## DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which Member States of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

### NOTE

Symbols of United Nations documents are composed of capital letters combined with figures.

The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Where the designation “country or area” appears in this publication, it covers countries, territories, cities or areas. In previous issues of this publication, where the designation “country” appears in the headings of tables, it should be interpreted to cover countries, territories, cities or areas.

In some tables, the designation “developed” economies is intended for statistical convenience and does not necessarily express a judgement about the stage reached by a particular country or area in the development process.

## PREFACE

The *2013 International Trade Statistics Yearbook* (2013 ITSY) is the sixty-second edition of this yearbook. Its objective is to inform about the detailed merchandise and services imports and exports of individual countries (areas) by commodity and service category and by partner country (volume I), the world trade in individual products (3-digit SITC groups and 11 main EBOPS categories) (volume II) and total world merchandise trade - up to the year 2013. The two volumes are prepared at different points in time during 2014: *Volume I - Trade by Country* is made electronically available in June, and *Volume II - Trade by Product*, in December, as the preparation of the tables in Volume II requires additional country data which, normally, become available later in the year.

Beginning with the 2013 edition, trade in services data was introduced to the *International Trade Statistics Yearbook: Volume I - Trade by Country and Volume II – Trade by Product*. Therefore, the content and format of the yearbook were redesigned to take into account new additions of graphs/tables and analytical text. The data used in the tables and graphs in both volumes of the yearbook are taken at a specific time (June/December 2014) from the publicly available UN Comtrade (<http://comtrade.un.org>) and UN Service Trade (<http://unstats.un.org/unsd/servicetrade>) databases. Users are advised to visit these databases for additional and more current information as they are continuously updated.

The *International Trade Statistics Yearbook* is prepared by the Trade Statistics Branch of the Statistics Division, Department of Economic and Social Affairs of the United Nations Secretariat. Under the general supervision of the Chief of Branch, Ronald Jansen, the programme manager is Markie Muryawan and the chief editor is Kenneth Iversen, assisted by Marjorie Imperial-Damaso. Bekuretsion Amdemariam has the leading role in the processing of the data for UN Comtrade and Htu Aung for UN Service Trade. Habibur Rahman Khan, Kenneth Iversen, Nancy Snyder, Karoly Kovacs, Michael Behrman, Salomon Cameo and Markie Muryawan provided valuable contribution to the inclusion of trade in services data and the improvement of production processes. However, all staff of the branch are involved in the generation of the data and the review/validation of the yearbook. Markie Muryawan, Salomon Cameo and Luis Gonzalez Morales developed the original software which is maintained by Michael Behrman and Daniel Eshetie. Matthias Reister and Nelnan Koumtingue made very substantial contributions to earlier redesigned yearbook as its first programme manager and first chief editor of 2008 edition, respectively.

Comments and feedback on the yearbook are welcome. They may be sent to [comtrade@un.org](mailto:comtrade@un.org) / [tradeserv@un.org](mailto:tradeserv@un.org) or to United Nations Statistics Division, Trade Statistics Branch, New York, New York 10017, USA.

## INTRODUCTION

1. The *International Trade Statistics Yearbook: Volume II - Trade by Product*, provides an overview of the latest trends of trade in goods and services showing international trade for 257 individual commodities (3-digit SITC groups) and for the 11 main Extended Balance of Payments Services (EBOPS) categories. The publication is aimed at both specialist trade data users and common audience at large. The presented data, charts and analyses will benefit policy makers, government agencies, non-government organizations, civil society organizations, journalists, academics, researchers, students, businesses and anyone who is interested in trade issues.

2. The main content of the yearbook is divided into three parts. Part 1 consists of 11 detailed world data tables on merchandise trade. Part 2 contains the commodity trade profiles for 257 individual commodities. Part 3 contains profiles of service trade for the 11 main EBOPS categories. The profiles offer an insight into the trends in individual commodities and service categories by means of brief descriptive text, concise data tables and charts using latest available data. For further information on data availability, please see the sources section of this Introduction.

3. The yearbook is also made available online at the publications repository of the UN Statistics Division (<http://unstats.un.org/unsd/pubs>). For more detailed and latest available data, please consult UN Comtrade (<http://comtrade.un.org>) and UN ServiceTrade (<http://unstats.un.org/unsd/servicetrade>), which are the sources of the information presented in the yearbook, and which are continuously updated.

