## **Department of Economic and Social Affairs**

The Department of Economic and Social Affairs of the United Nations is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which United Nations Member States draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

### **Note**

The designations employed and the presentation of the material in the present publication do not imply the expression of any opinion whatsoever on the part of the United Nations concerning the legal status of any country or of its authorities, or the delimitations of its frontiers. The term “country” as used in this report also refers, as appropriate, to territories or areas. The designations of country groups are intended solely for statistical or analytical convenience and do not necessarily express a judgement about the stage reached by a particular country, territory or area in the development process. Mention of the names of firms and commercial products does not imply endorsement by the United Nations. The symbols of United Nations documents are composed of capital letters and numbers.

## PREFACE

The *2019 International Trade Statistics Yearbook* (2019 ITSY) is the sixty-seventh edition of this yearbook. Its objective is to inform about the detailed merchandise and services imports and exports of individual countries (areas) by commodity and service categories and by partner countries (volume I), the world trade in individual commodities (3-digit SITC groups and 11 main EBOPS categories) (volume II) and total world merchandise trade up to the year 2019. The two volumes are prepared at different points in time: *Volume I - Trade by Country* is made electronically available in June-July, and *Volume II - Trade by Product*, in December, as the preparation of the tables in Volume II requires comprehensive country statistics which, normally, become available later in the year.

Beginning with the 2017 edition, part 1 of the yearbook was completely redesigned to consider new additions of graphs, tables and analytical text for global, regional and selected trade or economic groupings. The data used in the tables and graphs in this volume of the yearbook are taken at a specific time (June 2020) from the publicly available UN Comtrade database<sup>1</sup>. Users are advised to visit the database for additional and more current information as it is continuously updated.

This *International Trade Statistics Yearbook* has been prepared by the Economic Statistics Branch of the Statistics Division, Department of Economic and Social Affairs of the United Nations Secretariat, under the general supervision of the Chief of Branch, Ivo Havinga. The team consists of Markie Muryawan as the programme manager, Vysaul Nyirongo as the chief editor, assisted by Melissa Paca and Arlene Adriano, Marjorie Imperial-Damaso and Bekuretsion Amdemariam (as supervisors of data processing) and Habibur Khan, Jing Zhang, Swe Winn Mar, Su Thant, Tewabe Mihret Kebede and Byungkwan Lee (contributed to the processing and validation of the collected trade data and the review of the yearbook). The IT manager was Govindaraj Rangaraj, assisted by Daniel Buenavad and Melissa Paca.

Comments and feedback on the yearbook are welcome. They may be sent to [tradedstat@un.org](mailto:tradedstat@un.org) or to United Nations Statistics Division, Economic Statistics Branch, New York, New York 10017, USA.

## INTRODUCTION

1. The *International Trade Statistics Yearbook: Volume I - Trade by Country*, provides an overview of the latest trends of trade in goods and services of most countries and areas in the world. The publication is aimed at both specialist and general trade statistics users from government, academic and business sectors.

2. The main content of the yearbook is divided into two parts. Part 1 consists of merchandise trade profiles for the world, regional and selected trade or economic groupings. The profiles offer an insight into the merchandise trade performance, composition and structure of the global, regional and selected trade or economic groupings by means of infographics and brief descriptive text, using latest available statistics. Part 2 contains the country trade profiles for most countries and areas in the world. The profiles offer an insight into the trade performance in goods and services of individual countries and areas by means of brief descriptive texts and statistics in concise tables and charts using latest available data. For further information on data availability, please see the sources section of this Introduction.

3. The yearbook is also made available online at the publications repository of the UN Statistics Division<sup>2</sup>. For more detailed and latest available data, please visit UN Comtrade, which is the source of the information presented in the yearbook and is continuously updated.

