INTERGOVERNMENTAL NEGOTIATING COMMITTEE
FOR A FRAMEWORK CONVENTION ON CLIMATE CHANGE
Tenth session
Geneva, 22 August - 2 September 1994
Item 3 (a) of the provisional agenda

MATTERS RELATING TO COMMITMENTS

FIRST REVIEW OF INFORMATION COMMUNICATED BY EACH PARTY
INCLUDED IN ANNEX I TO THE CONVENTION

The process for the first review of communications from Annex I Parties

Note by the interim secretariat

I. INTRODUCTION

A. Committee mandate

1. At its ninth session, the Committee decided to carry out, on an interim basis and at the eleventh session, the task of reviewing the first communications from Annex I Parties (A/AC.237/55, annex I, decision 9/3). Further, the Committee requested the interim secretariat "to develop a plan and budget for the review of the first communications from Annex I Parties, for consideration and adoption at the [tenth] session, and for immediate implementation thereafter" (A/AC.237/55, annex I, decision 9/3, section B, para. 7). In preparing this plan, the interim secretariat was asked to take into account the following:

- The conclusions adopted at the eighth session (A/AC.237/41, paras. 61 and 62)
- The views expressed and any submissions made during the ninth session, and
- Any further comments that may have been transmitted to the interim secretariat before 30 April 1994

The Committee also urged countries and relevant international organizations to consider what contributions they can make to support the review of the first national communications from Annex I Parties.

2. The Committee also noted the continuation of the valuable work on national communications from Annex I Parties undertaken by the group of countries and the organization included in that Annex, supported by the secretariats of the Organisation for Economic Co-operation and Development (OECD) and the International Energy Agency (IEA), and that this work would include the review process (see A/AC.237/55, annex I, decision 9/2).

B. Scope of the note

3. The purpose of this note is to assist the Committee in deciding on the process for the first review of communications from Annex I Parties by identifying what should be done, by whom, and when. Section II of the note reviews the previous decisions of the Committee, summarizes the results of an examination of other review processes, and considers the implications of the time constraints prior to the eleventh session. Section III proposes a possible statement of purpose for the review process and introduces possible terms of reference. It goes on to outline three elements -- a compilation and synthesis of the communications, review by the Committee and an in-depth review of individual communications -- around which the Committee is invited to design an appropriate process. Section IV examines issues surrounding the aggregation of communications.

4. A number of other documents prepared for the tenth session are relevant to the consideration of the review process, in particular A/AC.237/57 (and Corr.1 in English only) on the arrangements for the eleventh session, A/AC.237/64 on the roles of the subsidiary bodies and A/AC.237/61 on the activities and funding of the interim secretariat. Document A/AC.237/Misc.36 contains the submissions from Parties or other member States on this matter.

5. This note does not address issues relating to communications from non-Annex I Parties. The process for reviewing communications from non-Annex I Parties will be determined by the Conference of the Parties (COP) in due course, taking account of the different nature of their commitments and the distinctions between the provisions of Article 12.1 and 12.2.

C. Possible action by the Committee

6. If Governments are to have sufficient time to prepare for a review of communications from Annex I Parties at the eleventh session, and if any supporting analysis is to be requested for that session, **the Committee must take decisions at the tenth session on the nature and details of the review to be undertaken at the eleventh session.** In addition, the Committee may wish to decide on recommendations to the first session of the COP (COP 1) on how the latter might review these communications and on whether certain elements of the first review might be carried out in greater depth after COP 1. The timing of the submission and review of subsequent communications from Annex I Parties could also be addressed.

7. In this context, the interim secretariat proposes that the Committee consider adopting a decision, at its tenth session, that would address the following points:

(a) The elements of the review process to be implemented in preparation for, and at, its eleventh session, in particular:

- (i) The purpose and terms of reference of the process for the first review;
- (ii) The nature of the compilation and synthesis to be considered at the eleventh session;
- (iii) Whether the Committee should also consider and review, at its eleventh session, each individual communication, and if so, what role, if any, would be played by experts nominated by national Governments and international organizations;

- (iv) What the interim secretariat should do in preparation for the eleventh session (for example, with respect to the preparation of a compilation and synthesis, the level of technical analysis to be undertaken, other documentation to be prepared, and any other tasks, including guidance on the content of documents) and what other relevant actors the interim secretariat might seek to involve in this work;
- (b) A recommendation to COP 1 on:
- (i) The nature of the review to be undertaken at COP 1 (for example, focusing on the compilation and synthesis of the communications);
 - (ii) Any elements of the review process not undertaken at or before COP 1 that could be implemented between COP 1 and COP 2, including any guidance thereon to the subsidiary bodies and the secretariat, and the role, if any, of experts nominated by Governments and international organizations, and if such participation by experts could include the use of consultation visits to Parties.

8. The Committee, at its eleventh session, may wish to revisit the above-mentioned recommendation to COP 1 and modify it, based on the experience gained, for the purpose of the review process to be conducted under the auspices of the COP. It might also consider the timing of the second communication from Annex I Parties and whether a rotational approach to the submission and review of communications should be adopted.

