THE CONFERENCE OF EUROPEAN STATISTICIANS

The Conference of European Statisticians was set up in 1953 as a continuing body meeting under the auspices of the Economic Commission for Europe and the Statistical Commission of the United Nations. Its objectives are (a) to improve European Official statistics and their international comparability having regard to the recommendations of the Statistical Commission of the United Nations, the specialized agencies and other appropriate bodies as necessary; and (b) to promote close co-ordination of the statistical activities in Europe of international organizations so as to achieve greater uniformity in concepts and definitions and to reduce to a minimum the burdens on national statistical offices. The members of the Conference are the directors of the central statistical offices of the countries participating in the work of the United Nations Economic Commission for Europe. The Conference meets in plenary session once a year and also arranges numerous meetings of specialists on particular statistical subjects.

1. Description of the project

Under the programme of work of the Conference of European Statisticians, the secretariat of the Economic Commission for Europe engaged in the preparation of standardized input-output tables for ECE countries at periodic intervals. A first set of standards relating to years around 1959^{1/} was completed and published in 1965, and in 1977^{2/} a second set of tables for years around 1965 was published. The classifications used and rules applied in the compilation of the tables are described in detail in these publications.

For the third set of input-output tables of ECE countries, it was decided to prepare tables both for years around 1970 and for years around 1975. The time lag from the year of the table to the year of publication could therefore be shortened significantly, at the same time as two years of five-year interval could be put on a comparable basis.

The tables for 1959 and 1965 were prepared by the secretariat of the Economic Commission for Europe on the basis of available material. A totally different approach was chosen for the third round of standardized tables, viz. the use of a questionnaire for the collection of data from the countries. By using such an approach, one major step towards standardization was taken from the outset, and a higher degree of standardization could be achieved.

The input-output questionnaire was designed for data collection in a joint undertaking by the OECD and the ECE secretariat. One set of questionnaire tables was prepared by the OECD for the market economy countries, another set was prepared by the ECE secretariat for countries with centrally planned economies. The two sets of questionnaire tables were, however, very similar, taking into account special items of relevance to the two different reporting systems of national accounts - the System of National Accounts (SNA)^{3/} for the market economies and the System of Material Product Balances (MPS)^{4/} for the centrally planned economies.

In preparing the input-output tables, the national statistical offices - as in the two earlier rounds - greatly contributed to the success of the project. The majority of the participating countries submitted input-output data on the standardized questionnaire form. For a few countries, however, tables were prepared by the ECE secretariat.

countries for approval. Moreover, the countries to the ECE secretariat adjustment of the national tables for

, it has been possible to prepare standardized input-output tables for the following countries of the ECE region: Austria (1976), Belgium (1970 and 1971 and 1975), Czechoslovakia (1973 and 1977), Denmark (1970 and 1975), Finland (1970), France (1970 and 1975), Germany, Federal Republic (1970 and 1975), Greece (1970), Hungary (1976), Ireland (1969), Italy (1970 and 1975), Netherlands (1970 and 1975), Norway (1970 and 1975), Poland (1977), Portugal (1970 and 1974), Spain (1975), Sweden (1969 and 1975), Turkey (1968 and 1973), United Kingdom (1970 and 1975) and Yugoslavia (1970 and 1976). Statistics for Japan (1970 and 1975) were also included.

It was found convenient to publish the tables of the third round in two separate reports: one report entitled "Standardized Input-Output Tables of ECE countries for years around 1970" and the other report entitled "Standardized Input-Output Tables of ECE countries for years around 1975". The tables will also be available on magnetic tapes to interested statistical offices and research institutes. Requests for tapes should be addressed to the Statistical Division, Economic Commission for Europe, Palais des Nations, CH-1211 Geneva 10.

2. Main characteristics of the standardized input-output table

General framework

The input-output table is divided into three quadrants:

The first quadrant shows the breakdown of intermediate transactions into rows (intermediate uses) and into columns (intermediate inputs). The sector specification applied - basically a 26 sector ISIC classification - is further discussed under section 3 on rules and definitions. For most countries, the total intermediate transactions (designated T in the table) have been divided into two sub-quadrants: one for domestically produced (designated D in the table) and one for imported intermediate uses and inputs (designated I in the table). For a few countries, the individual intermediate transactions could be specified in totals only, without breakdown into domestically produced and imported intermediate uses and inputs.

The second quadrant (to the right of the first one) shows the final uses and total uses (final uses plus intermediate uses). The classification of final uses - the specification into columns - is described in section 3 below. These transactions are distributed according to sectors of origin. As in the first quadrant, two sub-quadrants are specified: one for domestically produced final uses and total uses, and one for imported final uses and total uses.

In the second quadrant total uses are shown both in approximate basic values^{1/} and in market values^{1/}. A column for commodity taxes, net of subsidies is also included.

1/ For definition see A System of National Accounts, Studies in Methods, Series F, No.2, Rev.3 (United Nations publication. Sales No. E.69.XVII.3).

The third quadrant (below the first one) shows primary inputs and total resources. The classification of primary inputs - specified into rows for value added and its components - is described in section 3 below. In the sector columns of total resources, totals are equal to the respective totals of total uses, specified on the rows of the table. The components of total resources - gross output and imports - are specified in approximate basic values and in market values, in order to have the same dual valuation as for total uses.

National accounting systems

In the ECE region, two different conceptual systems are used in the national accounts and balances of the countries, which are equally applied to national input-output tables. The main differences relate to the treatment of "non-material" services, the value added of which is counted as a part of the gross domestic product in the SNA concept, but not in the MPS concept. Input-output tables prepared according to SNA could be compared with the input-output tables computed according to MPS only if the tables are mutually adjusted.

In the standardized input-output table, the procedure adopted was to adjust the tables of the SNA countries to the MPS concept by adjusting for the non-material services. Hence, for the countries using SNA, a sub-total is given for sectors of the material sphere (including unallocated items and statistical adjustment and commodity taxes, net of subsidies) to establish a basis of comparison. However, since the material sphere for the SNA countries as defined in the table excludes certain "material" elements of business services, recreational services, etc., which are included in the totals of the MPS countries, full comparability is not completely achieved.

Reconciliation items of the second quadrant are the columns of "total final consumption" and "final uses of the material sphere and inputs of the non-material sphere". "Total final consumption" encompasses private final consumption expenditure and government final consumption expenditure for the countries using SNA, and personal consumption and final consumption of non-material services for the countries using MPS.

