# THE TERRITORY OF NEW GUINEA.

# ANNUAL REPORT 1952-53.

# PART I.—INTRODUCTORY DESCRIPTIVE SECTION.

GENERAL DESCRIPTION OF THE TERRITORY.

Area and Location.

The Trust Territory of New Guinea extends north to south from the Equator to 8 degrees South Latitude a distance of 400 nautical miles; and west to east from 141 degrees East Longitude (its boundary with Dutch New Guinea) to 160 degrees East Longitude, a distance of 1,000 nautical miles. The land area of the Territory covers some 93,000 square miles and includes that part of the island of New Guinea north of the Papuan and west of the Dutch New Guinea borders, the islands of the Bismark Archipelago, of which New Britain, New Ireland and Manus are the largest, and the two northern-most islands of the Solomon Group, namely Buka and Bougainville.

# Topography.

New Guinea Mainland.—Within the island of New Guinea the central core of this zone is a massive cordillera which extends from one end of the island to the other, a distance of 1,500 miles. This cordillera is one of the great mountain systems of the world, reaching in several places a height of 15,000 feet. It represents the eastern extremity of the great arc of fold mountains which extend through the Himalayas and Malaya into the Pacific.

In the Trust Territory the highest peak is Mount Wilhelm, 15,400 feet in the Bismarck Range. Despite the fact that the Main Ranges extend throughout the length of the island and form a complete divide between north and south flowing drainage, they do not consist of a single chain but form a complex system of ranges, separated in many cases by broad upland valleys. The principal units of this system in eastern New Guinea are the Star Mountains (extending across the Dutch New Guinea border), the Hindenburg, Muller, Kubor, Schrader and Bismarck Ranges. Each of these reaches an altitude of 10,000 feet or more and each has an individual character which is largely in accordance with its geological structure. The width of the Main Range is not uniform but varies from 50 miles at its narrowest part to 150 miles at its widest. An appreciable part of these highlands appears to be in an initial stage of an erosion cycle and has not yet been greatly dissected. Marginal to the highlands dissection has been proceeding apace and has resulted in intensely rugged juvenile topography.

There is, however, a large number of wide grass-covered valleys in the Main Ranges, many of these appear fertile, have a healthy climate and are possibly suitable for European settlement.

Running parallel to the Main Ranges but separated from them by the Central Depression are the Northern Mountains. The Central Depression is a great trough of structural origin which includes the valleys of the Sepik and Ramu rivers which drain in opposite directions to enter the sea close to each other between Hansa Bay and Wewak, and the Markham Valley, which drains into the Huon Gulf near Lae. The ranges which constitute the Northern Mountains, running east from the Dutch New Guinea border, are as follows: the Bewani, Torricelli and Prince Alexander mountains (north of the Sepik River) and the Adelbert, Finisterre and Sarawaged mountains (between the mouth of the Ramu River and Huon Gulf). The mountains north of the Sepik do not exceed 5,000 feet in height, but in the Finisterre and Sarawaged ranges of the Huon Peninsula some peaks exceed 13,000 feet. These latter ranges are particularly rugged, and include numbers of near vertical precipices several thousands of feet in depth.

The coastal areas of eastern New Guinea show the features indicative of a slowly rising littoral. One of the most significant features is that with few exceptions the rivers are not navigable. Another feature is the raised reefs which extend almost continuously from the Sepik Delta south-easterly to Cape Cretin. The Morobe coast between Salamana and Morobe is a drowned littoral, and there is a complete absence of the raised coral from the mouth of the Markham River to the Papuan border and beyond. A notable feature of the north coast is the belt of off-shore volcanic islands, which stretches from Wewak to Dampier Strait (west of New Britain).

New Britain—is the largest of the islands of the Bismarck Archipelago. There are two main lines of ranges in the island—the Whiteman and Nakanai Ranges in the south which trend from south-west to north-east, and the Baining Mountains of the Gazelle Peninsula, trending north-west and south-east. The low relief of the north coast is broken by a large number of sharp volcanic peaks which in some cases reach 7,000 feet in height. These volcanoes are mostly of the explosive type and eatastrophic eruptions have

occurred in recent times. At the western end of New Britain is a claster of volcanic mountains containing several peaks over 3,000 feet in height, another group of volcanous occur further east in the Kimble Bay and Open Bay areas, and an area of very recent volcanism on the Gazelle Peninsula in the vicinity of Rabaul. All of New Britain not of a mountainous nature may be classified as shore-line, coastal plains or swamps. The coastal plain is approximately 1,000 miles in length, fringing and barrier coral reefs, although not continuous, are extensively developed around most of the coastline.

New Ireland—which is nearly 200 miles long, averages only 7 miles in width except in the south, where it expands to 50 miles. It is exceedingly mountainous with the Schleinitz mountains (in the northern part of the island) atteining 4.100 feet, and the Ros el mouarains (in the south) reaching 6,430 feet. To the south-cast of the former is the extensive Lelet Photeau with a mean height of 2,600 feet. To the west of this plateau is an almost continuous fringe of extensive alluvial plain.

The coasts of New Ireland are relatively straight and expeard, and afford little shelter. They have been subject to recent elevation and there has been an extensive development of raised coral reefs.

Manus Island—is about 50 miles long from west to east, and its greatest width is about 17 miles. The island is largely hilly and deeply dissected. Along the coast steep slopes alternate with swamy lowland embayments, there being no continuous coastal plain. Practically the whole of Manus is fringed by coral reefs.

The Solomon Islands—Bougainville is the largest island in the Solomons being about 127 miles in length with a maximum width of about 49 miles. The interior of the island contains a massive mountain range which follows its length and which is known as the Emperor Range in the north and the Crown Prince Range in the south. It contains the two active volcances of Balbi (8,502 feet) and Bagana (5,730 feet). Shoals and fringing coral reefs are common off the coasts of the island.

Buka Island just north of Bougainville is 35 miles long by 9 miles wide. A range of volcanic hills follows the west coast and reaches a maximum height of about 1,300 feet. Parallel to this and fronting the east coast is a lower range of hills formed of coral limestone, terraced on their seaward slopes. The east and north coasts are steep and are backed by wooded cliffs. The west and south coasts are protected by a barrier reef from 2-3 miles off shore, on which is situated a chain of 20 or more small corat islets.

There are some 600 lesser islands within the Trust Territory mainly of volcanic origin or coralline formation.

#### Drainage.

The heavy rainfall of New Guinea, New Britain, New Ireland and Bongainville, coupled with the large area of steep slopes with rapid run off, have been responsible for a large number of rivers with a very large volume of flow. With one exception, the Sepik (which is navigable for a distance of 300 miles from its mouth by vessels drawing 13 feet), the rivers are not navigable except by causes or small launches in the lower reaches. Mountain streams are found extensively throughout the Territory, in fact they are frequently a hindrance to travel, as they carry a hage volume of water, especially after heavy rains, and a large proportion of them cannot be crossed except by bridge.

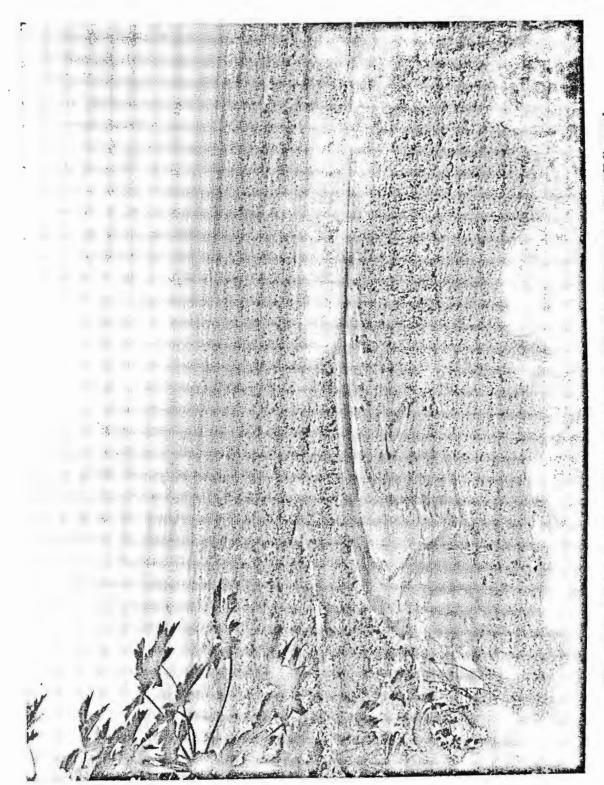

Swamps are amongst the most extensive features of the terrain. Tidal swamps occur where the land is regularly submerged at high tide. They are almost entirely mangrove swamps and occur intermittently round the coasts. Riverine swamps are to be found in the Sepik basin while grass and reed marshes are most extensive in the mid-Sepik and mid-Ramm areas, where the low-lying terrain is almost continously under water.

There is a number of small lakes in the Territory, but none is of any physiographic or economic importance.

# Climate.

Lying wholly within the tropies and situated as it is between the continents of Asia and Australia, the Territory of New Guinea experiences a typical monsoonal climate. The monsoonal régime divides the year into two principal wind seasons which are distinguished primarily by difference in wind direction. The north-west monsoon season during which the winds blow from a north-west or westerly direction extends from December to March, and the south-east monsoon (Trades) season when the winds blow from the south-east or east extends from May to October. The seasons are separated from each other by "change over" or transitional periods during which the wind changes its direction. These periods occur either in April or May and either in October or November. As is characteristic of all monsoonal regions, the time and intensity of the wind varies from year to year.

The North-west Monsoon, and the South-east Trades, pass over large expanses of ocean before reaching the islands of the Territory, both are thus heavily laden with moisture; the precipitation of this moisture over the islands results in heavy rainfalls throughout the area and most places in the Territory have an average annual rainfall in excess of 100 inches. The highest figures are recorded on coasts and mountain sides exposed to the steady South-east Trades, Southern New Britain and the higher mountains

(To face page 10.) F,689.

of the Huon Peninsula receive an average of 250 inches of rainfall or more per annum. Wide valleys parallel to the east coast such as the Middle and Upper Ramu Valleys, and enclosed valleys in the highland regions such as the Bulolo Valley where the average annual rainfall is 56 inches, lie in "rain shadow" zones and have a very low rainfall.

Some areas in the Territory have a more or less uniform rainfall throughout the year, but most places have a definite seasonal distribution of rainfall, receiving the greater perceutage of their rainfall in one or other of the two main wind seasons. This seasonal distribution of rain is the resultant effect of topography on the rain bearing winds. The island of New Britain illustrates this effect perfectly—the median mountainous backbone of the island lies athwart the direction of the seasonal winds, on the north coast of the island a seasonal concentration of rainfall occurs in the North-west Monsoon season, at the same period the south coast is relatively dry, the central mountains form an effective barrier, and places the latter area in a "rain shadow". In the South-east Trades season concentration of rainfall occurs on the southern coast whilst the protected northern coast remains dry.

Within the Territory the length of day varies very slightly throughout the year, there being only a half hour difference between the extreme limits of sunrise and sunset. The sun daily ascends almost perpendicularly with the horizon so that dawn and twilight are of short duration and there is little change in the sun's position at noon.

Atmospheric temperature and humidity are uniformly high throughout the year. Summer and winter seasons as experienced in the temperate latitudes do not exist, the annual range of temperature rarely exceeds 90 degrees Fahrenheit and the mean minimum rarely falls below 70 degrees Fahrenheit. A relatively large diurnal temperature range of from 10-15 degrees Fahrenheit is experienced in most localities. There is a general lowering of temperatures with increase in elevation, highland areas being cooler than the coastal regions.

# Natural Resources.

Soils.—Very little is known about the soils of the Territory. No detailed surveys of large areas have been made, and reconnaissance surveys have been of superficial nature.

A basic factor to be considered in regard to the soils is the relatively small area suitable for agricultural development. The greater part of the inland mountainous country of the islands is covered with shallow or heavily leached and infertile soils. Notable exceptions are to be found in the broad valleys such as the Ramu. Markham and Bulolo valleys, and an appreciable part of the plateau regions of the Central Mountains including areas in the vicinity of Mount Hagen, Aiyura and Chimbu where either rich alluvial soils or soils of volcanic origin occur.

The soils of the coastal areas are of varying fertility ranging from shallow relatively infertile soils formed from decomposed earal, to extremely fertile deep alluvial and volcanic soils. From the data available it appears that the greatest possibilities for agricultural development are on the latter two groups of soils. There are appreciable areas of volcanic soils in northern New Britain, especially in the Rabaul area, where most of the commercial agricultural development of the island is centred, extensive areas of volcanic soils also occur in the higher parts of Bougainville. As a general rule the soils of greatest fertility are those where volcanic activity has been recent, as soil matures it tends to depreciate as the result of intense leaching. As in the case of volcanic soils the better alluvial soils are of recent origin. Alluvial soils are wide-spread in occurrence in the Territory. The largest areas are on the coastal plains and in the broad river valleys. They are found not only on the lower parts of the valley floors, but are frequently well developed on the adjoining slopes.

Minerals.—A large number of different minerals have been discovered in the Territory including gold, platinum, osmiridium, silver, lead, sulphur, low-grade coal and various gemstones. Of these, gold is the only one which has assumed any economic importance, and the gold won from the Morobe district has become one of the chief exports of the Territory. Favorable geological conditions have lead to a search for oil in the Sepik district of the Territory, but as yet no payable quantities have been found.

Vegetation and Timber Resources.—The vegetation of the Territory is luxuriant and has a great wealth of plant species; and although there are large areas in which the whole aspect of the vegetation has been transformed by human activities, by far the greater part of the area still bears natural vegetation little affected by man. Since much of the Territory is still botanically unexplored, the vegetation is incompletely known, although thousands of species have already been identified. The flora of the Territory has much in common with that of northern Australia, but because of the large proportion of Asiatic settlements, New Guinea is reckoned botanically as part of the Indian-Malayan region.

With the exception of low rainfall areas the major part of the Territory below 6,000 feet is covered by "rain forest". This type of forest is characterized by a thick overhead canopy of leaves, branches and creepers which cut off the sunlight and inhibits the growth of smaller bushes on the ground. Except for a few very high isolated trees the ceiling is dense and of fairly uniform height. A feature is the buttressed roots of many of the trees, often radiating several yards from the butt.

Secondary growth consisting of thick tangled growths of bush, brambles and creeper are found throughout the rain forest areas, usually in the vicinity of native villages, or where the land has been previously cleared for native gardens. It generally occurs in small isolated patches.

At altitudes of about 6,000 feet the "rain forest" usually gives way to "moss forest", which persists to the edge of the alpine vegetation at about 11,000 feet. The trees of the "moss forest" are lichen covered and festooned. The ground is carpeted with a layer of moss and decayed vegetation many feet thick.

In the zone of alpine vegetation the trees are stunted conifers and constitute what is known as "alpine forest". The timber is rarely continuous, but grows in stands separated by stretches of grassland over which tree ferns and shrubs are scattered. Trees are rarely found above 12,000 feet, and grassland is dominant.

A number of areas in various parts of the Territory are completely covered by tall grasses, of which kunai and kangaroo grass are dominant. Very extensive areas of these grasslands occur in the Waria, Markham, Ramu and Sepik valleys, and in the highlands. It is possible that some of these areas are natural grasslands, but in most cases there is little doubt that they have been caused by fires or native clearing.

In the swamp lands a large variety of plants grow. "Mangrove" is to be found between the limits of tides and is found on most flat areas along the coast, and also along rivers. In New Guinea the delta of the Ramu River is covered with this type of vegetation. "Nipa" palm is often associated with mangrove and patches of it are to be found in the less salty parts of the mangrove swamps and in the less salty parts of the large rivers. In general, the "Mangrove" occurs nearest the sea and the "Nipa" behind it, extending to the limits of the brackish water. "Sac Sac" or "Sago" palms grow generally in swamps beyond the limits of brackish water, and numerous areas are to be found along the Sepik and Ramu Rivers. "Pit Pit", which grows to a height of about 12 feet and resembles wild sugar cane, is also to he found in swampy low-lying country usually lining stream banks, but does not cover extensive areas.

Within the forests of the Territory there are several timbers which have economic possibilities, they are mainly soft woods, there being an unfortunate lack of durable hardwoods, although a limited number of such timbers do exist. To date the timber resources have been hardly touched, inaccessibility, lack of transport, costs and the absence of large stands of any one species of timber have been the main deterrents to the development of a large-scale timber industry. However, it is possible that the near future will see a much greater exploitation of the Territory's timber wealth.

Fauna.—The fauna of the Territory of New Guinea is closely related to that of Australia. In spite of this close association with Australian fauna, the long isolation of the New Guinea group of islands has had a great influence, and some types and forms which succumbed in the continent have survived in the islands.

There are over a hundred species of mammals, and with the exception of the echidna or spiny ant-eater, they are all marsupials. The largest of these is the "tree kangaroo". The phalanger family is represented by several species, of which the "cuscus" and "red bandicoot" are representatives. There is only one carniverous animal in New Guinea, the "dasyure", known in Australia as the native cat. Bats, rats and mice are common.

The birds of New Guinea include a number of handsome and brightly coloured forms. Most are of Australian origin, but many have come from the Malayan region. The "Bird of Paradise" and the "Cassowary" have arisen locally. There is an abundance of cockatoos, parrots and lories, pigeons, kingfishers, honey-suckers, thrusbes, warblers and shrikes.

There are about 70 species of snakes, many of which are poisonous. These include boas and pythons. There are no vipers. Lizards are common and many species are represented. Tortoises and crocodiles are found in the rivers and sea.

Eighty species of amphibia exist, all of which belong to one or the other of five families of frogs; many of them are arboreal.

Insects are prolific, most places are alive with ants, cockroaches, flies, sandflies, mosquitoes and many other types. Although a number of these are dangerous, the most harmful to humans are the malarial-carrying mosquito and the typhus-bearing mite; and to plants certain species of borers and coconut hoppers; both these pests have caused concern to coconut growers. Butterflies are numerous, large and often beautifully coloured.

Discussion of the fauna of the Territory would be incomplete without some mention of the "giant snail", which was introduced by the Japanese as a food during the war. Work is being carried out to control the spread of this potential serious pest, which has caused much damage to native gardens in areas of New Ireland, New Britain and the mainland.

# Ethnic, Linguistic, Religious and Social Structure.

Population.—The total indigenous population of the Territory is estimated at 1,143,564 while the non-indigenous population numbers 11,064. The details as at 30th June, 1953, were as follows:—

Indigenous-								
Enumerated						• •	• •	967,788
Estimated			• •	••		• •	• •	175,826
Total			• •			• •		1,143,564
Non-Indigenous-	-							
Europoan								8,406
Chinese	• •	• •					• •	2,078
Others	• •	• •	• •	• •	• •	• •	• •	580
Total			••	• •		••	• •	11,064

A census of the indigenous population was in progress at the 30th June, 1953, and will be continued on all administrative patrols until completed. Details of the population are given in Appendix I. The estimated population figures, where smaller than previous years totals are shown, as a rule refer to areas where a census has been recorded, but the degree of contact with the people has not been such as to assure a complete record having been made. Isolated family groups, and probably hamlets, may not have been included in such figures. The estimate is usually made on a basis of what information can be obtained from the people contacted and from observation of the sizes of houses and garden areas.

Children are classified as those not exceeding the apparent age of thirteen years.

Compulsory registration of births and deaths is confined to the non-indigenous inhabitants of the Territory. It is proposed that a census of the non-indigenous population be taken in June, 1954.

The Native Village Councils Ordinance 1949 (section 12(1)(j)), provides that a Native Village Council may make rules providing that the birth or death of any indigenous person within the Council area be reported to the Council or to such person as it directs. At 30th June, 1953, this procedure had operated only in the Rabaul Native Village Council area but other village councils are being encouraged to adopt the same practice.

Ethnic Structure.—There is a great diversity of physical types and linguistic groups of indigenous people in the Territory and there are many differences between local groups and between individuals within those groups.

In general, however, the indigenous people may be grouped under five headings: Papuans, Papua-Melancsians, Negritos, Micronesians, Polynesians. These classifications are not clearly defined, being based partly on linguistic, and partly on racial characteristics.

The majority of the people usually have been classified among the predominantly dark-skinned, woolly-haired Melanesians who occupy the greater part of the Western Pacific. A distinction has been made between what has been called the Papuan type and the Melanesian type. This is based on differences in stature, hair-texture, nose-form and other characteristics. It has been related, at times, also to the division between the Melanesian languages and those non-Melanesian languages sometimes known as "Papuan". The distinction based on physical types has not the clarity of the linguistic division and, because of the extent of overlapping and the number of variations between and within groups, is useful only from the most general point of view. In this general way, it may be said that the Papuan type comprises those aborigines or pre-migratory inhabitants who have retained their original language as distinct from those who have fused their language with other groups. The Papuan may be taken as representative of such western parts as the Sepik and the Highlands Districts of the New Guinea mainland, while the Melanesian is more representative of some coastal parts of the mainland and of the island districts of New Ireland, New Britain, Manus and Bougainville.

Papuo-Melanesions are not of a single race and differ widely amongst themselves in such physical characteristics as colour of skin, texture of hair and features. As a whole they are identified by their language which is a fusion of the Papuan and Austronesian tongues, the latter being introduced to the New Guinea mainland by one of the early migratory movements. It has been estimated that Papuo-Melanesians comprise roughly two-thirds of the indigenous peoples of the Territory.

A few Negrito groups, such as those of the Aiome area of the Eastern Highlands District, have been noted. These are quite distinctive in stature, men of one group ranging from 4 ft. 4½ in. to 4 ft. 9 in. in height, while average heights for Melanesians have been given as 5 ft. 1½ in. to 5 ft. 3 in. Apart from stature, these groups do not appear to show any greater differences from their neighbours than those to be observed between the Territory's groups in general, and the opinion has been expressed that they may have developed locally and may not indicate sources of origin different from those of the Territory's other inhabitants, being a strong muscular type with dark sooty brown skin and frizzy almost black hair.

In the north-west islands of the Manus group are small groups of people who bear a physical resemblance to the inhabitants of the Caroline Islands and the area commonly known as Micronesia. These people have been classified as Micronesian. It has been suggested that they are of Caucasian origin and those of the Territory of New Guinea display signs of considerable admixture of types such as Melanesians and Malays.

The Polynesian groups are few in number and are confined to the Tanu and Nukumanu Islands and other small adjacent atolls. They bear the well-known physical characteristics of the Polynesian type, even to the one persistent feature, namely, the small smudge observed at the base of the spine of infants.

Linguistic.—Linguistically the picture is varied, and so great is the diversity that members of villages only a few miles apart are sometimes unable to understand one another without the aid of an interpreter. In coastal areas, language groups exceeding 5,000 are unusual and a great many are well below that figure. In the interior of the New Guinea mainland, larger groups have been found, the Medlpa language of the Mount Hagen Sub-District, for example, extending over a group of approximately 25,000 people, while in Chimbu Sub-District a research survey indicated that Kuman is spoken or understood in some form by approximately 40,000 people. However, it has been possible to recognize three main linguistic groups: Papuo-Melanesian speakers, Papuan speakers and Melanesian pidgin speakers.

The Papuo-Melanesian speakers include those language groups which belong to the Austronesian family. The great majority of the Austronesian languages are Melanesian, the few exceptions being seen in the Polynesian languages of islands like Nukumanu, and in Micronesian influences noticed in some of the small language groups of Manus District. There is a good deal of diversity among these Melanesian languages and some of them exhibit non-Austronesian characteristics.

So far as is known, there are 53 Melanesian languages in New Guinea.

Generally speaking, Melanesian languages are found mainly in Manus District, the Bismark Archipelago. New Britain District, Bougainville District and coastal areas of the New Guinea mainland, frequently appearing side by side with non-Austronesian languages. On the mainland they do not extend far inland and are not found at all in the Highlands.

The non-Austronesian languages, which are found in large areas of the Territory, have sometimes been grouped together as "Papuan". They do not, however, appear to form a group, though certain structural resemblances between some of them have been noted in various places. Nor does the term "Melanesian" or "Papuan", as it might be applied, in the sphere of language to any local group of people, necessarily apply to that group in the sense in which it has been used in physical classification.

The number of Papuan languages is probably greater than the Melanesian.

With the exception of Manus District, non-Austronesian languages have been noted in every district of the Territory. In the New Ireland and New Britain Districts they are, however, rare.

The Negrito people who inhabit the central ranges and valleys speak languages which are not Melanesian but may possibly be classed as Papuan.

Melanesian-pidgin has become the *lingua-franca* for the whole of the Trust Territory. The vocabulary includes a large number of words of English derivation, some Melanesian terms from Blaache Bay, New Britain, and a few German, Malay and Polynesian terms.

Social.—The social systems vary considerably in detail throughout the Territory, but in outline they conform to a pattern usual in the Western Pacific region of Melanesia, and can be said to be based upon the family,

Generally the basis of subsistence is shifting cultivation of such crops as yams, thro and sweet potatoes, though in a number of places the cultivation of gardens is subordinate to the collection of such a foodstuff as sago. All four of these foodstuffs, as well as various subsidiaries, may be used in the one area, but usually one of the four is the staple of any particular group and makes up the bulk of its diet. Domestic pigs are kept, and are numerous in some areas, though they are regarded as a token of wealth and prestige and reserved for feasts and special occasions, rather than a source of daily food. In coastal areas the indigenous people fish and everywhere some form of hunting adds to the variety of the diet, although the quantity of meat thus obtained is small.

The division of labour between the sexes involves the extension of women's work beyond the sphere of domestic duties within the home. A large part of the maintenance of gardens and the tending of food crops is performed by women. The initial clearing of garden sites and such heavy work as the fencing of gardens is done by men, but planting of crops, maintenance and harvesting, is the work of both sexes, with variations from place to place in the extent of either's duties.

Articles of importance in trade systems may be made by either men or women. Clay pots, for instance, which in various places are exchanged for food or other objects, are made by women in many areas.

Features of the indigenous system of work are the small development of specialization and the high degree to which each individual is equipped to carry out all the duties considered suitable for his or her sex. A few practices, particularly in the spheres of art and magic, may be confined to small numbers of people or to individuals within some communities, while some individuals are naturally more highly skilled than their fellows in particular aspects; but, apart from the sexual division, all individuals perform the same type of work and are capable of practising most of the skills possessed by their communities. A man's importance or standing as a leader in a community does not remove him from the field of activities involved in such things as the cultivition of crops, house-building and canoe-making.

Inheritance of land and other forms of property follow two systems. In some communities, the predominant principle is that the individual inherits from the father and his group; in others, inheritance is predominantly from the mother's group. Affiliation with kinship groups shows the same variation.

The people of the Territory live in villages usually having populations of 200-300, though some are larger; in hamlets of about 20-40 people; or sometimes in single dwellings. Houses, except in places close to centres of European settlements, are built of local timbers, grasses and paim leaves. They show many differences in size, design and methods of construction. Usually, they are occupied by the individual family of parents and children, though it is customary in some places for men to sleep and spend a large part of their time in special "men's houses". Particularly is this so in the case of young unmarried men.

The people's sense of community fellowship rarely extends beyond the village or collection of neighbouring hamlets. Within the larger groupings made up of those speaking the same language, there is usually no strong or widespread feeling for common interests and aims, though there is a consciousness of difference from other groups speaking a different language.

In the political organization of local groups, the most general principle is that all men have some influence and that all have the opportunity of rising to leadership by exhibiting qualities considered desirable according to the cultural emphasis of the group. Energy in the acquisition of wealth in the form of garden produce, ceremonial and other objects, counts for much in the majority of communities, while in earlier days leadership in war was also an important factor. General personality and outstanding knowledge of a group's customs and skills are of influence. In a few places, inheritance of rank is taken into account. In other places, reputation as a practitioner of various forms of magic can help to raise a man to leadership.

Each group has its own customary law, much of which is backed by the authority of myth and legend. Breaches of such law sometimes are dealt with by community or individual action; at other times, consequences arising from the operation of supernatural forces are expected to follow.

Communities in the Territory have always been strongly influenced by religion and by belief in magic. In religion belief in a supreme or limited number of deities has not been observed the emphasis having been to respect and attempt to please and propitiate a number of spiritual beings some remembered ancestors, some existing from the remote past. At times, these spiritual beings are given material location in certain natural objects.

Beliefs in the efficacy of attempts, directly to influence events by the use of charms, actions, and the recital of spells, may be divided into two main groups—those of social and those of anti-social magic. In the first, comes such magic as is, for example, directed towards ensuring the well-being of garden crops, the assurance of a proper supply of rain and the success of trading expeditions. The second activities of magic aimed at bringing death and disaster to enemies, and a belief in the efficacy of these has been the cause of some trouble in the past between individuals and groups. Skill and power in magic are often thought to be the possession of particular individuals whose qualities are utilized by their fellows in both the social and the anti-social spheres. This is probably the most notable example of specialization to be observed among the Territory's communities.

The practice of artistic skill is usually connected with religion, magic, ceremonial or the marking of affiliation with kinship or other groupings, and in most cases is not undertaken for its own sake. Where belief in the importance of indigenous elements of this nature has been reduced by contact with outside influences, interest in the practice of indignous arts connected with such things as the decoration of ceremonial structures and their contents and the creation of objects for wearing on ceremonial occasions or for ceremonial exchange has naturally tended to diminish. The maintenance of interest in art forms, which have often been considered to have considerable value, has become something of a problem, and emphasis has accordingly been placed, in schools, on handieraft work.

Extensive trade systems existed in many areas in the past, and some of these remain. Examples are to be seen in the Huon Gulf and Markham River areas of Morobe District; in the Mount Hagen area of the Western Highlands District; in Manus District and in New Britain District. Various artifacts, including pottery, stone axes, wood-carvings and shell-work, some utilitarian, some possessing ceremonial or religious significance, are exchanged between communities for other objects or for foodstuffs. In some cases, European money has now entered into old trade systems.

Most aspects of indigenous life have been increasingly influenced by external influences since the period of first European contact. There have, however, been no significant changes in the physical types of the various areas, as there has been little intermixing between groups.

The movement of the indigenous population does not present economic or social problems to the Administration as, with the exception of labourers proceeding to and from their places of employment, the indigenous inhabitants rarely travel outside their lingual houndaries, except for the purpose of trade. The Administrator has the power to restrict or prohibit employment of indigenous people from specific areas to prevent over-recruitment.

In the sphere of language, Melanesian Pidgin is still used as a lingua franca by a very large number of individuals, not only those brought together by employment but also in other places. In some cases, this medium is used in formal education but the policy is to eventually make all the people literate in English. Despite the imperfections of Melanesian Pidgin, the value of its use as a lingua franca until the people become literate in English is obvious, and it has also played an important part in breaking down the isolation of the language groups.

Social systems have been affected by organized activities, in general administration, in education and in Mission evangelization as well as by experiences in employment outside the individual's local group and by other contacts. However, shifting agriculture, supplemented by fishing, hunting and collecting, remains the main basis of livelihood in the majority of communities. The use of metal tools and other articles has entered into work in many areas, but there is wide adherence to old techniques and methods.

The introduction of European money into the various communities has, to some extent, modified the influence of older forms of wealth on which leadership was often based. The disappearance of warfare and some diminution in the helief in the efficacy of magic have also had an effect on the basis of leadership and, consequently on local political conditions. Customary law has been affected by these factors in many areas.

Though these and other modifications of old ways of life may be noted, the Territory remains an area of very great diversity linguistically and socially. Furthermore, it remains one in which concentration of loyalty on village or hamlet groups tends to obscure any conception on the people's part of a community of interests on a Territory-wide scale.

### Historical Survey.

Geographical characteristics often play an important part in shaping a country's history and nowhere is this more evident than in New Guinea. Europeans who first entered the area in the 16th Century were discouraged by its rough topography and its swamps and left New Guinea well alone. Moreover, these factors have also influenced the type and course of administration. New Guinea's isolation came to an end in the last quarter of the 19th Century at the same time as the unknown parts of Africa were being opened up. Although some of the basic reasons underlying this activity in Africa are also applicable to New Guinea, there were a number of special local factors which operated in New Guinea to end its isolation. In the first place the need of European industries for coconut oil provided for the first time a market for one of New Guinea's natural products. In the 1870's the largest trading firm in the Pacific, Godeffroy's, of Hamburg, began trading for copra in the New Guinea Islands. In 1884 Germany formally took possession of what is now the Trust Territory of New Guinea. The administration of the new Territory then known as German New Guinea was placed in the hands of a chartered company, the German New Guinea Company, but by 1899 it felt that the burden of administration was too heavy and the Imperial Government assumed control. In 1914 the colony was occupied by Australian troops and administration was carried out by a military administration until 1921.

In 1920, the League of Nations, in pursuance of Article 22 of the Covenant, conferred upon His Britanuic Majesty, for and on behalf of the Government of the Commonwealth of Australia, a Mandata for the Government of the Territory of New Guinea. The Now Guinea Act 1920, was passed by the Commonwealth Government to provide for the Government of the Territory in accordance with Article 22, the Act coming into force on 9th May, 1921.

The Territory continued to be administered under Mandate until the Japanese invasion brought about the suspension of civil administration and large areas of the Territory were devastated. The Australian New Guinea Administrative Unit, the organ of military Government, carried out native administration and as far as circumstances permitted, kept plantations in production. The indigenous people made a valuable contribution to the Allied war effort.

With the surrender of the Japanese in 1945, civil administration of the Territory was progressively restored between October, 1945, and June, 1946.

The Trusteeship Agreement for the Territory was approved by the General Assembly of the United Nations on the 13th December, 1946.

The Papua and New Guinea Act 1949-1950, approved the placing of New Guinea under the International Trusteeship system and provided for the government of the Territory in an administrative union with the Territory of Papua, with the title of the Territory of Papua and New Guinea.

This Act also provided for the setting up of a Legislative Council for the Territory of Papua and New Guinea, which was established at Port Moresby, Papua, on the 26th November, 1951, being inaugurated by His Excellency, the Administrator of the Government of the Commonwealth of Australia, General Sir John Northcott, K.C.M.G., C.B., M.V.O.

At the end of the War the Territory set itself the task of recovery and rehabilitation which was greatly assisted by large grants by the Commonwealth Government and war damage compensation payments to both Europeans and natives.

The work of bringing the remaining restricted area under control has continued and medical, educational, agricultural and developmental services have been expanded.

Two Delegations of the Parliament of the Commonwealth of Australia comprising the following Senators and Members visited the Territory during the year under review:—

Senator A. M. Benn.

Senator A. M. McMullin.

Senator E. B. Maher.

Senator J. M. Shechan.

Mr. C. W. Davidson, O.B.E., M.P.

Mr. H. G. Pearce, M.P.

Mr. D. McLeod, M.P.

Mr. C. E. Griffiths, M.P.

Mr. F. J. Davis, M.P.

Mr. H. S. Robertson, M.P.

Mr. A. S. Luchetti, M.P.

Mr. J. F. Fitzgerald, M.P.

Visits were also made by the Minister for the Navy and for Air, the Honorable William McMahon, M.P., and His Excellency the High Commissioner for Canada in Australia, Mr. D. Frascr-Elliott, Q.C., C.M.G.

# PART II.—STATUS OF THE TERRITORY AND ITS INHABITANTS.

STATUS OF THE TERRITORY.

The basis of the administration of the Territory in international constitutional law is the Trusteeship Agreement approved by the General Assembly of the United Nations on 13th December, 1946.

The Papua and New Guinea Act 1949-1950, which came into force on the 1st July, 1949, approves the placing of the Territory of New Guinea under the international trusteeship system. The Act provides for the government of the Territory of Papua and the Territory of New Guinea in an administrative union under the title of the Territory of Papua and New Guinea. Although providing for the administrative union of the two territories, the Act declares the intention of the Commonwealth Parliament to be that the identity and status of the Territory of Papua as a Possession of the Crown and the identity and status of the Territory of New Guinea as a Trust Territory shall continue to be maintained. The Act also provides that there shall be expended in each year upon the administration, welfare and development of the Territory of New Guinea, an amount which is not less than the total amount of public revenue raised in that year in respect of the Territory of New Guinea.

No changes have been made during the year in any legislation defining or affecting the legal status of the Territory.

# STATUS OF THE INHABITANTS.

By regulation (Statutory Rules 1951 No. 120) made in October, 1951, under the Nationality and Citizenship Act 1948-1952 of the Commonwealth, the legal status of the indigenous inhabitants of the Territory and persons horn in New Guinea, whether before or after the making of the regulation, who are not British subjects is that of "Australian protected persons". The status of "protected persons" is significant mainly in international affairs and usually becomes important to the individual when he is about to travel ahroad and requires diplomatic and consular protection.

There are no immigrant communities as such in the Territory of New Guinea. Inbahitants of the Territory who are not indigenous retain their individual national status and citizenship.

# PART III .- INTERNATIONAL AND REGIONAL RELATIONS.

INTERNATIONAL RELATIONS.

The Administering Authority has continued to co-operate with the organs of the United Nations and with the Specialized Agencies in furnishing statistical and other information requested in relation to the Territory.

During the year annual reports were submitted to the World Health Organization, the International Labour Organization, the Narcotic Drugs Commission, and a periodic report to the Food and Agriculture Organization.

The United Nations Visiting Mission to the Trust Territories in the Pacific visited the Territory during March and April, 1953. The members of the Mission were—

Dr. E. de Marchena (Dominican Republic)-Chairman.

Mr. L. Pignon (France).

Mr. N. Rifai (Syria).

Mr. W. A. C. Mathieson (United Kingdom).

The Mission arrived at Rabaul on 14th March. Arrangements were made for the Mission to see the conditions and activities in all districts and to meet representatives of all sections of the community. The Mission departed from the Territory on 9th April for Port Moresby, Territory of Papua, and remained there for meetings with the Administrator and Administration officials until 13th April.

The only non-governmental bodies in the Territory of an international character are the missionary organizations, whose activities are described elsewhere in this Report.

Information relating to the Treaties, Conventions and Agreements that applied to the Territory of New Guinea at 30th June, 1953, is given in Appendix XXIII.

## REGIONAL RELATIONS.

The Territory is within the territorial scope of the South Pacific Commission, established in 1947 by Agreement between the six metropolitan governments responsible for the administration of non-self-governing territories in the South Pacific region, as a consultative and advisory body in matters affecting the economic and social development of the territories and the welfare of the inhabitants. Through the Administering Authority, the Administration maintains an active interest in the work of the Commission particularly in relation to matters of direct interest to the economic and social welfare of the indigenous inhabitants.

Two officials of the Administration, Dr. J. T. Gunther, Director of Health and Mr. W. C. Groves, Director of Education, are members of the Research Council of the South Pacific Commission.

During the year visits were made to the Territory by the Secretary-General of the South Pacific Commission, the Deputy Chairman of the Research Council of the Commission and by personnel undertaking research investigations in connexion with plant and animal quarantine and commercial relations.

Four indigenous people represented the Territory of New Guinea at the Second South Pacific Conference held at Noumea, New Caledonia, in April, 1953.

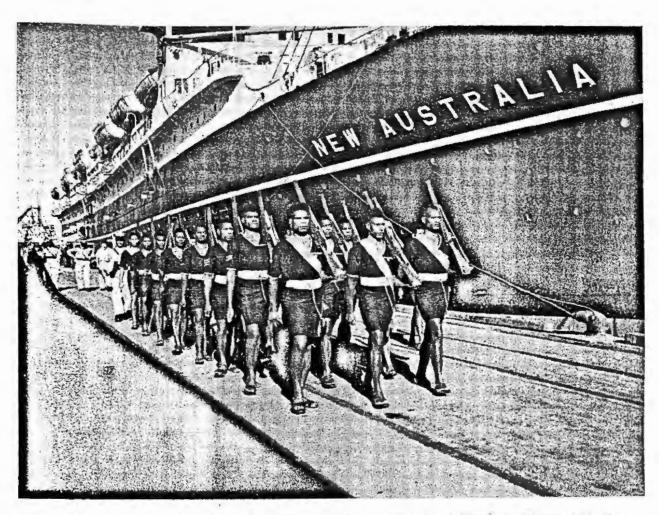

# PART IV.—INTERNATIONAL PEACE AND SECURITY: MAINTENANCE OF LAW AND ORDER.

# POLICE FORCE.

Internal law and order are maintained by the Royal Papuan and New Guinea Constabulary, which is composed of the European Constabulary, the Auxiliary European Constabulary and the Native Constabulary. The European Constabulary consists of officers recruited to the force and employed wholly on police duties, the Auxiliary European Constabulary of District Commissioners, District Officers, Assistant District Officers and Patrol Officers and the Native Constabulary of indigenous members, two-thirds of whom are recruited from the Trust Territory of New Guinea. Subject to the control and authority of the Administrator the force is under the control of the Commissioner of Police with head-quarters in Port Moresby, Papua.

The following information deals with the section of the force stationed in the Trust Territory which, in addition to the officers of the Auxiliary European Constabulary, numbers 28 officers of the European Constabulary and 1,391 members of the Native Constabulary. Expenditure during the year was £274,024.

The Territory is divided into nine administrative districts, each administered by a District Commissioner who, by virtue of his office, is the senior Police Officer for the District, with the rank of Superintendent. This arrangement is varied in the districts of New Britain and Morobe where, for

Members of the Royal Papuan and New Guinea Coronation contingent at Fremantle, Western Australia, en route to London for the Coronation of Her Majesty Queen Elizabeth the Second.

Members of the Royal Papuan and New Guinea Constabulary Coronation Contingent at Kingsford Smith airport, Sydney, after returning to Australia by air from England.

•		

purposes of police administration, the towns of Rabaul, Lae and Wau have been proclaimed special police districts and each is under the control of a Superintendent of Police of the European Constabulary. Officers of the European Constabulary are posted to the larger centres, i.e., Rabaul, Lae, Wau, Bulolo, Madang, Wewak, Kavieng, Finschhafen, Manus, Goroka, Kokopo and Sohano, and detachments of the Native Constabulary are posted to each administrative district.