## Concepts and definitions of International Merchandise Trade Statistics

4. The merchandise trade data used in this Yearbook have been compiled by national statistical authorities largely complying with the United Nations recommended *International Merchandise Trade Statistics, Concepts and Definitions 2010* (IMTS 2010).<sup>3</sup> The main elements of the concepts and definitions are:

i. Coverage: As a general guideline, it is recommended that international merchandise trade statistics record all goods which add to or subtract from the stock of material resources of a country by entering (imports) or leaving (exports) its economic territory. The general guideline is subject to the clarifications provided in IMTS 2010, in particular, to the specific guidelines in chapter 1 concerning the inclusion or exclusion of certain categories of goods.

ii. Time of recording of transactions: As a general guideline, it is recommended that goods be recorded at the time when they enter or leave the economic territory of a country.

iii. Statistical territory: The statistical territory of a country is the territory with respect to which trade statistics are being compiled. The definition of the statistical territory may or may not coincide with the economic territory of a country or its customs territory, depending on the availability of data sources and other considerations. It follows that when the statistical territory of a country and its economic territory differ, international merchandise trade statistics do not provide a complete record of inward and outward flows of goods.

iv. Trade systems: Depending on what parts of the economic territory are included in the statistical territory, the trade data-compilation system adopted by a country (its trade system) may be referred to as general or special.

- a) The general trade system is in use when the statistical territory coincides with the economic territory. Consequently, it is recommended that the statistical territory of a country applying the general trade system comprises all applicable territorial elements. In this case, imports include goods entering the free circulation area, premises for inward processing, industrial free zones, premises for customs warehousing or commercial free zones and exports include goods leaving those territorial elements;
- b) The special trade system is in use when the statistical territory comprises only a particular part of the economic territory, so that certain flows of goods which are

---

<sup>3</sup> At its forty-first session, held from 23 to 26 February 2010, the Statistical Commission adopted the revised recommendations “International merchandise trade statistics: concepts and definitions 2010” (IMTS 2010) which provide very important amendments while retaining the existing conceptual framework contained in the previous recommendations. The publication is available under Statistical Papers, Series M No. 52, Rev.3 (United Nations publication, Sales No. E.10.XVII.13) and electronically at: <https://unstats.un.org/unsd/publications/catalogue/>.

in the scope of IMTS 2010 are not included in either import or export statistics of the compiling country. The strict definition of the special trade system is in use when the statistical territory comprises only the free circulation area, that is, the part within which goods “may be disposed of without customs restriction”. Consequently, in such a case, imports include only goods entering the free circulation area of a compiling country and exports include only goods leaving the free circulation area of a compiling country.

- c) The relaxed definition of the special trade system is in use when (a) goods that enter a country for, or leave it after, inward processing, as well as (b) goods that enter or leave an industrial free zone, are also recorded and included in international merchandise trade statistics

v. Classifications: It is recommended that countries use the *Harmonized Commodity Description and Coding System* (HS) for the collection, compilation and dissemination of international merchandise trade statistics as suggested by the Statistical Commission at its twenty-seventh session (22 February to 3 March 1993).<sup>4</sup> The Harmonized System was adopted by the Customs Co-operation Council in June 1983, and the International Convention on the Harmonized System (HS Convention) entered into force on 1 January 1988 (HS 1988).<sup>5</sup> In accordance with the preamble to the HS Convention, which recognized the importance of ensuring that the HS be kept up to date in the light of changes in technology or in patterns of international trade, the HS is regularly reviewed and revised. The sixth edition, HS 2017, came into effect 1 January 2017.<sup>6</sup> The *Standard International Trade Classification (SITC)*<sup>7</sup>, which was in the past used by countries in data compilation and reporting, has been recognized for its continued use in analysis.<sup>8</sup>

vi. Valuation: At its fifteenth session, in 1953, the Economic and Social Council, taking the view that trade statistics must reflect economic realities, recommended that the Governments of Member States of the United Nations, wherever possible, use transaction values in the compilation of their national statistics of external trade or, when national practices are based on other values, endeavour to provide supplementary statistical data based on transaction values (Economic and Social Council resolution 469 B (XV)). To promote the comparability of international merchandise trade statistics and taking into account the commercial and data reporting practices of the majority of countries, it is recommended that: (a) The statistical value of imported goods be a CIF-type value; (b) The statistical value of exported goods be

an FOB-type value; however, countries are encouraged to compile FOB-type value of imported goods as supplementary information. FOB-type values include the transaction value of the goods and the value of services performed to deliver goods to the border of the exporting country. CIF-type values include the transaction value of the goods, the value of services performed to deliver goods to the border of the exporting country and the value of the services performed to deliver the goods from the border of the exporting country to the border of the importing country.

vii. Partner country: It is recommended that in the case of imports, the country of origin be recorded; and that in the case of exports, the country of last known destination be recorded. The country of origin of a good (for imports) is determined by rules of origin established by each country. The country of last known destination is the last country - as far as it is known at the time of exportation - to which goods are to be delivered, irrespective of where they have been initially dispatched to and whether or not, on their way to that last country, they are subject to any commercial transactions or other operations which change their legal status. Further, it is recommended that country of consignment be recorded for imports as the second partner country attribution, alongside country of origin; the compilation of export statistics on the country of consignment basis is only encouraged, depending on a country's needs and circumstances.