From the point of view of adjusting the SNA to the MPS, the item "gross value added of the material sphere, including inputs of non-material services in market values" is introduced as a reconciliation item between the two systems on the resource side in the third quadrant. Thus, the value added according to the MPS concept has for the SNA countries been obtained as the sum of the value added according to the SNA and of the intermediate inputs of non-material services. In addition, gross value added is presented for all countries.

3. Rules and definitions

Classification

(i) ISIC sector classification

The countries of both reporting systems of national accounts were asked to construct their input-output tables on an industry by industry basis, but other forms were also acceptable.

In the ECE standardized table all intra-industry transactions (i.e. the diagonal elements of domestically produced deliveries for intermediate uses) have been included.

The sector classification adopted in the standardized table is that of the ISIC as defined in the United Nations publication: International Standard Industry Classification of All Economic Activities (Series M. No.24, Rev.2, United Nations, New York, 1971). The industry groups used in the ECE input-output tables are shown in Annex I.

The standardized table comprises 26 sectors, of which 16 cover the industrial sectors of mining and quarrying, manufacturing and electricity, gas and water. ISIC major division 9 "Community, social and personal services", has been divided into three sectors in accordance with the SNA: "Industries", "Producers of government services", and "Other producers", i.e. producers of private non-profit services and domestic services to households. For the countries using MPS, two sectors have been added; one for other branches of the material sphere, and another for the non-material sphere. A special total is given for the material sphere.

(ii) Other classifications

The categories of final demand used in the columns of the second quadrant are the following: Total final consumption, sub-divided into Private and Government consumption; Increase in stocks - General government; Increase in stocks - Other; Gross fixed capital formation - General government; Gross fixed capital formation - Other; and Exports.

The lines of primary inputs in the third quadrant specify the following components of value added: Consumption of fixed capital; Indirect taxes, net of subsidies other than commodity taxes, net of subsidies; Compensation of employees, including social security; and Other incomes. These components add up to value added in approximate basic values. The component "Compensation of employees" includes wages and salaries, other types of labour income and social security contributions. It should be pointed out that "Indirect taxes, net of subsidies, other than commodity taxes", in most cases have not been specified and thus been included with "Other incomes".

Net indirect taxes

Approximate basic values and cif values have been used as the basic valuation for the individual input-output figures. This means that indirect taxes, net of subsidies have to be shown subdivided into "Commodity taxes, net" and "Indirect taxes, net other than commodity taxes, net". This distinction is carried through in the standardized input-output table as follows:

Output flows:

- Commodity taxes, net of subsidies on domestic production and on imports are shown by production sectors for output flows in a separate column in the second quadrant under total uses, but not separately for intermediate uses (first quadrant) and for final uses (second quadrant) on the sector lines.

Input flows:

- Commodity taxes, net of subsidies on domestically produced intermediate inputs and on imported intermediate inputs are shown by production sectors for input flows on separate lines in the first quadrant.
- Indirect taxes, net of subsidies other than commodity taxes, are shown by production sectors for input flows on a separate line in the third quadrant.

Final uses:

- Commodity taxes, net of subsidies on final uses from domestic production and from imports are shown by category of final uses on separate lines in the second quadrant.

Treatment of VAT

Countries which impose value added tax (VAT) were requested to use the net treatment of VAT. Net treatment means that VAT invoiced by the producer is kept outside the production system, that only the non-deductible VAT is included in the flows for intermediate and final uses and that the balance between the supply and the user side is obtained through a new supply item, comparable to import duties, called VAT levied on production.

Net treatment of VAT in the standardized input-output table implies that the first quadrant is valued without the deductible VAT on intermediate transactions, but includes the non-deductible VAT on intermediate consumption in the row for commodity taxes, net.

In the columns of the second quadrant on final uses, VAT on final consumption and the non-deductible VAT on capital goods are included on the row for commodity taxes, net. Primary inputs of the third quadrant exclude VAT levied on production, since it is not included in the columns of the first and second quadrants for intermediate and final uses by sector of origin. VAT (except for non-deductible VAT on intermediate inputs) is thus excluded from gross output and gross inputs by sector. Gross value added at approximate basic values in the standardized table thus equals gross output in approximate basic values less intermediate inputs in purchasers values minus deductible VAT on these inputs. Hence, on the line for commodity taxes, net of the intermediate inputs, all commodity taxes are included, other than the VAT plus the non-deductible VAT on these inputs.

Commodity taxes, net on imports

In the standardized table, commodity taxes, net of subsidies on imports should include both protective duties and other taxes levied, less subsidies granted, on imports. For a number of countries the import figures were not presented in cif values but in ex-customs values including the above-mentioned commodity taxes, net of subsidies on imports. In these cases, the corresponding figures for domestically produced flows were in most cases reported in producers' values, implying that total indirect taxes, net would be included in the third quadrant

(as part of value added in producers' values) and excluded from the first and second quadrants (row of commodity taxes, net shown as "not available").

Unallocated items and statistical adjustment

Most countries have entries in the balancing item "Unallocated items and statistical adjustments". To a large extent, these entries represent small errors due to rounding in the various lines and columns. Also, whenever an item is included in the table for which the standard lines and columns are not appropriate, the item in question has been included in "Unallocated items and statistical adjustment". For more details of the contents of the residual item, see the country notes in Annex III.

Miscellaneous

The general treatment of scrap and secondhand goods was left open to the countries - following SNA or national rules. A majority of countries reported sales of domestic secondhand goods and scrap and added it to the line for distribution. See country notes for national practices.

In the standardized table the government sector has been considered as a producer with all purchases and sales shown in the first quadrant as intermediate consumption. Government final consumption expenditure would consist of the aggregated value of purchases less sales and value added in the government sector, and shown as a lump sum in the column for government final consumption expenditure.

Conclusions

The tables shown in Annex IV have been made comparable to a large extent. For some countries the degree of comparability is rather high, even at a detailed level, for others more limited due to a lack of the required breakdowns. In a few cases, combined reported sectors have been subdivided by using the method described in Annex II. A requisite for using this technique was the availability of appropriate marginal totals. The identified discrepancies which could not be accounted for have been listed in the country notes to the tables, given in Annex III.

Even in the absence of the above-mentioned statistical difficulties, input-output tables of this kind can only give the values of flows subject to transactions within the productive system or coming from this system. It cannot be concluded on the basis of similarities or dissimilarities, as revealed by international comparisons, that production technique, or wage levels, etc. are similar or very divergent between two countries, as these characteristics may be due to the price system deriving from the general economic system.

