ÍNDICE DE MATERIAS

CONTENTS

Notas explicativas

En los cuadros del presente *Anuario* se han empleado los siguientes signos:
El asterisco indica que se trata de cifras preliminares.
Tres puntos (...) indican que los datos faltan o no constan por separado.
La raya (-) indica que la cantidad es nula o despreciable.
El punto (.) se usa para separar los decimales.
El guion (-) puesto entre cifras que expresen años, por ejemplo 1971-1973, indica que se trata de todo el período considerado, ambos años inclusive.
La sigla n.e.p. significa no especificado (o incluido) en otra parte.
La palabra "toneladas" indica toneladas métricas, y la palabra "dólares" se refiere a dólares de los Estados Unidos, salvo indicación contraria.
Salvo indicación contraria, las referencias a tasas anuales de crecimiento o variación corresponden a tasas anuales compuestas.
Debido a que a veces se redondean las cifras, los datos parciales y los porcentajes presentados en los cuadros no siempre suman el total correspondiente.
La "T" inserta en una serie de datos indica un quiebre de dicha serie originado por cambios en el año base de las estimaciones, en su cobertura o en su metodología de elaboración.

Notes and explanation of symbols

The following symbols have been used in the tables in the *Yearbook*:
An asterisk indicates preliminary figures.
Three dots (...) indicate that data are not available or are not separately reported.
A dash (-) indicates that the amounts is nil or negligible.
A point (.) is used to indicate decimals.
Use of a hyphen (-) between years, e.g., 1971-1973, indicates reference to the complete number of calendar years involved, including the beginning and end years.
The abbreviation n.e.s. indicates that the item in question is not elsewhere specified or included.
The abbreviation n.e.c. indicates that the item is not elsewhere classified or included.
Reference to "tons" mean metric tons, and to "dollars" United States dollars, unless otherwise stated.
Unless otherwise stated, reference to annual rates of growth or variation signify compound annual rates.
Individual figures and percentages in tables may not necessarily add up to the corresponding total, because of rounding.
A "T" inserted in a series of data indicates a break in that series owing to a change in the base year of the estimates, in their coverage or in the methodology with which they were elaborated.

| 49. Tipos de hogares urbanos, según sexo del jefe, alrededor de 1985 y 1995..... | 60 | 49. <i>Types of urban households, by sex of head of household, around 1985 and 1995.....</i> | 60 |
| 50. Tipos de hogares urbanos, según nivel de ingreso familiar, 1994 | 62 | 50. <i>Types of urban households, by household income level, 1994.....</i> | 62 |
| 51. Distribución del ingreso de los hogares urbanos, por quintiles..... | 64 | 51. <i>Distribution of income in urban households, by quintiles</i> | 64 |
| 52. Hogares en situación de pobreza e indigencia, por zonas urbanas y rurales | 66 | 52. <i>Poor and indigent households, by urban and rural areas.....</i> | 66 |
| 53. Unidades de vivienda particulares ocupadas, por tipo y disponibilidad de servicios | 68 | 53. <i>Occupied private dwelling units, by type of service available.....</i> | 54. |
| 54. Crecimiento del consumo privado por habitante | 69 | 54. <i>Growth of per capita private consumption.....</i> | 69 |

II. CRECIMIENTO ECONÓMICO / *ECONOMIC GROWTH*

| | | | |
|------------------------------------------------------------------------------------------------|----|--------------------------------------------------------------------------------------------|----|
| 55. Crecimiento del producto interno bruto, a precios constantes de mercado..... | 70 | 55. <i>Growth of gross domestic product, at constant market prices.....</i> | 70 |
| 56. Crecimiento del producto interno bruto por habitante, a precios constantes de mercado.. | 71 | 56. <i>Growth of per capita gross domestic product, at constant market prices</i> | 71 |
| 57. Crecimiento del ingreso nacional bruto real disponible, a precios constantes de mercado .. | 72 | 57. <i>Growth of real gross national disposable income, at constant market prices.....</i> | 72 |

| | | | |
|-----------------------------------------------------------------------------------------------------------|----|----------------------------------------------------------------------------------------------------------|----|
| 58. Crecimiento del quntum de las importaciones de bienes y servicios | 73 | 58. <i>Growth of quantum of imports of goods and services</i> | 73 |
| 59. Coeficientes de las importaciones de bienes y servicios | 74 | 59. <i>Coefficients of imports of goods and services.....</i> | 74 |
| 60. Crecimiento del quntum de las exportaciones de bienes y servicios | 75 | 60. <i>Growth of quantum of exports of goods and services</i> | 75 |
| 61. Coeficientes de las exportaciones de bienes y servicios | 76 | 61. <i>Coefficients of exports of goods and services.....</i> | 76 |
| 62. Coeficientes de la formacin bruta de capital fijo | 77 | 62. <i>Coefficients of gross fixed capital formation.....</i> | 77 |
| 63. Crecimiento de la agricultura, silvicultura, caza y pesca | 78 | 63. <i>Growth of agriculture, forestry, hunting and fishing.....</i> | 78 |
| 64. Participacin de la agricultura, silvicultura, caza y pesca en la generacin del producto .. | 79 | 64. <i>Share of agriculture, forestry, hunting and fishing in the generation of the product.....</i> | 79 |
| 65. Superficie cosechada de los once principales productos | 80 | 65. <i>Eleven main products: area harvested</i> | 80 |
| 66. Crecimiento de la produccin de alimentos .. | 81 | 66. <i>Growth of food production.....</i> | 81 |
| 67. Mecanizacin | 82 | 67. <i>Mechanization</i> | 82 |
| 68. Exportaciones agropecuarias | 83 | 68. <i>Agricultural exports</i> | 83 |
| 69. Crecimiento de la produccin minera | 84 | 69. <i>Growth of mining production</i> | 84 |
| 70. Consumo de hidrocarburos por habitante .. | 86 | 70. <i>Per capita consumption of hydrocarbons</i> | 86 |
| 71. Crecimiento del consumo total de hidrocarburos | 87 | 71. <i>Growth of total consumption of hydrocarbons</i> | 87 |
| 72. Consumo de energa elctrica por habitante .. | 88 | 72. <i>Per capita consumption of electric energy</i> | 88 |
| 73. Crecimiento del consumo total de energa elctrica..... | 89 | 73. <i>Growth of total consumption of electric energy</i> | 89 |
| 74. Participacin de la energa hidroelctrica en la generacin de electricidad | 90 | 74. <i>Share of hydroelectric power in generation of electricity</i> | 90 |
| 75. Crecimiento de la industria manufacturera .. | 91 | 75. <i>Growth of manufacturing</i> | 91 |
| 76. Participacin de la industria manufacturera en la generacin del producto | 92 | 76. <i>Share of manufacturing in the generation of the product</i> | 92 |
| 77. Crecimiento del producto manufacturero por habitante, a precios constantes de mercado .. | 93 | 77. <i>Growth of per capita manufacturing product, at constant market prices</i> | 93 |
| 78. Concentracin industrial | 94 | 78. <i>Industrial concentration</i> | 94 |
| 79. Participacin de las industrias metalme c nicas en la generacin de la produccin manufacturera | 98 | 79. <i>Share of manufacturing output produced by the metal manufactures and machinery industry</i> | 98 |

III. PRECIOS INTERNOS /DOMESTIC PRICES

| | | | |
|-------------------------------------------------------|-----|----------------------------------------------------------|-----|
| 80. Variaciones en el ´ndice de precios al consumidor | 100 | 80. <i>Variations in the consumer prices index</i> | 100 |
|-------------------------------------------------------|-----|----------------------------------------------------------|-----|

IV. FORMACIN DE CAPITAL Y FINANCIAMIENTO / CAPITAL FORMATION AND FINANCING

| | | | |
|------------------------------------------------------------------|-----|---------------------------------------------------------------------------|-----|
| 81. Formacin bruta de capital fijo en construccin | 104 | 81. <i>Gross fixed capital formation in construction</i> | 104 |
| 82. Formacin bruta de capital fijo en maquinaria y equipo | 105 | 82. <i>Gross fixed capital formation in machinery and equipment</i> | 105 |

V. COMERCIO EXTERIOR / EXTERNAL TRADE

| | | | |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|--------------------------------------------------------------------------------------------------------------------------|-----|
| 83. Exportaciones de productos primarios..... | 106 | 83. <i>Exports of primary products.....</i> | 106 |
| 84. Exportaciones de productos manufacurados | 107 | 84. <i>Exports of manufactures.....</i> | 107 |
| 85. Amrica Latina y el Caribe: exportacin de los diez productos principales segn su participacin porcentual en cada ao | 108 | 85. <i>Latin America and the Caribbean: exports of the ten leading products by their percentage share each year.....</i> | 108 |
| 86. Argentina: exportacin de los diez productos principales segn su participacin porcentual en cada ao | 110 | 86. <i>Argentina: exports of the ten leading products by their percentage share each year.....</i> | 110 |
| 87. Barbados: exportacin de los diez productos principales segn su participacin porcentual en cada ao..... | 112 | 87. <i>Barbados: exports of the ten leading products by their percentage share each year.....</i> | 112 |

| | | | |
|---------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------------------------------------------------------------------------------------|-----|
| 88. Belice: exportación de los diez productos principales según su participación porcentual en cada año | 114 | <i>Belize: exports of the ten leading products by their percentage share each year</i> | 114 |
| 89. Bolivia: exportación de los diez productos principales según su participación porcentual en cada año | 116 | <i>Bolivia: exports of the ten leading products by their percentage share each year</i> | 116 |
| 90. Brasil: exportación de los diez productos principales según su participación porcentual en cada año | 118 | <i>Brazil: exports of the ten leading products by their percentage share each year</i> | 118 |
| 91. Chile: exportación de los diez productos principales según su participación porcentual en cada año | 120 | <i>Chile: exports of the ten leading products by their percentage share each year</i> | 120 |
| 92. Colombia: exportación de los diez productos principales según su participación porcentual en cada año | 122 | <i>Colombia: exports of the ten leading products by their percentage share each year</i> | 124 |
| 93. Costa Rica: exportación de los diez productos principales según su participación porcentual en cada año | 124 | <i>Costa Rica: exports of the ten leading products by their percentage share each year</i> | 124 |
| 94. Dominica: exportación de los diez productos principales según su participación porcentual en cada año | 126 | <i>Dominica: exports of the ten leading products by their percentage share each year</i> | 126 |
| 95. Ecuador: exportación de los diez productos principales según su participación porcentual en cada año | 128 | <i>Ecuador: exports of the ten leading products by their percentage share each year</i> | 128 |
| 96. El Salvador: exportación de los diez productos principales según su participación porcentual en cada año | 130 | <i>El Salvador: exports of the ten leading products by their percentage share each year</i> | 130 |
| 97. Guatemala: exportación de los diez productos principales según su participación porcentual en cada año | 132 | <i>Guatemala: exports of the ten leading products by their percentage share each year</i> | 132 |
| 98. Honduras: exportación de los diez productos principales según su participación porcentual en cada año | 134 | <i>Honduras: exports of the ten leading products by their percentage share each year</i> | 134 |
| 99. Jamaica: exportación de los diez productos principales según su participación porcentual en cada año | 136 | <i>Jamaica: exports of the ten leading products by their percentage share each year</i> | 136 |
| 100. México: exportación de los diez productos principales según su participación porcentual en cada año | 138 | <i>Mexico: exports of the ten leading products by their percentage share each year</i> | 138 |
| 101. Nicaragua: exportación de los diez productos principales según su participación porcentual en cada año | 140 | <i>Nicaragua: exports of the ten leading products by their percentage share each year</i> | 140 |
| 102. Panamá: exportación de los diez productos principales según su participación porcentual en cada año | 142 | <i>Panama: exports of the ten leading products by their percentage share each year</i> | 142 |
| 103. Paraguay: exportación de los diez productos principales según su participación porcentual en cada año | 144 | <i>Paraguay: exports of the ten leading products by their percentage share each year</i> | 144 |
| 104. Perú: exportación de los diez productos principales según su participación porcentual en cada año | 146 | <i>Peru: exports of the ten leading products by their percentage share each year</i> | 146 |
| 105. Trinidad y Tabago: exportación de los diez productos principales según su participación porcentual en cada año | 148 | <i>Trinidad and Tobago: exports of the ten leading products by their percentage share each year</i> | 148 |
| 106. Uruguay: exportación de los diez productos principales según su participación porcentual en cada año | 150 | <i>Uruguay: exports of the ten leading products by their percentage share each year</i> | 150 |
| 107. Venezuela: exportación de los diez productos principales según su participación porcentual en cada año | 152 | <i>Venezuela: exports of the ten leading products by their percentage share each year</i> | 152 |
| 108. Exportaciones intrarregionales | 154 | <i>Intra-regional exports</i> | 154 |
| 109. Importaciones intrarregionales | 155 | <i>Intra-regional imports</i> | 155 |
| 110. Ingresos por transportes | 156 | <i>Income from transport</i> | 156 |

| | | | |
|--------------------------------------------|-----|--------------------------------------------|-----|
| 111. Gastos en transportes | 157 | 111. <i>Expenditure on transport</i> | 157 |
| 112. Ingresos por concepto de viajes | 158 | 112. <i>Travel incomes</i> | 158 |
| 113. Gastos por concepto de viajes | 159 | 113. <i>Travel expenses</i> | 159 |

VI. FINANCIAMIENTO EXTERNO / EXTERNAL FINANCING

| | | | |
|--------------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------|-----|
| 114. Balance en cuenta corriente con respecto a las exportaciones | 160 | 114. <i>Balance on current account with respect to exports</i> | 160 |
| 115. Balance en cuenta corriente con respecto a las importaciones | 161 | 115. <i>Balance on current account with respect to imports</i> | 161 |
| 116. Contribución del financiamiento externo neto a la inversión interna bruta | 162 | 116. <i>Contribution of net external financing to gross domestic investment</i> | 162 |
| 117. Coeficientes de financiamiento externo neto | 163 | 117. <i>Coefficients of net external financing</i> | 163 |
| 118. Remesas por pagos de utilidades e intereses | 164 | 118. <i>Remittances for payments of profits and interest</i> | 164 |
| 119. Variaciones de las reservas internacionales .. | 165 | 119. <i>Annual changes in international reserves</i> .. | 165 |

SEGUNDA PARTE: SERIES ESTADÍSTICAS DE AMÉRICA LATINA Y EL CARIBE

PART TWO: STATISTICAL SERIES FOR LATIN AMERICA AND THE CARIBBEAN

I. POBLACION / POPULATION

| | | | |
|---------------------------------------------------------------------|-----|--------------------------------------------------------------------------|-----|
| 120. Población total | 169 | 120. <i>Total population</i> | 169 |
| 121. Proyecciones de la población total | 170 | 121. <i>Projections of total population</i> | 170 |
| 122. Población estimada, por grupos de edades, 1997 | 172 | 122. <i>Estimated population, by age groups, 1997</i> | 172 |
| 123. Población masculina estimada, por grupos de edades, 1997 | 174 | 123. <i>Estimated male population, by age groups, 1997</i> | 174 |
| 124. Población femenina estimada, por grupos de edades, 1997 | 176 | 124. <i>Estimated female population, by age groups, 1997</i> | 176 |
| 125. Población en hogares particulares, por tamaño del hogar | 178 | 125. <i>Population in private households, by size of household</i> | 178 |

II. CUENTAS NACIONALES / NATIONAL ACCOUNTS

| | | | |
|---------------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| 126. América Latina y el Caribe: producto interno bruto por clase de actividad económica, a precios constantes de mercado | 180 | 126. <i>Latin America and the Caribbean: gross domestic product by kind of economic activity, at constant market prices</i> | 180 |

INTRODUCCIÓN
INTRODUCTION

INTRODUCCIÓN / INTRODUCTION

La edición 1997 del *Anuario estadístico de América Latina y el Caribe* contiene una selección actualizada a comienzos de diciembre de las principales series estadísticas disponibles sobre la evolución económica y social de los países de la región. Representa un sistemático esfuerzo de la División de Estadística y Proyecciones de la CEPAL, orientado a homogeneizar las cifras y a hacerlas internacionalmente comparables.

Con relación a la edición 1996, no se han introducido modificaciones en la estructura; en cambio el contenido de los capítulos sobre Desarrollo Social y Bienestar y Condiciones Sociales registran diferencias importantes ya que se han rediseñado, reubicado y reemplazado algunos de los cuadros que los conforman. En la presentación de las balanzas de pagos se mantiene la presentación de las orientaciones para su versión analítica extraídas de la quinta edición del Manual de balanza de pagos, publicada por el Fondo Monetario Internacional en 1993.

Cabe destacar una vez más, los esfuerzos realizados para que la presente edición esté a disposición de los usuarios en forma oportuna.

La primera parte comprende indicadores socioeconómicos derivados (tasas de crecimiento, proporciones o coeficientes), que representan una visión resumida de cada área de interés y que constituyen antecedentes para que la información pueda ser utilizada en análisis especializados. En este conjunto de indicadores se han incluido los que se emplean en las evaluaciones regionales periódicas del proceso de desarrollo de América Latina y el Caribe que realiza la Secretaría de la CEPAL.

En la segunda parte figuran las series históricas en números absolutos, lo que permite su posible utilización para una gran variedad de propósitos. En la mayoría de los cuadros estadísticos aparecen cifras referidas a un mismo tema, ordenadas de manera que se facilite la comparación entre países y entre éstos y los totales o promedios regionales. Al respecto, sólo los cuadros de balanza de pagos y cuentas

The 1997 edition of the *Statistical Yearbook for Latin America and the Caribbean* contains a selection, updated to the end of December, of the main statistical series available on economic and social trends in the countries of the region. It represents a systematic effort of the ECLAC Statistics and Projections Division to harmonize the figures and make them internationally comparable.

This year's edition does not differ a great deal from the 1996 edition in terms of its structure, but does exhibit major differences with respect to the contents of the chapters on social development and welfare and on social conditions, in which some of the tables have been redesigned, moved or changed altogether. The tables on the balance of payments continue to be based on the approach to its analysis taken by the fifth edition of the *Balance of Payments Manual* (International Monetary Fund, 1993).

It should be noted that an effort is again being made to ensure that this edition will be made available to users promptly.

Part One consists of derived social and economic indicators (growth rates, ratios or coefficients) which provide an overview of each area of interest, along with the background material needed to make the information suitable for use in specialized analyses. This group of indicators include those used in the periodic regional appraisals of the development process of Latin America and the Caribbean conducted by the ECLAC secretariat.

Part Two provides historical series in absolute figures which can be used for a large variety of purposes. The majority of the statistical tables provide figures on a single topic, organized in such a way as to facilitate comparisons among countries as well as between individual countries and regional totals or averages. The tables on the balance of payments and national accounts are the only

nacionales son una excepción, ya que han sido elaborados por países.

Aunque en la actualidad 33 países latinoamericanos y del Caribe son miembros de la Comisión, los cuadros en que se presentan totales regionales por lo general corresponden a la suma de datos referentes a 25 países. En este sentido, cabe señalar que las estadísticas de los países del Caribe son menos completas, razón por la cual la cobertura regional varía según el área temática que se aborda. Al respecto, se siguen haciendo esfuerzos por superar esta situación y se espera contar en el mediano plazo con información completa, al menos sobre los grandes esquemas estadísticos macroeconómicos, como las cuentas nacionales, la balanza de pagos y el comercio exterior.

En la mayoría de los cuadros, los países aparecen en orden alfabético, excluyéndose aquellos sobre los que se carece de datos o en los que las cantidades son nulas o mínimas.

Los indicadores de la primera parte del *Anuario* corresponden, en general, a los años 1980 y 1985, y al período comprendido entre 1990 y 1996. Cuando los datos no están suficientemente actualizados, se presenta el último año disponible para cada país. Algunos de los indicadores basados en información censal se consignan sólo en torno a los años en que se han efectuado los censos respectivos. Las series estadísticas de la segunda parte, tanto las de origen nacional o estimaciones regionales, presentan datos de los años 1980 y 1985, y el período comprendido entre 1988 y 1996.

Dada la excelente receptividad de los usuarios, así como el buen grado de aproximación alcanzado en versiones anteriores, se continúan publicando estimaciones preliminares del año de edición del *Anuario* (en este caso 1997). Se trata de un esfuerzo realizado en el último bimestre de cada año para informar a la comunidad internacional sobre la evolución macroeconómica de los países de la región en el período que se examina. Al respecto, cabe formular la siguiente precisión: debido a las diferentes fechas de cierre, en ciertos casos las cifras históricas de los últimos años de los cuadros del *Anuario* pueden acusar pequeñas diferencias con las del *Balance preliminar de la economía de América Latina y el Caribe, 1997*, ello por el distinto momento en que se obtuvo la información contenida en cada una de dichas publicaciones.

exceptions in this respect, since they have been prepared on a country-by-country basis.

Although there are currently 33 Latin American and Caribbean member countries of the Commission, the tables giving regional totals generally correspond to the sum of data on 25 countries. In this connection, it should be noted that the statistics of the Caribbean countries are less complete, which is why the regional coverage varies according to the subject area addressed. Efforts continue to be made to overcome this situation and it is hoped that in the medium term complete information will become available, at least on the major macroeconomic items such as national accounts, the balance of payments and foreign trade.

In most of the tables, the countries appear in alphabetical order; those for which there are no data or for which the amounts are zero or negligible are not included.

In Part One of the *Yearbook*, most of the indicators correspond to the years 1980 and 1985 and to the period 1990-1996. In cases where the data have not been updated, the most recent figures available for each country are given. Some of the indicators that are based on census data are given only for the years when censuses were conducted. The country and regional series included in Part Two cover 1980, 1985 and 1988-1996.

In view of users' favourable response, as well as the degree of accuracy achieved in previous versions, preliminary estimates for the year of issue of the *Yearbook* (in this case, 1997) are once again given. These estimates are the result of an effort made during the last two months of each year to inform the international community about the macroeconomic trends observed in the countries of the region during the period. In this connection, it is important to note that due to the difference in closing dates, in certain cases the historical figures given for recent years in the tables of the *Yearbook* may differ slightly from those of the *Preliminary Overview of the Economy of Latin America and the Caribbean, 1997*.

NOTAS TÉCNICAS / TECHNICAL NOTES

INDICADORES DEL DESARROLLO ECONÓMICO Y SOCIAL: CONCEPTO Y CRITERIOS DE SELECCIÓN

INDICATORS OF ECONOMIC AND SOCIAL DEVELOPMENT: CONCEPT AND SELECTION CRITERIA

Antecedentes

La CEPAL comenzó a elaborar sistemáticamente, a contar de 1973, un conjunto de indicadores del desarrollo económico y social en América Latina y el Caribe que pudieran servir de base a las evaluaciones regionales de la Estrategia Internacional de Desarrollo dispuestas por la resolución 2626 (XXV) de la Asamblea General de las Naciones Unidas. Se seleccionó un primer conjunto de indicadores en *América Latina y la Estrategia Internacional de Desarrollo: primera evaluación regional* (E/CN.12/947/Add.2), documento que sirvió de apoyo a la Evaluación de Quito en 1973. La elaboración sistemática de indicadores destinados a suministrar una base cuantitativa a los análisis de las evaluaciones regionales cristalizó en *El desarrollo latinoamericano y la coyuntura económica internacional* (E/CEPAL/981/Add.3), en el que se apoyó la Evaluación de Chaguanas en 1975. Este conjunto de indicadores fue ulteriormente publicado en *Indicadores del desarrollo económico y social en América Latina* (Cuaderno estadístico de la CEPAL, Nº 2). El *Anuario Estadístico de América Latina y el Caribe* ha ido incorporando a su contenido la mayor parte de aquellos indicadores además de algunos otros que son el fruto de una mayor disponibilidad de datos estadísticos o que han demostrado ser pertinentes para apreciar mejor determinados aspectos del desarrollo.

El concepto de indicador

En términos generales, se denomina indicador a una observación empírica que sintetiza aspectos de un fenómeno que resultan importantes para uno o más propósitos analíticos y prácticos. Si bien el término indicador puede aludir a cualquier característica observable de un fenómeno, suele

Background

In 1973, ECLAC began to prepare systematically a set of indicators of economic and social development in Latin America which could be used as a basis for the regional appraisals of the International Development Strategy provided for by United Nations General Assembly resolution 2626 (XXV). An initial set of indicators was employed in *Latin America and the International Development Strategy: First Regional Appraisal* (E/CN.12/947/Add.2), which furnished supporting documentation for the Quito Appraisal in 1973. The systematic preparation of indicators to serve as a quantitative analytical base for the regional appraisals found its full expression in *Latin American Development and the International Economic Situation* (E/CEPAL/981/Add.3), which provided the background material for the Chaguaramas Appraisal in 1975. This set of indicators was subsequently published in *Indicadores del desarrollo económico y social en América Latina* (Cuaderno Estadístico de la CEPAL, No. 2). The *Statistical Yearbook for Latin America and the Caribbean* includes most of these indicators, as well as some others whose preparation has been made possible by the greater availability of statistical data or which have proved to be useful for a better appreciation of specific aspects of development.

The concept of indicators

Broadly speaking, an indicator is an empirical observation which synthesizes aspects of a phenomenon which are of importance for one or more analytical or practical purposes. Although the term "indicator" may refer to any observable characteristic of a phenomenon, it is usually

aplicarse a aquellas que son susceptibles de expresión numérica.

En la medida en que los datos sobre una variedad de fenómenos se van combinando en conceptos agregativos, se obtienen indicadores sintéticos del proceso de desarrollo económico, como son el producto, los números índices de los agregados de la actividad económica, o la esperanza de vida al nacer. Desde otra perspectiva, parece también necesario disponer de indicadores analíticos, que se obtienen al acotar el universo de estudio y precisar la definición, de manera que se expliciten los propósitos específicos de cada indicador.

Los indicadores pueden ser expresados en los términos absolutos en que se realiza la medición, o derivados mediante un proceso de cálculo que relacione dicha medición con otras magnitudes (tasas de variación, participaciones, relaciones). La expresión en términos relativos suele estar asociada a la especificidad de los usos a que se destina cada indicador, aunque también contribuye a facilitar la comparación entre países. En cambio, los indicadores en números absolutos pueden servir a una multiplicidad de propósitos, y además ser utilizados posteriormente para construir indicadores específicos aplicables a distintas áreas de interés. Por esta razón, y en concordancia con el uso corriente, en la parte I del *Anuario* sólo se han incluido indicadores derivados, destinándose la parte II a las mediciones o series estadísticas en números absolutos.

Criterios utilizados en la selección de indicadores

En esta edición del *Anuario* se incluyen tanto indicadores del desarrollo económico como indicadores sociales. Por medio de las evaluaciones del desarrollo regional que ya se mencionaron, se ha ido decantando un conjunto adecuado de indicadores de los aspectos económicos del desarrollo. Por otra parte, los esfuerzos internacionales por elaborar un sistema coherente de indicadores sociales¹ constituyen el marco conceptual dentro del cual se inscribe la elaboración de indicadores sociales para la región latinoamericana.

¹ Naciones Unidas, *Hacia un sistema de estadísticas sociales y demográficas*, Estudios de métodos, serie F, N° 18, Nueva York, 1975, y Naciones Unidas, *Social Indicators: Preliminary Guidelines and Illustrative Series*, Statistical Papers, serie M, N° 63, Nueva York, 1978.

applied to those which may be expressed numerically.

When data on a variety of phenomena are combined to form aggregate concepts, synthetic indicators of the economic development process are obtained, such as the product, index numbers for economic aggregates or life expectancy at birth. From another standpoint, there also seems to be a need for analytical indicators, which are obtained by limiting the universe under consideration and defining it more precisely so as to focus on the specific aims of each indicator.

