evolving programme of mitigation activities, involving all relevant national institutions;

(f) Help national authorities to integrate all relevant international agencies, bilateral and NGO efforts into this programme;

(g) Capitalize on each new disaster to initiate or expand mitigation efforts in the light of lessons learned;

(h) Ensure that active exchange of experience and methodologies takes place, especially between countries and within regions with similar disaster and socio-economic characteristics.

50. The Office's total expenditure for disaster mitigation activities during the period 1990-1991 was \$3,369,463. In order to illustrate three of the more important dimensions of UNDR0 disaster mitigation programmes, "pie diagrams" follow which illustrate the distribution of this technical assistance among the five principal elements which make up the spectrum of disaster mitigation activities, the distribution by geographical region, and the attention given according to disaster type. Given the constraints of its limited financial and technical resources, UNDR0 none the less attempts to divide its disaster mitigation activities evenly among the disaster-prone developing countries according to these various considerations (see annex VII).

51. Figure 9 gives a breakdown of expenditures by type of project activity, from hazard analysis and risk analysis, through disaster prevention and preparedness, to information and training, the five major elements of the disaster mitigation cycle of activities. Figure 10 shows a distribution of UNDR0 disaster mitigation efforts by geographical region. Figure 11 illustrates the attention given to disaster mitigation according to various types of disaster.

52. The stark reality of disaster occurrence is that the number of persons at risk increases with population growth. On top of this, the level of vulnerability of the growing population rises faster because of the progressive overspill of the least privileged and most poorly protected people into zones of ever higher risk. Except where the effort invested in mitigation equals the population growth rate plus the accelerating vulnerability factor, the magnitude of disasters will inevitably continue to grow.

DISASTER MITIGATION PROJECTS, 1990-1991 Breakdown by Type of Project Activity

Figure 9

DISASTER MITIGATION PROJECTS, 1990-1991 Breakdown by Geographical Region

Figure 10

DISASTER MITIGATION PROJECTS, 1990-1991 Breakdown by Type of Disaster

Figure 11

**V. DISASTER INFORMATION MANAGEMENT - AN ESSENTIAL
SUPPORT ACTIVITY**

53. The overall objective of UNDR0 activities in disaster information is to increase the effectiveness and efficiency of disaster management world wide by disseminating accurate information of the type and in the form needed by relief officials, disaster managers, policy and decision makers and, to the general public. In international preparedness and response, timely and accurate information facilitates prompt, appropriate and coordinated responses. In disaster mitigation, sound and suitably targeted information on hazards world wide, on levels of risk and vulnerability, and on capacities to address these issues, is essential to disaster reduction programmes and technical assistance initiatives. Finally, the fruitful transfer of knowledge depends on the availability of, or referral capacity to sources of, comprehensive and up-to-date information on disaster management policies, programmes, practices, techniques and technologies.

54. How well the Office does in meeting this objective depends greatly on information management - on how information is used, both for internal and external purposes. There are thus compelling reasons for the Office to be equipped, staffed, and organized in a manner that will favour the best possible flow of disaster-related information. Yet, in recent years, as information technology has advanced, there had been a growing awareness that the Office's information management capacities have been proving insufficient to accomplish the increasingly complex, global, and technical tasks of information support for international disaster and emergency management.

55. During the biennium a concerted effort was made to correct the situation. Funds were sought to complement the limited amounts available to UNDR0 from the regular budget, contributions were received from the Finnish, German and Japanese Governments. An internal study was made to define the weaknesses and measures needed to overcome them. The basis was thus laid to strengthen progressively the UNDR0 information management communications and office system (IMCOS) in the areas of technical and institutional capacity, information for international preparedness and response, and database development and international networking.