ANNEX I

ECE CLASSIFICATION BY INDUSTRY GROUPS

No.	ECE Industry group	ISIC 1/ reference
1	Agriculture, hunting, forestry and fishing	1
2	Coal mining	21
3	Crude petroleum and natural gas	22
4	Metal ore mining	23
5	Other mining	29
6	Manufacture of food, beverages and tobacco	31
7	Textile, wearing apparel and leather industries	32
8	Manufacture of wood and wood products	33
9	Manufacture of paper and paper products, printing and publishing	34
10	Manufacture of chemicals and chemical, petroleum, coal, rubber and plastic products, except petroleum refineries	35 except 353
11	Petroleum refineries	353
12	Manufacture of non-metallic mineral products, except products of petroleum and coal	36
13	Basic metal industries	37
14	Manufacture of fabricated metal products, machinery and equipment	38
15	Other manufacturing industries	39
16	Electricity, gas and steam	41
17	Water works and supply	42
18	Construction	50
19	Distribution	61 and 62
20	Restaurants and hotels	63
21	Transport and storage	71
22	Communication	72
23	Other branches of material sphere	Part of 8, and 9
24	Financing, insurance, real estate and business services	8
25	Community, social and personal services: Industries	92 to 95
26	Community, social and personal services: Government	91 to 94
27	Community, social and personal services: Other producers	92 to 95
28	Other services, non-material sphere	Part of 8 and 9

1/ Relates to International Standard Industry Classification of All Economic Activities, Statistical Papers, Series M. No.24, Rev.2, United Nations, New York, 1971.

ANNEX II

Methods for sub-division of industries in the ECE Standardized Input-Output Tables

In a large number of cases, the breakdown in groups of industries in the various national tables is not detailed enough to enable an exact correspondence to the ECE standard classification. Often such inadequacies in correspondence to the classification standard have not been made subject to adjustments because they are insignificant or because no statistical basis for adjustments has been found. In such cases, the deviations from the classification are described in the notes for the various countries. In some cases, however, it has been possible to use a standardized method for sub-dividing branches, in order to eliminate deviations from the classification. This method implies a subdivision of data for country A by using input-output table data from a similar country, B. This method is described below:

Assume that for country A there is a column vector for branch j which also covers branch k. The element in row i is then written

$$E_{i,j+k}^A$$

This element has to be partitioned into

$$E_{i,j}^A \text{ and } E_{i,k}^A$$

In a similar way, there exists a row vector where the element

$$E_{j+k,i}^A$$

has to be partitioned into $E_{j,i}^A$ and $E_{k,i}^A$

For the columns, it has been assumed that the technology of branches j and k in country A is similar to country B. If so, the same cost structures as in country B apply. Since it is possible from other statistics usually to determine gross output (= total costs) for branches j and k separately, it is then possible to estimate $E_{i,j}^A$ and $E_{i,k}^A$. It is also possible to adjust roughly for the fact that the technology assumption is not always exactly true, which is seen when the initial estimates

$$E_{i,j}^A + E_{i,k}^A \neq E_{i,j+k}^A$$

The initial estimates have then been adjusted proportionately.

When sub-dividing the rows, a similar technology assumption, and a final proportional adjustment, has also been made. The technology assumption means that in each branch the use of commodity j per unit of output is the same in both countries, and similarly for commodity k. The final proportional adjustments roughly eliminate eventual invalidities in the assumption. This is especially important in the context of final demand, where the technology assumption has little theoretical validity. For exports and imports, direct estimates have been made on the basis of foreign trade statistics.

ANNEX III

Country notes to the standardized input-output tables

Countries and years covered:

Belgium	1970
Canada	1971
Czechoslovakia	1973
Denmark	1970
Finland	1970
France	1970
Germany, Federal Republic of	1970
Greece	1970
Ireland	1969
Italy	1970
Japan	1970
Netherlands	1970
Norway	1970
Portugal	1970
Sweden	1969
Turkey	1968
United Kingdom	1970
Yugoslavia	1970

BELGIUM

Source:

The input-output table for 1970 has been compiled from the input-output publication for 1970 issued by the Statistical Office of the European Communities ("Input-output table - Belgium 1970", Special serie 5, Luxembourg 1977).

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis, viz. by branches as defined in the "European System of Integrated Economic Accounts (ESA)" published by the Statistical Office of the European Communities.

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value-added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 2 Mining and quarrying is included in ISIC 3 Manufacturing. Thus, data for ISIC 21 Coal mining, ISIC 22 Crude petroleum, etc., ISIC 23 Metal ore mining and ISIC 29 Other mining are not available in the table. This is due to the classification according to the NACE-CLIO, R44 version of the ESA. ISIC 42 Water works and supply is included in ISIC 41 Electricity, gas and steam on the input side, but are shown separately on the output side.
- ISIC 8 Finance, insurance, real estate, etc., also includes part of ISIC 92 to 95 Community, etc., services: Industries, viz market services of education and research, recreational and cultural services, personal services, and other market services not elsewhere covered (but not market services of health and recovery and repair services). Also included are domestic services and other non-market services not elsewhere covered of ISIC 92 to 95 Community, etc., services: Other producers.
- ISIC 91 to 94 Community, etc., services: Government also include private non-profit institutions of ISIC 92 to 95 Community, etc., services: Other Producers.
- Increase in stocks - Other, also includes increase in stocks - general government.

Other deviations:

- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in producers' values/ex-customs values:

- Commodity taxes, net are not specified in the first and second quadrants of the table.
- Net treatment of VAT is followed.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- The transfers of ordinary by-products and adjacent products and transfers of incidental sales are included as a correction line in the first quadrant. The transfer amounts are partly negative, partly positive and totals zero.
- Small errors due to rounding.
- Purchases of commodities in the government sector is recorded net of sales of commodities.

(iv) Miscellaneous

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total is published as private final consumption expenditure in the domestic market. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases by residents.

CANADA

Source:

A completed input-output questionnaire for 1971 was received from Statistics Canada, Ottawa, in May 1981.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The individual figures of the first and second quadrants are valued in approximate basic values. These figures are provided for totals of domestically produced and imported flows only, since no distinction between sources of supply had been accounted for. The value added of the third quadrant is in factor values.