Indicators may be expressed in the absolute terms in which the measurement is made or may be derived through a process of calculation which relates that measurement to others (rates of change, shares, ratios). The use of indicators expressed in relative terms is usually associated with the specific purposes for which each indicator is intended, although it also makes comparisons between countries easier. On the other hand, indicators in absolute figures may serve a variety of purposes and may also subsequently be used to construct specific indicators which are applicable to different areas of interest. Therefore, in accordance with current practice, Part One of the *Yearbook* includes only derived indicators, while Part Two presents the measurements or statistical series in absolute numbers.

Criteria used in the selection of indicators

This issue of the *Yearbook* includes indicators of economic development as well as social indicators. In the course of the above-mentioned appraisals of regional development, a suitable set of indicators of the economic aspects of development has gradually been formed. International efforts to prepare a coherent system of social indicators¹ provide the conceptual framework for the preparation of social indicators for the Latin American region.

¹ United Nations, *Towards a System of Social and Demographic Statistics*, Studies in Methods, series F, No. 18, New York, 1975, and United Nations, *Social Indicators: Preliminary Guidelines and Illustrative Series*, Statistical Papers, series M, No. 63, New York, 1978.

Los indicadores incluidos en el *Anuario* se han seleccionado atendiendo básicamente a su pertinencia, a la posibilidad de comparar a través de ellos la situación de los países, a la conveniencia de mantener un buen equilibrio entre la información referente a distintos sectores o áreas de interés y al propósito de evitar duplicaciones y superposiciones en los datos presentados.

El criterio de pertinencia se tradujo en una definición inicial de las áreas sociales y económicas más estrechamente asociadas al proceso de desarrollo de los países de la región y una posterior selección de aquellos indicadores de mayor interés sustantivo dentro de cada área.

El criterio de comparabilidad tuvo en cuenta la disponibilidad de los datos básicos, su homogeneidad conceptual, así como su cobertura social y espacial. Se tendió a favorecer la inclusión de indicadores disponibles o que pudieran ser calculados para todos o la mayoría de los países de la región. Asimismo, se prefirieron indicadores en cuya construcción se pudieran utilizar aquellas series estadísticas nacionales que tienen suficiente homogeneidad en cuanto a contenido conceptual, limitación de las categorías sociales a que se refieren los datos y cobertura espacial.

El criterio de equilibrio entre sectores se tradujo en la tendencia a equiparar el número de indicadores en cada área de interés, respetándose, sin embargo, la complejidad de los fenómenos característicos de cada una de ellas.

Finalmente, se procuró evitar duplicaciones y superposiciones en la información provista por los distintos indicadores dentro de cada área.

Los indicadores seleccionados han sido agrupados en seis grandes áreas: *Desarrollo social y bienestar*, que contiene indicadores de población y características demográficas, de empleo y estructura ocupacional, de niveles de vida, consumo, nutrición y distribución del ingreso, así como de salud, educación, seguridad social y vivienda; *Crecimiento económico*, que incluye indicadores referentes a los agregados económicos globales y a los principales sectores productivos; *Precios internos*; *Formación de capital y financiamiento*, que incluye indicadores sobre la inversión, el ahorro y los recursos financieros públicos; *Comercio exterior*; y *Financiamiento externo*.

En su gran mayoría, los indicadores incluidos en la parte I se derivan de las series estadísticas que se incluyen en la parte II, y están sujetos, por lo tanto, a las mismas limitaciones que éstas. Por la misma

The indicators included in the *Yearbook* have been chosen primarily on grounds of relevance, the possibility of using them to compare the situations in the various countries, the desirability of achieving a balanced coverage of different sectors or areas of interest, and the goal of avoiding duplication and overlapping of data.

The criterion of relevance led to an initial identification of the social and economic areas most closely linked with the development process of the countries of the region, followed by a selection of the indicators of greatest substantive interest in each area.

The criterion of comparability took into account the availability of basic data, their conceptual homogeneity, and their social and spatial coverage. There was a tendency to give preference to indicators which either were already available or could be calculated for all or most of the countries of the region. Preference was also given to indicators which could be constructed using those national statistical series having a satisfactory level of homogeneity as regards their conceptual content, the definition of the social categories covered by the data, and spatial coverage.

The criterion of balanced coverage of the sectors led to a tendency to have a similar number of indicators in each area of interest, while, however, ensuring that due regard was given to the complexity of the phenomena involved in each case.

Finally, an attempt was made to avoid duplication and overlapping in the information provided by the different indicators within each area.

The chosen indicators have been grouped into six major areas: *Social development and welfare*, which contains indicators of population and demographic variables, employment and the occupational structure, standards of living, consumption, nutrition and income distribution as well as health, education, social security and housing; *Economic growth*, which includes indicators referring to global economic aggregates and the main sectors of production; *Domestic prices*; *Capital formation and financing*, which includes indicators on investment, saving and public financial resources; *External trade*; and *External financing*.

For the most part, the indicators contained in Part One are derived from the statistical series included in Part Two and are therefore subject to the same limitations as the latter. For this reason,

razón, se aplican a estos indicadores derivados las observaciones que se formulan más adelante acerca de dichas series, en lo que atañe a conceptos, definiciones, cobertura, procedimientos de cálculo y fuentes utilizadas para su obtención.

La definición de cada indicador se deduce de su denominación y de las aclaraciones que figuran en el cuadro respectivo acerca de la forma en que se expresa. Así, por ejemplo, bajo el título "Formación bruta de capital fijo en construcción" se señala que éstos están expresados en un porcentaje del Producto Interno Bruto (PIB) a precios constantes de 1990.

Las tasas de crecimiento se basan en datos a precios constantes. Las tasas anuales de variación para períodos mayores de un año han sido calculadas en forma geométrica, a contar de los años extremos del período.

En el caso de algunos indicadores se han omitido los valores regionales, ya sea porque no se dispone de ponderaciones adecuadas, o porque la información básica es parcial o no estrictamente comparable entre los países, o bien porque las informaciones para cada país corresponden a diferentes períodos de referencia.

Los cuadros contienen anotaciones que especifican si los valores correspondientes a un país tienen o no la cobertura o el período a que se refiere la definición del indicador, y cuáles son las diferencias respectivas.

the observations made below in reference to the series in Part Two concerning concepts, definitions, coverage, methods of calculation and the sources used to obtain them also apply to these derived indicators.

The definition of each indicator may be deduced from the title and the notes which appear in the corresponding table concerning the form in which it is presented. Thus, for example, under the title "Gross fixed capital formation in construction" it is noted that these coefficients are expressed as percentages of the gross domestic product at constant 1990 prices.

Growth rates are based on data at constant prices. Annual rates of variation for periods of more than one year have been calculated geometrically on the basis of data for the initial and final years of the period.

In the case of some indicators, the regional values have been omitted either because adequate weightings are not available, because the basic information is partial or not strictly comparable among countries, or because the information on each country corresponds to different reference periods.

The tables contain notes that indicate whether or not the values shown for a country correspond to the coverage or the period to which the definition of the indicator refers and that specify the differences in question.

POBLACIÓN Y CARACTERÍSTICAS DEMOGRÁFICAS / POPULATION AND DEMOGRAPHIC CHARACTERISTICS

Las series sobre población y los indicadores demográficos corresponden a las estimaciones que realiza el Centro Latinoamericano de Demografía (CELADE) y que publica periódicamente en su *Boletín demográfico*.

Tanto en esta parte como en las de educación, empleo, salud y vivienda, se incluyen cifras o indicadores que se han obtenido o elaborado sobre la base de los censos de población y vivienda. Si bien las recomendaciones internacionales indican que éstos deben realizarse en los años terminados en 0, los países no siempre están en condiciones de cumplir con esta recomendación; por este motivo, en algunos cuadros los títulos de las columnas que indican la

The population series and demographic indicators are estimates which have been prepared by the Latin American Demographic Centre (CELADE) and which are published periodically in its *Demographic Bulletin*.

This section, as well as the sections on education, employment, health and housing, contains figures or indicators obtained from or compiled on the basis of population and housing censuses. Although international recommendations indicate that such censuses should be carried out in the years ending in 0, the countries are not always able to comply with this recommendation; for that reason, the column headings showing the date to which the

fecha a que se refiere la información dice "alrededor de ...". Para mayor facilidad del lector, se indica a continuación la fecha de levantamiento de los censos cuya información figura en el presente *Anuario*.

information refers include the word "around ...". For the reader's information, the dates of the censuses from which information was taken for this *Yearbook* are listed below.

Censos alrededor de:

| País | 1970 | 1980 | 1990 |
|----------------------|-----------|----------|-----------|
| Argentina | IX-1970 | X-1980 | V-1991 |

| Trinidad and Tobago | IV-1970 | V-1980 | - |
| Uruguay | V-1975 | X-1985 | V-1996 |
| Venezuela | XI-1971 | X-1981 | X-1990 |

En las proyecciones de población elaboradas por el CELADE se utilizó el método de componentes. Este método supone la proyección en forma separada de la fecundidad, la mortalidad y el saldo migratorio internacional por sexos y grupos quinquenales de edades para cada período quinquenal que abarca la proyección hasta el año 2050. Se estimó también una población inicial coherente con las estimaciones de fecundidad, mortalidad y migración internacional establecidas en el pasado, así como con las estructuras por sexos y edades de la población enumerada en los censos. Con estos elementos se proyectó la población por cohortes a fin de obtener la población para mediados de los años terminados en los dígitos 0 y 5, desagregada por sexos y grupos quinquenales de edades desde el año 1980 hasta el año 2050.

In the population projections prepared by CELADE, the component method was used. This method involves the preparation of separate projections of fertility, mortality and the international migratory balance by sex and five-year age group for each five-year period covered by the projection up to the year 2050. Also, an initial population estimate was prepared that was consistent with past estimates of fertility, mortality and international migration, as well as with the structures by sex and age of the population covered by the censuses. These elements were used to project the population by cohorts in order to obtain the population for the middle of the years ending in 0 and 5, broken down by sex and five-year age group, from 1980 until 2050.

Distribución espacial de la población. En este rubro se incluye un conjunto de indicadores que muestran la importancia relativa de la población en localidades de distinto tamaño y el crecimiento que éstas han experimentado en los últimos decenios. Dada la dificultad de comparar la información entre países, debido a la falta de uniformidad en las definiciones y a las diferencias en la forma de identificar las aglomeraciones urbanas, se presentan además los datos sobre distribución espacial desagregando la población según el tamaño de las localidades de residencia, de acuerdo con los últimos censos de población.

Natalidad. Se adoptó como medida la tasa bruta de natalidad, que se presenta por quinquenios y representa el número de nacidos vivos por cada mil habitantes. Esta se calcula dividiendo el promedio anual de los nacidos vivos en un quinquenio por la población media de ese quinquenio, y multiplicando el resultado por mil.

Mortalidad. La medida adoptada fue la tasa bruta de mortalidad, que representa el número de defunciones por cada mil habitantes. Las tasas quinquenales se calcularon dividiendo el promedio anual de defunciones en el quinquenio por la población media en ese quinquenio y multiplicando el resultado por mil.

Mortalidad infantil. Representa el número de niños que mueren antes de cumplir un año de edad, por cada mil niños que nacen vivos y se calcula dividiendo las defunciones de los menores de un año, en un año y zona determinados, por el número de nacidos vivos en el mismo año y zona, y multiplicando el resultado por mil. La limitación principal de este indicador es que generalmente las cifras se extraen de registros civiles que adolecen de omisiones, tanto de nacimientos como de defunciones, o que registran ambos hechos con diferentes grados de precisión. Para obviar estos problemas, se adoptaron las tasas de mortalidad infantil elaboradas por el CELADE las que se construyen sobre la base de las tablas de vida implícitas en las proyecciones de población, en las que se han corregido las anomalías derivadas de errores en el registro de los datos.

Fecundidad Se midió a través de la tasa global de fecundidad, que corresponde al número de hijos por cada mujer perteneciente a una cohorte de mujeres en edad fértil que no está expuesta a riesgos de mortalidad hasta el término de la edad fértil. La tasa se calcula sumando las

xxx

Spatial distribution of the population. This includes a set of indicators showing the relative weight of the population in localities of different sizes and the growth they have experienced in recent decades. Given the difficulty of comparing the information for different countries due to the lack of uniformity in the definitions and to differences in the way urban agglomerations are identified, data on spatial distribution are also presented on the basis of a breakdown of the population according to the size of residential localities based on the latest population censuses.

Birth rate. This is the gross birth rate and is shown for five-year periods. The gross birth rate represents the number of live births per 1 000 inhabitants. It is calculated by dividing the average number of live births per year in a five-year period by the average population for that five-year period and multiplying the result by 1 000.

Mortality. The measurement used for this variable is the gross mortality rate, which represents the number of deaths per 1 000 inhabitants. The five-year rates were calculated by dividing the average number of deaths per year in a five-year period by the average population in that five-year period and multiplying the result by 1 000.

Infant mortality. This measurement represents the number of children per 1 000 live-born children who die before reaching their first birthday and is calculated by dividing the number of deaths of children aged less than one year in a given year and zone by the number of live births in that year and zone and multiplying the result by 1 000. The main limitation of this indicator is that the figures are generally obtained from registry office records which do not include some births and deaths or do not record births and deaths with the same degree of accuracy. To avoid these problems, the infant mortality rates prepared by CELADE were used. These rates are constructed from the life tables implicit in population projections in which the anomalies resulting from errors in the recording of data have been corrected.

Fertility. The measurement selected for this variable is the global fertility rate, which indicates the number of children per woman in a cohort of women of child-bearing age who are not exposed to mortality risks up to the end of their child-bearing years. The rate is calculated by

tasas de fecundidad media de cada grupo quinquenal de edades y multiplicando dicha suma por cinco.

Esperanza de vida al nacer. Se define como el número medio de años de vida que le restaría vivir a las personas que nacen, si estuvieran sometidas en el futuro a las mismas condiciones de mortalidad presentes, tal como lo indican los datos que abarcan un período reciente.

Población en hogares particulares por tamaño del hogar. Estos datos fueron extraídos de los censos nacionales de población y de las encuestas de hogares. En su lectura es conveniente tener presente las dificultades que en la práctica del levantamiento censal suele encontrar la identificación de los hogares dentro de las viviendas. Al hacer equivalentes los hogares con las unidades habitacionales se aumenta el tamaño medio de los hogares. La inclusión o no inclusión de los empleados domésticos en los hogares de los empleadores también influye en el tamaño medio y afecta la comparabilidad de estos datos.

adding the average fertility rates for each five-year age group and multiplying the result by five.

Life expectancy at birth. This is defined as the average number of years which newborn children could be expected to live if they remained subject in future to the prevailing mortality conditions as indicated by the data for a recent period.

Population in private households by size of household. These data were taken from national population censuses and household surveys. When using these data it is necessary to bear in mind the practical difficulties which usually arise during census-taking in identifying households within housing units. Equating households with housing units has the effect of increasing the average size of households. The inclusion or exclusion of domestic servants in the households of their employers also affects the average size, as well as the comparability of the data.

EMPLEO Y ESTRUCTURA OCUPACIONAL / EMPLOYMENT AND OCCUPATIONAL STRUCTURE

En esta sección se presentan datos provenientes de tres fuentes de información, que determinan las características específicas de los datos.

Proyecciones realizadas por el CELADE. Estas proyecciones permiten mostrar las tendencias de la PEA, los volúmenes de empleo y las tasas de participación en la actividad económica. Corresponden a las series revisadas por el CELADE a partir de 1980, mediante la aplicación de una nueva metodología² que permite aprovechar la información recopilada en los censos y encuestas de hogares disponibles.

Volumen de la PEA. Se han homogeneizado tanto los límites de edad como la definición de la PEA, y los datos se han centrado en los años terminados en 0.

This section provides data from three different sources, each of which imparts certain specific characteristics to the corresponding information.

Projections prepared by CELADE. These projections provide an indication of trends in the economically active population (EAP) as they relate to the working-age population, the size of the EAP itself and participation rates. The projections correspond to the series revised by CELADE from 1980 on based on the use of a new methodology² which permits the utilization of information compiled in censuses and household surveys.

Size of the EAP. Age limits and the definition of the EAP have been standardized, and the data have been aligned around the years ending in 0.

² Véase CELADE, *Métodos para proyecciones demográficas* (LC/DEM/CR/G.05), San José, 1984. Aplicaciones específicas para cada país se presentan en CELADE, *Boletín demográfico*, N° 57 (LC/DEM/G.158), Santiago de Chile, 1996.

² See CELADE, *Métodos para proyecciones demográficas* (LC/DEM/CR/G.05), San José, 1984. Specific applications for each country appear in CELADE, *Demographic Bulletin*, No. 57 (LC/DEM/G.158), Santiago, Chile, 1996.

Tasa de participación en la actividad económica. Se presentan las tasas clasificadas por sexo que corresponden a la relación entre la población económicamente activa de 10 años y más y la población de esa misma edad de cada sexo, multiplicada por 100. Para el cálculo de esas tasas se dividió la PEA homogeneizada y centrada por la población centrada independientemente.

Encuestas de hogares: Para la presente edición del Anuario se han utilizado las encuestas de hogares como principal fuente de información, para describir y caracterizar a la fuerza de trabajo. Como se sabe, esto impone ciertas restricciones debido a que no todos los países realizan encuestas periódicamente y en muchos casos la cobertura geográfica se limita a las áreas urbanas.

Sobre la base de esas encuestas, se presenta un conjunto de indicadores de empleo referidos exclusivamente a las áreas urbanas y calculados a partir de una PEA de 15 años y más. Esto se ha hecho con el objeto de homogeneizar la información, dado que las encuestas nacionales difieren en cuanto a cobertura geográfica y los límites mínimos de edad para la determinación de la PEA.

Las tasas de participación en la actividad económica en las áreas urbanas dejan en evidencia las tendencias del período 1986-1995 correspondientes a hombres y mujeres y clasificadas por grupos de edad en el caso de 1995, último año sobre el que se dispone de información incorporada al banco de datos de la CEPAL. Estas tasas de participación son tasas refinadas del total de la población y tasas específicas, por sexo y edad.

La ocupación por rama de actividad económica se tabula de acuerdo con las grandes divisiones de la *Clasificación Industrial Internacional Uniforme de Todas las Actividades Económicas*, Rev. 2, lo que permite distinguir nueve ramas. Se presenta la estructura porcentual de los ocupados por rama de actividad, en términos generales y por sexo.

La ocupación por categoría de empleo se clasificó en cuatro grupos homogéneos: empleadores, asalariados, trabajadores por cuenta propia y personal de servicio doméstico. Asimismo, se presenta la estructura porcentual de la población ocupada, clasificada en dichas categorías, en términos generales y por sexo.

Participation in economic activity. Participation rates are given by sex. These rates represent the ratio between the EAP aged 10 or over and the male and female populations in that same age group, multiplied by 100. These rates were calculated by dividing the EAP (according to the standardized definition and age alignment as indicated) by the population after it was adjusted to conform to the age alignment in question on the basis of a separate calculation.

Household surveys. In this edition of the *Yearbook*, household surveys have been used as the main source of information for the description and characterization of the labour force. This approach suffers from certain limitations, of course, since not all the countries conduct such surveys on a regular basis and in many cases their geographic coverage is confined to urban areas.

Based on these surveys, a number of employment indicators are presented. These indicators refer exclusively to urban areas and have been calculated for an EAP aged 15 and over. This procedure has been used in the interests of comparability, since the countries' surveys differ in terms of their geographic coverage and the lower age limits used for defining the EAP.

The participation rates given for urban areas reflect the trends observed in 1986-1995 for men and women and, in the case of 1995 (the last year for which information has been incorporated into the ECLAC data bank), by age group. Refined participation rates for the total population and specific rates by sex and age are shown.

Employment by kind of economic activity has been tabulated on the basis of the nine major divisions of the *International Standard Industrial Classification of All Economic Activities*, Rev. 2. The occupational structure is given in percentages, by kind of activity for the total working population and disaggregated by sex.

Employment is disaggregated by occupational category on the basis of four standardized groups: employers, wage earners, own-account workers, and domestic staff. The distribution of the employed population among these categories is given in percentages for the total working population and by sex.

El empleo se clasifica de acuerdo con los principales grupos de ocupación de la Clasificación Internacional Uniforme de Ocupaciones de la OIT (1968). Esta clasificación se pudo aplicar en todos los países, con la excepción de Argentina, razón por la cual no se incluye a ese país en los cuadros sobre estructura porcentual de los ocupados por grupo ocupacional, tanto general como por sexo.

La tasa de desempleo abierto urbano se calcula como relación porcentual entre la población que no ha trabajado pero ha buscado empleo durante el período considerado y el total de la población activa. Hay que tener presente que las cifras corresponden a distintos períodos, debido a que el período de referencia utilizado con respecto al empleo en las encuestas nacionales varía de un país a otro. Se presentan las tasas correspondientes a 1995, clasificadas por sexo y nivel de instrucción.

Censos de población realizados en torno al 1990. Estos fueron los censos utilizados para calcular los indicadores de estructura de la población ocupada en general y por sexo, de acuerdo a las grandes ramas de actividad económica con el objeto de actualizar la información presentada en ediciones anterior del *Anuario*, que cubría hasta 1980. Cabe destacar que los datos de 1970 y 1980 corresponden a estimaciones de la OIT basada en los censos de población de esos años y en una edad mínima de incorporación al mundo laboral de 10 años. Los datos de 1990 se recopilaron directamente en censos realizados por los países en torno a ese año, en los que se considera como edad mínima la estipulada por cada uno de ellos. Por lo tanto, los indicadores de estructura de la población ocupada por rama de actividad de distintos años no son estrictamente comparables. La cobertura geográfica se limita a los países que han dado a conocer los resultados de los censos sobre características económicas de la población, que figuran en la base de datos del CELADE.

Employment is also broken down into the major occupational groups of the ILO *Standard International Classification of Occupations* (1968). It proved possible to apply this classification in all the countries except Argentina, and that country is therefore not included in any of the tables on the percentage breakdown of the employed population by occupational group.

The open unemployment rate for urban areas represents the number of persons who have sought employment but who have not worked during the relevant period, stated as a percentage of the total EAP. The reader should bear in mind that the figures do not all refer to the same time period, since the reference periods used for these purposes in national surveys vary from one country to the next. Rates for 1995 are shown, classified by sex and educational level.

Population censuses conducted around 1990. The results of these censuses were used to calculate the indicators for the distribution of the employed population among the major areas of economic activity (3), both for the total EAP and by sex. These calculations serve to update the information presented in previous editions of the *Yearbook*, which covered the period up to 1980. The figures for 1970 and 1980 are ILO estimates based on the population censuses for those years using a minimum labour-force entry age of 10 years. The figures for 1990 were compiled directly from the censuses conducted by the countries on or around that year and are based on the minimum entry ages used in the individual censuses. Consequently, the indicators for the distribution of the employed population by kind of activity for different years are not comparable in a strict sense. Their geographic coverage is limited to those countries that have published the results of their censuses on the economic characteristics of their populations and those covered in the CELADE database.

MAGNITUD DE LA POBREZA / POVERTY

Los porcentajes de hogares en situación de pobreza e indigencia que figuran en esta publicación fueron elaborados en la CEPAL sobre la base de información proporcionada por las encuestas de hogares.

The figures on the percentage of households classified as poor and as indigent which are given in this publication were calculated by ECLAC on the basis of information obtained from household surveys.

Las estimaciones sobre pobreza absoluta fueron realizadas por la CEPAL mediante el "método del ingreso", que se basa en el cálculo de las líneas de pobreza. Estas representan el monto de ingreso que permite a cada hogar satisfacer las necesidades básicas de todos sus miembros. La determinación de las líneas de pobreza de cada país y zona geográfica se basó en una estimación del costo de una canasta básica de alimentos que permite cubrir las necesidades nutricionales de la población y que considera sus hábitos de consumo, así como la disponibilidad efectiva de alimentos en el país y los precios relativos de los mismos. Al valor de esta canasta se sumó una estimación de los recursos requeridos por los hogares para satisfacer el conjunto de las necesidades básicas no alimentarias.

Las líneas de indigencia corresponden al costo de la canasta básica alimentaria, en tanto que los indigentes (o extremadamente pobres) son las personas que residen en hogares cuyos ingresos son tan bajos que aunque los destinaran íntegramente a comprar alimentos, no lograrían satisfacer adecuadamente las necesidades nutricionales de todos sus miembros.

Al calcular las líneas de indigencia, se tomaron en cuenta las diferencias de precios de los alimentos entre las áreas metropolitanas y las zonas urbanas y rurales. En general, las canastas básicas de alimentos de las zonas urbanas no metropolitanas y rurales se estimaron con precios 5 y 25% inferiores a los de las áreas metropolitanas, respectivamente.

El valor de las líneas de pobreza de las zonas urbanas se obtuvo duplicando el valor de las líneas de indigencia, en tanto que el de las zonas rurales se calculó incrementando en 75% el presupuesto básico destinado a alimentación. Los porcentajes de hogares y de población pobre e indigente se obtuvieron contrastando el valor de ambos presupuestos con el ingreso total per cápita de cada hogar. Los índices nacionales de pobreza e indigencia se calcularon como promedios ponderados de los respectivos índices de cada área geográfica, razón por la cual en ellos influyen tanto la incidencia de la pobreza en cada área como la importancia relativa de las mismas dentro de la población total de cada país.

The estimates of extreme poverty were prepared by ECLAC using the "income method", which is based on the calculation of poverty lines. These lines represent the level of income required by a household in order to meet the basic needs of all its members. The poverty lines for each country and geographical area were determined on the basis of the estimated cost of a basket of staple foods –taking into account eating habits and the actual availability of food in each country as well as relative prices– which meets the nutritional requirements of the population. The value of this basket was then added to the total estimated sum required by households to meet their basic non-food needs.

The indigence line denotes the cost of this basket of staple foods, and the indigent (or those living in extreme poverty) are defined as persons who reside in a household whose income is so low that even if the whole of that income were used to buy food, the household could not adequately cover the nutritional needs of all its members.

In calculating these lines, the differences among food prices in metropolitan areas, other urban zones and rural areas were taken into account. In most cases, estimates of the cost these baskets of staple foods in non-metropolitan urban zones and rural areas were based on price levels 5% and 25%, respectively, below those used in the case of metropolitan areas.

For urban areas, the poverty line was obtained by doubling the value of the indigence line, while for rural areas it was drawn at a point 75% above the level of the basic food budget. The percentages of households and persons classified as poor and as indigent were obtained by comparing the value of the two budgets against the total per capita income of each household. Country indexes of poverty and indigence were calculated as weighted averages of the corresponding indexes for each geographical area. These indexes are therefore influenced not only by the extent of poverty in each such area, but also by the relative size of its population in terms of the total national population.

SALUD / HEALTH

Dentro de esta sección, se considera la mortalidad infantil como un indicador importante de la eficiencia del funcionamiento de los sistemas nacionales de salud, y se presentan series e indicadores sobre los niveles de recursos humanos y materiales de este sector a los que potencialmente podría acceder la población.

Número de habitantes por médico. Con respecto a la información sobre el número de médicos, es necesario hacer presente que no existen métodos de recopilación uniformes, ni entre los países, ni dentro de un mismo país a través del tiempo. En algunos países, la información sólo se refiere a los médicos que trabajan para los ministerios de salud o en instituciones hospitalarias. En otros, en cambio, las cifras se obtienen de informes emitidos por los establecimientos hospitalarios. Debido a que estos profesionales trabajan en jornadas parciales en diferentes centros asistenciales, es posible que se los incluya más de una vez en la estadística final. Por estas razones, tanto la comparación entre países como la comparación entre distintos momentos en un mismo país de los valores de este indicador, debe hacerse con cautela, y debe ser complementada y controlada sobre la base del comportamiento de otros indicadores del acceso potencial de la población a los servicios de salud.

