Commission on Population and Development

Fifty-fourth session

19–23 April 2021

Population, food security, nutrition and
sustainable development

Statement submitted by WOOMB International, a non-governmental organization in special consultative status with the Economic and Social Council¹

The Secretary-General has received the following statement, which is being circulated in accordance with paragraphs 36 and 37 of Economic and Social Council resolution 1996/31.

¹ The present statement is issued without formal editing.

Statement

The issues surrounding the political climate of population in developing countries often dictate their inability to increase the level of sustainable development within their borders, and that may have external repercussions on their neighbors. Economic non-proliferation and socio-coercive conditions also impact these countries. Multifaceted strategies are required to address the elements of poverty which inhibit the growth of a society in order for it to achieve independent stability and health.

WOOMB International renders this assistance to individual women and girls throughout developing countries by elevating their knowledge of their own fertility through ecological family planning with the Billings Ovulation Method® of Natural Fertility Regulation. Natural health, prevention of disease and unwanted pregnancies, are achieved through its continuous realization and implementation, as are the independent pursuits of higher education and sustainable employment.

The Billings Ovulation Method® is easily learned by women of varying climates and cultures and is adaptable to most environments. It is refined in its simplicity and ease-of-use. It is the perfect companion to regional stability and human mobilization, as it does not require any apparatus nor incur any side effects. Women fortify their resolve to live a more complete and comprehensive life, allowing them to plan and space their children in all circumstances.

The food security of several countries within a region may be adversely affected by the extreme poverty of one country. Concerted efforts to eliminate the scourge of poverty challenge sustainable countries to assist in the elevation of unstable poverty-stricken environments through which comprehensive strategies encompass the dialogue of mutual shared responsibility in technologies between these neighbouring governments and the implementation of cohesive development, encouraging opportunities of economic and social growth within each of the countries of that region.

Similarly, the strengths of self-reliance and communal partnerships are consistently realized by the women who employ ecological family planning with the Billings Ovulation Method®, providing them the ability to seek economic and social independence. Comprehensive fertility education allows women to make sexual choices based on their current needs and livelihoods. These strategies contribute to the economic stability and physical health of women and girls which empower them to diminish the machinations of poverty and aim for its elimination within their own lives and their community.

Recognizing that the ability to provide and engage in healthy nutrition is impeded by extreme poverty, a collective response from countries which exhibit the pillars of sustainability is required in order to render supportive assistance to those that are struggling. In doing so, a geographical precedent is established which can enable the struggling countries to gain much needed economic independence and develop their own socio-economic infrastructures on their path to sustainability. In a similar context, the Billings Ovulation Method® contributes to the sexual health, well-being, and fertility needs of all women and girls, by providing them with comprehensive fertility education in ecological family planning. Accordingly, women and girls are supported through its implementation and gain their own independence in that regard.

WOOMB International assists women in the knowledge of their fertility by providing them with comprehensive universal strategies for regulating pregnancies through the implementation of the Billings Ovulation Method®. Our organization

administers the correct instruction and distribution of the authentic Billings Ovulation Method® wherever it is taught and assists in providing natural regulatory birth strategies through international affiliates within 50 developed and evolving countries. These affiliates have served millions of women worldwide and our strategies have proven to be effective, reliable and safe.

Comprehensive strategies advance the prospective results of sustainable development and the outcomes of their given parameters. The Billings Ovulation Method® of Natural Fertility Regulation provides necessary strategies to meet the needs of women and girls whose challenges cause them to confront the reality of inexplicable hardships in many venues. WOOMB International, through the knowledge of the Billings Ovulation Method, improves the lives of women and girls by encouraging the development of microcosmic community initiatives which support them.

The empowerment of women to retain control of their reproductive and sexual powers, in all conditions and circumstances, safeguards their sexual ownership with responsible childbearing through the Billings Ovulation Method®. When women learn to recognize the physiological characteristics associated with their fertility, mastery of their sexuality develops into independent freedom. This empowerment ensures continued success for harmonious strategic outcomes in all countries while addressing population, food security, nutrition and sustainable development.