The Native Constabulary is recruited by voluntary enlistment from the indigenous inhabitants of the Territory of Papua and New Guinea, and members serve in either Territory. Recruits must be of superior physique and intelligence. Engagement of a member of the Native Constabulary is for a period of not less than three years or more than five years, with subsequent re-engagement for any further period not exceeding five years. Leave is granted on the basis of one mouth's leave for each year of service. This period is exclusive of any travelling time and the member is transported to and from his village at the expense of the Administration. In addition to the rates of pay shown hereunder, members of the Native Constabulary are provided with uniform, accommodation and rations and receive either rations or pay in lieu of rations when on leave. A member may, with the approval of a commissioned officer, have his wife and children reside with him, and in such case accommodation, clothing and rations for his wife and children are also provided free of charge. At present 407 members of the Native Constabulary have their families residing with them. An application by a member to have his family reside with him on the station is usually granted, but it is preferred that the member should complete a period of three years before making such application. If an application has to be refused on the grounds of lack of married accommodation the member is, when circumstances permit, transferred to a station where married accommodation is available.

The rates of pay for the	Native (	Constabi	lary are	:	' -,		1	Per month.
Warrant Officer 1st	Class Se	rgeant-l	Major, al	l years				350s.
Warrant Officer 2nd	Class Se	rgeant-I	Major, 31	d year a	nd subsequ	ent years		290s.
Sergeant-Major, 1st	and 2nd	years						250s.
Sergeant, 3rd year			- ,					220s.
Sergeant, 1st and 2n	d years							180s.
Corporal, 3rd year								150s.
Corporal, 1st and 2nd	d years				• •			130s.
Lance-Corporal, 3rd	year				• •			120s.
Lance-Corporol, 1st s	-	years		* *				100s.
Constable, 30th year					٠			80s.
Constable, 25th year								75s.
Constable, 20th year				.,				70s.
Constable, 15th year			• •					65s.
Constable, 10th year								60s.
Constable, 5th year								558.
Constable, 4th year								50s.
Constable, 3rd year								45s.
Constable, 2nd year								35s.
Constable, 1st year								25s.

Within the Native Constabulary there is a Specialist Branch comprising clerks, carpenters, mechanics and drivers. These members are enlisted on the same terms as a constable performing normal police duties but special allowances are paid, e.g., a corporal-clerk receives an allowance of 150s. to 170s. per month in addition to the normal pay of 150s. per month; a sergeant receives an allowance of 80s. to 120s. per month, depending on his capabilities; a sergeant major warraut officer 2nd class receives an allowance of 10s. per month in the first year, 30s. in the second year and 50s. in the third year. The scale varies for carpenters, mechanics and drivers.

In June, 1953, a Special Contingent of Royal Papuan and New Guinea Constabulary, comprising three European officers and twenty-five indigenous personnel, fifteen of whom were from New Guinea, represented the Territory of Papua and New Guinea at the eeremony of the Coronation of Her Majesty Queen Elizabeth the Second in London. The contingent travelled to London by sea and returned by air. The tour occupied approximately three months and during that time the indigenous members of the contingent had the opportunity to see many different countries and the way of life of the people of those countries. For these men, who had not before been outside their own country, the tour had considerable educational value.

#### PUBLIC ORDER.

There were no cases of collective violence or disorder during the year.

# PART Y,--POLITICAL ADVANCEMENT.

# CHAPTER 1.

# GENERAL POLITICAL STRUCTURE.

The basis of the Territory's legislative, administrative and judicial systems is the *Papua and New Guinea Act* 1949-1950 which came into force on 1st July, 1949. The Act approved the placing of the Territory of New Guinea under the International Trustee system and provided for the administration of the Territory in an administrative union with the Territory of Papua. The Act is administered by the Minister of State for Territories, the Honorable Paul Hasluck, M.P., through the Department of Territories at Canberra.

The Act provides for the appointment of an Administrator who is charged with the duty of administering the government of the Territory on behalf of the Government of the Commonwealth of Australia. The Administrator is assisted by an Executive Council of not less than nine officers of the Territory. The Act also provides for a Legislative Council consisting of the Administrator, sixteen officers of the Territory, and twelve unofficial members three of whom are elected and nine appointed by the Governor-General of the Commonwealth on the nomination of the Administrator. The Legislative Council was inaugurated on 26th November, 1951. It has full legislative powers in regard to the peace, order and good government of the Territory.

Under the general direction of the Administrator, the administrative functions of government are discharged by twelve functional departments, the officers of which are members of the Public Service of the Territory of Papua and New Guinea. The detailed administration of each department is the responsibility of the Departmental Head, subject to the direction of the Administrator. The head-quarters of the Administration are located in Port Moresby in the Territory of Papua.

For administrative purposes the Territory is divided into nine districts each administered by a District Commissioner. A District Commissioner is the Administrator's representative and the Chief Executive Officer and within his district is responsible for general and native administration and the co-ordination of the activities of all departments.

The Supreme Court of the Territory of Papua and New Guinea established under the Papua and New Guinea Act is the highest judicial tribunal in New Guinea and the only court possessing general jurisdiction over civil and criminal matters. The jurisdiction, practice and procedure of the Supreme Court are provided for under the Supreme Court Ordinance 1949-1952. Courts having limited jurisdiction are District Courts constituted under the District Courts Ordinance 1924-1947 and Courts for Native Affairs constituted under the Native Administration Ordinance 1921-1951.

Appeals from the inferior courts lie to the Supreme Court and from the Supreme Court to the High Court of Australia.

Efforts are continuing to be directed towards the development of local government on democratic lines as the most suitable method of training the native people to take a more responsible part in the government of the Territory.

## CHAPTER 2.

# TERRITORIAL GOVERNMENT.

#### Structure.

The general administrative structure of the territorial Government has been described under Chapter 1 and is illustrated by the organization chart at Appendix II.

# Chief Administrative Officer.

The Government of the Territory derives its authority from the Papua and New Guinea Act 1949-1950, which provides that there shall be an Administrator charged with the duty of administering the Government of the Territory on behalf of the Administering Authority. The Act also provides that the Administrator shall be appointed by the Governor-General by Commission under the Seal of the Commonwealth of Australia and shall hold office during the pleasure of the Governor-General and that he shall exercise and perform all powers and functions that belong to his office in accordance with the tenor of his Commission and in accordance with such instructions as are given to him by the Governor-General.

The Assistant Administrator, Brigadier D. M. Clcland, C.B.E., assumed duty as Acting Administrator on 18th July, 1952, and was appointed Administrator on 23rd January, 1953.

# Heads of Departments.

Territorial Ordinances confer various statutory functions on these officers by office and, in addition, in some cases the Administrator has delegated to heads of departments certain of his powers relating to a department or subject-matter under the supervision of the officer.

# District Boundaries.

The territorial boundaries of the Territory of Papua and New Guinea are maintained.

No changes were made in district boundaries during the year. However, a check of the areas of the districts as varied by the boundary changes made during 1951-52 necessitated some adjustments in the areas previously recorded for the mainland districts.

As at 30th June, 1953, the districts and areas were as follows:-

				District.					Land Atea.	Head-huarters
North-East Eastern H	New Guin lighlands	ea (callo	ed the M	lainland)	<u>.</u> .				Sq. Miles.	Goroka
Western I	Highlands						• •		9,600	Mt. Hagen
Sepik	.,					• •			30,150	Wewak
Madang		1.			* *			• •	10,800	Madang
Morobe	• •	••	• •	••	••	••		••	13,000	Lae
Bismarck Ar	rchinelago.	_							70,150	
New Brita	uin .	• •		• •					14,150	Rabaul
New Irela	$^{ m nd}$		• •		••	• •	• •	1	3,820	Kavieng
Manus	• •	••	• •	••	••	••	••	•••	800	Lorengau
olomon Isla Bougainvi		•• .				••	••	••	4,080	Sohano
Total	area of th	e Territ	tory				• •		93,000	

#### Classification of Areas.

Administratively the Territory is classified into the following categories:-

- (i) "Under Administration Control".
- (ii) "Under Administration Influence".
- (iii) "Under Partial Administration Influence".
- (iv) "Penetrated by Patrols (Restricted)".

During the year 1,393 square miles were added to the area under influence or partial influence. Particulars of the areas in the various categories are given in Table 6, Appendix II.

The area under "control or influence" at the 30th June, 1953, was 84,500 square miles and the "restricted area" had been reduced to 8,500 square miles. The consolidation of areas under influence has proceeded steadily during the year, and several new posts have been established.

#### Patrala

In areas under Administration control, most of the villages are visited at least twice a year by officers of the field staff of the Department of District Services and Native Affairs and periodical visits are made by officers of other departments, in particular Health, Agriculture and Forests.

Villages in areas under Administration influence or partial influence are visited by officers of the field staff of the Department of District Services and Native Affairs at least once a year and special patrols are made when the need arises.

New areas are linked with those under partial influence by means of exploratory patrols. An air reconnaissance is first undertaken to make an appreciation of the terrain and the best means of entry into a particular area. This is followed by a ground patrol, led by an experienced officer, which usually penetrates to a previously decided location suitable for an airstrip making contact and establishing friendly relations with the native people en rollie. After the airstrip has been dompleted and a post established the patrol extends its operations further afield. Similar work is going on from other selected points in the region and the pattern of patrolling is so organized that patrols from various posts contact each other until the whole region is evered.

The series of photographs facing page 32 indicate the nature of the task involved in extension of Administration influence to new areas.

## Executive Council.

The functions of the Executive Council are to advise and assist the Administrator. The Council is constituted of not less than nine officers of the Territory appointed by and holding office during the pleasure of the Governor-General.

The Administrator may, if he thinks fit, act in opposition to the advice of a majority of the members of the Executive Council present at the meeting at which it is decided to tender the advice, but in any such case the Administrator shall forthwith fully report the matter to the Minister with his reasons for his action.

Minutes of the proceedings at all meetings of the Executive Council are kept, and a copy of the minutes relating to each meeting is transmitted by the Administrator to the Minister as soon as practicable after the meeting is held.

The following officers of the Territory were members of the Council at 30th June, 1953:-

Mr. S. A. Lonergan		Government Secretary.			
Mr. H. H. Reeve	teeve Treasurer and Director of Finance.  Proves Director, Department of Education.  Dwyer Director, Department of Agriculture, Story Fisheries.  Addam Director, Department of Forests.  Macinnis Secretary, Department of Lands, Surveys and Watkins Crown Law Officer.  Oberts Acting Director, Department of District Servi				
Mr. W. C. Groves		Director, Department of Education.			
Mr. R. E. P. Dwyer		Director, Department of Agriculture, Stock and Fisheries.			
Mr. J. B. McAdam		Director, Department of Forests.			
Mr. D. E. Macinnis		Secretary, Department of Lands, Surveys and Mines.			
Mr. W. W. Watkins		Crown Law Officer.			
*Mr. A. A. Roberts	• • • • • • • • • • • • • • • • • • • •	Acting Director, Department of District Services and Native Affairs.			
†Dr. A. J. May		Acting Director, Department of Health.			

# Legislative Council.

The Legislative Council consists of twenty-nine members, namely-

- (a) The Administrator;
- (b) Sixteen officers of the Territory (known as official members);
- (c) Three non-official members possessing such qualifications as are provided by Ordinance, and elected, as provided by Ordinance, by electors of the Territory;
- (d) Three non-official members representing the interests of the Christian missions in the Territory;
- (e) Three non-official indigenous members; and
- (f) Three other non-official members.

The qualifications for and the methods of election of the three non-official members, together with the electoral boundaries are explained in Chapter 5.

Nominated members are appointed by the Governor-General on the nomination of the Administrator and the Act provides that the Administrator shall exercise his powers of nomination to ensure that not less than five non-official members are residents of the Territory of New Guinea.

The Legislative Council is empowered to make Ordinances for the peace, order and good government of the Territory. Ordinances made by the Legislative Council do not have any force until assented to as provided in the Act, and must be presented to the Administrator for assent. Certain classes of Ordinances may not be assented to by the Administrator, but must be reserved for the Governor-General's pleasure.

An Ordinance assented to by the Administrator may be disallowed by the Governor-General within six months from such assent, and an Ordinance reserved for the Governor-General's pleasure does not have any force unless and until, within one year after the day on which it was presented to the Administrator for assent, the Administrator causes to be published in the Government Gazette a notification that the Ordinance has received the Governor-General's assent.

The initiation of legislative proposals into the Council is governed by sections 47 and 48 of the Papua and New Guinea Act 1949-1950 and by the Standing Rules and Orders regulating the order and conduct of the Council's husiness and proceedings. Subject to these requirements, and particularly the restriction on any act involving government expenditure, non-official members are empowered to introduce legislation. One such Bill, the Trading with Natives Bill 1953, was brought in by the member for the New Guinea Island electorate and was passed by the Council at the second meeting of the second session.

The Council met twice during the year, the first meeting from the 6th to the 18th October, 1952, and the second meeting from the 4th to the 8th May, 1953.

<sup>•</sup> Mr. A. A. Roberts was appointed an Acting Member of the Executive Council during the absence from the Territory of Mr. J. H. Jones, Director, Department of District Services and Native Affairs.

† Dr. A. J. May was appointed an Acting Member of the Executive Council during the absence from the Territory of Dr. J. T. Gunther, Director, Department of Realth.

The official language of the Council is English. The Papua and New Guinea Act 1949-1950, requires that minutes be kept of all meetings and, in addition, a verbatim record is made of the proceedings and debates.

The members of the Council at the 30th June, 1953, were-

President, His Honour the Administrator, Brigadier, D. M. Cleland, C.B.E.

#### Official members-

Mr. S. A. Lonergan, Government Secretary.

Mr. J. H. Jones, Director, Department of District Services and Native Affairs.

Dr. J. T. Gunther, Director, Department of Health.

Mr. I. F. Champion, O.B.E., Chief Native Lands Commissioner.

Mr. H. H. Reeve, Treasurer and Director of Finance.

Mr. W. C. Groves, Director, Department of Education.

Mr. R. E. P. Dwyer, Director, Department of Agriculture, Stock and Fisheries.

Mr. D. E. Macinnis, Secretary, Department of Lands, Surveys and Mines.

Mr. J. B. McAdam, M.M., Director, Department of Forests.

Mr. W. W. Watkins, Crown Law Officer.

Mr. F. Lee, Chief Collector, Department of Customs and Marine.

Mr. H. L. R. Niall, M.B.E., District Commissioner, Morobe District, Territory of New Guinea.

Mr. J. K. McCarthy, M.B.E., District Commissioner, New Britain District, Territory of New Guinea.

Mr. J. R. Foldi, District Commissioner, Acting as Assistant Director, Department of District Services and Native Affairs.

Mr. S. Elliott-Smith, District Commissioner, Central District, Territory of Papua.

Mr. C. D. Bates, M.C., District Commissioner, Madang District, Territory of New Guinea.

#### Elected members-

Mr. Donald Barrett, Planter, New Guinea Islands Electorate.

Mr. Carl Mallesch Jacobsen, Planter, New Guinea Mainland Electorate.

Mr. Ernest Alfred James, Public Accountant, Papua Electorate.

#### Mission representatives-

Reverend David Eric Ure, London Missionary Society, Port Moresby, Territory of Papua. Very Reverend James Dwyer, M.S.C., Sacred Heart Mission, Rabaul, Territory of New Guinea.

Reverend Frank George Lewis, Chairman, Methodist Overseas Mission, Rabaul, Territory of New Guinea.

## Indigenous members-

Mr. Merari Dickson, Mission Teacher, Samarai, Milne Bay District, Territory of Papua.

Mr. Aisoli Salin, School Teacher, Tabar, New Ireland District, Territory of New Guinea.

Mr. Simogun, B.E.M., Chairman, Dagua Rural Progress Society, Sepik District, Territory of New Gninea.

#### Other non-official members -

Mr. Basil Fairfax-Ross, Manager, Port Moresby, Territory of Papua.

Mrs. Doris Regina Booth, O.B.E., Mine Owner, Wau, Territory of New Guinea.

Mr. John Bexley Sedgers, Company Director, Rabaul Territory of New Guinea.

# CHAPTER 3.

#### LOCAL GOVERNMENT.

# Native Councils.

It is the aim of the Administering Authority to foster the political advancement of the indigenous inhabitants and gradually replace the direct rule system of village officials by elected councils as and when the people are ready and able to accept the responsibility. These councils, which are established under the provisions of the Native Village Councils Ordinance 1949-1952 are empowered to legislate for the peace, order and welfare of the indigenous community in the area and to provide local social and public services.

Specialist officers of the Department of District Services and Native Affairs have been appointed to encourage the establishment of these councils and to provide guidance and assistance in the early stages, and officers of the Departments of Health, Education, Forests and Agriculture, Stock and Fisheries provide technical advice and assistance.

The people are always consulted before a council is established and it is explained to them that these councils are but a first step in their political advancement. When sufficient councils (which tisually embrace a number of villages) have been established in a district, the people will be consulted regarding the formation of area councils, composed of representatives from the village councils, and later consulted regarding district and maybe regional councils. By this time a stage in their political advancement will have been reached when the people can be fitted in a way they understand into the Territory's political system and consulted on the measures which may be taken or contemplated towards self-government.

The Papua and New Guinea Act provides for the establishment of Advisory Councils for Native Matters. As "native local government" develops, such councils (in which the indigenous members shall be at least a majority of the total number of members) will be established.

The initial hurdle of "artificiality"—of applying a western type of governmental organization to the existing facts of Mclanesian social structure—bas proved less difficult to surmount than was anticipated. Primarily, this has been due to the presence on each council of an element of intelligent and energetic men who, under the guidance of members of the staff of the Department of District Services and Native Affairs, have carried the burden of executive work. Many councillors still do not have a sufficient appreciation of their duties and responsibilities, or are too timorous to utilize their authority at the risk of jeopardizing personal popularity. At this stage in the development of the native local government policy, it is even more important that councillors should be men of energy and character, than that they should be educated. The poor calibre of many members has been a weakness in the system, but as the electorates become more politically aware, more suitable candidates should he forthcoming.

On the whole, the standard of executive work in the councils has steadily improved and the degree of organizing ability displayed on occasions has been remarkably good. In contrast to the attitude of two years ago, the executive committees of Rabaul, Reimber and Vunantami are tending to think more for themselves, and to implement points on their approved annual programmes without waiting for suggestions from native authorities officers. They have made mistakes and will he doubt make many more. Progress is evident despite lack of education and inexperience in administrative and financial matters which will leave the councils heavily dependent on official assistance for years to come.

Various procedures have heen adopted as a guard against the councils becoming separated from their people. To Melanesians impersonal government is unfriendly government. By this criterion they are functioning very satisfactorily. All councillors are required to form their own village advisory committees, and to consult regularly with their constituents. In addition, each council convenes two or three general assemblies each year, and the people are encouraged to voice their criticisms and suggestions. Thus far the attitude at these meetings has been eulogistic, rather than critical. Constant emphasis is being placed on the council being the people's council with their future progress dependent to no small degree on the council's ability to carry out its functions adequately. The continuing ability of the councils to collect taxes is a searching test of their stability.

Rules passed by councils during the year included-

- (1) Council tax rules—passed by all councils.
- (2) Maintenance of village roads within council areas—passed by five councils.
- (3) Requirements regarding cocoa cultivation and processing—passed by the Vunamami Council only.
- (4) Compulsory registration of births and deaths—passed by the Rabaul Conneil.

Subject to the approval of the Administrator, councils have the power to make rules relating to taxation. Such rules vary in accordance with the economy of the area, but in principle they follow a general pattern. The rules passed by the Baluan Council during November, 1952, for the financial year 1953, are typical of all councils. They read—

- "1. The Baluan Village Council tax for the year 1953 shall consist of three grades-
  - (1) £4 for all able-bodied males above the age of 17 years.
  - (2) £2 for all males over the age of 17 years who for reasons of age or infirmity are unable to pay the full tax of £4 but who are not entitled to exemption.
  - (3) £1 for all females over the age of 17 years who wish to become eligible to vote.
- 2. The levying of council taxes will commence and finish on dates to be decided by the council.
- 3. The Tax Appeal Tribunal shall decide all matters concerning the age of taxpayers and the grading of all male taxpayers. Appeal may be made to the District Commissioner or his representative, whose decision shall be final.
- 4. All male natives deemed to be a taxpayer, who fail to comply with this rule shall be guilty of an offence.

Penalty: Five pounds (£5) fine or imprisonment for one month, or both.

5. All proceedings under this rule shall be initiated by the Tax Appeal Tribunal and heard by a Court for Native Affairs."

The only other form of taxation introduced by village councils has been the provision of a dog licence. Fee payable is two shillings per year. This tax rule is not general.

Revenue from council tax is handled by the council Treasurer and is expended on approved estimates for the financial year.

Councils proclaimed prior to 30th June, 1952, were-

Vunamami-Kokopo Sub-district of New Britain.

Reimber-Rabaul Sub-district of New Britain.

Rabaul-Rabaul Sub-district of New Britain.

Baluan-District of Manus.

The Vunadadir-Toma-Nanga Nanga Council, in the Kokopo Sub-district of New Britain, was proclaimed in December, 1952, and the Livuan Council, which includes Watom Island, in the Rabaul Sub-district of New Britain, was proclaimed in January, 1958.

The Raluana-Viveran/Tākubār-Tāviliu/Nawuneram groups, New Britain District, comprising a total population of 2,000 indicated their unwillingness to adopt local government. They form a small minority group surrounded by established councils, and investigations disclosed that a number of reasons, purely local in character, were responsible for their attitude. The contributing circumstances are being mitigated and the needs of the groups are receiving close attention. The Taviliu/Nawuneram section has since signified its desire to join the Rabaul Village Council whilst the Raluana/Viveran group is still considering its position.

. Details of councils proclaimed during the year-

- (1) Vunadadir-Toma-Nanga Nanga Council. The council which was proclaimed in December, 1952, includes 27 villages with a population of 6,013. It is the second largest of the native local government bodies established to date and has 24 members elected according to the council's constitution, on a proportional representation basis.
- (2) Livuan Council. This council was proclaimed in January, 1953, and comprises 18 villages with a population of 3,400 and is the smallest of the Tolai council units.

The problem of inadequate size has been partly circumvented by effecting a financial merger with Reimber Council, which adjoins the Livuan Council. The unit has twenty members elected on a proportionate representation basis and its constitution provides for an initial one year tenure of office, followed by elections at two years intervals. Details of activities of councils are given below.

New Britain District.—The local government financial year coincides with the calendar year. The following tables show:—

- A. The degree of achievement in terms of the actual amounts spent on public services of the Rabaul, Reimber and Vunamami Councils during the period January-December, 1952.
- B. Abstracts of Estimates of the established five councils for the period January-December, 1953.
- C. Analysis of estimated expenditure on public services of the five councils during the period January-December, 1953.
- D. Works completed, in hand, and estimated for, during the period July, 1952-March, 1953.

Notes.—As the inclusion of additional village groups within the Vunadadir-Toma-Nanga Nanga Council is pending, the current estimates of this unit are subject to major revision.

The items—Personal emoluments; Other charges and capital expenditure cover respectively—

(i) Salaries and wages of council members and employees. Expenditure on this item may not exceed 50 per cent. of the total income of a council.

(ii) Maintenance and contingencies.

(iii) Capital items of expenditure e.g., huildings, transport.

TABLE C.—ANALYSIS OF ESTIMATED EXPENDITURE ON PUBLIC SERVICES DURING COUNCIL FINANCIAL YEAR COMMENCING JANUARY, 1953.

Name of Council.	Council Adminis- tration.	Transport,	Medical and Sanitation.	Education.	Agriculture.	Forestry.	Roads and Bridges.	Water Supply.	Special Social Services.	Total.

Vunamami .,	Truck garage Three aid posts One school	One aid post Additions to school	House for teaching staff Water tanks and wells Council rest house
	Purchase of radios Cocoa fermentary House for council clerk	Workshop equipment Cocoa drying sheds Village housing improvement scheme	Workshop
Livuan	Conneil honse Levelling council area	Office furniture and fittings Workshop and store shed	One aid post Boat (18 feet), wells and tanks
	Bicycles for council con- stables	One aid post	Carraco
Vunadadir – Toma – Nanga Nanga	Purchase of 4-ton truck	Council house, one aid post	Council house, furniture and equipment Bicycles for council con-
	Garage		stables House for council clerk One aid post One house for teaching staff

The tables do not cover all aspects of council activities, but indicate the interest displayed in social services, economic advancement and the general problems involved in raising living standards.

Following the successful introduction of agricultural periods into the syllabus of schools within the Vunamami Council area, arrangements have been made for the inclusion of similar periods in the syllabus of schools in other council areas. The students who live in during the week cultivate and grow their own foods.

The Vunamami Council bas acquired approximately 150 acres of good agricultural land, adjacent to the school, in order to extend the agricultural syllabus to include pig and fowl breeding, as well as cocoa and rice production. The council, whose area is comparatively heavily planted with cocoa has also financed the construction of a cocoa fermentary, and the fermenting, drying, and marketing of cocoa beans has been organized along co-operative lines.

A similar fermentary is being constructed within the Reimber Council area, but this project is being financed by a loan of £800, free of interest, granted by the Department of Agriculture, Stock and Fisheries.

The Rabaul Council, whose members are short of farming land, was granted a 99-year lease over 1,000 acres of land in the vicinity of Keravat. The clearing of the land and the construction of roads have commenced, and the council has appropriated an initial sum of £500 towards the project for 1953. This land will also provide the natives of Rabaul with a safe retreat area in the event of volcanic activity.

The council continued to improve facilities at the Rabaul market. The vendors at the market are natives from the whole of the Rabaul sub-district and buyers, in the main, are Europeans, Asians and indigenous workers from other districts.

Construction has started on a boarding school for girls. The cost is being met by the Rabaul, Reimber and Vunamami councils who have already subscribed the sum of £1,000 which has been paid into a special fund controlled by a joint committee.

Small libraries have been established by each of the five councils.

Manus District.—The area under the jurisdiction of the Baluan Council comprises nine villages with an approximate population of 1,700. The council, in numbers, is far too small, but owing to the geographical location of Baluan Island, it will be difficult to increase its size. The possibility of Lou Island and villages on the south coast of Manus Island being incorporated in the Baluan Council area has been investigated, but no decision was reached prior to the 30th June, 1953.

A council school has been established at Rambutso, which is in charge of a teacher of the Department of Education, assisted by two indigenous assistants employed and paid by the council.

Water tanks were purchased and transported to Baluan Island, where they have been erected in villages.

The council is paying the salaries of two native medical assistants, as well as providing accommodation.

A small experimental plot has been cleared and planted with cocoa, under the guidance of the District Agricultural Officer. It is hoped, should conditions suit the crop, to increase the economic potential within the area by this means.

The economic potential of the Baluan Council is dependent upon a small production of copra, garden produce and trochus shell. In order to increase staple food products and income the council has passed a rule requiring every male native, eligible to pay tax, to plant a minimum of twenty coconuts each year.

The following is a summary of the estimates of revenue and expenditure for 1953:-

# Unofficial Councils.

The unofficial village councils, referred to in the Report for 1951-52, continue to function and it is hoped that within the next year several will have reached a stage where they will be able to assume the responsibilities of an official council.

### District and Town Advisory Councils.

District advisory councils, which are non-statutory, give non-indigenous residents an opportunity to express their views and offer advice to District Commissioners on matters directly affecting them within their districts.

Each council is composed of the District Commissioner, who is chairman, and such members, not exceeding eight, as the Administrator appoints from a panel of names recommended by the District Commissioner. Members are appointed for a period of two years and are eligible for re-appointment. Public servants, other than the District Commissioner, are not eligible for appointment.

New rules for District Advisory Councils came into force in August, 1953, and whilst not differing materially from those which formerly applied, they permit a flexibility in membership and invite proposals for the development of the district to be brought forward and considered.

Town Advisory Councils which are also non-statutory are composed of representative citizens and officers of the Administration and advise only on matters concerning towns.

New rules for Town Advisory Councils have also been introduced which make provision for the creation of wards if a council so desires, a rotating system of membership, i.e., half of the council retiring each year thus ensuring a measure of continuity of experience and acquaintance with policy, and that in addition to advising and assisting the Administrator, councils may undertake such other duties and responsibilities as are agreed upon by the council in consultation with the Administrator, e.g., management of public utilities.

The following are some of the matters on which the District and Town Advisory Councils have submitted advice during the year:—Aerodromes; copra and copra production and other aspects of economic advancement; navigation aids; wharfs; shipping and air services; educational facilities; treatment and hospitalization of the sick; conditions of employment of indigenous lahour; tariffs; town planning; housing; telephone services; fire-fighting services; electricity and water supply; streets and roads maintenance.

These councils deal with matters predominantly of non-native interests and membership has so far been confined to Europeans and Asians. The interests of the indigenous people are adequately protected by the policy of the Administration exercised through all Departments, in particular the Department of District Services and Native Affairs which is directly concerned with the general welfare of the indigenous inhabitants and is represented by its officers on all District and Town Advisory Councils.

#### CHAPTER 4.

# THE PUBLIC SERVICE.

# Basis and Organization.

The Public Service of the Territory of Papua and New Guinea is constituted under the *Papua and New Guinea Act* 1949-1950 and regulated by the *Public Service Ordinance* 1949-1950 and Regulations thereunder.

The structure of the Public Service is shown in diagrammatic form in Appendix II.

The Public Service Ordinance 1952, which came into operation on 23rd April, 1953, and is to be read in conjunction with the Public Service Ordinance 1949-1950, provides for the inclusion in the standard salaries of all classified positions in the Public Service of a proportion of the cost-of-living allowance established under the principal ordinance. The amount included as standard salary in the case of an adult male officer was £204 and in the case of an adult female officer £161. Corresponding amounts were added to the standard salaries of juniors, both male and female.

The Superannuation (Papua and New Guinea) Ordinance 1952, which came into force on 10th April, 1953, amended the Superannuation (Papua and New Guinea) Ordinance 1951 by raising the value of all units of pension to £39 each (previously, units in excess of the first eight were valued at £32 10s.), and providing for increased benefits to contributors to the Papua and New Guinea Provident Account.

The following table shows the staffing organization in the Territory of Papua and New Guinea:-

	-	<b>-</b>	No. of Classified	Buropean Staff as at 30th June, 1953—						
Department.			Positions as at 30th June, 1953.	Head-quarters	Papua.	New Gulaca.	Unattached.	Total,

•			1,641	304	318	654	171	1,447		
Works (a)			26				,,			

<sup>(</sup>a) This Departmental organization and classification is dormant during the period that the Commonwealth Department of Works and the Works Branch are responsible for carrying out public works for the Administration.

For further information regarding positions and allocation of staff, see Appendix II.

The following are the more important changes in the organization of the Service during the year:-

- (1) Creation of Works Branch (Department of Government Secretary);
- (2) Public Relations Officer, new position (Department of Administrator);
- (3) District Inspector, new position (Department of District Services and Native Affairs);
- (4) District Officer, Grade 1, five positions (Department of District Services and Native Affairs). These positions have been reclassified and accorded a higher salary scale;
- (5) Native Authorities Officer (Department of District Services and Native Affairs). Six new positions created; and
- (6) Co-operative Officer (Department of District Services and Native Affairs). Four new positions created.

## Conditions of Entry into Service.

Permanent appointment to the Public Service is governed by the qualifications, experience, competence and general suitability of the candidate and is limited to persons who are natural born or naturalized British subjects. Provision is, however, made for other persons to be employed in an exempt or temporary capacity. When indigenous inhabitants reach the standard required, suitable provision will be made for their entry into the Service and in the meantime a great number are employed by the Administration in occupations suitable to their qualifications and experience.

At 30th June, 1953, 9,712 indigenous inhabitants were employed by the Administration in New Guinea in clerical and other capacities, including 1,391 in the Royal Papuan and New Guinea Constabulary.

## Recruitment and Training.

During 1952-53 action was taken to initiate the forward planning of recruitment and this will facilitate an orderly intake of new staff and help to provide a balanced Service. A system of selection, including interview by a properly constituted committee, was also introduced.

A total of 164 persons was recruited to the Public Service during the year and details of the recruitment to each department is summarized hereunder—

District Services and Native Affairs Health Treasury—					50 31
Treasurer's Office				1	
Government Printing Office				1	
Posts and Telecommunications Branch				15	
_				_	17
Forests			• •		13

Government Secretary—					_
Police and Prisons Branch	1.4	• •			7
Lands, Surveys and Mines		• •			G
Customs and Marine		• •		• •	1
Clerical and Typing for allocation to Department	5				16
- ·					
Total		* *	+ +		164

The actual number appointed to the Territory of New Guinea is not readily available although it can be stated that at least 50 per cent, of the above new appointees, other than those attached to head-quarters, Port Moresby, will be assigned to New Guinea.

During the year 34 Cadet Patrol Officers were appointed and arrived in the Territory in April, 1953, where they attended a six weeks' induction course before posting to district stations.

After a period of duty in the Territory of not less than 21 months, Cadet Patrol Officers are eligible to attend a special two years' course of training at the Australian School of Pacific Administration, which is located in Sydney, New South Wales. Subjects studied include law, government (colonial administration), anthropology, geography and land use, history, tropical hygiene, and mapping and survey. A diploma of the school is awarded on the successful completion of the course. Eleven officers of the Department of District Services and Native Affairs commenced the course in March, 1953, and 26 officers are due to complete the course at the end of 1953.

Arrangements are being completed for a group of appointees to positions within the Department of Education to commence a special course at the Australian School of Pacific Administration in 1954, before proceeding to take up duty in the Territory.

The appointments of three Cadet Forestry Officers were effected in March, 1953. This cadetship is of five years' duration and includes a two-year forestry course at an Australian nniversity, one year of field work in the Territory, followed by a two-year period of training at the Australian Forestry School, Canberra, Australian Capital Territory.

The appointment of Surveyors, Agricultural, Veterinary and Education Cadet Officers is proceeding. The duration of the cadetships varies from two to five years. In addition, appointments of a number of Agricultural, Forestry and Veterinary Officers, Produce Inspectors, Surveyors, Administrative Officers, and a Fisherics Expert will be completed during 1953-54.

#### CHAPTER 5.

#### SHEFRAGE.

The qualifications for, and methods of election of non-official members to the Legislative Council, together with the electoral boundaries, are laid down in the Legislative Council Ordinance 1951.

For the purpose of elections, the Territory of New Guinea is divided into two electorates, the New Guinea Mainland Electorate and the New Guinea Islands Electorate. One member is elected to represent cach electorate.

# A candidate for election must-

- (i) be an elector:
- (ii) have resided continuously in the Territory during the three years immediately preceding the lodging of his nomination as a candidate; and
- (iii) not be an officer or employee of the Public Service of the Territory or of the Commonwealth or an officer or employee of an instrumentality of the Administration or of the Commonwealth.

Elections are to be held at intervals of not less than three years. Every person resident in the Territory, not being a native or an alien as defined in the Nationality and Citizenship Act 1948-1952, who is not under the age of 21 years, and who has resided continuously in the Territory for at least twelve months immediately preceding the date of his application for enrolment is entitled to enrolment as an elector and to vote. Certain persons, including those of an unsound mind and those under sentence of imprisonment for one year or longer are precluded from voting.

Voting for the election of members is by secret bullot and in accordance with the preferential system.

No organized parties contested the elections for the first Legislative Council which were held on 10th November, 1951, but ten candidates stood as individuals, four for the New Guinea mainland, and six for New Guinca islands electorates.

The election of members to native village councils is by either open or secret ballot, mostly on a proportionate representation basis. The qualifications for franchise are contained in the Native Village Council Regulations, the relevant sections of which read-

- "6,-(1.) Subject to the next succeeding sub-regulation where a Proclamation makes provision for the cleetion of some or all of the Members of a Council by ballot, the following categories of Natives resident within the Council's area shall be eligible to vote:
  - (a) Any Native who has paid Council tax in respect of the financial year in which the elections are held or who is deemed to be liable to pay Council tax for that financial year.

    (b) Any Native who has been granted an exemption from Council tax; and
- (2.) All adult Natives resident within the area of the Council shall be eligible to vote at the initial elections following the establishment of a Council.
- 7. Any female Native apparently above the age of seventeen years resident in a Council's area may become eligible to vote by applying to have her name inserted in the Register of Taxpayers of the Council."

## CHAPTER 6.

## POLITICAL ORGANIZATIONS.

There are no non-governmental organizations of a political nature in the Territory.

#### CHAPTER 7.

THE JUDICIARY.

Types of Courts.

The Courts which exercise jurisdiction within the Territory are-

- (1) The Supreme Court of the Territory of Papua and New Guinca.
- (2) District Courts.
- (3) Courts for Native Affairs.
- (4) Wardens' Courts.

The Supreme Court is the highest judicial authority in the Territory. It has original criminal and civil jurisdiction.

In each district in the Territory there are District Courts with criminal jurisdiction to try "simple summary" and "non-indictable offences", but having no jurisdiction to try indictable offences, i.e., crimes and misdemeanours. District Courts also exercise a limited civil jurisdiction.

The jurisdiction of the Courts for Native Affairs extends to offences by indigenous inhabitants against the Native Administration Regulations, and civil actions of any kind, if all parties are natives.

The Administrator has power to establish Wardens' Courts in respect of each gold field or mineral field, with jurisdiction over civil cases respecting mining or mining lands held under the Mining Ordinance, and offences against the mining laws of the Territory.

# Appeals.

Appeals lie from the decisions of the courts of inferior jurisdiction to the Supreme Court. The High Court of Australia subject to prescribed conditions, has jurisdiction to hear and determine appeals from judgments, decrees, orders and sentences of the Supreme Court of the Territory of Papua and New Guinea.

## Official Language.

English is the official language of the courts. When indigenous inhabitants are concerned, however, evidence, &c., is given in a native language, but is translated into English for the court. Court interpreters are employed to assist the presiding judge or magistrate.

Whilst no statutory qualifications are prescribed for interpreters, in practice it is required that interpreters shall have considerable experience and, if possible, a good educational background as well as an ability to interpret.

# Constitution of the Courts.

Judges of the Supreme Court of the Territory of Papua and New Guinea are appointed by the Governor-General of the Commonwealth of Australia under section 59 of the Papua and New Guinea Act 1949-1950. A Judge may be removed from office by the Governor-General of the Commonwealth of Australia on the ground of proved misbehaviour or incapacity, but may not otherwise be removed from office. Retiring age is 65 years, but a Judge who has held office as a Judge of the Supreme Court of Papua-New Guinea under the Papua-New Guinea Provisional Administration Act 1945-1946 may continue in office during the pleasure of the Governor-General after he has attained that age. At present the Supreme Court of the Territory of Papua and New Guinea consists of four Judges who exercise all the powers and functions of the court when sitting alone. The seat of the Supreme Court is at Port Moresby, but the judges move on circuit throughout the Territory of New Guinea as the occasion arises.

Apart from the Judges of the Supreme Court all judicial functions are discharged by administrative personnel.

District Commissioners and Assistant District Officers are ex officia magistrates of the District Courts which are established under the provisions of the District Courts Ordinance 1924-1947. In addition, there is provision for the appointment of three District Officers, Grade II., specifically as magistrates. Two of these officers are stationed in the Territory of New Guinea. Stipendiary Magistrates may be appointed by the Governor-General, but no person is holding such an appointment at the present time. The Administrator may appoint any person to be a Justice of the Peace. A District Court consists of at least two Justices of the Peace, or a Stipendiary Magistrate, District Commissioner or Assistant District Officer sitting alone.

District Commissioners and Assistant District Officers are ex officio members of Courts for Native Affairs which are established under the Native Administration Ordinance 1921-1951. The Administrator may appoint any person to be a member of a Court for Native Affairs and may terminate any such appointment. Courts for Native Affairs consist of one or more members.

Wardens' Courts are conducted by a Warden appointed under the Mining Ordinance 1928-1947. Any officer of the Public Service may be appointed a Warden.

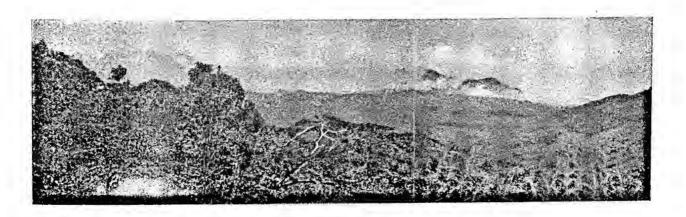

## Judicial Appointments.

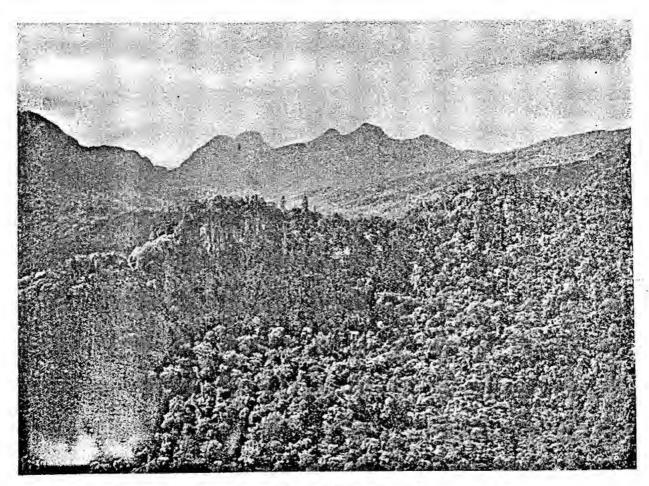

A person to be eligible for appointment as a Judge of the Supreme Court must either have been a Judge of the Supreme Court of Papua-New Guinea or be a barrister or solicitor of the High Court of Australia or the Supreme Court of a State or Territory of the Commonwealth (including the Supreme Court of the Territory of Papua-New Guinea) of not less than five years' standing.

The Barristers and Solicitors Admission Ordinance 1946-1948 provides that any person who is entitled to practice in the High Court of Australia or in the Supreme Court of any State or Territory of the Commonwealth shall be deemed to be qualified for admission to practice as a barrister and solicitor of the Supreme Court of the Territory.

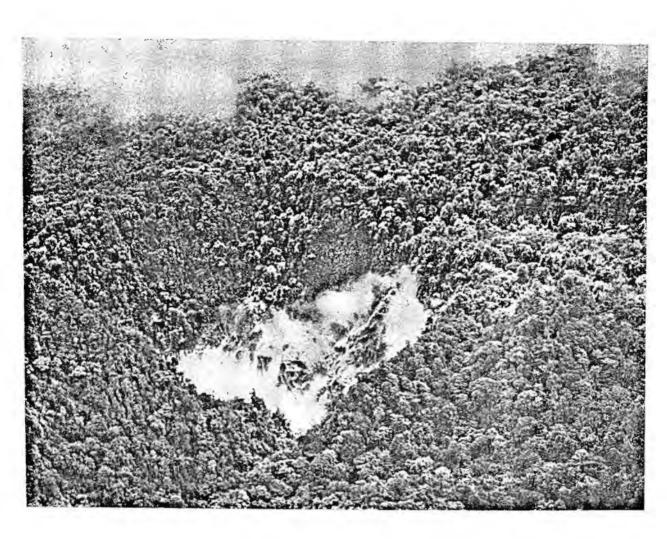

The right to officiate in the Supreme Court and its tribunals is open to any person who holds the requisite qualifications and who has been admitted to practice within the Territory.