Camas de hospital. Se entiende por cama de hospital aquella instalada en una institución hospitalaria en la que hay personal y equipos necesarios como para que pueda ser utilizada regularmente durante las 24 horas del día por pacientes hospitalizados. La calidad de esta información depende de la estructura del sistema de prestación de servicios de salud. Cuando un organismo o ministerio tiene tuición sobre la mayoría de los hospitales, suele ser más fácil obtener datos completos y comparables; no así cuando esta responsabilidad está repartida entre muchas instituciones, ya sean públicas o privadas.

Gasto público en salud. Las cifras corresponden al porcentaje que representa el gasto en salud del gobierno central consolidado en el producto interno bruto a precios corrientes de mercado. En la comparación de las cifras, el lector deberá tener presente que éstas no incluyen los gastos en salud que no provienen del gobierno central.

Indicadores seleccionados de salud. Se trata de un conjunto de indicadores recopilados de publicaciones de organismos internacionales especializados.

This section considers infant mortality as an important indicator of the effectiveness of national health systems. It includes series and indicators on the levels of human and material resources in the health sector that are potentially available to the population.

Number of inhabitants per doctor. With regard to the information on the number of doctors, it should be noted that compilation methods are not uniform either from one country to another or within a single country over time. In some countries, the information covers only those doctors who work for the Ministry of Health or in hospitals. In others, the figures are obtained from reports issued by hospitals, and since doctors often work part-time in various medical centres, they may be counted more than once in the final statistics. For these reasons, caution must be exercised in comparing the values shown for this indicator, both between countries and at different times within the same country. Such comparisons should be supplemented by and checked against the trends of other indicators of the potential access of the population to health services.

Hospital beds. The term "hospital bed" is understood to mean a bed in an institution providing hospital care and having the staff and equipment needed to care for hospitalized patients 24 hours a day. The quality of this information depends on the structure of the health service system. When a particular body or ministry has authority over most of the hospitals, it is usually easier to obtain complete and comparable data than when this responsibility is shared by many institutions, whether public or private.

Public expenditure on health. The figures correspond to the consolidated central government's expenditure on health as a percentage of the gross domestic product at current market prices. In comparing the figures, the reader should bear in mind that they do not cover health expenditures by any entity other than the central government.

Selected health indicators. A number of different indicators have been compiled from the publications of specialized international agencies.

Mortalidad materna. Se define como el número de mujeres fallecidas anualmente por causas relacionadas con el embarazo y el parto, por cada 100 000 nacidos vivos.

Mortalidad de menores de cinco años por nivel de instrucción de la madre. Este indicador, calculado por el CELADE, corresponde a estimaciones de la probabilidad de muerte ante de los cinco años basadas en datos provenientes de estadísticas vitales, censos de población y encuestas por muestreo. En este caso se consideran deficiencias de las fuentes las derivadas de los métodos de estimación, y los valores adoptados a nivel nacional e internacional. Las estimaciones comparables entre países presentaron dificultades, debido a las características de las fuentes, y las diferencias de metodología y criterios de medición.

Subregistro de defunciones. Diferencia entre 100 y la tasa de registro, definida como la relación porcentual entre el número de defunciones registradas y el número de defunciones estimadas por métodos indirectos.

Partos atendidos por personal calificado. Relación porcentual entre partos atendidos por médicos, enfermeras, parteras y otro personal calificado de atención primaria, y parteras tradicionales capacitadas, y el total de nacimientos estimado por métodos indirectos.

Malnutrición infantil. Porcentaje de niños menores de cinco años con deficiencia nutricional o que presentan exceso de nutrientes dañinos para la salud y que afectan el potencial genético de crecimiento. Corresponde a la proporción de niños que pesa menos del 80% del peso estándar para su edad y se calcula utilizando la escala de malnutrición de Gómez.

Maternal mortality. This is defined as the number of women who die per year from pregnancy- or childbirth-related causes, per 100,000 live births.

Child mortality (under 5 years of age), by mother's educational level. This indicator is calculated by CELADE and estimates the probability of death occurring before five years of age on the basis of data drawn from vital statistics, population censuses and sampling surveys. The shortcomings of the estimation methods used by each such source are taken into account, as are the values in use at the national and international levels. The preparation of estimates that will be comparable across countries is difficult in this case due to the varying characteristics of the sources used and differences in the methodologies and measurement criteria applied.

Under-registration of deaths. This indicator is calculated by subtracting the registered rate from 100 and measures the number of registered deaths as a percentage of the total number of deaths as estimated by indirect means.

Births attended by specialized personnel. The number of births attended by doctors, nurses, midwives or personnel trained to administer primary healthcare or trained traditional midwives as a percentage of the total number of births as estimated by indirect means.

Child malnutrition. The percentage of children under five years of age suffering from nutritional deficiency or exhibiting an excessive level of nutrients that represent a health hazard and affect genetic growth potential. This indicator measures the percentage of children who weigh less than 80% of the standard weight for their age and is calculated using the Gómez scale of malnutrition.

EDUCACIÓN / EDUCATION

En esta sección se aportan datos sobre el nivel educativo de la población potencialmente disponible para el mercado de trabajo, sobre la capacidad del sistema educativo para incorporar a los segmentos de población en edad escolar, y sobre los recursos humanos y materiales invertidos en la educación.

Analfabetismo. Porcentaje de mayores de 15 años que declaran no saber leer ni escribir en los censos y encuestas. En esta edición del Anuario se incluyen dos cuadros sobre este indicador. En el primero se indican los niveles de

This section contains data on the educational level of the portion of the population potentially available for the labour market, on the capacity of the educational system to incorporate the school-age segment of the population, and on the human and material resources invested in education.

Illiteracy. The percentage of persons over 15 years of age who state, in response to census or survey questions, that they do not know how to read or write. This edition of the Yearbook includes two tables based on this indicator. The

analfabetismo del total de la población en el período 1970-1995, calculados sobre la base de datos provenientes de los censos demográficos y estimaciones de la UNESCO. En el segundo se indican los niveles de analfabetismo de la población urbana, clasificada por sexo y grupos de edad, en 1995; los datos provienen de tabulaciones especiales de las encuestas de hogares.

Matrícula en cada nivel de enseñanza. Para su medición se ha adoptado la tasa bruta de matrícula que representa la relación entre el total de matriculados en cada uno de los niveles de enseñanza –cualquiera sea la edad de los alumnos– y una población cuyos límites de edad se determinan según la duración legal de los estudios en cada uno de dichos niveles (excepto en el caso de la educación de tercer nivel para el cual se consideró el grupo de población de 20 a 24 años como denominador de la masa).

La comparación internacional de estos datos debe considerar que los países no guardan uniformidad con respecto a los programas y extensión de cada nivel.

Los cambios efectuados por los países en la extensión de cada nivel de enseñanza, que en general ha significado un aumento de los años de estudio en el primer nivel y una disminución de los del segundo, afectan la comparabilidad de la información a través del tiempo en ambos niveles de enseñanza, tanto en lo relativo a la matrícula como a los maestros.

Según la definición de la UNESCO, la enseñanza de segundo nivel es la que se imparte en las escuelas de enseñanza general, normal y vocacional. Mientras que el título obtenido en la primera permite el ingreso al tercer nivel, ello no es necesariamente así en el caso de las otras dos. La enseñanza de tercer nivel es aquella para cuya admisión se exige como condición mínima haber cursado con éxito el segundo nivel o estar en condiciones de demostrar la posesión de conocimientos equivalentes. La comparación de los datos de matrícula en el tercer nivel deberá considerar el posible efecto de las diferencias en la proporción de estudiantes de tiempo parcial, así como las variaciones entre los países en cuanto al tipo de instituciones educativas que se consideran de tercer nivel.

Al comparar los datos relativos a los recursos del servicio educativo también deben tenerse en cuenta las posibles diferencias en cuanto a la intensidad de la dedicación de los maestros a sus cursos, tal como se manifiesta por ejemplo en las horas promedio por jornada de

first gives the illiteracy rates for the entire population during the period 1970-1995 as calculated on the basis of population census data and UNESCO estimates. The second shows illiteracy rates for the urban population, by sex and age group, for 1995 using special tabulations of household survey data.

Enrolment at each level of education. The measurement used for this variable is the gross school enrolment rate, which is the ratio between the total number of pupils enrolled in each level of education –regardless of their age– and a population whose age limits are determined by the legally required duration of schooling at each of the levels (except in the case of third-level education, for which the number of people in the age group 20-24 years was used as the denominator).

In comparing these data internationally, it should be borne in mind that the countries vary with respect to the content and the length of each level.

Changes made by the countries in regard to the duration of studies in each level of education, which have generally involved increasing the years of schooling in the first level and decreasing those in the second, affect the comparability across time of the information on enrolment and teachers in both levels of education.

As defined by UNESCO, second-level education is the instruction provided in general education schools, teacher-training schools and vocational schools. A diploma awarded by a general education school makes it possible to enter the third level, but this is not necessarily true of the other two types of secondary schools. Third-level education is education for admission to which it is necessary, as a minimum condition, to have successfully completed the second level or to be able to demonstrate the possession of equivalent knowledge. When comparing data on enrolment in third-level education, account should be taken of the possible effect of differences in the proportion of part-time students and of variations among countries as to what types of institutions are considered to provide third-level education.

When comparing the data relating to the resources of the educational system, consideration must also be given to possible differences in teachers' course loads, as reflected, for example, in the average number of hours worked daily. This particularly affects

trabajo. Este fenómeno afecta particularmente la comparabilidad de los índices de alumnos por maestro en el segundo nivel.

Gasto público en educación. Se ha tomado como indicador el porcentaje del producto interno bruto, en monedas nacionales a precios corrientes del mercado, dedicado a la educación. Comprende, en general, todos los gastos destinados a la educación que efectúa el gobierno central consolidado.

the comparability of pupil-teacher ratios at the secondlevel.

Public expenditure on education. The indicator used is the percentage of the gross domestic product, expressed in local currency at current market prices, allocated to education. It includes, in general, all expenditures on education by the consolidated central government.

VIVIENDA Y HOGARES / HOUSING AND HOUSEHOLDS

En esta sección se incluyen estadísticas e indicadores sobre características de las viviendas y de los hogares correspondientes.

Unidad de vivienda. El término designa el local de habitación o vivienda destinado a alojar un hogar particular, aunque en el momento de recoger los datos pueda haber estado ocupado por más de un hogar particular. También se incluyen locales que aun cuando no hayan sido originalmente concebidos como hogares particulares, de hecho están ocupados como tales.

Tipo de tenencia. Se refiere al tipo de convenio bajo el cual un hogar ocupa una vivienda, ya sea como dueño, inquilino, o de acuerdo con algún otro sistema.

Acceso a agua potable. La población que dispone de agua potable es aquella que puede acceder a agua no contaminada sin que ello demande el uso de una parte desproporcionadamente alta de su tiempo. En general para el sector urbano se suele establecer como criterio que la fuente de agua no esté a más de 200 metros de la vivienda del consumidor. Los problemas de definición operativa son mucho más complejos en el sector rural, lo que afecta la confiabilidad de los datos en ese sector. Los cuadros incluyen información sobre las viviendas y sobre la población que reside en ellas.

Sistemas de eliminación de excretas. Se incluyen datos sobre el número de viviendas conectadas a los sistemas de alcantarillado y sobre la población que, residiendo en ellas, tiene acceso por ese medio, a sistemas de recolección y eliminación (con o sin tratamiento) de excrementos humanos y de aguas servidas que son arrastrados por corrientes de agua.

This section includes contains statistics and indicators with housing and households.

Dwelling unit. This term refers to dwellings or living quarters intended to house one private household, even though at the time when the data were collected it may have been occupied by more than one private household. Also included are premises which, although not originally intended as private dwelling units, are in fact occupied as such.

Type of tenancy. Refers to the type of agreement under which a household occupies a dwelling, either as owner, tenant or under some other system.

Access to drinking water. The population having access to drinking water is that which can obtain unpolluted water without devoting a disproportionate amount of time to this task. Generally, the criterion for the urban sector is that the source of water should be no further than 200 metres from the user's dwelling. The problems of establishing an operative definition are much more complex in the rural sector, and this affects the reliability of the data for that sector. The tables include information on dwelling units and on the population residing in them.

Sewage disposal systems. Data are included on the number of dwellings connected to sewerage systems and on the population residing in such dwellings which thereby has access to systems for the collection and disposal (with or without treatment) of human waste and other sewage which is carried away by running water.

También se incluye una estimación de la población que reside en aquellas áreas urbanas en que existen redes públicas de instalaciones para la eliminación de excretas y aguas servidas.

Alumbrado. Se midió a través del número de viviendas y del tamaño de la población que reside en ellas, que cuentan con instalación de luz eléctrica.

Hogar. La definición de hogar comúnmente utilizada en las encuestas de hogares corresponde a “una persona o conjunto de personas emparentadas o no entre si, que residen habitualmente en la vivienda y se asocian para atender sus necesidades de alimento y de otros bienes y servicios esenciales”.

Clasificación de hogares. Utilizando la variable relación de parentesco, entre los miembros que integran un hogar en relación con la persona identificada como “jefe del hogar”, se construyeron tipos de hogares a los cuales se les estudió ciertas características especiales, como el sexo del jefe del hogar y su presencia en diferentes estratos de ingresos.

Los tipos de hogares definidos de acuerdo con la presencia o ausencia de determinados miembros del hogar son:

Hogar unipersonal, integrado por una sola persona.

Hogar nuclear biparental. Está integrado por el padre y la madre (pareja unida o casada legalmente) y uno o más hijos.

Hogar nuclear monoparental. Lo integran uno de los padres y uno o más hijos.

Hogar nuclear sin hijos. Está constituido por la pareja unida o casada legalmente sin hijos.

Hogar extenso o compuesto. Corresponde a cualquiera de los tipos definidos anteriormente, más la presencia de uno o más parientes o no parientes del jefe de hogar.

An estimate is also included of the population residing in urban areas where there are networks of public facilities for the disposal of human waste and other sewage.

Lighting. This was measured on the basis of the number of dwellings that have electric lighting and the size of the population living in them.

Household. For household survey purposes, the term “household” is usually defined as “a person or group of persons, whether related or not, who normally reside together in a housing unit and combine to provide themselves with food and other essential goods and services.”

Categorization of households. Based on the kinship relationship between the members of a household and the designated “head of household”, a number of categories of households were defined. Various characteristics of these different types of households, such as the sex of the head of household and the relevant income stratum, were then examined.

The following types of households were identified on the basis of their members:

Single-person household: A household composed of one person;

Two-parent nuclear household: A household composed of a father and mother (a free union or a legally married couple) and one or more children;

Single-parent nuclear household: A household composed of one parent and one or more children;

Childless nuclear household: A household composed of a couple, whether living in free union or legally married, with no children;

Extended or composite household: A household corresponding to any of the above categories which also includes one or more relatives or non-relatives of the head of household.

CUENTAS NACIONALES / NATIONAL ACCOUNTS

Los conceptos y clasificaciones que figuran en los cuadros sobre cuentas nacionales corresponden a la tercera revisión del Sistema

The headings and classifications used in the tables on national accounts correspond to the third revision of the United Nations System of

de Cuentas Nacionales de las Naciones Unidas (SCN, Rev. 3)³ y a la segunda revisión de la Clasificación Industrial Internacional Uniforme de todas las actividades económicas (CIIU, Rev. 2).⁴

Para mantener el principio de comparabilidad internacional y teniendo en cuenta que las cuentas nacionales tienen distintos grados de desarrollo y uniformidad entre los países de la región, se han seleccionado las estimaciones de aquellos agregados de elaboración más generalizada en los cálculos nacionales que sean importantes desde el punto de vista de los indicadores económicos. Asimismo, el detalle de las respectivas clasificaciones se ha simplificado y limitado a las aperturas que permitan presentar los datos por países en la forma más homogénea posible y efectuar su agregación a fin de obtener las estimaciones correspondientes al conjunto de América Latina y el Caribe y facilitar el uso e interpretación de los datos a los usuarios.

Con tal propósito, la clasificación del producto por clase de actividad económica se presenta al nivel de las grandes divisiones de la CIIU, Rev. 2 (sectores económicos) sin efectuar la separación propuesta en el SCN, Rev. 3, por tipos de productores, que distingue entre industrias, productores de servicios gubernamentales, productores de servicios privados sin fines de lucro que se prestan a los hogares y servicios domésticos. Como excepción y por la importancia que revisten, se presentan por separado las actividades correspondientes a los servicios de vivienda, en la gran división 8, y a los servicios gubernamentales,⁵ en la gran división 9.

La base de valoración de las distintas estimaciones se indica en los respectivos cuadros, señalándose si están expresadas a precios de mercado o al costo de factores, a precios corrientes o a precios constantes. Cuando en un cuadro no figura la base de valoración, se

³ Naciones Unidas, *Un sistema de cuentas nacionales*, serie F, Nº 2, Rev. 3, Nueva York, 1970. Publicación de las Naciones Unidas, Nº de venta: S.69.XVII.3.

⁴ Naciones Unidas, *Clasificación Industrial Internacional Uniforme de todas las Actividades Económicas*, serie M, Nº 4, Rev. 2, Nueva York, 1969. Publicación de las Naciones Unidas, Nº de venta: S.68.XVII.8.

⁵ Cabe destacar que el conjunto de actividades incluidas en esta categoría de servicios gubernamentales equivale en la práctica a la categoría de productores de servicios gubernamentales del SCN, Rev. 3, ya que normalmente los servicios comunes prestados por el gobierno general se refieren a actividades comprendidas en la gran división 9 de la CIIU, Rev. 2.

National Accounts (SNA, Rev. 3)³ and to the second revision of the International Standard Industrial Classification of All Economic Activities (ISIC, Rev. 2).⁴

In order to uphold the principle of international comparability, and bearing in mind that national accounts show varying degrees of development and uniformity in the countries of the region, the estimates selected for inclusion concern those aggregates most commonly used in the countries' national calculations which are of importance as economic indicators. The respective classifications have also been simplified and confined to those entries for which the data can be presented by countries on as uniform a basis as possible and which their entries limited to those which permit data by country to be presented as homogeneously as possible and aggregated to obtain estimates for Latin America as a whole and facilitate the use and interpretation of the data by users.

To this end, the classification of the product by kind of economic activity is presented at the level of the major divisions of ISIC, Rev. 2 (economic sectors) without making the separation proposed in the SNA, Rev. 3, by type of producer, which distinguishes among industries, producers of government services, producers of non-profit services to households and domestic services. As exceptions, owing to their importance, the activities corresponding to household services in major division 8, and government services⁵ in major division 9 are presented separately.

The valuation basis of the different estimates is given in the respective tables, indicating whether they are expressed in market prices or at factor cost, in current prices or constant prices. When the valuation basis for a table is not shown, it is understood that the data

³ United Nations, *A system of National Accounts*, series F, No. 2, Rev. 3, New York, 1970. United Nations publication, Sales No. E.69.XVII.3.

⁴ United Nations, *International Standard Industrial Classification of All Economic Activities*, series M, No. 4, Rev.2, New York, 1969. United Nations publication, Sales No. E.68.XVII.8.

⁵ It should be noted that the group of activities included in this category of government services is equivalent in practice to the category of producers of government services of the SNA, Rev. 3, since normally the community services provided by the general government relate to activities included in major division 9 of ISIC, Rev. 2.

entiende que las series de datos están medidas a precios de mercado, y si no se indica lo contrario, a precios corrientes.

Los valores a precios de mercado se diferencian de los valores al costo de factores por incluir los impuestos indirectos netos de subsidios. Los valores a precios corrientes indican que los flujos de bienes y servicios están valuados a los precios del año en que se realizaron las transacciones; los valores a precios constantes representan flujos de bienes y servicios que están valuados a los precios que ellos tenían en el año que se ha tomado como base.

Por otra parte, corresponde aclarar que las estimaciones de los componentes del gasto final están valoradas a precios de comprador, en tanto que las serie de los valores agregados sectoriales están medidas a precios de productor. Los valores de comprador se refieren al valor de los bienes y servicios en el punto de entrega al comprador, es decir, una vez añadido al valor de productor los márgenes de distribución y de transporte. Los valores de productor corresponden al valor de los bienes en el establecimiento de los productores, y el valor agregado de cada actividad a precio de productor es igual al valor de la correspondiente producción bruta a precio de productor menos el valor a precio de comprador del respectivo consumo intermedio.

Cuando el valor agregado sectorial está expresado a precios de mercado, la suma de todas las actividades en valores de productor representa el total del producto interno bruto a valores de comprador.⁶ En consecuencia, para designar el producto total de la economía y agregados similares, las expresiones “a precios de mercado” y “a valores de comprador” son equivalentes y se usan indistintamente.

series are measured at market prices, and unless otherwise indicated, at current prices.

The values at market prices differ from the values at factor cost in that they include net indirect taxes on subsidies. Values at current prices indicate that the flows of goods and services are valued at the prices for the year when the transactions were made; values at constant prices represent flows of goods and services which are valued at their prices in the year taken as the base year.

It should be clarified that the estimates of the components of final expenditure are valued at purchasers' prices, while the series of the sectoral added values are measured at producers' prices. Purchasers' values refer to the value of the goods and services at the point of delivery to the purchaser, i.e., after the addition to the producers' value of distribution and transport margins. Producers' values correspond to the value of the goods at the production site, and the added value of each activity at producers' prices is equal to the value of the corresponding gross output at producers' prices less the value at purchasers' prices of the respective intermediate consumption.

When the sectoral value added is expressed in market prices, the sum of all activities in producers' values equals the total gross domestic product at purchasers' values.⁶ For countries using the previous revision of the SNA, both items are included in the sectoral values added. Consequently, in reference to the total product of the economy and similar aggregates, the expressions “at market prices” and “at purchasers' values” are equivalent and are used interchangeably.

⁶ Para los países que aplican el SCN, Rev. 3, a la suma de los valores agregados sectoriales se añaden los derechos de importación incluido el impuesto al valor agregado neto, para los países que lo presentan por separado, y se resta la comisión imputada de los servicios bancarios para obtener el producto interno bruto total. Para los países que mantienen la anterior revisión del SCN, ambos conceptos están comprendidos en los valores agregados sectoriales.

⁶ For countries applying SNA, Rev. 3, import duties (including the net value added tax in countries that record it separately) are added to the sum of the sectoral values added and the imputed commission of banking services is deducted to obtain the total gross domestic product. For countries using the previous revision of the SNA, both items are included in the sectoral values added.

Series regionales

En esta edición se incluyen datos nacionales y regionales que corresponden a estimaciones de las series del producto y del ingreso valuadas a precios constantes de 1990.

Por limitaciones en la disponibilidad de la información relativa a un tipo de cambio en 1990, no fue posible incluir a Cuba en los agregados. Dicho país inició en 1996 la difusión de sus estimaciones macroeconómicas siguiendo las orientaciones del sistema de cuentas nacionales recomendado por las Naciones Unidas. En sus presentaciones anteriores utilizó como marco conceptual los *Principios fundamentales del sistema de balances de la economía nacional*.

Las series a precios constantes de 1990 incluidas en esta publicación están referidas al origen del producto interno bruto por clase de actividad económica, al destino por componentes del gasto del producto y al ingreso bruto real. Estas estimaciones, calculadas a partir de los datos oficiales que los países proporcionan periódicamente a la CEPAL, fueron complementadas para los efectos del cálculo regional con información oficial que se solicitó expresamente a fin de que el cálculo realizado con base 1990 arrojara resultados lo más homogéneos posibles, y que al mismo tiempo, permitiera su agregación regional.

Los conceptos, clasificaciones, definiciones y categorías utilizados se ajustaron a las recomendaciones de las Naciones Unidas y a los manuales y orientaciones técnicas vigentes al momento de realizarse las estimaciones originales.⁷

Las estimaciones se efectuaron mediante cálculos sobre tres grupos interrelacionados de datos. El primero comprendió la estimación del producto por clase de actividad económica a precios de mercado. Para este conjunto de datos, en general, el procedimiento seguido consistió en transformar el producto interno bruto a precios constantes de cada país a los precios del nuevo año base extrapolando, a nivel de las grandes

Regional series

This edition presents estimates for the regional and country series on output and income at constant 1990 prices.

Due to a lack of sufficient information on Cuba's exchange rate in 1990, it was not possible to include this country in these aggregates. In 1996 Cuba began to publish its macroeconomic estimates in a format that corresponds to the System of National Accounts recommended by the United Nations (its accounts had previously been based on the *Basic principles of the system of balances of the national economy*).

The series at constant 1990 prices included in this publication refer to the origin of the gross domestic product by kind of economic activity, the final expenditure components of the GDP and real gross income. These estimates, which were calculated on the basis of the official data periodically furnished by the countries to ECLAC, were supplemented with official information expressly requested from them for use in the regional calculations so that the calculations made using 1990 as the base would yield the most homogeneous results possible and facilitate a regional aggregation.

The headings, classifications, definitions and categories used were adjusted to conform to the recommendations of the United Nations and the manuals and technical guidelines which were current at the time the estimates were originally prepared.⁷

The estimates were made by calculating three interrelated groups of data. The first set of data was used to estimate the product by kind of economic activity at market prices. The procedure generally followed in this case was to convert each country's gross domestic product at constant prices to the prices for the new base year by extrapolating, at the level of ISIC major divisions, the data for the base year using the

⁷ Naciones Unidas y OCDE, *Instrucciones y definiciones para el cuestionario sobre cuentas nacionales* (revisión 1984); Naciones Unidas, *Manual de cuentas nacionales a precios constantes*, serie M, N° 64, Nueva York, 1979; *Un sistema de cuentas nacionales*, serie F, N° 2, Rev. 3, Nueva York, 1970; *Clasificación Industrial Internacional Uniforme de todas las Actividades Económicas*, serie M, N° 4, Rev. 2, Nueva York, 1969.

⁷ United Nations and OECD, *Instructions and Definitions for National Accounts Questionnaire* (revised 1984); United Nations, *Manual on National Accounts at Constant Prices*, series M, No. 64, New York, 1979; *A System of National Accounts*, series F, No. 2, Rev. 3, New York, 1970; *International Standard Industrial Classification of All Economic Activities*, series M, No. 4, Rev. 2, New York, 1969.

divisiones de la CIU, el año base con los respectivos índices del producto real obtenidos de sus series oficiales, muchas de las cuales están referidas a una base diferente de la seleccionada para las estimaciones regionales. Las actividades referidas a Viviendas y Servicios gubernamentales se analizaron en forma independiente, siguiendo el criterio de las grandes divisiones. Los totales nacionales se obtuvieron por agregación de sus componentes, procedimiento que determina para cada país un desempeño del producto total diferente del observado a través de las series oficiales a precios constantes, cuando tienen un año base de comparación distinto.

El producto interno bruto total a precios constantes de mercado obtenido por el lado del origen constituyó el nivel distribuido por categorías de gasto según los distintos componentes de la demanda final y del comercio exterior. Este segundo grupo de datos, relacionado con el primero a través del producto global, se obtuvo manteniendo este total y calculando cada uno de los componentes del PIB a precios del nuevo año base 1990. El método aplicado fue diferente en cada grupo de categorías que se deseaba estimar. Es así como para la obtención de los gastos de consumo del gobierno general y de la formación bruta de capital fijo, el método consistió en extrapolar el año base 1990 con las series oficiales de cada uno de ellos, expresadas a precios constantes. Dado que en varias estimaciones nacionales la variación de existencias se obtuvo mediante procedimientos que no se adecuan plenamente a las recomendaciones internacionales y en otras se presenta incorporada dentro del consumo privado, en el cálculo regional se optó por dejar esta variable dentro del consumo privado, a fin de utilizar un criterio de presentación compatible con las características mencionadas.