56. In the first area, resources were allocated to increase the number and range of expertise of technical staff to make possible the technical changes and development needed. With respect to increasing institutional capacity, UNDR0 transitioned from the International Computing Centre, Geneva (ICC) mainframe computer environment to a more flexible and productive "personal computer environment". This included the establishment of an UNDR0 Local Area Network (LAN) itself connected to the ICC. The network will soon also be connected to the prospective LAN of the United Nations Office at Geneva. A start was made to equip all of UNDR0 staff with personal computers operating off the LAN, and to train them on standard software for routine office functions, input and access to common databases, and use of communications facilities from respective work stations. The UNDR0 Registry, which plays a

key role in maintaining institutional memory of past experience in disaster management, was further computerized to facilitate records management, eventually also off the LAN.

57. In the area of international disaster response, the Office's multiple distribution and communications system for disaster-related information and situation reports was further enhanced. Recipients now have the choice of receiving these reports by telex, facsimile or electronic mail (via UNIENET). The increased use of facsimile and electronic mail has decreased the average cost of communicating these reports, which were simultaneously and electronically dispatched to over 400 disaster managers from Governments, United Nations, intergovernmental and non-governmental organizations around the world, as well as to the press.

58. Of special importance are the steps recently taken to establish an Operations Centre, which will enable a more reliable and systematic approach to information management for international emergency preparedness and response. This project is widely supported by concerned Governments and officials. The initial definition of specifications for the Centre was completed in 1991.

59. In the area of international electronic networking and databases, special attention was given to strengthening the UNDR0 electronic information network UNIENET. The network, established in 1987 with support from USAID/Office for Disaster Assistance (OFDA), is a disaster-specific electronic mail/database/bulletin board system which interconnects an increasing number of disaster management focal points world wide.

60. The pilot phase having ended in December 1989, arrangements were made for the network to be more self-supporting financially and to reduce costs to developing country participants by charging certain categories of users in developed countries. By the end of the biennium there were some 190 participants in UNIENET, in 45 countries, from all "categories" of the disaster management "community": United Nations organizations, non-governmental organizations, intergovernmental organizations, universities, libraries and individuals. Users of the network have world wide access to databases/bulletin boards. They can also communicate with users of other United Nations networks and vice versa; at present, these are UNISER (United Nations Department of Public Information), UNET, the United Nations Children's Fund (UNICEF), UNDP, the United Nations Environment Programme (UNEP) and PAHONET. Arrangements have been made with organizations to maintain databases and/or bulletin boards on UNIENET. These include for example, emergency resource materials from UNHCR, special alerts and reports from the Food and Agriculture Organization of the United Nations (FAO), field activities of the Natural Hazards Project of the Organization of American States (OAS), national disaster coordinators in Latin America/Caribbean (WHO-PAHO), calendar of events of the Asian Disaster Preparedness Center and lists of national coordinators for the Decade. The Office's own databases on UNIENET include, inter alia, contact points for emergency officials, and UNDR0 situation

reports - which, in the cases of Volunteers in International Technical Assistance (VITA, a United States non-governmental organization), and Australia's Center for International Research on Communications and Information Technologies (CIRCIT), are "downloaded" for dissemination on their own networks.

61. Special effort was made during the biennium to develop the UNDR0 database and to keep the information useful and up-to-date. The UNDR0 Data Bank has focused on those for which information is frequently solicited in connection with disaster relief and mitigation - notably emergency contacts, disaster management training centres, disaster plans, and disaster statistics covering disasters with UNDR0 involvement in recent years. (The latter database was developed with the help of a contribution from the Japanese Government and complements a project on disaster statistics undertaken by the Center for Research on the Epidemiology of Disasters (CRED) at Louvain University, Belgium, for which UNDR0 provided regular input.) Certain databases can be accessed through UNIENET. The groundwork was also laid during the reporting period for a structured database to be developed and maintained on the UNDR0 LAN, once it becomes fully operational.

62. It is of the greatest importance to note that all the above-mentioned development has been financed exclusively by ad hoc extrabudgetary contributions and that it will be essential to place such activities on a more secure funding basis.