II. BACKGROUND

A. Convention provisions

9. The Convention does not address the details of the process for the review of communications. In Article 4.2(b), it provides that "detailed information" on policies and measures to be communicated by Annex I Parties "will be reviewed by the Conference of the Parties at its first session and periodically thereafter". Further, Article 10.2 provides that the Subsidiary Body for Implementation (SBI) shall consider the information communicated in accordance with Article 12.1 and 12.2 to assess the overall aggregated effect of the steps taken and to assist the COP in carrying out the reviews of the adequacy of commitments as required by Article 4.2(d). On a related point, Article 9.2(b) provides that the Subsidiary Body for Scientific and Technological Advice (SBSTA) shall prepare scientific assessments on the effects of measures taken in the implementation of the Convention. Finally, Article 7.2(e) may also be relevant. It requires the COP to assess, on the basis of all

information made available to it, the implementation of the Convention, the overall effects of the measures taken and the extent to which progress towards the objective of the Convention is being achieved.

B. Committee discussions

10. The Committee has not yet had a thorough discussion of the process for the review of communications from Annex I Parties. Nonetheless, it adopted some relevant conclusions and decisions at its eighth and ninth sessions.

11. At the eighth session, the Committee adopted conclusions on the review of communications by the COP (A/AC.237/41, paras. 61 and 62). It was agreed that the review process should be "facilitative, non-confrontational, open and transparent" and "should facilitate the exchange of information and experience on implementation of the Convention". The Committee further agreed that the subsidiary bodies should carry out two principal tasks:

- (a) A thorough analysis of national communications, 1/ including:
- Verifying methodologies used
 - Comparing national data with authoritative international sources
 - Noting inclusion or absence of information and data and their quality
 - Reviewing projections and their assumptions
 - Assessing comprehensiveness and effectiveness of mitigation and adaptation measures
 - Evaluating impacts of climate change
- (b) A compilation and synthesis of information provided, including the overall effects of policies and measures.

The Committee acknowledged that additional information or visits to clarify country reports, with the prior approval of the country concerned, might be useful. It also noted the possible usefulness of designating national focal points with which the bodies of the Convention could interact.

12. At the ninth session, a range of views were expressed on matters such as the roles and responsibilities of the subsidiary bodies in the review process, the role of country visits or country reviews modelled on the OECD and IEA processes, and the role of the interim secretariat in analysing and synthesizing the first communications from Annex I Parties. A number of relevant decisions were adopted, including the following:

(a) The interim secretariat was requested, in Committee decision 9/1 (see A/AC.237/55, annex I), to prepare documentation on the work currently under way in relevant bodies relating to methodologies for aggregating national communications (see section IV, below);

(b) The Committee agreed provisionally, in Committee decision 9/3, on a list of functions of the subsidiary bodies that would see the SBI review national communications on the basis of scientific and technical analysis of the communications provided, upon request, by the SBSTA;

(c) The Committee decided that it would carry out, on an interim basis, the most pressing tasks of the subsidiary bodies in order to contribute to the success of COP 1 and, in that context, to allocate the tasks listed in Article 4.2(b), (c) and (d) to its existing working groups. (These tasks include the review of information submitted by Annex I Parties); and

(d) The interim secretariat was requested to develop a plan and a budget for the review of the first communications from Annex I Parties.

13. Further to the Committee's invitation in decision 9/3 and a subsequent communication by the interim secretariat, submissions have been received, to date, from three Parties and other member States (see A/AC.237/Misc.36).

C. Other review processes

14. In developing this document, the interim secretariat has examined a number of other review processes, both within and outside the United Nations and its specialized agencies. The key features of the processes examined are summarized in annex I. Each of these processes has its own mandate, characteristics and "culture" developed over many years of experience. None can simply be copied for the review process under the Convention. They can, however, inform the Committee's deliberations and may reveal relevant experience or considerations that will be useful in the elaboration of a process under the Convention that meets the needs of the Parties.

15. In most of the other processes examined, the "peer" review is undertaken by an intergovernmental body at a session of that body. This review is assisted and informed by analytical work done in advance by either a secretariat or an expert group of some sort (supported by a secretariat). In most cases this analytical work is based on, or relies heavily

on, information supplied by the reviewed country. It can involve a visit to the reviewed country for meetings with Government officials and others. The processes normally result in a written product (for example, a "report", "conclusions" or "observations") that is revised and published pursuant to consideration by the intergovernmental body. In some processes, there is provision for the designation of "examining countries" or "discussants" who have a more active role than other participants in the process.

D. Time constraints

16. In identifying possible elements of the review process under the Convention, the interim secretariat has been particularly conscious of the importance of time. This takes three forms:

(a) First, the interim secretariat has assumed that the review process will be elaborated in stages. It has taken as an appropriate planning horizon for the first review process a period that extends to COP 2;

(b) Second, the limited time available between 21 September 1994 (the legal deadline for the submission of the communications by the initial group of Annex I Parties) and the time by which secretariat documents must be finalized so that they can be made available to Governments for consideration prior to the eleventh session is an important determinant of what will be possible. The time-frame will be a maximum of 10 weeks for the communications available on 21 September and less for those that may be submitted later. This schedule may preclude a thorough or in-depth analysis of individual communications in this period;

(c) Third, the short time (five weeks) between the close of the eleventh session and the opening of COP 1 precludes the preparation and translation of any new substantive documents on the review process and will permit only minor revisions to then existing texts.