5. The pages containing the country profiles (Part 2 of this publication) indicate the trade system, valuation and partner attribution each country is following. For more detailed information on national practices in the compilation and dissemination of international merchandise trade statistics please go to website of IMTS National Compilation and Dissemination Practices Survey<sup>9</sup>.

## **Concepts and definitions of Statistics of International Trade in Services**

6. The trade in services statistics in this Yearbook have been compiled by national statistical authorities or central banks largely complying with the *Manual on Statistics of International Trade in Services 2010* (MSITS 2010).<sup>10</sup> In particular, MSITS 2010 recommends that the Sixth Edition of the Balance of Payments and International Investment Position Manual (BPM6) recommendations on the principles of recording (regarding residence, valuation, time of recording, currency of recording and conversion) should be followed for compiling international trade in services statistics.<sup>11</sup>

---

<sup>9</sup> <https://comtrade.un.org/survey/Reports/byCountry>

<sup>10</sup> At its forty-first session, held from 23 to 26 February 2010, the Statistical Commission adopted the revised "Manual on Statistics of International Trade in Services" (MSITS 2010), which sets out an internationally agreed framework for the compilation and reporting of statistics of international trade in services and align with the revisions of well-established revised international statistical standards. The publication is available under Statistical Papers, Series M No. 86, Rev.1 (United Nations publication, Sales No.E.10.XVII.14) and electronically at <https://unstats.un.org/unsd/trade>.

<sup>11</sup> International Monetary Fund. Sixth Edition of the Balance of Payments Manual (BPM6). 2009. <http://www.imf.org/external/pubs/ft/bop/2007/pdf/bpm6.pdf>. The previous edition of this manual was the Fifth Edition of the Balance of Payments Manual (BPM5), which was published in 1992.

7. The main elements of the concepts and definitions of MSITS 2010 are:

i. Definitions: In general, MSITS 2010 respects the 2008 SNA use of the term services, which is defined as follows (2008 SNA, para. 6.17):

- a) Services are the result of a production activity that changes the conditions of the consuming units, or facilitates the exchange of products or financial assets. These types of service may be described as change-effecting services and margin services, respectively. Change-effecting services are outputs produced to order and typically consist of changes in the conditions of the consuming units realized by the activities of producers at the demand of the consumers. They can also be referred to as “transformation services”. Change-effecting services are not separate entities over which ownership rights can be established. They cannot be traded separately from their production. By the time their production is completed, they must have been provided to the consumers.
- b) MSITS 2010 defines “international trade in services” as trade in services between residents and non-residents of an economy, as well as the supply of services through foreign affiliates established abroad and the supply of services through the presence of foreign individuals, either as foreign service suppliers themselves or as employees of a foreign service supplier.

***Importantly***, trade in services statistics included in this Yearbook only reflect trade in services between resident and non-resident institutional units.

ii. Coverage: The coverage in this Yearbook only include trade in services between resident and non-resident institutional units. The residence of an institutional unit is the economic territory with which it has the strongest connection, constituting its centre of predominant economic interest. Each institutional unit is a resident of one and only one economic territory, as determined by its centre of predominant economic interest. An institutional unit is resident in an economic territory when there exists, within the economic territory, some location, dwelling, place of production, or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale. The location need not be fixed as long as it remains within the economic territory. Actual or intended location for one year or more is used as an operational criterion. While the choice of one year as a specific period is somewhat arbitrary, it is adopted to eliminate uncertainty and facilitate international consistency. More specific criteria for determining residence are given in the MSITS 2010.

iii. Time of recording of transactions: The appropriate time for recording transactions in services is when they are delivered or received (the “accruals basis”). Some services, such as certain transport or hotel services are provided within a

discrete period, in which case there is no problem in determining the time of recording. Other services are supplied or take place on a continuous basis, for example, construction, operating leasing and insurance services. When construction takes place with a prior contract of sale, the ownership of the structure is effectively transferred progressively as the work proceeds. When services are provided over a period of time (such as freight, insurance and construction), there may be advance payments or settlements at later dates for such services. The provision of services should be recorded on an accrual basis in each accounting period, that is to say it should be recorded when the service is rendered and not when the payment occurs.