Las exportaciones e importaciones de bienes y servicios corresponden a elaboraciones de la CEPAL mediante la deflación con los respectivos índices de valor unitario con base 1990, de las cifras de la balanza de pagos proporcionadas por el Fondo Monetario Internacional (FMI). Finalmente, los gastos de consumo privado se obtuvieron por diferencia, según la siguiente ecuación:

$$C_p = [PIB + M(b \text{ y } s)] - [C_g + FBK + X(b \text{ y } s)]$$

corresponding real product indexes obtained from the country's official series, which in many cases use a different base year from that selected for the regional estimates. Activities relating to Dwellings and Government services were analysed separately based on the ISIC major divisions. The national totals were obtained by aggregating their components. This procedure yields a different result for a given country's total product than that shown in its official series at constant prices in those cases where the base year used is not the same.

The total GDP at constant market prices obtained from series by sectors of origin was the level which was categorized by type of expenditure according to the different components of final demand and external trade. This second group of data, which is related to the first set through the total product, was obtained by maintaining this total and calculating each of the components of GDP at the prices of the new base year (1990). The method used to do this varied according to the group of categories to be estimated. In order to obtain general government consumption expenditure and the national and total figures for gross fixed capital formation, the method used consisted of extrapolating the base year 1990 from the official series for each expressed in constant prices. Since national figures for "increase in stocks" have been estimated using procedures that do not fully conform to international recommendations, in the case of some countries, and, in others, are incorporated within private consumption, in the regional accounts this variable has been left as part of private consumption in the interests of maintaining a compatible format.

Exports and imports of goods and services were calculated by ECLAC using the respective indexes of unit value (base year 1990) to deflate the balance-of-payments figures provided by the International Monetary Fund (IMF). Finally, private consumption expenditure was calculated by difference using the following equation:

$$C_p = [GDP + M(g \& s)] - [C_g + GCF + X(g \& s)]$$

Los índices de valor unitario utilizados en las estimaciones regionales proceden de las cuentas nacionales de aquellos países que aplicaban índices de base móvil en sus estimaciones; en cambio, para aquellos países que usaban índices de base fija, sus índices de valor unitario se estimaron con datos recopilados directamente por la CEPAL. Los índices de valor unitario calculados para las exportaciones y para las importaciones de servicios permiten, además, estimar, a precios constantes de 1990, los respectivos componentes de servicios de la cuenta corriente de las balanzas de pagos, es decir, los pagos de servicios factoriales, las donaciones privadas netas, el efecto de la relación de precios del intercambio y el saldo en cuenta corriente.

Dado que no fue posible contar con la información necesaria referente a varios países de la región, se podrá apreciar la menor cobertura de países en los totales regionales de las variables componentes del producto por tipo de gasto cuando se la compara con la correspondiente al producto por clase de actividad económica.

En la elaboración de series regionales de cuentas nacionales a precios constantes, se requiere de factores de conversión que expresen en una moneda común los valores estimados en la moneda de cada país, haciéndolos así comparables y permitiendo su agregación.

La mayoría de las publicaciones que contienen las series de cuentas nacionales de los distintos países expresadas en una moneda común suelen utilizar como factor de conversión el tipo de cambio medio con que se realizan sus transacciones de comercio exterior.

Esta práctica dista de contar con una aceptación generalizada. Las principales críticas dicen relación con su uso en la conversión a una moneda común de las variables de cuentas nacionales que miden resultados de actividades internas, tales como la producción, el consumo y la inversión. En efecto, se argumenta que el tipo de cambio se fija de forma de equilibrar el comercio exterior y el financiamiento externo, lo que puede llevar a fijar un tipo de cambio que no refleje necesariamente las relaciones entre productividad, disponibilidad de recursos y precios que caracterizan las situaciones de equilibrio contempladas en la teoría económica.

The unit value indexes used in preparing the regional estimates were taken from the national accounts of countries that use moving indexes for their estimates; for countries that used fixed-base indexes, unit value indexes were estimated using data compiled directly by ECLAC. The unit value indexes calculated for exports and for imports of services also made it possible to estimate, at constant 1990 prices, the respective services components of the balance-of-payments current account, i.e., factor service payments, net private donations, the terms-of-trade effect, and the balance on current account.

As the necessary information was not available for several countries of the region, the country coverage of the regional totals for the component variables of the product by type of expenditure is more limited than it is in the case of the product by kind of economic activity.

Preparation of regional series of national accounts at constant prices requires conversion factors that change the values estimated in the currency of each country into a common currency, so that they can be compared and combined into aggregates.

Most publications that contain series of national accounts from the various countries expressed in a common currency use as a conversion factor the average rate of exchange in which a country's foreign trade transactions were realized.

This method is no longer generally accepted. The chief criticisms relate to its use for converting national accounts variables that measure the results of internal activities, such as production, consumption and investment, to a common currency. The argument is that the exchange rate is set in order to balance foreign trade and external financing and hence will not necessarily reflect the relationship between productivity, resource availability and prices characteristic of the equilibrium situations contemplated by economic theory.

Esta crítica se hace más fuerte cuando se trata de países en que el comercio representa porcentajes reducidos del producto o está sometido a medidas de control directo, subsidios o protecciónismo. También cobra mayor intensidad cuando las corrientes financieras sufren grandes variaciones que son difíciles de vincular con la producción, el consumo o la inversión del año, o cuando se ven muy influidas por motivos especulativos.

Por el contrario, el tipo de cambio se acepta más como factor de conversión en aquellos países donde el comercio exterior representa porcentajes elevados del producto, la competitividad de los productos externos cumple un papel importante en las decisiones internas, existen convenios de integración que dan estabilidad a las transacciones, las estructuras de precios relativos se asemejan y no existen en grado significativo políticas de control, subsidio o protecciónismo externo.

En el caso concreto de América Latina en los años cincuenta y sesenta, los factores que hacen desventajoso el uso del tipo de cambio oficial para llevar adelante la comparabilidad de los niveles productivos del país o de consumo de la población primaron sobre aquellos que lo hacen recomendable.

Por este motivo, la CEPAL realizó grandes esfuerzos en los años sesenta y setenta por establecer y mantener al día un llamado *tipo de cambio de paridad*. Con este tipo de cambio se intentaba establecer un factor de conversión que igualara el valor de canastas de productos lo más representativas posible de la producción, el consumo y la inversión de los países. Para ello, la CEPAL realizó en los años sesenta una investigación que cubrió dos ciudades norteamericanas y veinte ciudades latinoamericanas. De esta forma, se calcularon un conjunto de tipos de cambio para el año 1960 que luego fueron actualizados para 1970 y que sirvieron de base para las publicaciones de series regionales a precios constantes que la CEPAL publicó hasta mediados de los años ochenta.

Para la base de 1980, se evaluó la posibilidad de realizar un ejercicio que actualizara o reemplazara los tipos de cambio de paridad usados en los años setenta. El mayor grado de complejidad alcanzado por las economías regionales y el elevado costo implícito

This criticism applies even more forcibly to countries in which foreign trade represents a small portion of output or is heavily controlled, subsidized or protected. It also carries great weight in situations where financial flows undergo sharp fluctuations that bear little relation to production, consumption or investment during the year or are strongly influenced by speculative motives.

On the other hand, the exchange rate is more acceptable as a conversion factor in the case of countries where foreign trade represents a large percentage of output, where competition from foreign products has a major influence on domestic decisions, where integration agreements result in a steady flow of transactions, where relative price structures are similar and where policies of control, subsidy and protectionism have minor impact.

Specifically, in the case of Latin America during the 1950s and 1960s, the reasons against using the official rate of exchange to compare countries' levels of production or consumption outweighed than the reasons in favour of the method.

ECLAC therefore made strenuous efforts in the 1960s and 1970s to elaborate and update what it called a "parity exchange rate" in an attempt to develop a conversion factor that would come as close as possible to the value of the product baskets most representative of the countries' patterns of production, consumption and investment. For the purpose, ECLAC did studies in the 1970s on two cities in the United States and twenty in Latin America. On that basis, it calculated a set of exchange rates for the year 1960, later updated to 1970, which served as the basis for the regional series at constant prices in ECLAC publications until the mid-1980s.

In changing to the base year 1980, the possibility was considered of updating or replacing the parity exchange rates used during the 1970s. However, the greater complexity of the region's economies and hence the high cost of a study that would satisfy the technical

que supuso realizar con la necesaria rigurosidad técnica un estudio de ese tipo, se transformaron en barreras infranqueables que impidieron su realización.

Dichas circunstancias, sumadas al hecho de que hacia 1980 los flujos de comercio exterior y de financiamiento externo representaban porcentajes del producto interno bruto mucho mayores a los registrados en los años setenta, y los tipos de cambio y los precios internacionales cumplían un papel mucho más importante que en décadas anteriores, determinaron que se optara por utilizar como factor de conversión para 1980 un tipo de cambio que se sustentara en los tipos de cambio que regían las relaciones externas.

No obstante, el proceso de endeudamiento externo, que alcanzó su cúspide en torno a 1980, determinó en muchos países que los tipos de cambios se alejaran de la que sería una condición de equilibrio signada por el comercio exterior y flujos más normales de financiamiento. Era, pues, necesario intentar corregir esos tipos de cambio para que reflejaran mejor esas condiciones de equilibrio, al menos en el mediano plazo. De hecho, al producirse en 1982 la crisis del endeudamiento externo, muchos tipos de cambio se alteraron abruptamente, como fruto de una profunda reversión de los flujos de financiamiento externo.

El procedimiento utilizado para corregir la mencionada distorsión consistió en examinar la evolución del tipo de cambio real durante el período 1970-1985, con el fin de identificar aquellos países en que éste se había distanciado significativamente del registro de 1970. Para estimar el tipo de cambio real se relacionó la evolución de los precios internos de cada país con el índice de precios de los Estados Unidos, utilizando en ambos casos los deflactores implícitos del producto.

En los países cuyo tipo de cambio real no se distanció significativamente del de 1970, se calculó el promedio del tipo de cambio real para el período 1979-1982. Con este índice, se corrigió el tipo de cambio de comercio exterior y financiamiento externo de 1980.⁸

⁸ En el caso de Bolivia el valor del tipo de cambio para 1982 contempló un promedio de los diferentes tipos de cambio con que se realizaron las transacciones de comercio exterior y financiamiento externo.

requirements for that purpose became insurmountable obstacles to such a project.

Accordingly, since by 1980 flows of external trade and financing had come to represent much higher percentages of gross domestic product than they had during the 1970s, so that exchange rates and international prices played a far more important role than they had in previous decades, the decision was made to take as the conversion factor for 1980 an exchange rate based on the exchange rates applied to external transactions.

However, the process of accumulating external indebtedness, which was reaching its peak around 1980, caused the exchange rates of many countries to diverge sharply from what they would have been in an equilibrium situation characterized by more normal external trade and financing flows. It was thus necessary to adjust these exchange rates better to reflect theoretical equilibrium conditions, at least in the medium term. When the external debt crisis came to a head in 1982, exchange rates in many countries did, in fact, shift abruptly as a result of a drastic reversal of external financing flows.

The procedure used to correct for the above-mentioned distortion was to examined trends in the real exchange rate during the period 1970-1985 in order to identify those countries in which this rate had changed significantly since 1970. In order to estimate the real exchange rate, domestic price trends in each country were compared with the price index in the United States, using the deflators implicit in output in both cases.

In countries where the real exchange rate had not changed significantly since 1970, the average real exchange rate was calculated for the period 1979-1982. This index was used to adjust the exchange rate used for foreign trade and external financing transactions in 1980.⁸

⁸ In the case of Bolivia the value of the exchange rate for 1982 was calculated on the basis of an average of the different exchange rates used to conduct foreign trade and external financing transactions.

Como resultado de este análisis, se estableció que en Argentina, Barbados, Haití, México, Trinidad y Tabago, Uruguay y Venezuela, el índice del tipo de cambio real excedía los rangos considerados aceptables.

Con respecto a los países mencionados, en los que la variable del tipo de cambio real en torno a 1980 era extremadamente acentuada, se utilizó un promedio que abarcaba un período más amplio.

Para 1990, a fin de evitar las posibles condicionantes de la elección del año base de los índices e indicadores usados, se aplicaron métodos estadísticos con el propósito de estimar una supuesta tendencia correcta del tipo de cambio a partir de la evolución de los precios internos respecto de los externos. Si bien los índices que permitieron calcular estas relaciones se referían a años base específicos (lo que supone una determinada estructura de sus respectivos sistemas de precios), con una regresión del tipo de cambio en función de la trayectoria de dichas relaciones se pudo encontrar una estimación del tipo de cambio para cada momento del período considerado. De esta manera se pudo determinar, al comparar dichas estimaciones con los tipos de cambio vigentes, si existían desviaciones importantes.

Como puede verificarse en el cuadro que se presenta a continuación, los resultados obtenidos mostraron que, en 22 de los 31 países analizados, las tasas de cambio estimadas presentaban desviaciones inferiores a 5.5% respecto de la tasa de cambio vigente y, entre ellos, la gran mayoría registraba desviaciones menores al 3.0%. Ante estos ligeros márgenes de variación, la CEPAL optó por respetar, en lugar de corregir, el tipo de cambio presentado por el país, si éste mostraba desviaciones iguales o inferiores a 5.5%. En consecuencia, se corrigieron los tipos de cambio para el año 1990 de Bolivia, Brasil, Ecuador, Guyana, Honduras, Jamaica, Nicaragua, República Dominicana y Uruguay, y los de los demás países considerados en el estudio se mantuvieron sin cambios.

This analysis revealed that in Argentina, Barbados, Haiti, Mexico, Trinidad and Tobago, Uruguay and Venezuela, the real exchange rate index exceeded the limits considered acceptable.

For the above-mentioned countries, in which the change in the real exchange rate around 1980 was very pronounced, an average covering a longer period was used.

In changing to 1990 as the base year for indices and indicators, in order to correct for any bias that might result, statistical methods were applied to estimate the hypothetically correct tendency of the exchange rate based on the ratio of the trend in domestic prices to the trend in external prices. Although the indices used to calculate these ratios were based on specific base years (presupposing a given structure in their respective price systems), by regression analysis of the exchange rate as a function of the path of the ratios it was possible to estimate the exchange rate for each point in time during the period considered and, by comparing the resulting estimates with the actual exchange rates, to determine whether there were any major deviations.

As may be seen from the following table, in 22 of the 31 countries analysed, the estimated exchange rate deviated by less than 5.5% from the actual exchange rate and in most of those cases the deviations were less than 3.0%. In view of these small variation margins, ECLAC decided not adjust but to use unchanged the exchange rate as reported by the country in all cases where the deviation was no greater than 5.5%. Therefore, the exchange rates reported for 1990 were adjusted for Bolivia, Brazil, Dominican Republic, Ecuador, Guyana, Honduras, Jamaica, Nicaragua and Uruguay and used without change for the rest of the countries analysed.

| País | Tipo de cambio estimado/ Estimated exchange rate (I) | Tipo de cambio oficial ^a / Official exchange rate ^a (II) | Desviación porcentual de (II)/(I) / Percentage deviation from (II/I) (III) | Tipo de cambio utilizado/ Exchange rate used (IV) | Country |

Series por países

Como en versiones anteriores, el segundo grupo de cuadros de cuentas nacionales que se entrega en este *Anuario* contiene las estimaciones que los países miembros de la región pusieron a disposición de la CEPAL a la fecha de cierre de su publicación, y están referidas al producto interno bruto por tipo de gasto y por clase de actividad económica, a precios corrientes y a precios constantes, y sobre las transacciones de ingresos y gastos corrientes del gobierno general y de los hogares. En un cuadro resumen de cada país se presentan las relaciones entre los principales agregados de las cuentas nacionales a precios corrientes.

Country series

As in previous editions, the second group of National Accounts tables provided in this Yearbook contains the estimates which the member countries of the region had made available to ECLAC by the closing date for its publication. These estimates refer to the gross domestic product by type of expenditure and by kind of economic activity, at current prices and at constant prices, and to current incomes and outlays of the general government and of households. A summary table for each country gives the relations among the main national main national accounts aggregates at current prices.

La información actualizada se obtuvo gracias a la continua y valiosa cooperación de las oficinas de cuentas nacionales de los países y mayoritariamente a través de medios magnéticos, utilizándose un programa de computación de difundida aplicación en la región.

La presentación de los datos continúa efectuándose de manera uniforme y, a medida que la información disponible lo permite, se van adaptando las series de todos los países a las clasificaciones propuestas en SCN, Rev. 3, y en la CIU, Rev. 2.

Salvo en lo relativo a la forma de la presentación, las series de datos son las calculadas oficialmente por cada país. Se han mantenido los criterios propios de valoración, los distintos períodos base elegidos para las estimaciones a precios constantes y las diferencias conceptuales, de alcance o cobertura derivadas de la aplicación práctica de las recomendaciones internacionales y que se señalan en los respectivos cuadros.

En esta edición las series a precios constantes de Argentina continúan siendo las obtenidas en la revisión efectuada en septiembre de 1996. Dado que los datos entregados sobre la base de dicha revisión no incluyeron series a precios corrientes, las que aquí se presentan no son compatibles con las series a precios constantes. Brasil, presentó un conjunto de nuevos datos a precios corrientes y constantes elaborados a partir de las recomendaciones del Sistema de Cuentas Nacionales 1993⁹ (SCN 1993) que por razones de tiempo no pudieron incorporarse en esta edición. Dicho sistema ya está siendo aplicado por Bolivia y México en la preparación de sus estimaciones oficiales de Cuentas Nacionales. Honduras y Panamá por su parte, hicieron una revisión de sus fuentes y métodos de cálculos de sus cuentas nacionales correspondientes a los períodos 1978-1996 y 1980-1996, respectivamente.

Finalmente, todos aquellos cuadros publicados en más de una oportunidad en ediciones anteriores con datos que acusaban un atraso considerable –y para los que tampoco fue posible contar en esta oportunidad, con información actualizada– fueron retirados transitoriamente del Anuario, a la espera de que las gestiones que a tal efecto se están efectuando permitan reiniciar su publicación en el más breve plazo.

The updated data were obtained thanks to the ongoing and valuable cooperation of the countries' national accounting offices, and were transmitted primarily through diskettes or tapes using software which is widely used in the region.

These data continue to be presented in a standard format and, as the available information permits, the series of all the countries are being adapted to conform to the classification proposed in the SNA, Rev. 3, and in ISIC, Rev. 2.

Except as regards the format in which they are presented, the data series are identical to the official series calculated by each country. The countries' own valuation criteria have been maintained, as have the different base periods chosen for the estimates at constant prices and the differences in concept, scope or coverage stemming from the way in which the international recommendations have been applied, as indicated in the respective tables.

As in the previous edition, the series at constant prices for Argentina shown in this edition of the *Yearbook*, correspond to the revision carried out in September 1996. Since the available data based on that revision do not include series at current prices, those which are presented in the *Yearbook* are not compatible with the series at constant prices. Brazil has prepared a new series at current and constant prices in accordance with the recommendations made in the System of National Accounts for 1993 (SNA, 1993).⁹ Due to time constraints, however, this series could not be included in this edition of the *Yearbook*. Bolivia and Mexico have also begun to apply the SNA 1993 in the calculation of official estimates for their national accounts. In addition, Honduras and Panama have revised their sources and methods of calculating national accounts for the periods 1978-1996 and 1980-1996, respectively.

Lastly, all of the tables published on a semi-regular basis in earlier editions which contain information that has become outdated and for which updated information is not available, have been temporarily excluded from the *Yearbook* in the hope that the steps being taken to provide these data will permit them to be published again in the near future.

⁹ Naciones Unidas, Sistema de Cuentas Nacionales, 1993 (ST/ESA/STAT/SER.F/2/Rev.4).

⁹ United Nations, *System of National Accounts*, 1993 (ST/ESA/STAT/SER.F/2/Rev.4).

PRECIOS INTERNOS / DOMESTIC PRICES

Índices de precios implícitos del producto interno bruto. Los índices implícitos del producto interno bruto que se presentan en esta edición han sido elaborados por la CEPAL con una metodología uniforme que se inscribe en el marco del programa de cambio de base de las series regionales de cuentas nacionales. Reemplazan a las series incluidas en ediciones anteriores cuyos índices, predominantemente de origen nacional, eran sometidos a diversas transformaciones para homogeneizar su presentación mediante procedimientos aritméticos. Por lo tanto, en algunos países las trayectorias de los índices de la presente edición pueden diferir en mayor o en menor grado de los publicados anteriormente.

Estos índices, que tienen como base el año 1990, se obtuvieron de la relación entre el producto interno bruto a precios corrientes de mercado en moneda nacional, cuyas cifras provienen de los países, y su equivalente a precios constantes de 1990 elaborado por la CEPAL. Los datos a precios constantes se estimaron siguiendo la metodología de cálculo descrita en las notas técnicas para ser aplicada a las series regionales de las cuentas nacionales.

Índices del nivel general de precios mayoristas por cada país. Estos varían considerablemente en cuanto a los bienes que comprenden y a la etapa de captación de los precios.

Índices de precios al consumidor. Representan en general el costo, relativo al período base, de una canasta típica de bienes y servicios efectivamente adquirida por un grupo representativo de consumidores. Con respecto a aquellos países que calcularon sus índices de precios al consumidor con una base distinta a la de 1990, se procedió a uniformar la base utilizando un procedimiento aritmético. Así, las series de un considerable número de países se elaboraron efectuando empalmes con índices de distinta base y, en algunos casos, fue inevitable vincular índices de diferente cobertura ya sea desde el punto de vista geográfico o según los estratos socioeconómicos investigados. En todo caso, la tendencia general de estos índices constituye una buena pauta para analizar la evolución de los precios al consumidor.

Price indexes implicit in the gross domestic product. The indexes implicit in the gross domestic product which are presented in this edition were prepared by ECLAC using a standard methodology in keeping with the programme of changing the base year for the regional series of national accounts. They replace the series used in previous editions whose indexes, primarily of national origin, were modified in various ways in order to standardize their presentation by means of arithmetical procedures. Consequently, for some countries the trend of the indexes given in this edition may differ to some degree from those previously published.

Those indexes, for which 1990 is the base year, were obtained by calculating the ratio between the gross domestic product at current market prices in local currency, the figures for which are provided by the respective countries, and its equivalent at constant 1990 prices as calculated by ECLAC. The data at constant prices were estimated using the method of calculation described in the technical notes concerning the regional series of national accounts.

Indexes of the general level of wholesale prices in each country. These vary considerably in terms of the goods covered and the point at which the prices are measured.

Consumer price indexes. Generally speaking, these represent the cost, relative to the base period, of a typical basket of goods and services actually acquired by a representative group of consumers. For those countries which calculated their consumer price indexes using a base year other than 1990, the base was standardized arithmetically. The series for a considerable number of countries were thus prepared by splicing indexes with different base years and, in some cases, it was necessary to link indexes having different geographical or socioeconomic coverages. Nonetheless, the general trend of these indexes constitutes a good frame of reference for analysing the evolution of consumer prices.

FINANCIAMIENTO Y ENDEUDAMIENTO EXTERNO / FINANCING AND EXTERNAL INDEBTEDNESS

En la presente versión se han incluido seis cuadros que contienen un conjunto de variables vinculadas al financiamiento externo. En general, a menos que se especifique otra cosa, las cifras de estos cuadros corresponden a las definiciones siguientes:

La deuda externa total: comprende el total de la deuda pública externa, la deuda privada garantizada por el sector público y la deuda privada de mediano, largo y corto plazo, más la deuda con el Fondo Monetario Internacional (FMI).

La transferencia neta de recursos: equivale al ingreso neto de capitales (autónomos y no autónomos) más (+) errores y omisiones, menos (-) las utilidades e intereses netos, que incluyen tanto los intereses efectivamente pagados como los vencidos y no pagados.

Los intereses pagados y devengados: se refieren a los intereses de la deuda externa efectivamente pagados y a aquellos vencidos y no pagados.

Las utilidades pagadas: comprenden las remesas enviadas al exterior y las utilidades reinvertidas.

La inversión extranjera directa neta: incluye la inversión directa en el extranjero y la inversión directa en la economía declarante.

La tenencia de reservas internacionales: es un concepto que conviene explicitar, pues constituye una categoría especial de capital que trata de reflejar en forma aproximada la liquidez internacional de un país en un determinado momento. No existe una definición precisa acerca de los activos que desempeñan la función de "reserva". La identificación de los activos de reserva presenta dos interrogantes. La primera: además de los activos realmente propios, ¿qué otros recursos pueden considerarse a disposición de las autoridades centrales? La segunda: de los activos que se controlan, ¿cuáles se pueden usar si se presenta la necesidad? Estas interrogantes llevan a referirse al "control efectivo" y a la "disponibilidad de uso" de los activos. El control efectivo de éstos tiene incluso connotaciones políticas, pues en un sentido amplio puede decirse que, en virtud de su poder, el Estado podría no

This edition of the *Yearbook* includes six tables that contain a series of variables relating to external financing. In general, unless otherwise specified, the figures in these tables correspond to the following definitions:

Total external debt includes the total external public debt, private debt guaranteed by the public sector and medium-, long- and short-term private debt, plus debts owed to the International Monetary Fund (IMF).

Net transfer of resources equals net (autonomous and non-autonomous) capital inflows, plus (+) errors and omissions, less (-) net profits and interest, which include both actual interest payments and interest due but not paid.

Interest paid and due refers to interest on the external debt that has actually been paid and interest due but not paid.

Profits paid include remittances to the exterior and reinvested profits.

Foreign direct investment (net) includes direct investment abroad and direct investment in the reporting economy.

International reserve holdings is a concept that requires explanation, since it is a special category of capital that is intended to provide an approximate indication of the international liquidity of a country at a given point in time. There is no precise definition of the assets that perform the role of "reserves". The identification of reserve assets raises two questions. The first is: what assets, in addition to those that they actually own, could be considered as actually being at the disposal of the central authorities? The second question is: which of the assets that they control are available for use if the need arises? These questions lead to the concepts of "effective control" of assets and their "availability for use". The concept of effective control has political connotations as well, since in a broad sense it could be said that, by virtue of its authority, the State can not only control all the assets located within the

sólo controlar todos los activos situados en la economía que lo sustenta, sino también disponer de ellos. No obstante, es obvio que esta situación estaría reñida con un sistema político mixto o con el predominio de la propiedad privada. Al respecto, el FMI recomienda adoptar como criterio de control efectivo que “los únicos activos que se clasifican como parte de las reservas son los activos sobre el exterior que efectivamente pertenezcan a las autoridades centrales”; sin embargo, no se descartan situaciones en que ese control pudiera ampliarse mediante políticas monetarias para estimular una colaboración del sector privado en esta materia.

Según el criterio de “disponibilidad de uso” (posibilidad de que las autoridades que posean los activos puedan disponer de ellos de inmediato), el oro, los derechos especiales de giro (DEG) y las posiciones de reservas en el FMI, constituyen la máxima forma de liquidez. Sin embargo, éste se considera un enfoque excesivamente riguroso en la definición de las reservas. Un criterio más flexible consiste en examinar si existe un razonable grado de seguridad de que, en caso necesario, se pueda contar con las condiciones para utilizar el activo dentro de la institucionalidad vigente.

En resumen, no hay una definición rígida del concepto de reservas. Este sólo cobra sentido concreto cuando en cada país se fija el límite entre activos de reserva y otros activos, teniendo en cuenta los criterios de “control efectivo” y “disponibilidad de uso”, antes indicados. En todo caso, cabe señalar que el concepto de reservas en los cuadros sobre “tenencias” incluye el oro monetario, los DEG, la posición de reserva en el Fondo Monetario Internacional y las divisas.