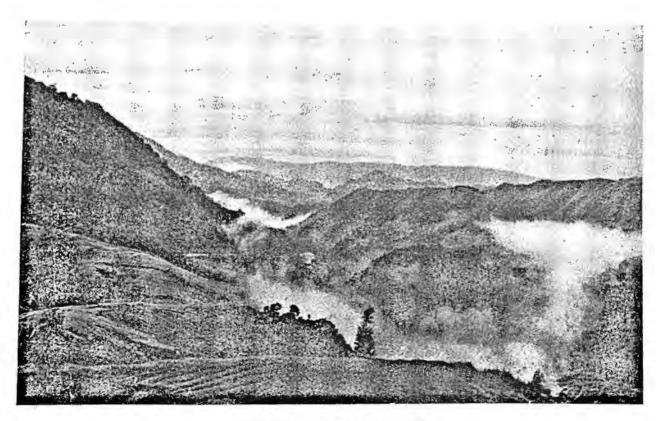

# PHOTOGRAPHIC ACCOUNT OF AN EXPLORATORY PATROL.

General views of the area covered.

General views of the area covered.

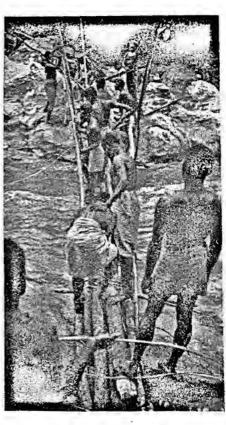

The patrol sets out.

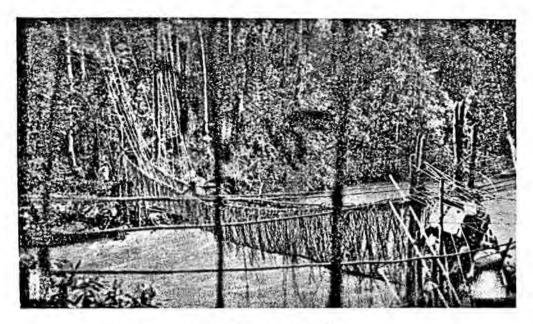

Crossing a landslide.

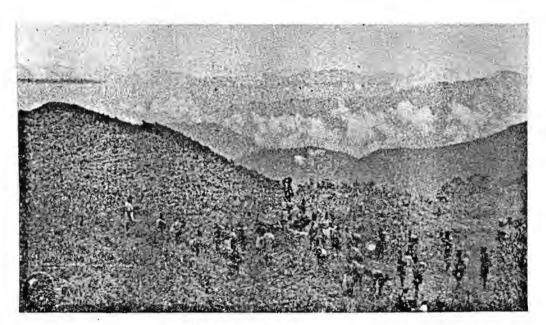

Negotiating a fast-running stream.

Bridging a river.

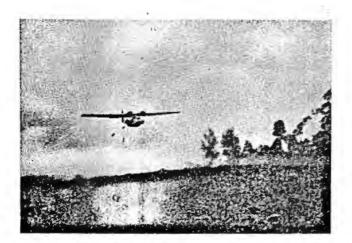

Native-built suspension bridge.

Patrol resting on typical ridge country.

Fording a river.

Patrol receives supplies by air drop.

A village is sighted in the distance in area previously selected during an air-reconnaissance as suitable for an air-strip.

First contact is made with the men and youths of the village outside the village area.

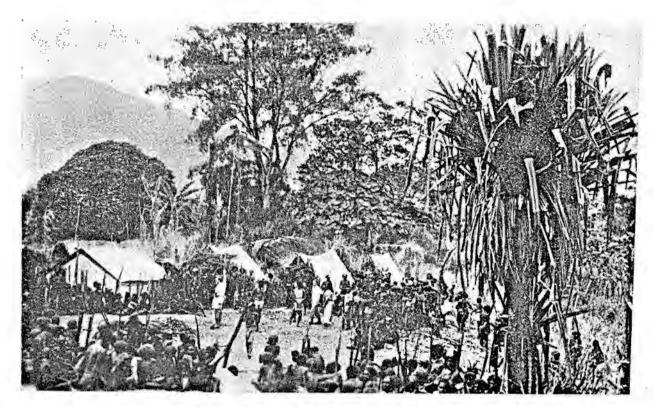

Deep trenches surrounding houses and gardens for defensive purposes—these varied from 9 to 20 feet deep and about 15 feet wide.

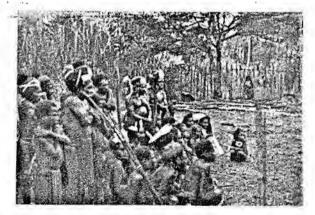

Nearing the village.

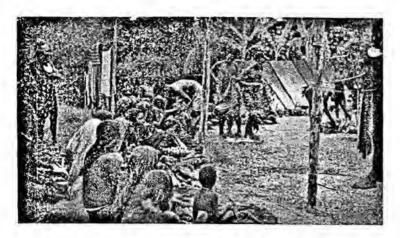

Camp is established on the outskirts of the village.

The purpose of the visit is explained to the assembled villagers.

Friendly relations are established and the women bring food which is purchased by the patrol.

Belecting a site for an air-strip.

Clearing and levelling the site.

A new station is established from where patrols will penetrate further into the restricted area.

#### Fees.

Court fees are on a moderate scale and in general are related to the amount at issue in the particular case. No fees are charged in Courts for Native Affairs.

## Legal Aid.

Under the Poor Persons' Legal Assistance Ordinance 1951 any person without adequate means to provide legal assistance for himself may on satisfying a Judge that it is desirable in the interests of justice that he should have legal assistance obtain such legal assistance. This assistance applies only to trials for indictable offences. In addition, the Crown Law Officer will at the request of the Director of District Services and Native Affairs arrange for the legal defence of any indigenous person accused of any offence, and in practice it has been ruled by the Judges that an indigenous person accused of a capital offence must, if at all possible, have legal assistance provided. In other cases members of the Department of District Services and Native Affairs field staff act as defending officers.

## Method of Trial.

The normal British and Australian procedure governing the methods of trial and ascertainment of facts is followed by the courts of the Territory.

Under the Jury (New Guinea) Ordinance 1951, provision has been made for trial before a jury of four persons, of any person of European descent charged with a crime punishable by death. All other issues both civil and criminal are tried without a jury.

The indigenous people are not subject to trial by jury for the reason that in their present state of development it would not be appropriate for civilian members of the European community to constitute a jury for the trial of a native accused of a criminal offence. It is considered that a Judge sitting alone, as Judge and jury, and having a wide experience with regard to judicial practise involving the indigenous community, will give an unbiassed verdict and decision on any case tried before him.

A male resident of the Territory of New Guinea who is of European descent, has reached the age of 30 years and is a natural-born or naturalized British subject, is qualified to serve on a jury. Persons who have been convicted of an offence which is punishable by twelve months' imprisonment are not so qualified. Clergy in holy orders, missionaries and public servants are exempt from jury service.

Since the commencement of this Ordinance four cases have been tried before a jury.

## Equality of Treatment before the Law.

One of the basic principles of English law is equal treatment for all in the courts, irrespective of nationality, and this principle is always observed throughout the Territory. No discrimination is made against any person or classes of persons in the administration of justice.

#### Penalties.

The penalties which may be imposed by the courts are stated in the Ordinances and Regulations under which the charges are laid. With one exception there is no differentiation in the application of penalties between one section of the population and another.

The exception exists in relation to certain offences committed by natives in respect of other natives. In regard to such offences it is recognized that the present state of development of the indigenous peoples is such that they ought not to be subject to the full rigour of the criminal law applicable to Europeans and a special code, namely, the Native Administration Regulations 1924, has therefore been created permitting very simple court procedure and generally allowing for reduced maximum penalties. This code also recognizes certain peculiarly native offences, the chief of which is adultery—a grave offence in most indigenous societies, but not an offence according to the introduced European law.

Capital punishment by hanging is theoretically possible where a person has been convicted of treason, wilful murder, rape or certain kinds of piracy. Each section of the community is equally liable and the penalty may be inflicted on any person convicted of any one of these offences, but it has not been carried out since the resumption of civil administration in 1945 except in relation to certain war crimes.

Corporal punishment may be imposed but is restricted in the case of adults to certain categories of serious offences. In the case of juveniles it is usually given where the alternative is to send the offender to prison. It is given with a light cane or strap; privately and under strict supervision. Sentence of corporal punishment cannot be passed on a female.

Apart from the fact that a prisoner is forced to reside for a definite term in one of Her Majesty's prisons, no such penalty as "forced residence" exists in the Territory.

Deportation of any immigrant member of the European or Asian population (but not of the indigenous population) can be ordered under certain circumstances, but only by an administrative act. Deportation as a penalty to be imposed by a Court does not exist in the Territory.

All penalties in the criminal law of the Territory are quoted as maxima and any lesser penalty may be imposed by the court (except where the penalty is death, when it may be reduced only by the Administrator). Thus in place of a life sentence, a court may impose one of a term of years, and instead of a sentence for a term of years it may impose a fine. In all cases other than where the penalty is death, the court may order the prisoner to be released and remain at liberty provided that, for a certain definite time, he is of good behaviour.

#### CHAPTER 8.

LEGAL SYSTEM.

## General.

The source of the law of the Territory is the Papua and New Guine Act 1949-1950 of the Commonwealth of Australia which, inter alia, adopts the Trusteesbip Agreement for the Territory of New Guinea under the International Trusteeship System.

The Act authorizes the making of laws by a Legislative Council, but continues in full force all other laws in force immediately before the commencement of that Act; these comprise the following classes of laws:—

- (1) Ordinances made under the New Guinea Act 1920-1935.
- (2) Ordinances made under the Papua-New Guinea Provisional Administration Act 1945-1946.

One of these Ordinances, the Laws Repeal and Adopting Ordinance 1921-1951, adopts as laws of the Territory to the extent that they are applicable to the circumstances of the Territory and not inconsistent with any other law of the Territory—

- (a) certain specified Statutes of the State of Queensland;
- (b) such of the Statutes of England as were in force in the State of Queensland on the 9th May, 1921;
- (c) certain specific Ordinances of the Territory of Papua; and
- (d) the principles and rules of common law and equity that were in force in England on the 9th May, 1921.

In addition to laws which derive their force from the above enactments, certain laws are valid in the Territory of their own force:—

- (1) Certain Imperial legislation, e.g., the Extradition Acts 1870-1935.
- (2) Certain Commonwealth legislation, e.g. Air Navigation Act.

In general the legal system whether civil, criminal or administrative adheres both in principle and practice to that pertaining in England and the Australian States.

## Native Law and Custom.

The Laws Repeal and Adopting Ordinance provides that the tribal institutions, customs and usages of the aboriginal natives of the Territory shall not be affected by this Ordinance, and shall, subject to the provisions of the Ordinances of the Territory from time to time in force, be permitted to continue in existence insofar as the same are not repugnant to the general principles of humanity.

The Native Administration Regulations provide for Courts for Native Affairs to take judicial notice of all native customs and give effect to them, save insofar as they are contrary to the principles of humanity or conflict with any law or Ordinance in force in the Territory; and for all District Officers and Patrol Officers to make themselves acquainted by all means in their power with the native customs of their district, and to reduce such customs to writing and keep a copy of them in the district office. No attempt has been made to codify such information.

# PART VI. ECONOMIC ADVANCEMENT. SECTION 1.—FINANCE OF THE TERRITORY.

## CHAPTER 1.

## PUBLIC FINANCE.

Provision is made in the Papua and New Guinea Act 1949-1950, in relation to the public funds of the Territory of Papua and New Guinea. Section 75 of the Act provides that revenues of the Territory shall be available for defraying the expenditure of the Territory and that receipt, expenditure and control of revenues and moneys of the Territory shall be regulated as provided by Ordinance and that no revenues or moneys of the Territory shall be issued or expended except under appropriation made by law and except hy warrant under the hand of the Administrator. The accounts of the Territory are subject to inspection and audit by the Auditor-General of the Commonwealth of Australia.

Section 11 of the Act provides that there shall be expended in each year upon the Administration, welfare and development of the Territory of New Guinea an amount which is not less than the total amount of public revenue raised in that year in respect of the Territory of New Guinea.

Procedures for dealing with the public funds of the Territory of Papua and New Guinea and the annual budget of the Administration are prescribed in the Treasury Ordinance 1951-1952. Annual estimates of revenue and expenditure are required to be prepared and submitted by the Treasurer to the Administrator before the beginning of the financial year to which the estimates relate. A copy of the estimates is forwarded by the Administrator to the Minister for Territories for consideration and determination of the amount of the grant that will be made available by the Commonwealth Government to the Territory. The estimates are then submitted to the Legislative Council for the Territory of Papua and New Guinea in the form of an Appropriation Bill. If the bill is approved by the Legislative Council, an Appropriation Ordinance is passed by the Council and is then presented to the Administrator for assent. If the Administrator assents to the Ordinance it comes into operation but, as in the case of all Ordinances, it may be disallowed by the Governor-General within six months of the Administrator's assent thereto.

The accounts of the Territory are kept in accordance with the provisions of the Treasury Ordinance 1951-1952 and the revenues and expenditures of the Territory of Papua and of the Territory of New Guinea are recorded separately. Where administrative costs and items of expenditure are common to both Territories they are apportioued to each Territory ou an approved basis which has been calculated to reflect the value of the services rendered to each Territory.

There are no loans or guarantees of loans current in respect of the Territory and there is no public debt.

No customs union exists with the metropolitan country or the neighbouring territory of the Administering Anthority. There are no customs agreements of any kind between the Territory of Papua and the Territory of New Guinea, and no preferences on imported goods are given in the Customs Tariff of the Territory.

The financial year commences on the first day of July and ends on the thirtieth day of June of each year. The revenue of the Administration during the year under review was derived from the following sources:—

(i) Direct grant by the (ii) Internal revenue	Government	of the	Common	wealth	of Austra	lia 	2,769,543 1,544,542
Total			••				4,314,085

A direct grant of £4,657,022 was made by the Government of Australia to the Territory of Papua and New Guinea during the year 1952-53 and of that amount the sum stated in (i) above was allocated directly to the Territory of New Guinea. A comparative table showing details of all grants made available to the Territory of Papua and New Guinea by the Government of the Commonwealth of Australia during the period 1st July, 1950, to 30th June, 1953, is shown below—

Item.	1950-51.	1951-52.	1952-53.

Total	4,549,167	5,577,741	4,926,850

<sup>.</sup> The grants are not repayable and do not bear interest.

Details of the revenue and expenditure of the Territory of New Guinea are given in Appendix IV., and are discussed in relevant sections of this Report.

The budgetary systems and procedures of Native Village Councils are prescribed by the Native Village Councils Ordinance 1949-1952, and the Regulations thereunder. For further information on native village councils, see Chapter 3, Part V. of this Report.

## CHAPTER 2.

## TAXATION.

No direct income, business or capitation tax is levied but the Administration derives revenue from taxation by way of import and export duty, licence-fees, stamp and succession duties, registration fees, land rentals, sale of timber and royalties on gold and timber. Details of revenue collected under these various items are shown in the statements of revenue in Table 2, Appendix IV.

A council established under the Native Village Councils Ordinance 1949-1952 is authorized by that Ordinance to levy rates and taxes to be paid within its area. Such rates and taxes are payable to the village treasury fund vested in the council. Information concerning the taxes levied during 1952-53 is given in Chapter 3, Part V. of this Report.

Matters relating to customs are regulated under the Customs Ordinance 1951 and the duties on goods imported into and exported from the Territory are prescribed by the Customs Tariff Ordinance 1933-1952. The rates of duties in operation at 30th June, 1953, are shown in the following Ordinances:—

- (i) Customs Tariff Ordinance (No. 2) 1941 (No. 23 of 1941);
- (ii) Customs Tariff (New Guinea) Ordinance 1948 (No. 11 of 1948);
- (iii) Customs Tariff (New Guinea) Ordinance 1950 (No. 5 of 1950);
- (iv) Customs (Export) Tariff Ordinance (No. 31 of 1951);
- (v) Customs Tariff Surcharge Ordinance 1951 (No. 1 of 1952);
- (vi) Customs (Rubber Export) Tariff Ordinance 1951 (No. 2 of 1952);
- (vii) Customs Tariff (New Guinea) Ordinance 1952 (No. 55 of 1952);
- (viii) Customs (Export) Tariff Ordinance 1952 (No. 110 of 1952);
  - (ix) Customs (Export) Tariff Ordinance 1953 (No. 55 of 1953);
  - (x) Customs Tariff (New Guinea) Ordinance (No. 2) 1952 (No. 96 of 1952);
  - (xi) Customs Tariff (New Guinea) Ordinance (No. 3) 1952 (No. 80 of 1952);
- (xii) Customs Tariff Surcharge Ordinance 1952 (No. 10 of 1952);
- (xiii) Customs Tariff Surcharge Ordinance 1953 (No. 50 of 1953).

Receipts from duty on imports and exports to and from the Territory are recorded separately from those of the Territory of Papua. Imports during 1952-53 amounted to £7,175,612 on which £585,162 was received in import duties while £385,729 was paid in export duties. During the period customs revenue rose by £40,749.

## SECTION 2.—MONEY AND BANKING.

The issue and circulation of currency are governed by the Currency Coinage and Tokens Ordinance 1922-1938. No new issue of Territorial coinage has been made since re-establishment of civil administration after the war. Australian coins and Territory coins are legal tender in the Territory.

The Commonwealth Bank of Australia and the Bank of New South Wales provide banking facilities and the normal credit facilities for agricultural and industrial development are available through these institutions.

The Savings Bank facilities offered by the Commonwealth Bank of Australia are widely availed of and branches are located at Lae, Madang and Rahaul, and agencies operated at most outstations.

At the close of the year the accounts of indigenous inhabitants numbered 33,277, an increase of 2,947, and the balance of deposits totalled £530,152, an increase of £70,187. The balance of all Savings Bank accounts at 30th June, 1953, was £1,779,090.

# SECTION 3.-ECONOMY OF THE TERRITORY.

CHAPTER 1.

GENERAL.

General Situation.

The economy of the Territory is based on primary production. The principal industries are agriculture, mining and timber.

The principal agricultural crop marketed is copra, which has been the chief primary industry in the Territory for many years. During the war coconut plantations suffered severely from neglect and damage. Rehabilitation of plantations and a considerable increase in native production has, however, brought copra production up to approximately 70,000 tons, which is very little below pre-war levels.

The production of cocoa and coffee, although not great, has shown an appreciable increase.

In the past the majority of the indigenous people have confined their agricultural activities to subsistence cropping, but as the result of advice and technical assistance given by the Administration are now turning, in ever-increasing numbers, to eash crops for which there is a ready market in the Territory.

The production of gold has played an important part in the economy of the Territory. Other mineral wealth discovered has been small and relatively unimportant.

The timber industry continues to expand and production has reached a stage where most of the local requirements can be met and, in addition, logs and sawn timber have been exported.

The relative importance of exports of the principal products in 1952-53 was as follows:—

	<del>-</del>			Quantity.	Value.
<del></del> ,	 	<del></del>			£
Copra	 		5 a	64,152 tons	4,425,057
Gold	 . ,			138,694 fine oz.	2,147,766
Coconut oil	 			3,568 tons	473,026
Cocoa beans	 			628 tons	171,876
Shell	 4 *			606 tons	87,894
Timber	 			1,994,889 super. ft.	75,833
Coconut meal	 			2,085 tons	35,463
Coffee beans	 			45 tons	30,332

Although non-native private enterprise continues to be responsible for the main development of the Territory's resources, the indigenous inhabitants are taking an ever-increasing part in economic development, particularly through their co-operatives and rural progress societies.

With the rehabilitation of the agricultural industry, attention has been given to the expansion of production and research directed towards improving the quality and yield of established crops, such as copra, rubber, cocoa and eoffee, and the introduction of new crops such as kenaf. With this objective in view, the Administering Authority is, with due regard to the present and foreseeable future needs of the indigeous inhabitants, facilitating the leasing of suitable land and providing increased technical services and information regarding agricultural conditions in the Territory.

## National Income.

At this stage of development it is impracticable to obtain adequate statistics for the purpose of ascertaining an estimate of the national income.

## Non-Governmental Organizations.

The main non-governmental organizations of an economic nature are the Chamber of Commerce in Rabaul, the Planters' Association of New Guinea, and the co-operative societies.

## CHAPTER 2.

# POLICY AND PLANNING.

Economic policy is directed to increasing the wealth of the Territory for the benefit of all the inhabitants, and for all sections of the community to play their part, with increasing participation by the indigenous inhabitants. Policy regarding the conservation and development of the national resources is dealt with in Chapter I. of Section 4 of this Report.

Plans for the development of the Territory are based on long-term policy objectives and are progressively fulfilled by means of annual work programmes which are influenced by the progressive results of research, the extent of private capital investment and the economic and social advancement of the indigenous inhabitants.

There is no separate administrative organization for the purpose of economic development other than the Land Development Board, which *inter alia* assists intending settlers to obtain land suitable for their purpose, and the Copra Marketing Board which undertakes the marketing of all copra.

The Administering Authority assists in many ways both direct and indirect. It assists directly by making a substantial grant to meet the costs of administration and for public works such as roads and bridges, wharfs and harbour facilities, electric power plants, &c. It assists indirectly by making available to the Territory the services of specialists from various technical Departments of the Commonwealth Covernment to investigate special technical problems relating to such matters as crops, stock-raising,

timber development, fisheries surveys, and geological surveys. An example of this is the assistance being given by the Australian Commonwealth Scientific and Industrial Research Organization in the survey of the natural resources of Papua and New Guinea.

Mention is made elsewhere in the relevant sections of this report of the separate activities of the technical departments of the Administration in the fields of development.

In the field of local government members of village councils prepare finance and administer local economic development programmes for their areas.

The total expenditure during 1952-53 for maintenance, capital works and services and capital purchases was £1,208,014. The bulk of this expenditure was for the purposes of economic development.

Normal banking and commercial credit facilities are available to all sections of the community, but these are not suitable to meet some of the special needs of the indigenous inhabitants. The position is being examined and a survey of credit facilities available for financing agricultural, commercial and industrial development among the indigenous inhabitants was carried out by the South Pacific Commission.

During the year under review £267,684 was paid to indigenous inhabitants under the war damage compensation scheme, making the total payments to 30th June, 1953, £1,467,684.

#### CHAPTER 3.

## INVESTMENTS.

The development of the economic resources of New Guinea calls for large capital investment and outside investment is encouraged in ways consistent with sound economic development and the welfare of the indigenous inhabitants.

Procedures for the formation and registration of companies are set down in the Companies Ordinance 1912-1926 (Papua adopted), the Companies Ordinance 1933-1938 and the Companies (New Guinea) Ordinance 1952.

During 1952-53, 25 new companies having a total capital of £2,740,050 were incorporated as "local companies", and one commercial company increased its capital by £20,000. At 30th June, 1953, 109 companies with an aggregate nominal capital of £8,623,450 were operating. The objects of the new companies include timber, trading, shipping services, plantation, general trading, building construction and slipway and salvage operations.

Five new "foreign companies" (i.e., companies incorporated outside the Territory but carrying on business in the Territory) were registered during the year and one pre-war company was restored to the Register, making a total of 54 foreign companies operating in the Territory as at 30th June, 1953. The nominal capital of the companies incorporated outside the Territory, but within the sterling area, totalled £80,761,488 and one company incorporated in Canada had a nominal capital of 6,000,000 dollars. Most of these companies operate through agents, usually a local firm, and the exact amount of capital actually invested in the Territory is not known.

Every person or firm carrying on business or having a place of business in the Territory under a husiness name which does not consist of the true surnames of all partners (together with the christian name or names or the initials thereof) is required to be registered under the Business Names Ordinance 1935. During the year 1952-53, 26 new firms were registered under this Ordinance.

Particulars of local and foreign companies and their nominal capital are given in Appendix VII.

All the companies referred to are formed from private investment with the exception of Commonwealth-New Guinea Timbers Ltd., in which the Administering Authority has subscribed £500,001 of a total capital of £1,000,000.

No statistics are available to show the interest, profit, dividends, &c., of the above companies or the extent to which profits remained or were reinvested in the Territory.

# CHAPTER 4.

# ECONOMIC EQUALITY.

Nationals of members of the United Nations other than the Administering Authority, and non-members of the United Nations, enjoy equal treatment in economic matters with nationals of the Administering Authority, but no company having for its object or one of its objects the engaging in agricultural, pastoral or forestry pursuits, mining for coal or iron ore, or aerial navigation may be formed or registered unless at least two-thirds of the shares issued by the company are held by or on behalf of British subjects.

## CHAPTER 5.

## PRIVATE INDEBTEDNESS.

There is no problem of private indebtedness among members of any section of the population. Usury is not practised in the Territory.

## SECTION 4.—ECONOMIC RESOURCES, ACTIVITIES AND SERVICES.

## CHAPTER 1.

#### GENERAL.

## Policy and Legislation.

Policy with regard to the natural resources of the Territory is based on the preservation of those natural resources on which economic advancement depends, in particular land and forests; and the development, improvement and increased production of crops and products suitable for Territory requirements and for export.

The executive responsibility for the implementation of governmental policy rests with the Departments of Agriculture, Stock and Fisheries, Forests and Lands, Surveys and Mines, working in close conjunction with the Department of District Services and Native Affairs and the District Administration.

Some limits have been placed on this development in order that it shall not be injurious to native interests and so that, in the long term, it will not set up barriers to native participation in the enjoyment of the life and wealth of their own country.

The chief limits are set by the administration of land policy. The established policy is that no land can be acquired from the indigenous people except by the Administration, which may then make it available on leasehold to the settler. Before the land is acquired the Administration satisfies itself that the owner is fully willing to sell and that the land is surplus to their present and future foreseeable requirements.

To facilitate the carrying out of this policy a Native Land Commission and a Land Development Board have been created. The functions of the first-named body is to discover more exactly native ownership in land and to register it; and the functions of the second is to assist applicants to obtain land suitable for their purpose.

## Production Distribution and Marketing.

Australia provides a ready market for an appreciable portion of the exportable surplus of Territory production, which at present is mainly copra, timber, cocoa, coffee and peanuts. The Territory of Papua and New Guinea is accorded preferential tariff treatment by Australia and all Territory produce is exempt from primage duty. Territory produce normally pays the lowest rate of duty applicable under the Australian Tariff and for several commodities special rates apply which are lower than the British Preferential rates. These special rates, which are mostly free, are almost exclusively for Territory produce. Items admitted free include—

Copra.

Cocoa beans.

Coffee, raw and kiln dried.

Peanuts, kernel and unshelled.

Copra production is the staple industry of New Guinea.

Following the Japanese invasion of the Territory in 1942, production almost ceased. In 1943 the Australian New Guinea Production Control Board was established to secure the maximum supplies of copra and other products during the war. The Board took over coconut plantations, in areas not occupied by the enemy, and operated them on behalf of the absent owners. Thus production was resumed and damage from neglect avoided. With the end of hostilities and the release of districts from military control, the Board assisted owners progressively to reoccupy plantations and themselves resume production.

Copra plantations in the Territory suffered extensive war damage. It is estimated that about 30 per cent, of the coconut palms were destroyed and damage to buildings and equipment on plantations was also high. Special provision was made to include Territory property owners in the Australian war damage compensation scheme.

Compensation received for private chattels, crops, plant, live-stock, huildings and palms provided the capital necessary for the reoccupation of many plantations after the surrender of the enemy. In addition, an ex gratia subsidy was granted for clearing the heavy tropical secondary growth consequent on the years of neglect.

The remarkable progress made with the rehabilitation of the copra industry is shown by export figures for the year, viz., copra 64,152 tons valued at £4,425,057, coconut oil 3,568 tons (which equals about 6,000 tons of copra) valued at £473,026, and coconut meal 2,085 tons valued at £35,463.

Under a long-term agreement between the United Kingdom Ministry of Food and the Commonwealth of Australia, the United Kingdom Ministry of Food has agreed to purchase for nine years ending in 1957 the total quantity of copra available for export from the Territory after meeting the requirements of the Territory and the requirements of the Australian market for processing for home consumption. Provision also exists within the agreement for sales of copra to be effected to other countries if mutually agreed upon by both parties.

The Government in 1952 placed the marketing of the Territory's main export crop on a firm basis by replacing the Production Control Board, set up under National Security Regulations, with the Papua and New Guinea Copra Marketing Board, established by the Papua and New Guinea Copra Marketing Board Ordinance 1952. Membership of the Board includes representatives of producers.

Representations by the Government on behalf of the producers resulted in an increase from 1st January, 1952, of just over £14 per ton in the price of copra sold under the agreement to the United Kingdom. This included the maximum increase permitted by the agreement for a year to year variation and a special additional increase of about £7 5s, per ton which the Government was able to obtain. The same price of £81 5s, per ton f.o.b. was secured for 1953, despite conflicting reports and views on the future of world free market copra prices. The consent of the United Kingdom Ministry of Food has been obtained from time to time to advantageous free market sales outside the agreement, from which the producers have received substantial cash benefits.

A private company opened a copra crushing mill near Rabaul in October, 1952, and satisfactory arrangements were made for the supply to the United Kingdom of oil from 15,000 tons of copra per annum.

The price paid for copra delivered to the Board ex coastal ships' slings, or in the cases where road transport is used, at warehouse door, is arrived at after deducting customs duty, handling and other internal charges.

Attention has been paid to the quality of the product, and as well as price incentives to encourage production of higher grades, legislation providing for official inspection and grading has been passed and is being implemented.

Export of cocoa beans has increased rapidly, the total for 1952-53 being 628 tons, which is an increase of 153 tons over 1951-52.

To control the growing of cacao, in particular to ensure that proper precautions are taken against disease and to eliminate uncontrolled planting, the Cacao Ordinance was passed in 1952.

Except for small quantities for local use, almost all production is exported, the main market being Australia.

## Stabilization.

In 1946-47, a levy was imposed on all copra exported from Papua and New Guinea for the purpose of creating a stabilization fund, which at the 30th June, 1953, totalled £1,713,812. Apart from this, there are no arrangements designed to protect producers against any adverse price fluctuations or to create financial reserves for the promotion of improvement of economic development.

## Private Corporations and Organizations.

The principal private organizations engaged in the Territory in respect of the principal economic resources, activities and services are as follows:—

## Plantations-

Buka Plantations and Trading Co. Ltd. Burns Philp (N.G.) Ltd. Choiseul Plantations Ltd. Cottees Passiona Ltd. Edgell and Whitely Ltd. New Guinea Co. Ltd. New Guinea Estates Pty. Ltd.

# Mining-

Bulolo Gold Dredging Ltd.
Enterprise of New Guinea Gold and Petroleum Developments Ltd.
Gold and Power Ltd.
Koranga Gold Sluicing Ltd.
New Guinea Goldfields Ltd.

## Timber-

Commonwealth New Guinea Plywood Timbers Ltd. Chipper, J. L., and Co. Ltd.

## Shipping-

Burns Philp and Co. Ltd. New Guinea Co. Ltd.

## Monopolies.

The following public monopolies have been established:-

- (a) Papua and New Guinea Marketing Board.—This Board controls the export and sale of all copra exported from the Territory.
- (b) Posts and Telegraphs.—The postal and telecommunication services are reserved to the Administration, the latter being operated in association with the Overseas Telecommunications Commission of Australia.

## Co-operatives.

The co-operative movement, which offers a definite and important place in the overall development and economic advancement of the people of the Territory is being encouraged and assisted.

The desire for economic advancement amongst the indigenous inhabitants is not of recent origin, but has been present, in varying degrees, since the first contact with Europeans. The necessity to obtain money to acquire European goods had led to active participation in various spheres of activity, possibly the most common of which was the hiring of their labour to commercial and Government interests. Although other types of activity were also undertaken this was due not so much to their initiative but rather to the foresight of Administration officials.

The role played by the Administration was chiefly to ensure that plantations snitable for future native development were planted and the action then taken is responsible for the existence of considerable areas of native-owned coconut groves.

Whilst statistical data would indicate that neither of these two activities provided more than a minor amount of income, both played an important part in the development of the present-day economic trend. The hiring of labour to plantation and other private non-native interests gave the natives a certain familiarity and technical skill in handling economic crops, whilst a primitive agricultural background and the existing native plantations on the other hand provided the material to which training could later be applied.

It was not until after the Pacific War that any over-all trend towards economic activity beyond the primitive forms already mentioned was noted. Once this trend developed it was made manifest by a spontaneous movement towards the establishment of private businesses hased on company or individual lines. This new trend was developed by the Administration through the medium of the Co-operative Section of the Department of District Services and Native Affairs and the guidance of this section has enabled some of the changes in the economic life of the native people which have since occurred. The basic fact beyond the change is that more and more natives are prepared to use their time and energy to produce more cash crops at the expense of leisure time.

The Co-operative Section.—The Co-operative Section of the Department of District Services and Native Affairs covers both the Territory of Papua and the Territory of New Guinea under the central authority of the Registrar of Co-operative Societies. Under the Registrar, two Assistant Registrars (one for each Territory) control a staff of European Co-operative Officers; Assistant Co-operative Officers and indigenous Co-operative Inspectors.

By far the most important feature of activities of the section during the year has been the consolidation and expansion of societies already in operation. There has been very little extension into new types of ventures during the year and the producer activity is almost entirely centred on the production of copra. The weakness of this dependence upon monocultural activity is fully appreciated and every effort is being made to stimulate interest in other forms of agriculture. Activities under consideration include eitrus, rice production, and cocoa production.

Registration.—The basic work necessary for registration has been earried out in nearly all districts and at the close of the year sixteen societies and one association had been registered under the Native Economic Development Ordinance 1951-1952. One society has been registered under the Co-operative Societies Ordinance 1950.

Legislation.—The Co-operative Societies Ordinance 1950 gives the Registrar of Co-operative Societies statutory authority in matters relating to registered co-operative societies. This Ordinance is most comprehensive and it has so far been possible to raise only one indigenous society to the high standard nocessary for compliance with its provisions. The legislation is available for registration of indigenous and non-indigenous societies. The provisions of the Co-operative Societies Ordinance 1950 prohibit the use of the word "Co-operative" by any person other than a society registered under that Ordinance. Accordingly, the Native Economic Development Ordinance 1951-1952 has been introduced for the purpose of legally providing for the operations of those forms of group economic activity which, while they may become capable of developing into orthodox co-operative societies at a later stage of their development, cannot be brought within the provisions of the Co-operative Societies Ordinance 1950 at the present time.

Under the simple provisions of the Native Economic Development Ordinance 1951-1952 the Registrar of Co-operative Societies is appointed Registrar of Native Societies and is given statutory authority of a very wide nature in all matters pertaining to societies registered under the Ordinance.

The effect of the two Ordinances has been to provide the means of legalizing, regulating and co-ordinating native economic development throughout the Territory.

Society Organization.—The present form of society may be subdivided into primary and secondary organizations. The primary societies consist of marketing and consumer retailing bodies which deal direct with individual members. Where both activities are combined in one society this is termed a dual purpose primary. This dual purpose activity covers the majority of co-operative organizations.

Secondary organization is represented by associations (of societies), that is, groups of societies joined together to effect an amalgamation of their purchasing power in retail consumer store work and their marketing volume in relation to agricultural production. A major benefit to be derived in both instances is the provision of transport facilities.

The main function of an association is to perform for component societies various functions which single societies cannot fulfil adequately or economically. The allotment of these functions is decided in the light of ruling circumstances, but individual societies are encouraged to retain a high degree of autonomy.

Society Finance.—Primary societies depend on share capital subscribed by members, and the units of share capital are usually kept equal within a society, mainly to assist the indigenous people in better understanding the "one man—one vote" principle of co-operation. The raising of capital is usually not difficult. Share capital is further augmented by accrued surpluses which form part of the working capital until distributed as rebate at the end of the year. Such distributions do not necessarily mean a loss of funds available to the society because it has been observed that in every instance the distribution of surplus has resulted in a voluntary increase of share capital. This trend has been so strong that in many cases the surplus distribution has been transferred directly as additional shares.

The secondary association depends on share capital subscribed by member societies; this capital is in reality that which was subscribed by the individual members to the primary. The effect of this arrangement is to concentrate the individual's share subscription from a wide area into one central association. This affects the ready-cash position of the primary, but it does not hamper the primary's activities since these are all channelled through the association on a credit basis. The dual-purpose nature of the primaries preserves a reasonable balance between produce marketed and retail goods purchased, so that eash adjustments are rarely necessary.

There have been no loans made to any society from any source although adequate trade credit facilities are available from commercial companies. The banks will also grant normal credit facilities to societies should they be required.

Society Operation in General.—The operation of societies shows a relatively high standard of efficiency in view of the semi-literate state of the members. From the point of view of efficient business practices the majority of societies have room for improvement and there is still too much dependence on the assistance of the Co-operative Officer. These failings will be overcome by education and experience.

Co-operative Education.—The Co-operative Section has maintained a continuous educational programme in the limited sphere of business principles, bookkeeping and co-operative techniques.

District Activities.—The following is a résumé of co-operative activities in each district during the year:—

New Britain.—The Assistant Registrar for New Guinea has his Head-quarters at Rabaul. In September, 1952, an Assistant Co-operative Officor was posted to Kandrian on the south coast of New Britain. Four copra-marketing societies had been organized in the Kandrian area and a survey completed in the Talasca sub-district indicates that the organization of copramarketing societies can be expected.

In the Gazelle Peninsula, two new societies commenced operations towards the close of the year—one consumer retail store and one dual purpose copra marketing-consumer store.

Bougainville.—All twelve societies in the Bougainville District are of the dual purpose copra marketing-consumer retail store variety and these are concentrated at the northern end of Bougainville Island, on Small Buka and other nearby islands.

An association of societies has been formed in Buka Passage.

New Ireland.—Seventeen societies operating in New Ireland are engaged solely in copramarketing activities and only four are of the dual purpose marketing-consumer retail store type.

The association of societies in New Ireland has 21 member societies and each society nominates one delegate to the association. These nominees elect from within their own ranks five directors, who control the activities of the association. The association also fills the role of banker for component societies, there being no branch of a trading bank in Kavieng.

Madang.—An assessment has been made of the economic potential on Karkar and Bagabag Islands and nine societies have been organized to market copra. As soon as retail storemen have been trained, the organization will change over to the dual-purpose type of society.

Manus.—The first society in Manus District is in process of being organized. This society will be engaged in the purchase of copra and shell from members and in the retailing of consumer goods.

Sepik.—Two societies, formed at Walis and Tarawai Islands, have leased the coconut plantations on those Islands which they hope eventually to purchase.

Statistics.—Comparative statistics for the Territory over the past three years are set out in the following table:—

	Year,	Sorieties.	Members.	Cupital.	Store Turnover,	Copra Production.	Other Production.	Total Turnover,
1951 1952 1953		 18 29 50	8,253 11,631 20,646	£ 5,962 24,623 61,319	£ 6,519 20,000 28,436	£ 8,660 17,250 90,113		£ 15,179 37,250 118,549

#### CHAPTER 2.

## COMMERCE AND TRADE.

#### General.

There is increasing participation by the indigenous inhabitants in the commercial life of the Territory. Increased trading has been stimulated by the organization and encouragement of co-operatives and the development of cash crop farming. The bulk of commerce and trade is however, still conducted by European enterprise and to a smaller extent by the Asian section of the community.

The bulk of manufactured goods and a considerable quantity of prepared foodstuffs are imported into the Territory and the normal method of distribution is through importers, wholesalers and retailers in centres of population or through agencies and by mail orders in more scattered settlements. There is also considerable direct trade between private individuals and commercial enterprises in the Territory and business houses in Australia.

The indigenous inhabitants are for the most part self-sufficient in the production of food and domestic requirements, but new demands have been created by the Administering Authority's efforts to improve the standard of nutrition, health, village hygiene and general standard of living. These demands are met through normal commercial channels in areas where indigenous inhabitants are in close contact with the Administration and where each crops and trading have been introduced into their economy.

There is no restriction on the distribution of foodstuffs, piece goods or essential commodities in the Territory.

# Control of Prices.

Price control in the Territory exists under the *Prices Regulation Ordinance* 1949. A list of goods declared under the Ordinance was given in the *Papua and New Guinea Gazette* No. 2 of 10th January, 1952, whilst amendments to correct certain anomalies were published in the *Papua and New Guinea Gazettes* No. 56 of 9th October, 1952, and No. 58 of 16th October, 1952. There has been no extension of prices control during the year under review.

#### External Trade.

The external trade of the Territory consists of the export of agricultural and other types of primary and processed products, and the import of manufactured products, machinery and certain classes of foodstuffs. The range of items is indicated in tables in Appendix VII.

During the year under review the total of exports and imports amounted to £15,667,008 which was an increase of £995,025. Imports decreased by £978,490 and exports increased by £1,973,515 as shown below—

							1951–1952.	.1952-1953.
Imports				••		 	£ 8,154,102 6,517,881	£ 7,175,612 8,491,396
	•					<u></u>	14,671,983	15,667,008
Excess of imports Excess of exports	••			• •	:.	 	1,636,221	1,315,784

The exports of local origin of £7,515,646 showed an increase over the previous year of £1,692,228. The principal items and the value of the increases were as follows:—

						£
Cocoa beans			 	• •	• •	 24,373
Coconuts			 			 2,343
Coffee heans		• •	 • •		• •	 19,984
Copra	••	• •	 			 835,674
Gold		• •	 			 440,365
Peanuts	.,		 			 19,985
Silver			 			 2,876
Shell	• •		 			 10,592

Coconut meal and coconut oil valued at £35,463 and £473,026 respectively are new products, exports of which commenced in February, 1953.

Items of export which showed a decrease and the amount of the decrease were desiccated coconut (£101,055), logs (£41,238), sawn timber (£14,861), copra refuse (£20,424) and coconut fibre (£2,546).