63. The Office's specialized disaster management Reference Library now holds some 4,000 publications including reports, conference proceedings, case studies, legal acts, emergency plans, manuals and training materials, and receives nearly 200 specialized newsletters, bulletins and journals. The bibliography is computerized; list of recent acquisitions are maintained on UNIENET. During the biennium a service of library "kits" was established to provide selected core materials for disaster management centres and programmes. These kits, initially put together for the UNDR0 regional South Pacific Project Office, met with increasing interest and demand from other regions. Each kit of some 500 pages contain bibliographic information and summaries of specialized reference works.

64. The UNDR0 Information and Publication Unit is responsible for the Office's publications programme. Demand for these has continued to rise steadily, including those disaster mitigation volumes offered as sales publications. They are being used extensively in specialized training courses and seminars for disaster managers, notably in Asia (through the Asian Disaster Preparedness Centre for the Asian Institute of Technology) and in Latin America and the Caribbean. More and more requests for UNDR0 publications come from national libraries as well as universities, schools and research institutes.

65. Several reports on specific disaster situations were also widely disseminated, notably on the Iraq/Kuwait crisis (International Assistance to Displaced Persons Through Jordan) in 1990, and the Mount Pinatubo eruption in the Philippines in 1991. A Multisectoral Study on Disaster and Management Planning in Armenia, following a mission in September 1989, was prepared and published by UNDR0 in 1990. In cooperation with UNDP, a mission report and technical review of the impact of the Disaster Prevention and Preparedness Programmes in Ecuador and neighbouring countries were outlined by the UNDR0-USAID/Office of Disaster Assistance (OFDA) Project in a 1990 report which was widely distributed, particularly in Latin America.

66. During 1991, a report on the International Search and Rescue Workshop convened by UNDR0 and hosted by the Austrian Government was also issued. The report summarizes the objective of the workshop, which is to develop guidelines for strengthening the coordination of international relief within the field of search and rescue, and comprises the four protocols of understanding. It was prepared in response to a recommendation of the Third Meeting of Officials in Charge of National Emergency Relief Services (NERS III). An essential tool in this process is the trilingual (English, French and Spanish) directory of International Search and Rescue Teams which was published shortly after the workshop report. It contains entries covering 23 search and rescue teams registered by national Governments.

67. A new technical manual entitled Mitigating Natural Disasters - Phenomena, Effects and Options, was issued and added to the existing list of sales publications.

68. In support of the Disaster Management Training Programme (DMTP), a series of training modules, with corresponding trainers' guides, were prepared by UNDP in collaboration with the Office of the United Nations Disaster Relief Coordinator and the University of Wisconsin Disaster Management Center, United States of America.

69. The production of the bimonthly UNDR0 News (distribution currently approximate 7,000) continued to be enhanced through desktop publishing facilities. To meet increasing demand, the print run for the journal had to be constantly augmented.

VI. ADMINISTRATION AND FINANCE

70. The UNDR0 budget comprises the following major elements:

(a) A regular budget allocation approved by the General Assembly, which covers approximately 60 per cent of the essential needs for the normal functioning of the Office (staff costs, travel, general operating expenses, etc.) for the biennium 1990-1991;

(b) Two principal extrabudgetary sources - the trust fund for the strengthening of UNDR0 (financed from voluntary government contributions) and the special account for programme support (financed from overhead charges on donor contributions for relief and mitigation programmes) - which meet the remaining 40 per cent of the Office's basic operating costs for the same biennium.

71. Since 1980, the proportion of extrabudgetary funds required in order to meet operating expenses has been constantly growing, as a result of the concerted fund-raising efforts undertaken by UNDR0 in order to maintain its operational capacity. By way of comparison, the percentage of regular budget and extrabudgetary expenditures for the previous biennium (1988-1989) were 74 per cent and 26 per cent, respectively (against 60 per cent and 40 per cent in 1990-1991).