It bears recalling that first communications from Annex I Parties will continue to be submitted pursuant to the ongoing process of ratification and accession. Any review process will have to take this into account.

17. The interim secretariat has assumed that there would be insufficient time, and too many other priorities, to permit any substantive review of individual communications at COP 1. However, a compilation and synthesis of the information in the communications, including the overall effects of policies and measures, would appear to be an important input to the decisions that COP 1 must take. If the Committee agrees, it may wish to recommend that any review of communications at COP 1 should focus on a compilation and synthesis. (This would not preclude beginning work on the in-depth review of individual communications before COP 1, if the Committee so decides.)

III. THE PROCESS FOR THE FIRST REVIEW

A. Introduction

18. In view of the complexity of the issue and in the absence to date of a thorough Committee discussion of the process for reviewing national communications, the interim secretariat has opted not to present a single plan for the first review. Rather, this note presents possible elements, or building blocks, of a plan, for the first review. These are preceded by proposals on a possible purpose and terms of reference for the review process. The components address the following three main elements of the review process:

- compilation and synthesis of the communications
- review by the Committee
- in-depth review of individual communications

These elements, discussed in more detail below, have been selected because they touch on the main issues that need to be considered by the Committee in reaching consensus on the process for the first review. Budgetary information is also presented in annex IV.

B. The purpose of the process for the first review

19. As noted in paragraph 11, above, the Committee has already agreed that the review process should be facilitative, non-confrontational, open and transparent and should facilitate the exchange of information and experience on implementation of the Convention. In addition to this guidance it may be useful if the Committee were to agree on a definition of the purpose of the first review process to assist it in its deliberations at the eleventh session.

20. Before considering the purpose of the review, however, it may be useful to define what the process does not entail. It would not provide a legal assessment of the extent to which specific obligations are being followed by individual Parties. Thus, it would not be a mechanism for formally assessing compliance by individual Parties with the terms of the Convention nor a basis for dispute settlement. Moreover, it is not meant to be a confrontational or judgmental exercise nor a judicial or quasi-judicial process. Finally, it should not result in Parties being told that they must undertake certain actions.

21. The Committee may wish to consider the following proposed statement of purpose for the first review process:

To review, in a facilitative, non-confrontational, open and transparent manner, the information contained in the communications from Annex I Parties to ensure that the Conference of the Parties has accurate, consistent and relevant information at its disposal to assist it in carrying out its responsibilities, inter alia,:

- (a) To assess the implementation of the Convention by the Parties, the overall effects and cumulative impacts of the measures taken and the extent to which progress towards the objective of the Convention is being achieved (Articles 7.2(e) and 4.2(b));
- (b) To contribute to its reviews of the adequacy of commitments and to its decisions on follow-up action (Articles 10.2(b) and 4.2(d));
- (c) To periodically examine the obligations of the Parties and the institutional arrangements under the Convention (Article 7.2(a));
- (d) To promote and guide the development and refinement of methodologies (Article 7.2(d)); and
- (e) To promote and facilitate the exchange of information on measures adopted by the Parties (Article 7.2(b)).

22. In this context, an important function of the process of reviewing communications would be to provide Parties with an opportunity to benefit from the advice and experience of other Parties. As such, a two-way learning process could emerge. The review process could also lead to the identification of needs for future assistance or advice (for example, regarding methodologies, inventories, projections or the implementation of policies and measures). This could take the form, for example, of information exchange, bilateral cooperation or technical assistance.

23. For the review process to proceed effectively, it will be important for the Committee to provide guidance on what tasks should be undertaken. This could take the form of terms of reference for the review. The interim secretariat, building largely on the Committee's conclusions at the eighth session (see paragraph 11, above), has developed possible elements for such terms of reference for consideration by the Committee. They are found as annex II to this document.

C. Possible elements of the process for the first review

24. As noted in paragraph 18, above, the possible elements of the review process presented below constitute a series of building blocks based on which the Committee is invited to design the process for the first review. Three possible elements are identified around which the discussion may be structured:

Prior to COP 1

- Consideration of a compilation and synthesis of communications by the Committee at its eleventh session (and by COP 1)
- Consideration of individual communications by the Committee at its eleventh session

After COP 1

- In-depth review of individual communications by teams of experts reporting to the Subsidiary Body for Implementation (SBI) after COP 1

Each of these possible components is discussed below.

1. Consideration of a compilation and synthesis of communications by the Committee at its eleventh session (and by COP 1)

Description

25. The Committee would consider a compilation and synthesis of the key information contained in the communications from Annex I Parties. Such an approach could have the following characteristics:

(a) A draft compilation and synthesis would be prepared under the responsibility of the interim secretariat and submitted to the Committee at its eleventh session;

(b) The draft compilation and synthesis would be prepared in accordance with agreed terms of reference, perhaps along the lines of those proposed in Task B of annex II. (A possible outline for the compilation and synthesis is attached as annex III;)

(c) The information contained in each communication would be subject to a basic technical analysis for the purpose of facilitating and improving the draft compilation and synthesis. This would be done in accordance with agreed terms of reference, perhaps along the lines of those proposed in Task A of annex II, although the level of analysis would be limited;

(d) The draft compilation and synthesis document would not include a detailed analysis of each individual communication;

(e) The draft compilation and synthesis document would be prepared by the interim secretariat. As in the normal course of events, the interim secretariat would hire consultants as needed. In addition, it would be assisted by experts selected by it from individuals suggested by Governments and international organizations taking due account of the principle of geographic balance and of the need to have a balance of skills and expertise;

(f) Pursuant to its consideration by the Committee, the draft compilation and synthesis document would be revised and transmitted to COP 1. Transmission could be as a document under the responsibility of the interim secretariat, of which the Committee will have taken note and to which it may have recommended some revisions, or as a Committee document.