The value of imports declined by 12 per cent. from £8,154,102 in 1951-52 to £7,175,612 in 1952-53. The following were the principal classes of imports in 1952-53 with comparative figures for 1951-52:—

			 		1951-1952— Imports.	1952-1953Imports.
				) 	· £	£
Foodstuffs of animal origin			 		1,177,614	874,717

			 		121,370	84,570
			 1.4		123,630	120,310
			 		121,450	105,464
			 		137,986	110,491
			 		192,014	128,396
Drugs, chemicals and fertilizers			 		231,437	168,331
Miscellaneous			 		<b>3</b> 56,160	382,573
Total			 		8,154,102	7,175,612

The range of items included in the above table together with their respective values and countries of origin is indicated in Table 4, Appendix VII.

All receipts from imports and exports to and from the Territory are recorded separately and no customs union exists with the metropolitan country or with the neighbouring territory of the Administering Authority. No customs agreements of any kind have been entered into between the Territories and no preferences on imported goods are given in the Customs Tariff of the Territory.

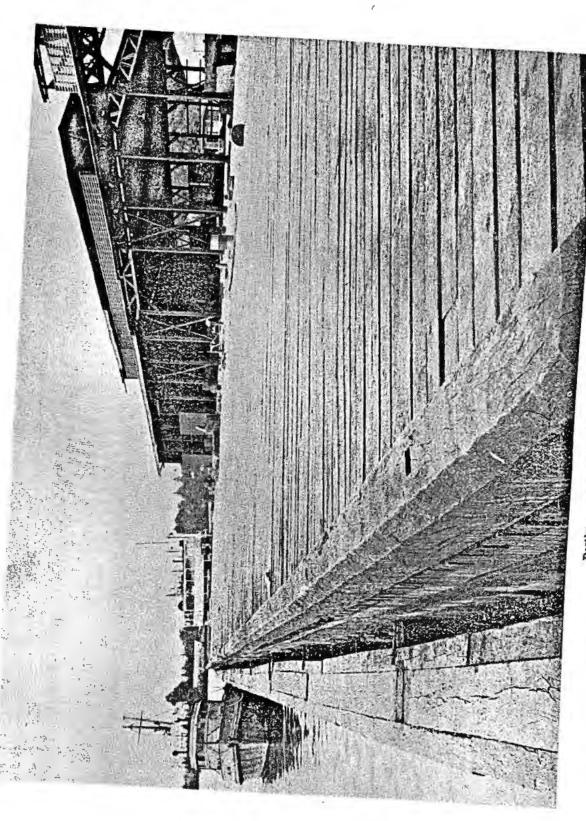

A copy of the Customs Tariff of the Territory has been made available in documents submitted to the Secretary-General of the United Nations.

## Import and Export Restrictions.

Import restrictions came into force on 24th March, 1952, in order to conserve supplies of foreign eurrency. These restrictions, full details of which were given in the 1951-52 Report were relaxed to the following extent as from 24th March, 1953:—

Category "A"—which relates to items such as mining machinery, structural iron and steel, galvanized iron, metals, books and periodicals—remains at 100 per cent. of the 1950-51 level, but this level may be exceeded if essentiality and necessity are shown.

Category "B"—which relates to items such as motor vehicles, apparel and attire, alcoholic liquors, manufactured tohaceos, cigarettes, textiles, manufactured fibres, household utensils, paper and paper manufactures—quota increased from 75 per cent. to 100 per cent. of the value of 1950-51 imports, with the exception of ale and other beer, porter, eider, perry, gin and whisky, which remain at the former level.

	•	

Category "C"—which relates to goods of non-essential character and to foodstuff and other items readily obtainable from Australian sources—quota increased from 20 per cent. to 50 per cent. of the 1950-51 level.

#### Subsidies.

There are no direct or indirect subsidies designed to stimulate imports or exports of any particular category.

## CHAPTER 3.

LAND AND AGRICULTURE.

(a) LAND TENURE.

Classification of Land.

The whole of the lands in the Territory are classified as follows:--

- (a) Native-owned land.
- (b) Land which is owned in freehold by non-indigenous inhabitants.
- (c) Administration land, including land leased to non-indigenous inhabitants.
- (d) Ownerless land.

#### Native-owned Land.

The importance of land to the indigenous people and the necessity of protecting their ownership rights have always been recognized by the Administering Authority and provisions to protect these rights and regulate dealings in land are included in all the land laws of the Territory. The most important safeguard is the provision that native-owned land may be alienated only by the Administration.

All unalienated land is deemed to be native-owned until proved otherwise. This is designed to protect the interests of the indigenous inhabitants until such time as the position regarding ownership of land is clarified by the Native Lands Commission. Any land of which there are no owners or ownership cannot be proved to the satisfaction of the Commission will be taken possession of by the Administration.

Provisions for the investigation and recording of native rights and interests in land and the establishment of a register of native-owned lands are contained in the Native Lands Registration Ordinance.

The Chief Commissioner under the Ordinance was appointed in July, 1952, and one Commissioner in December, 1952. Arrangements are being made for the appointment of additional Commissioners.

The policy is to finalize registration of native-owned land to those Districts where the main agricultural development has taken place, e.g., New Britain and New Ireland; and in the densely populated areas of the Highlands where the extension of Administration control has enabled tribes to move back to their hereditary lands from which they had been driven by tribal warfare.

There is considerable variation in indigenous systems of land tenure in different parts of the Territory. It is directly related to the type of social structure possessed by the particular community. Rights to land, for instance, will be affected according to whether a particular group is patrilineal or matrilineal. If there is a clan structure the members of the clan have important rights in common, that is, as a corporate group, though this is not invariably the case. As a member of a joint family, a clan, a village or some larger group, a native possesses certain rights to land in common with other members of the same group. Whilst there are a great variety of systems the underlying principles are similar in each case.

The following is an example of land tennre of an indigenous community.

Social Organization.—The group consists of five villages which are situated within a common named territory. The territory is approximately 16 square miles in area; its boundaries, fixed in relation to certain streams and other natural features, are known to the members of the group and to the members of other villages beyond the boundaries. Before Administration control was established, the members of the group regarded all persons who resided beyond these boundaries as enemies or strangers, regardless of similarities of language and culture, and constant raiding was a conspicuous feature of native life.

Each village consists of soveral unnamed, patrilineal, local clans. All those persons who trace descent through males to a common male ancestor, five or six generations removed, are considered true blood relatives and cannot intermarry. Each local clan is a corporate group, combining for certain important activities and baving certain common rights, and several clans live together in a single large settlement (village) but each clan tends to occupy a particular portion of the larger unit. The clans which comprise any one village are related by various ties and traditions of co-operation, and each village also acts as a corporate group on some occasions. Similarly, there are ties of various kinds between certain villages within the district group.

The right to live within the group and in a particular village is conferred by hirth into the patrilineal clan. Membership of a patrilineal clan also brings rights to utilize land, rights which cannot be taken away unless a person is banished (an event which is rare).

Food and Types of Land.—The group are agriculturists, though hunting is also an important activity. The land consists of four main types; forested hillsides (used mainly for hunting and for the largest kinds of yam gardens); kunai hillsides (nearer to the villages than forested areas; used for cultivated crops of all kinds); plain land immediately below the foot hills (a narrow, well-watered strip surrounding the villages; used for hananas and other cultivated crops, excluding yams) and the kunai plain proper (by far the most extensive area; important primarily as a source of wild game). Different rights are associated with each type of land.

Building Rights.—Every married male in the group has the right to erect a house in the village where his fellow clansmen reside, but his fellow clansmen must approve of the site chosen in the village and young men build where their clan elders suggest. He has also the technical right to erect a house on any of the portions of land which are cultivated or claimed by his clan, or wherever his banana gardens are situated. The members of one village have not the right to build within another village, though under certain circumstances they may be permitted to do so.

Hunting Rights .- Forested hillsides and the kunai plain are the principal hunting areas.

The kunai plain is by far the largest portion of the territory, and is subdivided into village sections. The boundaries of these sections are known and are fixed in relation to certain streams, trees, and other natural features. The members of any particular village all possess equal rights to their own village area. Any member of a village may hunt at any time on his village area, but should the game cross to the area of a neighbouring village he has no right to follow it and hunt there.

Uncultivated forest areas are similarly divided into village sections (with fixed houndaries), and any member of a particular village has the right to hunt within the area claimed by it. He cannot hunt on areas claimed by other villages. Timbor is scarce and may be taken only from areas claimed by one's village. Edible wild products, however, may be collected by any one from any section of land, irrespective of the fact that he belongs to a different village to that which lays claim to the area.

Cultivation Rights .- Cultivation rights constitute the most complicated system of all.

The plain land immediately helow the foot bills is utilized almost exclusively for banana plantations and is divided into a number of named sections whose boundaries are once again fixed in relation to certain natural features, streams, trees, &c. The important group where rights to banana land is concerned is the patrilineal local clan. Each clan possesses exclusive cultivation rights to a number of these named areas, the number varying from clan to clan, though rights to three such sections appear to be average. Membership hy hirth in a particular clan brings the right to make banana plantations on any of those areas to which the group lays claim.

The right to cultivate strips claimed by a particular clan is conferred by birth into that group and cannot be taken away. Technically, a man has the right to make gardens anywhere and on any strip claimed by his clan. In practice, however, his choice is limited and determined by several factors. In the first place, most of the land in some areas may be already under cultivation. Secondly, he tends to make his gardens on strips where his nearest patrilineal kinsmen (his father, brothers, &c.) have their gardens, thus ensuring that there is generally some one to look after his produce during his absence. The sections claimed by a particular clan are generally scattered over a considerable area, but the areas claimed by all the clans of any village tend to form a contiguous block, and largely because of this it can be said that each village claims and cultivates the land in its immediate vicinity.

The kunai hillsides are also divided into named sections, and each clan claims exclusive cultivation rights to several of these areas. This type of land is utilized for the cultivation of root crops, taro, yams and sweet-potatoes. These gardens, unlike banana plantations, are a communal undertaking. The garden is constructed by a number of people and the cultivated area is then divided into a number of lots which are allocated to the heads of particular households. Again, the initiation of yam gardens, the choice of site, and the arranging of the necessary labour, &c., is a matter for consultation between the elders of clans and snb-clans. Younger members of the group take no part in these arrangements and their choice is therefore determined by others. Taro and sweet-potato patches are sometimes constructed individually, but once again, if the clan elders do not approve of a chosen site, the gardener will not be permitted to cutivate there.

The Right of Inheritance.—The various rights referred to are inherited patrilineally. At birth, a person is born into a particular clan and village and together with the other members of these groups he has equal rights to all the areas which are claimed by them. But certain special rights of inheritance are associated with cultivated land.

For instance, banana plantations, unlike yam gardens, are not abandoned after the first harvest, and remain of economic value for as long as seven years. Consequently, when a man dies his hanana plantations pass directly to his sons. It is not the land, however, which is inherited by them, but only the use of the land and its produce for as long as the gardens retain their economic value. When the garden is eventually ahandoned, the land passes again into the patrilineal group, any member of which may make

a garden there if he so desires (subject to the limitations noted above). A person's rights in yam gardens also pass to his sons, but since these gardens are abandoned after the harvest, they remain in the son's possession for only one season. The rights, together with those belonging to other people, then revert to the clan or village as the case may be. It is the right to the produce alone which is inherited in both cases.

Coconut groves and certain trees (breadfruit) also pass from father to son, and as these retain their economic value for a very long time, they may be handed down through several persons. Once again, however, it is not the land on which they stand which is inherited. When the groves are eventually abandoned, the land reverts to the patrilineal clan.

The Right of Atienation.—There is no precedent for sale of land, and land has no native price (a common feature throughout New Guinea).

A sister, who normally lives in some other village (marriage being patrilocal), may be given land by her patrilineal group during her lifetime, but her children have no rights there; they inherit their rights from their father. Should they be orphaned, however, a brother frequently takes his sister's children to live with him. If the members of the clan are agreeable, they may, under certain circumstances, be taken into the clan as members and may be given equal rights with the other members. Generally, they are compelled to return to their father's village, where they have land rights, as soon as they reach maturity.

Provided the elders agree, a particular clan may allow the members of an affiliated clan (in the same or a neighbouring village) to cultivate on its land. It is only a temporary arrangement, and the clan may withdraw the right at any time. Moreover, even if the clan which claims the land is willing to make the arrangement, the village as a whole may express disapproval. In this case the clan which has expressed its willingness to accommodate the affiliated group will withdraw its permission.

Land Titles.—New Guinea communities always possess an equivalent of title deeds to land. In this group a native has only to prove his descent from a particular male ancestor to be accepted as a full member of the same descent group, with equal rights to all those areas claimed by that group. Membership of this group also gives him equal rights with other claus of the same village. Land rights are usually expressed in the phrase, "It is not land of other people—our ancestors lived and worked here before; their coconut palms are standing yet".

## Freehold Land.

There are 519,380 acres of freehold land in New Guinea owned by private non-indigenous inhabitants. This originated almost cutirely during the German administration before World War I. Although the Land Ordinance of New Guinea provides for the granting of freehold estates in land, the policy of the Administering Authority is to grant leases only.

#### Administration Land.

This consists of-

- (i) land to which the Administration succeeded the German Fiscus in title following the acceptance of Mandatory powers by the Government of the Commonwealth of Australia after World War I.:
  - (ii) laud purchased by the Administration from native and non-native owners;
- (iii) land acquired for public purposes by the Administration; and
  - (iv) land of which upon inquiry it was found that there appeared to be no owner and was taken possession of by the Administration.

The last is further explained under the heading of "Ownerless Land". Leases of Administration land totalling 189,351 acres have been granted mostly for agricultural purposes. Particulars are given in Appendix VIII.

The total area of alienated land is approximately 1.8 per centum of the area of New Guinea.

## Ownerless Land.

Section 11 of the Land Ordinance provides that the Administrator may from time to time by proclamation declare that any land which has never been alienated by the Administration and of which there appears to be no awner shall, unless good cause is shown to the contrary, within the period to be specified in the proclamation, become Administration land. About 39,150 acres have been possessed by the Administration under this provision. There is no doubt that additional areas will be acquired by the Administration as the work of the Native Land Commission progresses.

## Registration of Titles.

A system of registered titles and interests in alienated land is provided for under the Lands Registration Ordinance 1924-1951. The New Guinea Land Titles Restoration Ordinance 1951 enables the compilation of new registers and official records relating to land, mining and forestry, in place of those lost or destroyed during the war of 1939-45.

## (b) AGRICULTURAL PRODUCTS.

# Types and Methods of Agriculture.

Most of the indigenous inhabitants are agriculturists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, paw-paws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits, and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is usually cut largely from naturally occurring stands. In other parts of the country small areas are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest.

In many localities they follow a farming system known as "Bush fallowing rotation". The inhabitants of each village have, at any one time, a number of distinct and separate cleared garden areas in the land surrounding the village. The garden clearings may be located some miles from the village and are not usually contiguous. Each garden area may be made up of a number of distinct plots owned by individuals or families. The number of garden clearings (and their area) attached to each village depends on the size of the village and the fertility of the land.

The method of cultivation followed is for the jungle trees to be felled and undergrowth cleared with axes and knives, the larger trees being usually left standing. The timber and foliage is allowed to dry out and then burnt. In some localities there is a little cultivation before the crops are planted, and root vegetables are placed in holes dug with a stick. In other places, however, there is careful preparation of the soil and weeding is done while the crops are growing. After harvesting, a new area of land is selected, cleared, burnt and planted. On rare occasions only are two consecutive crops planted in the same area. They return to the first area only for the purpose of harvesting fruit from trees, such as paw-paw and banana, that may have been planted in the garden, but these are soon submerged in the new growth which quickly appears. The plot is allowed to lie fallow for a period varying from seven to ten years or even longer, depending upon the local population pressure. Ultimately they return to the original plot and clear, burn and plant again. The cycle continues year by year throughout the agricultural land belonging to the village.

The foregoing is a broad generalization of the method followed. There are many variations, however. In some localities, where soil fertility is high, the same garden areas may be kept in productive cultivation for three to six years, or longer. In parts of the highlands districts the village system of gardens found elsewhere in New Guinea is not followed, and individuals cultivate their own single farm plots.

A system is practised on grasslands in some of the fertile areas, such as alluvial valley floors, and on Manus, of mulching with material from clearing the garden area, instead of burning. Primitive irrigation systems are found in a number of localities, the principal methods being by contour ditches or by bamboo piping. The contour levels are determined by eye, and their accuracy is noteworthy.

Gardening is done by both the men and women, with the division of work usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally the clearing of the land is done by the men and the harvesting of the crops by the women. However, other work, such as cultivating, planting and weeding, may be done by either men or women according to the customs of the particular village or area.

Generally speaking, prior to the war, the indigenous people were not interested in producing for any purpose other than to provide their immediate food and other requirements; and almost the entire commercial agriculture was concentrated in the coastal regions and restricted to the production of copra. However, the advice and assistance given by the Administration has brought about a marked change and they are now taking a keen interest in the production of cash crops of existing and new varieties, and improved methods.

The programme of agricultural development has three aspects-

- (a) the improvement in the agricultural methods followed by the indigenous population, with the aim of increasing the total volume of production and the nutritional level of the people;
- (b) the increase in production of certain commodities (e.g., rice, meat, dairy products, and certain fresh fruit and vegetables) which are at present imported into the territory; and
- (c) the increase in production of certain commodities for export (e.g., copra, cocoa, tea, sisal, manila herap, kenaf and peanuts), and involves—
  - (i) making land available for new settlement,
  - (ii) construction of roads to the land made available,
  - (iii) encouragement of capital investment in agricultural industries,
  - (iv) provision of technical agricultural advice to farmers,

- (v) teaching the indigenous people the value of new crops and varieties, and improved methods,
- (vi) provision on easy terms of simple tools and equipment to native agriculturists,
- (vii) intensification of research and investigation work by the Department of Agriculture,
- (viii) the increase in the staff of the Department of Agriculture, and
  - (ix) carrying out fundamental surveys of land resources, particularly to assess agricultural and pastoral possibilities.

## Agricultural Experiment Stations.

The Department of Agriculture, Stock and Fisheries maintains three agricultural experiment stations, Keravat (lowlands), Aiyura (5,500-6,000 feet) and Garaina (2,200 feet) to carry out plant industry research. These stations also act as centres for agricultural extension in all phases of crop husbandry and foster by demonstrations, per se, and through attached agricultural officers, the development of agriculture in various districts.

Research and experimentation, at these three stations, involves land use studies, soil fertility problems and their elucidation and experiments of an agronomic nature with cocoa, tea, manila hemp and other fibres, cinchona, coffee (Arabica and Robusta), native food crops, fodder crops, cover crops and crops introduced for trial to determine their suitability for European and indigenous production.

In order to keep abreast of modern agriculture a plant introduction station is maintained and introduction of new crops is continually being made. Laboratory facilities are available to study aspects of quarantine control and permanent nurseries have been established to enable observations of introduced plants to be made.

The Department of Agriculture, Stock and Fisheries employs Agricultural Extension officers whose functions are to keep agriculturalists apprised of the latest findings in crop husbandry, up-to-date cultural practices and to inform them of the most suitable methods to be used.

Lowlands Agricultural Experiment Station, Keravat.—The functions of this station, which is the main lowland experiment station and the laboratory centre for the whole of northern New Guinea, cover a wide range of activities including: demonstration and testing crops, vegetative propagation, progeny trials, yield and costing trials, and seed production for supply to field extension officers and private planters. Entomological research on cocoa, ecconuts and the "giant snail" is also carried out.

Professional advice is given to planters, and officers attached to the station make periodical inspections of plantations and other agricultural activities.

A laboratory is almost completed, where studies of soil, soil fertility, plant pathology, plant physiology and entomology will be undertaken. Cocoa and coffee processing experiments are to be carried out and for this purpose an experimental coffee and cocoa fermentation house is being constructed.

Crops studied at this station are cocoa, coffee, native food crops, fibres, and shade and cover crops. Aspects of study comprise soil fertility problems associated with various crops, manufal trials with special emphasis on micro-elements, indigenous cropping techniques and general agronomic problems.

During the year this station supplied 28,000 cocoa seedlings, 200 lb. of coffee seed and quantities of planting material of shade, cover and other crops to growers.

The Senior Entomologist, working on the economic pests of crops, is located at the station.

Highlands Experiment Station, Aiyura.—At this station studies include land use, including the development of cultivation techniques and crop rotations to suit highland conditions; the regeneration of degraded soils, terracing, contouring and grasses and legumes in association with live-stock. Crops studied are tea, cinchona, coffee and fibres. Tea and coffee seed, tea cuttings and other planting material are made available to private growers. In addition, extension work is carried out in crop and animal husbandry.

Tea Experiment Plantation, Garaina.—The functions of this station are to produce tea under semi-commercial conditions to the final stage of processing the product for market and thus to provide technical and economic data to settlers, and supply tea seed and cuttings to growers.

Tea seed production at the station is approximately 250 lb. per month, which is sufficient to meet the current demand from commercial interests and for experimental needs.

# District Agricultural Stations.

In addition to the three experiment stations there are six district agricultural stations located in the districts of Madang, Sepik, Manus, Bougainville, Morobe and Western Highlands. These stations are the centres where live-stock, crops and methods are tested out locally and where local modifications of animal husbandry and agricultural methods are developed. Each station is the centre of agricultural extension work for its district and the indigenous people are encouraged to work at the station for periods to obtain training in improved methods of agriculture, in the growing of new crops and the

handling of animals. Agricultural officers, based on these stations, carry out patrols in the course of which assistance is given to growers, seeds are distributed and studies made of the indigenous methods of agriculture.

Madang.—Rice is the major crop studied and trials are conducted with coffee, sorghum, peanuts, maize, tapioca, citrus, kapok, oil palm, castor beans, fibres and native food crops.

There are 27 acres under perennial and annual crops and 40 are fenced for grazing.

Sepik.—The main work of this station during the period has been the propagation and trial of rice. Other crops established are maize, sorghum, peanuts and sisal.

Manus.—Main activity has been on the establishment of pasture grasses for cattle depasturing. Attention has been given also to the marketing of native produce.

Bougainville.—The main emphasis has been placed on the establishment of permanent blocks of experimental cacoa; and the utilization of an area for trials and multiplications of annual crops.

Morobe.--Work is being conducted on fibres, rice, caeao, and disease-free manila hemps.

Western Highlands.—This station is being developed to serve the highlands area. Correct methods for the planting and maintenance of highlands coffee will be demonstrated, including the use of wind-breaks and various permanent shades, and various annual crops including peanuts, soya bean, vegetables, maize, sorghum and passion fruit.

## Entomological Investigations.

The most serious pests are the rhinoceros beetle, Sexava coconut grasshopper, caeao mirids and the giant suail, and appropriate control measures are being directed against each.

With regard to the rhinoceros beetle, the measures adopted include advice to planters to destroy breeding places for the larvae, such as dying and dead palms and decaying vegetable matter, the collection and destruction of adult beetles, and parasitic (biological) control.

In connexion with the latter, the Senior Entomologist visited Mauritius and Zanzibar to arrange for the collection and despatch to the Territory of rhinoceros beetle parasites, including the wasps scolia ruficornis and scolia oryctophaga. Small consignments have already arrived and 180 females were liberated at a number of infected plantations. Arrangements have been made for additional consignments of each species to be forwarded to the Territory.

The coconut grasshopper (Sexava spp.) causes severe damage to coconnt palm fronds and inflorescences, causing a reduction in palm vigour and interruption of nut-setting. Inspections are being made for the purpose of ascertaining the distribution of the pest and to assess damage, and preliminary trials have been carried out in the use of insecticides as a means of control.

Mirids.—Six mirid species infesting cacao have been positively identified. There has been no record of this pest outside the Gazelle Peninsula, although it has been recorded from an increased number of plantations within the area. In some instances, the damage has been rather severe. Progress is being made in determining the life history details of *Parabryocoropsis typicus*, but the species, especially the adult, is extremely fragile and will stand little handling.

Giant Snail (Achatina fulica).—Introduced during the Japanese occupation, the snail has spread and caused damage to coconut palms, eacao (especially young caeao) and food crops.

Resulting from a visit to Kenya by the Senior Entomologist, arrangements have been made with their Department of Agriculture to forward colonies of the two predators of the giant snail, viz., a carabid beetle (Tefflux hacquardii) and a predatory snail (Gonaxis kibweziensis). These will be liberated in selected areas of the Territory.

# Indigenous Agriculture.

Projects in rice, cacao and coffee production have been assisted and given every encouragement and favorable progress has been made.

Rice production on the pattern of the Amele and Lower Gogol Valley rice project has spread to all the sub-districts of the Madang District. Fifteen rural progress societies have been formed and twelve mills, with ancillary equipment, are now installed. The production of rice for the year was approximately 100 tons and it is estimated that the 1953-54 crop will produce at least 300 tons.

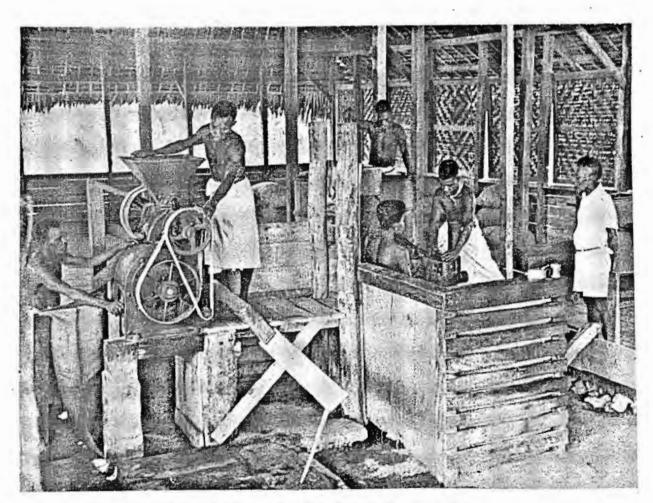

There has been a considerable development of peanut production in association with the rice projects.

Expansion has also taken place in the Sepik District, and five new village groups, two in coastal areas and three on the Sepik Plains, have planted rice and are ready to purchase milling machinery. A second mill has already been installed.

The whole of the rice production extension scheme in the Madang and Sepik Districts is now being treated as a single project and it is estimated that, by 1959, the annual rate of production will be at least 4,200 tons. Of this, about 1,700 tons would be consumed by the producing communities and the remainder available for sale. Associated development will include copra, cocoa and coffee.

Rice-growing at Amele: Madang District.

Milling rice at Amele Rural Progress Society, Madang.

	•	
•		•

The cacao project in the Gazelle Peninsula has reached the production phase with the establishment of six fermentaries with sun-driers. The production during 1952-53 was 15 tons and is expected to increase to 100 tons during 1953-54. Where individual growers do not possess proper facilities, every effort is being made to have small lot quantities processed in bulk, and so standardize the quality.

Growers so far registered under the Cacao Ordinance 1951-1952 number 219.

Arabica coffee (coffee arabica) exists in scattered native planted groves over a considerable area of the mountainous hinterland, south-west of Finsehhafen (Morobe District). Towards the latter part of the year, an Extension Officer was stationed in the area to establish central processing facilities and provide continuous European patrol supervision.

Hand-processing machinery has been forwarded and more is on order. The officer concerned has also reported a growing interest by the native people in the production of cacao.

## Land Use Surveys.

The Commonwealth Scientific and Industrial Research Organization's Land Research and Regional Survey Section, which is carrying out a resources survey of Papua and New Guinea in conjunction with the Administration, to assess agricultural and pastoral potentialities of the land, has commenced field work in Papua, and will later extend its activities to the Territory of New Guinea.

A soil survey of the experimental tea station at Garaina has been completed. Reconnaissance surveys of the upper Bulolo Valley and at Kudjeru have been undertaken and a soil survey of the Markham Valley commenced.

## Crops.

Copra.—There are more than 400 coconut plantations with a total area of approximately 200,000 acres. The majority of the plantations which vary in size from 25 to 2,000 acres are in the districts of New Britain, New Ireland, Bougainville and Madang. Coconut products continue to be the main source of agricultural income and production has shown an increase during the year, particularly native production of copra, which is estimated to be about 20,000 tons.

Arrangements have been made with the South Pacific Commission for Mr. W. V. D. Pieris, a recognized authority on coconut cultivation and improvement, to carry out a comprehensive survey of the industry.

Cacao.—Great interest is being taken in coeoa and new plantations are appearing in all districts—the number of trees planted up to the 30th June, 1953, was just over 1,000,000 compared with 500,000 at 30th June, 1952, and 200,000 at 30th June, 1951.

The production for 1952-58 was 500 tons of heans and it is estimated that when all trees at present planted reach maturity production will be approximately 5,000 tons per annum.

Experimental work on cacao is being intensified; this includes selection of desirable types, yield, studies in compatability, breeding and vegetative propagation. The capacity for striking cuttings has been increased and production of clonal material has been stepped up considerably. Work is continuing on the testing of clones, under varying conditions, throughout the Territory and when the tests have been completed clones will be made available to the planting industry.

Coffee.—The two major varieties of coffee used in commerce—Arabica, a highland type, and Robusta, a lowland type—can be grown successfully. The former grows particularly well in certain highland areas and the latter has proved suitable for interplanting with coconuts in the lowlands. Interest in coffee is growing and many new holdings are being established, particularly in the highlands. Exports rose from 34 tons in 1951-52 to 45 tons in 1952-53.

Tea.—There are large areas with suitable soil and climate which could produce lowland, midland and highland tea in quantity and quality. The destructive "blister blight" of the older tea-producing countries is not present in the Territory.

At the Highlands Experimental Station, Aiyura, further areas of tea have been planted with introductions from the Boh Estate, Malaya, and with progeny of the introductions which had been made from South Johnstone, Queensland, and Borneo. Experiments have commenced to determine the effectiveness of vegetative propagation of tea cuttings when placed directly in the field.

At the Experimental Tea Plantation, Garaina, 10 acres of seed bearers have been planted out and 25 acres (in 5-acre blocks) of tea for plucking have been laid down to determine the most suitable spacing for planting. This area will serve to test out various mechanical plucking devices.

Both Aiyura and Garaina can supply sufficient planting material to meet the needs of experimental plantings and commercial interests.

Fibres.—Experiments are being conducted and multiplication of disease-free types of manila hemp and sisal are pragressing. Selection work with manila hemp is being continued though considerable difficulty has been experienced in eradicating old bunchy-top infested stands. Fifty thousand manila hemp seedlings have been established for selection and there is evidence of many good types. Next year sufficient material should be available to enable fibre tests to be undertaken.

Rice.—There has been an expansion of rice production by the indigenous inhabitants, especially in the Madang and Sepik Districts and a few non-natives are also becoming interested.

Rice experiment work is undertaken at the district agricultural stations at Madang, Bainyik and Morobe. New Guinea also benefits from the results of the rice experimental work carried out at Epo Rice Station (Papua).

Peanuts.—Peanut production has expanded considerably and prices secured for the exported erop have been sufficiently attractive to retain the interest of producers, and exports rose from  $6\frac{1}{2}$  tons in 1951-52 to  $106\frac{1}{2}$  tons in 1952-53. Local consumption is also increasing.

Agronomic experiments with peanuts are undertaken at the Lowlands Experiment Station, Keravat, and the District Agricultural Station, Madang.

Passion Fruit.—Planters are taking an interest in this new industry, which is centred in the eastern highlands district, and an Extension Officer has been stationed at Goroka to assist in its development. A cordial manufacturing company has commenced operations at Goroka and to date has purchased 50 tons of fruit from indigenous growers.

Cinchona.—In order to determine the suitability of the area for cinchona production, investigations are undertaken at the Highlands Agricultural Experiment Station, Aiyura. Various species are tested and samples are assayed by the University of Melhourne to determine the percentage of anti-malarials present. A higher yielding species, Cinchona ledgeriana, has been introduced to replace the C. succirubra, which made up the pilot project.

Three hundred trees of C. ledgeriana have been sampled and of these twenty have yielded over 10 per cent. alkaloids with over 80 per cent. of the alkaloids appearing as quinine.

Rubber.—Early in the year under review, Mr. C. E. T. Mann, Director of the Rubber Research Institute of Malaya, investigated the rubber industry in Papua and New Guinea and expressed the opinion that certain areas of New Guinea were possibly suited to rubber-growing.

## CHAPTER 4.

#### LIVE-STOCK.

Types of Live-stock and Methods of Breeding and Raising.

Cattle.—The cattle are principally of British breed, that is of Bos taurus species, imported from Australia since 1946, or the progeny of such importations. There are some cattle of the zebu breeds, that is of Bos indicus species, and some interspecies crosses (so-called "hybrids"). One small group of zebus is the progeny of importations from the East Indies, Borneo, or Timor during the German administration; a small group of zebus has been imported from Fiji by a plantation company to introduce zebu "blood" to some 1,000 cattle imported as foundation breeders from Australia and a large proportion of the few hundred cattle that were left at the end of the recent war were part zebu in breeding. Three bulls of part zebu-part British dairy breed donated by the Commonwealth Scientific and Industrial Research Organization have been used by the Administration.

In general, prior to 1942 there was a preference for animals with some zebu blood. Since restocking began in 1947, however, not only has eradication of cattle tick proved practical, but it appears generally that where tick has been cradicated or excluded, British breeds of cattle have thrived. Critical observations over a few generations on stations representing the various potential grazing areas of the Territory will be necessary, bowever, hefore it can be determined conclusively if British breeds may be maintained without degeneration in the respective areas. •In the meantime, a proportion of cattle-owners now prefer animals of British breed without a trace of zebu blood.

The choice available to eattle-raisers is either to raise British breeds, which are easily obtainable in Australia and lend themselves to simple breeding programmes or, since large numbers of zebus or "hybrids" are not available, to introduce zebu blood to British foundation stock, which involves a more difficult breeding programme; the availability in Australia of Santa Gertrudis bulls which may be used for "grading up" once a population of suitable "hybrids" has been established makes this course more practical than hitherto. Big disadvantages of the zebu strains available are that they are not of good dairy or beef type and that under plantation conditions they tend to be "wild" in temperament.

Observations to date suggest that cattle of British breeds under favorable conditions in the Territory are satisfactorily thrifty and productive, but that in the hottest conditions, where ectoparasites are not under control or where hard draft work is required, entile with infusions of zebu blood are better adapted and more productive. Critical long-term tests are being commenced in association with the Commonwealth Scientific and Industrial Research Organization to determine under what natural environmental conditions and what management conditions in the Territory British breeds will thrive and produce as dairy, beef, and draft animals and whether in any of the conditions infusion of zebu blood is essential or advantageous. Concurrently, zebu or zebu-cross bulls will be made available to breeders who want them. To this end a small number of Scindhi and Sahiwal cattle was imported from Pakistan to Papua during the year; some of these cattle, or their progeny, will be introduced to New Guinea.

In the meantime, since 1947, cattle herds have been established for observation and propagation as a foundation for developmental and extension work at several live-stock and agricultural extension stations throughout the Territory:--viz., Animal Industry Farm, Goroka (Australian Illawarra Shorthorn dairy herd); Western Highland Live-stock Station, Baiyer River (Polled Shorthorn beef herd); Upper Ramu Live-stock Station, Arona (Zebu herd and crosses with culls of British breeds); Highlands Agriculture Experiment Station, Aiyura (Red Poll dual purpose cattle); New Guinea Lowland Live-stock Station, Erap (Australian Illawarra Shorthorn and Polled Shorthorn cattle); District Agricultural Station, Madang (Australian Illawarra Shorthorn and zebu cross dairy cattle); District Agricultural Station, Sohano (Australian Illawarra Shorthorn); District Agricultural Station, Manus (Jersey herd); Animal Industry Centre, Kurrakakaul, Rabaul (Aberdeen Angus, Jersey, Australian Illawarra Shorthorn herds and zebu). Development of a breeding station at Vunakanau near Rabaul for New Britain, New Ireland, Bougainville, and Manus has been suspended as the land is required for an airport. As the stations become stocked and developed and scientific staff becomes available, controlled mating, the various forms of production recording and progeny testing, and critical observations are becoming possible; breeding and raising cattle on these stations will be on an intensive system rather than on the range system which was adopted at the outset to allow propagation of stock and limited observation pending the fuller development of stations.

It is considered that due to the relative shortage of good pastoral country, the well-distributed rainfall and growth of herbage in most parts of the Territory, and the measures necessary for control of ectoparasites, practically all cattle-raising in the Territory will ultimately be under intensive rather than range conditions.

Water Buffalo.—There are a few water buffalo or carabao of the "swamp" type, descendants of stock imported during the German administration. It is considered that in view of its versatility as a farm animal and its ability to thrive under moist bumid conditions, there is considerable scope for use of this animal, particularly by the indigenous inhabitants. In view of the excellent results obtained in the Philippines by crossing this type with the "river" type of buffalo, a small number of buffaloes of the "Murrab" breed have been imported to Papua from Pakistan and these or their progeny will be available for developmental work in New Guinea.

Equines.—Equines are of Australian origin and comprise some heavy draught horses, "elumpers", "walers", ponies, donkeys, and a few mules. It is probable that as the number of horses approaches the demand, mule breeding will be undertaken to meet the demand for this type of animal for farm, plautation, and pack work.

Sheep.—The full-scale experiment in intensive sheep-farming by the Hallstrom Live-stock and Fauna (Papua and New Guinea) Trust at its station at Nondugl is continuing. Trouble was encountered from the internal parasites Haemonchus contortus and Oesophagostomum columbianum, but there has been a marked improvement following adoption of a programme of drenching and rotational grazing.

Several small flocks (up to 50 sheep) are maintained by settlers and on Administration stations. In general, where these have free range and where there is a definite dry season in the year, they breed and produce satisfactorily.

Goats.—A few goats are kept on a number of mission stations and plantations; with some exceptions, the standard of husbandry is low.

Pigs.—Herds of pure-bred pigs are kept on several Administration stations and by some settlers and missions. It has proved necessary for pigs either to be given completely free range, or to be confined to sties with slatted or impervious floors in which internal parasites (particularly Ascaris lumbricoides and Stephanurus dentatus) may be controlled by daily cleaning.

Types of Live-stock and Methods of Breeding Utilized by the Indigenous Inhabitants.

The indigenous fauna do not include animals suited to domestication. Pigs, bowever, are an old standing introduction; these are kept by the indigenes but are tokens of wealth and prestige and objects of barter and ceremonial rather than food animals. Both feral and domesticated pigs are primitive in type. In some areas the standard of husbandry is fairly high, mating being controlled, improved boars being used, and the pigs being fed and properly housed, whilst in others the standard of busbandry is very low. Improved stock is distributed by the Administration and every endeavour is made to promote the use of pigs as food animals.

In the vicinity of Boana, in the Markham Valley, a mission is distributing a small number of cattle to villages and the development is being watched with interest.

Donkeys have been loaned to a village in the neighbourhood of Finschhafen for transport of coffee for sale, but sufficiently large numbers have not yet become available for large-scale experiments in this field.

It is considered that development of animal industries by the indigenous people must be by way of extension from European industries and from projects such as that conducted by the Hallstrom Live-stock and Fauna (Papua and New Guinea) Trust.

# Quantity and Quality of Stock, &c.

All but a few hundred of the cattle in New Guinea (which numbered 20,494 in 1940) were destroyed during the war. Restocking commenced in 1947 and at 31st March, 1953, the number of cattle in the Territory was 2,928. Further importations prior to 30th June, 1953, will be taken into account in the figures for next year.

Imports of animal origin during 1952-53 were valued at £874,717. These included about 2,000 tons of fresh and preserved meats, or the equivalent of about 7,000 beef carcasses. It is estimated that under the intensive management conditions practicable in New Guinca an established hord of about 35,000 head should provide this amount of meat annually. It is obvious that a great increase in the number of stock is needed to provide the meat requirements of the Territory.

Continuation of the useful and necessary small-scale trials and demonstrations of stock-raising by the Administration in various environments is planned; it is clear, however, that the development of commercial beef herds to make the Territory self-supporting in meat requires importation and breeding on a greater scale than could be undertaken by the Government. It is the policy of the Administering Authority to encourage private enterprise to develop the beef cattle industry and associated with the development of herds must be the establishment of marketing and distributing facilities. During the year importations of cattle from Australia by the Administration and private interests totalled 790.

The Administration makes available for distribution to private farmers and graziers a proportion of the stock bred on its stations, but this number is far short of the demand.

Since 1947 a substantial contribution has been made towards restocking devastated areas with pigs, which in some cases have been loaned, and in others sold at reasonable cost to the indigenous inhabitants. Practically all areas now have adequate numbers of breeding pigs with which to complete restocking, and attention is being turned to improvement of quality by the supply of good boars and encouragement of better husbandry.

# Evaluation of the Efficiency of the Live-stock Industry.

Evaluation of the efficiency of the live-stock industry is not possible at this stage of its development. Attention is being given not only to animal breeding, but also to the introduction, testing and propagation of fodder species. There are numerous valuable fodder species in the Territory including a number of legumes introduced as plantation shade and cover crops and knowledge of their use is being gathered and disseminated. In this connexion, an officer of the Division of Animal Industry spent several weeks at South Johnstone Research Station, in Queensland, where tropical plants are the subject of feeding trials with dairy cattle. Experience is being accumulated on the conversion of kunai (Imperata spp.) stands, which form the bulk of the grasslands of the Territory, into swards more useful for grazing.

Since the commencement of copra crushing in New Britain during the year, a feeding meal of good quality at reasonable cost is available which is of utmost importance to the development of the live-stock industry.

# Effect of the Indigenous Law and Custom.

Due to the absence of indigenous animals suited to domestication the native people have little, if any, experience and no positive attitude to the use of farm animals. It is considered most important that they should develop the attitude that live-stock are useful farm and food animals and not that they are primarily items of wealth, prestige and exchange, as is often the case in regard to pigs.

As feral pigs are present throughout the Territory and are destructive to gardens, it is general practice to protect gardens by fences and ditches. It may be expected, therefore, that destruction of gardens by stock will not be a major problem in most areas. To prevent trouble of this kind, and to provide adequate control in the event of outbreak of disease, it is Administration policy, implemented in Ordinances, that stock should at all times be kept under control by means of fencing and natural boundaries.

#### Changes in Acreage and Numbers of Stock.

There was no major change during the year in the acreage devoted to the principal types of live-stock. The increase in numbers due to importations and to natural increase was absorbed on plantations previously stocked and on existing stations and farms. The potential grazing and farming capacity of the Territory is far in excess of present stock numbers. The numbers and principal types of live-stock are shown in Appendix IX.