iv. Classifications: In 1996, OECD and Eurostat, in consultation with IMF, developed for use by their members a more detailed classification than that presented in the IMF's Balance of Payments Manual (BPM5) for international trade in services between residents and non-residents, by breaking down a number of the BPM5 service items. This more detailed classification is termed the Extended Balance of Payments Services Classification (EBOPS). The EBOPS classification was published in 2002 in the MSITS 2002 and was subsequently revised to the EBOPS 2010 classification, as published in the MSITS 2010. All trade in services statistics in this Yearbook are presented according to the EBOPS 2002 classification rather than EBOPS 2010 classification (see para 31-32 below).

The 11 main EBOPS 2002 standard services components (as presented in the MSITS 2002) are:<sup>12</sup>

- a) **Transportation**: covers all transportation services that are performed by residents of one economy for those of another and that involve the carriage of passengers, the movement of goods (freight), rentals (charters) of carriers with crew, and related supporting and auxiliary services. Some related items that are excluded from transportation services are freight insurance (included in insurance services); goods procured in ports by non-resident carriers and repairs of transportation equipment (both are treated as goods, not services); repairs of railway facilities, harbours and airfield facilities (included in construction services); and rentals or charters of carriers without crew (included in operational leasing services).
- b) **Travel**: covers primarily the goods and services acquired from an economy by travelers during visits of less than one year to that economy. Includes business and personal travel, which includes health-related expenditure (total expenditure by those travelling for medical reasons), education-related expenditure (i.e., total expenditure by students), and all other personal travel expenditure.
- c) **Communications services**: covers postal and courier services (which cover the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels and packages, including post office counter and

mailbox rental services) and telecommunications services (which cover the transmission of sound, images or other information by telephone, telex, telegram, radio and television cable and broadcasting, satellite, electronic mail, facsimile services etc., including business network services, teleconferencing and support services). It does not include the value of the information transported. Also included are cellular telephone services, Internet backbone services and on-line access services, including provision of access to the Internet.

- d) **Construction services:** covers work performed on construction projects and installation by employees of an enterprise in locations outside the territory of an enterprise.
- e) **Insurance services:** covers the provision of various types of insurance to non-residents by resident insurance enterprises, and vice versa. These services are estimated or valued by the service charges included in total premiums rather than by the total value of the premiums.
- f) **Financial services:** covers financial intermediation and auxiliary services, except those of life insurance enterprises and pension funds (which are included in life insurance and pension funding) and other insurance services that are conducted between residents and non-residents. Such services may be provided by banks, stock exchanges, factoring enterprises, credit card enterprises and other enterprises.
- g) **Computer and information services:** covers hardware and software-related services and data-processing services; news agency services include the provision of news, photographs, and feature articles to the media; and database services and web search portals (search engine services that find internet addresses for clients who input keyword queries).
- h) **Royalties and license fees:** covers international payments and receipts of franchising fees and the royalties paid for the use of registered trademarks and international payments and receipts for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights and industrial processes and designs) and with the use, through licensing agreements, of produced originals or prototypes (such as manuscripts, computer programs, and cinematographic works and sound recordings).
- i) **Other business services:** covers merchanting, other trade-related services, operational leasing services, legal services, accounting, auditing, bookkeeping and tax consulting services, business and management consulting and public relations services, advertising, market research and public opinion polling, research and development, architectural, engineering and other technical services, waste treatment and de-pollution, agricultural, mining, and other on-site processing services, other business services, and services between related enterprises, not included elsewhere (n.i.e.).

- j) **Personal, cultural, and recreational services:** covers services and associated fees related to the production of motion pictures (on film or videotape), radio and television programmes (live or on tape) and musical recordings services, as well as those services associated with museums, libraries, archives and other cultural, sporting and recreational activities.
- k) **Government services, not included elsewhere (n.i.e.):** covers government transactions (including those of international organizations) not contained in the other components of EBOPS as defined above. Included are all transactions (in both goods and services) by embassies, consulates, military units and defence agencies with residents of economies in which the embassies, consulates, military units and defence agencies are located and all transactions with other economies. Excluded are transactions with residents of the home economies represented by the embassies, consulates, military units and defence agencies, and transactions in the commissaries, post exchanges and these embassies and consulates.
- v. **Valuation:** The market price is used as the basis for valuation of transactions in international trade in services. Market prices for transactions are defined as amounts of money that willing buyers pay to acquire something from willing sellers. The exchanges are made between independent parties and based on commercial considerations only and are sometimes called “at arm’s length” transactions. These transactions will generally be valued at the actual price agreed between the supplier and the consumer.
- vi. **Partner country:** It is recommended that the breakdown by partner economy for services transactions between residents and non-residents be recorded, the aim being to report partner detail, first, at the level of services trade as a whole and, second, for each of the main types of services in EBOPS and (as a longer-term goal) for the more detailed EBOPS items. Partner country information for trade in services is not included in this publication, as most countries do not currently compile these statistics by partner country.

