## INTRODUCTION

### Historical background

Although the search for greater comparability of foreign trade statistics had been going on for a very long time, it was not until the 1930s that significant developments towards the solution of the problem took place. In 1938 the League of Nations published the report of its Committee of Statistical Experts, Minimum List of Commodities for International Trade Statistics.<sup>1/</sup> The League's Minimum List was based on the 1937 revision of the League's Draft Customs Nomenclature.<sup>2/</sup>

Since the appearance of the Minimum List there have been many changes both in the structure of international trade and in the need of countries, intergovernmental bodies and international agencies for greater international comparability of trade data. Consequently, the United Nations Statistical Commission at its third session recommended that a revision of the League's Minimum List be prepared to make it more suitable for the analysis of the current character of international trade, and to make it more appropriate to the increased demand for international comparability. In co-operation with Governments and with the assistance of expert consultants, the United Nations Secretariat drew up the 1950 edition of the United Nations Standard International Trade Classification (referred to below as the "original" SITC).<sup>3/</sup> In May 1950, the Statistical Commission at its fifth session recommended to the Economic Social Council the adoption of the following resolution, which was adopted by the Council on 12 July 1950 (resolution 299 B (XI)):

"The Economic and Social Council,

"Taking note of the work done by the Statistical Commission during its third, fourth and fifth sessions, and the comments received from Governments and specialized agencies regarding the Standard International Trade Classification, and

"Taking note that the classification recommended can serve as a basis for a systematic analysis of world trade and as a common basis for the reporting of trade statistics to international agencies, thus reducing the burden on Governments,

"Urges all Governments to make use of this Standard Classification by:

"(i) Adopting this system of classification with such modifications as may be necessary to meet national requirements without disturbing the framework of the classification, or

"(ii) Rearranging their statistical data in accordance with this system for purposes of international comparison."

By 1960 Governments of a large number of countries were compiling trade-by-commodity data according to the original SITC or classifications correlated with SITC, and major international agencies had adopted it as a basis for the reporting of trade statistics. Some countries of Latin America and countries and territories of the British Commonwealth also used the original SITC as the basis of their customs nomenclature.<sup>4/</sup>

At the same time, in many European countries and in a number of countries outside Europe, customs tariff nomenclature was based on the 1955 Tariff Nomenclature (BTN) of the Customs Co-operation Council.<sup>5/</sup> This is an internationally agreed nomenclature in which articles are grouped according to the nature of the material of which they are made, as has been traditional in customs nomenclature. Consequently, data based on BTN had to be regrouped in order to provide economic statistics, since for economic analysis it is necessary that aggregates be available for classes of goods such as food, raw materials, chemicals, machinery and transport equipment and also for groupings of commodities by stage of fabrication and by industrial origin. The regrouping of BTN data into the form of the original SITC involved numerous subdivisions of BTN items. Considerable statistical resources were therefore required to regroup, giving rise to serious inconveniences to the developed countries and almost insuperable obstacles to the countries whose statistical resources were limited, when they attempted to use both the original SITC and BTN.

To improve this situation a group of experts from countries and intergovernmental agencies using both the original SITC and BTN prepared SITC, Revised, <sup>6/</sup> which combined the original SITC and BTN. This revision required some modifications of both classifications. In the case of BTN this consisted of the subdivision of a number of BTN items and the provision of a commentary in the Brussels Explanatory Notes on the subheadings thus created, steps which the Customs Co-operation Council took, thereby making the precision of definition achieved by BTN applicable to SITC and providing to countries a system offering at the same time the advantages of an internationally agreed tariff nomenclature and an internationally agreed statistical classification. A reciprocal one-to-one correspondence was thus achieved between SITC, Revised, and BTN.

In resolution 6 (XI) <sup>7/</sup> the Statistical Commission at its eleventh session recommended that, as was convenient to them, countries compiling data according to the original SITC substitute for it SITC, Revised, and that countries implementing for the first time Economic and Social Council

resolution 299 B (XI) do so, if possible, on the basis of SITC, Revised, it being understood that Member States which had based customs nomenclature on the original SITC might not wish to make the change until they would, in any case, be reviewing their customs nomenclatures.

SITC, Revised, represented a great improvement over the original SITC. Nevertheless, the increase in the volume of trade and the changes which had taken place in geographical as well as commodity patterns since 1960 had by 1968 created a demand for a further revision of SITC. Thus, in 1969, in accordance with a recommendation of the Statistical Commission, <sup>8/</sup> a group of experts was established to consider the revision.

Work started late that year and the final draft of that second revision which had been prepared by the Secretariat, based on the opinions of Governments and international organizations, was recommended for adoption by the Statistical Commission at its eighteenth session in October 1974. Finally, on 7 May 1975, the Economic and Social Council adopted resolution 1948 (LVIII) recommending SITC Revision 2 for international use. The subsequent revision of the 1972 edition of BTN to produce the Customs Co-operation Council nomenclature (CCCN) <sup>9/</sup> ensured a relationship such that there is a one-to-one correspondence between the subdivisions of the CCCN headings and the basic headings of SITC Revision 2.