Comments by the interim secretariat

26. A compilation and synthesis would appear to be an important input to the final recommendations of the Committee and to the decisions of COP 1 on the implementation of the Convention, the review of information and associated methodological issues, matters relating to the implementation of the financial and technological commitments, including the financial mechanism, as well as the review of the adequacy of commitments and any follow-up thereto. In the absence of such a synthesis, the Committee would have to consider the individual communications on the basis of which it would be difficult to draw overall conclusions.

27. As additional Annex I countries become Parties to the Convention, and submit their first communications, the new information will have to be compiled and synthesized for future sessions of the COP. This could take the form of an addendum or addenda to the first compilation and synthesis document.

2. Consideration of individual communications by the Committee at its eleventh session

Description

28. The Committee would have an item on its agenda at the eleventh session relating to the consideration of individual communications. Such an approach could have the following characteristics:

- (a) The Committee would discuss:
- each individual communication in turn, or
 - only those communications for which a discussion is requested by any Party

(b) The Committee would have before it the individual communications but no documents reviewing these communications;

(c) The Co-Chairs of the working group dealing with this matter would prepare a summary of the working group's discussion of the communications for use by the Committee, focusing on matters relevant to the other agenda items of the Committee at the eleventh session and to the decisions to be taken at COP 1.

Comments by the interim secretariat

29. Peer review in an intergovernmental body is central to most of the review processes examined by the interim secretariat. In these processes, however, the circumstances surrounding such a peer review are quite different from those that will prevail at the eleventh session, especially in terms of the number of communications being addressed and the time available.

30. Consideration of individual communications at the eleventh session, in the absence of detailed preparatory analysis, would raise questions about the effectiveness of the exercise and about the extent to which this would contribute to achieving the purpose of the review process as proposed in paragraph 21, above. Moreover, the consideration of each communication in turn, assuming some form of discussion of each one, would require, at a minimum, several days of Committee time.

31. The nature of the treatment of individual communications by the Committee at the eleventh session would need to be defined (see para. 28 (a), above). One model would be the procedure used in the trade policy review process of the General Agreement on Tariffs and Trade/World Trade Organization (GATT/WTO), adjusted to take account of the time available (see annex I).

32. Implementation of this element, on its own, would not meet the requirement for a compilation and synthesis.

33. A similar review of Annex I Party communications could be undertaken by one or both subsidiary bodies after COP 1. Such a review could be additional to, or in lieu of, a review of individual communications by the Committee at its eleventh session.

3. In-depth review of individual communications by teams of experts reporting to the SBI after COP 1

Description

34. The third component of the review process is a thorough, or in-depth, analysis of individual communications. Because of the time constraints noted above, the interim secretariat has concluded that such a review, in its entirety, could not be implemented effectively prior to the eleventh session. The scenario presented below for consideration by the Committee discusses the undertaking of an in-depth review of individual communications in the period between COP 1 and COP 2. COP 1 could so decide on the basis of a recommendation from the Committee.

35. For the purposes of this discussion, the interim secretariat has assumed that such an in-depth review would be coordinated and supported by the secretariat and undertaken largely by experts. It has also assumed that the review would be carried out under the authority of the SBI (see A/AC.237/64). The COP or the SBI would determine the mandate for this review and its results would be reported to the SBI. It is conceivable that such a review could be carried out solely by the secretariat. However, this option would have substantial additional cost implications, notably for secretariat staffing. For this reason, this option is not pursued further.

36. Such an in-depth review of individual communications could have the following characteristics:

(a) The starting point for the review would be the individual communications and any analysis done prior to COP 1, including the compilation and synthesis;

(b) The interim secretariat would manage and coordinate the process and provide logistical and analytical support. Under the guidance of the Chairman of the SBI, it would organize teams of experts drawn from lists of names provided by Parties and from international organizations, possibly supplemented by consultants, paying due account to the principle of geographic balance;

(c) Each communication would be reviewed by a team of experts in accordance with agreed terms of reference. The terms of reference proposed in Task A of annex II could serve as a basis but might require further elaboration in view of the in-depth nature of the review. Each team could be composed of a small number of experts (perhaps five). This would include, at a minimum, one individual from an Annex II Party, one from a Party "in transition", and one from a developing country Party plus a member of the secretariat. Additional team members might be necessary for reviewing the more complex communications. The size and number of teams would vary depending on the number of communications to be reviewed by each team and on the time and money available;

(d) The core of the review could be a "paper exercise" involving analysis and

preparation of written reports by team members and provision for meetings of the team members. Some dialogue with the Party concerned would be necessary and could be undertaken by correspondence;

(e) The review could also involve a visit to the reviewed country for consultations with Government officials and other relevant actors. Such visits would be arranged by the secretariat with the approval and collaboration of the Party concerned. A visit would allow more fruitful interaction between the Government and the review team;

(f) A review report on each communication would be prepared by the review team, discussed with the Party concerned, finalized and made available by the secretariat to the SBI prior to its proposed meeting in early 1996 (see A/AC.237/64);

(g) The SBI would have the option of considering each individual review report or only those review reports whose consideration have been requested by a Party. For example, a reviewed country may have some comments on the conclusions of the review report and wish to register these in a formal discussion. Alternatively, another Party may have questions or comments about a communication or a review report that it would like to raise;

(h) The results of the in-depth review of communications would be used as the basis for an addendum to the first compilation and synthesis.