72. For the biennium 1990-1991, the General Assembly appropriated an amount of \$7,508,400 for UNDR0. Annex VIII to the present report shows that the regular budget allocations for the three previous bienniums (1986-1987, 1988-1989 and 1990-1991) were fully expended, with total expenditures for 1990-1991 amounting to \$7,504,847.84. The difference between the 1988-1989 and 1990-1991 appropriation is due mainly to the revaluation and inflation rates at Geneva of 2.2 per cent and a net resource growth for UNDR0 of 0.6 per cent.

73. Approximately 80 per cent of the regular budget appropriation is devoted to personnel costs, the remaining 20 per cent being distributed among various objects of expenditure such as travel, communications, grants, and so on.

74. With regard to the trust fund for the strengthening of UNDR0, the same observation can be made as for the regular budget - that the major part is used to meet personnel costs. Annex IV lists contributions of Governments to this trust fund in the biennium 1990-1991.

75. In addition to the above-mentioned trust funds, UNDR0 manages three others: the Trust Fund for Disaster Relief Assistance; the Trust Fund for Technical Cooperation Activities; and the Sasakawa/UNDR0 Disaster Prevention Award.

76. Annex III compares income and expenditures recorded under all UNDR0 trust funds in the past three bienniums (1986-1987, 1988-1989, 1990-1991).

77. The staffing table of UNDR0 for 1990-1991 appears in annex IX to the present report. As a result of the post reduction exercise the regular budget staffing table was reduced from 22 to 20 Professional posts, and from 14 to 12 General Service posts at the beginning of 1990. Concurrently, one temporary regular budget Professional post was discontinued.

78. In order to respond with efficiency to requests from Member States for specific assistance, and to discharge its mandated responsibilities, UNDR0 has made use of flexible arrangements enabling it to have, in addition to the established extrabudgetary posts, both project staff in the field as well as consultants recruited for specific missions. During the biennium, UNDR0 had a total of 7 Professional and 13 General Service project staff in Angola, Antigua (Pan-Caribbean Disaster Preparedness and Prevention Project), Fiji, Lebanon, Mozambique, Nepal and Pisa, as well as 7 Project Personnel at Geneva.

79. In addition, UNDR0 contracted 140 consultancies for specific missions either in relief coordination field or in the disaster mitigation area. Two junior professional officers have been financed by their Governments and assigned to UNDR0 through the UNDP Programme. A total of six Professional staff were assigned to UNDR0 on a short- or medium-term basis under various arrangements with Governments and United Nations agencies and programmes.

80. There has been a significant increase during the biennium in extrabudgetary contributions to UNDR0, in particular for earmarked disaster assistance. It is a source of satisfaction to the Office that it has been able to gain the confidence and support of an increasing number of donor countries. However, it is a matter of concern that in 1990-1991 more than 40 per cent of UNDR0 staffing and associated costs (i.e. travel and communications) need to be met by voluntary contributions, which UNDR0 had the responsibility to secure each year and which henceforth the Department of Humanitarian Affairs will need to secure. This refers in particular to the need to have in the Department, whether in Geneva or New York, the necessary backstopping capacity for the Office's ever-growing activities in the field of emergencies.

Notes

1/ UNDR0/91/1 entitled "The Iraq/Kuwait crisis: International assistance to displaced people through Jordan (August-November 1991)".

2/ Note by the Secretary-General on the strengthening of the Office of the United Nations Disaster Relief Coordinator (E/1991/121).

3/ UNDR0/90/1.