### Control of Pests and Diseases.

Control of posts and diseases of animals is the responsibility of the Division of Animal Industry. The head-quarters of the Division is at Port Moresby and regional head-quarters will be developed at Lac and Rabaul as senior staff become available. A veterinary laboratory is being established at Port Moresby which will serve also New Guinea as the major diagnostic laboratory and research centre.

Precautions against entry of exotic disease are taken under authority of proclamations under the Customs Ordinance 1951 of the Territory of Papua and New Guinea. Disease control in animal population is exercised under the Quarantine Ordinance 1931-1938 of the Territory of New Guinea. The Animal Disease Control Ordinance 1952 of the Territory of Papua and New Guinea, assented to during the year but not yet in operation, will greatly improve live-stock disease control and facilitate the programme of cattle tick eradication.

The Chief of the Division of Animal Industry makes frequent tours of the Territory. Resident Stock Inspectors and officers of the Department of Agriculture, Stock and Fisheries who are Quarantine Officers (Animals) under the Quarantine Ordinance make regular reports on the animal disease situation

within their areas.

The Territory is free from serious epizootic diseases; rinderpest, foot-and-mouth disease, contagious

bovine pleuropneumonia, sheep-pox, rabies, glanders, dourine, and swine fever do not occur.

During the year precautions against entry of foot-and-mouth disease and contagious bovine pleuropneumonia were reviewed and strengthened. Arrangements have been made for development of liaison with the Government of Netherlands New Guinea on matters of animal disease control, as it is considered that in view of the feral pig population the greatest risk of entry of exotic disease is associated with the land boundary with Netherlands New Guinea.

The major current disease problems are associated with cattle tick (Boophilus microplus), screwworm fly (Chrysomia bezziana villen) and anthrax. Although cattle tick is widespread, the areas of infestation, related to the distribution of cattle, are localised. Eradication measures are proving successful. The screwworm fly is widely distributed. It constitutes an impediment to the development of the live-stock industry in that time-consuming local treatment is required in each case of infestation. Local treatment with ointments and smears kills maggots, promotes healing, and keeps the population of adult fly to a minimum. Anthrax is endemic in the eastern and western highlands districts and causes epizootics in pigs; no human cases have been recorded. Epizootics are dealt with by extensive inoculation campaigns and prohibition on the movement of pigs and losses are kept to a minimum in this way.

# Disposal of Products.

Foodstuffs of animal origin produced in the Territory are consumed locally.

A small quantity of wool has been marketed in Australia, but the objective is to promote its use within the Territory. In co-operation with the Hallstrom Live-stock and Fauna (Papua and New Guinea) Trust the Administration has conducted schools in spinning and weaving by simple methods for indigenous people.

## CHAPTER 5.

#### FISHERIES.

Commercial fisheries have not been established in the Territory and fishing by the indigenous inhabitants is mostly for subsistence purposes, although some trading in fish takes place between coastal and inland people and with the owners of plantations who are generally anxious to obtain fresh fish for their employees. The only processing facilities available are those for preservation of fish, by smoking or sometimes by salting, as practised by the indigenous inhabitants.

The Administration continued its policy of distributing improved fishing gear to the native people and during the year assistance was given to groups in the Sepik and New Britain Districts. Indigenous communities in the Manus, New Britain and Bougainville Districts showed increased interest in trochus

fishing.

The value of shell exported during the year was £87,894 compared with £77,302 during the previous year.

#### CHAPTER 6.

#### FORESTS.

# Forest Estate.

The forests vary from swamps and lowland forest to alpine vegetation and moss forest.

The lowland forest regions contain the major proportion of readily accessible millable timber, but the greatest potential is in mid-mountain type forests lying between an altitude of 1,500 and 7,000 feet. With the exception of the Bulolo Valley much of this timber is difficult of access. The actual area of forest acquired by the Administration cannot be given owing to the loss of many of the pre-war records, but from the information and records that are available it is estimated at 527,000 acres.

No areas have been proclaimed Territorial Forests or Timber Reserves under the Forestry (New Quinea) Ordinance 1936-1951, but some 63,000 acres in the Bulolo Valley, 37,000 acres in the Trans-Koravat and 60,000 acres in the Sepik area are in an advanced stage of processing for proclamation as Territorial Forests, and a large area at Oomsis is being investigated for acquisition and permanent retirement to forestry purposes. Approximately 500 acres of plantations have been established in Bulolo

and approximately 400 acres of plantation will have been established at Keravat at the end of the present monsoon. No forests have been treated by natural regeneration as yet. It is not possible at the present time to give a figure for the total forest area of the Territory.

The forest rights acquired by the Administration during 1952-53 were-

Timber rights-						Acres.	Acres.

					•		62,500
Total		* * ;;	• •		• •		77,836
		• • • •					

#### Legislation.

The forest law of the Territory is embodied in the Forestry (New Guinea) Ordinance 1936-1951 and Regulations thereunder. It provides for the protection of forests and forest produce, afforestation, establishment of timber reserves, acquisition of land and timber rights, the issue of timber permits and licences, control of exports and the collection of fees and royalties. Control in regard to forestry diseases and pests is provided for under quarantine legislation. It is administrative policy to undertake afforestation measures wherever these are necessary or desirable.

#### Silviculture.

Steady progress has been made in silvicultural work at the following stations:-

Bulolo.—The 136 acres planted to Hoop and Klinkii pine is showing excellent growth and a new area of approximately 165 acres of Hoop pine is well established.

The nursery was extended during the year and some 157 beds were formed and sown to Hoop pine. Additional areas were grubbed and plowed for further expansion. Existing stock is sufficient for planting of 200 acres.

Keravat.—A further 54 acres of Teak and 56 acres of Kamarere plantings were established. A severe giant snail attack at the time of planting caused losses, but control measures proved effective. The plantings in preceding years have made very good growth, and material from the thinnings is being used for pulping and other utilization tests. All thinnings were measured for volume table production.

Lac.—The nursery at Lac has been maintained for planting up of the botanical gardens at that centre, and in addition is producing substantial quantities of stock, mainly Hoop and Klinkii pines, for trials in the Markham Valley.

Goroka.—Reafforestation, using trained native nurserymen, has been continued. Arrangements are well advanced for the introduction of willows to selected sections in the highlands with the object of producing timber for artificial limb manufacture.

#### Botanical.

Collections, totalling 460, were made from the Morobe, Eastern and Western Highlands Districts, and wood samples, supporting the botanical material, have been collected wherever possible.

The Forest Botanist combined with the forestry stuff in the New Britain District in the complete enumeration, down to seedlings, of one acre of tropical rain forest.

#### Research.

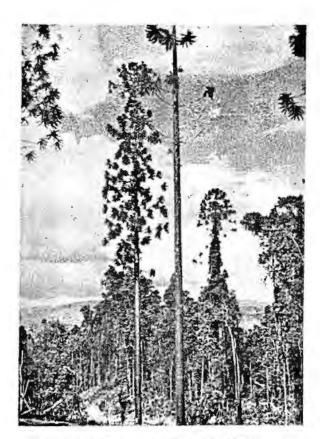

The investigations into the pulping of Hoop and Klinkii pines is well advanced and the quality of the material produced is most promising. Pulping tests on Mangrove species are also well advanced and a composite report is being prepared by the Division of Forests Products, Commonwealth Scientific and Industrial Research Organization, which will also deal with permeability to preservatives, tanning content of the hark, testing for sleepers, &c.

Two species, Pentaspadon and Melanorrhea, were tested for peeling qualities and sample plywood bas been produced from them. The second species, which is called Hekakora, is reputed to be highly irritant and investigations on the substance causing the irritation are being carried out. Both of the above species belong to the family Anacardiaceae.

Samples of Taun despatched to New Zealand for treatment with Dolman salts have been returned and "Graveyard" trials are to commence at Lac.

Logging truck passing from virgin forest through first-year planting area— Buiolo Valley.

Tall klinki pine trees in the Bulolo Valley—note figure at base of tree.

Hoop pine plantation in the Bulolo Valley. Trees are approximately three years old.

Preparation of material for major durability trials in conjunction with the Division of Forest Products, Commonwealth Scientific and Industrial Research Organization, Melbourne, is expected to be completed towards the end of 1953.

Samples of juvenile timber from Kamarere thinnings have been prepared and despatched to the Division of Forest Products, Melbourne, for pulping trials. Material of more mature trees will be despatched as it becomes available.

New tending experiments in the establishment of Hoop pine in the field at Bulolo have been established on a more elaborate basis and should yield valuable data by next wet season.

#### Licences and Concessions.

Twenty timber permits are in operation covering an area of approximately 208,000 acres and 23 Native Timber Authorities and seven timber licences were issued during the year.

The revenue during the year from fees for permits and licences, and royalty was £20,248, being an increase of £2,212 over the previous year.

### Sustained Field Project-Bulolo Valley.

The joint public company, Commonwealth-New Guinea Timbers Ltd., bas made considerable progress towards establishing a plywood factory, and plywood production should commence during January, 1954. The objects of this company include the harvesting of logs, the sawing and milling of timber, the peeling of venecer and the manufacture of plywood, utilization of waste and marketing of timber and timber products.

#### Timber Industry.

The slackening of timber demand, which characterized the closing months of 1951-52, continued into the early part of the year under review. By the end of the year, however, demand increased and production commenced to climb.

Twenty-five saw-mills operated during the year, the consumption of logs totalled 20,000,000 super. feet. Approximately 11,000,000 super. feet of sawn timber were produced of which 4,000,000 super. feet were from hardwoods.

Exports were: Logs, 1,108,000 super. feet; sawn timber, 836,000 super. feet (including 374,000 super. feet of special flitches for the production of battery separator veneers).

The two Administration mills have had a stabilizing effect in the areas on which they are centred and have maintained a steady supply of milled timber. The Yalu saw-mill, near Lae, converted 3,031,766 super. feet of logs for a recovery of 1,265,172 super. feet of sawn timber and the Keravat saw-mill, near Rabaul, converted 2,433,057 super. feet of logs for a production of 1,056,277 super. feet of sawn timber. The total sales were valued at £85,724.

The training of indigenous workers as engine-driver winchman, saw sharpeners, sawyers, log-cutters and general hands at these mills is being continued.

#### Attitude of Indigenous Inhabitants.

The attitude of the indigenous inhabitants towards the creation of forest reserves and granting of concessions is favorable as they realize that the granting of concessions mean increased activity in their area from which they benefit, and the building up of a forest estate will ensure to them an adequate supply of timber to meet their future needs.

#### Forest Products.

The forest products which are important to the internal and external economy of the Territory are timber for building and other constructional purposes and cance making. Other products, used mainly by the indigenous inhabitants include sago, rattans, bamhoos, palms, the leaves of sago and nipa for thatching, nuts and edible fruits. Betel nut and fruits of several other palms are widely used as stimulants.

### CHAPTER 7.

#### MINERAL RESOURCES.

# Development.

The most important mineral at present in production is gold. Other known mineral resources are platinum, silver and osmiridium.

Production figures and value of minerals produced for the year ended 30th June, 1953, will be found in Appendix XII.

There are five "local" companies with a total nominal capital of £738,000 and twelve "foreign" companies with a total nominal capital of £17,791,388 and 6,000,000 dollars operating in the Territory. One foreign company with a nominal capital of £250,000 was registered, whilst in the case of two other companies, capital was increased by £4,350,000.

The main production of gold is from the Morobe gold-fields, where production increased by approximately 28,670 fine ounces. In other districts, production showed a decrease: Central Highlands dropped from 812 to 693 fine ounces, Sepik 270 to 262 fine ounces and Bougainville 78 to 6 fine ounces.

The indigenous inhabitants are taking an active interest in mining for gold and the 130 engaged in the industry, who employ about 700 casual workers, produced 1,051.65 ounces bullion valued at £11,241 during the year.

The gold-mining industry faces the problem of heavy and ever increasing operating costs, whilst the price of gold has remained fixed, and consideration is being given to the question of whether some form of assistance is necessary. Any increase of the present royalty rate could not be carried by the majority of operators and would have the effect of retarding prospecting and the development of marginal ground. A panel of experienced officers has been appointed to investigate and report on the position of the mining industry generally.

### Policy and Legislation.

All minerals are the property of the Administration and royalties and other receipts derived from mining and prospecting are paid into the general revenue of the Territory for the general benefit of its inhabitants as a whole.

Mining may be carried out only by the holders of permits and licences issued under the provisions of the Mining Ordinance and Regulations, except that indigenous inhabitants have all the rights conferred by this Ordinance upon the holders of miners' rights for purposes incidental to or connected with mining.

The Ordinance provides for the payment of a royalty at the rate of 5 per cent. on the value of all gold won. The total royalty paid for the year was £109,245.

A miner's right, which may be issued for any period not exceeding ton years, entitles the holder to prospect for minerals in accordance with the provisions of the Mining Ordinance and Regulations. The fee is at the rate of £1 for every year of which the right is to be in force. The holder of a miner's right may be granted an exclusive prospecting licence for an area not exceeding 7,000 hectares, for a period of two years. An annual licence-fee calculated at the rate of 6d, for every hectare in the area is payable in advance.

Other leases which may be granted are a gold-mining lease not exceeding 20 hectares, for a period not exceeding 21 years, and a mineral lease for minerals other than gold over an area not exceeding 100 hectares, for a period not exceeding 21 years. The yearly rent for a gold-mining lease is at the rate of £2 10s, per hectare and for a mineral lease the yearly rent is at the rate of £1 5s, per hectare.

Revenue for the year, exclusive of royalties, totalled £8,751.

The rights in surface resources are determined by the nature of tenure and the terms of occupancy. They convey no mineral rights. Any holder of a miner's right may apply for an authority to enter and prospect upon alienated or native-owned land, but provision is made for the protection of roads, business and residence areas and improved land, and for the payment of compensation where prospecting or mining injuriously affects the surface rights of the owner.

There is no provision for the resoiling of land damaged by mining operations, but as already stated, compensation is payable to the owners of such land. So far as the dredged areas are concerned, a survey has shown that double dredging and the thinness of the overburden, coupled with the nature of the gravels, which are generally very coarse with a high percentage of boulders, make it very doubtful if resoiling would be practicable. Should any further application be made for a dredging lease, consideration would be given to the inclusion of a condition requiring the area to be resoiled.

#### Duration of Mineral Resources.

Although the geological investigations which have already been carried out have provided some knowledge of the geology of the Territory, it is not yet possible to give any accurate estimate of the future duration of the mineral resources.

It is hoped that, as the work of geological survey and prospecting progresses, both by the Administration and private enterprise, new mineral discoveries will be mndc.

At this stage in the development of the Territory it would be premature to work out any plan designed to protect the inbabitants against the economic effects of the exhaustion of the mineral resources.

Although production of gold has played a significant part in the economy of the Territory, land is the most important natural resource and the development and prosperity of the Territory will depend mainly on agricultural development and the conservation and development of forests.

#### CHAPTER 8.

#### INDUSTRIES.

### Manufacturing Industry.

Manufacturing industries are largely confined to the processing of raw materials and in some cases most of the processed article is consumed locally, but in others the bulk is exported. The chief among these processing industries—to reduce the raw materials to a marketable and exportable form—are copra, oil from copra, desiccated coconut and cocoa, and the treatment of mineral ores. The encouragement of secondary industry is part of the economic policy of the Administering Authority.

Other industries are cordial factories, printing works, timber mills, furniture-making establishments, engineering workshops and slipways.

Local Handicraft and Cottage Industry.—Local handicrafts include weaving, basketwork, beadwork, pottery, cance-making and net-making. Production is mainly to meet the requirements of the indigenous people, but articles of wood-carving, baskets, mats, &c., have a ready sale among the non-indigenous inhabitants and visitors as curios. Surveys are being made to assess the resources available for the development of these cottage industries, but it is doubtful if they are suitable or capable of development in competition with mass-produced manufactured articles.

Food Industry.—In addition to the production of about 2,000 tons of food per day to meet their own requirements, the indigenous inhabitants produce considerable quantities of vegetables for sale. The production in the highlands is rapidly increasing and non-natives are now taking an active part. The vegetables produced include several that cannot be grown at lower altitudes and find a ready market in the coastal areas. Industrial processes are limited to desiccated coconut, rice, a small quantity of coffee, and dried fish by the indigenous people for their own requirements.

" :urist Industry.—There is no regular tourist traffic.

# Principal Markets.

Local industry is at present largely concerned with the processing of primary produce and it formation regarding the markets for such produce will be found in Appendix VII.

#### Measures Towards Industrialization.

As mentioned earlier, the encouragement of secondary industries is part of the economic policy of the Administering Authority. Electric power is made available to the light industries already established and surveys to assess the hydro-electric production potential are being carried out. Encouragement has been given in one case by Government financial participation in the Commonwealth-New Guinea Timbers Ltd., in which the Government holds 51 per cent. of the capital.

# Industrial Licensing.

There are no systems of industrial licensing or control.

#### Fuel and Power Facilities.

Public electricity supplies are provided by the Administration, which operates diesel generating plants in all towns and principal stations, but apart from the towns of Rabaul, Lae and Madang—where light industries are catered for—the supply is for domestic purposes only. The Bulolo Gold Dredging Co. and New Guinea Goldfields Ltd. operate hydro-electric stations for their own requirements and make a limited supply available for public use in the surrounding district.

The supply of electricity for lighting and other purposes and electricity charges are regulated by the Electricity Supply Ordinance 1951 and Regulations made thereunder. The rates paid by consumers are—

- (a) Domestic supply—Where a meter is installed 3d. per unit with a minimum of £1 per month and where no meter is installed a special monthly charge is made for each point installed and type of appliance used.
- (b) Commercial Power Supply—Per k.w., 4d. per unit. Where no meter is installed £1 15s. per horse-power of motor per month.

#### CHAPTER 9.

#### TRANSPORT AND COMMUNICATIONS.

#### Postal Services.

The Administration provides a full range of mail services except house-to-house delivery. Delivery is effected through the medium of private boxes, private bags and poste restante service. Facilities are available for registration, cash on delivery; and provision is made for air letters and air parcels. The inland postal rate for surface mail is 3½d. for first ounce, 2½d. each additional ounce; for inland airmail

the charge is the postage at ordinary rates according to the class to which the article belongs plus an airmail fee at the rate of 3d, per half ounce. The charges for private boxes are from £2 to £6, according to the size of the box. Transport of mail within the Territory is provided by road, air and shipping services.

Post offices providing full postal and telegraphic facilities are established at the following centres:--

Aitape.	Goroka.	Lae.	Rahaul.
Angoram.	Kainantu.	Madang.	Sohano.
Buin,	Kandrian.	Maprik,	Talasea.
Bulolo.	Kavieng.	Mount Hagen.	Wan.
Chimbu.	Kieta.	Lorengau.	Wewalt.
Finschhafen.	Kokopo.	Namatanai.	

### Telephone and Radio Telephone Services.

A total of 1,298 telephone services are provided in Lae, Wewak, Rabaul, Madang, Kavieng, Goroka, Wau, Namatanai and Kokopo.

A radio telephone trunk service has been installed linking Lae, Rabaul, Madang, Port Moresby and Samarai, and arrangements are being made to bring these stations into the overseas radio telephone circuit. Approximately 7,000 calls were handled during the year.

Six zone or group centres for radio telephone communications have been established with the following associated stations:—

Lae—21 associated stations.	Kavieng—7 associated stations.
Madang40 associated stations.	Wewak-19 associated stations.
Rabaul-43 associated stations.	Lorengau-9 associated stations.

#### Roads.

Owing to the extremely difficult terrain and the heavy rainfall which causes washaways and landslides, both the construction and maintenance of roads present a formidable task. Despite these difficulties the construction of new roads is going ahead and 329 miles suitable for light traffic were completed during the year. Later, as circumstances require, these roads will be adapted for heavy transport purposes.

The new roads include an access road from Gusap in the Ramu River valley to Goroka, the district head-quarters of the Eastern Highland district, by way of Arona and Kainantu, which will eventually be extended to link up the Eastern Highland and Western Highland districts, and the construction of 36 miles of the road designed to link Madang, the head-quarters of the Madang district with Dumpu in the Upper Ramu River Valley. This road will open up the Gogol River Valley and ultimately link Madang with Goroka in the Eastern Highland district, Mount Hagen in the Western Highland district and Lae in the Morobe district.

The total mileage of vehicular roads is now 2,675, and bridle paths increased from 20,457 to 21,017 miles.

### Road Transport and Railway Services.

There are no railways in the Territory, but road transport services operate in the towns of Rabaul, Lae, Kavieng, and Madang and on the trunk roads between Rahaul and Kokopo, Lae and Wau, and Kavieng and Namatanai.

#### Air Transport Services.

Scheduled airlines and charter flights provide a network of services throughout the Territory and there is a regular air service between New Guinea and Australia. Full particulars of air and airmail services will be found in Appendix XV.

# Metcorological Services.

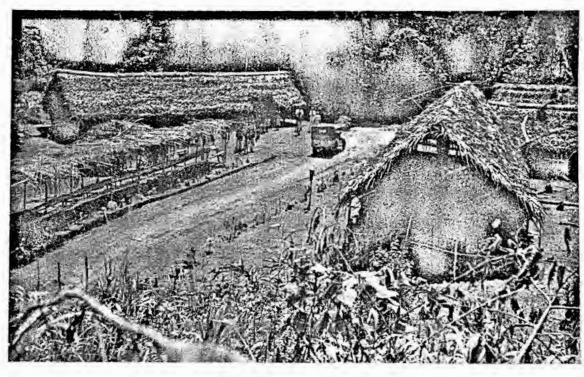

The Meteorological Branch of the Commonwealth Department of the Interior is responsible for the provision of meteorological services in the the Territory of New Guinea. Weather forecasts are broadcast from Station 9PA, Port Moresby.

#### Shipping Services.

A coastal and inter-island passenger and cargo service is operated by the Government-owned Papua and New Guinea Coastal and Inter-Island Shipping Service with fifteen ships of up to 300 tons. In addition, a number of small craft are owned and operated by private enterprise.

Bridge under construction—Gogol Valley road.

Road camp-Gogol Valley road.

A regular shipping service between Australia and the Territory of New Guinea is maintained by the vessels Bulolo (6,397 tons), Malaita (3,310 tons) and the Malekula (3,786 tons) of the Burns Philp line, and since November, 1952, the vessels Shansi (3,147 tons) and Sinkiang (3,020 tons) of the New Guinea-Australia line have also maintained a regular service. In addition vessels engaged in the trade between Anstralia, Hong Kong and Japan call at Rabaul and other ports when cargo is offering, and copra is shipped direct to the United Kingdom in vessels of the Bank line.

#### Distinctions in Use, Ownership, &c.

There is no discrimination on grounds of race or nationality in regard to the ownership and operation of transport services. All the facilities offered by the various services are available to all nationalities and races, indigenous and non-indigenous alike.

#### CHAPTER 10.

#### PUBLIC WORKS.

The expenditure on public works during the year ended 30th June, 1953, included the following:---

0			, ,			•				-
£										
530,140			c.) .,	ieme, &	etrie seh	hydro-ele	culation,	city reti	ital Works ( idges, electri	Ъ

1,019,306	• •		• •	••	• •	• •		• •	Total	
<del></del>										

Further particulars of capital expenditure and maintenance will be found in Appendix IV.

# PART VII.—SOCIAL ADVANCEMENT.

#### CHAPTER 1.

GENERAL SOCIAL CONDITIONS.

Social and Religious Background and Customs.

This has already been covered to a large extent in the introductory section of this report dealing with the religious and social structure of the population. Customs and practices vary, but there is a general belief in a power which is supernatural and belief in such power is expressed in magical rites and in religious practices. The social structure of the indigenous groups is based on the family or clan unit and, as they are characteristically egalitarian, there are no divisions into social classes of different ranks and there are no persons who are vested with supreme authority over the groups. Every community, however, recognizes and possesses established leaders to whom the members of the group owe allegiance and whose opinions carry most weight in the society.

### Non-governmental Organizations.

Apart from the various missionary societies established in the Territory which engage on work of a social nature, the following are some of the non-governmental organizations which engage in social activities. The Native Ex-Servicemen's Associations and sporting and social clubs formed by the indigenous inhabitants; the Junior Red Cross and the Boy Scouts and Girl Guides, in which all sections of the community take an interest; and various associations, sporting bodies and clubs formed by the non-indigenous population.

#### CHAPTER 2.

#### HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS.

#### General.

There has been no change in the position as described in previous annual reports. All elements of the population are secure in the enjoyment of human rights and fundamental freedoms without discrimination as to race, sex, language and religion, except to the extent that it is still considered necessary to preserve certain provisions relating to the indigenous inhabitants in order to protect their interests, particularly in such matters as land acquisition, trading and industrial employment.

Freedom of thought and conscience and free exercise of religious worship are enjoyed by all inhabitants.

# Slavery.

Slavery is expressly prohibited under the *Papua and New Guinea Act* 1949-1950, and there are no practices akin to slavery in the Territory. Forced labour is prohibited in the Territory under the *Papua and New Guinea Act* 1949-1950, except in such circumstances as are permitted by the International Labour Organization Convention concerning Forced or Compulsory Labour.

#### Right of Petition.

The right of petition is known to the non-native population and for many years the indigenous people have presented petitions and appeals to officers on patrol and to the District Commissioners and on occasions to the Administrator when on tour. The right to submit petitions to the United Nations is becoming more widely known.

#### Restrictions.

No restrictions were imposed during the year other than the provision of the Native Administration Regulations, which requires indigenous inhabitants to obtain a pass to enter certain towns or be absent from their quarters in certain towns between the hours of 9 p.m. and 6 a.m.

#### Freedom of the Press.

There is no restriction on the expression of public opinion by any section of the population. All printing presses are required to be registered and the printer and publisher of a newspaper is required to make and register with the Registrar-General an affidavit giving the correct title of the newspaper, description of the building in which it is to be printed, and the names and addresses of the proprietor, printer and publisher. They must also enter into recognizances with sureties as security for the payment of any penalty that may be inflicted by reason of anything published in the paper, and for the payment of any damages awarded for libel.

There is no censorship and, subject only to the law relating to sedition and libel, the Administration does not exercise any control over the subject-matter of what is published in the press.

The South Pacific Post, a weekly newspaper printed in English and published in Port Moresby, is delivered throughout the Territory of New Guinea by airmail and there are many subscribers to overseas publications. A number of newspapers of particular interest to the indigenous inhabitants are published locally by the Administration and several missions in English, Melanesian Pidgin English and two native languages.

#### Indigenous Religions.

The religious beliefs of the indigenous people receive the protection and consideration accorded to all native customs under the provisions of the law.

# Missionary Activities.

No restrictions are imposed on missions or missionary authorities, other than the right of the Administering Authority to exercise such control as may be necessary, for the maintenance of peace, order and good government, the entry into restricted areas, and for the educational advancement of the inhabitants. Further reference to missionary activities is made in the relevant sections of this report and the number of adherents claimed by the various denominations will be found in Appendix XXV.

The Administration provides assistance to missionary organizations by way of financial grants in aid and the grant of supplies and equipment in respect of their work in the fields of education and health. Particulars are included in the sections of this Report which deal with those matters, and in Appendix XXV.

### Adoption of Children.

The conditions and procedures relating to the adoption of children are set out in the Adoption of Children Ordinance 1951. The Ordinance provides for the supervision and regulation of adoption of children by the Supreme Court, which has the power to make an adoption order, to impose terms and conditions, and, in certain circumstances, to discharge an adoption. The adopting parent is prohibited from marrying his adopted child.

#### Immigration.

Information relating to immigration for the year under review is given in Table 3 of Appendix I. of this Report. The control of the entry of persons into the Territory is governed by the provisions of the Immigration Ordinance 1932-1940 and the regulations thereunder. The Chief Collector of Customs is empowered to administer the Ordinance and Regulations on behalf of the Administrator.

### CHAPTER 3.

#### STATUS OF WOMEN.

#### General.

The laws of the Territory do not discriminate on the grounds of sex against women of any race. As regards social status the position of the women of the non-indigenous races is exactly the same as that of women in their respective countries of origin.

In the case of the indigenous people the status of women varies from one group to another and is affected by numerous social, political, economic and religious factors. Local leadership is confined to men us are also general political activities and decisions, but whilst women invariably remain in the background in such matters they have tribal social standing and influence, and their rights, privileges, duties and responsibilities are well established by indigenous custom and are fully recognized and respected.

Before marriage a woman is under the authority of her father or guardian and after marriage passes under the authority of her husband. She is expected to devote herself to her work in the home and the garden. In some areas women may own and inherit various forms of property, including land, and have rights in certain crops and may trade in the local markets on their own account.

### · Legal Copacity.

Under the laws administered by the courts of the Territory women, whether married or unmarried, enjoy equal rights with men in every respect—they can sue or be sued; may own and dispose of property, enter into contracts and practise any profession. As regards native women, their legal capacity in civil law depends to some extent on tribal custom.

Women are entitled to hold public office, including office in organs of government and to exercise public functions equally with men. Although it has not been a general custom among the indigenous inhabitants for the women to take part in public affairs, they have been given the right to vote under the Native Village Councils Ordinance and two women candidates have stood for election, but without success.

#### Employment.

Women enjoy the same rights as men regarding employment by the Administration. The only legal restrictions imposed on the employment of women are contained in the Native Labour Ordinance 1950-1952 and the Native Women's Protection Ordinance 1951. Social customs in many centres place restrictions on the employment of women outside of their tribal areas.

The Administration staff establishment provides for a number of positions to be filled by femule appointees, notably medical and nursing and teaching staff. Some locally engaged Asian women are employed on clerical duties, whilst native women have been engaged mostly for the educational and nursing organizations. With the expansion of education and training facilities, it is to be anticipated that the number employed by the Administration will increase.

#### Marriage Customs, &c.

Polygamy is still practised, but to an ever-decreasing extent. It is a recognized custom and has been a traditional feature of tribal life. The decrease is due partly to the spread of Christianity and partly to economic pressure.

Among the indigenous inhabitants there is no minimum age for marriage. A marriage which is in accordance with the custom prevailing in the tribe or group to which the parties belong is recognized as a valid marriage.

The Marriage Ordinance 1935-1936, which does not apply to any marriage both of the parties to which are indigenous people, provides that no marriage shall be celebrated unless each of the parties (not being a widower or a widow) has attained the age of 21 years, or if under that age, the requisite consent has been obtained in writing. The consent must be obtained of the father, or of the mother, if the father is not available, or of the guardian if neither parent is available. If no parent or guardian is available a District Commissioner may consent to the marriage or in any case a Judge may give his consent if he considers that, in all the circumstances, the marriage is for the benefit of the party.

The marriage of a native with any person other than a native cannot be celebrated without the written consent of a District Officer.

### Women's Organizations.

With Administration assistance various women's organizations continue to develop. Grants are made to help in the training of Guiders; and material, such as sewing syllabuses, plays and recipes, prepared by the Department of Education, is made available. Local associations are functioning in Rabaul, Bulolo and Buin. Two women's clubs have been established at Finschhafen and Dagua, each in charge of a European woman who provides instruction in English, sewing, cooking and mothercraft.

### CHAPTER 4.

#### L'ABOUR.

### Outstanding Factors and Problems.

The main objectives of labour policy are to ensure fair working conditions, the maintenance of good relations between employer and worker and improved efficiency and an increase in the productivity of the worker. The greatest problem is the assurance of an adequate supply of labour and at the same time ensure that large-scale employment of indigenous inhabitants as wage-earners, mostly away from their villages, does not retard plans for the welfare and development of the native people as a whole. No indigenous inhabitant is entirely dependent on wages for sustenance and the wages and other emoluments paid to the worker are supplementary to other income or subsistence derived from village and tribal activities.

# Kinds of, and Opportunities for Employment.

At the close of the year 38,443 indigenous inhabitants were in employment and full information will be found in Appendix XVII.

### Unemployment.

There is no unemployment and ample opportunities exist for unskilled and skilled workers to obtain employment, with a wide field to choose from. A shortage of skilled labour exists, but this will be eventually overcome as the training of apprentices gets under way.

#### Recruitment of Workers.

The engagement of labour is strictly in accordance with the provisions of the Native Labour Ordinance 1950-1952 and permits to engage employees are issued by District Officers—a permit authorizes the holder to engage workers for employment on his own behalf or with the written authority of a registered employer, on behalf of that employer. It is an offence for any person, in respect of the engagement of an employee to give, offer or accept any fee, bonus, commission or consideration of any kind, other than salary, wages and expenses. Workers are provided with free transport and sustenance from place of engagement to place of employment, and repatriation on termination of agreement. Where the wife and children of an employee, with the consent of the employer, accompany or join the employee at his place of employment, the employer is liable for the cost of the transport from their home to place of employment and for their return home on termination of agreement. Workers are free to choose the occupations in which they desire to work. The maximum period of engagement under a written agreement is two years with provision for a second agreement for one year before returning home or engaging in casual employment.

Special conditions apply to the engagement of workers from the Highlands districts for employment in areas baving an altitude of less than 3,500 feet above sea-level, and the period of employment is limited to a maximum period of eighteen months, after which they must be returned to their homes. Recruitment, which is restricted to fully controlled areas, is undertaken by the Administration as close supervision is considered advisable at this stage of their advancement and necessary to ensure that the special bealth precautions required by the Administration are carried out. Recruitment is, of course, purely voluntary. The usual fees payable under the Native Labour Ordinance are charged and, in addition, a special fee of 10s.

### Training of Skilled and Other Workers.

Training will shortly be available to indigenous workers under the apprenticeship system and, in addition to the technical training available at the Administration and Mission technical schools, industrial and vocational training is provided by departments of the Administration in agriculture, forestry, hygiene, navigation, engine-room attendants, printing, clerical and telecommunications.

# Migration of Workers.

There is no restriction on the employment of indigenous inhabitants of the Territory of New Guinea in Papua or vice versa, and at the close of the year 2,395 workers from New Guinea were employed in Papua and 547 Papuans were employed in New Guinea. The conditions of employment are the same for both Territories. Indigenous inhabitants have no occasion to leave the Territory of Papua and New Guinea in search of employment.

### Recruitment from Outside the Territory.

There is no recruitment of native people from outside the Territory other than the Papnans referred to.

# Compulsory Labour.

The Papua and New Guinea Act 1949-1950 prohibits forced labour except in accordance with the provisions of the Convention Concerning Forced and Compulsory Labour. The Native Administration Regulations provide for the compulsory planting and cultivation of crops in an area which has been declared by the Administrator to be liable to a famine or deficiency in food supplies. It was not necessary to declare any area during the year. There is no statutory provision in respect of compulsory labour for carrying and if an employee or casual worker is employed as a carrier any load must not be greater than 40 lh. in weight and not carried for any distance exceeding 12 miles in one day.

### Indebtedness.

Indebtedness amongst wage-earners and salaried workers is negligible and does not present any problem.

#### Application of Conventions.

No International Labour Organization Conventions have been applied to the Territory during the period under review. The following Conventions adopted by the International Labour Organization have been ratified on behalf of the Territory:—

Marketing of Weight (Packages Transported by Vessels); ratified on 9th March, 1932.

Forced Labour; ratified on 2nd January, 1933.

Unemployment Indemnity (Shir vreck); ratified on 6th November, 1937.

Final Articles Revision; ratified on 15th January, 1952.

### Terms and Conditions of Employment.

The conditions of employment and welfare of indigenous workers in paid employment are governed by the Native Labour Ordinance 1950-1952, the Mines and Works Regulation Ordinance 1935-1952 and the Native Contracts Protection Ordinance 1921-1947. Workers may be employed—

- (a) under a written agreement for a period not exceeding two years, and on expiration for a further period of one year (referred to in this report as an employee);
- (b) as a casual; or
- (c) on a day to day basis.

There is no provision for collective bargaining, conciliation and arbitration of wages and working conditions.

Labour Agreements.—All agreements accord with the requirements of the Native Labour Ordinance and an agreement has no force or effect until sanctioned and attested by an authorized officer. There are no penal sanctions and the remedy for breach of agreement by either party lies in the institution of civil proceedings hefore a District Court. In any such proceedings an employee may be represented by a District Officer or an officer authorized by the District Officer in writing. With the exception of employees from the Highlands districts, the maximum duration of such agreements is two years. An employee accompanied by his wife and children may enter into further agreements with the same employee hefore returning home but in other cases one only further agreement may be entered into, with the same employer, for a period not exceeding one year, on the expiration of which he must be given the opportunity to return home at the employer's expense.

Hours of Work, Rest Periods, &c.—The hours of work are 44 hours in a week from Monday to Saturday inclusive with one hour's break after each period of four hours worked. All hours worked in excess of eight hours in any one day from Monday to Friday or in excess of four hours in a Saturday are overtime for which special rates are paid. The maximum hours to be worked in any one day must not exceed twelve including overtime. Where the nature of the class of employment warrants or where shift work is necessary, normal duty on Saturday afternoon or Sunday may be required and overtime need not be paid unless 44 hours have been worked in any period of seven days.

Remuneration.—Wages must be paid in coin or notes which are legal tender in the Territory. A proportion of an employee's wages, not exceeding one half of his monthly wages, must be paid to him at the end of each month. The balance is deferred and payable to him at the termination of the agreement. With the consent and in the presence of an authorized officer an advance of the deferred wages not exceeding one-third of the deferred wages accrued may be made to the employee at his request. In the case of workers not employed under an agreement the full wages must be paid at intervals not greater than one month

The minimum monthly cash wage, prescribed by the Native Labour Regulations is 15s, per month and for overtime one and a half times the ordinary hourly rate or at the rate of 6d, per hour whichever is the greater. Although the minimum rate is 15s, per month, it will be seen from the figures given in Table 6, Appendix XVII., that the actual average is much higher, particularly among skilled and semi-skilled workers. In addition to cash wages, an employer must provide accommodation, medical attention, food, clothing, cooking utensils and such other articles as are prescribed free of charge; and to the wife and children of a worker if residing with him at his place of employment. The monthly value of rations, clothing and other free issues varies somewhat according to district and from month to month, but at the 30th June, 1953, it was estimated to average about £7 15s, per month exclusive of fractional monthly costs of medical care, accommodation, transportation, &c.

Provision of Rations, Clothing, &c.—The prescribed clothing and other articles to be issued are as follows:—At commencement of employment—one blanket, two loin cloths or two pairs of short trousers, one towel, one howl or plate, one cup, one spoon, one portable box or case or kitbag. At intervals of three months—one loin cloth (provided shorts not issued). At intervals of six months—one towel and one pair of short trousers. At commencement of second year of service—one blanket. Mosquito nets must also be provided except where a District Officer otherwise directs. Where a worker is employed at altitudes above 1,000 feet the following additional issues are made:—Not exceeding 1,500 feet, one woollen shirt; above 1,500 feet but not exceeding 2,500 feet, one woollen shirt and one blanket; above 2,500 feet but not exceeding 4,000 feet, one woollen shirt and three blankets.

All clothing and other articles prescribed must comply with the specifications in the Native Labour Regulations regarding quality, size, &c.

A new ration scale, prepared in conjunction with nutritional experts of the Commonwealth Department of Health, was introduced in 1952. The scale is designed to provide a wider variety of foodstuffs and to make greater use of the Territory's own products and to provide a diet that is adequate nutritionally. The general principles and classifications of foodstuffs are an improvement on the previous scale. A copy of the new scale will be found in Table 20, Appendix XVII.

Skirts and dresses are issued to female workers and the wives of workers in lieu of loin cloths and shorts and the issue of rations to wives and children is on a slightly reduced scale except items 3, 6 and 7, which must be issued in full to wives, and item 3, which must be issued in full to children. In the case of a day-to-day worker, wages are paid daily or weekly at a rate of not less than 6s, per working day, which includes the value of issues of rations, clothing and equipment.

Housing and Sanitary Conditions at Places of Employment.—The Native Labour Regulations prescribe the types and minimum dimensions of houses for the accommodation of labour, together with the minimum cooking, ablution and sanitary requirements.

Discrimination and Equal Remuneration.—The differences that at present exist with regard to opportunities for employment and wages rates are not the result of discrimination on grounds of race, but the result of differing standards of education, living, experience and qualifications. The policy is to develop educational and training facilities so that all sections of the community may have equal opportunities.

Medical Inspection and Treatment.—The Native Labour Ordinance requires the medical examination of a recruited worker before entering into an agreement and on termination of agreement before returning home, and an employer to provide, at the place of employment, free medical treatment for all his employees and casual workers and such wives and children as reside with them, and take all reasonable precautionarymeasures to safeguard their health.

An employer is also required to send to an Administration hospital or a hospital regularly visited by a medical officer any sick worker or any sick wife and child of a worker, if living with him, whose case appears to he such as requires treatment by a medical officer or whose health is not showing steady signs of improvement.

Workers' Compensation.—Compensation for injury sustained by an indigenous worker is provided for under the Native Labour Ordinance. The compensation is assessed by the District Court which may order the compensation to be paid into Court and give directions for its application for the benefit of the worker or his dependants.

Employment of Women and Juveniles.—The provisions of the Native Labour Ordinance and Native Labour Regulations apply to the employment of women with the exception that they cannot be employed under written agreement. The demand for female labour is very limited and only 261 were employed at the 30th June, 1953. Employment is in occupations suitable to their physical capacity. The employment of natives under the age of sixteen years is forbidden.

Underground and Night Work.—The Native Labour Ordinance applies to indigenous workers employed in mining and the Mines and Works Regulation Ordinance provides for the regulation and inspection of mines and works, including the conditions of employment in underground workings. An indigenous worker must not be employed in underground workings unless he is able to understand and make himself understood by those under whom he is placed, is over the age of sixteen years, and is employed only under the supervision of a European holding an underground miner's permit.

There are very few undertakings which operate regularly at night and night work is almost entirely restricted to loading and unloading of ships, attending copra-driers, operating telephones and radio services, police and hospital duties.

Freedom of Movement of Persons to Neighbouring Territories for Employment Purposes.—There is no restriction on the movement of persons between Papua and New Guinea and persons may move to neighbouring territories to seek employment provided they comply with the regulations concerning permits. As a variety of work is available in the Territory indigenous inhabitants have no desire to seek employment elsewhere. There is no system of labour passes or work books.