## **Description of world, regional and selected trade or economic groupings profiles in part 1**

8. The world trade profile provides information about global trade trends, composition and structure. These include a) trade growth per economic grouping, year-on-year percentage change; i.e., total of imports and exports value change as a percentage from the previous year; b) trade openness (Trade-to-GDP percentage) by economic grouping over the period 2006-2019; c) total trade levels, per capita and as GDP percentage by regional groupings; d) share of world’s exports by regional groupings; e) top export commodity categories according to SITC Rev.3 sections by regional groupings; and f) exports provenance and destination by SDG regional groupings. Throughout this Yearbook, regional country groupings closely follow those used for the monitoring and

evaluation of the Sustainable Development Goals (SDGs).<sup>13</sup> Henceforth these country groupings are termed “SDG regional groupings”.

9. Subsequently, trade profiles for SDG regional groupings and selected trade or economic groupings are presented. These include a) yearly value of merchandise exports, imports and the trade balance over the period 2006-2019; b) values of exports, imports and the trade balance with other SDG regional groupings as partners; and c) top export commodity categories of the regional groupings, according to SITC Rev.3 sections. Similar analyses are presented for selected trade or economic groupings – please see the section “Country Nomenclature and Country Grouping” of this Introduction (especially para 36-37). The category “other” for trading partners includes data whereby the partner country or region cannot be specified, including movement of merchandise to free zones, bunkers or involving special categories of merchandise.

## **Description of tables and graphs of country profiles in part 2**

10. Part 2 contains detailed statistics for individual countries or areas.

11. Not all countries have data up to 2019 and not all countries have data for imports and exports for all years. The inclusion of a country (or area) in part 2 requires that at least some data are available for any year from 2015 onwards. Depending on the availability of data, the following tables and graphs usually appear for each country or area:

12. Graph 1: Total merchandise trade, by value: This graph presents the trend of merchandise imports, exports and trade balance over the last 14 years.

13. Graph 2: Total services trade, by value: This graph presents the trend of services imports, exports and trade balance over the last 14 years.

14. Graph 3: Exports of services by EBOPS category: This graph presents the shares of total exports of services accounted for by each service category for the latest year such statistics are available.

15. Graph 4: Merchandise trade balance by SDG Regions: This graph presents, in the most recent year for which information on exports and imports are available, the trade balance by regions.

16. Graph 5: Partner concentration of merchandise trade: This graph shows the partner concentration of imports and exports for the latest available year. Graph presents the top 25 partners which usually account for a very large share of exports or imports for most countries. On the horizontal axis from the center to the right are the cumulative percent of exports and from the center to the left the cumulative percent of imports. On the vertical axis is the cumulative number of partners ranked by total value of exports and

---

<sup>13</sup> <https://unstats.un.org/sdgs/indicators/regional-groups/>

imports in a decreasing order. So, on each side, the first bar represents share accounted for by the largest partner; second bar represents share accounted for by the largest two partners and so on.

17. Graph 5 also presents the Herfindahl-Hirschman (HH) Index for imports and exports which is a measure of concentration. In the case of exports (imports), the HH index is the sum of squares of the partner's share of total exports (imports):

$$HH\ Index = \sum_{i=1}^n \left( \frac{X_i}{X} \right)^2$$

$n$  is the number of trading partners for exports (imports) and  $X_i$  is the value of exports (imports) to partner country  $i$  and  $X$  is the total value of exports (imports). The lower the HH index, the lower the partner concentration, and vice versa. If there is only one trading partner the HH index would equal 1.<sup>14</sup>

18. It should be noted that the HH index for a given country's exports (imports) depends on the distribution of share of exports (imports) among its partners. Hence a country with few major partners might have a lower HH index value, indicating low concentration, than a country with more partners if the former has its trade more evenly distributed among its partners than the latter.