Special notes:

(i) Classification

Deviation from the 26 sector ISIC classification:

- ISIC 42 Water works and supply is not covered, since most water works and supply arrangements are handled through the general municipal government.
- Other incomes also includes consumption of fixed capital.
- Increase in stocks - Other, also includes increase in stocks - General government.

Other deviations:

(ii) Indirect taxes, net

Following from the reporting of indirect taxes, net of subsidies as a total (not subdivided into commodity taxes, net and non-commodity taxes, net), distributed on intermediate uses and final uses:

- Commodity taxes, net also include indirect taxes, net, other than commodity taxes, net specified on the line in the first and second quadrants.
- Total intermediate inputs exceed the purchasers' values by the value of indirect taxes, net other than commodity taxes, net.
- Total commodity taxes, net (or indirect taxes, net) are not specified on output in the column for total uses.
- VAT is not levied in Canada.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- The dummy sectors "operating, office, lab. and food" and "travel, advertising and promotion", i.e. goods and services commonly used in the industrial sectors. The factor cost in these dummy sectors are zero (included with the sectors of origin).
- Unallocated imports and exports which is mostly a distribution of travel account in the balance of payments (195.1 mill. in the first quadrant and 1871 mill. in the second quadrant, of which 1775.2 mill. under exports and 95.8 mill. under private final consumption expenditure).
- Non-competing imports, i.e. such commodities that have no counterpart in the domestic economy (282.7 mill. in the first quadrant and 120 mill. in the second quadrant, of which 205.2 mill. under intermediate inputs in manufacture of food, etc., and 117.7 mill. under private final consumption expenditure).
- Imports are shown as a negative column in the residual of the second quadrant, as the figures of the first and second quadrants are provided for totals of domestically produced and imported flows only.
- Small errors due to rounding.

(iv) Miscellaneous

- The accounting framework of Canadian input-output tables includes a matrix of the values of primary inputs associated with final demand categories. The labour income includes wages and salaries and supplementary income paid by the government and personal sectors. These values have been transferred to the third quadrant of the standardized ECE table as compensation of employees with the ISIC sectors 91 to 94 community, etc., services: Government and 92 to 95 community, etc., services: Other producers, respectively. The estimate of operating surplus (i.e. consumption of fixed capital) relates to the government sector and non-profit institutions in the personal sector, for which the same kind of transformation was followed.
- The final demand figures of government and other producers were transformed to follow the present SNA treatment. Consequently, purchases and sales of goods and services regarding intermediate transactions were shown by sector in the government column and line of the first quadrant, government consumption expenditure as final use in the second quadrant (the original positive and

negative values were transferred to the column and line of government sector in the first quadrant) and value added components shown in the third quadrant. For other producers only values for value added components and private final consumption expenditure are included.

- Transport margins, which have been reported separately, have been included with the distribution sector in the standardized table.
- Sales of domestic secondhand goods and scrap are added to the line for distribution.

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics.

CZECHOSLOVAKIA

Source:

The Czechoslovak input-output data for 1973 were received from the Federal Statistical Office, Prague in March 1982.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis, aggregated from the original national input-output table of 42 sectors, which was elaborated in the ISIC classification (see classification table).

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in cif values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

- The ISIC classification is followed throughout, except that no data are available for the non-material sphere.
- The item "Other incomes" in the third quadrant also includes social security contributions.

(ii) Indirect taxes, net

No specifications of indirect taxes, are given in the table, since the figures of the first and second quadrants are valued in producers' values/cif values while indirect taxes, net of subsidies of the third quadrant (component of value added) are included in the item "other income".

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- Small errors due to rounding in the first and third quadrants.
- Statistical adjustment in the second quadrant column as balancing item between total resources and total uses, in the table recorded in the final uses part (3351.6 mill. koruny or 0.7 per cent of total final uses).

(iv) Miscellaneous

The data on exports and imports are given in CSSR wholesale prices, i.e. negotiated prices converted to CSSR price level. Imports are increased by trade costs of the foreign trade organizations providing imports and of the premiums and reductions stated due to state price regulations of imported material and goods.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same or similar aggregates of the national accounts statistics.

CZECHOSLOVAKIA 1973

DENMARK

Source:

A completed input-output questionnaire for 1970 was received from Danmarks Statistik, Copenhagen, in July 1981. Another source is input-output data published by the Statistical Office of the European Communities ("Input-Output Table - Denmark 1970". Eurostat).

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The individual figures of the first and second quadrants are valued in approximate basic values (domestic production) and in cif values (imports). The value added of the third quadrant is in approximate basic values.

Special notes:

(i) Classification

The 26 sector ISIC classification is followed throughout

- There are neither coal production (ISIC 21) nor metal ore production (ISIC 23) in Denmark.
- Operating surplus also includes consumption of fixed capital.
- Increase in stocks - other, also includes increase in stocks - general government.
- Gross fixed capital formation - other, also includes gross fixed capital formation - general government.

(ii) Indirect taxes, net

- Commodity taxes, net on domestic part also include commodity taxes, net linked to imports, but not import duties. Import duties are included in the approximate basic values.
- Total commodity taxes, net on output (column 45) are not available due to the fact that the concept of gross output (value added) at market prices by branch is not applied in the Danish national accounts.
- Net treatment of VAT is followed.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- Imports of special services which are not covered by the foreign trade statistics (imports). The contents are (i) goods and services imported directly to off-shore activities in the Danish part of the North Sea; (ii) purchases abroad by resident households and expenses for business trips, etc., and purchases in Denmark by non-resident households, etc., and (iii) expenses abroad for Danish ships.
- Small errors due to rounding.
- Sales of domestic secondhand goods and scrap are placed in the branches which produce similar new goods.

(iv) Miscellaneous

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics.

FINLAND

Source:

A completed input-output questionnaire for 1970 was received from the Central Statistical Office in Finland in August 1981. Another source is input-output data for 1970 published in "Input-Output Study - Input-Output Structure of the Finnish Economy in 1970" (Central Statistical Office of Finland, Helsinki, 1977).

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The individual figures of the first and second quadrants are valued in approximate basic values (domestic production) and in cif values (imports). The value added of the third quadrant is in approximate basic values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 29 Other mining also includes ISIC 21 Coal mining and ISIC 22 Crude petroleum, etc., in the import table part. There are neither coal production nor oil production in Finland.
- ISIC 353 Petroleum refineries also includes ISIC 354 Miscellaneous products of petroleum and coal, the latter's share of combined total being around 10 per cent.

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government, as well as statistical discrepancy.

- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

- Commodity taxes, net on domestic part also include commodity taxes levied on imports, except import duties.

- Total commodity taxes, net on output (column 45) are not given due to calculating difficulties.

(iii) Unallocated items and residuals

Non-existent in the table.

(iv) Miscellaneous

- Imputed bank service charge is included with operating surplus in the third quadrant (amount -551.4 mill.) and in internal delivery of ISIC 8 Finance, insurance, etc., of the first quadrant.

- Purchases of domestic secondhand goods and scrap are treated as part of intermediate consumption, of which the sale margin of those products is included in the distribution sector.

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are almost in full harmony with the same aggregates of the national accounts statistics, but there are some discrepancies for government final consumption expenditure, operating surplus and consumption of fixed capital. In the national accounts sales of non-market commodities are deducted from government final consumption expenditure, this is, however, not done in the input-output table. The discrepancies for operating surplus and consumption of fixed capital are mainly due to different estimation of the capital consumption of buildings in the input-output table and the national accounts.

For private final consumption expenditure the total refers to private final consumption expenditure in the domestic market plus direct purchases abroad by resident households and consumption of non-profit bodies. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases abroad by resident households.

FRANCE

Source:

A completed input-output questionnaire for 1970 was received from the Institut National de la Statistique et des Etudes Economiques, Paris, in November 1981.

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis, viz. by branches as defined in the "European System of Integrated Economic Accounts (ESA)", published by the Statistical Office of the European Communities.

(ii) Valuation

The figures of the first and second quadrants are valued in purchasers' values excluding deductible VAT. These figures are provided for totals of domestically produced and imported flows only, since no distinction between sources of supply has been accounted for. The value added of the third quadrant, for which the components are not available, is in purchasers' values and is shown net of VAT and including VAT. Total imports which are shown separately in the second quadrant are at cif values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 42 Water supply is included in ISIC 41 electricity, gas and steam.
- ISIC 91-95 "Community, etc., services" of Government and Other Producers are combined and shown under Government.

Other deviations:

- Trade margins are not included in distribution of the first and second quadrants, but are included in the figures for other industries.
- The components of value added are not specified in the third quadrant. Value added excluding VAT is shown on the line "compensation of employees".
- Increase in stocks - General government, also includes increase in stocks - Other.

(ii) Indirect taxes, net

- Commodity taxes, net are not shown separately in the first and second quadrants.
- Indirect taxes, etc., of the third quadrant refer to VAT on products.
- Net VAT treatment is followed.

(iii) Unallocated items and residuals

- The residual item of the first quadrant refers to the transfers of by-products with other branches, which transforms the actual output of a given branch to total output for its corresponding product. Transfers total to zero.
- The residual column item in the first and second quadrants refer to trade margins on intermediate consumption and final demand transactions respectively (referred to above). Given the flows are valued at purchasers' values, they have been introduced as a balancing item to eliminate that part of output (intermediate and final) of each commodity which refers to trade margins.

Miscellaneous:

- Purchases of commodities by ISIC 91-95 non-market services are recorded net of sales of commodities.
- The figures for imports presented in the second quadrant refer to total imports for intermediate consumption and final demand.
- Imputed bank service charge is included (amount to 21848 mill.) in intermediate consumption of banking (and deducted from value added).
- Sales of domestic secondhand goods and scrap have been added to distribution.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in full harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure, the total reported in the input-output table refers to private final consumption expenditure in the domestic market. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases abroad by residents.

GERMANY, FEDERAL REPUBLIC OF

Source:

A completed input-output questionnaire for 1970 was received from Statistisches Bundesamt, Wiesbaden in September 1981.

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis, viz. by branches as defined in the "European system of Integrated Economic Accounts (ESA)" published by the Statistical Office of the European Communities.

(ii) Valuation

The individual figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 23 Metal ore mining and ISIC 29 Other mining were reported combined.
- ISIC 92 to 95 Community, etc., services: Industries, ISIC 91 to 93 Community, etc., services: Government, and ISIC 92 to 95 Community, etc., services: Other producers were reported combined.

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in producers' values and ex-customs values:

- Commodity taxes, are not specified in the first and second quadrants of the table. Indirect taxes, net other than commodity taxes, net in the third quadrant also include commodity taxes, net other than import duties.
- Gross treatment of VAT has been followed.

(iii) Unallocated items and residuals

Non-existent in the table.

(iv) Miscellaneous

Sales of domestic secondhand goods and scrap have been added to the line for distribution.

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total is published as private final consumption expenditure in the domestic market. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases abroad by residents.

GREECE

Source:

A completed input-output questionnaire for 1970 was received from the National Accounts Service, Ministry of Co-ordination, Athens in June 1981.

General notes:

- (i) Compilation basis The input-output table has been compiled on an industry by industry basis.
- (ii) Valuation The figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values.

Special notes:

- (i) Classification Deviations from the 26 sector ISIC classification:

- ISIC 38 Metal products, machinery, etc. and ISIC 39 Other manufacturing also include repair services of machinery, electrical goods, watches, clocks, jewellery, etc., of ISIC 92 to 95 Community, etc., services: Industries. The latter sector does, however, contain the repair services of motor vehicles, motorcycles and footwear.
- ISIC 92 to 95 Community, etc., services: Industries also includes ISIC 63 Restaurants and hotels.
- ISIC 91 to 94 Community, etc., services: Government also includes private health, sanitary and educational services of ISIC 92 to 95 Community, etc., services: Industries.
- No data are available for ISIC 92 to 95 Community, etc., services: Other producers.
- Ownership of dwellings, which is part of ISIC 8 Finance, insurance, real estate, etc., includes the services of renting dwellings.

Other deviations:

- Operating surplus also includes consumption of fixed capital.
- Increase in stocks - Other, also includes increase in stocks - General government, and all statistical discrepancies.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in producers' values and ex-customs values:

- Indirect taxes, net other than commodity taxes, net in the third quadrant also include commodity taxes, net. The latter is therefore not available in the first and second quadrants.

(iii) Unallocated items and residuals

The item "Unallocated items and statistical adjustment" contains small errors due to rounding.

(iv) Miscellaneous

Sales of domestic secondhand goods and scrap have been added to the line for distribution.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics.