Debido a los problemas de definición de las reservas internacionales mencionados y a la valorización del oro, los niveles de tenencias de reservas publicadas en otras fuentes no se consideran estrictamente comparables con las cifras publicadas en este *Anuario*.

La porción de oro de las reservas publicadas en este *Anuario* se valoran uniformemente a los precios en Londres a fin de cada año, es decir 37.37 dólares por onza en 1970, 598.50 en 1980, 456.90 en 1982, 327.00 en 1985, 390.90 en 1986, 484.10 en 1987, 410.25 en 1988, 401.00 en 1989, 385.00 en 1990, 353.60 en 1991, 333.25 en 1992, 390.65 en 1993, 383.25 en 1994, 386.75 en 1995 y 369.25 para 1996.

economy that sustains it, but could also make use of them. However, it is obvious that such a situation would be at variance with a mixed political system or one in which private ownership predominates. In this regard, the IMF recommends that the question of effective control be determined on the basis of the criterion that “only foreign claims actually owned by the central authorities would be found to form part of the reserves”, although it is recognized that there may be situations where such control could be broadened by means of monetary policies designed to elicit the collaboration of the private sector in this respect.

Using the criterion of “availability of use” (i.e., the possibility that the authorities possessing the assets can make use of them immediately), gold, special drawing rights (SDRs) and IMF reserve positions are the most unconditional form of liquidity. However, this is considered to be an excessively rigorous criterion for the definition of reserves. A more flexible approach is to consider whether there is a reasonable degree of certainty that, should the need arise, the necessary conditions for using the asset within the existing institutional structure could be satisfied.

In sum, there is no strict definition of the concept of reserves. This term only takes on a concrete meaning when the dividing line between reserve assets and other assets is drawn in each country, taking into consideration the criteria of “effective control” and “availability of use” mentioned above. In the case at hand, it should be noted that the concept of reserves used in the tables on “holdings” includes monetary gold, Special Drawing Rights, IMF reserve position and foreign exchange.

Due to these problems in defining international reserves and to the changing valuation of gold, the levels of reserve holdings published in other sources are not considered to be strictly comparable with the figures published in this *Yearbook*.

The gold portion of the reserves published in this *Yearbook* is uniformly valued at the London price at the end of each year, that is to say US\$37.37 per ounce in 1970, \$598.50 in 1980, \$456.90 in 1982, \$327.00 in 1985, \$390.90 in 1986, \$484.10 in 1987, \$410.25 in 1988, \$401.00 in 1989, \$385.00 in 1990, \$353.60 in 1991 and \$333.25 in 1992, \$390.65 in 1993, \$383.25 in 1994, \$386.75 in 1995, and \$369.25 in 1996.

Para los años 1990, 1991, 1992, 1993, 1994, 1995 y 1996, las tenencias de reservas a fin de cada año se expresan también en función del número de meses de importaciones de bienes y servicios que podrían financiarse con ellas, considerando el valor medio de las importaciones de cada año.

For the years 1990, 1991, 1992, 1993, 1994, 1995 and 1996, reserve holdings at the end of each year are also expressed in terms of the number of months of imports of goods and services that they would finance, calculated on the basis of the mean value of imports in each year.

COMERCIO EXTERIOR / EXTERNAL TRADE

Índices del comercio exterior / *External trade indexes*

El cálculo de los índices del comercio exterior con base 1990=100 comprende índices para bienes y para servicios.

Para calcular los índices del comercio exterior con base 1990=100, se han seleccionado los bienes más representativos del comercio exterior de cada país, definiéndose las "muestras" sobre la base de los siguientes criterios:

a) Restricción de valor. Se consideraron sólo los productos que superaban un determinado valor a precios corrientes; por lo general se trató de una proporción fija de las exportaciones o importaciones.

b) Relativa homogeneidad de los productos incluidos en cada partida, que supone que los productos sujetos a comparación posean características básicas similares.

La selección de la muestra se realizó sobre la base de las partidas ordenadas según la Revisión 2 de la Clasificación Uniforme para el Comercio Internacional (CUCI-Rev.2). Se utilizó principalmente la información contenida en el Banco de Datos del Comercio Exterior de América Latina y el Caribe (BADECCEL),¹⁰ que mantiene la División de Estadística y Proyecciones de la CEPAL. Complementariamente, se recurrió a diversas publicaciones sobre el comercio exterior de los países.

Indexes for goods and for services were used in calculating the foreign trade indexes (base year 1990=100).

In order to calculate the external trade indexes using 1990 as the base year, the goods which are most representative of the foreign trade of each country have been chosen, the "samples" being defined according to the following criteria:

a) Value limits. Only the products which exceeded a given value at current prices were taken into account; the threshold was usually a fixed proportion of exports or imports.

b) Relative homogeneity of the products included in each group. This means that the products to be compared have similar basic characteristics.

The sample was chosen on the basis of product groups arranged according to the Standard International Trade Classification (SITC), Rev.2. The main source of information was the External Trade Data Bank for Latin America and the Caribbean (BADECCEL),¹⁰ which is maintained by the ECLAC Statistics and Projections Division. In addition, several foreign trade publications of the countries of the region were used as supplementary sources.

¹⁰ Véase los títulos de las fuentes bibliográficas sobre comercio exterior, en la sección "fuentes generales".

¹⁰ See the sources shown in the "General sources" section of the bibliography given herein for the chapter on external trade.

Para obtener los índices implícitos de valor unitario sobre el total de las exportaciones e importaciones se calcularon valores constantes para la parte excluida del universo de cada Sección de la CUCI, y se deflactaron por el índice resultante de la muestra cuando se trataba de productos homogéneos que tenían una alta representatividad como, por ejemplo, determinados tipos de materias primas. Sin embargo, en el caso de productos heterogéneos con baja representatividad, como maquinaria y equipo, se utilizaron índices internacionales publicados por organismos especializados o por países desarrollados.

En el cálculo de los índices del comercio exterior de servicios se utilizaron las aperturas que se presentan en la quinta edición del Manual de balanza de pagos del FMI. El comercio de servicios se dividió en servicios de transportes, viajes y otros servicios. Para cada una de estas categorías se calculó un índice de precios sobre la base de la información recibida de los países en cuestión y de organismos internacionales especializados.

Para realizar el cálculo de los índices de valor unitario del conjunto regional se obtuvieron valores corrientes y constantes mediante la agregación de los respectivos valores en cada país, y se aplicó la fórmula de Paasche, cuyas características se explican más adelante.

Mediante los índices del comercio exterior de bienes se midieron las variaciones del valor, del quíntum, del valor unitario, de la relación de precios del intercambio y del poder de compra de las exportaciones.

El índice del quíntum se construyó utilizando la fórmula de Laspeyres, que contempla ponderaciones fijas del año utilizado como base. En cambio, el índice del valor unitario se calculó mediante la aplicación de la fórmula de Paasche, que se basa en ponderaciones de cada año considerado. El índice del valor unitario de las exportaciones corresponde a valores fob y el de las importaciones a valores cif.

Como es natural, los resultados obtenidos presentan las limitaciones inherentes a fórmulas como las del tipo Laspeyres y Paasche. La elección de estas fórmulas obedeció a que su combinación satisface la propiedad de reversión de factores, de manera que al multiplicar un índice del quíntum calculado con la fórmula de

In order to obtain the implicit unit value indexes for total exports and imports, constant values were calculated for the portion not included in the universe of each SITC section; these were deflated by the index obtained from the sample in the case of broadly representative, homogeneous products, as, for example, certain types of raw materials. In the case of heterogeneous products, such as machinery and equipment, which were not broadly representative, however, international indexes published by specialized agencies or by the developed countries were used.

The breakdowns used in the fifth edition of the IMF Balance of Payments Manual were used in calculating the indexes for foreign trade in services. Trade in services was divided into transportation services, travel and other services. A price index was calculated for each of these categories based on information received from the relevant countries and specialized international agencies.

In order to calculate the unit value indexes for the region as a whole, current and constant values were obtained by aggregating the respective values for each country using the Paasche formula, which is explained below.

The indexes for external trade in goods were used to measure the changes in value, volume, unit value, terms of trade and purchasing power of exports.

The index of volume was constructed using the Laspeyres formula, which employs fixed weightings for the base year. The unit value index, for its part, was calculated by applying the Paasche formula, which is based on weightings for each year in question. FOB values are used in the unit value index for exports, while CIF values are used for imports.

The results obtained naturally reflect the limitations inherent in such formulas as the Laspeyres and Paasche. These two formulas were chosen because together they satisfy the factor reversal principle, so that when a volume index which is calculated according to the Laspeyres formula is multiplied by a unit value index

Laspeyres por un índice del valor unitario calculado con la fórmula de Paasche, se obtiene un índice del valor. Lógicamente, al ser reversibles los factores, cada índice puede obtenerse despejando la ecuación: valor = valor unitario x cantidad.

El índice de la relación de precios del intercambio se define como el cuociente entre el índice del valor unitario de las exportaciones y el índice del valor unitario de las importaciones, ambos referidos a la misma base.

CLASIFICACIÓN DE LAS EXPORTACIONES E IMPORTACIONES DE BIENES / CLASSIFICATION OF EXPORTS AND IMPORTS OF GOODS

Exportaciones de productos primarios y manufacturados. Los datos que se presentan en este Anuario se compilaron sobre la base de las estadísticas oficiales del comercio exterior de los respectivos países mediante un método computarizado, en que se utilizó el BADECEL. El total correspondiente al conjunto de la región (excluidos Cuba y Haití, sobre los cuales no se dispone de información), se obtuvo agrupando los datos por países. Los valores de las exportaciones totales al mundo incluyen ajustes por revaluación para varios países.

El criterio adoptado para clasificar tanto los productos primarios como los manufacturados corresponde al que utiliza la División de Estadística de las Naciones Unidas para presentar los datos del comercio exterior mundial por regiones económicas. Para ello se agrupan las secciones de la CUCI modificada de la manera siguiente:

A. *Productos primarios*

Comprende el total de las secciones:

0. Productos alimenticios y animales vivos destinados principalmente a la alimentación
 1. Bebidas y tabaco
 2. Materiales crudos no comestibles, excepto los combustibles
 3. Combustibles y lubricantes minerales
 4. Aceites, grasas y ceras de origen animal y vegetal
 9. Mercancías y operaciones no clasificadas en otro rubro de la CUCI.

calculated according to the Paasche formula, an index of value is obtained. Logically, since the factors are reversible, each index can be obtained by applying the equation: value = unit value x quantity.

The index of the terms of trade is defined as the quotient of the unit value index for exports and the unit value index for imports, both referring to the same base.

Exports of primary products and manufactures. The data given in this Yearbook were compiled on the basis of official foreign trade statistics of the respective countries through a computerized method in which use was made of the BADECEL. The total for the region as a whole (excluding Cuba and Haiti, for which information was not available) was obtained by adding together the data for the individual countries. The values for total exports to the rest of the world include adjustments for revaluation in the case of several countries.

The criterion adopted for classifying both primary products and manufactured goods is that used by the United Nations Statistical Division in presenting world foreign trade data by economic regions. For this purpose the sections of the SITC, Revised, are grouped as follows:

A. *Primary products*

This group includes all the products in sections:

0. Food and live animals chiefly for food
1. Beverages and tobacco
2. Crude materials, non-edible, except fuels
3. Mineral fuels, lubricants and related materials
4. Animal and vegetable oils, fats and waxes
9. Commodities and transactions not classified elsewhere in the SITC.

Se incluye además el capítulo 68 denominado metales no ferrosos.

B. *Productos manufacturados*

Comprende el total de las secciones:

5. Productos químicos y conexos, n.e.p.
6. Artículos manufacturados, clasificados principalmente según el material (excluido el capítulo 68: metales no ferrosos)
7. Maquinaria y equipo de transporte
8. Artículos manufacturados diversos.

Las importaciones de bienes se presentan según las tres clases básicas del Sistema de Cuentas Nacionales (SCN). El criterio para definir esta clasificación se basa en la reestructuración parcial de las 19 categorías de las Grandes Categorías Económicas (GCE)¹¹ de las Naciones Unidas. Así, se obtienen totales aproximados de los bienes de capital, los bienes intermedios y los bienes de consumo. Por otra parte, dada la importancia que tienen en el comercio internacional los carburantes para motores (categoría 321*) y los vehículos automotores de pasajeros (categoría 51*), éstas se presentan separadamente. Se excluye la gran categoría 7, "Bienes no especificados en otra partida", por no ser considerada en ninguna de las tres clases básicas del SCN, que a continuación se define:

1. *Bienes de capital*

Suma de categorías:

- 41* Maquinaria y otros bienes de capital (exceptuando el material de transporte)
521* Material de transporte, industrial.

2. *Bienes intermedios*

Suma de categorías:

- 121* Alimentos y bebidas, elaborados, destinados principalmente a la industria
111* Alimentos y bebidas, básicos, destinados principalmente a la industria
2* Suministros industriales no especificados en otra partida

¹¹ Naciones Unidas. Clasificación por Grandes Categorías Económicas, serie M. N° 53, Nueva York, 1971.

* Las referencias a la clasificación en GCE se señalan con un asterisco para evitar el riesgo de confusión con las secciones, capítulos y grupos numerados de la CUCI, modificada.

Division 68 –non-ferrous metals– is also included.

B. *Manufactured goods*

This group includes all the products in sections:

5. Chemicals and related products, n.e.c.
6. Manufactured goods classified chiefly by material (excluding division 68: non-ferrous metals)
7. Machinery and transport equipment
8. Miscellaneous manufactured articles.

Imports of goods are presented according to the three basic classes used in the System of National Accounts (SNA). The approach used in defining this classification was based on a partial reorganization of the 19 categories of the United Nations Classification by Broad Economic Categories.¹¹ On this basis, approximate totals have been obtained for capital goods, intermediate goods and consumer goods. In view of the important role in international trade played by motor spirit (category 321*) and passenger motor cars (category 51*), these categories are presented separately. Broad category 7, "Goods not elsewhere specified", is not included since it is not covered by any of the three basic SNC categories, which are defined as follows:

1. *Capital goods*

Sum of categories:

- 41* Machinery and other capital equipment (except transport)
521* Transport equipment, industrial.

2. *Intermediate goods*

Sum of categories:

- 121* Food and beverages, processed, mainly for industry
111* Food and beverages, primary, mainly for industry
2* Industrial supplies not elsewhere specified

¹¹ United Nations, Classification by Broad Economic Categories, series M, No. 53, New York, 1971.

* References to the Classification by Broad Economic Categories are marked with an asterik to eliminate the risk of confusion with the numbered sections, divisions and groups of SITC, Revised.

| | |
|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 31* Combustibles y lubricantes, básicos | 31* Fuels and lubricants, primary |
| 322* Combustibles y lubricantes, elaborados (excluidos los carburantes) | 322* Fuels and lubricants, processed (other than motor spirit) |
| 42* Piezas y accesorios para maquinaria y otro equipo de capital (exceptando el material de transporte) | 42* Parts and accessories for machinery and other capital equipment (except transport) |
| 53* Piezas y accesorios para material de transporte. | 53* Parts and accessories for transport equipment. |

3. *Bienes de consumo*

| | |
|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| Suma de categorías: | |
| 112* Alimentos y bebidas, básicos, destinados principalmente al consumo en los hogares | 112* Food and beverages, primary, mainly for household consumption |
| 122* Alimentos y bebidas, elaborados, destinados principalmente al consumo en los hogares | 122* Food and beverages, processed, mainly for household consumption |
| 522* Material de transporte no industrial | 522* Transport equipment, non-industrial |
| 6* Bienes de consumo no especificados en otra partida. | 6* Consumer goods not elsewhere specified. |

En cuanto a las exportaciones, además de la presentación tradicional en que se consideran dos grandes grupos, definidos según la CUCI como productos primarios y productos manufacturados, se ha incluido información según la Clasificación Industrial Uniforme de todas las actividades económicas (CIIU, Rev. 2). Estas estadísticas tienen por objeto ilustrar las transacciones comerciales de acuerdo con las tres grandes divisiones (1 dígito) de la CIIU, Rev. 2, vinculadas con los bienes transportables, que son: Gran división 1. Agricultura, caza, silvicultura y pesca; Gran división 2. Explotación de minas y canteras, y Gran división 3. Industrias manufactureras.

Las grandes divisiones 1 y 2 figuran individualmente como un todo. En cambio, en el caso de la gran división 3, se ha preferido presentar estadísticas que reflejen en forma más específica la clase de actividad económica que genera los bienes; en consecuencia, se han creado cuatro categorías agregándose las siguientes agrupaciones (3 dígitos):

- Industria de alimentos, bebidas y tabaco

Agrupación:

| | |
|-----------------------------------------------|----------------------------|
| 311-312 Fabricación de productos alimenticios | 311-312 Food manufacturing |
| 313 Industria de bebidas | 313 Beverage industries |
| 314 Industria del tabaco | 314 Tobacco manufactures |

| | |
|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| 31* Combustibles y lubricantes, básicos | 31* Fuels and lubricants, primary |
| 322* Combustibles y lubricantes, elaborados (excluidos los carburantes) | 322* Fuels and lubricants, processed (other than motor spirit) |
| 42* Piezas y accesorios para maquinaria y otro equipo de capital (exceptando el material de transporte) | 42* Parts and accessories for machinery and other capital equipment (except transport) |
| 53* Piezas y accesorios para material de transporte. | 53* Parts and accessories for transport equipment. |

3. *Consumer goods*

Sum of categories:

| | |
|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 112* Alimentos y bebidas, básicos, destinados principalmente al consumo en los hogares | 112* Food and beverages, primary, mainly for household consumption |
| 122* Alimentos y bebidas, elaborados, destinados principalmente al consumo en los hogares | 122* Food and beverages, processed, mainly for household consumption |
| 522* Material de transporte no industrial | 522* Transport equipment, non-industrial |

6* Bienes de consumo no especificados en otra partida.

In the case of exports, in addition to their presentation in the traditional format which distinguishes between two broad groups defined, on the basis of the SITC, as primary products and manufactured products, data organized on the basis of the International Standard Industrial Classification of All Economic Activities (ISIC, Rev. 2) have also been included. These statistics are intended to provide information about commercial transactions in terms of the three ISIC, Rev. 2, major divisions (one digit) relating to transportable goods, which are: Major Division 1. Agriculture, Hunting, Forestry and Fishing; Major Division 2. Mining and Quarrying; and Major Division 3. Manufacturing.

Major Divisions 1 and 2 each appear as one unit. In the case of Major Division 3, however, it has been deemed appropriate to present statistics which provide a more specific indication of the class of economic activity that generates the goods; thus, four categories have been created by aggregating the following major groups (three digits):

- Manufacture of food, beverages and tobacco

Major groups:

| |
|----------------------------|
| 311-312 Food manufacturing |
| 313 Beverage industries |
| 314 Tobacco manufactures |

- Otras industrias, principalmente de bienes de consumo no duraderos

Agrupación:

- 321 Fabricación de textiles
- 322 Fabricación de prendas de vestir, excepto calzado
- 323 Industria del cuero y productos de cuero, y sucedáneos de cuero y pieles, excepto el calzado y otras prendas de vestir
- 324 Fabricación de calzado, excepto el de caucho vulcanizado o moldeado o de plástico
- 322 Fabricación de muebles y accesorios, excepto los que son principalmente metálicos
- 342 Imprentas, editoriales e industrias conexas
- 390 Otras industrias manufactureras.

-Industrias, principalmente de bienes intermedios

Agrupación:

- 331 Industria de la madera y productos de madera y de corcho, excepto muebles
- 341 Fabricación de papel y productos de papel
- 351 Fabricación de sustancias químicas industriales
- 352 Fabricación de otros productos químicos
- 353 Refinerías de petróleo
- 354 Fabricación de productos diversos derivados del petróleo y del carbón
- 355 Fabricación de productos de caucho
- 356 Fabricación de productos de plástico, n.e.p.
- 361 Fabricación de objetos de barro, loza y porcelana
- 362 Fabricación de vidrio y productos de vidrio
- 369 Fabricación de otros productos minerales no metálicos
- 371 Industrias básicas de hierro y acero
- 372 Industrias básicas de metales no ferrosos.

- Industrias, metalmecánicas

Agrupación:

- 381 Fabricación de productos metálicos, exceptuando maquinaria y equipo
- 382 Construcción de maquinaria, exceptuando la eléctrica
- 383 Construcción de maquinaria, aparatos, accesorios y suministros eléctricos

- Other manufacturing, mainly of non-durable consumer goods

Major groups:

- 321 Manufacture of textiles
- 322 Manufacturing of wearing apparel, except footwear
- 323 Manufacture of leather and products of leather, leather substitutes and fur, except footwear and wearing apparel
- 324 Manufacture of footwear, except vulcanized or moulded rubber or plastic footwear
- 332 Manufacture of furniture and fixtures, except primarily of metal
- 342 Printing, publishing and allied industries
- 390 Other manufacturing industries.

- Manufacturing, mainly of intermediate goods

Major groups:

- 331 Manufacture of wood and wood and cork products, except furniture
- 341 Manufacture of paper and paper products
- 351 Manufacture of industrial chemicals
- 352 Manufacture of other chemical products
- 353 Petroleum refineries
- 354 Manufacture of miscellaneous products of petroleum and coal
- 355 Manufacture of rubber products
- 356 Manufacture of plastic products, n.e.c.
- 361 Manufacture of pottery, china and earthenware
- 362 Manufacture of glass and glass products
- 369 Manufacture of other non-metallic mineral products
- 371 Iron and steel basic industries
- 372 Non-ferrous metal basic industries.

- Manufacture of fabricated metal products, machinery and equipment

Major groups:

- 381 Manufacture of fabricated metal products, except machinery and equipment
- 382 Manufacture of machinery except electrical
- 383 Manufacture of electrical machinery, apparatus, appliances and supplies

384 Construcción de material de transporte
385 Fabricación de equipo profesional y científico, instrumentos de medida y de control n.e.p., y aparatos fotográficos e instrumentos de óptica.

Cabe señalar que la cobertura de la información que se presenta –según la CIU, Rev. 2–acerca de Barbados, Belice, Dominica, Jamaica, Panamá y Trinidad y Tabago no es completa, debido a que estos países no disponen en algunos casos de datos los suficientemente desagregados según la CUCI, lo que impide establecer una adecuada correlación con la CIU, Rev. 2.

De este modo, por un lado se ha procurado introducir una clasificación universal, apta para el análisis económico desde el punto de vista del uso que se da a los bienes importados, y por otro, brindar información básica para examinar la evolución de la estructura de las exportaciones de bienes según el origen de la actividad que los genera, fenómeno que en buena medida refleja el progreso tecnológico de un país.

Además, para dar una visión más amplia de los principales productos de exportación de cada país, se han seleccionado los diez más importantes según la magnitud de su valor en los años 1980, 1985 y 1990 a 1996. Estos pueden ser variables de un año a otro, en la medida que se produzcan importantes cambios en los volúmenes y en los precios relativos de las exportaciones, o que aparezcan nuevos productos exportables que desplacen a los seleccionados anteriormente.

Como en la edición anterior la selección de los productos se realizó utilizando la CUCI modificada en toda la serie.

BALANCE DE PAGOS / BALANCE OF PAYMENTS

En este volumen del Anuario se incluyen por segunda vez los datos de balanza de pagos desglosados conforme a los componentes analíticos de la quinta edición del *Manual de balanza de pagos* publicado por el FMI en 1993. En dicho *Manual* se introducen una serie de cambios metodológicos para la compilación de los datos de balanza de pagos, cambios que se señalan más adelante.

Los datos históricos, así como los datos recientes declarados por los países miembros en el formato de la cuarta edición del *Manual de balanza de pagos*, han sido convertidos por el personal del FMI y de la CEPAL conforme a la

384 Manufacture of transport equipment
385 Manufacture of professional and scientific, and measuring and controlling equipment, n.e.c. and of photographic and optical goods.

For Barbados, Belize, Dominica, Jamaica, Panama and Trinidad and Tobago, the coverage of the information presented –according to ISIC, Rev. 2– is incomplete because not all of the data for these countries are sufficiently disaggregated according to SITC, and therefore cannot be properly correlated with ISIC, Rev. 2.

By this means an attempt has been made, on the one hand, to introduce a universal system of classification geared to the purposes of economic analysis from the standpoint of the use to which merchandise imports are put and, on the other hand, to provide basic information for use in examining trends in the structure of merchandise exports in terms of the activity that produces them, which to a large extent reflects the technological progress made in a country.

In addition, in order to provide a broader picture of the main exports of each country, the 10 exports which were most important in terms of value in 1980, 1985 and 1990-1996 have been selected. These may vary from year to year as major changes occur in export volumes and relative prices or as new exportable products overshadow those selected previously.

As in the previous edition of the *Yearbook*, the product selection process was based on SITC, Revised, for the entire series.

This volume of the *Yearbook* marks the second time that the balance-of-payments data are presented in accordance with the standard components of the fifth edition of the *Balance of Payments Manual*, which was published by the IMF in 1993. This new edition of the *Manual* introduces a number of methodological changes for the compilation of balance-of-payments data. These changes will be described further on in this section.

Historical data, as well as recent data that member countries have reported in the format of the fourth edition of the *Balance of Payments Manual*, have been converted by IMF and ECLAC staff to the methodology and format of the fifth edition. The conversion involved the development

metodología y el formato de la quinta edición. La conversión se realizó elaborando fórmulas para adecuar la información de balanza de pagos que envió cada país al FMI y a la CEPAL utilizando el formato de la cuarta edición a la metodología y presentación que exige la quinta edición. Seguidamente se enviaron los datos convertidos a las autoridades de los respectivos países para su revisión y se incorporaron los comentarios recibidos a la nueva base de datos. Gracias a la conversión fue posible presentar en este volumen la información conforme al formato que establece la quinta edición sin grandes alteraciones metodológicas. Es posible que la base de datos históricos se vuelva a corregir para ciertos países si las autoridades de los mismos introdujeran refinamientos ulteriores en el proceso de conversión. Toda corrección que tenga lugar se publicará en volúmenes subsiguientes del Anuario.

PRINCIPALES DIFERENCIAS ENTRE LA CUARTA Y LA QUINTA EDICIÓN DEL MANUAL / SALIENT FEATURES OF THE FIFTH EDITION AS COMPARED TO THE FOURTH EDITION OF THE MANUAL

En la quinta edición del *Manual* se han incorporado cambios importantes para tener en cuenta la evolución del comercio y las finanzas internacionales que ha tenido lugar durante la última década. Además en la medida de lo posible, se han armonizado los conceptos utilizados con la metodología adoptada en el *Sistema de Cuentas Nacionales* de 1993 (SCN) y la que emplea el FMI para compilar las estadísticas financieras y de finanzas públicas. A continuación se indican los principales cambios metodológicos que afectan de manera considerable el significado y la presentación de las estadísticas de balanza de pagos en este Anuario:

1) La cobertura de la “cuenta corriente” es diferente en la quinta edición del *Manual*. Según la nueva definición, la “cuenta corriente” abarca las transacciones efectuadas con no residentes en bienes, servicios y renta y los ingresos/pagos de transferencias corrientes; en la cuarta edición, esta cuenta comprendía bienes, servicios, renta y todas las transferencias. En la nueva edición, las transferencias de capital forman parte de la nueva “cuenta de capital y financiera”, cuya cobertura es más amplia que la antigua cuenta de capital. La distinción entre transferencias corrientes y de capital se basa en las directrices establecidas en el SCN, el cual

development of formulas to transform the Fund's and the Commission's balance-of-payments data for each country from the format used in the fourth edition to the methodology and form of presentation used in the fifth edition. The converted data for each reporting country were then sent to the respective authorities for review, and their comments have since been incorporated into the new database. This data conversion has made possible the presentation of this volume of data in the fifth-edition format without any major methodological breaks. As further refinements are made in the data conversion for particular countries by the relevant national authorities, the historical database may be revised further. Such revisions will be published in subsequent volumes of the *Yearbook*.