## Concepts and definitions of International Merchandise Trade Statistics

4. The merchandise trade data in this Yearbook have been compiled by national statistical authorities largely complying with the United Nations recommended *International Merchandise Trade Statistics, Concepts and Definitions 2010* (IMTS 2010).<sup>1</sup> The main elements of the concepts and definitions are:

i. Coverage: As a general guideline, it is recommended that international merchandise trade statistics record all goods which add to or subtract from the stock of material resources of a country by entering (imports) or leaving (exports) its economic territory. The general guideline is subject to the clarifications provided in IMTS 2010, in particular, to the specific guidelines in chapter 1 concerning the inclusion or exclusion of certain categories of goods.

ii. Time of recording: As a general guideline, it is recommended that goods be recorded at the time when they enter or leave the economic territory of a country.

iii. Statistical territory: The statistical territory of a country is the territory with respect to which trade data are being compiled. The definition of the statistical territory may or may not coincide with the economic territory of a country or its customs territory, depending on the availability of data sources and other considerations. It follows that when the statistical territory of a country and its economic territory differ, international merchandise trade statistics do not provide a complete record of inward and outward flows of goods.

iv. Trade systems: Depending on what parts of the economic territory are included in the statistical territory, the trade data-compilation system adopted by a country (its trade system) may be referred to as general or special.

- a) The general trade system is in use when the statistical territory coincides with the economic territory. Consequently, it is recommended that the statistical territory of a country applying the general trade system comprises all applicable territorial elements. In this case, imports include goods entering the free circulation area, premises for inward processing, industrial free zones, premises for customs warehousing or commercial free zones and exports include goods leaving those territorial elements;
- b) The special trade system is in use when the statistical territory comprises only a particular part of the economic territory, so that certain flows of goods which are in the scope of IMTS 2010 are not included in either import or export statistics of the compiling country. The strict definition of the special trade system is in use when the statistical territory comprises only the free circulation area, that is, the part within which goods “may be

---

<sup>1</sup> At its forty-first session, held from 23 to 26 February 2010, the Statistical Commission adopted the revised recommendations “International merchandise trade statistics: concepts and definitions 2010” (IMTS 2010) which provide very important amendments while retaining the existing conceptual framework contained in the previous recommendations. The publication is available under Statistical Papers, Series M No. 52, Rev.3 (United Nations publication, Sales No. E.10.XVII.13) and electronically at: <http://unstats.un.org/unsd/pubs/gesgrid.asp?id=449>.

disposed of without customs restriction". Consequently, in such a case, imports include only goods entering the free circulation area of a compiling country and exports include only goods leaving the free circulation area of a compiling country.

- c) The relaxed definition of the special trade system is in use when (a) goods that enter a country for, or leave it after, inward processing, as well as (b) goods that enter or leave an industrial free zone, are also recorded and included in international merchandise trade statistics

v. Classification: It is recommended that countries use the *Harmonized Commodity Description and Coding System* (HS) for the collection, compilation and dissemination of international merchandise trade statistics as suggested by the Statistical Commission at its twenty-seventh session (22 February to 3 March 1993).<sup>2</sup> The Harmonized System was adopted by the Customs Co-operation Council in June 1983, and the International Convention on the Harmonized System (HS Convention) entered into force on 1 January 1988 (HS 1988).<sup>3</sup> In accordance with the preamble to the HS Convention, which recognized the importance of ensuring that the HS be kept up to date in the light of changes in technology or in patterns of international trade, the HS is regularly reviewed and revised. The fifth edition, HS 2012, came into effect 1 January 2012.<sup>4</sup> The *Standard International Trade Classification (SITC)*<sup>5</sup> which was in the past used by countries in data compilation and reporting has been recognized for its continued use in analysis.<sup>6</sup>

vi. Valuation: At its fifteenth session, in 1953, the Economic and Social Council, taking the view that trade statistics must reflect economic realities, recommended that the Governments of Member States of the United Nations, wherever possible, use transaction values in the compilation of their national statistics of external trade or, when national practices are based on other values, endeavour to provide supplementary statistical data based on transaction values (Economic and Social Council resolution 469 B (XV)). To promote the comparability of international merchandise trade statistics and taking into account the commercial and data reporting practices of the majority of countries, it is recommended that: (a) The statistical value of imported goods be a CIF-type value; (b) The statistical value of exported goods be an FOB-type value; however, countries are encouraged to compile FOB-type value of imported goods as supplementary information. FOB-type values include the transaction value of the goods and the value of services performed to deliver goods to the border of the exporting country. CIF-type values include the transaction value of the goods, the value of services performed to deliver goods to the border of the exporting country and the value of the

services performed to deliver the goods from the border of the exporting country to the border of the importing country.

vii. Partner country: It is recommended that in the case of imports, the country of origin be recorded; and that in the case of exports, the country of last known destination be recorded. The country of origin of a good (for imports) is determined by rules of origin established by each country. The country of last known destination is the last country - as far as it is known at the time of exportation - to which goods are to be delivered, irrespective of where they have been initially dispatched to and whether or not, on their way to that last country, they are subject to any commercial transactions or other operations which change their legal status. Further, it is recommended that country of consignment be recorded for imports as the second partner country attribution, alongside country of origin; the compilation of export statistics on the country of consignment basis is only encouraged, depending on a country's needs and circumstances.