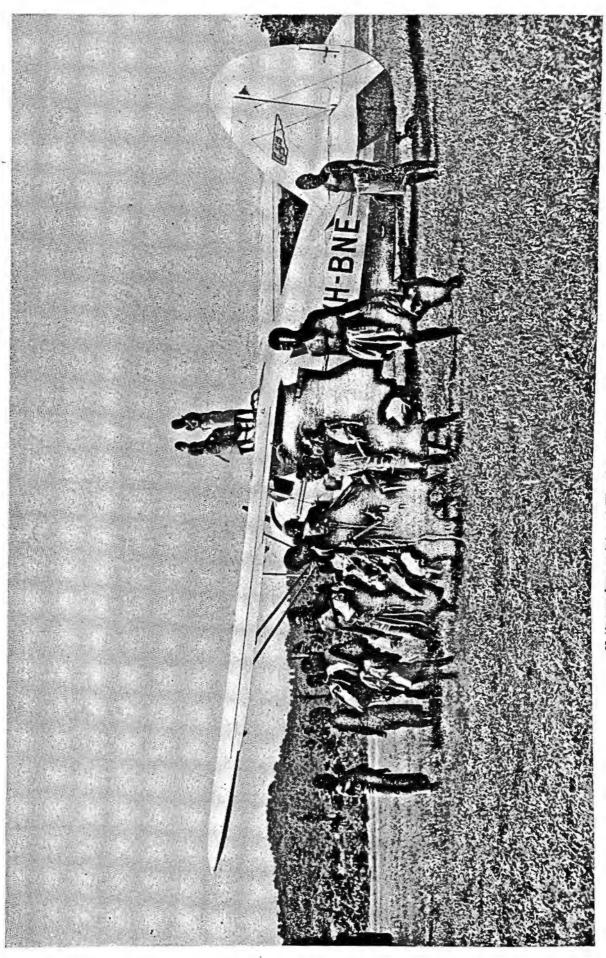

Training of Employees.—The only legislation relating to the training of employees is the Apprenticeship Ordinance which regulates apprenticeship agreements. Training is also carried out on the job in the various departments and private industry.

Industrial Homework.—There is no industrial homework apart from the occupation of the indigenous people in some areas in local handicrafts.

Industrial Safety.—Provisions relating to industrial safety are included in the Native Labour Ordinance 1950-1952, the Explosives Ordinance 1928-1949, the Mines and Works Regulation Ordinance 1935-1952 and the Electricity Supply Ordinance 1951.

Organization of Department Responsible for the Administration of Labour Laws.

The administration and enforcement of labour laws and regulations is one of the functions of the Department of District Services and Native Affairs. The Director of that Department is charged with the administration of the Native Labour Ordinance and District Commissioners, District Officers,

Assistant District Officers, and Senior Patrol Officers are authorized officers and inspectors for the purpose of the Ordinance.

The work falls into two main categories:-

Head-quarters organization (Native Labour Branch)-Administration, maintenance records, compiling reports and statistical data, drafting new legislation, &c.; and Field Inspectorate-Inspection of conditions of work at all places of employment, control of recruiting, investigation of complaints, advice to employers and employees on all matters connected with the employment of indigenous workers, conciliation of disputes, attestation of written agreements, and witnessing paying-off of workers on termination of agreements, &c.

#### Trade Unions.

There are no trade unions, and at the present stage of their development it would be very difficult for the indigenous workers to form proper trade unions as, with the continual turn-over of labour, the great majority are illiterates who would not be able to held responsible positions in a trade union and who, as members, would have difficulty in assimilating the aims and ideals of trade unionism and would probably not have complete trust in their executive representatives or a proper appreciation of their functions.

For the time being, it is considered that the best protection for the indigenous worker is for the Administration to retain full responsibility for the conditions of his employment and welfare generally.

### Settlement of Labour Disputes.

Most disputes that arise are of a minor nature and are settled by native labour inspectors and on rare occasions by the institution of civil proceedings before a District Court. It has not been necessary to provide for any special legislation for their settlement. A list of complaints by workers will be found in Table 21, Appendix XVII.

#### CHAPTER 5.

# SOCIAL SECURITY AND WELFARE SERVICES.

There is no special legislation dealing with social security and welfare services and so far as the majority of inhabitants are concerned no comprehensive scheme of social security is needed.

Practically the whole of the indigenous inhabitants live in their tribal areas and responsibility for the care of the aged, infirm and orphans rests primarily on the tribal organization which provides a traditional system of social security for the individual based on the accepted collective obligations and responsibilities of the family, extended family, clan or tribe.

The medical services, which are described in Chapter 7, under Public Health, are available to the indigenous inhabitants free of any charges and the services of the Red Cross Society, which has

branches in all the main centres, are available to all sections of the community.

No particular department is charged with the responsibility for welfare services, but there are very few activities of the Administration which are not directly concerned with the social welfare of the inhabitants. The contribution made by the religious missions is important and an ever-increasing interest is being taken in social welfare by village councils and various native societies.

# CHAPTER 6.

# STANDARDS OF LIVING.

The only surveys relevant to the standard of living are the nutritional survey carried out in 1949 by the Australian Institute of Anatomy in association with the Administration and a census of native agriculture which the Administration has been carrying out since 1950. The field work associated with this survey was almost completed at the end of the period under review.

A survey of the cost of living of the indigenous people would be impracticable as the majority obtain most of their requirements, such as food, fuel, cooking utensils, building material, &c., from their own local resources and tribes and villages barter with each other for those things which they do not produce themselves.

The stages of advancement and conditions vary so much throughout the Territory, from the semi-urhanized villages adjacent to towns to the areas recently brought under Administration influence, that it is difficult to generalize. In all areas the people have sufficient land to meet all their requirements and food is plentiful although, as shown by the nutritional survey, it does not in all cases provide a balanced diet and, as the result of feasting, there is sometimes a temporary shortage.

The action taken to effect improvements by the encouragement of improved agricultural methods, the planting of new crops and the storage of food crops has resulted in increased production and a demand for improved stock in pigs, goats and fowls, and for new and better quality food crops, including new varieties of vegetables which have been introduced to diversify their diet. Most of the effort directed towards the economic and social development of the Territory, and in which the co-operative movement and rural progress societies are playing an important part, is designed to bring about an improvement in the general standards of living.

### CHAPTER 7.

#### PUBLIC HEALTH.

### (a) GENERAL ORGANIZATION.

#### Legislation.

The following legislation affecting medical and public health work or related matters was passed during the year:—

No. 104 of 1952.—Slaughtering Ordinance 1952.

No. 136 of 1952.—Pharmacy Ordinance (No. 2) 1952.

No. 2 of 1953.—Drugs Ordinance 1952.

No. 7 of 1953.—Animal Disease and Control Ordinance 1952.

No. 8 of 1953.—Medical Ordinance (No. 2) 1952. Disallowed (Gazette No. 44 of 27th August, 1953).

No. 11 of 1953.—Pure Food Ordinance (No. 2) 1952.

No. 21 of 1953.—Dangerous Drugs Ordinance 1952.

No. 22 of 1953.-Poisons and Dangerous Substances Ordinance 1952.

No. 29 of 1953.—Sale of Meat Ordinance 1953.

No. 30 of 1953.—Pharmacy Ordinance Amendment Ordinance 1953.

No. 31 of 1953.—Slaughtering Ordinance 1953.

No. 35 of 1953.—Animal Disease and Control Ordinance 1953.

\*No. 100 of 1953.—Suppression of Hansen's Disease Ordinance 1953.

In addition, the following Regulations were made:-

No. 28 of 1953.—Slaughtering Regulations 1953 (No. 19 of 23rd April, 1953).

### Departmental Organization.

The Health Department is under the direction of the Director of Health with head-quarters in Port Moresby. There are three Assistant Directors in charge respectively of medical services, hygicne and medical training.

The Health Department is responsible for providing a medical service covering the whole Territory. It provides hospitals, dispensaries and public health services in each district, research facilities and dental and other ancillary medical services and undertakes the training of medical, nursing and other public health personnel. It supervises and co-ordinates the medical and public health services provided by Village Councils, and there is close liaison between the Department and missions engaged in medical work and medical training.

In conjunction with the Departments of Customs, and Agriculture, Stock and Fisheries, the Department of Health controls the importation and use of dangerous drugs and maintains the procedures for human, animal and plant quarantine. The functions of the staff of the Department may be classified under the following headings:—

- (1) Administrative,
- (2) Hospital, Pharmaceutical and Health Services.
- (3) Specialist Services-
  - (i) Tuberculosis.
  - (ii) Infant and Maternal Welfare.
  - (iii) Radiology.
  - (iv) Surgery.
  - (v) Ophthalmology.
  - (vi) Leprology.
  - (vii) Dental Services.
  - (viii) Laboratory Services.
    - (ix) Malariology.
    - (x) Medical Training.

#### Medical Services Outside the Government Service.

There are a number of missions engaged in medical work in the Territory and during the year they maintained 30 hospitals, 124 aid posts and 57 infant and maternal welfare centres. They have also undertaken the training of subordinate nursing staff and provided European staff for the three Administration Hansenide colonies. The work of these missions is given recognition through a system of grants-in-aid and the free supply of drugs, dressings, equipment, &c., which together represented a total of £78,746 for the year.

As mentioned earlier in this report, employers are required to provide medical attention for their employees and casual workers as prescribed in the Native Labour Ordinance and regulations thereunder.

# Co-operation with International Organizations.

Co-operation has been maintained with the World Health Organization, Food and Agriculture Organization, South Pacific Commission and International Civil Aviation Organization (F.A.L. Division) on public health matters such as nutrition, preventive treatment and health measures, quarantine and exchange of epidemiological information.

A list of the International Conventions which have been applied to the Territory has been given in previous reports which are referred to in Appendix XXIII.

The provisions of the International Sanitary Conventions relating to Maritime and Aerial Navigation are fully observed, and epidemiological information from the Territory is furnished monthly to the South Pacific Commission which in turn collates the information in the South Pacific area, advising the member Governments and the World Health Organization. In the event of an outbreak of any major quarantinable disease or epidemic, the South Pacific Commission and the World Health Organization are notified immediately.

The Department of Health receives a weekly Fasciculus of Epidemiological Intelligence recorded at the World Health Organization Intelligence Station, Singapore, and a Weekly Epidemiological Record from Geneva.

#### Finance.

Expenditure on health services for Papua and New Guinea amounted to £1,230,000 of which £848,801 was expended in the Territory of New Guinea. Further particulars will be found in Appendix IV. It should be noted that these figures do not include expenditure on works and services of a capital nature nor on the improvement and maintenance of existing hospital buildings. During the year work has been mainly concentrated on improvement and maintenance.

The revised plan of bospital construction provides for an integrated system of hospitals adequate to meet the needs of the Territory. A start has been made on the construction of the General hospital at Lae and it is expected that work will commence on the Wau and Nonga Regional hospitals during 1954.

The new works programme for 1953-54 provides for-

					£
(a) Nonga (Rabaul) Regional	Hospital				 218,000
(b) Wau Regional Hospital		• •		• •	 43,500
(c) Bulk Medical Store Rabaul			• •	• •	 10,000
(d) Lac General Hospital	• •			• •	 230,000
(e) Miscellaneous buildings		• •	• •		 11,500

Expenditure by village councils on health and sanitation was approximately £4,500 for the year.

#### (b) MEDICAL FACILITIES.

#### Hospitals.

There are 51 Administration hospitals, of which 40 are available to the indigenous people, eight to Europeans and three to Asians. In addition, 30 hospitals are maintained by missions, six of which are staffed with resident doctors.

# Medical Aid Posts (Village Dispensaries).

These posts are established in villages or groups of villages throughout the Territory. They are staffed by native medical assistants who have completed a two years' course of training, particulars of which are given under the heading "Medical Training". These posts serve the purpose of extending simple medical aid to the indigenous people in all parts of the Territory, establishing good hygiene practices and encouraging the sick and injured to seek admission to hospital for treatment. Posts established at the 30th June, 1953, number of trained attendants and number of known treatments are shown hereunder:—

	District.		District. Number of Aid Pos					Number of Medical Attendants.	Number of Known Treatments.	
					45	47	69,380			
Western Highlands					59	66	64,817			
Madang					33	39	11,485			
Sepik					108	136	54,696			
Morobe					88	125	42,971			
New Britain					40	69	18,913			
New Ireland					37	41	16,038			
Bougainville					61	89	95,690			
Manus	•••				16	22	4,594			
				ľ	487	634	376,584			

These figures shown an increase of 43 posts and 62 attendants for the year. In addition to the posts listed above, eleven posts are maintained by village councils.

#### Medical Patrols.

The only way to ensure that medical treatment is available to all the people, particularly those in the hinterland and newly opened up areas, is to visit them in their villages and every effort is made to ensure that all villages not within reasonable distance of a hospital are visited by a European medical patrol twice a year. These patrols also check up on medical aid posts en route.

Exclusive of the patrol work carried out by the Infant and Maternal Welfare and Anti-Tuberculosis teams, the number of medical patrols for the year was 214, during which 207,431 people from 1957 villages were medically examined and treatment given for the following:—

Diseas	e					No.
Yaws		 	 			3,468
Tropical ulcers		 	 			3,203
Other skin diseases	1 .	 	 			12,970
Tuberculosis		 	 4.9		1.4	669
Hansen's disease		 	 			1,310
Eye diseases		 ** 4	 			1,559
New Guinea mouth		 	 	4 +		26
Nutritional deficiene	У	 	 	• •		366
Filariasis		 	 			1,251
Gonorrhoea		 	 			27
Granuloma venereum		 	 			5
Hookworm		 	 			7,033
Other diseases		 	 			5,571
Total		 	 			38,058

### Specialist Units.

Maternity and Child Health.—Maternity and child welfare centres are maintained by the Administration and provide advice in the ante-natal period, general health check and examination of preschool and school children, advice on feeding and weaning, treatment of minor ailments, immunization with T.A.B., diphtheria, BCG, pertussis and tetanus, and training of native women in welfare work.

Eleven qualified nursing sisters are employed full time on infant and maternal welfare work with all sections of the community and permanent clinics are located at Rabaul and Kandrian in the New Britain District, Kavieng in the New Ireland District, and at Lae in the Morobe District. Four field units are also maintained by the Administration and clinics are held throughout the Territory at regular intervals, at which the opportunity is taken to give instruction on the prevention of disease and the introduction of positive health measures, in addition to the routine maternity and child health work.

Labour lying-in wards are maintained at all Administration and mission hospitals and the services of doctors, nurses and other medical personnel are available for the medical care and treatment of children.

The Missions assist in child and maternal welfare work and conduct 57 clinics for this purpose. As in previous years, they are supplied with powdered milk, cod liver oil and marmite for distribution to mothers and children as well as special drugs for infants. Missions which have recognized training schools have undertaken the training of 31 girls in welfare work; the trainees receive wages, rations and uniforms through the agency of the Department of Health.

Malaria Control.—Malaria control is exercised wherever a member of the staff of the Department of Health is located. A Malaria Control School has been established at Minj in the Western Highlands District to provide courses of instruction to students selected primarily from the Department of District Services and Native Affairs.

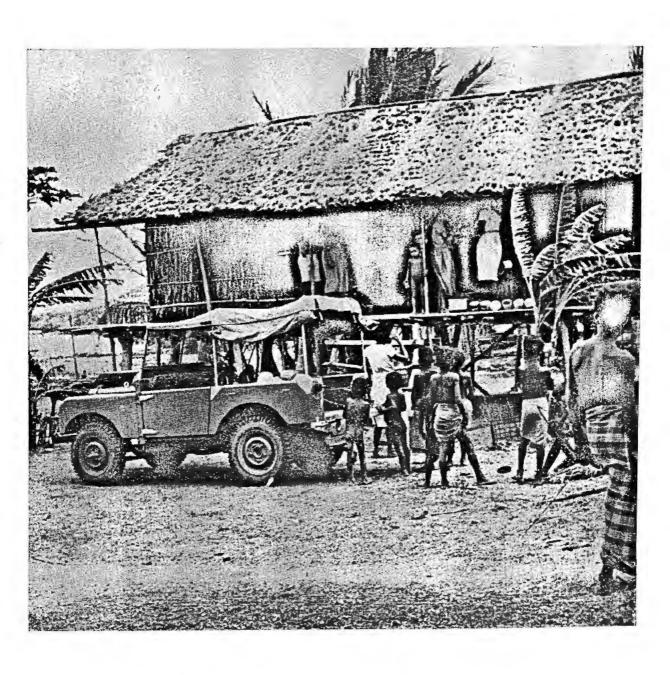

In towns and settlements stress is laid on species control and elimination of breeding areas. Squads of trained native hygiene workers have a set plan, and as potential danger areas are noted by survey, each is visited and treated once in every eight days.

Tuberculosis Control.—An Anti-Tuberculosis Survey Team is functioning in the Territory and the plans for the X-ray of all inhabitants are now in full operation. In addition, all susceptibles received BCG Vaccination. These are the two main methods of control apart from diagnosis and treatment in hospitals, where accommodation for Tuberculosis patients is available in special wards at all hospitals.

Venereal Disease Control.—The incidence of venereal diseases is not high. Prostitution is not widely practised in the common sense of the word amongst the indigenous people, nor has it become a health problem. Treatment for venereal disease is available at any hospital.

The Ordinances referred to hereunder give all the powers and authority required to control venereal disease—

Quarantine Ordinance 1931-1938. Venereal Diseases Ordinance 1920-1925. Native Administration Ordinance 1921-1951.

Mobile Infant and Maternal Welfare Clinic arriving at a native village and roadside stops.

÷ . • êt . •

Treponematoses (Yaws).—The standard treatment of yaws by injections is part of the routine work of the medical organization and in which the missions and other organizations actively co-operate. Penicillin is increasingly replacing N.A.B. in the treatment of this disease.

Hansen's Disease (Leprosy).—There are indications that this disease is widespread throughout the highlands and that it had its origin before the advent of Europeans in the Territory. Patients are treated in five special hospitals and also in isolation wards in most hospitals.

Other Endemic Discase Control.—Treatment is given at all stations and all inhabitants are instructed in necessary hygiene control of those diseases. The means used to impart these instructions are personal contact by officers on patrol, village officials, the radio and the press. The luluai (chief) of a village is required under the provisions of the Native Administration Ordinance to report to an administration officer if an unusual amount of sickness occurs in bis village.

### Research.

Research was continued during the year in the fields of malaria control, tuberculosis and Hansen's disease, which represent the three major disease problems in the Territory.

Malaria.—The Territory's littoral is hyperendemic, but the degree of hyperendemicity appears to be too low to afford full protection to the adult. Thus malaria, and even death from it, occur at all ages and are not practically limited to infancy. The highlands of New Guinea are irregularly infected. No true epidemics of malaria have, however, been observed. Two particular lines of approach are being used to seek control of malaria—the environmental and the suppressive. The methods adopted to date are simple and have been found suitable to the physical abilities and financial resources of the people.

The first project was the establishment of a Malaria Control School and the area chosen for demonstration drainage at Banz, in the Western Highlands, ceased to exhibit any cases of malaria after the field works had been completed. The school now has been transferred to Minj, also in the Western Highlands. The school buildings have been completed and courses of training for members of the community will commence late in 1953. Controlled drainage will do much to eradicate mesquito breeding in such parts of the Territory as are suitable to this type of undertaking.

The second method is the distribution of anti-malarials. In collaboration with the Director of Health special research into the use of anti-malarials is controlled and directed by a Malariologist of the School of Public Health and Tropical Medicine, Sydney. Totaquin tablets prepared in Australia from quinine grown in the Territory by the Department of Agriculture, Stock and Fisheries are issued to all inhabitants of selected villages and improvement in spleen and parasite rates are noted. The research extends into methods by which villagers can pay for this issue such as bartering for the supply of foodstuffs to native hospitals. The results of this experiment are not likely to be available until 1954.

Residual insecticide work has also been undertaken and despite its failure and apparent inapplicability in many localities owing to the habits of the significant Anopheles species, it is being found useful in some areas.

The policy of the Administration in connexion with this disease is-

- (a) to reduce the incidence among the partially immune by mosquito control, where possible, on a village to village hasis;
- (b) to provide mass therapy in case of epidemics;
- (c) to protect indigenous groups with little or no malaria, as well as the non-indigenous population, by suppressive treatment when in malarious areas; and
- (d) to protect infants in hyperendemic areas, if possible without hindering their development of immunity.

Malaria was responsible for the greatest number of admissions to Administration hospitals, 12,155, with an overall Territory death rate of 0.97 per cent.

Hansen's Disease.—There are two special Hansenide hospitals maintained and staffed by the Administration and special accommodation is available for the treatment of Hansenides at most Administration hospitals.

Various missions participate in the work of treating and caring for Hansenides and, at the request of and with funds provided by the Administration, the following missions have built and staffed Hansenide colonies at the following centres:—

Torokina-Marist Mission Society.

Anelaua-Mission of the Sacred Heart of Jesus.

Togoba—Coral Sea Union of Seventh-day Adventists Mission, and a second colony is to be established by this mission at Dogamur.

All running expenses and maintenance of these colonies are defrayed by the Administration.

The Lutheran Mission maintains a small colony near Ulap, with assistance from the Administration by way of the free supply of foodstuffs.

The total number of cases treated at all centres during the year was 1,611.

Plans for the control of the disease include the segregation of all infectious cases into the special institutions providing controlled treatment. All of these institutions are conducted as farm and occupational therapy colonies, and particular attention is paid to improvement of the social environment with an emphasis on educational advancement.

Tablets of sulphetrone are in use in all centres treating Hansenide patients and, like all other treatments, are provided free. The rather more contagious type of Hansen's disease—the lepromatores form—responds fairly rapidly and in a few months it is rendered non-contagious or nearly so. The less contagious variety—the neural type—responds less quickly, but early cases appear completely cured and relapses also respond. A minimum of eighteen months' treatment is necessary in nearly all cases. Although very good results are being obtained with sulphetrone, a newer simpler sulphone which, although more complicated to use is a little more effective, is to be introduced.

Tuberculosis.—The year has been marked by the founding of a more extensive scheme for the use of BCG vaccine, by extension of laboratory control of the disease and by the use of mass radiography.

BCG Vaccination Campaign.—In 1951, a freeze-dried vaccine prepared by the Commonwealth Serum Laboratories was used in a pilot survey. The conversion rate in a group of over 500 people at eight weeks was excellent. This group was retested and all persons had remained positive. These results were then extended by a patrol covering the whole of the island of New Ireland and its adjacent island groups. The following results were found:—

- (1) Freeze dried BCG vaccinc (CSL) kept in the refrigerator for one year was still fully potent.
- (2) Vaccine three months old and carried for a further three months at tropical temperatures in a light-proof box under ordinary patrol conditions remained fully potent.
  - (3) Exposure of BCG vaccine suspension in the ampoule of a syringe for two minutes in tropical sunlight completely killed the vaccine as judged by conversion rates.

These findings have led to a remodelling of the whole BCG programme which now provides for the extension of the use of BCG vaccine so that even the most outlying areas may benefit by its use. All centres, such as native hospitals and welfare clinics, are being visited and the staff given training in technique and record keeping. The Medical Officers in Tuberculosis Control are responsible for passing the centre as fit to use BCG vaccine.

There is sufficient experience in the use of Mantoux testing and BCG vaccine in the Territory to warrant an opinion on its value. The morbidity amongst vaccinated subjects has been small and is in marked contrast to that stated in pre-war reports. It is very difficult to visualize any other reason for this fall, apart from BCG vaccination. Other conditions have certainly improved but not so markedly as to produce such a decline. For this reason the value of BCG vaccination is accepted in the Territory and its use extended.

All indigenous employees proceeding from the Eastern Highlands District continue to be vaccinated with BCG before going to the coast. This vaccination programme now includes all employees from a region over 3,500 feet.

Prevention.—Simple techniques have been evolved for culturing of Tubercle bacilii. Elaborate apparatus is not required but a reasonable training in these methods is an essential requisite. Laryngeal swabs and a swab prepared from the sputum after swabbing have replaced concentration methods. The swabs are treated with acid and alkali in the outstations and smeared directly on to culture media held there. The inoculated tubes are then sent by air to the base laboratory for culture and reading. When a supply centre for the manufacture and distribution of Lowenstein Jensen media is established it is intended to carry accurate bacteriological diagnosis into the most isolated parts of the Territory where previously such diagnosis was technically quite impossible and which will represent a most important advance in tuberculosis control in the Territory.

Periodical X-ray and laboratory examinations have been organized for follow-up for all pulmonary suspects or others, where immediate hospitalization was not possible or required.

Anti-T.B. clinics held by qualified Medical Officers have been continued for patients seeking medical advice, examination for tuberculosis or out-patient treatment. All negative reactors to Mantoux test have been vaccinated with 0.1 cc. BCG vaccine.

Children continue with periodical tuberculin tests and X-ray examinations where necessary; e.g., periodical chest X-ray examination of tuberculin positive children.

As a special subject in the Gazelle Peninsula the results of previous BCG vaccinations were checked by conversion test (Mantoux) for tuberculin sensitivity. As the highest concentration, old tuberculin diluted 1:100 was used. The age group 0-1 was vaccinated several months previously; the older age groups approximately two and a half years ago.

The results are shown in the following table:-

					0-1.	2-5.	6–12,	18-80.	31 and over.	Total.
Males										
Danisins					20	170	176	118	29	513

Negative .					21	200	55	20	] 11	307
Trakal		• •			72	559	354	318	87	1,390
Per cent. of Posi	tive	Reactors			70.8%	64.2%	84.5%	93.7%	87.4%	77.9%

It was found that as an average 75.5 per cent. of males and 80.2 per cent. of females had retained their tuberculin sensitivity two and a half years after B.C.G. vaccination. The females in all age groups showed a slightly higher conversion rate compared with males, and the highest conversion rate was found in age group 13-30 years.

X-Ray Diagnosis.—The Anti-Tuberculosis Survey Team has at its disposal a mobile Schonander 35 mm. mirror eamera type of X-ray unit, installed on a trawler with fully equipped dark-room facilities, refrigeration, and an Onan generator. An efficient routine for mass chest X-ray examination, a satisfactory system of filing and follow-up work have been evolved taking into consideration the peculiarities of the country and its indigenous population.

A survey at Finschhafen deserves a special mention, as only full size X-ray plates were taken, using the Schonander 35 mm, unit. It was believed that full-size X-ray plates might not prove satisfactory when taken with this unit. It was required that this aspect he investigated and 105 patients at Finschhafen Native Hospital, clinically suffering from pulmonary tuberculosis, were selected for this test, and the following results were obtained:—

<del></del>			}	Males.	Females,	Total.
No. of large films taken				68	37	105
Abnormal Findings— Pulmonary Tuberculosis—						<u></u>
Probably active			1	29	10	39
	.,			7		7
Probably healed	. ,			15	5	20
Pulmonary suspects	• •			9	10	19
Total			[	60	25	85
Other abnormalities—				00	10	40
Pleural adhesion	• •	• •	••	29	13	42
Exudative Pleurisy		• •	• •	1		Ī
Others	• •	• •	[	2	1	3
Normal Chests				. 5	11	16

The large films taken with the Schonander unit proved to be of good quality. In nine cases the film had to be repeated, being technically unsatisfactory (under-exposed) in big persons. The short distance of the tube caused some distortion of the heart shadow; however, the lung fields were very satisfactory.

The persons showing radiological evidence for pulmonary tuberculosis were referred to the local Medical Officer for further routine examinations and follow up.

The following table gives some results of the survey in the Gazelle Peninsula in May and June. 1953:—

	Month.	No. of micro.	No. of large	Nor-	Total Abner-	Т	uberculosi	F.	Total.	Other	No. of	No. of	Number

Including healed T.B.; e.g. Ghon's focus and calcified foct in hilar glands,
 por thousand needing hospitalization,

Accommodation.—All centres carrying X-ray equipment have wards set aside for the treatment of tuberculous cases. These centres are visited by the Medical Officers in tuberculosis control. The result has been a degree of decentralization with supervision and advice carried to the centres by these Medical Officers. Such a scheme does not mean that the construction of central sanatoria can be excluded as there is still a large number of cases which require special methods of investigation and treatment.

A start has been made on the construction of a sanatorium at Bita Paka, near Rabaul. This sanatorium will treat all cases in the New Britain District and all cases requiring special methods of treatment from the whole of the Bismarck Archipelago. A similar sanatorium at Finschhafen is envisaged to serve the New Guinea mainland.

Treatment.—All modern drugs including antibiotics and facilities for minor and major thoracic surgery are available.

Chemotherapy.—Because of the high incidence of exudative change in cases found in this Territory, chemotherapy continues to be very extensively used. The results are similar to those reported by other authorities. A standard course of chemotherapy continues for a minimum of six months and preferably for a year. Shorter courses have been used, but relapses are much higher than in the prolonged courses. The standard course consists of Isoniazide and PAS Streptomycin is given, in addition, to all very severe cases and in cases during surgical treatment.

Local injections of anti-tuberculosis drugs have been given in cases of massive cavitation in the lungs. The results have not proven very satisfactory and haemoptysis, which is alarming to a native patient, has occurred. The method is proving unsatisfactory. However, local aspirations and injection into cularged lymph nodes, using PAS solution has proven a most valuable method in the therapy of this type of disease.

Surgical Treatment.—Thoracoplasty is giving good results in even severe cases and is a standard method of treatment for all resistant cavities. The native patients accept the operation very well and have good function after its performance. As in other areas it is quite clear that, if a eavity is left long after chemotherapy and steps are not taken for its collapse and removal, the disease relapses in almost every case. Pneumothorax is of little value because of the difficulties of refill in villages. Pneumoperitoneum is very painful. A large proportion of the patients have an enlargement of the spleen due to malaria with adhesions of the neighbouring viscera. These are liable to rupture and can be extremely dangerous. These two standard methods are not available for general use and the trend has necessarily been towards the more extended use of the surgical collapse methods.

Physical Methods of Treatment.—Postural retention is being investigated and will probably prove an extremely valuable method of treatment prior to surgical collapse,

# Number of Medical Personnel.

The lack of qualified medical personnel has been one of the main difficulties retarding the rapid development of medical and health services. The position is gradually improving and the over-all staffing position shows an increase of 89. Full particulars of medical staff are given in Appendix XIX.

An extensive recruiting programme has been undertaken with good prospects of success in securing professional and technical personnel. As part of the programme, medical students in their final year at Australian universities are encouraged and assisted to join the Department of Health during the long vacation and there are favorable prospects that, on graduating, some of these students will apply for appointment to the Service.

### (c) ENVIRONMENTAL SANITATION.

# Removal and Treatment of Waste Matters.

The Public Health Ordinance 1932-1938 makes provision for the introduction of measures to control and regulate sewerage systems. No area of the Territory has yet been declared to be a sewerage area nor has any authority been empowered to construct and maintain a sewerage system.

In urban areas the majority of houses and buildings have waterborne sanitation connected to septic tanks and absorption pits and drains and where this is not installed a pan system is made available. Refuse is collected in all towns and disposed of by incineration or controlled tipping.

<sup>†</sup> Seventy-two probable active cases in 2,158 films represents a rate of

During patrols, officers of the Department of District Services and Native Affairs and Department of Health advise the indigenous people regarding village sanitation, and health inspectors and other officers of the Health Department supervise the work of medical and hygiene assistants appointed by village councils.

There are provisions in the Native Administration Regulations relating to the general sanitation of villages.

#### Water Supplies.

Except in the town of Lae, where a system of pipeline reticulation is installed, water supply is obtained from storage roof catchment tanks, wells and streams.

Regular inspections and tests of water are carried out in the main centres and chemical analyses are undertaken when required. The chlorination process is used at Lae and is checked at frequent intervals. A practice supported by the health authorities is the boiling of all water to be used for drinking purposes.

### Food Inspection.

Inspection of food sold to the public is regularly carried out by Medical Officers and Health Inspectors who are empowered to examine any article of food for sale for human consumption and may inspect all premises, including restaurants, where foodstuffs are prepared, handled or sold. Provision is also made for the licensing of food premises and the seizure and disposal of unsound food.

Inspection of animals intended for human consumption is carried out by officers of the Animal Industry Division of the Department of Agriculture, Stock and Fisheries and the inspection and hygiene control of carcasses of slaughtered animals is vested in the Department of Health.

### Control of Pests Dangerous to Health.

Special attention has been given to the control and cradication of mosquitoes in both urban and rural areas. The Mosquito Prevention and Destruction Regulations provide for measures for the destruction and prevention of breeding of mosquitoes.

### (d) PREVALENCE OF DISEASES.

#### Principal Diseases.

The disease pattern is, in the main, unchanged. No dangerous epidemics have been recorded but mild epidemics of measles and whooping cough occur occasionally, a few eases of paratyphoid have been noted, and mumps, in quite mild forms, has been fairly widespread. The increased number of Hansenide cases treated is the result of the willingness of the indigenous people to undergo treatment and does not indicate a spread of this disease. Figures of the number of cases treated as in-patients at Administration hospitals in 1952-53 are given in the following table:—

		1	)іясаве.		-		Number,	Percentage of Total In-patient
							· -	
Malaria" 🗸 🞏 🥦	<b>!</b>						11,869	15.89

### Principal Causes of Deaths.

Although deaths from pneumonia dropped from 334 in 1951-52 to 232 for 1952-53, it continues to head the list of the principal causes of deaths. Deaths from pulmonary tuberculosis rose from 69 to 91 and from malnutrition from 21 to 48.

In the absence of general registration of births and deaths there is no reliable information as to the causes of mortality among the indigenous people and the figures given hereunder include deaths in Administration hospitals only:—

		Number.	Percentage of Total of all Deaths.				
Pneumonia						232	26.1

# Statistics.

It is not possible at this stage of their development to introduce a system of compulsory registration of births and deaths among the indigenous population, but limited experiments within the framework of the village councils are proceeding to determine the best procedures to be adopted. The Native Village Councils Ordinance provides authority for councils to make rules for the recording of vital statistics but, as mentioned in Part 1 of this Report, only the Rabaul Council has so far introduced a rule for this purpose.

#### (e) PREVENTIVE MEASURES.

# Vaccination and Inoculation.

All preventive vaccinations and inoculations are available free of charge at medical centres, and mass vaccination campaigns are undertaken from time to time. Certificates of various inoculations and of vaccination against typhoid, paratyphoid and cholera for persons travelling outside the Territory and the Commonwealth of Australia are given in the approved international form in accordance with the provisions of the International Sanitary Regulations No. 2.

More than 100,000 injections were given during the year for whooping cough; and approximately 50,000 susceptible persons, mostly indigenous inhabitants, were treated with BCG vaccine. The standard treatment of yaws by injections is part of the routine work of the medical organization in which the missions and other organizations and agencies actively co-operate.

# (f) TRAINING AND HEALTH EDUCATION.

Medical Training.

Facilities for training indigenous personnel are provided by the Departments of Health and Education and the missions, and are made available for a limited number of students at the Central Medical School, Fiji. There are no schools in the Territory granting registrable medical qualifications.

Three students have graduated as assisted medical practitioners from the Central Medical School, Fiji, five are at present taking the assistant medical practitioner and health inspector courses, and a group of students, including girls, are taking a special course of studies to obtain the required educational standard for entry to the Central Medical School and the Central Nursing School, Fiji.

Two students are being prepared for matriculation to enable them to enter a medical faculty at an Australian university. This is a long-term project and admission to a university cannot be expected before 1959.

Plans are being completed for full medical training to be given in the Territory of Papua and New Guinea. Enrolments in courses for pathological and laboratory technicians and hospital assistants (male nurses) will commence in 1954, and assistant medical practitioners, it is hoped, in 1955. These courses will be of four years' duration, and candidates will be required to attain a prescribed educational standard before being eligible. The first group to undertake these courses is expected to comprise some twenty students, but it is difficult to make an accurate forecast as there is a widening field of vocational employment offering to students now at educational institutions.

Medical training of indigenous people at present carried out in Government institutions for service with Administration includes:

Native Medical Assistants.—A course of two years' duration. The syllabus covers physiology, first aid, hygiene and treatment of all common diseases with special emphasis on cases that should be transferred to hospitals. Training also includes the giving of intravenous and intramuscular injections.

Native Medical Orderlies.—Candidates are trained at all hospitals. The first two years consists of practical training. Courses of study are prescribed and examinations must be passed to progress through the subsequent three grades to qualify as orderlies. Laboratory, Dental and X-ray Assistants are trained individually. Theoretical work is interspersed with practical duties, and the syllabus of training and examination is prescribed by the Department of Health.

Post-qualification training is provided by the recall at regular intervals of aid-post personnel to hospitals for three months' refresher courses. Medical and health texts are now being standardized in English, lingua franca and vernaculars for use by students and medical personnel, and libraries are being established at all hospitals. These texts are chosen from among the 57 suitable books in an annotated study which emanated from the Health Department during the year and has been accepted by the South Pacific Commission for publication in the quarterly, Pacific Reading. At the close of the year 190 were attending these courses.

The number of graduates from the Native Medical Training Schools since 1948 is shown in the following table:—

					Graduate	s 1948–52.	Graduates 1952-53.	Total Graduates.		
					Male.	Female.	Male.	Male.	Female	
Rabaul Lae Wewak Goroka Mt. Hagen	••				189 171 123 36 61	12 · 11 6 · · · · · · · · · · · · · · · ·	54 51 8 13 24	243 222 131 49 85	12 11 6	
Mt. Hagen		••	••	-	580	29	150	730	29	

Non-indigenous Personnel.—Opportunities for post-graduate study are available and prospective Administration Senior Medical Officers are required to obtain a Diploma in Public Health and Tropical Medicine, and facilities for taking the course are offered to all Medical Officers as soon as possible after their first two-year tour of duty in the Territory.

One European Medical Assistant is doing post-graduate work in T.B. nursing, another has completed a course of training as an X-ray technician, and a third has been given facilities in the Territory for the practical work to complete an approved correspondence course in radiography.

It is intended as soon as staff permits to organize courses and conferences for medical personnel, some of which will be held at the School of Malaria Control at Minj, Western Highlands District.

Training at Mission Institutions.—The Methodist Overscus Mission (New Ireland) and the Roman Catholic Mission (Vunapope) are approved training centres and have undertaken the training of midwives and subordinate nurses for Department of Health diplomas. The course of training extends over a period of three to four years and includes hygiene, general nursing, midwifery, infant and maternal welfare and ante and post natal attention. The missions receive grants-in-aid from the Administration for this work.

Most of the larger mission hospitals provide training in hygiene and first-aid, particularly in connexion with social development work in villages. Training is also provided for medical orderlies for employment in mission institutions.

# (g) NUTRITION.

The available evidence shows that the general level of nutrition of the indigenous population is low, and the diet is lacking in sufficient amounts of first-class protein. Malignant nutrition of infants (Kwashiorkor) has never been reliably reported, however. The Department of Agriculture, Stock and Fisheries is achieving improvements in local agriculture and diversification of food crops, and is actively assisting in the introduction of animal husbandry into the farming system for a source of protein and the promotion of good land use practices. The indigenous staple foods are yams, sweet potato, taro, bananas, sago and tapioca, of which yams and taro are the most nutritious. Sweet potato is particularly high in vitamins, especially in the yellow and orange varieties.

Tapioca, banana and sago have a low thiamin and proteio content. Fortunately, in areas where sago is caten as the stable food, fish is usually prevalent in the diet. Tapioca is not a popular food, and is mostly caten when other foods are lacking.

Rice has not yet become a significant village food though local and imported rice is popular with employers as the ration staple because it has better keeping qualities and smaller bulk than the indigenous staples.

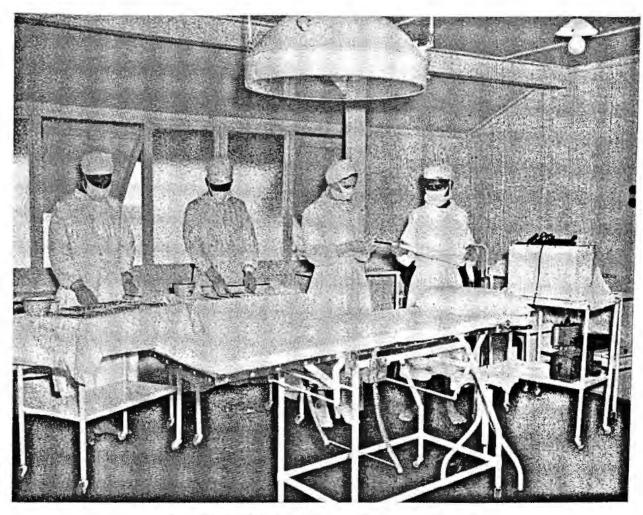

Pearled wheat is coming into use as a foodstuff item because of its lower cost and similarity to rice. As the true nutritive value of pearled wheat has not yet been finally determined, the same additives as for white rice are prescribed when it is used as a ration scale issue under the Native Labour Ordinance.

Wheatmeal is an imported food which also can be used as a staple, but it is generally used as a subsidiary food.

Since it is now compulsory to issue foodstuffs to the majority of employees, in accordance with the ration scales determined under the Native Labour Ordinance, white flour and bread form only a minor part of the dict of a very few people. Wherever bakeries are established they are encouraged to use wholemeal flours in the manufacture of bread.

The following table shows the food value of staple foods in the quantities for daily consumption as prescribed in the native labour ration scales:—

Food.	ŀ	Amount.	Calories.	Protein.	Fat,	Calcium.	Irou.	Vitania A.	Thlamin.	Ascorbic Acid.
		· · · · · ·	-	grms.	grms.	grms.	m. grms.	i.u.	m, grms.	m. grms.

#### CHAPTER 8.

#### NARCOTIO DRUGS.

The manufacture, sale, exportation, importation, labelling and distribution of drugs and pharmaceuticals are governed by the provisions of the Poisons and Dangerous Substances Ordinance 1939, the Dangerous Drugs Ordinance 1927-1947, the Arms, Liquor and Opium Prohibition Ordinance 1921-1952 and the Pharmacy Ordinance 1939. The latter Ordinance provides for the registration of pharmaceutical chemists and the control of the practice of pharmacy. The following conventions relating to narcotics have been applied to the Territory:—

- (1) International Opium Convention, 1912.
- (2) International Convention relating to Dangerous Drugs with Protocol, 1925.
- (3) International Convention for Limiting the Manufacture and regulating the Distribution of Narcotic Drugs, 1931 and Protocol of 1948.

The inhabitants of the Territory are not addicted to the use of narcotic drugs.