The fifth edition of the *Manual* incorporates major changes to take account of developments in international trade and finance over the past decade. In addition, the concepts used in the fifth edition have been harmonized, insofar as possible, with the methodology of the 1993 *System of National Accounts* (SNA) and IMF methodologies pertaining to financial and government finance statistics. The major changes in methodology that significantly affect the meaning and presentation of the balance-of-payments data presented in the *Yearbook* are:

1) The coverage of the “current account” in the fifth edition differs from that of the fourth edition. The fifth edition defines the “current account” as encompassing transactions with non-residents in goods, services, income and receipts/payments of current transfers; in the fourth edition, the “current account” was defined as including goods, services and all transfers. In the fifth edition, capital transfers are covered under an expanded and redesignated “capital and financial account”. The distinction between current and capital transfers is based on guidelines established in the 1993 SNA which characterize capital transfers in the following terms:

incluye las siguientes definiciones: a) una transferencia en especie es una transferencia de capital cuando entraña la transferencia de propiedad de un activo fijo, o la condonación de una obligación por parte de un acreedor sin recibir nada a cambio, y b) una transferencia de efectivo es una transferencia de capital cuando está vinculada o condicionada a la adquisición o enajenación de un activo fijo (por ejemplo, una donación para inversión) por una o ambas partes de la transacción.

2) En la quinta edición se ha ampliado la cobertura de la categoría de bienes, que incluye: a) el valor (en cifras brutas) de los bienes recibidos de otro país o enviados al exterior para ser transformados y la subsiguiente exportación/importación una vez efectuada la transformación; b) el valor de las reparaciones de bienes, y c) el valor de los bienes adquiridos en puerto por medios de transporte. En la cuarta edición, el valor neto de los bienes importados para ser transformados y reexportados posteriormente se registraba como servicios de transformación; las reparaciones de bienes y los bienes adquiridos en puerto por medios de transporte también se registraban como servicios.

3) En la quinta edición se clasifican por separado la renta y los servicios; en la cuarta, la renta era un subcomponente de servicios. Además, en la nueva edición se reclasifican ciertas transacciones de renta y de servicios. En la cuarta edición, la renta del trabajo incluía los gastos de los trabajadores no residentes además de sus ingresos; en la quinta, los ingresos de los trabajadores se clasifican en el componente remuneración de empleados de la categoría de renta y los gastos como servicios de viajes. En la cuarta edición, la remuneración del personal local de embajadas y bases militares situadas en el extranjero y de los funcionarios de organismos internacionales se registraba como parte de los servicios oficiales; en la quinta edición, dicha remuneración se clasifica como partida de crédito en remuneraciones de empleados. En la cuarta edición se incluían los pagos por el uso de patentes, derechos de autor y otros activos intangibles no financieros bajo el rubro renta de la propiedad; en la quinta edición se clasifican como servicios. En general, el concepto de renta del nuevo *Manual* abarca la renta de la inversión y todas las formas de remuneración de los empleados, en tanto que en la cuarta edición incluía la renta de la inversión, la renta del trabajo en casi todas sus formas (incluidos los casos de los trabajadores en el extranjero) y la renta de la propiedad.

a) a transfer in kind is a capital transfer when it consists of the transfer of ownership of a fixed asset, or of the forgiveness of a liability by a creditor when no counterpart is received in return; and b) a transfer of cash is a capital transfer when it is linked to, or conditional upon, the acquisition or disposal of a fixed asset (for example, an investment grant) by one or both parties to the transaction.

2) The coverage of goods in the fifth edition of the *Manual* has been expanded to include: a) the value of goods (on a gross basis) received/sent for processing and their subsequent export/import in the form of processed goods; b) the value of repairs on goods; and c) the value of goods procured in ports by carriers. In the fourth edition, the net value between goods imported for processing and subsequently re-exported was included in processing services; repairs of goods and goods procured in ports by carriers were also included under services.

3) The fifth edition classifies income and services separately; in the fourth edition, income was a subcomponent of services. The fifth edition also reclassifies certain income and services transactions. In the fourth edition, labour income included non-resident workers' expenditures, in addition to these workers' earnings; in the fifth edition, workers' earnings are classified under compensation of employees in the income category and their expenditures are classified under travel services. In the fourth edition, the compensation of resident staff of foreign embassies and military bases and of staff of international organizations was included under government services, whereas this compensation is classified as a credit item of compensation of employees in the fifth edition. The fourth edition classified payments for the use of patents, copyrights and similar non-financial intangible assets as property income; these items are classified as subcomponents of other services in the fifth edition. In general, the fifth-edition concept of income covers investment income plus all forms of compensation of employees, whereas in the fourth edition, it included investment income, most forms of labour income (including workers' expenditures abroad) and property income.

4) Se amplió la cobertura de la “cuenta de capital” de la cuarta edición y ahora se denomina “cuenta de capital y financiera”, dividida, a su vez, en dos categorías principales. La primera es la cuenta de capital, que cubre todas las transacciones que denotan a) transferencias de capital y b) adquisición/enajenación de activos no financieros no producidos. La segunda categoría es la cuenta financiera, aproximadamente equivalente a la cuenta de capital de la cuarta edición, que agrupa todas las transacciones efectuadas con no residentes vinculadas con un traspaso de propiedad de activos y pasivos financieros de una economía sobre el exterior, incluidas la creación, el intercambio y la liquidación de créditos frente al resto del mundo o del resto del mundo frente a la economía.

5) La inversión directa, tanto en la cuarta como en la quinta edición, se clasifica principalmente según su dirección: inversión directa de residentes en el extranjero e inversión directa de no residentes en la economía declarante. En la quinta edición, todas las transacciones entre empresas no financieras de inversión directa y sus empresas matrices y afiliadas se incluyen en la inversión directa. Las transacciones entre bancos filiales y entre otros intermediarios financieros filiales se limitan al capital en acciones y al que está relacionado con la deuda permanente. Las demás transacciones entre bancos e instituciones financieras filiales se clasifican como inversión de cartera u otra inversión. En la cuarta edición sólo se exclúan de la inversión directa las transacciones de estos tipos a corto plazo.

6) En la quinta edición se amplió la cobertura de la inversión de cartera para reflejar la reciente proliferación de nuevos instrumentos financieros. Se incluyen ahora los instrumentos de deuda del mercado monetario y los instrumentos financieros derivados negociables; en la cuarta edición se incluían dentro de “Otro capital”.

PRESENTACIÓN ANALÍTICA

En la presentación analítica, los componentes de la balanza de pagos se clasifican en cinco categorías principales de datos que se consideran útiles para analizar de manera uniforme la evolución de la balanza de pagos. No obstante, no debe interpretarse que esta división

4) The fourth edition's “capital account” was expanded and re-designated as the “capital and financial account” in the fifth edition of the *Manual*; this new account comprises two major categories. The first is the capital account as such, which covers all transactions that involve a) the receipt or payment of capital transfers, and b) the acquisition/disposal of non-produced, non-financial assets. The second category is the financial account, which is roughly equivalent to the capital account as defined in the fourth edition; this covers all transactions with non-residents that have to do with changes in the ownership of foreign financial assets and liabilities in an economy. Such changes involve the creation, exchange and liquidation of claims on or by the rest of the world.

5) As in the fourth edition, direct investment is classified in the fifth edition primarily on a directional basis, i.e., direct investment abroad by residents and direct investment in the reporting economy by non-residents. In the fifth edition, all transactions between non-financial direct investment enterprises and their parent companies and affiliates are included under direct investment. Transactions between affiliated banks and between other affiliated financial intermediaries recorded under direct investment are limited to investments in equities and loan capital representing a permanent interest. Other transactions between banks and affiliated financial institutions are classified under portfolio or other investment. In the fourth edition, only short-term transactions of these types were excluded from direct investment.

6) The coverage of portfolio investment was expanded in the fifth edition to reflect the growth of new financial instruments in recent years. The major change is that money market debt instruments and tradable financial derivatives are now included in portfolio investment; such instruments were treated as “other capital” in the fourth edition.

ANALYTIC PRESENTATION

In the analytic presentation, balance-of-payments components are classified into five major data categories which are considered useful for analysing balance-of-payments developments in a uniform manner. The selected groups should not, however, be regarded

en grupos refleja una recomendación sobre el enfoque analítico más apropiado para todos los países. Los componentes de balanza de pagos podrían agruparse de varias maneras en función de las circunstancias especiales de determinado país o de ciertos requisitos analíticos.

selected groups should not, however, be regarded as constituting an IMF recommendation as to an analytic approach that would be appropriate for every country. The standard components could be grouped in many different ways to take account of the special circumstances of any specific country or to meet particular analytical requirements.

CLASIFICACIONES PRINCIPALES DE LA PRESENTACIÓN ANALÍTICA

Como ya se mencionó, los componentes analíticos se clasifican en cinco grupos principales de cuentas:

I. La cuenta corriente, que comprende bienes y servicios, renta y transferencias corrientes.

II. La cuenta de capital, que se refiere a transferencias de capital y adquisición/enajenación de activos no financieros no producidos.

III. La cuenta financiera, que se refiere a activos y pasivos financieros.

IV. La cuenta de errores y omisiones, que compensa toda sobreestimación o subestimación de los componentes de los grupos anteriores.

V. La cuenta de reservas y partidas conexas, que se refiere a los activos de reserva, al uso del crédito del FMI y préstamos del FMI, a los pasivos que constituyen reservas de autoridades extranjeras y al financiamiento excepcional.

A efectos analíticos se incorporó una sexta categoría (número V en los cuadros) denominada balance global, que incluye todos los componentes de la cuenta corriente, de la cuenta de capital, de la cuenta financiera y de la cuenta de errores y omisiones.

Este balance puede medirse con mayor facilidad como la suma neta, con signo contrario de los componentes de la cuenta de reservas y partidas conexas (número VI en los cuadros).

Esta presentación general refleja el uso común adoptado en la mayoría de los países en el transcurso de los años y un importante cambio que se introduce en la quinta edición del Manual de balanza de pagos. La cuenta de capital se denomina ahora **cuenta de capital y financiera**, como ya se mencionó. A efectos de mantener la uniformidad con el SCN, se hace la distinción entre *transferencias de capital* y *transferencias corrientes* en las cuentas de la balanza de pagos, y se procura la concordancia con la cuenta de capital y la cuenta financiera del SCN.

MAIN CLASSIFICATIONS OF THE ANALYTIC PRESENTATION

As noted above, the analytic components of the balance of payments are grouped under five main types of accounts:

I. The current account, which includes goods and services, income and current transfers;

II. The capital account, which refers to capital transfers and the acquisition/disposal of non-produced, non-financial assets;

III. The financial account, which registers financial assets/liabilities;

IV. The errors and omissions account, which contains offsets for over- or under-estimates of components of the above accounts; and

VI. The reserves and related items account, which refers to reserve assets, the use of IMF credit and loans, liabilities constituting foreign authorities' reserves and exceptional financing.

For analytical purposes, a sixth category (designated as roman numeral "V" in the tables) has been established. This entry, called the global balance, includes all the components of the current, capital, financial and errors and omissions accounts.

This balance can be measured more easily as the net sum (with the opposite sign) of the components of the reserves and related items account (roman numeral "VI" in the tables).

This arrangement is based on common historical usage in most countries and on a major change introduced in the fifth edition of the *Balance of Payments Manual*, i.e., what was formerly the capital account has been relabeled the **capital and financial account**. Reflecting harmonization with the SNA, this change incorporates that system's distinction between *capital transfers* and *current transfers* in balance-of-payments accounts and concordance of the account with SNA capital and financial accounts.

CLASIFICACIÓN DETALLADA DE LA PRESENTACIÓN ANALÍTICA

Cuenta corriente

En la **cuenta corriente** se registran todas las transacciones en valores económicos, salvo recursos financieros, que tienen lugar entre entidades residentes y no residentes; asimismo, se registran los asientos compensatorios de los valores económicos corrientes que se suministren o adquieran sin un quid pro quo. Concretamente, las clasificaciones principales son **bienes, servicios, renta y transferencias corrientes**.

Bienes y servicios

Bienes

Mercancías generales: comprenden la mayoría de los bienes muebles que los residentes exportan a no residentes, o importan de ellos, dando lugar, salvo algunas excepciones especificadas, a un traspaso de propiedad (efectivo o imputado).

Bienes para transformación: comprenden la exportación (o importación, en la economía compiladora) de bienes que cruzan la frontera para ser transformados en el extranjero y la reimportación (o exportación, en la economía compiladora) subsiguiente de dichos bienes, valorados en cifras brutas antes y después de su transformación. Esta partida constituye una excepción al criterio de traspaso de propiedad.

Reparaciones de bienes: comprenden las reparaciones de bienes efectuadas para no residentes o recibidas de ellos en embarcaciones, aeronaves, etc. Si bien el movimiento físico de estos bienes es similar al descrito en el párrafo 154 del *Manual*, las reparaciones deben valorarse según el precio (derechos pagados o recibidos) de las mismas y no según el valor bruto de los bienes antes y después de las reparaciones.

Bienes adquiridos en puerto por medios de transporte: comprenden todos los bienes (como combustibles, víveres, pertrechos y suministros) que las empresas residentes/no residentes de transporte -aéreo, marítimo, etc.- adquieren en el extranjero/en la economía compiladora. Esta clasificación no cubre los servicios auxiliares prestados (remolque, mantenimiento, etc.), que se clasifican en la categoría *transporte*.

Oro no monetario: comprenden las exportaciones e importaciones de todo el oro que no esté en poder de las autoridades como activo de reserva (oro monetario). El *oro monetario* se trata como cualquier otra mercancía y se subdivide, toda vez que sea posible, en oro que se

DETAILED CLASSIFICATIONS OF THE ANALYTIC PRESENTATION

Current account

The **current account** covers all transactions (other than those of financial items) that involve economic values and occur between resident and non-resident entities. It also covers offsets to current economic values provided or acquired without a quid pro quo. Specifically, the major classifications are **goods and services, income and current transfers**.

Goods and services

Goods

General merchandise covers most movable goods that are exported to, or imported from, non-residents by residents and that, with a few specified exceptions, undergo actual or imputed changes in ownership.

Goods for processing cover exports (or imports, in the compiling economy) of goods crossing the border for processing abroad and subsequent re-import (or export, in the compiling economy) of the goods, which are valued on a gross basis before and after processing. This item is an exception to the change of ownership principle.

Repairs on goods cover repair activity on goods provided to or received from non-residents on ships, aircraft, etc. Although the physical movement of these goods is similar to that described in paragraph 154 of the *Manual*, the repairs are valued at the prices (fees paid or received) of the repairs rather than at the gross values of the goods before and after repairs are made.

Goods procured in ports by carriers cover all goods (such as fuels, provisions, stores and supplies) that resident/non-resident carriers -air, shipping, etc.- procure abroad (in the compiling economy). The classification does not cover the provision of auxiliary services (towing, maintenance, etc.), which are covered under *transportation*.

Non-monetary gold covers exports and imports of all gold that is not held as a reserve asset (monetary gold) by the authorities. **Non-monetary gold** is treated in the same way as any other commodity and is subdivided, when feasible, into gold

mantiene como reserva de valor y oro para otros usos (industrial).

Servicios

Transportes: abarcan la mayoría de los servicios prestados por residentes a no residentes, y viceversa, que se incluyan en las partidas embarques y otros transportes de la cuarta edición del *Manual*. En esta edición se excluye el seguro de fletes, que ahora forma parte de los *servicios de seguros*. *Transportes* incluyen el transporte de carga y de pasajeros por todos los medios, así como otros servicios de distribución y auxiliares, incluido el arrendamiento de equipo de transporte tripulado, con ciertas excepciones indicadas en los capítulos X, XI y XIII del *Manual*.

Viajes: comprenden bienes y servicios -incluidos los relacionados con salud y educación- adquiridos en una economía por viajeros no residentes (incluidos los excursionistas) para fines de negocios y para uso personal durante su estancia (inferior a un año) en esa economía. En *viajes* no se incluyen los servicios de transporte internacional de pasajeros, que forman parte de *transportes*. Los estudiantes y las personas que están bajo tratamiento médico se tratan como viajeros, independientemente de la duración de su estancia, en tanto que otros individuos -personal militar y de embajadas y trabajadores no residentes- no se consideran viajeros. No obstante, los gastos incurridos por los trabajadores no residentes se incluyen en *viajes*, mientras que los del personal militar y de embajadas se incluyen en *servicios del gobierno*, no incluidos en otra parte (n.i.o.p.).

Otros servicios. En esta categoría se incluyen:

Servicios de comunicaciones, que abarcan las transacciones de comunicaciones entre residentes y no residentes, incluidos los servicios postales, de mensajería y de telecomunicaciones (transmisión de sonido, imagen y otra información por diferentes medios, así como el mantenimiento pertinente proporcionado por residentes a no residentes y viceversa).

Servicios de construcción, que incluyen las obras de proyectos de construcción e instalación realizadas, con carácter temporal, en el extranjero/en la economía compiladora o en enclaves extraterritoriales por empresas residentes/no residentes y su personal. En este concepto no se incluyen las obras realizadas por una filial extranjera de una empresa residente o una oficina local no constituida en sociedad que

held as a store of value and other (industrial) gold.

Services

Transportation covers most of the services performed by residents for non-residents and vice versa that were included in shipment and other transportation in the fourth edition of the *Manual*. However, freight insurance is now included under *insurance services* rather than under *transportation*. *Transportation* includes freight and passenger transportation by all modes of transportation and other distributive and auxiliary services, including rentals of transportation equipment together with a crew. Certain exceptions are noted in chapters X, XI and XIII of the *Manual*.

Travel covers goods and services -including those related to health and education-acquired from an economy by non-resident travelers (including excursionists) for business purposes and personal use during their visits (of less than one year) in that economy. *Travel* excludes international passenger services, which are included in *transportation*. Students and medical patients are treated as travelers, regardless of their length of stay. Certain others -military and embassy personnel and non-resident workers- are not regarded as travelers. However, expenditures by non-resident workers are included in *travel*, while those of military and embassy personnel are included in *government services*, not included elsewhere (n.i.e.).

Other services. This category includes the following:

Communications services cover communications transactions between residents and non-residents. Such services comprise postal, courier and telecommunications services (transmission of sound, images and other information by various modes and associated maintenance provided by/for residents by/for non-residents).

Construction services cover construction and installation project work that is, on a temporary basis, performed abroad/in the compiling economy or in offshore enclaves by resident/non-resident enterprises and their personnel. Such work does not include work undertaken by a foreign affiliate of a resident enterprise or by an unincorporated site office

sea equivalente, siempre y cuando satisfaga ciertos criterios a una filial extranjera.

Servicios de seguros, que comprenden la contratación de seguros de no residentes con aseguradoras residentes y viceversa, incluidos los seguros de fletes (de bienes exportados e importados), los servicios correspondientes a otras clases de seguros directos (de vida y otros) y los servicios correspondientes a reaseguros.

Servicios financieros (salvo los relacionados con las empresas aseguradoras y las cajas de pensiones), que abarcan los servicios de intermediación financiera y los servicios auxiliares entre residentes y no residentes. Se incluyen las comisiones y los derechos relacionados con cartas de crédito, líneas de crédito, arrendamiento financiero, transacciones en divisas, crédito al consumidor y a las empresas, corretaje, colocación y suscripción de valores, instrumentos de coberturas de riesgo de diferentes clases, etc. En los servicios auxiliares se incluyen los servicios de operación y reglamentación de los mercados financieros, servicios de custodia de valores, etc.

Servicios de informática y de información, que abarcan las transacciones entre residentes y no residentes relacionadas con el asesoramiento en soporte técnico (*hardware*), aplicación de soporte lógico (*software*), servicios de información (procesamiento de datos, bases de datos, agencias noticiosas) y mantenimiento y reparación de computadores y equipo conexo.

Regalías y derechos de licencia, que comprenden ingresos (exportación) y pagos (importación) de residentes y no residentes por: i) el uso autorizado de activos intangibles no financieros no producidos y derechos de propiedad como marcas registradas, derechos de autor, patentes, procesos, técnicas, diseños, derechos de fabricación, concesiones, etc., y ii) el uso, mediante convenios de licencia, de originales o prototipos producidos, como manuscritos, películas, etc.

Otros servicios empresariales prestados por residentes a no residentes y viceversa, que se refieren a servicios de compraventa y otros servicios relacionados con el comercio, servicios de arrendamiento de explotación y servicios empresariales, profesionales y técnicos varios.

Servicios personales, culturales y recreativos, que abarcan i) servicios audiovisuales y conexos y ii) otros servicios culturales prestados por residentes a no residentes y viceversa. En el inciso i) se incluyen servicios relacionados con la producción de películas cinematográficas o videocintas, programas de

which, if it meets certain criteria, is equivalent to a foreign affiliate.

Insurance services cover the provision of insurance to non-residents by resident insurance enterprises and vice versa. This item comprises services provided for freight insurance (on goods exported and imported), services provided for other types of direct insurance (including life and non-life) and services provided for reinsurance.

Financial services (other than those related to insurance enterprises and pension funds) cover financial intermediation services and auxiliary services conducted between residents and non-residents. This category includes commissions and fees for letters of credit, lines of credit, financial leasing services, foreign exchange transactions, consumer and business credit services, brokerage services, underwriting services, arrangements for various forms of hedging instruments, etc. Auxiliary services include financial-market operational and regulatory services, security custody services, etc.

Computer and information services cover resident/non-resident transactions related to hardware consultancy, software implementation, information services (data processing, databases, news agencies) and maintenance and repair of computers and related equipment.

Royalties and licence fees cover receipts (exports) and payments (imports) of residents and non-residents for: i) the authorized use of intangible non-produced, non-financial assets and proprietary rights such as trademarks, copyrights, patents, processes, techniques, designs, manufacturing rights, franchises, etc., and ii) the use, through licensing agreements, of produced originals or prototypes, such as manuscripts, films, etc.

Other business services provided by residents to non-residents and vice versa cover merchanting and other trade-related services; operational leasing services; and miscellaneous business, professional and technical services.

Personal, cultural, and recreational services cover i) audiovisual and related services, and ii) other cultural services provided by residents to non-residents and vice versa. Included under i) are services associated with the production of motion pictures on film or video tape, radio and television programmes, and

radio y televisión y grabaciones musicales. Por ejemplo, los alquileres y honorarios percibidos por artistas, productores, etc. por sus producciones y por la venta de derechos de distribución a los medios de comunicación. En el inciso ii) se incluyen otros servicios personales, culturales y recreativos, como los relacionados con bibliotecas, museos y otras actividades culturales y deportivas.

Servicios de gobierno, n.i.o.p., que incluyen todos los servicios (como los gastos incurridos por embajadas y consulados) relacionados con sectores gubernamentales u organismos internacionales y regionales y no clasificados en otras partidas.

Renta

Remuneración de empleados: abarca los salarios, sueldos y otras prestaciones en efectivo o en especie, incluidos los de los trabajadores fronterizos, de temporada y otros no residentes (por ejemplo, personal local de embajadas).

Renta de la inversión: comprende los ingresos y pagos de la renta derivados, respectivamente, de las tenencias de activos financieros de residentes frente al exterior y de pasivos frente a no residentes, que se divide en renta de la inversión directa, renta de la inversión de cartera y renta de otra inversión. El componente inversión directa se desglosa en renta procedente de acciones y otras participaciones de capital (dividendos, utilidades de sucursales y utilidades reinvertidas) y en renta procedente de la deuda (intereses); la renta de la inversión de cartera se desglosa también en renta procedente de acciones y otras participaciones de capital (dividendos) y renta procedente de la deuda (intereses); en renta de otra inversión se registran los intereses devengados por otra inversión (préstamos, etc.) y, en principio, la renta imputada a las unidades familiares procedente de su participación neta de capital en las reservas de los seguros de vida y en las cajas de pensiones.

Transferencias corrientes

Las *transferencias corrientes* se distinguen de las *transferencias de capital*, que se incluyen en la cuenta de capital y financiera para guardar la uniformidad con el tratamiento de las transferencias que hace el SCN. Las transferencias son los asientos compensatorios de los traspasos de propiedad de recursos reales o financieros entre residentes y no residentes, ya sea en forma voluntaria u obligatoria, que no entrañan un quid pro quo en valor económico. Las *transferencias corrientes* comprenden todas aquéllas en las que no tiene lugar: i) un *traspaso* de propiedad de

musical recordings. (Examples of these services are rentals and fees received by actors, producers, etc., for productions and for distribution rights sold to the media.) Included under ii) are other personal, cultural and recreational services, such as those associated with libraries, museums and other cultural and sporting activities.

Government services, n.i.e. cover all services (such as expenditures of embassies and consulates) associated with government sectors or international and regional organizations which are not classified under other items.

Income

Compensation of employees covers wages, salaries and other benefits, in cash or in kind, and includes those of border, seasonal and other non-resident workers (e.g., local staff of embassies).

Investment income covers receipts and payments of income associated, respectively, with holdings of external financial assets by residents and with liabilities to non-residents. *Investment income* consists of direct investment income, portfolio investment income and other investment income. The direct investment component is broken down into income on equity (dividends, branch profits and reinvested earnings) and income on debt (interest); portfolio investment income is broken down into income on equity (dividends) and income on debt (interest); other investment income covers interest earned on other capital (loans, etc.) and, in principle, imputed income to households from net equity in life insurance reserves and in pension funds.

Current transfers

Current transfers are distinguished from *capital transfers*, which are included in the *capital and financial account* in accordance with the SNA treatment of transfers. Transfers are the offsets to changes, which take place between residents and non-residents, in ownership of real resources or financial items and, whether the changes are voluntary or compulsory, do not involve a quid pro quo in economic value. *Current transfers*, consist of all transfers that do not involve: i) transfers of ownership of fixed assets; ii) transfers of funds linked to,

activos fijos; ii) un traspaso de fondos vinculados o condicionados a la adquisición o enajenación de activos fijos; iii) una condonación de un pasivo por parte de un acreedor, sin que se reciba a cambio una contrapartida. Todas éstas son *transferencias de capital*. En las *transferencias corrientes* se distinguen las del gobierno general (por ejemplo, cooperación internacional corriente entre diferentes gobiernos, pagos de impuestos corrientes sobre la renta y el patrimonio, etc.) y otras transferencias (por ejemplo, remesas de trabajadores, primas -menos cargos por servicio- e indemnizaciones de seguros excepto los de vida). En el capítulo XV del Manual se examina en forma detallada la distinción entre *transferencias corrientes* y *transferencias de capital*.

Cuenta de capital

Los componentes principales de la *cuenta de capital* son las *transferencias de capital* y la *adquisición/enajenación de activos no financieros no producidos*. Las *transferencias de capital* son aquéllas en las que tiene lugar un traspaso de propiedad de un activo fijo, un traspaso de fondos vinculado o condicionado a la adquisición o enajenación de un activo fijo, o la cancelación de un pasivo por parte de un acreedor sin que se reciba a cambio una contrapartida. Las *transferencias de capital* se dividen en: i) las del gobierno general, que a su vez se subdividen en condonación de deudas y otras y ii) las de otros sectores, haciéndose el desglose en transferencias de emigrantes, condonación de deudas y otras. La *adquisición/enajenación de activos no financieros no producidos* abarca, en general, los factores intangibles, como las patentes, arrendamientos u otros contratos transferibles, el buen nombre, etc. En esta partida no se incluyen las tierras situadas en un territorio económico específico, pero puede incluirse la compra o venta de tierras por una embajada.

Cuenta financiera

La clasificación de los componentes de la *cuenta financiera* se basa en los siguientes criterios:

Todos los componentes se clasifican según la clase de inversión o haciendo un desglose funcional (*inversión directa, inversión de cartera, otra inversión*).