Subtotal			13	20 000	7 738 233	81 571 674
Total 1990 involvement			145	360 000	43 870 084	790 247 883

(Footnotes on following page)

(Footnotes to table)

Note: Please note that UNDRO reports contributions for disasters where UNDRO has been involved and has issued a minimum of three information reports or one situation report (indicating an international appeal).

a/ This UNDRO grant was \$15,000 to West Samoa, and \$8,000 to Tuvalu, Niue and Tonga.

b/ Funds received from Jordan/Displaced Persons reported under Gulf Region - Phase I.

c/ The total for this column will be US\$ 4,000 LESS than the "grand total" Emergency Grants for 1990, because the Philippines Flood of November 1990 did not fit the criteria to be included on this report (see Note).

d/ These figures represent actual funds received at UNDRO during 1991. They could differ from those included in "Total" as the latter was calculated based on pledges using the exchange rate prevailing at the time the pledges were communicated to UNDRO.

e/ Total contributions Mozambique: \$134 million for the period May 1990-April 1991.

ANNEX V

Contributions to the UNDRO Trust Fund for Disaster Relief
 Assistance in 1990-1991

Donors	Purpose (Affected country, region, activity)	Total in United States dollars
Australia	Myanmar/floods, Peru/drought, Persian Gulf	1 077 840.00
Austria	Bangladesh/cyclone, Islamic Republic of Iran/floods, Persian Gulf	2 411 461.93
Barbados	Islamic Republic of Iran/earthquake	5 000.00
Canada	Bangladesh/cyclone, China/floods, Liberia, Mozambique, Somalia, Persian Gulf	3 444 168.30
Denmark	Guinea, Sierra Leone, Persian Gulf	2 406 298.91
Finland	Bangladesh/cyclone, Pisa/depot, Persian Gulf	7 271 925.96
Germany	China/floods, Myanmar/floods, Workshop- satellite communications, Persian Gulf	3 600 180.44
Ireland	Bangladesh/cyclone, Mozambique, Peru/drought/cholera	229 016.94
Italy	Afghanistan/earthquake, floods, Bangladesh/cyclone, China/floods, Costa Rica/earthquake, Honduras/floods, Mauritania, Pakistan/earthquake, Pisa/depot, Romania, Persian Gulf	16 051 444.83
Japan	Malawi/floods, Pisa/depot, United Republic of Tanzania, Persian Gulf	140 928 633.99
Luxembourg	Antigua and Barbuda/hurricane, Bangladesh/ cyclone, Costa Rica/earthquake, Dominica/ hurricane, Montserrat/hurricane, St. Kitts and Nevis/hurricane	645 836.05
Mauritius	Islamic Republic of Iran/earthquake	10 000.00
Netherlands	Afghanistan/earthquake/floods, Ecuador/ cholera, Sierra Leone, Persian Gulf	2 919 047.75

/...

Donors	Purpose (Affected country, region, activity)	Total in United States dollars
New Zealand	Bangladesh/cyclone	175 130.14
Norway	Somalia, Pisa/depot	81 843.20
Singapore	Persian Gulf	25 000.00
Spain	Persian Gulf	469 598.21
Sweden	Angola, Persian Gulf	9 544 882.61
Switzerland	Afghanistan-Pakistan/earthquake/floods, Liberia, Persian Gulf	839 009.15
United Kingdom of Great Britain and Northern Ireland	Afghanistan/earthquake, Angola, Bangladesh/ cyclone, Cambodia/floods, China/floods, Ecuador/cholera, Guinea, Liberia, Maldives/ storms-surges, Peru/drought, Romania/floods, Sierra Leone, Somalia, Tunisia/floods, Persian Gulf	5 168 084.06
United States of America	Myanmar/fire, Pisa/depot, Persian Gulf	3 581 298.00
CARICOM	St. Kitts and Nevis/hurricane	996.83
EEC	Lebanon, Mozambique, Tunisia/floods	5 527 490.76
OPEC	Bangladesh/cyclone-floods, Islamic Republic of Iran/earthquake, Tunisia/floods	224 347.00
UNDP	Liberia	306 005.00
UNICEF	Liberia	1 765.20
UNOCA	Afghanistan/earthquake-cyclone-floods	228 735.74
Total contributions received as at 31 December 1991		207 175 041.00