The following quantities of opium and its derivatives and other dangerous substances were imported during the year under review and used solely for medicinal purposes:—

							Ommmes.
Codein	4.1		 			 	15
Morphine			 	• • .	* *	 	22
Cocain			 			 	6
Diacetylmor	rphine (	(beroin)	 			 	6
Pethidine (	analgesi	ic)	 	.,		 	393
Physeptone	(analge	esic)	 			 	23

The importation of heroin is now prohibited for all purposes.

#### CHAPTER 9.

#### DRUGS.

The manufacture, sale, exportation, importation, labelling and distribution of drugs and pharmaceuticals are governed by the legislation referred to in preceding Chapter.

#### CHAPTER 10.

#### ALCOHOL AND SPIRITS.

#### Legislation.

The Excise (Beer) Ordinance 1952 provides for the licensing of brewers and prescribes the conditions to be observed in the brewing of beer, and provisions for the regulation of the sale, supply and disposal of fermented and spirituous liquor are contained in the Liquor Ordinance 1931-1938.

The sale of any kind of alcoholic liquor is subject to licence and a Licensing Commissioner hears and determines all applications for licences and deals with all matters concerning the renewal, transfer, removal of licences, &c. The distillation or manufacture of alcoholic liquor is forbidden except on licence or permit from the Administrator.

Under the provisions of the Arms, Liquor and Opium Prohibition Ordinance 1921-1952 and the Native Administration Regulations it is an offence to supply intoxicating liquor to an indigenous person or for an indigenous person to drink or have intoxicating liquor in his possession. There are no indigenous alcoholic beverages and it is in their interests that the sale or supply of liquor to them is prohibited.

#### Import Duties.

The following import duties are levied on alcoholic liquors:-

- (a) Ales, beers, &c.-
  - (1) 5s. per gallon.
  - (2) for corresponding non-alcoholic beverages, 2s. 6d. per gallon.
- (b) Spirituous Liquors-
  - (1) potable spirits, including liquors, not exceeding the strength of proof, 49s. per gallon.
  - (2) exceeding the strength of proof, 56s. per proof gallon, plus 10 per cent. surcharge.
- (c) Wines-
  - (1) Sparkling, 30s. per gallon.
  - (2) Still-
    - (i) Containing less than 27 per cent. of proof spirit, 7s. per gallon plus 10 per cent. surcharge.
    - (ii) Including medicated and Vermouth, 12s. 6d. per gallon, plus 10 per cent. surcharge.
  - (3) Unfermented grape, ad valorem 10 per cent., plus 10 per cent. surcharge.
  - (4) Other than grape including saki and samshu-
    - (i) not exceeding the strength of proof, 39s. per gallon plus 10 per cent. surcharge.
    - (ii) exceeding the strength of proof, 56s. per proof gallon plus 10 per cent. surcharge.
  - (5) For sacramental purposes—50 per cent. of the specified appropriate duty rate plus 10 per cent. surcharge.

#### CHAPTER 11.

Housing and Town and Country Planning.

## Legislation.

Legislation affecting housing and town and country planning is contained in the following Ordinances:—

- (a) The Town Planning Ordinance 1952, which provides for the setting up of a Town Planning Board and for the orderly development of towns, including zoning.
- (b) The Building Regulations, which prescribe the standard of buildings and construction and provide for a Building Board to be constituted for each of the towns in the Territory and the appointment of Building Inspectors.

#### Housing Conditions.

The provisions of the Town Planning Ordinance and Building Regulations apply to towns only, but buildings erected by non-natives in rural areas usually comply fairly closely with the standard required in towns.

In the rural areas the indigenous people still build traditional type houses from materials available locally and the design and construction, which varies throughout the Territory, is influenced by climate, location and the building materials available. In areas adjacent to long established European settlements, however, there is evidence of a desire to improve the standards of bousing resulting in part from new needs induced by economic prosperity and from the advice of Administration officers on design, methods of construction and the layout of villages. Workers and trainees in the building trade are prominent in producing hetter types of houses on return to their villages.

· The Native Labour Ordinance and Regulations thereunder prescribe the minimum standard of housing for workers.

## Town Planning.

The following work has been carried out during the year:-

Goroka: Survey completed and township proclaimed.

Wewak: Survey completed, former business allotments established and new design prepared for residential area.

Rabaul: Zoning plan adopted and a survey of residential, business and industrial sites is proceeding.

Madang: Four light industrial sites snrveyed.

Lae: Residential area surveyed.

Kavieng: Progress bas been made in re-establishing former allotments.

The following table shows the number and types of leases offered by tender during the year:-

<del></del>	Town	· .	 Residence Outside Town Area.	Rældence.	· Business.	Industrial.	Light Industrial.	Slip-eites.	Total.
Lae Madang Rabaul Goroka Wau Kavieng			 4	19 ., 5 29 8	34 22 6 18 5	7	22   	 1 	79 22 19 47 13
			4	61	85	.7	22	2	181

In towns the shortage of houses is still a problem and, in an effort to improve the position, a housing loan scheme has been introduced which provides for the granting of financial assistance with an upper limit of £2,000 towards the cost of purchasing, erecting or enlarging a dwelling house or of discharging a mortgage.

#### CHAPTER 12:

#### PROSTITUTION.

There is no problem in respect of prostitution and brothel-keeping and as traffic in persons for such purposes as prostitution is non-existent in the Territory, legislative or administrative measures are not necessary.

Measures for the prevention and treatment of venereal disease have been dealt with in Chapter 7, Part VII. of this Report.

#### CHAPTER 13.

#### PENAL ORGANIZATION.

Extent and Nature and Factors Responsible for Crime.

There are no special factors responsible for crime in the Territory and taking the Territory as a whole the incidence of crime is low.

#### Departmental Organization.

The administration of prisons is one of the functions of the Police and Prisons Branch, under the direction of the Chief Inspector of Prisons. District Commissioners are, by virtue of their office, head gaolers of the prisons which are situated in their districts, except within the towns of Rabaul and Lae where special appointments are made. Gaolers and warders are drawn from the Papua and New Guinea Constabulary.

Prisoners are classified in the following classes on their admission to a prison:-

- (i) First Class.—Prisoners awaiting trial or under examination.
- (ii) Second Class.—Debtors and persons in prison for contempt of court or for failing to give security to keep the peace or be on good behaviour.
- (iii) Third Class.—First offenders other than those of the Second Class, who, at the date of conviction, were under the age of 21 years.
- (iv) Fourth Class.—First offenders, other than those of the Second and Third Classes, under sentence of imprisonment for eighteen months or less.
- (v) Fifth Class.—Prisoners, other than those of the Second and Third Classes, who have been previously convicted or whose sentence on first conviction exceeds eighteen months.

## Conditions of Prison Labour.

Punishments which may be inflicted under the laws of the Territory include imprisonment with or without hard labour and either sentence may be passed for the whole period of imprisonment.

The hours of work for prisoners sentenced to hard labour are prescribed by the Prisons Regulations, and prisoners may be employed both inside and outside the prison. Prisoners who are employed outside a prison are always under the control of warders and work is carried out only for public authorities and the Administration.

A prisoner sentenced to imprisonment without hard labour performs light duties within the prison at such hours as the head gaoler directs but not exceeding eight hours a day.

#### Prison Legislation.

The Prisons Ordinance 1923-1938 and Prisons Regulations provide for the organization, discipline, powers and duties of prison officers and for all matters connected with the administration of prisoners; and for the admission, custody and removal, discipline and discharge of prisoners. They also prescribe the functions of visiting justices, visiting medical officers and chaplains.

Prisoners, other than those convicted before the Supreme Court, must be committed to the nearest prison to serve any sentence imposed.

The Supreme Court has authority to commit a prisoner to any prison in the Territory and long-term prisoners may be transferred to central prisons for more effective supervision and planned training. Central prisoners are located at Lac, Oomsis and Wau (Morobe District), Rabaul (New Britain District), Goroka (Eastern Highlands District), Wewak (Sepik District), Lorengau (Manus District), Kavieng (New Ireland District) and Sohano (Bougainville District).

Separate quarters beyond the walls of the main compound of each prison are provided for the exclusive use of female prisoners.

All prisons have their own aid posts and sick bays and are visited regularly by Medical Officers. When adequate treatment cannot be given in prison, sick prisoners are removed to an Administration hospital for treatment.

District Commissioners are appointed visting justices and the Judges of the Supreme Court and the Director of District Services and Native Affairs are ex officio visiting justices for all prisons in the Territory.

Visiting justices are empowered to visit prisons at any time of the day or night; to have access to all parts of a prison and to all prisoners and to inspect all books and obtain any required information. No prison official shall be present at any interview of a prisoner by a visiting justice.

Breaches of prison discipline are tried by a visiting justice or the Head Gaoler, but if tried by the Head Gaoler the trial is subject to review by a visiting justice. Penaltics which may be imposed on conviction for a prison offence are—

- (1) Reduced diet for not more than four teen days and then for not more than a continuous period of four days at any one time.
- (2) Pack drill under specified conditions.
- (3) If the commission of any prison offcuce has been, in the opinion of the visiting justice, attended with circumstances of aggravation owing either to its repetition or otherwise, he may sentence the offender to be imprisoned with or without hard labour for any period not exceeding two months. Such sentence is cumulative with any sentence the prisoner is serving at the time.

No real problem of after care of indigenous prisoners exists as they usually return to their villages and vocations with an outlook broadened by the new ideas gained by their contact with Europeans and natives from other parts of the Territory. Asians are usually re-assimilated into their own communities; and Europeans are either removed to a prison in Australia or they leave the Territory of their own accordafter release if they feel unable to resume their former way of life.

#### Juvenile Offenders.

The number of juvenile offenders convicted in the Territory is very small. Any prisoner known or believed to be less than eighteen years of age is classified as a juvenile offender and, as such, is segregated from adult prisoners, given separate opportunities for corrective instruction and general improvement. Special steps are always taken to see that such segregation does not have the effect of putting the juvenile offender into solitary confinement. Arrangements are made through the Department of Education for juvenile offenders to be given special instruction in general education and practical training.

# PART VIII.-EDUCATIONAL ADVANCEMENT.

CHAPTER I.

GENERAL EDUCATIONAL SYSTEM.

Legislation and Policy.

Education is covered by the Education Ordinance 1922-1938 of the Territory of New Guinea. The Education Ordinance 1952 of the Territory of Papun and New Guinea has been passed but has not yet commenced in its entirety, although certain features of it are in operation. There is also provision in the Native Village Councils Ordinance 1949-1952 for the establishing of schools by councils, and some of these have already been established. The Native Apprenticeship Ordinance 1951-1952 commenced on 21st August, 1952, and provides for training and for examinations.

The basic provision of the *Education Ordinance* 1952 is that the control and direction of secular education in the Territory is the responsibility of the Administration. This Ordinance—

- (1) provides for the setting up of schools, pre-school centres, &c., by the Administrator;
- (2) allows the establishment of schools by native authorities, subject to the approval of the Administrator;
- (3) provides for the compulsory registration or recognition of all schools conducted by educational agencies other than the Administration;
- (4) provides for grants to be made by the Administration to missions or other educational agencies:
- (5) provides that the Administrator may declare that attendance of children in specified places is compulsory;
- (6) allows the Director of Education to determine the language or languages used in schools;
- (7) provides for the setting up of an Education Advisory Board to advise on educational matters, consisting of the Director of Education, four members appointed by the Administrator to represent the Missions and other educational agencies of the Territory, and such other members, not exceeding four in number, as the Administrator appoints;
- (8) provides for the setting up of District Education Committees, appointed by the Administrator, and composed of not more than five members, of whom at least one shall be a Mission representative.

Education is controlled by the Administration with the Missions playing an important part. The aim of the Education Department is to extend educational facilities to all the people of the Territory, both children and adults.

Education is essentially practical and related to the life and needs of the community. It is aimed to make the school the centre of community interests and of all efforts to improve the social and conomic conditions of the people. There is a strong emphasis on training in manual skills and in agriculture, and close liaison is maintained with the Department of Agriculture, Stock and Fisherics, the Department of District Services and Native Affairs, and the Department of Health.

In particular, educational policy is directed towards the preservation of the valuable elements of indigenous society and towards helping the native people to become adjusted to the changes that are resulting from the impact of influences on the Territory from outside cultures.

A further aim of education is universal literacy throughout the Territory, and the extension of the use of English as an eventual lingua franca.

The indigenous inhabitants have the right to set up schools through their village councils. There is no legal barrier to an indigenous inhabitant being appointed to the Education Advisory Board or to the District Education Committees. When the advancing educational standard of the indigenous people permits, it is envisaged that they will play a part in these bodies.

## Departmental Organization.

The Education Department is divided into five divisions-

- (1) Head-quarters Division.
- (2) General Division.
- (3) Technical (Industrial) Training Division.
- (4) Special Services Division.
- (5) Female Education Division.

The General Division, as well as being responsible for the organization and supervision of all non-technical schools, provides for pre-vocational training and higher education of a non-technical nature, including teacher-training. Primary schools for Europeans, Asians, natives and part-natives, conducted by the Administration and by the Missions, come within the scope of the General Division. It also acts as the examining authority for native clerical workers for the Administration and supervises examinations held in the Territory in connexion with Australian or overseas courses for Europeans.

The Technical Division is responsible for-

- (i) Technical training centres, at which students are trained for employment or independent practice of trade.
- (ii) Liaison with the General Division in respect of manual training annexes, at which instruction is given in crafts involving the use of hand-tools and such equipment and materials as may usually be available to indigenous people in their village life.

- (iii) Liaison with the General, Special Services, and Female Education Divisions in regard to the encouragement of indigenous craft work.
- (iv) Fostering vocational guidance and the planning of the Native Apprenticeship Scheme.

The Special Services Division provides for certain special aspects of education not normally regarded as falling within the General and Technical fields, though drawn on by both. It includes physical education, games, scouting, visual education, broadcasting, publications, arts and handicrafts, community development and cultural interests, music, a curriculum and research section including linguistics, applied psychology and anthropology, and equipment and records.

The Female Education Division organizes women's centres for domestic, health and agricultural education, in addition to girls' schools, and supervises native female teachers and students in those schools.

A general summary of Administration schools at 30th June, 1953, is as follows:-

	т	ype of Sch	100l.			Number of Schools.	Number of Pupils.
Primary—							
European						9	326
Asian						. 4	298
Part Nativ						2	65
Native Are						. 11 41	690
Other Nati	ve Prima	ry Scho	ools			41	2,096
Total	Primary					67	3,475
Secondary ar	nd Higher	Educa	tion—				
Central	**					6	394
Secondary	, Teacher	-Trainir	ig and Man	ual Tr	aining	3	80
Total	Secondar	y and I	ligher	• •		9	474
Total	All Adm	inistrati	on Schools			. 76	3,949

The number of teachers employed in Administration schools was—European 50, native 150, Asian seven, part native one, making a total of 208. These figures represent an increase of seven schools, 192 pupils and eight teachers over the 1951-52 totals. The total of European schools remained unchanged at nine, but there was an increase in enrolment of 54, mainly at Lae, Wan and Lombrum.

There are twelve fewer Asian students, mainly because an additional 39 left for education in Australia. The first pupil to attain secondary standard at the Asian School, Kavieng, was transferred to the Asian School, Rabaul, where secondary classes are provided.

There was an increase of 145 in enrolment at native Administration schools. Six new schools were established and the Central School at Boram was transferred to Brandi, 4 miles distant, where there are facilities for rural interest. There is now an Administration school in every district.

There are no private boards concerned with education in the Territory.

The Education Ordinance 1952, provides for an Education Advisory Board and also for district education committees, the composition of which is given above in the details of the Ordinance. The Education Advisory Board is already functioning.

A number of schools has been established in association with village councils, and a considerable amount of educational work is carried out by the religious missions in the Territory. Mission activity for the main part centres in the village vernacular schools, but also includes Intermediate and higher training schools.

School inspection is covered by the Head-quarters Division of the Department of Education, much of this work being carried out by district education officers.

Liaison is maintained between the Administration and the Missions by conferences, by inspections of mission schools and visits by district education officers and more senior Head-quarters officers, by the conditions under which subsidies are granted, and by the issue of syllabi by the Department of Education in order to ensure uniform standards of attainment. In November, 1952, a joint conference was held hetween the Missions and the Administration which resulted in valuable discussions on educational matters, and at which a pattern of very close co-operation was evolved. With the co-operation and advice of the Missions, the Department of Education completed during the year the compilation of a syllabus in ethics and morals.

## Plans and Programmes.

In general terms the plans and programmes of the Administration cover the following:-

- (1) The increasing of the numbers and the improvement of the standard of indigenous teachers.
- (2) The extension of facilities for secondary education and technical training.
- (3) The development of vernaculars as teaching media.
- (4) The increased use of such media as films, radio, &c.
- (5) Continued assistance to Missions.
- (6) The carrying out of projects aimed at organized community living.
- (7) An increasingly rural bias in education.

The year 1952-53 has been marked by modest progress in all branches of activity.

The question of improved teaching standards and increasing numbers is dealt with below in the section on teachers.

A rapid increase in numbers is expected in secondary and higher education. Facilities in Australia will be used as well as those in the Territory. Staff has been posted to Lae for the preparation of the site and the erection of buildings for a technical training centre. This centre will ultimately give instruction to pre-apprenticeship trainees and apprentices. Initially instruction will be given in carpentry and motor mechanics. Theoretical and practical "on the job" training was continued at other centres, viz., Malaguna, Kerevat, Vunamami, Buin, Brandi, Dregerhafen and the Tavui Native Education Centre for Girls

The Native Apprenticeship Ordinance came into operation on 21st August, 1952. The purpose of the Apprenticeship Ordinance is to provide for the regulation of trade apprenticeships under agreement between employers and persons approved as gnardians of the apprentice. It is designed for application only in cases of apprenticeship of the indigenous inhabitants of the Territory.

A Board has been appointed under the Ordinauce to administer the apprenticeship acheme. For this purpose it has a number of wide supervisory and executive powers.

Apprenticeship agreements may be made for a term not exceeding five years and where, before entering into an agreement, a native has been under instruction in a trade, the Board has authority to determine the period of instruction to be counted as portion of the term of the agreement.

Trainees for full-time courses in trade subjects in technical schools will be recruited from students who have reached Grade VIII. at a central school with special consideration given to those who have demonstrated particular aptitudes in manual training. The period of training is for three years and will be taken into account in post school training under an apprenticeship agreement. The other two years will be completed with an approved industrial organization. A student who satisfactorily completes a course under apprenticeship will be issued with a territorial craftsman certificate.

The present members of the Apprenticeship Board consist of the Director of Education (chairman); the officer in charge of the Technical Division of the Department of Education and the Divisional Engineer (Posts and Telegraphs) as Administration members, together with two private members. The Board held two meetings during the year.

The year was marked by the inauguration of a programmo of planned research into indigenous languages and their use in education. The printing of Dr. A. Capell's Methods and Materials for Recording of Papuan and New Guinea Languages, was arranged by the Department of Education, which also handled a limited distribution of this work. In this connexion a linguistics and literacy officer is working in liaison with Administration officials, Missions, and others interested in indigenous languages.

A detailed questionnaire on languages was sent to all field staff of the Department of District Services and Native Affairs to obtain information on the extent and number of speakers of languages of the Territory, together with an estimate of their intelligibility to speakers of adjacent languages.

A good proportion of these have been completed and returned. The information obtained is being incorporated into the general index and map of New Guinea languages prepared earlier in the year by the Linguistics Officer, and will supplement the material resulting from language surveys previously undertaken by Dr. A. Capell, Reader in Oceanic Languages in the University of Sydney. The principal value of such work to the Administration lies in the basis it gives for the selection of area or regional languages and the adoption of a uniform orthography for these.

News and information services to the native people were extended through the year by a wider distribution of educational publications. Visual education services were increased, and a greater range of hroadcast programmes was provided. Educational projects related to organized community development have been continued throughout the year. Details are provided in the section on "Adult and Community Education".

A definite trend throughout the year has been the provision of a strong rural bias in the programmes of central schools and at the two secondary education centres at Kerevat and Dregerhafen.

#### Non-governmental Schools.

The Education Ordinance provides that schools shall not be established by any organization or individual without the registration or recognition of the Director of Education. Recognition of a school is subject to the Director being satisfied that the school is to be conducted by a suitable person or by a properly constituted organization, that support for the school is reasonably assured, and that a reasonable standard of instruction in secular subjects will be maintained. Registration of a school is dependent additionally on the suitability of the curriculum, the number and qualifications of the teachers, and such features of school hygiene as playground space and seating accommodation. The existence of recognized schools as well as registered schools is designed to allow for schools of a lower standard, which must necessarily continue to be part of the Territory's educational system for some time to come.

The land and buildings for council schools are provided by the councils. Educationally, the schools are conrolled by the Administration. The extent of responsibility of the council varies as far as maintenance of buildings and payment of teachers is concerned, being decided on the particular circumstances of each case.

Mission organizations are assisted in their educational work by supplies of basic educational equipment and subsidies from the Administration. These subsidies totalled £50,474 in 1952-53, as compared with £48,879 during 1951-52. The grants were made on the following hasis:—

- (1) For approved European Specialist Staff. Grants-in-aid for approved European staff are made as shown below (provided that each individual is approved by the Director of Education and on the recommendation of the Mission concerned, to carry out the particular office for which the grant is made and has, in fact, carried it out to the satisfaction of the Mission and the Department of Education for the full period in respect of which certification is made)—
  - (i) Education Liaison Officer, male £500 per annum, female £430 per annum.
  - (ii) Master or mistress of method, male £450 per annum, female £400 per annum.
  - (iii) English (language), master or mistress, male £450 per annum, female £400 per annum.
  - (iv) Technical instructor, male £450 per annum.
  - (v) Woman kindergarten teacher, domestie interests for girls and women, £400 per annum.
  - (vi) Woman teacher, specialist in kindergarten and junior school methods, £400 per annum.

Pro rata payments are made wherever considered necessary.

(2) Grants in respect of types of school and attendance thereat.

These grants are calculated on a unit basis, each unit to consist of 50 pupils or students in regular attendance. The grants are as follows:—

- (a) Village schools, per unit per annum--£10.
- (b) Intermediate schools (non-boarding), per unit per annum-£20.
- (c) Intermediate schools (boarding), per unit per annum—£60.
- (d) Higher training institution (boarding), per unit per annum-£100.

Particulars of Mission schools are as follows:-

	Type of 8	chool,			Number of Pupils.	Number of Schools.
Non-Indigenous-		•			*	1

Total Pupils				[-	83,506	2,643

\* Particulars not available.

These figures show an increase over the 1951-52 figures of 69 village schools, 16 intermediate, one Asian and two part-native schools. Owing to a reclassification of standards the number of higher training establishments was reduced by five, and these were reclassified as intermediate schools. The number of pupils represents a decline of 7,883.

The number of teachers in Mission schools was as follows:—Europeaan 229, native 2,887, Asian 5, making a total of 3,121. These figures show an increase over 1951-52 figures of 24 European teachers and a decline of 156 and 8 respectively in respect of native and other teachers. This decline follows from the application by the Missions of higher standards for their teachers, but additional teachers are being trained.

## Basis of Establishment of Schools.

At the present stage the Administration is maintaining separate schools for native and for European children and, where the numbers warrant this, schools for Asian and for part-native children. This provision is necessitated by the great difference of cultural and educational background of these groups.

## Religious Instruction.

The teaching of religion in schools conducted by the Missions or by voluntary educational agencies is not restricted. Ministers of religion and authorized laymen are permitted free entry into Administration schools for the purpose of giving religious instruction, but attendance of pupils at this instruction is dependent on the agreement of the parents.

## Information about United Nations.

In schools knowledge of the United Nations is spread through the social studies syllabus. Small hooklets are made available to libraries, but there is a general shortage of literature simple enough to meet the demands of barely literate people. The need actually is for filmstrips on the work of the United Nations and the Specialized Agencies.

## Compulsory Education.

Provision is made by the Education Ordinance 1952, that attendance at schools may be declared compulsory in specified areas. It is anticipated that this provision will be applied in certain more advanced areas, but in many parts of the Territory this would at present be impracticable as it could have disintegrating effects on the existing indigenous social system. In areas not yet brought under control, school attendance is, of course, out of the question.

#### School Fees.

Education is free at all stages to both boys and girls, and in both Administration and Mission schools.

## Girls' Education,

Education for girls differs to the extent that manual instruction for boys may be replaced by domestic training for girls. Education for girls is not looked on by the indigenous people as being as essential as for boys, and they are somewhat less willing for girls to be sent to boarding institutions.

## Scholorships.

Higher education for indigenous children is provided free, and there is no charge for the use of school books and materials. Transport and accommodation are provided at Administration expense where necessary.

Since there is no European secondary school in the Territory, there is provision for Administration assistance to make it possible for parents to send their children to Australia for secondary education. This was extended in respect of 161 children during the year, and consisted of a grant of £115 per child, together with one free return air passage. In addition, free correspondence tuition was arranged for 110 European pupils in the Territory.

There are several scholarships available for European children-

- (a) The Renton Scholarshinp, valued at £50 a year for six years for a pupil of an Administration school proceeding to Australia for secondary education.
- (b) the Cromie Scholarship, valued at £50 a year, to assist a pupil proceeding to Australia for secondary education.
- (c) two anonymously donated scholarships, known as "A.V.M." scholarships, valued at £50 a year for five years, for which there is a pre-requisite of two years' residence in the Territory.

## School Buildings.

Six new schools for indigenous children were provided during the last year at Dagua, Mount Hagen, Malaguna, Mengen, Djaul, and Mandok. A new European school building was erected at Lae and extensions are being completed and work on the technical training centre has commenced.

## Text-books.

Text-books in English and in the vernacular have been distributed during the year. The Oxford and Longman's English Reader series are the officially prescribed readers.

In vernacular publications, the texts of Kaunua readers Nos. 1 and 2 have been edited and prepared for publication. The text of a supplementary reader "Some of our People" is awaiting publication. A further supplementary reader is now being illustrated by the Publications Officer and will shortly be available for publication. The Kaunua readers are used extensively in the Gazelle Peninsula area.

Libraries are maintained at a number of education centres, and are available for the use of both adults and children. Details of library services are provided in the section on "Adult and Community Education".

## Youth Organizations.

The Boy Scout and Girl Guide movements, embracing all sections of the community, have expanded during the year. In one form or another they are now to be found in every main centre of the Territory and are developing at many other localities. Impetus has been given by visits from overseas officials of the two movements and by the representation of the Territory by 40 scouts at the Pan-Pacific Scout Jamhoree held in Sydney during January, 1953. In June, 1953, Scout Training Commissioner Masters, from Townsville, Queensland, visited the Territory in connexion with the training of Boy Scout leaders.

#### CHAPTER 2.

#### PRIMARY SCHOOLS.

## Structure and Organization.

The primary section of indigenous education in the Territory extends over eight years.

The first four years are covered by village vernacular schools, which are generally conducted by the Missions, although some have been set up in conjunction with Village Councils and in several instances the Administration has established village schools for particular reasons.

The following four years, which cover Standards II. to V., are spent in village higher schools, area schools, station schools, or native authority schools. These are conducted by both Missions and Administration.

Primary schools for European children follow generally the pattern of the primary schools of the Australian State Departments of Education, as European children normally proceed to secondary education on the mainland. Schools for Asian and part-native children follow similar lines, with necessary adaptation for local conditions and for the differing backgrounds of the groups of children concerned.

#### Policy.

The basic policy of primary education for the indigenous people is to provide an education that is closely related to the lives of the people and that will prepare them for the changes resulting from European contact. Every effort is made to prevent the breaking-up of the indigenous culture, and as the result of extensive explanation, the people now generally realize that a village-centred school system is best adapted to their needs.

There is a strong rural hias in all these schools. Gardens are maintained, and nature study is stressed so that the students will be led to an understanding of natural phenomena.

One of the main aims is the teaching of English. Although the Missions in general aim at making the people literate in their own language, they provide the reading and writing of English in the fourth year of the village vernacular school, and in the preceding three years use a conversational approach to the teaching of English.

In village higher schools, English is the approved medium of instruction, although some still use the vernacular. In such cases, English is taught as a subject throughout.

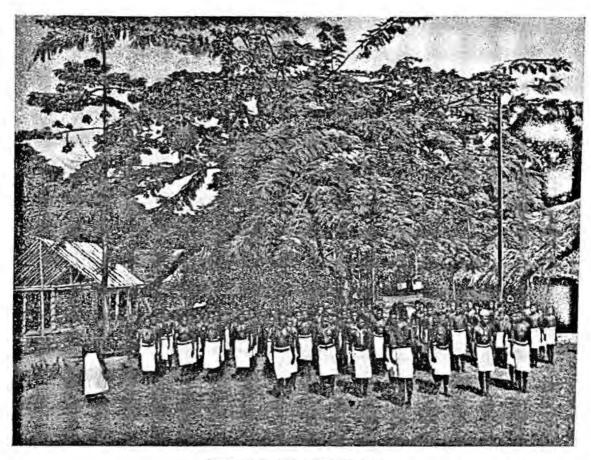

## Curriculum.

There is a certain amount of variation in the courses provided by the schools which cover Grades II. to V., the village higher schools, area schools and station schools.

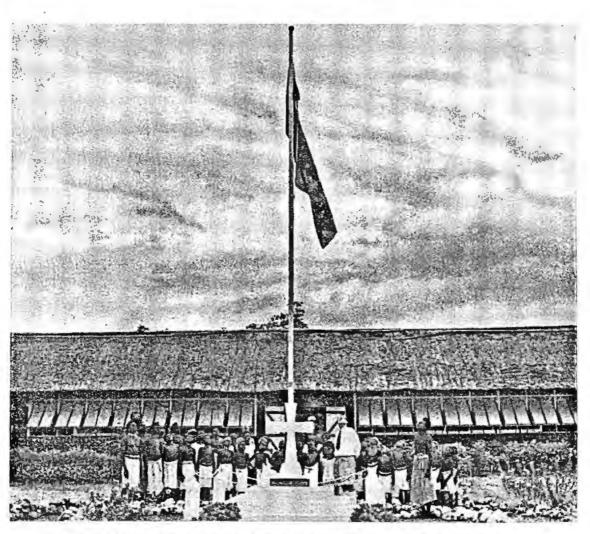

The village higher schools are conducted by native teachers and generally follow the syllabus fairly closely.

Area schools serve a number of villages belonging to a single cultural and linguistic group and are associated with what are known as area education centres. Each is in charge of a European, and is designed not only for the instruction of children, but also to provide a stimulus to the adult community in connexion with health, nutrition and elementary agriculture. A definite correlation is established between the curriculum and any local interests and community development programmes. Further, large subsistence gardens are maintained wherever possible, for agricultural instruction and also in an attempt to make these centres self-supporting.

Station schools operate at the same level of instruction as village higher schools. They are in charge of native teachers and serve children and adults resident at government stations. Since they do not exist in the normal village setting, they may lack the normal rural bias of the village higher school, but they serve a very useful purpose.

Students' Central School, Madang.

United Nations Day Celebrations at an Administration School, New Ireland District.

•			
	·		

## Ages of Pupils.

Pupils normally enter the village vernacular schools at five or six years of age and remain for four years. The age of children at village higher schools and area schools ranges generally from ten to thirteen years.

## Attendance.

The failure of many children to proceed to education beyond the village vernacular school level can be attributed to the diversity of standards of social advancement, the limited contact with Europeans in many areas, the shortage of trained teachers and of school accommodation, and the fact that further education involves greater disturbance of traditional life.

#### CHAPTER 3.

#### SECONDARY SCHOOLS.

## Structure and Organization.

Secondary education is not provided for European children in the Territory, although a European boarding high school has now been planned in detail. There are facilities for secondary education for Asian students at the Administration Asian school at Rabaul, and more advanced students are admitted to schools in the Australian mainland States.

Secondary education for the indigenous people is covered by-

- (a) Higher elementary education—Manual training central schools for boys, and domestic training central schools for girls, both providing two-year general courses and an additional one-year course for pupils completing their education at this stage.
- (b) Technical training centres and pre-vocational higher training centres, providing two-year courses. There are two of these established, at Kerevat and Dregerhafen.

## Policy.

Secondary and higher education is to be made available to all students who qualify to progress to higher standards but advantage of this can only be taken by those who have a sound primary education and a good knowledge of the English language.

The secondary education objective is to be achieved by using the facilities available both in the

Territory and in the Commonwealth of Australia.

The number of students fitted to undertake secondary education for the next few years will be very small, but a fairly rapid advancement in the totals can be anticipated.

#### Curriculum.

As in the case of primary education, there is a strong rural bias, and the nature study of primary schools is extended to the more specific field of botany, zoology, meteorology, &c.

Manual arts are recognized as also being of great importance, and it is intended that each central school shall have a manual training annexe. This is important both to prepare those with the requisite aptitude for more formal technical training and ultimately for apprenticeship courses, and also to assist those whose education will not continue beyond this level and whose future will be associated with the life and economy of the village.

Central schools necessarily have a limited number of students, as they are of a higher standard than primary schools and provide for a more intensive study of English. By their nature they are

generally residential.

During the year a boarding school was opened for girls at Dregerhafen. There are 30 pupils, a staff of two native assistants, a native matron, and a female education officer in charge. The girls' school at Raluana, near Rabaul, will shortly be replaced by a central school taking in boarding students from all the village higher schools of the Rabaul District.

There is provision for manual training for boys at some schools, and the syllabus in operation at all Administration and Mission schools where adolescent girls are being instructed, sets out a course

of instruction in nutrition, cooking, home management and laundry.

The early extension and raising of the standard of technical education have been earefully planned by the recently appointed officer in charge of the Technical Education Division. The promulgation of the Native Apprenticeship Ordinance makes it essential to have special training facilities as part of the apprenticeship arrangements. Plans include provision for three full-scale technical colleges, drawing in students at central school (early secondary) level and fully equipped to provide the essential teaching for qualification as competent technicians and artisans.

## Ages of Pupils.

Pupils generally proceed to central schools at the age of thirteen years and upwards, and after the two-year course proceed to the technical training centres and pre-vocational higher training centres, which provide generally for pupils aged fifteen to seventeen years plus.

#### Attendance.

The disparity in attendance at primary schools and at secondary schools is a result of the cultural background of the majority of the indigenous people, and the extension of secondary education is dependent on the provision of a more intensive background of primary education.

#### CHAPTER 4.

INSTITUTIONS OF HIGHER EDUCATION.

#### Facilities Available.

There are no universities in the Territory and some years must chapse before their existence could be justified.

Higher training centres are maintained by the Administration and the Missions, providing three-year courses. In each of these centres, there is a group doing a course of pre-vocational training, preparatory to a teacher-training course or a course in medicine, and other skills. These courses, like all other education in the Territory, are provided free.

Facilities for technical training have up to the present not been extensive. There is a technical training centre at Malaguna, near Rabaul, but it has not been able to work at the desired level. There are manual training annexes at one or two of the central schools, and a special education centre at Buin in which the local aptitude for cane and basket-ware crafts is tied in with the programme of scholastic teaching. These are all regarded as experiments from which something may be learnt for wider application in the educational system in the future.

The only barrier to undertaking higher study outside the Territory is the fact that the vast majority of the indigenous people have not yet reached the necessary educational standard.

Reference is made in Chapter 7, Part VII., of this Report (Public Health) to the fact that two students are now being prepared to undertake studies leading to the attainment of academic medical qualifications.

Others are to attend the Central Medical School. Suva, and courses within the Territory for assistant medical practitioners, for pathological and laboratory technicians, and for hospital attendants (male nurses).

In other directions, however, the educational field is being widened to enable students to acquire proper qualification for employment in specialized capacities such as agriculturalists, patrol, forest and police officers with the Administration and as circumstances require it, to obtain higher supplementary training in those callings.

Emphasis is also being placed on subjects to give a proper comprehension and training for participation by indigenous people in commercial pursuits, including employment with the commercial and savings banks. It is worthy of note that the Commonwealth Bank of Australia has already advocated the training of clerks at secondary school stundard to deal with native business in its branches in the Territory.

The stage of development of the Territory is such that there is no provision for carrying out basic research at these institutions.

#### CHAPTER 5.

#### OTHER SCHOOLS.

There are now seven European pre-school play centres in the Territory, located at Rabaul, Wewak. Madang, Wau, Bulolo, Goroka and Lae. All receive a subsidy from the Administration and are given advice and guidance by the Department of Education. Liaison is maintained with the Australian Accordance for Pre-School Child Development and similar bodies, from which must valuable documentation has been obtained.

Special schools are maintained to train native medical assistants and office-holders in co-operatives. Professional and vocational trainees receive special pre-vocational training at such centres as Dregerhafen and Kerevat, where the pre-vocational facilities are provided essentially for those proceeding to the vocational course. The plans for full-scale technical colleges, operating from central school level, have been mentioned above.

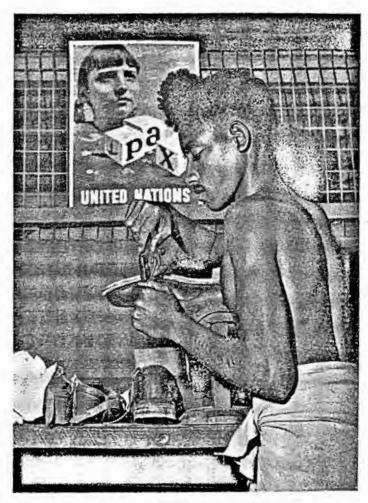

English is the approved language of instruction in these centres.

## CHAPTER 6.

#### TEACHERS.

## Professional Qualifications.

Enropean teachers in Administration schools are generally trained and certificated teachers from Australian State Departments of Education. Indigenous teachers in Administration schools are trained at one of the two education centres, and on graduation are given provisional teachers' certificates.

Native student learning boot repairing, Administration Technical School.

		a.			\$ 1.00 

Teachers employed by the Missions vary in their qualifications. The existence of Administration grants to approved European mission teaching staff ensures that many are highly qualified. Indigenous teachers employed by the Missions vary greatly in standard—some are fully trained teachers, others are primarily village pastors or teacher-catechists.

The shortage of properly trained teachers is one of the major problems confronting the programme of educational advancement.

#### Recruitment and Supply.

European teachers normally are recruited in Australia, and considerable selectivity is possible. Early in 1954 a group of ten cadet education officers will commence training in Australia prior to taking up duty in the Territory, and this system of cadetships will be expanded to meet a large proportion of future staff requirements. Nine other newly recruited trained teachers are now in Australia for specialized instruction and training before assignment to schools.

Twelve indigenous teachers graduated from the training institutions at Kerevat in December, 1952. There was no output from the institution at Dregerhafen, as the students there have not yet completed the necessary pre-vocational course. Owing to an increase in length of the general school course there will be no graduates from either institution in December, 1953, but it is felt that the resultant improvement in quality will be preferable to an increase in quantity at this stage.

#### Training.

Trainee native teachers are being inducted into the education centres to the limit of capacity. The introduction of additional teacher-training centres has been planned and some are expected to be in operation for the beginning of the 1955 scholastic year.

At both education centres there is a central or higher elementary school, followed by a training course that is partly scholastic and partly professional. The scholastic studies are intended to establish a sound knowledge of the subjects the teacher will be required to teach and to improve his general education. The professional studies are concerned with the technique of imparting that knowledge, school management and hygiene, child psychology, and the aims and method of education.

There is one teacher training institution conducted by a mission. It consists of a central school, followed by a higher training institution, staffed by two European teachers. The syllabus of the Department of Education has been adopted and the course of training is similar to that provided at the Administration centres.

During 1951-52 a system of teacher examinations was introduced, designed to improve a teacher's prospect of advancement, his status and his salary. Each teacher at Grade 1 level is required to enrol for a two-year course, the first year dealing mainly with general scholastic background, the second year with professional subjects such as school method, management and hygiene. Correspondence tuition was continued through the year, and the importance is recognized of the help that can be given to indigenous teachers by European colleagues. Refresher courses are provided where possible.

#### CHAPTER 7.

## ADULT AND COMMUNITY EDUCATION.

#### Extent of Illiteracy.

The illiteracy rate in the Territory is high, particularly in those areas where European contact is slight and of recent date. Illiteracy in uncontrolled areas is absolute. Universal literacy is one of the main ultimate aims of the educational policy.

#### Adult Education.

Mass education and community development projects are recognized to be of the highest importance. The work of extending the field of education beyond the planned school programme is carried out by the Special Services Division and other specialist branches of the Department of Education, working in close liaison with other departments of the Administration.

In particular, the area and station schools include amongst their activities the instruction of adults as well as children.

At Tabar, in the New Ireland District, a community development project is being carried out and the project at Maprik is continuing. Classes for village women in sewing and handicrafts continue at Maprik and the use of a simple spinning wheel was taught to the women so that they might make more rapidly the string used throughout the area for making string bags.

Once a week special classes are provided for the wives of teachers at the Education Centre, Dregerhafen, and at Gagidu a new women's centre was opened to eater for the wives of workers employed on the Administration station. At this centre a European woman gives instruction four mornings each week in English, hygiene, cooking and mothercraft.

The main work in adult education comes from the widespread use throughout the Territory of the specialized media of libraries, radio, films and publications.

Four main public libraries, at Rabaul; Lae, Madang, and Wewak functioned during the year. With each of these was associated a country lending section operated on the "box" system. The gross number of borrowers was approximately 25,000. Book stocks now total 15,000 and circulation increased tenfold. Reference sections and information services recorded nearly double activity in comparison with the preceding period.

The number of libraries operating in village schools, clubs and mission centres was increased to 26. This involved the issue of nearly 10,000 texts in simple English. A survey of reading preferences was carried out, and general comments on the service indicated a growing demand for the types of literature provided by this service. A number of locally produced texts are being published in association with the Literature Bureau of the South Pacific Commission.

Broadcast services provided for the indigenous inhabitants comprised-

- (a) A daily ten-minutes news and information service in English;
- (b) A daily ten-minutes news and information service in Melanesian Pidgin English;
- (c) A daily twenty-minutes Melanesian Pidgin English feature programme;
- (d) A daily twenty-minutes Kaunna vernacular session, Mondays excepted, directed principally to the people of the Gazelle Peninsula; and
- (e) A ten-minute Yabim vernacular session twice weekly for the people of the Huon Gulf area.