Para la categoría *inversión directa*, se hace la distinción según la dirección (en el extranjero o en la economía declarante); para los componentes acciones y otras participaciones de capital y otro capital, dentro de esta categoría, se hace el desglose de activos y pasivos.

or conditioned upon, acquisition or disposal of fixed assets; iii) forgiveness, without any counterparts being received in return, of liabilities by creditors. All of these are *capital transfers*. *Current transfers* include those of general government (e.g., current international cooperation between different Governments, payments of current taxes on income and wealth, etc.) and other transfers (e.g., workers' remittances, premiums –less service charges– and claims on non-life insurance). A full discussion of the distinction between *current transfers* and *capital transfers*.

Capital account

The major components of the *capital account* are *capital transfers* and *acquisition/disposal of non-produced, non-financial assets*. *Capital transfers* consist of those involving transfers of ownership of fixed assets; transfers of funds linked to, or conditional upon, acquisition or disposal of fixed assets; or cancellation, without any counterparts being received in return, of liabilities by creditors. *Capital transfers* include two components: i) general government, subdivided into debt forgiveness and other, and ii) other, subdivided into migrants' transfers, debt forgiveness, and other transfers. (See chapter XV of the *Manual* for a discussion of the distinction between *capital transfers* and *current transfers*.) *Acquisition/disposal of non-produced, non-financial assets* largely covers intangibles, such as patented entities, leases or other transferable contracts, goodwill, etc. This item does not cover land in a specific economic territory but may include the purchase of sale of land by a foreign embassy.

Financial account

The classification of the components of the *financial account* is based on the following criteria:

All components are classified according to type of investment or by functional breakdown (*direct investment, portfolio investment, other investment*).

For the category of *direct investment*, there are directional distinctions (abroad or in the reporting economy) and, for the equity capital and other capital components within this category, asset of liability distinctions.

En *inversión de cartera* y *otra inversión* se hace la distinción habitual entre activos y pasivos.

Cobra particular importancia en *inversión de cartera* y *otra inversión* la distinción por clases de instrumentos (títulos de participación en el capital, títulos de deuda, créditos comerciales, préstamos, moneda y depósitos, otros activos o pasivos). En el *Manual* se incluyen en *inversión de cartera* los instrumentos tradicionales y nuevos del mercado monetario y otros instrumentos financieros básicos y derivados.

En *inversión de cartera* y *otra inversión* se hace la distinción por sectores de acreedores internos, en el caso de los activos, o por sectores de deudores internos, en el caso de los pasivos, a efectos de facilitar la vinculación con las cuentas de renta, la posición de inversión internacional, el *SCN* y otros sistemas estadísticos.

La distinción tradicional entre activos y pasivos a largo y a corto plazo, basada en un plazo contractual original de más de un año o de un año o menos, se efectúa solamente en *otra inversión*. En los últimos años, este desglose ha perdido importancia para muchas transacciones internas e internacionales. En consecuencia, tanto en el *SCN* como en el *Manual* se da menos importancia a la diferencia entre largo y corto plazo que en ediciones previas. Sin embargo, debido a que el vencimiento sigue siendo importante para fines específicos –el análisis de la deuda externa, por ejemplo–, esta distinción se mantiene en el *Manual* para *otra inversión*.

Inversión directa, categoría que refleja el interés duradero de una entidad residente de una economía (inversionista directo) en una entidad residente de otra economía (empresa de inversión directa), abarca todas las transacciones entre inversionistas directos y empresas de inversión directa. Es decir, la *inversión directa* abarca la transacción inicial entre las dos partes y todas las transacciones subsiguientes que tienen lugar entre ellas y entre empresas filiales, constituidas o no en sociedad. Las transacciones de inversión directa (en el extranjero y en la economía declarante) se subclasifican en acciones y otras participaciones de capital, utilidades reinvertidas y otro capital (transacciones entre empresas afiliadas). En el caso de las acciones y otras participaciones de capital y de otro capital, se hace la distinción entre activos y pasivos frente a empresas filiales y frente a inversionistas directos. Las transacciones entre bancos filiales y entre otros intermediarios financieros filiales se limitan al capital en acciones y al que está relacionado con la deuda permanente.

For the categories of *portfolio investment* and *other investment*, the customary asset/liability distinctions are made.

Particularly significant for *portfolio investment* and *other investment* is the distinction by type of instrument (equity or debt securities, trade credits, loans, currency and deposits, other assets or liabilities). In the *Manual*, traditional and new money market and other financial instruments and derivatives are included in *portfolio investment*.

For *portfolio investment* and *other investment*, there are distinctions by sector of the domestic creditor for assets and by sector of the domestic debtor for liabilities. These distinctions serve to facilitate links with the income accounts, the international investment position, the *SNA* and other statistical systems.

The traditional distinction between long- and short-term assets and liabilities, which is based on original contractual maturity of more than one year or one year or less, applies only to *other investment*. In recent years, the significance of this distinction has clearly diminished for many domestic and international transactions. Consequently, the long- and short-term distinction is accorded less importance in the *SNA* and in the *Manual* than in previous editions. However, because the maturity factor remains important for specific purposes –analysis of external debt, for example– it is retained for *other investment*.

Direct investment, which reflects the lasting interest of a resident entity in one economy (direct investor) in an entity resident in another economy (direct investment enterprise), covers all transactions between direct investors and direct investment enterprises. Thus, *direct investment* covers the initial transaction between the two and all subsequent transactions between them and among affiliated enterprises, both incorporated and unincorporated. Direct investment transactions (abroad and in the reporting economy) are subclassified into equity capital, reinvested earnings and other capital (inter-company transactions). For equity capital and other capital, claims on and liabilities to affiliated enterprises and to direct investors are distinguished. Transactions between affiliated banks and between other affiliated financial intermediaries are limited to equity and permanent debt capital.

Inversión de cartera comprende las transacciones en títulos de participación en el capital y títulos de deuda. Los títulos de deuda están subdivididos en bonos y pagarés, instrumentos del mercado monetario e instrumentos financieros derivados (las opciones, por ejemplo), siempre que estos últimos generen activos y pasivos financieros. Se incluyen, asimismo, varios instrumentos financieros nuevos en las clasificaciones de instrumentos (se excluyen las transacciones clasificadas como *inversión directa* y *activos de reserva*).

Otra inversión incluye créditos comerciales a corto y largo plazo; préstamos, moneda y depósitos (transferibles y otros, como depósitos de ahorro y a plazo, acciones de asociaciones de ahorro y préstamo, acciones de cooperativas de crédito, etc.); otras cuentas por cobrar y por pagar (se excluyen las transacciones clasificadas como *inversión directa* y los pasivos que constituyen reservas de actividades extranjeras).

Errores y omisiones netos

Al aplicar los criterios recomendados en el *Manual*, se obtiene un conjunto coherente de asientos con signo positivo y negativo cuyo total neto es teóricamente igual a cero. En la práctica, sin embargo, una vez sumados todos los asientos, la balanza de pagos casi siempre arroja un crédito neto o un débito neto. Este saldo se debe a errores y omisiones en la compilación de las estadísticas, algunos de los cuales pueden tener relación con recomendaciones para una aproximación práctica a los criterios establecidos.

Por regla general, en el estado de balanza de pagos se presenta una partida separada de errores y omisiones netos, que algunos compiladores denominan partida equilibradora o discrepancia estadística, para compensar toda sobreestimación o subestimación de los componentes registrados. Así, si el saldo de estos componentes refleja un crédito, la partida de errores y omisiones netos aparece como un débito de igual valor, y viceversa.

Como algunos de los errores y omisiones que se producen al compilar los datos suelen compensarse entre sí, la magnitud de la partida residual no es necesariamente un indicio de la exactitud global del estado. Aun así, cuando el residuo neto es grande, es difícil interpretar un estado.

Reservas y partidas conexas

Las Reservas y partidas conexas incluyen los *activos de reserva*, el *uso del crédito del FMI*, los préstamos del FMI, y el *financiamiento excepcional*.

Portfolio investment covers transactions in equity securities and debt securities; the latter are subdivided into bonds and notes, money market instruments and financial derivatives (such as options) when the derivatives generate financial claims and liabilities. Various new financial instruments are covered under appropriate instrument classifications. (Transactions covered under *direct investment* and *reserve assets* are excluded.)

Other investment covers short- and long-term trade credits, loans; currency and deposits (transferable and other –such as savings and term deposits, savings and loan shares, shares in credit unions, etc.); other accounts receivable and payable. Transactions covered under *direct investment* are excluded and liabilities constituting foreign authorities' reserves.

Net errors and omissions

Application of the principles recommended in the *Manual* should result in a consistent body of positive and negative entries with a net (conceptual) total of zero. In practice, however, when all actual entries are totalled, the resulting balance will almost inevitably show a net credit or a net debit. That balance is the result of errors and omissions in the compilation of statements. Some of the errors and omissions may be related to recommendations for practical approximation to principles.

In balance-of-payments statements, the standard practice is to show a separate item for net errors and omissions. Labeled by some compilers as a balancing item or statistical discrepancy, this item is intended as an offset to the overstatement or understatement of the recorded components. Thus, if the balance of those components is a credit, the item for net errors and omissions will be shown as a debit of equal value, and vice versa.

Usually, some of the errors and omissions that occur in the course of compilation offset one another. Therefore, the size of the residual item does not necessarily provide any indication of the overall accuracy of the statement. Nonetheless, interpretation of the statement is hampered by a large net residual.

Reserves and related items

Reserves and related items include reserve assets, use of Fund credit, loans from the Fund, and exceptional financing.

Los Activos de reserva comprenden las transacciones de aquellos activos que las autoridades monetarias de una economía consideran disponibles para atender necesidades de financiamiento de la balanza de pagos y, en algunos casos, otras necesidades. Tal disponibilidad, en principio, no guarda estrecha relación con criterios formales tales como los de propiedad o moneda de denominación. Esta categoría se divide en oro monetario, DEG, posición de reserva en el FMI, activos en divisas (moneda, depósitos y valores) y otros activos.

Oro monetario: comprende las variaciones netas en las reservas de oro de la autoridad monetaria central.

Derechos especiales de giro (DEG): comprenden las variaciones netas en las tenencias de derechos especiales de giro.

Posición de reserva en el FMI: es la variación positiva del total de las compras que el país puede efectuar en el tramo de reserva más toda deuda del FMI contraída en virtud de un convenio de préstamo cuyo reembolso puede obtener fácilmente el país miembro.

Activos en divisas: comprenden los activos clasificados en el rubro “divisas” de la serie de datos sobre “líquidez internacional” publicada por el FMI en la publicación titulada *Estadísticas financieras internacionales*.

Otros activos: incluye todos los demás activos que forman la categoría de activos de reserva.

La cobertura e identificación de los componentes de los *activos de reserva* están relacionadas con un concepto analítico, son en parte resultado de una decisión razonada y no siempre se prestan a la aplicación de criterios objetivos y formales ni a clasificaciones bien delimitadas respecto de la condicionalidad y otras consideraciones. A diferencia de la cuarta edición del *Manual*, en la quinta edición se excluyen las variaciones de valoración de los *activos de reserva* y sus contrapartidas. También se excluyen la asignación y cancelación de DEG, la monetización y desmonetización del oro y los asientos de contrapartida. Estas variaciones, que no constituyen transacciones, figuran en la posición de inversión internacional.

Uso del crédito del FMI y préstamos del FMI: incluye las compras y recompras en los tramos de crédito de la cuenta de recursos generales del FMI, y los empréstitos netos en el marco del servicio de ajuste estructural (SAE), el servicio reforzado de ajuste estructural (SRAE) y el fondo fiduciario.

Reserve assets cover transactions in those assets which the monetary authorities of an economy consider to be available for use in meeting balance of payments and, in some instances, other needs. Such availability is not linked, in principle, to formal criteria such as ownership or currency of denomination. The items covered are monetary gold, SDRs, reserve position in the Fund, foreign exchange assets (currency, deposits and securities) and other claims.

Monetary gold covers net variations in the gold reserves of the central monetary authority.

Special drawing rights (SDRs) covers net variations in holdings of special drawing rights.

Reserveposition in the Fund is the positive variation in total reserve tranche purchases that a member may draw upon plus any indebtedness of the Fund under loan agreements that are readily repayable to the member.

Foreign exchange assets covers claims that are shown as the foreign exchange component of the series for international liquidity published by the Fund in *International Financial Statistics*.

Other claims includes all claims not included in the above headings which constitute reserve assets.

The coverage and identification of *reserve asset* components are linked to an analytic concept, are in part judgmental, and are not always amenable to the application of objective, formal criteria or clear rankings as to conditionality or other considerations. In contrast to the treatment in the fourth edition of the *Manual*, valuation changes in *reserve assets* are excluded, along with counterparts to such changes, in the fifth edition. Also excluded are the allocation/cancellation of SDRs, the monetization/demonetization of gold, and counterpart entries. These changes, which do not constitute transactions, are reflected in the international investment position.

Use of Fund credit and loans from the Fund includes purchases and re-purchases of credit tranches in the Fund’s General Resources Account and net credits within the framework of the Structural Adjustment Facility *Enhanced Structural Adjustment Facility* (ESAF) and the Trust Fund.

El uso de los recursos del FMI está sujeto al principio relativo a la necesidad, el cual -conforme al *Convenio Constitutivo* del FMI- está vinculado a la posición de la balanza de pagos de un país miembro, a su posición de reserva o a la evolución de sus reservas. Para determinar la necesidad, se debe hacer una clara distinción entre i) las transacciones que figuran por encima de la línea y que se consideran autónomas o que tienen su propia razón de ser y que de esa manera provocan o dan como resultado un déficit o superávit de pagos global, y ii) las que aparecen por debajo de la línea, consideradas acomodaticias o que financian dicho déficit o superávit. Aunque esa distinción entre grupos de transacciones entraña juicios subjetivos, presenta una medida del déficit o del superávit e indica las necesidades de financiamiento y/o los ajustes de política requeridos para corregir el desequilibrio.

Financiamiento excepcional: se refiere a las transacciones efectuadas por las autoridades para financiar necesidades de balanza de pagos e incluye la obtención de recursos en préstamos del exterior, los atrasos de pagos y la condonación de deudas.

El concepto de financiamiento excepcional y su trato contable en la balanza de pagos ha evolucionado desde la publicación de la cuarta edición del *Manual*, cobrando en los últimos años cada vez más importancia para las operaciones, las estadísticas y los países miembros del FMI. Como alternativa o en combinación con la utilización de los *activos de reserva* y el *uso del crédito y préstamos del FMI*, el *financiamiento excepcional* denota cualquier otro mecanismo empleado por las autoridades (u otros sectores inducidos por las autoridades) de una economía para financiar las necesidades de balanza de pagos.

The use of IMF resources is subject to a conceptual requirement of need, which –in accordance with the *Articles of Agreement of the International Monetary Fund*– is linked to a member country's balance-of-payments position, its reserve position or changes in its reserves. The determination of need requires that a clear distinction be drawn between (I) above-the-line transactions that are considered to be autonomous or to have been undertaken for their own sake and thus give rise to an overall payments deficit or surplus, and (ii) below-the-line items considered to be accommodating or financing the deficit or surplus. While such a distinction between groups of transactions involves a degree of judgment, it nonetheless presents a measure of the deficit or surplus and indicates financing needs and/or policy adjustments required to correct the imbalance.

Exceptional financing refers to transactions undertaken by the authorities for balance-of-payments reasons and includes the procurement of resources in the form of external loans, payments arrears and debt forgiveness.

The concept of exceptional financing and the related balance-of-payments accounting treatment have evolved since the fourth edition of the *Manual* was published and have assumed increased importance for IMF operations, statistics and member countries in recent years. As an alternative to, or in conjunction with, the use of reserve assets, and of Fund credit and loans exceptional financing denotes any other arrangements made by authorities (or by other sectors fostered by authorities) of an economy to cover balance-of-payments requirements.

RECURSOS NATURALES Y PRODUCCIÓN DE BIENES / NATURAL RESOURCES AND PRODUCTION OF GOODS

Estadísticas agropecuarias

La mayoría de las series estadísticas y los correspondientes indicadores provienen de las estimaciones de la Organización de las Naciones Unidas para la Agricultura y la Alimentación (FAO), con excepción del crecimiento de la actividad agropecuaria y de la participación del sector agropecuario en la generación del producto, en cuyo cálculo se utilizaron los datos de cuentas nacionales.

Agricultural statistics

Most of the statistical series and the corresponding indicators are taken from estimates of the Food and Agriculture Organization of the United Nations (FAO), with the exception of those on the growth of agricultural activity and the share of the agricultural sector in the gross domestic product, where national accounts data were used for the calculations.

Índices de producción agropecuaria e índices de productos alimenticios. Corresponden al concepto de producción neta.

Consumo de fertilizantes. Se refiere al consumo de abonos nitrogenados, fosfatados y potásicos.

Parque de tractores. Los datos representan el número total de tractores de rueda y oruga que se emplean en la agricultura.

Tierras cultivables. Las cifras corresponden a las tierras destinadas a cultivos permanentes y a las tierras arables o de labranza de cultivos temporales, aun cuando no se hallen cultivadas.

Estadísticas mineras

Índices de volumen físico de la producción minera de cada país. Los índices que se presentan en esta edición están referidos a una base de comparación que corresponde al año 1990.

Los precios utilizados para ponderar los distintos productos mineros contenidos en el índice corresponden al promedio aritmético anual de sus precios medios internacionales. El factor de ponderación fue la cantidad total producida en la región en 1990 respecto de cada uno de esos productos.

Para calcular el índice de producción minera, que excluye el petróleo y el carbón, y el índice general, excluido el carbón, se utilizó la fórmula de Laspeyres.

Estadísticas de la industria manufacturera

Se incluyen series de producción expresadas en términos físicos de 15 productos principales. Las series se presentan por producto para cada uno de los países productores y para la región en su conjunto.

Concentración industrial. Sólo se consideraron aquellos países que presentaban información censal sobre ocupación por tamaño de establecimientos y siempre que incluyeran el estrato denominado "menos de cinco personas ocupadas".

Estadísticas de energía eléctrica

Consumo total de hidrocarburos. Se refiere al consumo bruto de los derivados combustibles

Indexes of agricultural production and indexes of food products. These correspond to net production.

Consumption of fertilizers. This refers to the consumption of nitrogenous, phosphate and potassium fertilizers.

Number of tractors. The data represent the total number of wheeled and caterpillar tractors used in agriculture.

Cultivable land. The figures refer to land under permanent crops, and arable or ploughed land (for seasonal crops), even if it is not cultivated.

Mining statistics

Indexes of the physical volume of mining production in each country. The indexes presented in this edition take 1990 as a basis for comparison.

The prices used in weighting the various mining products included in the index correspond to the annual arithmetical average of the mean international prices for these products. They are weighted according to the total amount of each such product produced in the region in 1990.

In order to calculate both the index of mining production, which excludes petroleum and coal, and the general index, which excludes coal, the Laspeyres formula was used.

Manufacturing statistics

Production series expressed in physical terms are given for 15 main products. The series are presented by product for each of the producer countries and for the region as a whole.

Industrial concentration. Only countries which provided census information on employment by size of establishment were considered, and then only if they included the stratum "less than five persons employed".

Electric energy statistics

Total consumption of hydrocarbons. This refers to the gross consumption of

del petróleo (gasolina, querosene, *jet-fuel*, gas y *diesel-oil*, *fuel-oil* y gas licuado) y del gas natural.

Energía comercial. Comprende los derivados combustibles del petróleo y del gas natural, el carbón mineral y la electricidad de origen hidráulico, nuclear y geotérmico.

Energía eléctrica de origen hidráulico, nuclear y geotérmico. Fue expresada en toneladas equivalentes de petróleo (tep), considerada la cantidad de calor consumido en las centrales térmicas para generar 1 kWh.

Potencia instalada. Las cifras representan la capacidad de todos los generadores disponibles, al término del año, para operaciones simultáneas de plantas hidroeléctricas y termoeléctricas.

Producción total de electricidad. Se refiere a la producción de los servicios públicos y la de los establecimientos industriales que la generan para su propio uso, mediante plantas hidroeléctricas, termoeléctricas o de ambos tipos.

petroleum-based fuels (gasoline, kerosene, jet fuel, diesel oil, fuel oil, and liquified gas) and of natural gas.

Commercial energy. This consists of fuels derived from petroleum and from natural gas, coal, and hydroelectric nuclear and geothermal energy.

Hydroelectric, nuclear and geothermal energy. This is expressed in tons of petroleum equivalent (tep), considering the quantity of heat consumed in thermal power stations to generate 1 kWh.

Installed capacity. The figures represent the capacity, at years end, of all the generators available for simultaneous operation in hydroelectric and thermoelectric plants.

Total production of electricity. This includes both public utility generation and that by industrial establishments which use hydroelectric and/or thermoelectric plants to generate electricity for their own use.

SERVICIOS DE INFRAESTRUCTURA / INFRASTRUCTURE SERVICES

Las series estadísticas que se incluyen en esta sección se refieren a red de carreteras, ferrocarriles, marina mercante y tráfico aéreo.

Red de carreteras. Se presentan datos, correspondientes al último año disponible, sobre longitud total y proporción pavimentada.

Marina mercante. Los datos de cada país comprenden solamente barcos de 1 000 y más toneladas de registro bruto.

A continuación se ofrecen algunas definiciones de los indicadores utilizados en los cuadros sobre tráfico aéreo.

Kilómetros volados. Es la suma de los productos obtenidos al multiplicar el número de vuelos efectuados en cada etapa de vuelo por la longitud de la etapa.

Pasajeros transportados. El número de pasajeros transportados se obtiene contando sólo una vez cada pasajero de un vuelo determinado (con un solo número de vuelo) sin volver a contarla en cada etapa de ese vuelo; cuando un pasajero realiza etapas internacionales y del interior dentro del mismo vuelo debe contarse

The statistical series included in this section refer to the road system, railways, merchant fleets and air traffic.

Road system. Data on the total length and proportion paved are presented for the latest available year.

Merchant navy. The data for each country include only vessels of 1 000 gross register tons and over.

Some definitions of the indicators used in the air traffic tables are given below.

Kilometres flown. This figure is obtained by multiplying the number of flights made over each flight stage by the length of the stage.

Passengers carried. The number of passengers carried is obtained by counting each passenger on a specific flight (with a single flight number) only once, rather than recounting that passenger on each stage of the flight; when a passenger is flying over international and domestic stages on the same flight, however, he

como pasajero del interior y también como internacional. Se excluyen los pasajeros que pagan menos del 25% de la tarifa normal aplicable.

Pasajeros-kilómetro. Corresponde a la suma de los productos obtenidos al multiplicar el número de pasajeros transportados en cada etapa de vuelo por la longitud de la etapa; la cifra resultante es igual al número de kilómetros recorridos por todos los pasajeros.

Toneladas-kilómetro realizadas. Es la suma de los productos obtenidos al multiplicar el número de toneladas de carga transportadas en cada etapa de vuelo por la longitud de la etapa.

should be counted as both a domestic and an international passenger. Passengers paying less than 25% of the normal applicable fare are excluded.

Passenger-kilometres. This is obtained by multiplying the number of passengers carried over each stage of the flight by the length of the stage, the result being equal to the number of kilometres covered by all the passengers.

Ton-kilometres. This is obtained by multiplying the number of tons of cargo transported in each stage of the flight by the length of the stage.

INDICADORES DEL DESARROLLO
SOCIOECONÓMICO DE AMÉRICA LATINA
Y EL CARIBE**

**PART ONE
*INDICATORS OF ECONOMIC AND SOCIAL
DEVELOPMENT IN LATIN AMERICA
AND THE CARIBBEAN***

I. DESARROLLO SOCIAL Y BIENESTAR / SOCIAL DEVELOPMENT AND WELFARE

1. TASA DE CRECIMIENTO DE LA POBLACIÓN TOTAL ^a
TOTAL POPULATION GROWTH RATES ^a

(Tasas anuales medias por cada 100 habitantes / Average annual rates per 100 inhabitants)

| País / Country | 1970 - 1975 | 1975 - 1980 | 1980 - 1985 | 1985 - 1990 | 1990 - 1995 | 1995 - 2000 |
|---------------------------------------------------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|
| Antigua y Barbuda / <i>Antigua and Barbuda</i> | 0.5 | 0.5 | 0.5 | 0.5 | 0.6 | 0.7 |
| Argentina | 1.7 | 1.5 | 1.5 | 1.4 | 1.3 | 1.3 |
| Bahamas | 2.1 | 2.1 | 2.0 | 1.9 | 1.8 | 1.6 |
| Barbados | 0.6 | 0.3 | 0.3 | 0.4 | 0.3 | 0.3 |
| Belice / <i>Belize</i> | 1.7 | 1.8 | 2.6 | 2.4 | 2.6 | 2.5 |
| Bolivia | 2.4 | 2.4 | 1.9 | 2.2 | 2.4 | 2.3 |
| Brasil / <i>Brazil</i> | 2.4 | 2.4 | 2.1 | 1.8 | 1.5 | 1.3 |
| Chile | 1.7 | 1.5 | 1.6 | 1.7 | 1.6 | 1.4 |
| Colombia | 2.1 | 2.2 | 2.1 | 2.1 | 1.9 | 1.7 |
| Costa Rica | 2.6 | 3.0 | 2.9 | 2.8 | 2.4 | 2.1 |
| Cuba | 1.8 | 0.9 | 0.8 | 1.0 | 0.6 | 0.4 |
| Dominica | 0.7 | 0.3 | -0.3 | -0.3 | -0.1 | 0.1 |
| Ecuador | 2.9 | 2.8 | 2.7 | 2.4 | 2.2 | 2.0 |
| El Salvador | 2.6 | 2.1 | 0.6 | 1.5 | 2.4 | 2.2 |
| Granada / <i>Grenada</i> | -0.6 | -0.6 | 0.2 | 0.2 | 0.3 | 0.4 |
| Guatemala | 2.8 | 2.5 | 2.5 | 2.5 | 2.6 | 2.6 |
| Haití / <i>Haiti</i> | 1.7 | 1.7 | 1.8 | 2.0 | 2.0 | 2.1 |
| Honduras | 3.0 | 3.4 | 3.2 | 3.1 | 2.9 | 2.7 |
| Jamaica | 1.5 | 1.2 | 1.6 | 0.5 | 0.9 | 0.9 |
| México / <i>Mexico</i> | 3.1 | 2.7 | 2.2 | 2.0 | 1.8 | 1.6 |
| Nicaragua | 3.2 | 2.9 | 2.8 | 2.2 | 2.9 | 2.6 |
| Panamá / <i>Panama</i> | 2.7 | 2.5 | 2.1 | 2.0 | 1.9 | 1.6 |
| Paraguay | 2.5 | 3.2 | 2.9 | 3.1 | 2.7 | 2.6 |
| Perú / <i>Peru</i> | 2.8 | 2.7 | 2.4 | 2.0 | 1.7 | 1.7 |
| República Dominicana / <i>Dominican Republic</i> | 2.6 | 2.4 | 2.2 | 2.2 | 1.9 | 1.6 |
| Saint Kitts y Nevis / <i>Saint Kitts and Nevis</i> | -0.5 | -0.5 | -0.5 | -0.5 | -0.3 | -0.1 |
| San Vicente y las Granadinas / <i>Saint Vincent and the Grenadines</i> | 1.1 | 1.1 | 0.9 | 0.9 | 0.9 | 0.9 |
| Santa Lucía / <i>Saint Lucia</i> | 1.3 | 1.3 | 1.4 | 1.4 | 1.4 | 1.3 |
| Suriname | -0.4 | -0.5 | 1.2 | 1.2 | 1.3 | 1.2 |
| Trinidad y Tabago / <i>Trinidad and Tobago</i> | 0.8 | 1.3 | 1.7 | 1.0 | 0.8 | 0.8 |
| Uruguay | 0.1 | 0.6 | 0.6 | 0.6 | 0.6 | 0.5 |
| Venezuela | 3.4 | 3.4 | 2.5 | 2.6 | 2.3 | 2.0 |

^a Tasa de crecimiento implícita en las proyecciones de población elaboradas según la hipótesis media de fecundidad.