Comments by the interim secretariat

37. The in-depth review of individual communications by experts would more than meet the requirement to do a technical analysis of the communications in an open and transparent manner. It would ideally lead to better quality communications and data. It would also contribute to a two-way learning process based on exchanging information and experiences. The Committee will have to decide whether it wishes to recommend this type of approach to COP 1 and whether the investment of time and resources would be commensurate with the results.

38. There would be sufficient time to undertake such an in-depth review between COP 1 and COP 2. However, the challenges associated with an effort of this magnitude should not be minimized. In the other review processes examined, the average number of reviews conducted per year is about 10, and these are based on long-established processes and mechanisms. It should also be borne in mind that by the time the subsidiary bodies meet to review the communications some of the documents will be over a year old. (However, the review process could ensure that updated information was reflected in the review reports.)

39. If the Committee wished to initiate an in-depth review process on a pilot basis prior to

the eleventh session, it could so decide at its tenth session. For example, a limited number of reviews could be organized for Parties that volunteered to participate, assuming sufficient resources were available. In such a case, the Committee would have to decide how it wished to treat the results of such pilot reviews.

D. Periodicity of reviews and subsequent communications

40. The COP will, in due course, have to take decisions on the nature of the ongoing review process and on the periodicity of subsequent communications. As these decisions are not required for COP 1, they have not been addressed in this note. If, however, the Committee wished to make a recommendation on these issues to COP 1, the interim secretariat could be requested to prepare documentation for consideration at the eleventh session. Such documentation could consider whether all communications should be due at the same time or whether the submission of the communications, and their subsequent review, should be staggered over a fixed number of years.

41. It will also be important to consider the periodicity of future compilation and synthesis documents, taking account of the decisions of the Committee and the COP on in-depth review and of the fact that first communications will continue to be submitted by Annex I Parties as they become due.

IV. AGGREGATION OF COMMUNICATIONS

42. The Committee requested the interim secretariat to prepare documentation for its consideration at the tenth session on the work currently under way in relevant bodies, including the Intergovernmental Panel on Climate Change (IPCC), relating to methodologies for aggregating national communications (A/AC.237/55, annex I, decision 9/1). Limited responses have been received and are reflected in the following paragraphs.

43. The Convention addresses only tangentially the concept of aggregation. Article 10.2(a) requires the SBI to assess the overall aggregated effect of the steps taken by the Parties. The provisions of Article 7.2(d) may also be relevant in that they require the COP to promote and guide the development and refinement of methodologies.

44. It will be important for the Committee to base its conclusions on a common understanding of what is meant by "aggregation". For the purposes of the following discussion, the interim secretariat has assumed that aggregation refers to the aggregation of information contained in the communications. (It is distinct from aggregating the overall effect of the steps taken by Parties.) In this context, it will be useful to aggregate the following key quantitative information:

- inventories of emissions and removals
- projections of emissions and removals
- estimates of the effects of measures
- financial assistance

The interim secretariat has interpreted this to mean that the aggregation is to provide a picture of:

- (a) The total emissions and removals, by gas, by Annex I Parties in 1990 ;
- (b) The projected total emissions and removals, by gas, by Annex I Parties in 2000;
- (c) An estimate of the aggregate effects of measures undertaken by Annex I Parties, classified by gas; and
- (d) The total resources provided by Annex II Parties to developing country Parties for the implementation of the Convention, by channel of resource transfer.

45. The relevant information could be aggregated in tabular listings of national data from the various communications. These data would not be added up but would form the basis of qualitative conclusions.

46. Alternatively, the relevant data could be aggregated by adding up the respective national totals provided in the various communications for inventories, projections, estimates of effects of measures and financial transfers. Such information, accompanied by the necessary methodological caveats, would be useful in explaining to a broader public the projected effects of actions by Annex I Parties under the Convention. There would, however, be a number of problems associated with such an approach. The principal one would be that data would be available only for those Annex I Parties that had provided it. Moreover, in some cases, Parties may not be able to generate all the data. There would thus be gaps, especially in the earlier phases of implementation before all Annex I countries become Parties. A second problem would be that some of the data will have been developed using different methodologies and will not necessarily be consistent or comparable, especially for projections and estimates of the effects of measures. These are discussed in more detail below.

47. Aggregation could also involve efforts to harmonize national methodologies and models or assumptions used. However, such initiatives, if agreed upon, could not come to fruition for some years.

48. With regard to inventory data, the IPCC Draft Guidelines for National Greenhouse Gas Inventories, if used as required by Committee decision 9/1, should result in inventory data that is reasonably comparable. Some addition of the national totals should be possible. There would, nonetheless, be some differences that would have to be borne in mind in any aggregation exercise, some of which could be addressed through consultations with the Party concerned. Any data gaps (for those countries listed in Annex I which were not yet Parties or had not yet submitted their communications) would also be important. The resulting aggregate information could be compared with that available from various authoritative international sources to determine whether it is generally consistent with current understanding.