However, there were a number of users who found the subdivisions of CCCN (and thus SITC Revision 2) insufficient for their needs.<sup>10/</sup> There was also an expressed need for the harmonization of economic classifications.<sup>11/</sup> Partly to satisfy these needs, the Customs Co-operation Council in May 1973 undertook responsibility for the development and completion of a harmonized commodity description and coding system (HS). The work resulted in the revision of CCCN and the expansion of its four-digit categories into HS comprising 5,016 six-digit headings <sup>12/</sup>.

At its twenty-first session, in January 1981, the Statistical Commission had taken note of the fact that a third revision of SITC would have to be made available when both the revised CCCN and HS came into force.<sup>13/</sup>

<sup>13/</sup> Official Records of the Economic and Social Council, 1981, Supplement No.2 (E/1982/12).

Accordingly, later that year, the United Nations Secretariat commenced work on the revision of SITC Revision 2, based on the principle that every effort should be made to maintain its general character and structure but taking into account the need for its harmonization with the revised CCCN, the International Standard Industrial Classification (ISIC) and a Central Product Classification which was being developed jointly by the Statistical Office of the European Communities and the United Nations Statistical Office.

Employing the headings of HS as building blocks, in consultation with experts from Governments and interested international organizations and with the assistance of expert working groups, the United Nations Statistical Office produced a third revision of SITC taking account of the need for continuity with the previous versions of SITC as well as the following considerations:

- (a) The nature of the merchandise and the materials used in its production;
- (b) The processing stage;
- (c) Market practices and the uses of the product;
- (d) The importance of the commodity in terms of world trade;
- (e) Technological changes.

The final draft was revised and approved by the Statistical Commission at its twenty-third session, in February 1985, and the following resolution was adopted by the Economic and Social Council on 28 May 1985 (resolution 1985/7):

"The Economic and Social Council,

Recalling its resolution 229 B (XI) of 12 July 1950,

Considering:

"(a) The marked improvement in the international comparability of external trade statistics which has resulted since 1976 from the implementation by Governments and international agencies of the Standard International Trade Classification (SITC), Revision 2,

"(b) The action taken by the Customs Co-operation Council to maintain the correspondence of the Customs Co-operation Council Nomenclature (CCCN) with SITC Revision 2,

"(c) The action taken by the Customs Co-operation Council to revise CCCN and divide the headings thereof into a detailed Harmonized Commodity Description and Coding System (HS),

"(d) The proposed revision of SITC Revision 2, <sup>14/</sup> as described in the report of the Secretary-General on the harmonization of international economic classifications, <sup>15/</sup> to be known as the Standard International Trade Classification, Revision 3,

"1. Recommends that Member States should report internationally data on external trade statistics according to the Standard International Trade Classification, Revision 3, as far and as soon as possible, it being understood that Member States may not wish to make the change until they would in any case be reviewing their customs nomenclature:

"2. Requests the Secretary-General:

"(a) To publish SITC Revision 3, together with commodity indexes and correlation codes between SITC Revision 3, the Harmonized Commodity Description and Coding System and the Customs Co-operation Council Nomenclature and between SITC Revision 3 and the Classification by Broad Economic Categories,<sup>16/</sup>

"(b) To continue and complete, as a matter of priority, the development of the convertibility indexes between SITC Revision 2 and the Standard Foreign Trade Classification (SFTC) used for external trade by States members of the Council for Mutual Economic Assistance, and to establish similar convertibility indexes in respect of SITC Revision 3 and the Standard Foreign Trade Classification;

"(c) To arrange that, beginning not later than with data for the full year 1988, the publication of SITC data by United Nations bodies should be, as far as possible, in the form of SITC Revision 3."

#### General purpose

This publication presents SITC Revision 3, and in respect of each basic heading provides (a) the code in respect of the corresponding heading of HS or of CCCN and (b) the corresponding SITC Revision 2 codes. As regards (a), CCCN codes are shown wherever SITC Revision 3 heading under reference encompasses all the sub-divisions of a CCCN heading. In cases where the corresponding CCCN heading also represents an HS heading, the relevant HS code is used.

Appendix I provides the HS nomenclature by section and heading reference codes together with the corresponding SITC Revision 3 codes. Thus, since the basic headings of SITC Revision 3 represent combinations of the HS headings and can be rearranged to provide the four-digit headings of CCCN, countries using for tariff purposes CCCN or HS can compile economic statistics by rearranging their customs data using the key thus provided. The unique exception refers to refined petroleum products (group 334) which is identified in HS merely as a single basic heading. In SITC Revision 3, because of the importance of these products, the relevant SITC Revision 2 headings have been retained, and so those countries may wish to include these headings in their nomenclature.

Countries basing customs nomenclature on any of the previous versions of SITC may wish to make the revision necessary to conform to SITC Revision 3. In

an attempt to facilitate such countries, the correspondence between SITC Revision 3 and SITC Revision 2, arranged in accordance with SITC Revision 2, is presented at appendix II.