IRELAND

Source:

The input-output table for 1969 was compiled from the publication "Input-Output Tables for 1969", published by the Stationery Office, Dublin, January 1978.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in cif values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 29 Other mining includes all Mining and quarrying. Thus, data for ISIC 21 Coal mining, ISIC 22 Crude petroleum, etc., and ISIC 23 Metal ore mining are not available in the table.
- ISIC 39 Other manufacturing also includes ISIC 353 Petroleum refineries.
- ISIC 38 Metal products, machinery, etc., also includes ISIC 37 Basic metal industries.
- ISIC 42 Water works and supply are included in ISIC 41 Electricity, gas and steam.
- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.
- No detailed data on imports are available for ISIC 41 to 95, but are included as Complementary imports in "Unallocated items and statistical adjustment".

Other deviations:

(ii) Indirect taxes, net

Following from the reporting of indirect taxes, net of subsidies as a total distributed on intermediate uses and final uses.

- Commodity taxes, net also include indirect taxes, net, other than commodity taxes, net specified on the line in the third quadrant.
- Total commodity taxes, net (or indirect taxes, net) are not specified on output in the column for total uses.

(iii) Unallocated items and residuals

The item "Unallocated items and statistical adjustment" includes the following.

- Complementary imports.
- An artificial sector which records:
 - (a) special by-products for which no suitable sector exists;
 - (b) sales by final buyers (e.g. rags, scrap metal, wastepaper); and
 - (c) materials for repairs, packaging, and residual business current expenditures.
- Small errors due to rounding.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics.

ITALY

Source:

A completed input-output questionnaire for 1970 was received from the Istituto Centrale di Statistica, Rome, in June 1981. Another source is input-output data for 1970 published by the Statistical Office of the European Communities ("Tavola Input-Output, Italia - 1970", serie speciale 4, Luxembourg 1977).

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis, viz. by branches as defined in the "European System of Integrated Economic Accounts (ESA)", published by the Statistical Office of the European Communities.

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 2 Mining and quarrying excluding ISIC 21 Coal mining is included in manufacturing. Thus, data for ISIC 22 Crude petroleum, etc., ISIC 23 Metal ore mining and ISIC 29 Other mining are not available in the table. This is due to the classification according to the NACE-CLIO, R44 version of the ESA.

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in producers' values/ex-customs values:

- Commodity taxes, net are not specified in the first and second quadrants of the table, but are contained in the third quadrant with non-commodity taxes, net (but excluding import duties, etc.).

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- The transfers of ordinary by-products and adjacent products are included as a correction item in the first quadrant. The transfer amounts are partly negative, partly positive and totals zero.
- Small errors due to rounding.
- Sales of domestic secondhand goods and scrap are treated as in the ESA (recorded in the group recovery service - NACE/CLIO group 620 - which belongs to ISIC 92 to 95 Community, etc., services : Industries).

(iv) Miscellaneous

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in full harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total reported in the input-output table refers to private final consumption expenditure in the domestic market. Consequently, exports are excluding direct purchases in the domestic market by non-residents and imports excluding direct purchases abroad by residents.

JAPAN

Source:

A completed input-output questionnaire for 1970 was received from the Office of Statistical Standards, Administrative Management Agency, Tokyo in July 1981. Another source is input-output data for 1970 published in "1970 Input-Output Tables - English Summary" (Administrative Management Agency, March 1974).

General notes:

- (i) Compilation basis The input-output table has been compiled on a commodity by commodity basis.
- (ii) Valuation The individual figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant - on a commodity basis - is in producers' values.

Special notes:

- (i) Classification The 26 sector ISIC classification is followed throughout.
- Increase in stocks - Other, also includes increase in stocks - General government.
 - Compensation of employees and private final consumption expenditure also include the item "consumption expenditure outside households" (see Miscellaneous below).
- (ii) Indirect taxes, net Following from the basic valuation in producers' values and ex-customs values:
- Commodity taxes, net are not specified in the first and second quadrants of the table, but are contained in the third quadrant with the non-commodity taxes, net.
 - VAT is not levied in Japan.
- (iii) Unallocated items and residuals The item "unallocated items and statistical adjustment" includes the following:
- An unspecified sector which records the activities not classified elsewhere in the table. This sector is actually treated as balancing items including the estimation error in both lines and columns.
 - The dummy sectors office supplies and packing materials - goods and services commonly used in the industrial sectors.
 - Small errors due to rounding.

(iv) Miscellaneous

- Sales of domestic secondhand goods are not accounted for.
- The treatment of scrap is according to Stone's method (regarded as negative input from one sector to another and distributed to demand sectors from the latter).
- In Japan, the item "consumption expenditures outside households" corresponds to what is called consumption of enterprises on welfare expenses and social expenses. In the Japanese national accounts, these expenditures are treated as kinds of operating expenses (intermediate consumption). There is, however, the alternative way of treating this item as transfer of payments from industrial sectors to the personal sector. Accordingly, in the input-output table consumption expenditures outside households are included in value added as compensation of employees and in final uses as private final consumption expenditure.

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics. However there are deviations in the range of 2-4 per cent for most of the aggregates under study, while government final consumption expenditure in the input-output table exceeds the corresponding national accounts figure by more than 9 per cent. The latter is mainly due to the fact that sales of goods and services by producers of government services are included in government final consumption expenditure in the input-output table, while deducted in the national accounts. For exports and imports there is a difference in the treatment of factor incomes (excluded in the input-output table), and furthermore imports are valued f.o.b. in the national accounts.

NETHERLANDS

Source:

A completed input-output questionnaire for 1970 was received from the Netherlands Central Bureau of Statistics in July 1981. Another source is input-output data for 1970 published by the Statistical Office of the European Communities ("Input-Output Table - Nederland 1970", Speciale serie 3, Luxembourg 1976).

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The figures of the first and second quadrants are valued in approximate factor values (domestic production) and in cif values (imports). The use of factor values is considered by the Netherlands as a better approximation to basic values than the use of producers' values. The value added of the third quadrant is in factor values (gross).

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 353 Petroleum refineries also includes ISIC 22 Crude petroleum, etc.
- ISIC 39 Other manufacturing also includes Precision and optical instruments of ISIC 38 (3850).
- ISIC 41 Electricity, gas and steam and ISIC 42 Water works and supply, having been reported combined, were subdivided by using the method described in Annex II. The basic subdivided data on gross output, exports and imports were extracted from industrial statistics and foreign trade statistics, whereas the input-output coefficients were taken from the input-output table of Denmark.

Other deviations:

- Other incomes also includes consumption of fixed capital.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in approximate factor values/cif values:

- Indirect taxes, net other than commodity taxes, net are included with commodity taxes, net in the first and second quadrants and altogether excluded in the third quadrant of the table.