19. Graph 6: Imports of services by EBOPS category: This graph presents the shares of total imports of services accounted for by each service category for the latest year such statistics are available.

20. Table 1 and table 4: Top 10 export and import commodities: These tables present the top 10 commodities in terms of 4-digit HS headings for exports and imports, respectively, using the aggregate of trade values for the last three reporting years as available. It should be noted that exports contain re-exports and imports contain re-imports. That is, one or more top exports of a country may be commodities which the country does not actually produce. Data on re-exports and re-imports can be found in UN Comtrade. For countries which reported the last three years of data in HS 2012 the statistics in these tables follow HS 2012. For other countries the statistics in these tables may be presented in earlier or later HS editions. For the convenience of the users the last column shows the SITC group (3 digits) that corresponds to the HS heading. The SITC group is identified based on the correlation and conversion tables between HS and SITC, Rev 3.<sup>15</sup>

---

<sup>14</sup> For the application of HH index to measure partner concentration in merchandise trade, no thresholds are known to be established. Users might wish to define a specific limit of the HH index to indicate low concentration and a limit to indicate high concentration. However, based on the analyses of the data presented in the yearbook, following thresholds were applied to determine level of concentration of merchandise trade, both exports and imports:  $HH < 0.15 \rightarrow$  Diversified;  $0.15 < HH < 0.25 \rightarrow$  Moderately concentrated;  $HH > 0.25 \rightarrow$  Highly concentrated.

<sup>15</sup> The conversion tables are available on the website of UNSD at <https://unstats.un.org/unsd/trade/classifications/correspondence-tables.asp>.

21. In addition to trade values, the table 1 and table 4 also present unit values. Unit values are expressed in U.S. dollars (US\$) per unit (kg, unit, Megawatt-hours (Mwh), pair, litre, carat etc). The calculation of unit values on the heading level requires the availability of value and quantity information for all the underlying detailed statistics (6-digit subheadings). In some cases, the quantity information for some sub-headings was estimated (see paragraph 29) and the unit value for the heading appears in italics. If quantity information appears incorrect it is not shown.

22. Table 2 and table 3: Merchandise Exports and Imports by SITC sections: These tables show the structure of exports and imports in the latest available year by SITC sections in terms of value, share of the total, growth in comparison with the previous year and annual average growth for the last four years which is calculated as the geometric mean.

## Sources

23. Statistics in part 1 (world and regional trade profiles) consists of data as reported to the UN Comtrade and estimated data for missing reporters. When not reported, statistics on the total merchandise imports and exports of countries (or areas) presented in part 1 are mainly derived from the International Financial Statistics (IFS) published monthly by the International Monetary Fund (IMF). They are supplemented with statistics from other sources such as national publications and websites and the United Nations Monthly Bulletin of Statistics Questionnaire.

24. The statistics in the country profiles in part 2 of the publication (country trade profiles) are obtained from data directly submitted by countries to the United Nations Statistics Division (UNSD). All statistics published in the country profiles are available in UN Comtrade.

25. In some cases, original country data are received via international and regional partner organizations, such as the Organization for Economic Co-operation and Development (OECD), the Food and Agriculture Organization of the United Nations (FAO), the International Monetary Fund (IMF), the International Trade Centre (ITC), the Caribbean Community (CARICOM) Secretariat, the Common Market of Eastern and Southern Africa (COMESA), the Economic Community of West African States (ECOWAS) and the UN regional commissions such as the Economic Commission for Latin America and the Caribbean (ECLAC) and the Economic and Social Commission for Western Asia (ESCWA). Data for the European Union (EU-28) is received from the Statistical Office of the European Union (Eurostat).

26. Part 1 shows statistics as available by the end of June 2020. Also, the country tables and graphs in part 2 contain statistics available in UN Comtrade by the end of June 2020.

## Method of estimation

27. Missing data are estimated to arrive at aggregates in part 1. The estimation process is automated using quarterly year-on-year growth rates for the extrapolation of missing quarterly statistics, unless quarterly statistics can be estimated using available monthly statistics within the quarter. Estimates are reviewed and adjusted where necessary.

28. Statistics by partner and commodity for missing reporters are estimated either through the extrapolation of the statistics for the two adjacent years, or, if this is not possible, through the use of the statistics reported by the trading partners; i.e., mirror statistics. Mirror statistics are also used in cases in which the reported data must be adjusted due to partner distribution or confidential data. All estimates are reviewed and adjusted where necessary.