49. With regard to data gaps, it would be possible to use data from other sources to attempt to develop a comprehensive picture of emissions and removals in Annex I countries as a whole. This could not, however, be undertaken without guidance from the Committee and eventually from the COP.

50. The projections of emissions and removals in 2000 contained in the communications will have been developed using independent national methodologies. Some will involve complex models, others will be derived from less complicated approaches. To add up the national totals will not provide a scientifically rigorous aggregate number. It would, however, provide one estimate that could be compared with those available from authoritative international sources. Data gaps would continue to be a problem.

51. The same issues must be faced with regard to estimates of the effects of measures. There will be methodological differences and data gaps. In this case, other sources are unlikely to be able to provide meaningful alternative estimates.

52. The information included in the communications from Annex II Parties on the level of resources provided to developing country Parties for the implementation of the Convention is likely to vary in terms of its uncertainty. Some figures, such as contributions to the financial mechanism or other relevant identifiable entities, will be quite definitive although the determination of allocations to climate change projects may be problematic. Others, for example, for aspects of ongoing bilateral or multilateral assistance programmes that are relevant to climate change, are likely to be more in the order of estimates. To the extent possible, it may be useful to aggregate the data in accordance with the categories specified in the "Guidelines for the preparation of first communications by Annex I Parties" (for example, financial mechanism (pilot phase and replenished), multilateral channels, bilateral channels, and whether it is directed at mitigation or adaptation). Any aggregation of the category totals would provide a reference point, although its level of certainty would depend on the degree of estimation of the input data.

53. The Committee may also wish to provide some guidance to the interim secretariat on whether it should seek to develop aggregate information on inventories using global warming potentials (GWPs), based on the conclusions regarding GWPs contained in the forthcoming IPCC Special Report and taking into account the relevant provisions of the "Guidelines for the preparation of first communications by Annex I Parties".

54. The most significant work relating to methodologies for aggregation under way in relevant bodies is being undertaken under the rubric of the project by Annex I countries on national communications. It is anticipated that the results of the project relating to aggregation will be made available to the Committee as a contribution to consideration of this item.

Note

1/ The interim secretariat has concluded, based on the list of activities in paragraph 11 (a), above and taking into account earlier documents it had prepared, that the Committee intended the review process to include the review of individual communications.

Annex II

**ELEMENTS OF POSSIBLE TERMS OF REFERENCE FOR THE FIRST
REVIEW OF COMMUNICATIONS FROM ANNEX I PARTIES**

The process for the review of first national communications from Annex I Parties can be divided into two component tasks -- the review of individual national communications and the compilation and synthesis of the information contained in the individual communications.

Task A: A thorough analysis of individual communications

The analysis of individual communications, with provision for seeking clarification or additional information from a Party as required, should include the following elements:

(a) Verifying the methodologies used in each communication (especially those for inventories, projections, assessment of effects of measures) with particular reference to the "Guidelines for the preparation of first communications by Annex I Parties" and the IPCC Draft Guidelines for National Greenhouse Gas Inventories, paying particular note to transparency and comparability as well as to the ability to reconstruct the inventory from data and assumptions provided;

(b) Comparing the information and data in each communication with authoritative international sources (for example, with regard to inventories, projections, financial assistance and technology transfer), such sources being primarily published information from intergovernmental organizations;

(c) Based on commitments in the Convention, the "Guidelines for the preparation of first communications by Annex I Parties", and the IPCC Draft Guidelines for National Greenhouse Gas Inventories, noting the inclusion or absence of information and data in each national communication and noting the quality of information and data with particular attention to clarity of presentation, accuracy, internal consistency, transparency and completeness;

(d) Reviewing the projections included in each communication, especially noting transparency and level of uncertainty, and reviewing the assumptions used, noting their reasonableness and comparability vis-à-vis the assumptions of other countries;

(e) Assessing the comprehensiveness and effectiveness of the mitigation and adaptation measures described in each communication, noting the projections of emissions and removals for 2000 and how these relate to 1990 levels as well as the estimated effects of measures, and whether the results appear reasonable based on the information provided in the communication, and further noting how the results relate to any national or other targets, if the necessary information is available in the communication;

(f) Evaluating the national impacts (for example, environmental and socio-economic impacts) of climate change to the extent they are described in each communication, paying particular note to the methodologies used.