The programme, known as the Native People's Session, is transmitted through Stations 9PA/VLT on 1,250 kilocycles and 6,130 kilocycles respectively. It is conducted in close association with the corresponding programme for the Territory of Papua and the combined unit is broadcast from 4.30 p.m.-6 p.m.

A feature of the year's work has been the number of successful recording patrols undertaken by broadcast officers. These patrols have permitted the major part of feature programmes to be made in the field. The subsequent audience response has been most favorable. Successful recordings have been permanently transcribed. Facilities for the reception of the broadcast programmes have been improved considerably by the distribution of specially constructed shortwave receiving sets to various listening centres; by the sale, through co-operative societies, of a reasonably priced dual-wave receiving set, and by an alteration in the transmitting wave length of the Australian Broadcasting Station VLT 6 permitting better reception throughout the Territory.

The Administration maintained sixteen mm. projectors at Lae, Dregerhafen, Madang, Wewak, Maprik, Kavieng, Rabaul and Buin and privately owned projection units regularly supplied with Administration film programmes, were located at Mission centres at Lae, Goroka, Mount Hagen, Bena-Bena, Kainantu, Rabaul, Madang, Wewak, Vunapope, Sohano, Kieta and Rooke Island. A total of 429 screenings were made at 54 points. The combined audience total was 87,000, of which 79,000 were indigenous people.

Arrangements have been made to produce five films for the Department of Agriculture, Stock and Fisheries, and one of these, "Cacao", has already been made and is in use for instructional purposes amongst the village people.

Work has commenced on the production of educational film-strips of special local interest.

The circulation of the monthly paper Papua and New Guinea Villager has increased and reader surveys have revealed a 90 per cent. favorable reaction to the material produced. The Wewak News, Lae Garamut and Rabaul News, roneoed newspapers, are regularly issued by the Administration and have wide circulation among the indigenous people.

## CHAPTER 8.

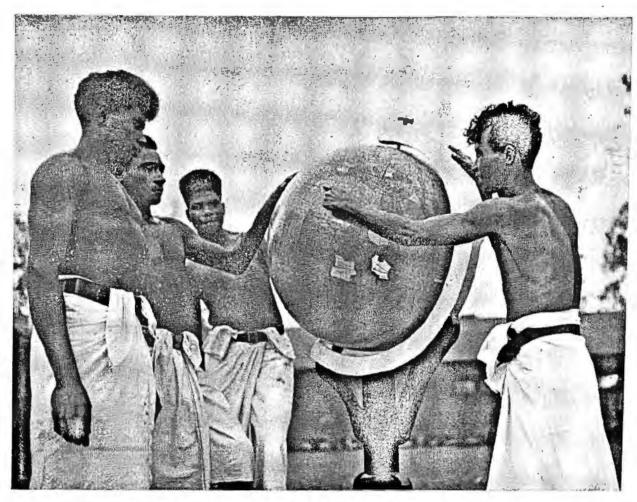

## CULTURE AND RESEARCH.

## Research.

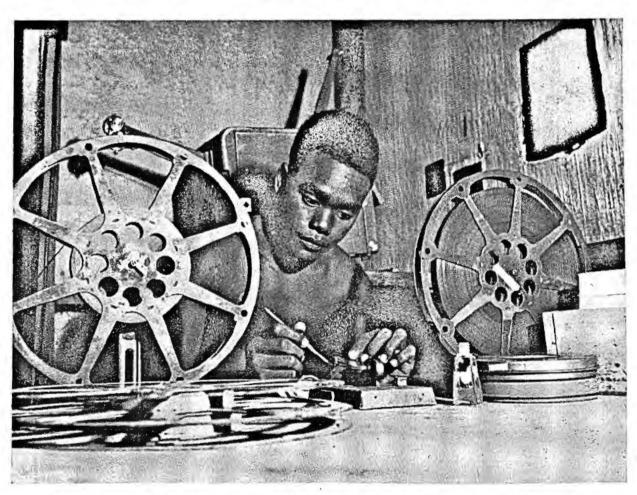

Details of research in basic services and in economic and social fields are given in the appropriate chapters of this Report. Anthropological and sociological data are constantly being collected by the government anthropologist, patrol officers, and education officers. Anthropologists visit the Territory from time to time, and active co-operation is maintained with the South Pacific Commission.

## Indigenous Art and Culture.

The development of handicrafts is an integral part of the programme in all types of Administration schools, and the Department of Education has as one of its main aims the fostering of indigenous art and culture. A considerable proportion of the "Native People's" broadcast sessions is concerned with indigenous music, dance and folklore. Much of this is further distributed through the various publications made available by the Department of Education to the indigenous people. This work of preserving and encouraging indigenous art and culture is carried out by the various branches of the Department of Education.

Three natives from Wewak, Sepik District, taking lesson in Geography at a Native Teachers' Training Centre.

Native assistant splicing film used by Visual Education Section of the Department of Education. (To face page 92.)
F.689.

## Museums, Parks, &c.

A commencement has been made in the setting up of a museum, but little progress can be made until a suitable building is available. Botanical and entomological collections are being built up.

It has not been possible to give consideration to the question of parks, nor is there any great urgency in this matter owing to the relative sparsity of population.

No special steps have been taken to preserve the flora of the Territory, although much of it receives protection indirectly under the *Forestry Ordinance* 1963-1951, under which the Administrator may, by notice in the *Gazette*, declare any tree or any species or classes of trees to be reserved trees.

Provision for the protection of fauna is contained in the Birds and Animals Protection Ordinance 1922-1947. Under this Ordinance the Administrator may, by proclamation, declare any birds or animals specified in the proclamation to be protected birds and animals. The Ordinance also forbids the capture or destruction of certain birds unless special permission to do so has been granted.

There are no archaeological expeditions at work in the Territory.

The New Guinea Antiquities Ordinance 1922-1936 provides for the protection of New Guinea antiquities, relies, curies and articles of ethnological and anthropological interest or scientific value.

The Ordinance provides that no person shall remove from the Territory any New Guinea antiquities without first offering them for sale at a reasonable price to the Administration. The Ordinance also provides that any person who discovers that there exists in any locality:—

- (i) caves or other places in which ancient remains, human or other, are to be found; or
- (ii) carvings, paintings or other representations on rocks or in caves of living beings or inanimate objects; or
- (iii) deposits of ancient pottery or historical remains of any description; or
- (iv) places used in former times as ceremonial or initiation grounds;

shall immediately inform the nearest District Officer of the discovery or the reputed existence of such places or objects; and that such places or objects shall not be defaced, damaged, uncovered, exposed or excavated or otherwise interfered with without the written permission of the Administrator.

#### Languages,

The linguistic pattern in the Territory is extremely varied. As far as is known there are 53 Melanesian languages, and the number of Papuan languages is probably greater. The diversity is so great that often villages only a few miles apart cannot communicate except through interpreters. In coastal areas, linguistic groups of more than 5,000 people are rare. In the interior, however, groups are generally larger, and a recent research survey indicated that, in the Chimbu sub-district, Kuman is spoken or understood in some form by approximately 40,000 people.

It is clearly impracticable to establish a common indigenous language. Details are given in an earlier section of this report on research projects being carried out on the preparation of a linguistics map of the Territory, the development of various vernaculars as teaching media, and the provision of a unified orthography for these.

## Supply of Literature.

The supply of literature to literate natives is encouraged by two means. The Administration and the Missions supervise the work of mobile libraries and of the libraries established at various centres, details of which are given in the section dealing with "Adult and Community Education". In addition, the following newspapers and other material are circulated to the indigenous people: one English and four Melanesian-Pidgin periodicals published by the Administration, five vernacular publications of the Missions (three of which contain English sections) and reneced material produced by the Mass Literaey Committee.

## PART IX.—PUBLICATIONS.

Copies of the laws affecting the Territory of New Guinea made during 1952-53, and which have been printed, have been transmitted to the Secretary-General of the United Nations. The remainder will be forwarded when printed.

No bibliographies referring to the Territory have been published during the period under review.

# PART X.—RESOLUTIONS AND RECOMMENDATIONS OF THE GENERAL ASSEMBLY AND THE TRUSTEESHIP COUNCIL.

The resolutions and recommendations of the Trusteeship Council arising out of the examination of the Annual Report, 1951-52, have been noted and considered by the Administering Authority and the following information is furnished thereon:—

#### I. GENERAL.

#### GENERAL CONSIDERATIONS.

"The Council, considering that the report of its 1953 Visiting Mission provides a valuable review of the essential problems of administration in the Trust Territory which is characterized by abnormally difficult terrain, excessive fragmentation of indigenous society and a diversity of vernaculars, and whose human and economic resources are still largely unexplored, endarses in general the observations, suggestions and recommendations put forward by the Mission as a contribution to the more effective solution of those problems and to the further progress of the Territory in all fields, and commends them to the carnest consideration of the Administering Authority."

The observations, suggestions and recommendations of the 1953 Visiting Mission in regard to the problems of administration in the Territory have been noted and will be given full consideration by the Administering Authority.

## FORM AND CONTENT OF THE ANNUAL REPORT.

"The Council, recalling the view which it expressed at its tenth session as to the need for including more complete information in the annual reports, notes that at its twelfth session a number of its members have drawn attention to matters upon which they consider that fuller information would be desirable, and welcomes the assurance of the Administering Authority that such information will be included in future annual reports."

The present report has been compiled on the basis of the questionnaire approved by the Trusteeship Council on 6th June, 1952, and where available, information sought by members of the Council has been included in the appropriate sections of the report.

## UNDERSTANDING OF THE UNITED NATIONS.

"The Council, noting that the Visiting Mission did not find in the Territory any appreciable knowledge among the indigenous inhabitants concerning the aims and activities of the United Nations or of the basic objectives of the International Trusteeship System, and noting also that two of its members observed that a misunderstanding of the role of the United Nations in the Territory existed among certain sections of the European settler community, expresses the hope that collaboration between the Administering Authority and the Secretary-General will result in the supply to and dissemination in the Territory of increased information on the United Nations, suitably adapted to the linguistic and other cultural conditions of the indigenous inhabitants and calculated to promote a fuller understanding of the principles and purposes of the United Nations among the immigrant communities."

A wide variety of information on the principles and purposes of the United Nations is now disseminated to all people in the Territory through the media of public libraries and special libraries maintained by the Department of Education for indigenous inhabitants, medium and short wave radio broadcasts, newspapers and adult and community education centres. Initial steps have been taken regarding the supply of information on the United Nations suitably adapted for the cultural conditions of the indigenous inhabitants.

## II. POLITICAL ADVANCEMENT.

#### GENERAL ADMINISTRATION.

"The Council, noting the impression gained by the Visiting Mission that the authority of District Commissioners is considerably circumscribed by the highly centralized nature of the existing administrative organization, endorses the view of the Mission as to the desirability of delegating additional responsibility and power to them, and notes with interest the statement of the Administering Authority that a study is being made of means by which greater decentralization may be brought about."

A number of objectives considered necessary in regard to decentralization, particularly in relation to District Commissioners, has been achieved by delegations of authority under the *Public Service Ordinance* 1949-1950. In addition, District Commissioners possess financial delegations for a wide variety of purposes from all Administration Departments, have considerable statutory authority and by the direction of the Administrator an administrative co-ordinating function at District level.

The Administering Authority, however, is continuing to examine the position with the view to still greater decentralization and the delegation of more responsibility and power to District Commissioners.

## PEACEFUL PENETRATION.

"The Council endorses the commendation by the Visiting Mission of the Administration of the Trust Territory in respect of its record of peaceful penetration of uncontrolled areas, and notes in particular the ardnous nature of the duties of the officers entrusted with this task."

In Part V., Chapter 2, of this Report information is given relating to the further extension of Administration influence to new areas.

#### LEGISLATIVE COUNCIL.

"The Council, recalling its previous recommendations favouring increased participation by the indigenous inhabitants in the legislative system of the Territory, notes the view of the Visiting Mission that at the present stage of political development the Territory's representation of two indigenous members on the Legislative Council of Papua and New Guinea has little except educational significance; considers that the desirable objective of gradually increasing the representation of the indigenous inhabitants on the Legislative Council may at the present stage be most effectively approached by developing its usefulness as a means of political education and preparation for more active participation; recommends to this end that the Administering Authority take all practicable steps, including the possible participation of additional indigenous persons in the work of the Council as observers as proposed by the Visiting Mission, to extend among the indigenous population an understanding of the legislative procedures; and requests it to include information on this matter in its next annual report".

At this stage of their development the most effective way to extend amongst the indigenous population an understanding of legislative procedure is through the work on the Village Councils and the encouragement and assistance given to that work by the District Officers. The Administering Authority is giving consideration to other practical steps which might be taken to extend the understanding of legislative procedures including informative addresses to Village Councils and by specific provisions in school syllabi.

#### MUNICIPAL AND DISTRICT GOVERNMENT.

"The Council, recalling that provision is made in the Papua and New Guinea Act for the establishment of Advisory Councils for Native Matters upon which at least a majority of the total number of members would be indigenous inhabitants, and noting that the existing Town and District Advisory Councils, which are not statutory organs and are not related to the Advisory Councils proposed under the Act, are limited in membership to non-indigenous persons, endorses the view of the Visiting Mission that there should be no rigid formalization of political institutions on a bi-racial basis, and welcomes the assurance of the Administering Authority that when conditions are apprapriate for the establishment of statutory district organs it will give full attention to the desirability of setting them up on a multi-racial basis".

The Administering Authority assures the Council that when conditions are appropriate for the establishment of statutory district organs it will give full attention to the desirability of setting them up on a multi-racial basis.

## LOCAL GOVERNMENT.

"The Council, noting the favourable impression gained by the Visiting Mission as to the effectiveness of the official Native Village Councils thus far established, endorses the view of the Mission that a rapid development of this system of local government would do much to hasten political advancement, and welcomes the statement of the Administering Authority that it proposed not only to make additional specialist officers available for this purpose but also to regard the development of local government as a primary responsibility of the district administrative afficers".

Full information relating to Native Village Councils is given in Part V., Chapter 3, of this Report.

"The Council, noting further that a number of the official Village Councils already have jurisdiction over areas cantaining a group or groups of villages, and noting the views of the Visiting Mission as to the effectiveness of the example at Rabaul of area organization of this kind, urges the Administering Authority to proceed with the development of such wider units of local government in other parts of the Territory, having due regard to the desirability of adapting the pattern of their organization to the varying conditions and requirements of the peoples concerned".

The desirability and advantages of Councils representing a group or groups of villages was realized when the first councils were established and the practice will be followed wherever it is considered that it would be in the best interests of the people concerned.

#### III.—ECONOMIC ADVANCEMENT.

#### GENERAL.

"The Council, recalling the concern which it has previously expressed as to the economic development of the Trust Territory, and recognizing the difficulties confronting the Administering Authority in this field as a result of geographical, historical and other factors, notes the observation of the Visiting Mission that in the absence of detailed knowledge of the Territory's economic resources and potential little economic development and exploitation of the resources has taken place thus far; endorses the view of the Mission that all possible steps should be token to secure the necessary surveys as a preliminary to planned economic development; welcomes the intention of the Administering Authority to proceed with existing and proposed surveys; and expresses the hope that adequate staff may be made available for this purpose to ensure that the essential studies are completed as soon as possible".

The Administering Authority has for some time recognized the importance of resources and land use surveys and has and will continue in accordance with well established policies to make available as much staff, equipment, &c., as possible to ensure that essential studies are completed as soon as possible. The Trusteeship Council will, however, be aware that there is a world shortage of some of the specialists required and that comprehensive survey work can only be performed satisfactorily if all the specialist members of the scientific teams are available. Meanwhile, concurrently with the more fundamental investigations, the Administering Authority is carrying out reconnaissance and ad hoc surveys and investigations to enable economic development to proceed on a sound basis wherever the indications are favorable and indigenous or other inhabitants or approved immigrants are willing and properly equipped with capital and skill to undertake it.

"The Council, recalling also its previous recommendation favoring the formulation of broad economic development plans for the Territory, but noting that in the interest of flexibility and because of problems of long-term financing the Administering Authority has taken the view that for the time being a more realistic approach to the problems of development is to establish long-term objectives and to plan for their achievement by means of annual work programmes, endorses the opinion of the Visiting Mission that such funds as are made available from year to year for the purposes of economic development should be spent in accordance with a fully co-ordinated development plan covering a period of five or ten years and designed to establish a pattern of economic expansion best suited to enhance the future prospects of the inhabitants; and recommends that the Administering Authority again study the desirability of proceeding on these lines and of incorporating into such a plan those of its long-term objectives which may be adapted to the purposes of the plan."

The Administering Authority has again studied the practical desirability of formulating five or ten year co-ordinated development plans, but still considers that the present practice of working steadily towards well established long-term policy objectives for economic development with co-ordinated action plans from year to year is the most appropriate in the circumstances. The Trustceship Council will readily recognize that one of the immediate difficulties in formulating realistic five or ten year plans, lies precisely in the lack of complete detailed knowledge of resources and other factors conditioning economic development for the whole Territory to which the Council has made specific reference in its first recommendation under economic advancement.

The Administering Authority nevertheless has followed the practice of devoting the maximum financial and other resources each year to progressive economic expansion within the established and co-ordinated long-term objectives of social and economic development and in the light of the results of short and long term investigations as they come to hand.

"The Council, recalling further that it has previously recommended that emphasis should be placed, in plans for the development of the economy, on the participation of the indigenous population, and noting that the Visiting Mission found that such economic development as has taken place primarily affects the European planters and companies, welcomes the intensified efforts of the Administering Authority to foster the development of co-operative organizations among the indigenous producers and expresses the opnion that activities of this kind should be given a prominent place in the formulation of an economic development plan; and, in furtherance of its view that emphasis in planning should be placed upon the role of the indigenous population in general, draws the attention of the Administering Authority to the observation of the Visiting Mission that a sound decision on the difficult and important problem of European settlement in the Territory is likely to determine to no small degree its economic future."

The Administering Authority is well aware of the importance of the role of the indigenous population in economic development and has always given prominence to this in economic and social planning. Land is basic to economic development and rights and long-term interests and welfare of the indigenous people are thoroughly protected in long-standing law and administrative practice. The development of co-operative productive and trading activity and of special agricultural extension services have received considerable and special attention, especially over recent years.

The importance of correct decisions on European settlement in the Territory has also been recognized by the Administering Authority as basic to the balanced economic and social development of the Territory. The introduction of capital resources, modern skills and production techniques and the opportunities of employment and training which are the concomitants of European settlement and enterprise bave very great advantages for the native people. The existing framework of law and administration ensures that European settlement falls into its proper place in the co-ordinated economic and social developmental policies with their full provision for the participation of the indigenous population.

#### PUBLIC FINANCE.

"The Council, recalling its previous interest in the possibility of improving the fiscal system of the Territory, attaches importance to the recommendation of the Papua and New Guinea Customs Inquiry Committee to the effect that there should be a comprehensive examination of the whole financial system; welcomes the assurance of the Administering Authority that it will give close attention to the findings of that committee; expresses the hope that in carrying out a further examination of the matter the Administering Authority will give attention to the possibility of introducing some form of direct taxation; and requests it to include further information on the matter in its next annual report."

The financial system of the Territory is continually under review. The  $\Delta$ dministering  $\Delta$ uthority does not consider that the conditions in the Territory are yet opportune to institute a form of direct taxation.

#### LAND.

"The Council, recalling its previous recommendation that the Native Land Commission should be organized without delay, is pleased to note that the Commission has now begun its work in part of the New Britain area, and recommends that the earliest possible steps be taken to extend the activities of the Commission to other parts of the Trust Territory."

The extension of the activities of the Native Land Commission in the Territory is receiving the close attention of the Administration. As mentioned in Part VI., Chapter 3, of this Report, the Chief Commissioner and a Commissioner have been appointed and arrangements are being made for the appointment of additional Commissioners.

"The Council, noting from the report of the Visiting Mission that indigenous inhabitants in same areas have shown a desire to repossess land previously alienated, invites the Administering Authority, when such land becomes available for transfer of ownership, to give sympathetic consideration to applications which may be received from indigenous persons, with a view to according them all possible preference in the acquisition of title."

As regards the acquisition of alienated land by indigenous inhabitants, it is an integral part of the land policy of the Territory that all residents have equal rights to secure a title to alienated land and indigenous people desiring to acquire possession of a block of land for use in accordance with the approved purposes, would have their application sympathetically considered by the Land Board of the Territory. Indigenous people also may negotiate by private treaty to acquire title to alienated land subject to the general provisions requiring the approval of the Administrator to transfers of interests in land.

## TRANSPORT AND COMMUNICATIONS.

"The Council, noting that the Visiting Mission observed that in spite of the physical difficulties and high cost of road construction in the Territory the Administering Authority recognizes its importance for general conomic development and is pursuing construction wherever possible, and noting further the continuing increase in the funds allocated for the purpose, again emphasizes that an effective road network is an essential prerequisite to large-scale economic development and to social cohesion, and urges the Administering Authority to intensify its efforts in this direction."

The Administering Authority is giving as much attention as possible to the development of an effective road network. The completion of several major wharfs will free technical and other labour and equipment resources for road investigation, planning and construction. Plans for road development include the construction of motor roads to the Eastern Highlands from Lae via the Markham River Valley; the construction of a coastal road from Madang to Bogia and extension to the Lower Ramu Valley; the construction of a road between Marui, on the Sepik River and Wewak; and between Wewak, Aitape and Vanimo.

Information relating to road construction during the year is given in Part VI., Section 4, Chapter 9, of this Report.

#### IV .-- SOCIAL ADVANCEMENT.

## PUBLIC HEALTH.

"The Council, noting on the one hand the over-all increase in the number of hospital, dispensary and clinic facilities and in the number of persons receiving hospital care ar skilled medical treatment during the period under review, and noting on the other hand the opinion of the Visiting Mission that

many of the existing hospitals are in urgent need of improvement as far as buildings and equipment are concerned, and the fact that the 1951 plan of new hospital construction has not been implemented pending revision of the plan, invites the Administering Authority to take into consideration, in revising the hospital programme, the views expressed by the Visiting Mission; expresses the hope that the revised plan will provide for the ultimate establishment of an integrated system of hospitals adequate in number, equipment and location to satisfy the needs of the Territory; and requests the Administering Authority to include in its next annual report its definitive plans in this respect."

The Administering Authority agrees with the Trusteeship Council that although there has been an over-all increase in the number of hospital, dispensary (aid posts) and clinic facilities and number of persons receiving hospital eare or skilled attention, many of the existing hospitals are in urgent need of improvement as far as buildings and equipment are concerned and this matter has been receiving attention.

In revising the hospital building programmes, the Administering Authority is planning for a steady increase in the number of general hospitals, and specialized hospitals for the treatment of tuberculosis and Hansen's disease with the ultimate objective of providing an integrated system of hospitals adequate to the needs of the Territory.

"The Council, noting from the report of the Visiting Mission that the dispensaries or aid posts in the Territory are for the most part staffed by indigenous medical assistants without supervision except for the occasional visits of administrative officers, draws the attention of the Administering Authority to the opinion of the Mission that he present system of training these assistants is unsatisfactory, and that they should be better selected, better trained and their work regularly supervised by properly qualified medical personnel; and recommends that it take measures to review and improve the existing systems of selection, training and supervision in the light of the observations of the Mission."

The Administering Authority is fully aware of the need for earc in the selection, training and supervision of indigenous medical assistants and full information on these matters has been given in Chapter 7 (f) of Part VII. of this Report.

#### CORPORAL PUNISHMENT.

"The Council, recalling that it reaffirmed at its tenth session its view that corporal punishment should be formally abolished, and noting that it is the policy of the Administering Authority to do so as soon as conditions permit, again affirms its previous opinion and expresses the hope that the Administering Authority will formally abolish corporal punishment as soon as possible."

As advised in the Annual Report for 1951-52, the Administering Authority reviewed the laws of the Territory relating to corporal punishment and amended those laws to abolish this form of punishment for all offences other than—(a) certain offences by juveniles; (b) sexual offences against females; (c) certain offences of violence, e.g., garrotting, destruction of inhabited huildings and vessels with explosives; attempts to wreck ships and like acts; and (d) prison offences, e.g., mutiny in prison, incitement to mutiny in prison and gross personal violence to prison staff. The amendments also reduced the extent and severity of the punishment. The Administering Authority whilst still supporting the principle of abolition of corporal punishment, and the amendments referred to are a step in this direction, considers it necessary, to meet the conditions of the Territory and in the interests of the maintenance of good order, to retain in the legislation provision for corporal punishment for the offences which are set out above.

## COMMUNITY DEVELOPMENT.

"The Council, noting with interest the community development project being carried out on Tabar Island in co-operation with the South Pacific Commission, recommends that the Administering Authority devise plans to undertake projects of this kind in other parts of the Territory, and invites it to explore the availability of expert assistance under the United Nations technical assistance programme for the planning and execution of such projects."

Community development, which is an integral part of native affairs administration, is receiving the close attention of the Administering Authority. The approach to the problem is that every indigenous community should be a living project and should get the maximum attention which its nature dictates and its resources permit.

Should it be found that the Administration is not able to provide all the technical assistance required from its own resources, the question of obtaining such assistance from either the South Pacific Commission or under the United Nations technical assistance programme would, of course, be explored.

## V.—EDUCATIONAL ADVANCEMENT.

#### GENERAL.

"The Council, endorsing the opinion of the Visiting Mission that the expansion of educational facilities must be one of the primary duties of the Administering Authority and that it should push forward with its plans for the general improvement of education on all levels, reaffirms its previous recommendations

in this sense; ogain draws attention to the fact that although some facilities for general secondary education are available in the Territory for Asian students and in Australia for the children of Europeans, no such facilities are provided for indigenous students, and recommends that the Administering Authority take the necessary measures, including the provision of scholarships, to give indigenous students access to secondary and other more advanced levels of education; and recommends further, in connexion with the views which it has expressed on the question of the training of indigenous medical personnel, that in revising the educational programmes the Administering Authority take into account the desirability of ensuring that the programmes are so designed as to facilitate the selection and adequate basic education of candidates for medical and other specialized training."

Generally speaking the great majority of the indigenous population has not yet reached a level where they can fully understand the values of European civilization. To introduce secondary education on a wide scale would be to place the wrong emphasis on the educational requirements of the Territory. At this stage of development it is felt that energies are best expended on the increase of primary schools at the village level.

However, the Administering Authority provides for free education and maintenance for indigenous students for higher training at teacher training centres and similar establishments in the Territory, and suitably qualified students receive the opportunity to undergo medical training at the Central Medical School at Suva, Fiji. Arrangements have also been made for selected students to undertake advanced education in Australia.

#### LANGUAGES OF INSTRUCTION.

"The Council, noting that the Administering Authority has determined that English should be the approved medium of instruction and the universal language of the Territory, and at the same time noting from the report of the Visiting Mission the wide extent to which Melanesian pidgin is at present used both in the lower levels of education and by all administrative officials in their contacts with the indigenous population, endorses the opinion of the Mission that Melanesian pidgin is not only not suitable as a medium of instruction but has characteristics derived from the circumstances in which it was invented which reflect now outmoded concepts of the relationship between indigenous inhabitants and immigrant groups; and recommends that the Administering Authority take energetic steps to eradicate it from all instruction given within the Territory, that it urgently develop plans to eliminate it completely from the Territory, and that in areas where the population is as yet unfamiliar with Melanesian pidgin its use should be officially prohibited immediately."

Throughout the Territory a special problem exists because of the complexity and multiplicity of native languages. Such languages are often confined to usage amongst small groups of people and differ in structure and vocabulary from those of their neighbours. Hence Melanesian Pidgin English has been used for many years as the practical lingua franca in New Guinea. The Administration is working towards replacing this lingua franca but it will be a long process to change the people's habits.

As a matter of administration policy Melanesian Pidgin English is not taught in schools. At times, however, it is necessarily made use of in some education processes to overcome language difficulties which would otherwise be insurmountable. The aim of the Administering Authority, however, is to make indigenous pupils in its schools fluent and literate in English in the shortest possible time.

## TEACHERS AND TEACHER THAINING.

"The Council, reaffirming its previous recommendations for the expansion of facilities for the training of teachers, endorses the opinion expressed by the Visiting Mission on this matter, and draws the particular attention of the Administering Authority to the fact that the substitution of standard English for Melanesian pidgin and the consequent raising of the general level of education depend very largely upon the institution of an intensive programme of training of teachers competent in the use of standard English."

There are two education centres in the Territory—one at Dregerhafen, and one at Keravat, at each of which is a higher elementary school, and a higher training institution for the training of teachers. Both these centres were re-organized in 1952, admission standards were raised, and the training course was lengthened to raise the standard of proficiency of native teachers. English is the language of instruction.

"The Council, noting that a linguistic map of the Territory is in course of preparation and that work has begun on the examination of languages suitable for regional use in vernacular instruction, and noting the interest expressed by UNESCO in this project, requests the Administering Authority to keep it informed of the progress and the results and invites it to consider the desirability of seeking collaboration of UNESCO in completing the project."

The work on the examination of languages and a linguistic map have not yet been completed. Particulars of the progress made are given in Part VIII., Chapter I. of this Report.

## PART XI.—SUMMARY AND CONCLUSIONS.

The principal events and achievements during the year under review have been outlined in the preceding sections of the report and to avoid unnecessary repetition of information this part of the report is restricted to a brief reference to some of the main features of the year's work.

An area of approximately 1,393 square miles of the restricted area was brought under Administration influence during the year and, as the result of consolidating patrols, 1,373 square miles of the area previously classified as under Administration influence or partial influence was brought under Administration control.

In the development of local government good progress has been made in the consolidation of councils already established and in the preparatory work among new groups which, although a lengthy process requiring much tact and patience, is necessary before they can assume the responsibilities of a council. Two new councils were proclaimed during the year and it is hoped that, as the result of the preparatory work referred to, several new councils will be proclaimed during 1953-54.

Economic progress during the year is indicated by increased production of agricultural and other products, increased activities in the expansion of production and in research into the improvement of the quality and yield of established crops and the introduction of new crops. The continued and increasing interest of the indigenous inhabitants in economic projects is being actively encouraged and developed by the Administration.

The Co-operative movement continues to expand and is playing an important part in both the economic and social development of the indigenous people. Between 1st July, 1952, and 30th June, 1953, membership increased from 11,631 to 20,646, capital from £17,277 to £61,319, store turnover from £20,000 to £28,436, copra production from £17,250 to £90,113 and total turnover from £37,250 to £118,549.

Expenditure by the Administration on all activities and services was £4,314,085, of which £1,544,542 was derived from internal revenue and £2,769,543 provided by grant by the Administering Authority.

The value of exports of products of local origin totalled £7,515,646, being an increase of £1,692,228 over the previous year.

The progress made in the rehabilitation of the copra industry is reflected in the output of approximately 70,000 tons for the year which is very little below pre-war levels. Exports of copra were 64,152 tons valued at £4,425,057 and for the first time coconut meal and oil to the value of £473,026 and £35,463 respectively, were exported.

Further advancement has been achieved in the fields of health, education and other social services, but the provision of new buildings has presented a major problem. This is due mainly to the great number of buildings required to replace those destroyed during the war and the limitations of the Territory's total building capacity.

## STATISTICAL APPENDICES.

## STATISTICAL ORGANIZATION.

The Census Ordinance 1947 (No. 4 of 1947) provides for the taking of a census of the non-indigenous population of the Territory by the Commonwealth Statistician in conjunction with the census of the Commonwealth of Australia. The last census was taken at 30th June, 1947, and the results in respect of the Territory of New Guinea were published by the Commonwealth Statistician in Census Bulletin No. 6. Details of the census were also given in the Annual Reports of the Territory for 1947-48 and 1948-49.

The notification of births, marriages and deaths of members of the non-indigenous population is required under the Registration of Births, Deaths and Marriages Ordinance 1935-1952.

A census of the indigenous people in areas under Administration control is undertaken by the Department of District Services and Native Affairs. Officers of that Department visit individual villages and record vital statistics on a family group basis, including details of age, sex, relationships, births and deaths, migration and absentees from villages. This information is entered in village books, which are retained in the village, and is revised each year during census patrols, and is also entered in a village population register which is maintained at each district head-quarters. Figures of the enumerated and estimated population at 30th June, 1953, are given in Appendix I. of this Report.

Provision is made in the Native Village Councils Ordinance 1949-1952 for Native Village Councils, constituted under the Ordinance, to maintain a register of births and deaths within the Council area.

The Statistics Ordinance 1950 (No. 15 of 1950) provides for the appointment of a Statistical Officer and for the collection and compilation of statistics of the Territory as prescribed by Regulations. The position of Statistical Officer is included in the classification of the Government Secretary's Department and Regulations (No. 11 of 1951), have been made under the Ordinance and published in Gazette No. 31, of 25th May, 1951. Separate statistics are compiled for the Territory of New Guinea and the information available is included in the following Appendices.

Payments made during the years 1945-46 and 1946-47 were not separately recorded and are not included in the above table. The total payment is approximately £1,467,000.

## APPENDIX III.

#### JUSTICE.

1. Cases Tried Before the Courts of the Territory During the Period 1st July, 1952, to 30th June, 1953.

(a) In its Criminal Jurisdiction-

(1) Supreme Court.

Offence.	Charged.	Cor	wleted.	Discharged.	Nolls Prosequi.	Sentences.
Wilful murder	(a) 20	(b)	13	(a) 4	3	Seven months to 4 years' I.H.L. Sentences of death recorded against five of the accused
Murder	7	(c)	4		3	Nine months' I.H.L. to 2
Manshughter	(d)(e) 12	(d)	10		1	years' I.H.L.  Fine of £25 in default 1 month's I.H.L.; two accused ordered to come up for sentence if called upon; and imprisonment ranging from Rising of the Court to 2½ years' I.H.L.
Conspiring to murder	2		2		••	Six months' light labour and 12 months' I.H.L.
Grievous bodily harm Assault cocasioning bodily harm	1 2		2		1	Rising of the Court and 4 months' I.H.L.
Knowingly having in possession a dan- gerous engine with intent by means thereof to commit a crime	1		••		1	
Assault	(1) 6	(1)	5	1		Fines of £20, £25 and £40 and imprisonment of Rising of the Court and 9 months' I.H.L.
Rape	(g) 14		11	3		Rising of the Court to 4½ years' I.H.L.
Attempted rape	(h) 7	(h)	7			Nine months' I.H.L. to 4 years' I.H.L.
Unlawful and indecent assault	(i) 2	(i)	2			Four years' I.H.L. and I year's I.H.L.
Unlawful carnal knowledge of girl under twelve years	1		1			Nine months' I.H.L.
Unlawfully and indecently dealing with a girl under the age of seventeen years Unlawfully aud indecently dealing with	3	(j)	3 3		1	Twelve months' I.H.L. to 18 months' I.H.L. Four and one-half years' I.H.L., 5 years' I.H.L.
a girl under the age of twelve years Wilfully doing an indecent act with	1				1	and 5 years' I.H.L.
intent to insult another Being a native, having carnal knowledge of a European woman with her consent, the said European woman not being a European woman to whom the accused			2	• •	, .	Rising of the Court
was married Being a European woman, voluntarily permitting a native to have carnal knowledge of her, the said native not being a native to whom she was married	(k) 1		1	• 1	.,	Recognizance of £25 to appear and receive judg- ment when called upon
Incest ,,	5	•	5	• • •		Nine months' I.H.L. to 18 months' I.H.L.
Entering or being in or upon a dwelling house of another or the curtilage of the dwelling house with intent indecently to insult or offend any female inmate of that house	9		8	1	• •	Six months' I.H.L. to 12 months' I.H.L.
Stealing	20		8	2	10	Fine of £5 to fine of £90 and 4 months' I.H.L. to 12 months' I.H.L.
Attempting to steal Breaking and entering with intent to commit a crime therein	3	(1)	3	• • • • • • • • • • • • • • • • • • • •	1	Own recognizance to appear and receive judgment when called upon to 18 months' I.H.L.

#### (1) Supreme Court—continued.

(a) In its Criminal Jurisdiction-continued.

Offence.	Charged.	Convicted.	Discharged.	Nolle Prosequi.	Sentences,
Breaking and entering and stealing	22	17	2	3	Own recognizance of £1 to appear and receive judg- ment when called upon and from 3 months' I.H.L. to 3 years' I.H.L.
Arson	3	2		1	Twelve months' I.H.L. each accused
Sodomy	2	2			Nine months' I.H.L. and 1 year's I.H.L.
Having in possession without lawful excuse gold (Section 132A of the Mining Ordinance 1928-1947)	1	, 1			Nine months' I.H.L.
Unlawfully and indecently dealing with a boy under the age of fourteen years	. 1	1			Nine months' I.H.L.
Total	(e) 153	. 113	· 13	26	,,,

(a) Includes one European female.
(b) Includes one European female.
(c) Includes one accused found guilty of murder only and three accused found guilty of manslaughter only.
(c) Includes one accused found guilty of manslaughter only.
(d) Includes one European male who was found guilty of unlawful assault only—he was fined £25 in default 1 month's imprisonment with hard labour.
(e) One accused was found to be incapable of understanding the proceedings—it was ordered that he be kept in custody until he could be dealt with according to law.
(f) This includes two Europeans each of whom appeared on two indictments.
(g) Includes three Europeans—two of these Europeans were acquitted by a jury—the other European was convicted by a jury and was sentenced to 44 years' I.H.L., but this accused appealed to the High Court of Australia and a new trial was ordered. At the re-trial a jury acquitted this accused.
(d) Includes a case of a native attempting to rape a European woman—the accused was found guilty and was sentenced to 4 years' I.H.L.
(i) One of these offences was committed against a European woman—the accused was entenced to 4 years' I.H.L. The other accused was found not guilty of unlawful and indecent assault but guilty of assault—he was sentenced to 1 year's I.H.L.
(i) These convictions were in respect of offences committed against European girls.
(ii) This accused was charged upon two counts—she was acquitted on the first count but was convicted on the second count.
(ii) Includes one accused found guilty of attempting to steal—he was sentenced to 6 weeks' I.H.L.

#### Number of Cases Tried Before the Supreme Court in its Criminal Jurisdiction, Classified ACCORDING TO SECTIONS OF THE POPULATION.

Indigenous	• •	•:	 137	. 105	7	24
Total		1	 153*	113	13	26

\* See note (e) supra.

(b) In its Appellate Jurisdiction-

Four appeals from the decisions of District Courts throughout the Territory were lodged during the year. Three of these appeals were discontinued before the hearing commenced. One appeal proceeded to the hearing and the conviction was quashed.

(c) Appeals from the Supreme Court of Papua and New Guinea-

There were two appeals to the High Court of Australia—one appeal was from a seutence imposed by a Judge of the Supreme Court of the Territory of Papua and New Guinea; in this instance the High Court reduced the sentence.

A European who had taken his trial before a Judge and Jury for rape appealed against his conviction to the High Court of Australia; the High Court ordered a new trial and at the new trial the Jury returned a verdict of Not

Guilty. A European woman applied to the High Court of Australia for leave to appeal from a decision of the Supreme

Court of the Territory of Papua and New Guinea; the High Court has refused leave to appeal in this ease. In regard to the appeal mentioned in last year's report, the High Court ordered a new trial but as yet the re-trial has not taken place.

#### (d) In its Civil Jurisdiction-

Common law-

Thirty-seven writs of summons were issued.

Matrimonial Causes-Sixteen petitions for dissolution of marriage were filed.

#### (1) Supreme Court—continued.

#### (e) In its Probate Jurisdiction-

The following grants were made during the year:-Probate 11 .. .. . . Reseals of Probate 21 .. • • 1 Letters of Administration . . Letters of Administration with the Will annexed 4 7 . . . . . . 3 Election to Administer .. 6 .. 53 Total .. . .

### APPENDIX XI.

### FORESTS.

Information regarding the total area of productive and other forests is not available. The area being exploited is approximately 220,000 acres. The area of forest so far acquired by the Administration is approximately 527,000 acres and approximately 900 acres of plantations have been established. Further particulars are given in Part 6, Section 4, Chapter 6, of this report.

The output of merchantable timber for the year was, in terms of log timber, 20,000,000 super. feet.

Information regarding other forest products is not available other than the information regarding exports which will be found in Table 6 of Appendix VII.

### APPENDIX XII.

### MINERAL RESERVES.

The quantity and values of minerals produced were-

Mueral Field.	Gold	i. [	Platin	nun. Silver.			Osmirfdium,		
	Fine oz.	Value. Fine oz.		Vajue.	Fine oz.	Value.	Fine oz.	Value.

Total	138,694.145	2,147,766	4.048	133	64,420.44	23,399	1.221	63	

The number of workers employed in the mining industry was-

	Тура о	f Mlaing.			Native.	European.
Underground Sluicing Dredging.	 	••	•••	•••	 330 1,172 713	31 184 191
Total	 ••	.,		••	 2,215	406

Indigenous inhabitants mining on their own account numbered 130 and it is estimated that they employed approximately 700 casual workers.

Details of accidents are given in Appendix XVII.

## APPENDIX XIII.

### INDUSTRIAL PRODUCTION.

No estimates are available of the gross or net value of industrial production. Information regarding the number of establishments was not available at the time of the completion of this report.

No statistics are available of the quantity and value of commodities produced but quantities and values of the principal commodities exported during the year ended 30th June, 1953, are given in Table 6, Appendix VII.

### APPENDIX XIV.

### CO-OPERATIVES.

Full information relating to Co-operative Societies is given in Chapter 4, Section 4, Part VI. of this Report. F.089,---11

### APPENDIX XV.

### TRANSPORT AND COMMUNICATIONS.

- (1) Information concerning postal, telephone and radio telephone and telegraph services is included in Part VI., Section 4, Chapter 9.
  - (2) Vehicular Roads and Bridle Paths. Table 1.
  - (3) Railways—There are no railways in the Territory.
  - (4) Internal Air and Air Mail Services. Table 2.
  - (5) Meteorological data is included in Appendix XXIV.—Climatic Conditions.
  - (6) Overseas Vessels entered and cleared Territory Ports. Table 3.
  - (7) Tonnage of Cargo handled. Table 4.

N.B.—No details are available from the New Ireland District.

These tables show the retail prices of various staple foodstuffs and other items commonly used by the indigenous population. The rates shown are the average for each centre. Some centres have only one distributing agency whilst at others there are a considerable number with consequent variations in brand and quality of items. In addition, air and shipping freight rates and distribution costs play a prominent part in the determination of the final costs.