29. For part 2, the country trade profiles, modifications to the received data are only made in cases where the provided data are obviously incomplete, in particular in the case of unreported petroleum oils exports in merchandise data. Quantity information that is missing or does not comply with the World Customs Organization's recommendations are estimated and flagged in UN Comtrade accordingly. Some quantity information that were identified as 'extreme' – meaning far outside a pre-defined 'normal' range – were replaced in UN Comtrade with estimates, if applicable. The estimation of quantities is either based on the country's own data or uses standard unit values (SUVs) which are derived from the available information for all countries in the previous year.

## Conversion of classifications

30. Conversion of classification for merchandise trade statistics: All countries follow recommendation to report their detailed merchandise trade data according to the Harmonized Commodity Description and Coding System (HS) (see paragraph 4.C.v). In order to provide comparable time series statistics in UN Comtrade for all countries, the data reported in the latest HS classification is converted into earlier editions of the HS, and to corresponding or earlier versions of the Standard International Trade Classification (SITC).<sup>16</sup> The latest edition of the HS classification was its sixth and was released in 2017. The commodities in this publication are mostly presented according to the one-digit sections of SITC, Rev.3 as the SITC sections provide a limited set of economically meaningful main categories.<sup>17</sup> In addition, statistics according to SITC, Rev.3 is available for long time series. In two tables, commodities are presented in terms of four-digit headings of the HS, often according to the 2012 edition of HS but in some cases also in

---

<sup>16</sup> Detailed information on the data conversions used for UN Comtrade can be found on the website of the United Nations Statistics Division at: <https://unstats.un.org/unsd/trade/classifications/correspondence-tables.asp>.

<sup>17</sup> Standard International Trade Classification, Revision 3, Statistical Papers, Series M No.34/Rev.3, (United Nations publication, Sales No. E.86.XVII.12). SITC, Revision 4 was accepted by the United Nations Statistical Commission at its thirty-seventh session in March 2006 (see Official Records of the Economic and Social Council, 2006, Supplement No. 4, (E/CN.3/2006/32), chapter III, para. 26 (b)). Yet, it will require several years until a time series of data according to SITC, Revision 4 will be sufficiently long for publication.

earlier or later HS editions.<sup>18</sup> The HS headings provide a meaningful description of traded commodities at a relatively detailed level and also allow the presentation of quantity information.

31. Conversion of classification for trade in services statistics: Many countries have progressively been transitioning from EBOPS 2002 to EBOPS 2010 classification (corresponding to the BPM5 and BPM6 recommendations, respectively), however, **to present longer time series (covering the period 2006-2018) and comparable statistics across countries and period, all trade in services statistics in this Yearbook are presented according to the EBOPS 2002 classification.** For the cases in which a country has transitioned to the EBOPS 2010 classification (as presented in MSTIS 2010) and did not provide UNSD with data based on EBOPS 2002, and for those countries for which the IMF is the only data source,<sup>19</sup> the data were converted to the EBOPS 2002 classification. The conversion was based on the IMF's BPM5-to-BPM6 Conversion Matrix (available at <http://www.imf.org/external/pubs/ft/bop/2008/08-10b.pdf>).<sup>20</sup>

32. Although countries have progressively been transitioning from EBOPS 2002 to the EBOPS 2010 classification, backcasting the series is the main challenge. Converting data from EBOPS 2010 to EBOPS 2002 is feasible in most cases since the EBOPS 2010 has a wider scope and is more detailed compared to the EBOPS 2002 classification (many correspondences from EBOPS 2002 to EBOPS 2010 are one-to-many). However, conversion from EBOPS 2010 to EBOPS 2002 may be imperfect depending on reported level of detail by country. The main changes in classification of services include the treatment of manufacturing services, merchanting and Financial intermediation services indirectly measured (FISIM).<sup>21</sup>

## Currency conversion and period

33. Currency conversion: For both merchandise and trade in services statistics in this publication, conversion of values from national currencies into United States dollars is done by means of currency conversion factors based on official exchange rates. Values in currencies subject to fluctuation are converted into United States dollars using weighted average exchange rates specially calculated for this purpose. The weighted average exchange rate for a given currency for a given year is the component monthly factors,

<sup>19</sup> The IMF is only presenting data on a BPM6 basis (which corresponds to the EBOPS 2010 classification) for data from 2009 onwards.