Task B: A compilation and synthesis of the information provided in the communications

The compilation and synthesis of the communications should include the following elements:

(a) Synthesis of information and data presented in the communications (at least qualitatively) across all areas of commitment (such as inventory of emissions/removals of inventory, finance and technology, education, adaptation, research) to provide an overview of the implementation of the Convention by Annex I Parties;

(b) Presentation of an overview of the actions, policies and measures described in the communications (across all areas of commitment but highlighting actions to limit emissions and enhance sinks) and noting of trends or patterns, areas of convergence or divergence and other appropriate qualitative conclusions, **for example**, by identifying:

- the sectors, policies and gases that have been the focus of action and, conversely, those where action has been limited, including any barriers specified;
- strategies and instruments that appear to the Parties applying them to be particularly successful or promising and potentially replicable, including new technologies, and which may be relevant to decisions on the follow-up to the review of the adequacy of commitments;
- the use of education and training as a tool to implement the Convention;
- the use of successful partnership arrangements between Governments and other sectors of society (for example, industry, cities, non-governmental organizations);
- the extent to which climate change considerations are taken into account in other policy areas;
- approaches to adaptation;
- the resources provided for developing countries through the financial mechanism and other channels and the principal types of activities for which they were, or are expected to be, used;

- actions to promote, facilitate and finance the transfer of, or access to, technology and know-how and to support the development and enhancement of endogenous capacities and technologies in developing countries;

(c) Presentation of projections of emissions and removals by Annex I Parties so as to assess (at least qualitatively) the overall aggregated effect of the policies and measures described in the national communications. At a minimum, providing an overall sense of the aggregate efforts of Annex I Parties to meet their commitments and of trends in emissions and removals for Annex I Parties. Indication of the number of Parties that expect to attain the aim specified in Article 4.2(b);

(d) Assessment of the overall results of the process of preparing and reviewing the communications from the perspective of:

- the transparency, consistency and comparability of communications
- the extent to which the "Guidelines for the preparation of first communications by Annex I Parties" were useful, and
- the experience with the methodologies used

and identification of any generic problems or gaps and how these could be addressed.

In the compilation and synthesis, any comparative presentation of information and data should be limited to tables and charts and should not enter into narrative discussion of the comparative performance of individual Parties.

Annex III**POSSIBLE OUTLINE OF THE FIRST COMPILATION AND SYNTHESIS
OF NATIONAL COMMUNICATIONS**

- I. Overall achievements and highlights
- II. Introduction
 - A. Purpose of the report
 - B. General considerations
- III. Synthesis of the information provided in the national communications
 - A. Context for compilation and synthesis
 - B. Inventories of emissions and removals in 1990
 - (a) CO₂ emissions and removals
 - (b) CH₄ emissions
 - (c) N₂O emissions
 - (d) emissions of other greenhouse gases
 - (e) emissions by bunkers and civil aviation
 - (f) methodological issues and approaches (such as key assumptions, use of GWPs, models used)
 - (g) summary conclusions
 - C. Policies and measures being implemented by Parties to reduce emissions and enhance sinks
 - (a) by sector and by gas
 - (b) by instrument and by gas
 - D. Projections and effects of policies and measures adopted by Annex I Parties
 - (a) projected emissions in 2000 of CO₂, CH₄, N₂O and other GHG
 - (b) estimate of total effects of policies and measures on GHG emissions and removals
 - (c) methodological issues and approaches used (such as key assumptions, models used)
 - (d) summary conclusions including on the overall effects of policies and measures
 - E. Finance, technology and capacity building

- (a) contributions by Annex II Parties to:
 - financial mechanism in its two phases
 - other multilateral programmes
 - regional and bilateral programmes
- (b) technology transfer and cooperation
- (c) capacity building

F. Implementation of other commitments of the Convention

- (a) adaptation measures (and expected impacts of climate change)
- (b) research and systematic observation
- (c) education and public participation
- (d) integration of climate change concerns in national policies
- (e) coordination efforts and review of policies toward reduction of greenhouse gases emissions
- (f) identification of successful partnerships

G. Special considerations

- General discussion of cases in which provisions in Articles 4.6 and 4.10 were applied

IV. General assessment of the process for the first review of national communications to date

- A. Identification of information gaps and problem areas
- B. Usefulness of Guidelines, as reflected in communications
- C. The experience of preparing the first compilation and synthesis of Annex I communications
- D. Recommendations for improvement in the process

Annexes

- I. List of international authoritative sources of information used
- II. List of Annex I Parties which have ratified the Convention and have submitted communications

Tables

- 1. Policies and measures reported, by sector, for each Party
- 2. Relevant information from international authoritative sources for reference
- 3. Table with key assumptions used by Parties
- 4. Other background tables

Annex IV**BUDGETARY CONSIDERATIONS***Interim secretariat: the current situation

1. The interim secretariat anticipates that, as of 15 September 1994, it will have 5 professional staff and 2 general service staff assigned to support the activities of Working Group I, including matters associated with the communication and review of information. Of these:

- 2 professionals are funded by their Governments for the entirety of the period in question; and
- 3 professionals and 2 general service are funded from the trust fund.

A budget will be presented to the tenth session in document A/AC.237/61, including the status of contributions to the trust fund required to maintain this staff until the end of the life-span of the interim secretariat (that is, 31 December 1995). To date contributions totalling \$750,000 have been pledged to the trust fund for the communication and review of information.

2. In the period leading up to COP 1, these 7 staff will support Working Group I and the Committee in areas relating to:

- the communication and review of information (Committee documentation, preparation of compilation and synthesis, coordination of process)
- the review of the adequacy of commitments (Committee documentation, report to COP 1)
- joint implementation (Committee documentation)
- subsidiary bodies (Committee documentation)
- the report on implementation
- methodologies (Committee documentation).

Thereafter, the structure of the interim secretariat will be reviewed in the light of the outcome of COP 1.

