United Nations A/AC.172/1998/3

Distr.: General 14 July 1998

Original: English

#### **Committee on Conferences**

Substantive session Agenda item 2 (b) (i)

# Calendar of conferences and meetings: improved utilization of conference-servicing resources: meeting statistics of United Nations organs

#### Report of the Secretary-General

- 1. Annex I to the present document contains statistical data on the planned and actual utilization of conference resources allocated to a core sample of bodies that met in New York, Geneva and Vienna in 1997, compiled in accordance with the experimental methodology adopted as final by the Committee on Conferences at its 348th meeting, on 18 May 1993. The data include compliance and availability indices for assessing compliance with the deadlines for the submission of pre-session documentation and availability of such documentation for bodies based in New York, Geneva and Vienna, which were proposed by the Committee on Conferences at its substantive session of 1992.
- 2. In addition, data on utilization and availability of documentation at Nairobi are included, although information on late starting and early ending at that venue will be available as from 1999 only.
- 3. Annex II contains an analysis of the statistics, including the overall utilization factor, and a breakdown in terms of percentages of the meeting ratio and planning accuracy factor of the bodies in the sample.
- 4. In general, the bodies in the sample meet on a regular basis, and it may be assumed that their performance is a reflection of United Nations bodies as a whole. Clearly, however, such indicators as the utilization factor can depend on particulars that do not apply to all United Nations bodies.
- 5. In accordance with decisions of the Committee on Conferences, the time utilized for informal meetings or consultations held before the start or after the adjournment of officially scheduled meetings is not included as time lost owing to late starting or early ending of meetings.

- 6. An explanation of column headings that appear in the annexes follows:
  - A Number of meetings planned by a given organ at a scheduled session;
  - B Number of additional meetings held during the session;
  - C Number of meetings cancelled during the session;
  - D Number of meetings actually held;
  - E Number of unrelated reassignments;
  - F Amount of time lost owing to late starting/early ending (hours and minutes rounded to the nearest five minutes, e.g., 5.25 = 5 hours and 25 minutes);
  - MR Meeting ratio, calculated as meetings held as a percentage of meetings available to a given body (D as a percentage of A);
  - PAF Planning accuracy factor, calculated as meetings planned, minus additional meetings, minus cancellations, all as a percentage of meetings planned (A minus B minus C as a percentage of A);
  - UF Utilization factor, the percentage of available conference resources actually used by the organ in question. The utilization factor is based on the following calculation:

$$(A+B) - (C-E) - (F/3) = UF$$
  
(A+B)

In the foregoing calculation, the number of hours lost as a result of late starting and early ending is converted into the equivalent of meetings lost by dividing the total by three, as the standard meeting time is three hours. The number of unrelated assignments is subtracted from the number of cancelled meetings. The difference between the two and the number of meetings lost are then subtracted from the sum of meetings planned and additional meetings held. The result is expressed as a percentage of the sum of meetings planned and additional meetings held;

- CI Compliance index, calculated as the percentage of pre-session documentation issued in accordance with the six-week rule;
- AI Availability index, calculated as the actual rate of delivery presented on a weekby-week basis.

Annex I

Statistical data on the planned and actual utilization of conference resources allocated

### **Annex II**

## Analysis of the statistics

1. The overall utilization factor for 1997 was 81 per cent. This figure is computed by totalling the data in the six columns for all bodies in the three locations and treating them as if they reflected a single body, as follows:

Duty station	A	В	С	D	Е	F (minutes)	UF
New York	1 400	94	186	1 308	85	39 920	78
Geneva	589	27	33	583	_	8 615	87
Vienna	183	0	3	180	_	3 500	88
	2 172	121	222	2 071	85	52 035	81

- 2. The overall utilization factor for 1997 shows a slight decline of 2 points against the same factor for 1996 (83 per cent), as reported in paragraph 1 of the report of the Secretary-General of 29 July 1997 (A/AC.172/1997/3). The decrease of 3 points in the utilization factor in New York in 1997 as against 1996 (78 per cent and 81 per cent, respectively) is largely due to the reduction in utilization, of from 3 to 19 points, on the part of the General Assembly and its Main Committees.
- 3. The utilization factors for the bodies in the sample for the period from 1995-1997 are presented below in tabular form for purposes of comparison:

Hallis adies for any		Number of sessions	
Utilization factor(percentage)	1995	1996	1997
0–19	_	_	_
20–29	1	_	_
30-39	1	_	_
40-49	1	_	3
50-59	6	_	2
60-69	11	5	6
70–79	18	12	17
80-100	44	60	46
Total number	82	78	74

- 4. In 1995 and 1996, 4 per cent and 1 per cent of the bodies, respectively, fell in the lowest range of 0-49 per cent. In 1997, 4 per cent of the bodies fell in that range. In 1995 and 1996, 43 per cent and 22 per cent of the bodies, respectively, used 50 to 79 per cent of their resources; in 1997, 34 per cent of the bodies did so. As to compliance with the benchmark, in 1995 and 1996, 54 per cent and 77 per cent of the bodies, respectively, had a utilization factor of 80 per cent or higher. In 1997, 62 per cent of the bodies in the sample utilized 80 per cent or more of their conference-servicing resources.
- 5. The figures are summarized as follows:

	Perce		
Percentage of resources utilized	1995	1996	1997
80–100	54	77	62
50–79	43	22	34
0–49	4	1	4

6. The following is a breakdown of the meeting ratios of the bodies in the sample for 1997, including Nairobi:

Percentage	Number of sessions
10–19	1
20–29	_
30–39	_
40–49	_
50–59	2
60–69	2
70–79	1
80–89	11
90–100+	61
Total	78

- 7. Thus, in 1997, 8 per cent of the bodies in the sample had meeting ratios below 80 per cent; 92 per cent had meeting ratios above 80 per cent. Seventy-eight per cent of the bodies had meeting ratios of 90 per cent or higher, or an increase of 4 per cent over 1996.
- 8. The following is a breakdown of the planning accuracy factors of the bodies in the sample for 1997, including Nairobi:

Percentage	Number of sessions
0–39	2
40–49	_
50-59	3
60–69	6
70–79	6
80–89	14
90–100	47
Total	78

9. Thus, in 1997, 22 per cent of the bodies had planning accuracy factors below 80 per cent; 78 per cent of the bodies had factors above 80 per cent. Sixty per cent of the bodies had planning accuracy factors of 90 to 100 per cent, or an increase of 1 per cent over 1996.

**10**