### Description of SITC Revision 3

The 1,033 subgroups of SITC Revision 3 encompass all commodities of international trade. Of these, 720 are further divided into 2,805 items either to permit additional detail or to permit correspondence with CCCN and other economic classifications. Thus, there are 3,118 basic headings in SITC Revision 3. Any of these may be further subdivided, if desired for national use. The subgroups are arranged into 261 groups which are designed to distinguish those commodities in respect of which data are normally sought in international trade returns. These groups, in turn, are assembled into 67 divisions which are designed to summarize the groups according to their broader characteristics. The divisions are finally consolidated into 10 sections which serve to subdivide the trade aggregate according to broad economic categories.

For convenience in obtaining aggregates at each level by automatic data processing equipment, the code number of each commodity in SITC Revision 3 is so designed that the first digit determines the section, the first two digits determine the division, the first three digits determine the group, the first four digits determine the subgroup and, if the subgroup is divided, the five digits determine the resulting items.

Countries may code any subdivision of items they make into the sixth and subsequent positions. The classification scheme of SITC Revision 3 is presented on pages XV to XVII and the complete listing begins on page 1.

Countries may find that, for certain classes of commodities, the pattern of their trade does not justify elaborating in their statistics the full detail of SITC Revision 3. For such classes countries may wish to "contract" SITC Revision 3 by showing data only at the next higher level of SITC or in some other way consistent with the structure of SITC. Also, use may be made of the symbol "x" as a separate category to refer to totals of relevant miscellaneous categories which may not be available in the detail recommended at the country level for some reason or other. For example, "Cheese and curd" is divided into four headings at the four-digit level. If the total trade in the group were to be known, but for some reason only "processed cheese, not grated or powdered" could be identified in the statistics, the data would be shown as follows:

024	Cheese and curd	Total
024.3	Processed cheese not grated or powdered	<u>A</u>
024.x	Other cheese and curd	<u>Total - A</u>

The "x" in the last part of the code would automatically inform the user that the heading was not standard or necessarily comparable with goods identified by the same code for another country, since the commodities for which data were available could be very different. That method would also avoid the use of residual headings, such as 024.9 "Other cheese" outside of their precise definitions in SITC Revision 3.

The titles of the headings of SITC Revision 3 have been aligned with the texts of the HS or CCCN headings wherever feasible but the full text of HS is not included in this publication. The content of each heading is identical with that of the corresponding HS or CCCN heading to which it is keyed, which in turn is determined by the documentation of the Customs Co-operation Council. <sup>17/</sup> Alphabetical commodity indexes for SITC Revision 3 and HS will be prepared jointly by the Statistical Office of the United Nations and the Secretariat of the Customs Co-operation Council.

Beginning with the year 1988, the United Nations plans as far as possible to base its international compilations of trade-by-commodity statistics on SITC Revision 3. Such compilations appear regularly in the International Trade Statistics Yearbook, Commodity Trade Statistics, the Monthly Bulletin of Statistics, the World Trade Annual and its Supplement.

Nature and scope of the data to be classified according to SITC Revision 3

As is the case for the original and other editions of SITC, SITC Revision 3 is designed to classify all commodities entering external merchandise trade. The Statistical Commission has recommended that this comprise all goods which add to or subtract from the material resources of a country as a result of their movement into or out of the customs area of that country. Besides the usual commercial transactions, merchandise trade includes government trade (including foreign aid goods, war reparations and trade in military goods), the trade of foreign concessionaires and postal trade. It also includes, in respect of imports, fish landed directly from foreign fishing vessels and, in respect of exports, fish landed abroad from domestic fishing vessels. In so far as these are included in a country's statistics of external trade, entrepôt or bonded warehouse trade, re-exports, re-imports and trade in bunkers and stores with foreign ships and aircraft should be included in the analysis according to SITC Revision 3. Goods passing through the country for purposes of transport only are excluded.<sup>18/</sup>

Since their movement affects monetary rather than material resources, monetary gold together with currency and titles of ownership after their issue into circulation are excluded from the statistics (but all kinds of silver, except silver coin after its issue, are included). For the convenience of countries in respect of which the practice is to provide, in a single report, data on their merchandise trade on the one hand and their transactions in monetary gold and current coin on the other hand, the following classification is suggested, and its correspondence with ES is shown.

	<u>HS</u>
I. Gold, monetary	7108.20
II. Gold coin and current coin ;	7118.90

### Supplemental classifications

Many types of subsidiary classifications for rearranging trade data for analysis are possible, each of them serving a specific purpose. The headings of SITC Revision 2 have been rearranged into the broad economic categories of the Classification by Broad Economic Categories (BEC) such as primary and processed food and beverages, primary and processed industrial supplies, fuels and lubricants, machinery and other capital equipment and parts and accessories thereof, transport equipment and its parts and accessories, and consumer goods, thereby facilitating economic analysis by end use of external trade statistics. BEC aligned with SITC Revision 3 will be published in the near future.