^a Growth rate implicit in population projection based on the average fertility hypothesis.

I. DESARROLLO SOCIAL Y BIENESTAR / SOCIAL DEVELOPMENT AND WELFARE

2. ESTRUCTURA DE LA POBLACIÓN TOTAL, POR GRUPOS DE EDADES
STRUCTURE OF TOTAL POPULATION, BY AGE GROUPS

(Porcentaje de la población total / Percentage of total population)

| País | 1970 | | | | | 1980 | | | | |
|----------------------|------------------|-------|-------|-------|----------------------------|------|-------|-------|-------|----------------------------|
| | Grupos de edades | | | | | | | | | |

^a Tasas brutas de natalidad por cada mil habitantes. Se definen como el cociente entre el número medio de nacimientos ocurridos durante un período determinado y la población media del mismo período. Están implícitas en las proyecciones de población elaboradas según la hipótesis de fecundidad recomendada.

^a Gross birth rates per thousand inhabitants. Defined as the quotient of the mean number of births occurring during a given period and the average population in the same period. Are implicit in the population projections based on the recommended fertility.

I. DESARROLLO SOCIAL Y BIENESTAR / SOCIAL DEVELOPMENT AND WELFARE

^a Tasas implícitas en las proyecciones de población. Se definen como el cociente entre el número medio anual de defunciones ocurridas durante un período determinado y la población media del mismo período.

^a Rates implicit in population projections. Defined as the quotient of the mean number of deaths occurring during a given period and the average population for the same period.

^a La tasa global de fecundidad, es el número de hijos que en promedio tendría cada mujer de una cohorte hipotética de mujeres que durante el período fértil tuvieron sus hijos de acuerdo con las tasas de fecundidad por edades de la población en estudio y no estuvieron expuestas a riesgos de mortalidad desde el nacimiento hasta el término del período fértil. Las tasas implícitas en las proyecciones de población están elaboradas según la hipótesis de fecundidad recomendada.

^a The global fertility rate is the average number of children which would be born to each woman of a hypothetical cohort of women whose childbearing during their period of fertility was consistent with the age-specific fertility rate of the population concerned and who were not exposed to mortality risks between birth and the end of their period of fertility. The rates used are those implicit in the population projections based on the recommended fertility hypothesis.

^a Ingreso medio de las personas de cada grupo de estudios dividido por el valor de la línea de pobreza correspondiente.

^b El ingreso se obtuvo calculando el valor de la hora de trabajo de cada persona y multiplicándolo por 44.

^c Se refiere al Gran Buenos Aires.

^d Se refiere a La Paz, El Alto y capitales departamentales.

^e A partir de 1993, se amplió la cobertura geográfica de la encuesta hasta abarcar prácticamente la totalidad de la población urbana del país.

^f Se refiere a Asunción y Departamento Central.

^a Average income of persons in each education group divided by the value of the corresponding poverty line.

^b Income figures were obtained by calculating the value of each hour worked by persons in each category and multiplying by 44.

^c Refers to Greater Buenos Aires.

^d Refers to La Paz, El Alto and the departmental capitals.

^e In 1993 the survey's geographic coverage was broadened to include virtually the entire urban population of the country.

^f Refers to Asunción and the Central Department.

^a Total de matriculados sobre la población del grupo de edades correspondiente, multiplicado por cien.

^b Límites de las edades legales de la población considerada en el denominador de la tasa bruta de matrícula.

^c Corresponde a educación primaria, diurna y nocturna, oficial, privada y semioficial (primer y segundo ciclo).

^d Incluye el total de la educación primaria diurna.

^e Incluye educación preescolar.

^f Enseñanza pública solamente.

^g A partir de 1985 la enseñanza de primer nivel aumentó de 6 a 9 años.

^h Incluye escuelas nocturnas.

^a Total number of enrolled persons out of the population of the students in the prescribed age groups, multiplied by 100.

^b Legal age limits for the population included in the denominator of the gross enrolment rate.

^c First-level education in day or night schools, including State-run, private and State-subsidized institutions (upper and lower levels).

^d Including total enrolment in day schools.

^e Including pre-primary education.

^f Public education only.

^g From 1985 onwards, the duration of first-level was increased from 6 to 9 years.

^h Including night schools.

^a El ingreso de los hogares está ordenado por quintiles según su ingreso per cápita. El quintil 1 corresponde a los hogares más pobres y el quintil 5 a los hogares más ricos.

^b Incluye el Gran Buenos Aires más diecisiete conglomerados urbanos.

^a The household income is classified by quintile, based on per capita income. Quintil 1 is composed of the poorest households; quintile 5 corresponds to the richest.

^b Includes Greater Buenos Aires plus seventeen other urban population clusters.

^a Tasa por 100 000 nacidos vivos.

^b Las tasas están definidas como la probabilidad de morir antes de los 5 años. Estimaciones realizadas por el Centro Latinoamericano de Demografía y el Fondo de las Naciones Unidas para la Infancia UNICEF para el período más reciente. Los años de educación señalados en la columna "7 y más" no corresponden a todos los países. Para Argentina son 8 y más, para Bolivia y República Dominicana 9 y más, para Brasil 4, para Colombia 12, para Ecuador 13, para Perú 11 y para Venezuela 6 años y más.

^c Muertes anuales de niños entre 0 y 5 años.

^d Se refiere a la proporción de niños menores de 5 años que mueren por esa causa.

^e Porcentaje de niños menores de 5 años.

^f El subregistro de muertes está calculado como 100 menos el porcentaje que representa el número de muertes registradas por causas definidas, en relación con el número total de muertes estimadas.

^g Relación porcentual entre el número de partos atendidos por personal especializado y el número estimado de nacimientos.

^h Corresponde a la cantidad de proteínas disponible per cápita/día.

ⁱ Se refiere a la proporción de población con conexión domiciliaria o con fácil acceso.

^j Se refiere a la proporción de población con servicios de alcantarillado y evacuación de excretas.

| Partos atendidos por personal calificado ^g Births attended by trained personnel ^g 1990 | Disponibil. proteínas ^h Protein (grams) ^h | Población con acceso a agua potable (alrededor 1990) ⁱ Population with access to drinking water (around 1990) ⁱ | | | Población con acceso a saneamiento (alrededor 1990) ^j Population with access to sanitation facilities (around 1990) ^j | | | Country |

| 82 | 68 | 79 | 80 | 75 | 59 | 64 | 30 | Venezuela |

^a Rate per 100 000 live births.

^b These rates are defined as denoting the probability of dying before age 5. They correspond to the most recent period estimates prepared by the Latin America Demographic Centre (CELADE) and the United Nations Children's Fund (UNICEF). The figures given in the column indicating seven or more years of schooling ("7 and more" do not correspond to that exact cut-off level in all the countries (Argentina: 8 or more; Bolivia and Dominican Republic: 9 or more; Brazil: 4; Colombia: 12; Ecuador: 13; Peru: 11; and Venezuela: 6 or more).

^c Death per year of children between the ages of 0 and 5 years.

^d Refers to percentage of children under 5 years deaths by this cause.

^e Percentage of children under 5 years of age.

^f The under-registration of deaths is calculated by subtracting the percentage of total estimated deaths that were registered by cause from 100.

^g Percentage of total estimated births that were attended by qualified personnel.

^h Amount of protein available per person/day.

ⁱ Refers to percentage of persons having hook-ups in the home or ready access.

^j Refers to percentage of persons furnished with sewerage and excreta disposal services.

I. DESARROLLO SOCIAL Y BIENESTAR / SOCIAL DEVELOPMENT AND WELFARE

47. GASTO PÚBLICO EN SALUD ^a
PUBLIC EXPENDITURE ON HEALTH ^a

(Porcentaje del producto interno bruto a precios corrientes /
Percentage of the gross domestic product at current prices)

^a Porcentaje de hogares cuyo ingreso es inferior al doble del costo de una canasta básica de alimentos. Incluye los hogares en situación de indigencia.

^b Porcentaje de hogares cuyo ingreso es inferior al costo de una canasta básica de alimentos.

^c Promedio ponderado de las estimaciones correspondientes a las áreas metropolitanas de Río de Janeiro y São Paulo.

^d Cálculos basados en las encuestas CASEN 1987, 1990, 1992, 1994 y 1996. Estimaciones consistentes con nuevas cifras de la cuenta de ingresos y gastos de los hogares aportadas por MIDEPLAN.

^e A partir de 1993 se amplió la cobertura geográfica de la encuesta, hasta abarcar prácticamente la totalidad de la población urbana y rural del país. Hasta entonces la encuesta cubría alrededor de la mitad de la población urbana.

^f El diseño de la muestra no permite obtener estimaciones para el Distrito Federal.

^g Incluye, además de los 14 países, Ecuador, El Salvador, Haití, Nicaragua y República Dominicana.

^a Percentage of households whose incomes amount to less than twice the cost of a basic food basket. Includes indigent households.

^b Percentage of households whose incomes amount to less than the cost of a basic food basket.

^c Weighted average of estimates for metropolitan areas of Rio de Janeiro and São Paulo.

^d Calculation based on 1987, 1990, 1992, 1994 and 1996 CASEN surveys. Estimates are in line with the new figures supplied by MIDEPLAN for the household income and expenditure account.

^e From 1993 onwards, the survey's geographic coverage was broadened to include virtually the entire urban and rural population of the country. Previously, the survey covered about one half of the urban population.

^f The sample was designed in such a way that it was not possible to arrive at estimates for the Federal District.

^g In addition to the 14 countries shown, includes Dominican Republic, Ecuador, El Salvador, Haiti and Nicaragua.

^a Se refiere a establecimientos con una persona ocupada y en los que se emplea fuerza motriz superior a 0.5 H.P., como asimismo a los que cuentan con dos o más personas ocupadas (excluidos los familiares del propietario) ya sea que empleen o no fuerza motriz.

^b Los tramos de acuerdo con el personal ocupado por los establecimientos son los siguientes: 1-5, 6-10, 11-25, 26-50, 51-100, 101-200, 201-500, 501 y más personas ocupadas.

^c De 100 a 249 personas ocupadas.

^d De 100 a 249 personas.

^e De 250 a 499 personas ocupadas.

^f Incluye establecimientos que no declararon la cantidad de personal ocupado.

^g No se dispone de información sobre establecimientos que emplean de 1 a 4 personas.

^h Incluye los establecimientos sin personal remunerado no clasificado en otro tramo.

ⁱ Incluye al personal ocupado en los establecimientos que no llevan contabilidad.

^j Comprende las industrias extractivas con excepción del petróleo, pero no incluye las industrias de refinería del petróleo ni las de petroquímica básica.

^k Los tramos de acuerdo con el personal ocupado por los establecimientos son los siguientes: 1-5, 6-25, 26-100, 101-500 y 501 y más.

^m El personal ocupado en la industria extractiva equivale al 5%, 3% y 3.1% del total en los años 1960, 1970 y 1975 respectivamente.

ⁿ Los tramos de personal ocupado por los establecimientos son los siguientes: 0-5, 6-10, 11-20, 21-50, 51-100, 101-250, 251-500, 501 y más.

^o No se dispone de información sobre establecimientos que emplean de 5 a 9 personas.

^a Refers to establishments employing one person and using motor power of more than 0.5 H.P., and those employing two or more persons (excluding owner's relatives) whether or not they use motor power.

^b Establishments are classified according to number of persons employed, as follows: 1-5, 6-10, 11-25, 26-50, 51-100, 101-200, 201-500, 501 and over.

^c 100 and over employees.

^d 100-249 employees.

^e 250-499 employees.

^f Including establishments which did not report number of persons employed.

^g No data available for establishments employing from 1 to 4 persons.

^h Including establishments without paid staff not classified in another section.

ⁱ Including personnel employed in establishments which do not keep accounts.

^j Including mining industries other than petroleum. Does not include petroleum refining or basic petrochemical industries.

^k Establishments are classified according to number of persons employed, as follows: 1-5, 6-25, 26-100, 101-500, 501 and over.

^l Personnel employed in mining industry equals 5%, 3% y 3.1% of the total in the years 1960, 1970 and 1975 respectively.

^m Establishments are classified according to number of persons employed, as follows: 0-5, 6-10, 11-20, 21-50, 51-100, 101-250, 251-500, 501 and over.

ⁿ No data available for establishments employing from 5 to 9 persons.

II. CRECIMIENTO ECONÓMICO / *ECONOMIC GROWTH*

78. CONCENTRACIÓN INDUSTRIAL *INDUSTRIAL CONCENTRATION*

^a Se refiere a establecimientos con una persona ocupada y en los que se emplea fuerza motriz superior a 0.5 H.P., como asimismo a los que cuentan con dos o más personas ocupadas (excluidos los familiares del propietario) ya sea que empleen o no fuerza motriz.

^b Los tramos de acuerdo con el personal ocupado por los establecimientos son los siguientes: 1-5, 6-10, 11-25, 26-50, 51-100, 101-200, 201-500, 501 y más personas ocupadas.

^c De 100 y más personas ocupadas.

^d De 100 a 249 personas ocupadas.

^e De 250 a 499 personas ocupadas.

^f Incluye establecimientos que no declararon la cantidad de personal ocupado.

^g Incluye los establecimientos sin personal remunerado no clasificado en otro tramo.

^h No se dispone de información sobre establecimientos que emplean de 1 a 4 personas.

ⁱ Comprende las industrias extractivas con excepción del petróleo, pero no incluye las industrias de refinería del petróleo ni las de petroquímica básica.

^j Los tramos de acuerdo con el personal ocupado por los establecimientos son los siguientes: 1-5, 6-25, 26-100, 101-500 y 501 y más.

^k El valor agregado de la industria extractiva equivale a 11.6 % del total.

^l El valor agregado de la industria extractiva equivale a 3.9 % del total.

^m El valor agregado de la industria extractiva equivale a 3.8 % del total.

ⁿ No se dispone de información sobre establecimientos que emplean de 5 a 9 personas.

^a Refers to establishments employing one person and using motor power of more than 0.5 H.P., and those employing two or more persons (excluding owner's relatives) whether or not they use motor power.

^b Establishments are classified according to number of persons employed, as follows: 1-5, 6-10, 11-25, 26-50, 51-100, 101-200, 201-500, 501 and over.

^c 100 and over employees.

^d 100-249 employees.

^e 250-499 employees.

^f Including establishments which did not report number of persons employed.

^g Including establishments without paid staff not classified in another section.

^h No data available for establishments employing from 1 to 4 persons.

ⁱ Including mining industries other than petroleum. Does not include petroleum refining or basic petrochemical industries.

^j Establishments are classified according to number of persons employed, as follows: 1-5, 6-25, 26-100, 101-500, 501 and over.

^k Value added by mining industry equals 11.6% of total.

^l Value added by mining industry equals 3.9% of total.

^m Value added by mining industry equals 3.8% of total.

ⁿ No data available for establishments employing from 5 to 9 persons.

^a Aporte de las industrias dedicadas a la fabricación de productos metálicos, maquinaria y equipo (División 38 de la CIIU Rev.2) al total del producto interno bruto del sector manufacturero, calculado sobre la base de valores constantes a precios de mercado.

^b Al costo de factores

^c Sobre la base de cifras a precios corrientes.

^d A partir de 1985, los datos están basados en cifras proyectadas por el Banco Central, no comparables con la serie anterior.

^e Incluye las industrias metálicas básicas.

^f El total manufacturero incluye la extracción minera.

^g Se refiere al año fiscal que comienza el 1 de julio del año indicado y termina el 30 de junio del año siguiente.

^a Contribution of the industries which produce metal products, machinery and equipment (Division 38 of ISIC, Rev. 2) to the total gross domestic product of the manufacturing sector, calculated on the basis of constant values at market prices.

^b At factor cost.

^c Based on figures at current prices.

^d From 1985 onward, the figures shown are based on projections prepared by the Central Bank and are not comparable with the preceding series.

^e Includes basic metal industries.

^f The total figure for manufacturing includes mining.

^g Refers to the fiscal year beginning on 1 July of the calendar year shown and ending on 30 June of the following year.

^a Incluye la deuda con el Fondo Monetario Internacional.

^b Cifras preliminares.

^c Corresponde a nuevas estimaciones preparadas por el Ministerio de Economía, disponibles para el período 1991 -1995.

La deuda corresponde sólo al stock de deuda bruta del sector público y algunas partidas del sector privado. No incluye la deuda financiera de corto plazo del sector privado, y como es deuda bruta la acumulación de activos en el exterior por parte de dicho sector. Para 1980, 1985, 1988, 1989 y 1990 y sólo para efectos del agregado regional, se utilizó la serie del Banco Mundial, contenida en el World Debt Tables 1995 - 1996. Nótese que las series mencionadas no son comparables por haber sido elaboradas con metodologías distintas. Por ejemplo, en 1991 la cifra del Banco Mundial supera en 7 000 millones de dólares la nueva estimación oficial.

^d Deuda externa pública.

^e Deuda total sobre la base de cifras oficiales y de organismos financieros internacionales.

^f La deuda pública excluye la inversión en valores gubernamentales de los no residentes. Las cifras de la deuda privada entre 1991-1993 han sido ajustadas teniendo en cuenta el proceso de privatización y eliminación del sistema de control de cambios.

^a Includes debt owed to the International Monetary Fund.

^b Preliminary figures.

^c New estimates prepared by the Ministry of Economic Affairs for 1991-1995. The figures correspond only to the gross stock of public-sector debt and certain categories of private-sector debt. They do not include the private sector's short-term financial debt or assets accumulated by that sector abroad. The computation of the regional aggregates for the years 1980, 1985, 1988, 1989 and 1990 has been based on the World Bank series shown in the World Debt Tables for 1995-1996. These series are not comparable, however, because different methodologies were employed for their compilation. For example, the World Bank figures for 1991 is US\$ 7 billion higher than the latest official estimate for that year.

^d Public external debt.

^e Total debt based on figures from government agencies and international financial institutions.

^f Public debt does not include investments made in government securities by non-residents. The figures shown for private debt for 1991-1993 have been adjusted for the effects of privatizations and the elimination of the exchange control system.

^a Desde 1980 las cifras corresponden a cantidad neta de carbón.

^b Desde 1980 las cifras se refieren a carbón bituminoso.

^c Producción neta.

^d Volumen de mineral "todo uno" (antes de cualquier proceso).

^e Carbón antracito y bituminoso.

^f No incluye Perú.

| | | | | | Total |

^a From 1980 onward, the figures refer to the net quantity of coal.

^b From 1980 onward, the figures refer to bituminous coal.

^c Net production.

^d Volume of "run-of-mine" coal (before any kind of processing).

^e Anthracite and bituminous coal.

^f Does not included Peru.

VIII. RECURSOS NATURALES Y PRODUCCIÓN DE BIENES /
 NATURAL RESOURCES AND PRODUCTION OF GOODS

337. PRODUCCIÓN DE COBRE ^a
COPPER PRODUCTION ^a

(Miles de toneladas / *Thousands of tons*)

| Total | 419 469 ^f | 617 550 | 805 792 | 609 059 |

^a Potencial técnicamente aprovechable. Potencial evaluado con un factor de planta de 0.5. Estimaciones efectuadas por los países con la metodología de OLADE en los años que se indican.

^b Corresponde únicamente al potencial instalable inventariado, no incluye el estimado.

^c Evaluación preliminar.

^d Correspondiente sólo a las centrales Corpus, Itaipú, Yaciretá y la parte perteneciente al Paraguay de la "Central Presidente Stroessner".

^e Incluye Bárbaros, Cuba, Granada, Guyana, Haití, Jamaica, Surinam y Trinidad y Tabago.

^f No incluye países del Caribe.

^a Technically exploitable potential with a plant factor of 0.5. Estimates by countries using the OLADE methodology and for the years indicated.

^b Refers only to assessed installable potential; does not include the estimated potential.

^c Preliminary estimate.

^d Covering only the Corpus, Itaipú and Yacireta plants and the portion of the "Presidente Stroessner Plant" belonging to Paraguay.

^e Includes Barbados, Cuba, Grenada, Guyana, Haiti, Jamaica, Suriname, and Trinidad and Tobago.

^f Does not include the Caribbean countries.

^a "Piped water" includes water supplied within the dwelling, outside the dwelling but inside the building, and outside the building but within 100 metres of the dwelling.

^b By sewerage system.

^c Private dwellings whose occupants were present at the time of the census.

^d Refers to private households.

^e Ordinary dwellings.

ANEXO

ANNEX

ANEXO / ANNEX

INTRODUCCIÓN / INTRODUCTION

Estimaciones para 1997

Las estimaciones que se presentan en este anexo fueron elaboradas en el curso del último bimestre de 1997 y en ellas se han tenido en cuenta las revisiones de índices y de las series históricas efectuadas hasta mediados de diciembre. Originalmente sirvieron de base para que la CEPAL, a través de su Secretario Ejecutivo, diera a conocer su opinión a la comunidad internacional sobre los acontecimientos más destacados de la evolución económica de América Latina y el Caribe durante 1997.

Aunque buena parte de estas cifras fueron proporcionadas por los propios países, otra, también considerable, constituye el resultado de investigaciones de diferentes publicaciones nacionales e internacionales y del análisis de tendencias para obtener estimaciones cuando no se dispuso de suficiente información básica. Así, pues, se trata de órdenes de magnitud que pueden experimentar importantes modificaciones.

No obstante el carácter preliminar de esta información, se ha creído conveniente continuar incluyéndola como anexo del *Anuario estadístico*, por estimarse que ha venido proporcionando una idea bastante aproximada de lo acontecido en una fecha más reciente, como ya se ha podido comprobar en años anteriores.

Al igual que en la edición 1996, se han introducido modificaciones en su estructura y contenido. Entre ellas, cabe destacar la nueva clasificación usada para ordenar los países considerados en cada uno de sus cuadros y la presentación integrada en un solo cuadro de todas las transacciones componentes de la versión analítica de la balanza de pagos, contenida en la quinta edición del Manual de balanza de pagos.

Por tratarse de un conjunto de variables por medio de las cuales se pretende dar una visión global de la evolución de las economías de los países durante un período coyuntural, sólo se refieren al comportamiento de los aspectos más agregados de la producción, precios al consumidor y desempleo, de las transacciones externas, del financiamiento externo y de la relación de precios del intercambio.

Estimates for 1997

The estimates contained in this annex were calculated during the last two months of 1997 and take into account revisions made in the indexes and historical series up to mid-December. They originally served as background material for use by ECLAC in preparing the report presented by its Executive Secretary to the international community concerning the most outstanding features of the economic trends in Latin America and the Caribbean during 1997.

Although many of these figures were supplied by the countries, many others were the result of research based on a variety of national and international publications and analyses of trends which were used to obtain estimates when sufficient background information was not available. Thus, orders of magnitude are involved which may undergo substantial change.

In spite of the preliminary nature of this information, it continues to be included as an annex to the *Statistical Yearbook* because it is felt that, judging from the results of previous years, these tables provide a fairly reliable idea of developments during a more recent period.

Changes in both structure and content have been introduced in the 1997 edition. It is important to note the new classification used in arranging the countries in each table and the integrated presentation in a single table of all the transactions covered in the analytical version of the balance of payments set forth in the fifth edition of the IMF Balance of Payments Manual.

Because the annex deals with a set of variables which are intended to provide an overview of more recent trends in the countries' economies, reference is made only to the performance of the principal aggregates of production, consumer prices and unemployment, external transactions, external finance and the terms of trade.

Fuente: CEPAL, sobre la base de cifras proporcionadas en los estados de Balanzas de pagos por el Fondo Monetario Internacional y por fuentes nacionales.

^a Corresponde a la inversión directa en la economía declarante, deducida la inversión directa de residentes de esa economía en el exterior. Para algunos países esta información no está disponible. Incluye la reinversión de utilidades.

^b Conforme a la quinta edición del manual de Balanza de pagos del FMI, todas las transacciones entre empresas no financieras de inversión directa y sus empresas matrices y afiliadas se incluyen como inversión directa.

^c Cifras preliminares.

^d La inversión extranjera en la economía declarante fue de 522, 699, 808, 1 772, 1 668, 4 092 y 4 000 millones de dólares para 1991, 1992, 1993, 1994, 1995, 1996 y 1997.

Source: ECLAC, on the basis of balance of payments figures from the International Monetary Fund and national sources.

^a Refers to direct investment in the reporting economy minus direct investment abroad by residents. For some countries this information is not available. Includes reinvested earnings.

^b In accordance with the fifth edition of the IMF Balance of Payments Manual, all transactions between non-financial direct-investment enterprises and their parent companies and affiliates are included in direct investment.

^c Preliminary figures.

^d Foreign investment in the reporting economy was US\$ 522 million, US\$ 699 million, US\$ 808 million, US\$ 1.77 billion, US\$ 1.66 billion, US\$ 4.09 billion and US\$ 4 billion in 1991, 1992, 1993, 1994, 1995, 1996 and 1997, respectively.

^a La transferencia neta de recursos equivale al ingreso neto de capitales (incluidos los no autónomos y errores y omisiones), menos el saldo en la cuenta de Renta (utilidades e intereses netos). Las cantidades negativas indican transferencias de recursos al exterior.

^b Cifras preliminares.

Source: ECLAC, on the basis of figures provided by the International Monetary Fund and national agencies.

^a The net transfer or resources is equal to net capital inflow (including non-voluntary inflows and errors and omissions) minus the balance on the income account (net payments of profits and interest). Negative figures indicate net outward resource transfers.

^b Preliminary figures.

Fuente: CEPAL, sobre la base de cifras oficiales.

^a Incluye la deuda con el Fondo Monetario Internacional (FMI).

^b Cifras preliminares.

^c La deuda corresponde sólo al stock de deuda bruta del sector público y algunas partidas del sector privado. No incluye la deuda financiera de corto plazo del sector privado y, por tratarse de deuda bruta, tampoco la acumulación de activos en el exterior por parte del sector privado.

^d Deuda externa pública.

^e La deuda pública excluye la inversión en valores gubernamentales de los no residentes.

^a Includes debt owed to the International Monetary Fund (IMF).

^b Preliminary figures.

^c Debt corresponds only to the stock of gross public-sector debt and the debt of some parts of the private sector. It does not include private-sector short-term financial debt nor, since it is gross debt, cumulative private-sector assets abroad.

^d Public external debt.

^e The public debt does not include investment by non-residents in government securities.

Publicaciones de la CEPAL

COMISIÓN ECONÓMICA PARA AMÉRICA LATINA Y EL CARIBE
Casilla 179-D Santiago de Chile

PUBLICACIONES PERIÓDICAS

Revista de la CEPAL

La Revista se inició en 1976 como parte del Programa de Publicaciones de la Comisión Económica para América Latina y el Caribe, con el propósito de contribuir al examen de los problemas del desarrollo socioeconómico de la región. Las opiniones expresadas en los artículos firmados, incluidas las colaboraciones de los funcionarios de la Secretaría, son las de los autores y, por lo tanto, no reflejan necesariamente los puntos de vista de la Organización.

La Revista de la CEPAL se publica en español e inglés tres veces por año.

Los precios de suscripción anual vigentes para 1997 son de US\$20 para la versión en español y de US\$22 para la versión en inglés. El precio por ejemplar suelto es de US\$10 para ambas versiones.

Los precios de suscripción por dos años (1997-1998) son de US\$35 para la versión español y de US\$40 para la versión inglés.