- Taxes levied on some imported agricultural products are not allocated to the related goods (amount (392 mill.)), but are included with indirect taxes, net (imports).
- Net treatment of VAT (value added tax) has been followed.

(iii) Unallocated items and residuals

The item "Unallocated items and statistical adjustment" includes the following.

- Figures for goods and services not elsewhere covered (first and second quadrants).
- Imports of service not allocated to competitive industries plus certain kinds of imported goods not produced domestically (treated as "complementary imports" - total amount 8677 mill. or 15.4 per cent of total imports, cif, of which 5988 mill. in the first quadrant and 2265 mill. in the second quadrant).
- Imputed bank service charge is included with operating surplus in the third quadrant (amount -2447 mill.).
- Sales of domestic secondhand goods and scrap have been added to the line for distribution.
- Increase in stocks with general government is not recorded, but is included in intermediate consumption of producers of general government.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in full harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total reported in the input-output table refers to private final consumption expenditure in the domestic market plus direct purchases abroad by resident households, which is the coverage recommended in the SNA, for input-output tables (commodity flows). Consequently, exports exclude direct purchases in the domestic market by non-residents.

NORWAY

Source:

A completed input-output questionnaire for 1970 was received from the Central Bureau of Statistics, Oslo in September 1981.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis, from rectangular commodity by industry and industry by commodity tables.

(ii) Valuation

The individual figures of the first and second quadrants are valued in approximate basic values (domestic production) and in cif values (imports). The value added of the third quadrant is in approximate basic values.

Special notes:

(i) Classification

Deviation from the 26 sector ISIC classification:

- ISIC 92-95 Community, etc., services: Industries, also includes ISIC 92 to 95 Community, etc., services: Other producers.
- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

In the Norwegian national accounts the VAT is recorded gross, but in this table the value added tax is recorded net. "Net" means deduction of deductible invoiced VAT in the case of intermediate consumption, which means that amounts not deductible by the producer are still implicitly included.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- Purchases/sales of existing real capital and direct purchases in Norway by non-residents households are included in the second quadrant, in the domestic part.
- Non-competing (complementary) imports of goods and services are included in the first and second quadrants for imports.
- Small errors due to rounding.
- Sales of domestic secondhand goods and scrap have been added to the distribution line, apart from purchases/sales of existing real capital which have not been allocated (see above).

(iv) Miscellaneous

- Imputed bank service charge is included with operating surplus (amount - 1709 mill.) and the internal delivery of the banking sector (ISIC 8 Finance, insurance, real estate, etc.).

Harmonization with
national accounts
aggregates

The aggregates of the second and third quadrants of the input-output table are in full harmony with the same aggregates of the national accounts statistics.

PORTUGAL

Source:

The input-output table for 1970 was compiled from Grupo de Estudos Básicos de Economia Industrial (GEBEI): Sistema de matrizes multisoctoriais para o Continente Português (60 x 60). Lisboa 1975.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in cif values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviation from the 26 sector ISIC classification:

- ISIC 92-95 Community, etc., services: Industries, also includes ISIC 92 to 95 Community, etc., services: Other producers.

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

Following from the basic valuation in producers' values and cif values:

- Commodity taxes, net are not specified in the first and second quadrants of the table, but are contained in the third quadrant.
- VAT (value added tax) is not levied in Portugal.

(iii) Unallocated items and residuals

Small errors due to rounding.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table differ somewhat with the same aggregates of the national accounts statistics due to conceptual differences.

SWEDEN

Source:

The input-output table for 1969 has been compiled from the Swedish input-output publication for 1969 ("Input-output tables for Sweden 1969", Statistical Reports N 1977:5, National Central Bureau of Statistics, Stockholm, January 1977).

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis.

(ii) Valuation

The individual figures of the first and second quadrants are valued in approximate basic values (domestic production) and in cif values (imports). The value added of the third quadrant is in approximate basic values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 29 Other mining also includes ISIC 21 Coal mining and ISIC 22 Crude petroleum, etc., and ISIC 23 Metal ore mining.
- ISIC 41 Electricity, gas and steam and ISIC 42 Water works and supply, having been published combined, were subdivided by using the method described in Annex II. The basic subdivided data on gross output, exports and imports were extracted from industrial statistics and foreign trade statistics, whereas input-output coefficients were taken from the input-output table for Sweden 1975.
- ISIC 92 to 95 Community, etc., services: Industries, also includes ISIC 92 to 95 Community, etc., services: Other producers.

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net

- Following from the basic valuation in approximate basic values/cif values:
- Commodity taxes, net are specified in the first and second quadrants of the table and altogether excluded from the third quadrant.
- Commodity taxes, net on domestic part also include commodity taxes, net on imports.
- Commodity taxes, net on output are not specified.
- Net VAT treatment is followed.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes errors due to rounding.

(iv) Miscellaneous

- Sales of domestic secondhand goods and scrap are added to the line for distribution. This also applies to the transfer of 305 mill. from gross fixed capital formation to exports (secondhand goods).
- In the publication the data for the government sector (ISIC 91 to 94 Community, etc., services : Government) have been limited to the commodity transactions, viz. government sales of commodities (line) and purchases of commodities (column), but are adjusted to include the other elements of gross output (other than intermediate consumption, i.e. value added). Consequently, government final consumption expenditure is given the appropriate extended coverage.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total in the input-output table refers to private final consumption expenditure in the domestic market. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases abroad by residents.

TURKEY

Source:

A completed input-output questionnaire for 1968 was received from the State Institute of Statistics, Ankara, in July 1981. An original Turkish input-output table for 1968 was also submitted by the same institute.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis.

(ii) Valuation

The individual figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 29 Other mining also includes other metallic minerals of ISIC 23, which covers iron ore production only.
- ISIC 33 Wood and wood products also includes metallic furniture and fixture production of ISIC 38 Metal products, machinery, etc.
- ISIC 39 Other manufacturing also includes part of ISIC 38 Metal products, machinery, etc.
- ISIC 42 Water works and supply also includes gas and steam of ISIC 41 Electricity, gas and steam.
- ISIC 8 Financing, insurance, real estate and business services excludes machinery and equipment rentals, which are shown in the related producing industries instead.
- ISIC 92 to 95 Community, etc., services: Industries, excludes repairs, which are shown in the related producing industries instead.
- ISIC 92 to 95 Community, etc., services: Other producers is not covered as a sector, but is evaluated in private consumption expenditure.