<sup>20</sup> Due to data limitations for some countries and for some periods, conversion from EBOPS2010 classification to EBOPS2002 classification may not always be complete, which may result in a break in series. Such instances are noted in footnotes on the individual country pages.

furnished by the International Monetary Fund in its IFS publication, weighted by the value of the relevant trade in each month; a monthly factor is the exchange rate (or the simple average rate) in effect during that month. These factors are applied to total imports and exports and to the trade in individual commodities with individual countries. The conversion factors applied to the data presented in parts 1 and 2 are published quarterly in the *UN Monthly Bulletin of Statistics: External trade conversion factors*<sup>22</sup> and also made available in a country's metadata on UN Comtrade.

34. Period: Generally, statistics refer to calendar years; however, for those countries which report according to some other reference year, the statistics are presented in the calendar year which covers the majority of the reference year used by the country.

### **Country nomenclature and regional groupings**

35. Country nomenclature: The naming of countries (or areas) in this publication follows in general the *United Nations Standard Country or Area Codes for Statistical Use*.<sup>23</sup> The names and composition of countries as reporter are changing over time. Also, countries rarely follow the identical nomenclature in the recording of partner information. For example, when former geographical entities commonly referred to in national statistics have changed, countries may introduce the corresponding changes in their statistics at different times. In this publication, wherever possible, areas of the world have been designated the names they currently bear.

It should be noted that, in this publication:

i. Statistics published for China exclude those for Taiwan Province of China. Data representing the trade with Taiwan Province, which may have been reported by any reporting country or area, are included in the grouping Asia, nes. For statistical purposes, statistics for China also do not include those for Hong Kong Special Administrative Region and Macao Special Administrative Region.

ii. Russian data provided by the Russian Federation. Includes statistical data for the Autonomous Republic of Crimea and the city of Sevastopol, Ukraine, temporarily occupied by the Russian Federation.

iii. The Government of Ukraine has informed the United Nations that it is not in a position to provide statistical data concerning the Autonomous Republic of Crimea and the city of Sevastopol

v. On 3 June 2006, Serbia and Montenegro formally dissolved into two independent countries: Montenegro and Serbia.

vi. On 10 October 2010 the federation of the Netherlands Antilles was formally dissolved. The former Dutch Caribbean dependency ceased to exist with a change of the five islands' constitutional status. Under the new political structure, Curaçao and Sint Maarten (Dutch part) have become autonomous countries within the Kingdom of the Netherlands, joining Aruba, which gained the status in 1986. The islands of the remaining territorial grouping, alternately known as Bonaire, Sint Eustatius and Saba or the BES islands, are special municipalities and part of the country of the Netherlands and overseas territories of the European Union. For statistical purposes, the data for the Netherlands do not include the BES islands. Statistics referring to Netherlands Antilles (as a partner) prior to 2011 refer to the former territory which included Curaçao, Sint Maarten (Dutch part), Bonaire, Sint Eustatius and Saba.

vii. On 9 July 2011, Sudan formally dissolved into two independent countries: Sudan and South Sudan. Statistics provided for Sudan prior to 1 January 2012 refer to the former Sudan (including South Sudan). Statistics referring to Sudan (as a partner) for 2012 are attributed to Sudan excluding South Sudan.

viii. From January 2013 onwards, Saint Barthélemy is no longer part of the customs territory of France. Therefore, it is recognised as a separate statistical area both as reporter and partner. Whereas from January 2014 onwards, Mayotte became part of statistical area of France and it is no longer shown as a reporter or a partner.

ix. In 2016, Czechia was adopted as the short country name for the Czech Republic.

x. In 2018, Kingdom of Swaziland was renamed as Kingdom of Eswatini. Therefore, there is no longer reference to Swaziland in this publication.

xi. On 14 February 2019, the former Yugoslav Republic of Macedonia was renamed as Republic of North Macedonia. Therefore, there is no longer reference to the former Yugoslav Republic of Macedonia in this publication.

36. Aggregations are calculated as the sum of country or area components. This includes the regional and world totals presented in parts 1.

37. Regional groupings: This publication uses a more detailed version of regional country groupings used for monitoring and evaluation of the Sustainable Development Goals (SDG)<sup>24</sup>.

38. Additional country groupings: The composition of additional country groupings according to trade or economic integration agreements, used in part 1 are as follows<sup>25</sup>:
