COMMITTEE ON CONTRIBUTIONS
Forty-fifth session
New York

METHODS TO AVOID EXCESSIVE VARIATIONS OF INDIVIDUAL
RATES OF ASSESSMENT BETWEEN TWO SUCCESSIVE SCALES

Note by the Secretariat

1. Pursuant to resolution 31/95 A of 16 December 1976 by which the General Assembly requested the Committee on Contributions to consider "the possibility of mitigating extreme variations in assessments between two successive scales, without departing essentially from the principle of the capacity to pay, either by increasing the statistical base period from three years to some longer period or by any other appropriate method", the Committee adopted a seven-year base period, covering the years 1969 to 1975, for establishing the scale of assessments for 1978-1979 as it considered that a longer base would serve to alleviate the sharp variations in rates of assessment which it had been called upon to avoid.
2. In successive resolutions, 34/6 B, 36/231 A and 37/125 B, the General Assembly requested the Committee on Contributions to study "methods [or ways and means] which would avoid excessive variations of individual rates of assessment between two successive scales, including ways of setting a percentage limit or percentage points limit or a combination of the two".
3. In response to these requests, the Committee on Contributions concluded in its report to the thirty-ninth session of the General Assembly that "the mechanism set forth in paragraph 49 [of its report A/39/11]^{1/} should be adopted to dampen excessive variations in individual rates of assessment of Member States". That mechanism is a combination of percentage limits and percentage point limits with eight rate brackets. It is reproduced below for easy reference:

/...

Table 1

Combination of percentage limits and percentage point
limits with eight rate brackets

If the present official scale is	The percentage change in the new machine scale should not be more than the lesser of:	
	<u>Percentage limits</u>	<u>Percentage point limits</u>
Above 5.00 per cent	5.0	75 points
2.50 - 4.99 per cent	7.5	30 points
1.00 - 2.49 per cent	10.0	20 points
0.76 - 0.99 per cent	15.0	14 points
0.51 - 0.75 per cent	20.0	12 points
0.25 - 0.50 per cent	25.0	8 points
0.05 - 0.24 per cent	30.0	3 points
0.01 - 0.04 per cent	-	1 point

4. In resolution 39/247 B, paragraph 1(f), the General Assembly decided that:

"Scheme III, as defined in paragraph 49 of the report of the Committee on Contributions, should be used to limit the variations of individual rates of assessment between successive scales after pertinent modifications in the light of the views expressed by Member States in the Fifth Committee, particularly in respect of rates below the level of 1 per cent;".

5. The intention of the General Assembly with respect to the scheme of limits was made clear by the Chairman of the Fifth Committee when he introduced that part of the draft resolution:

"Subparagraph (f) addresses the scheme to limit excessive variations of individual rates of assessments between successive scales proposed by the Committee on Contributions in paragraph 49 of its report. However, since several delegations had expressed the view that the percentage, and percentage point limits for the rates below one per cent were too high, the Committee on Contributions is being requested to modify these rates prior to implementation of Scheme III. The main problem in respect of rates below one per cent related to the concern that Member States at the lower end of the brackets would be called upon to absorb increases that would still appear to be unacceptably high. It is hoped that when this problem has been addressed, the Scheme might be introduced with beneficial results."

/...

6. Table 2 below provides, in addition to what already appears in table 1, a distribution of the total membership of the United Nations by rate bracket (column (2)) and the percentage limits expressed in index points for rates at the lower and higher end of each bracket (columns (4) and (5)). The latter information is included to facilitate the Committee's review of percentage point limits.

Table 2

Combination of percentage limits and percentage point limits with eight rate brackets

If the present official Number of Member States The percentage change in the new machine scale scale is should not be more than the lesser of:

(1)	(2)	(3)	Column (3) expressed in index points		(6)
			Min.	Max.	
Above 5.00 per cent	5	5.0	25	-	75 points
2.50 - 4.99 per cent	3	7.5	19	37	30 points
1.00 - 2.49 per cent	8	10.0	10	25	20 points
0.76 - 0.99 per cent	4	15.0	11	15	14 points
0.51 - 0.75 per cent	7	20.0	10	15	12 points
0.25 - 0.50 per cent	10	25.0	6	13	8 points
0.05 - 0.24 per cent	23	30.0	1-1/2	7	3 points
0.01 - 0.04 per cent	99	-	-	-	1 point

159

7. During the last session of the Fifth Committee, a number of delegations commented on the uneven changes in percentage limits from one bracket to the other. They pointed out that changes in percentage limits (column (3) above) were in the order of 2.5 per cent for the first three brackets, counting from the top, and then increased to 5 per cent from the third bracket downward.

8. In its review of the scheme of limits, the Committee might consider, among others, to retain the same eight-rate brackets while modifying the percentage limits and percentage point limits to reflect the above concern of the General Assembly. The modified scheme given below is submitted for consideration by the Committee.

/...

Table 3Combination of percentage limits and percentage point limits with eight rate brackets

<u>If the present official scale is</u>	<u>The percentage change in the new machine scale should not be more than the lesser of:</u>			
	<u>Percentage limits</u>	<u>Column (1) expressed in index points</u>		<u>Percentage point limits</u>
	(1)	<u>Min.</u>	<u>Max.</u>	(4)
Above 5.00 per cent	5.0	25	-	75 points
2.50 - 4.99 per cent	7.5	19	37	30 points
1.00 - 2.49 per cent	10.0	10	25	20 points
0.76 - 0.99 per cent	12.5	10	12	11 points
0.51 - 0.75 per cent	15.0	8	11	10 points
0.25 - 0.50 per cent	17.5	4	9	8 points
0.05 - 0.24 per cent	20.0	1	5	4 points
0.01 - 0.04 per cent	-	-	-	1 point

9. In this modified scheme, the percentage limits are reduced for the brackets below 1 per cent to reflect the views expressed in the Fifth Committee. The percentage point limits are also changed in such a way that rates at the lowest end of a higher bracket (e.g., 0.25 per cent is the lowest end of the third bracket counting from below) would not increase in index points by more than increases for rates corresponding to the highest end of a lower bracket (e.g., 0.24 per cent represents the highest end of the second bracket counting from below). Those slight changes serve to smooth out the differences in index point limits applied to rates falling at the end of one bracket and the beginning of the next higher bracket.

10. It should be noted that the percentage point limit in table 3 above for rates within the bracket 0.05-0.24 per cent is one index point higher than the corresponding point limit recommended by the Committee in paragraph 49 of its report.^{1/} This change might affect Member States with rates of assessment falling below 0.18-0.24 per cent. A closer analysis shows that the rates of assessment of four Member States falling within that range might actually be affected by that modification. On the other hand, while the lowering of percentage limits for the four brackets from 0.05-0.99 per cent, covering currently 44 Member States, would keep increases in individual rates of assessment between successive scales within the 20 per cent range, they would similarly reduce the decreases in the rates of some Member States.

/...

11. The effects of applying revised Scheme III limits (para. 49 of the Committee's report)^{1/} and the modified scheme given in table 3 of the present paper are shown in the annex to this paper. The total of the present official scale is 100.04 per cent because of the admission to the United Nations membership of two new members, Brunei Darussalam in 1984 and Saint Christopher and Nevis in 1983, after the establishment of the 1983-1985 scale. The machine scale shown in columns (2)-(6) are constructed using the same constraints and principles as those employed in the establishment of the present official scale, that is, the ceiling and floor rates are 25 and 0.01 per cent, respectively. The low per capita income allowance formula is changed to \$US2,200 and 85 per cent, while the statistical base period remains 10 years (1974-1983). Column (2) gives the results before applying the limits; columns (3) and (4) the results after applying the limits given in para. 49 of the Committee's report; and columns (5) and (6) show the results after applying the limits given in table 3 of the present paper.

12. For the purposes of the limits exercise, all increases and decreases take the official scale as the starting point. If the percentage rates in column (2) compared with those in column (1) do not exceed or fall below the limits, the figures "before proration" under columns (3) and (5) will be the same as those in column (2). On the other hand, if the percentage rates in column (2) compared with those in column (1) exceed or fall below the limits, the figures "before proration" under columns (3) and (5) will be equal to the percentage rate in column (1) plus or minus the relevant limit.

13. Generally, this exercise would lead to percentage rates "before proration" in columns (3) and (5) which would not add up to the required 100 per cent. In actual fact, column (3) adds up to 99.8044 and column (5) to 99.6866. The difference between the actual total and 100 per cent (to which all scale calculations ought to add) is prorated among all the Member States other than those subject to the ceiling and floor, and those whose percentage rates are restricted from moving up or down beyond the said limits and which, therefore, are fixed at specified levels. The results after such proration are shown in columns (4) and (6). The total shown in those columns are calculated as close to 100 per cent as possible, subject to rounding constraints.

14. The net effect of applying the scheme of limits on the scale of assessments as a whole could be seen in the differences between the totals in columns (2) and (3) ($99.96 - 99.80 = 16$ index points) and columns (2) and (4) ($99.96 - 99.69 = 27$ index points). The difference between the totals in columns (3) and (5) ($99.80 - 99.69 = 11$ index points) represents the net effect of lowering the percentage points and percentage point limits for brackets below 1 per cent.