Other deviations:

- Compensation of employees also includes operating surplus and consumption of fixed capital.
- Increase in stocks - Other, also includes increase in stocks - General government. Increase in stocks covers only finished and semi-finished goods of domestic producing industries. Raw materials and commercial stocks have not been included. Stocks have been evaluated at their book value. Stocks of imported goods, raw materials and commercial stocks are included with private final consumption expenditure.

- (ii) Indirect taxes, net - Total commodity taxes, net on output are not available.
- Commodity taxes, net in the first and second quadrants refer to imported goods only, but they are not specified in the table.
- Subsidies were not used for netting indirect taxes, which are shown among primary inputs in the third quadrant.
- (iii) Unallocated items and residuals Non-existent in the table.
- (iv) Miscellaneous
- The inter-industry part of the table (the first quadrant) on imports shows the distribution of imported goods only. Imports of services are included in a spread-out manner (pro-rata to total uses of imports of the industries) among the import uses in ex-customs values.
 - Data on increase in stocks cover only finished and semi-finished goods stock of the manufacturing industries.

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics, but there are some discrepancies for gross capital formation, exports and imports (in the range of 4-7 per cent).

UNITED KINGDOM

Source:

The input-output table for 1970 has been compiled from the input-output publication for 1970 issued by the Statistical Office of the European Communities ("Input-output table - United Kingdom 1970", Special serie 2, Luxembourg 1976).

General notes:

(i) Compilation basis

The input-output table has been compiled on a commodity by commodity basis.

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values. The cost-structure of GDP by activity is based on commodities, not on industries.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification:

- ISIC 2 Mining and quarrying was included in manufacturing in the original table. By using the method described in Annex II ISIC 21 Coal mining was extracted from ISIC 35 using figures published in the national input-output table of the United Kingdom, 1970. ISIC 22 Crude petroleum, etc., was extracted from ISIC 353 using the same method and taking into account national accounts figures for United Kingdom, foreign trade statistics, industrial statistics and input/output coefficients from the input-output table of the United Kingdom 1975.
- ISIC 35 except 353 Chemicals, etc., also includes production and processing of radio-active materials and ores of ISIC 37 Basic Metals.
- ISIC 41 Electricity, gas and steam and ISIC 42 Water works and supply, having been combined, were subdivided by using the method described in Annex II, and taking into account input-output coefficients from the input-output table for the United Kingdom 1975.
- ISIC 8 Finance, insurance, real estate, etc., also includes ISIC 92 to 95 Community, etc., services: Industries, viz. market services of education and research, market services of health and recreational and cultural services, personal services, recovery and repair services, other market services not elsewhere covered, and ISIC 63 Restaurants and hotels.

- ISIC 91 to 94 Community, etc., services: Government, also includes ISIC 92 to 95 Community, etc., services: Other producers. The data for general public services, non-market services of education and research provided by general government and private non-profit institutions, non-market services of health provided by general government and private non-profit institutions and domestic services and other non-market services not elsewhere covered, have been aggregated and presented as "non-market services".

Other deviations:

- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

(ii) Indirect taxes, net Following from the basic valuation in producers' values/ex-customs values:

- Commodity taxes, net are not specified in the first and second quadrants of the table but are contained in the third quadrant.
- Net VAT treatment is followed.

(iii) Unallocated items and residuals

The item "unallocated items and statistical adjustment" includes the following:

- The transfers of by-products to present value added on an industry basis in the third quadrant, as in the national accounts. The components of GDP, however, are allocated among sectors based on commodities rather than industries.
- Small errors due to rounding.
- Sales of domestic secondhand goods and scrap have been added to the line for distribution.
- Purchases of commodities in the government sector is recorded net of sales of commodities.

(iv) Miscellaneous

Harmonization with national accounts aggregates

The aggregates of the second and third quadrants of the input-output table are in harmony with the same aggregates of the national accounts statistics. For private final consumption expenditure the total is published as private final consumption expenditure in the domestic market. Consequently, exports exclude direct purchases in the domestic market by non-residents and imports exclude direct purchases abroad by residents.

YUGOSLAVIA

Source:

The input-output table for 1970 was received from the Federal Statistical Office, Beograd in July 1981.

General notes:

(i) Compilation basis

The input-output table has been compiled on an industry by industry basis, aggregated from the original national input-output table of 28 sectors (aggregated version), which was elaborated in the ISIC classification (see classification table).

(ii) Valuation

The figures of the first and second quadrants are valued in producers' values (domestic production) and in ex-customs values (imports). The value added of the third quadrant is in producers' values.

Special notes:

(i) Classification

Deviations from the 26 sector ISIC classification adopted for the MPS countries:

- ISIC 1 Agriculture, etc., excludes operation of irrigation systems, etc.
- ISIC 21 Coal mining also includes coal processing of ISIC 35 except ISIC 353, Petroleum refineries.
- ISIC 22 Crude petroleum, etc. also includes ISIC 353, Petroleum refineries.
- ISIC 23 Metal ore mining also includes ISIC 37 Basic metal industries.
- ISIC 29 Other mining also includes manufacture of non-metallic mineral products (part of ISIC 36), but excludes extraction of stone and sand, included in ISIC 36 instead.
- ISIC 71 Transport also includes ISIC 72 Communication.
- No data are available for the non-material sphere.
- Increase in stocks - Other, also includes increase in stocks - General government.
- Gross fixed capital formation - Other, also includes gross fixed capital formation - General government.

Other deviations:

(ii) Indirect taxes, net

No specifications of indirect taxes, are given in the table, since the intermediate transactions of the first quadrant and the figures of the second quadrant are given in market values (producers' values/ex-customs values), while indirect taxes, net in the third quadrant are included with the item "Other income".

(iii) Unallocated items and residuals

The item "Unallocated items and statistical adjustment" includes the following:

- Scrap and waste, treated as a separate sector in the national input-output table (881 mill. or 0.6 per cent of total value added, of which 787 mill. for intermediate use and 93 mill. for final use).
- Decrease in stocks, shown on the residual line of the third quadrant.
- Small errors due to rounding.

(iv) Miscellaneous

The production comprises only activities producing material goods and material services, while other activities have been comprised within the segment of final demand.

Harmonization with national accounts statistics

The aggregates of the second and third quadrants of the input-output table are in harmony with the same or similar aggregates of the national accounts statistics.