Preparation of a compilation and synthesis document for consideration by the Committee at its eleventh session

3. The interim secretariat expects to be in a position to dedicate three professional staff (one of whom is funded by his Government) and one general service staff on a full-time basis

* Reference to "dollars" (\$) indicates United States dollars.

to the preparation of the compilation and synthesis of the information provided in the communications. (They would be assisted by experts loaned by Governments and international organizations and, as needed, by consultants.) In addition, the interim secretariat is able to provide, within existing resource levels, management and administrative support, office accommodation and furnishings, telephone and facsimile services and document editing, and to meet certain other ad hoc requirements. The United Nations Office at Geneva will not charge the interim secretariat for the translation and printing of the compilation and synthesis. Additional financial requirements are listed below.

4. In preparing the following budgetary analysis, the interim secretariat has assumed that communications will be submitted by the required date and that the following schedule can be envisaged for 1994:

- 21 September: communications received
- 26 September: secretariat (and experts) begin limited analysis and preparation of inputs to synthesis
- 4 November: secretariat (and experts) complete inputs to compilation and synthesis (and experts depart)
- November: interim secretariat drafts compilation and synthesis, editing
- 2 December: compilation and synthesis finalized, submitted for translation, available in English

5. For the purposes of developing cost estimates, the interim secretariat has assumed that it would be assisted by 10 experts as follows:

- 4 experts loaned by international organizations (6 weeks each)
- 4 national experts loaned by Governments (6 weeks each)
- 2 consultants (10 weeks each)

The necessary geographic balance would be maintained in the selection of experts. The interim secretariat has further assumed that:

- The work would be undertaken in Geneva, which would result in travel and subsistence costs for some visiting experts and consultants assumed to be \$2,500 per trip and \$169 per day (\$7,100 for 6 weeks) respectively;
- The consultants would be required for somewhat longer than the other experts to assist with preparations and with completion of the compilation and synthesis;
- Consultants would be paid fees of \$2,000 per week and both would require travel and subsistence costs;

- 2 national experts would come from Annex II Parties and 2 from non-Annex II Parties;
- The salaries of experts from national Governments and international organizations would be paid by those Governments/organizations;
- It may be expected that Governments of non-Annex II Parties and international organizations would wish to be reimbursed for the travel and subsistence costs of their seconded experts.

6. On the basis of the above assumptions, the following costs can be calculated:

	<u>US\$</u>
- Consultants: fees	40,000
travel and subsistence	28,660
- Travel and subsistence: experts from international organizations	0 to 38,400
experts from national Governments	19,200

7. In addition, the interim secretariat would require financing for the following:

- 2 temporary secretaries for 6-10 weeks	20,000
- Rental of 10 computers and software for 2 months	8,000

8. In addition to the approximately \$270,000 required to finance the relevant existing staff of the interim secretariat from 1 September until COP 1, the cost of preparing a compilation and synthesis for consideration at the eleventh session of the Committee is estimated tentatively at between \$115,860 and \$154,260.

In-depth review of communications after COP 1

9. In developing the budgetary considerations associated with this component of the review process, the interim secretariat has assumed that the resource requirements for an in-depth review would begin on 1 April 1995 and continue until COP 2. The figures provided in this document, however, are for the period ending 31 December 1995, after which funding would be covered by the regular budget of the permanent secretariat. It has been further assumed that the staffing levels of the secretariat as discussed above (that is, 3 professional staff and one general service) would be extended for this period. This would require contributions to the trust fund of \$350,000. (This figure does not include the bilateral contribution to the trust fund from a Government to finance one of the 3 professional staff.) **However, the figures presented in the following discussion can only be considered tentative.**

10. Although the mandate and structure of the permanent secretariat are not yet clear, it may be assumed that the same magnitude of resources, 3 professionals and one general service, would be available to coordinate and participate in any in-depth reviews. Some other supporting

tasks could also be absorbed within the secretariat. This would, however, be insufficient to carry out all of the tasks that might be envisaged as being assigned to the secretariat to effectively coordinate and manage an in-depth review process. The interim secretariat believes that 2 additional professional staff and one additional general service staff would be required. The cost of these staff would be approximately \$300,000.

11. In order to develop cost estimates for the implementation of the in-depth reviews as discussed in the document, the interim secretariat has made the following assumptions:

(a) Thirty communications will have been received for review in the period between COP 1 and COP 2;

(b) Each review team would be composed of:

- one national expert from each of the following:
 - an Annex II Party
 - a Party with an economy in transition
 - a developing country Party
- one expert from an international organization
- one secretariat staff member
- one consultant

(c) Travel and subsistence costs would be required for a country consultation visit or a meeting in Geneva for the consultant and the experts from international organizations and non-Annex II Parties (and for the secretariat in the event of country consultation visits) for each of the thirty communications in accordance with the following assumptions:

- cost of average trip: \$2,500 per person
- subsistence costs: \$1,000 per person for one week

(d) Consultants would be paid fees for two weeks per visit at \$2,000 per week.

12. On the basis of the above assumptions the following funding needs may be calculated (for the period 1 April to 31 December 1995):

	<u>US\$</u>
- Extension of existing secretariat staff (does not include one staff member funded by his Government)	350,000
- Additional secretariat staff	300,000
- Travel	300,000-375,000
- Subsistence	120,000-150,000
- Consultant fees	120,000
TOTAL	<u><u>\$1,190,000-1,295,000</u></u>

- - - - -