5. The commodity trade profiles (part 2 of this publication) are based on the detailed trade data as reported by countries (or areas) and published on UN Comtrade without any adjustments for conceptual differences such as differences in the trade system, valuation and partner attribution. The explanatory notes on UN Comtrade inform about the trade system, valuation and partner attribution of individual reporter countries (or areas). ### **Concepts and definitions of Statistics of International Trade in Services**

6. The trade in services data in this Yearbook have been compiled by national statistical authorities or central banks largely complying with the *Manual on Statistics of International Trade in Services 2010* (MSITS 2010).<sup>7</sup>

7. The main elements of the concepts and definitions of MSITS 2010 are:

- i. Definitions: In general, MSITS 2010 respects the 2008 SNA use of the term services, which is defined as follows (2008 SNA, para. 6.17):
  - a) Services are the result of a production activity that changes the conditions of the consuming units, or facilitates the exchange of products or financial assets. These types of service may be described as change-effecting services and margin services, respectively. Change-effecting services are outputs produced to order and typically consist of changes in the conditions of the consuming units realized by the activities of producers at the demand of the consumers. They can also be referred to as

---

<sup>7</sup> At its forty-first session, held from 23 to 26 February 2010, the Statistical Commission adopted the revised "Manual on Statistics of International Trade in Services" (MSITS 2010), which sets out an internationally agreed framework for the compilation and reporting of statistics of international trade in services and align with the revisions of well-established revised international statistical standards. The publication is available under Statistical Papers, Series M No. 86, Rev.1 (United Nations publication, Sales No.E.10.XVII.14) and electronically at <http://unstats.un.org/unsd/tradeserv/TFSITS/msits2010.htm>.

“transformation services”. Change-effecting services are not separate entities over which ownership rights can be established. They cannot be traded separately from their production. By the time their production is completed, they must have been provided to the consumers.

- b) MSITS 2010 defines “international trade in services” as trade in services between residents and non-residents of an economy, as well as the supply of services through foreign affiliates established abroad and the supply of services through the presence of foreign individuals, either as foreign service suppliers themselves or as employees of a foreign service supplier.

***Importantly***, the services data included in this Yearbook only reflect trade in services between residents and non-residents.

ii. Concept and definition of residence: The residence of an institutional unit is the economic territory with which it has the strongest connection, constituting its centre of predominant economic interest. Each institutional unit is a resident of one and only one economic territory, as determined by its centre of predominant economic interest. An institutional unit is resident in an economic territory when there exists, within the economic territory, some location, dwelling, place of production, or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale. The location need not be fixed as long as it remains within the economic territory. Actual or intended location for one year or more is used as an operational criterion. While the choice of one year as a specific period is somewhat arbitrary, it is adopted to eliminate uncertainty and facilitate international consistency. More specific criteria for determining residence are given in the MSITS 2010.

iii. Valuation: The market price is used as the basis for valuation of transactions in international trade in services. Market prices for transactions are defined as amounts of money that willing buyers pay to acquire something from willing sellers. The exchanges are made between independent parties and based on commercial considerations only and are sometimes called “at arm’s length” transactions. These transactions will generally be valued at the actual price agreed between the supplier and the consumer.

iv. Time of recording of transactions: The appropriate time for recording transactions in services is when they are delivered or received (the “accruals basis”). Some services, such as certain transport or hotel services are provided within a discrete period, in which case there is no problem in determining the time of recording. Other services are supplied or take place on a continuous basis, for example, construction, operating leasing and insurance services. When construction takes place with a prior contract of sale, the ownership of the structure is effectively transferred progressively as the work proceeds. When services are provided over a period of time (such as freight, insurance and construction), there may be advance payments or settlements at later dates for such services. The provision of services should be recorded on an accrual basis in

each accounting period, that is to say it should be recorded when the service is rendered and not when the payment occurs.

v. Framework and scope: MSITS 2010 recommends that the Sixth Edition of the Balance of Payments and International Investment Position Manual (BPM6)<sup>8</sup> recommendations on the principles of recording (regarding residence, valuation, time of recording, currency of recording and conversion) should be followed. The Extended Balance of Payments Services Classification (EBOPS) is a more detailed classification than that of BPM5 for international trade in services between residents and non-residents, by breaking down a number of the BPM5 service items. The main components of the EBOPS classification are presented in paragraph 7.vii below.

vi. Partner country: It is recommended that the breakdown by partner economy for services transactions between residents and non-residents be recorded, the aim being to report partner detail, first, at the level of services trade as a whole and, second, for each of the main types of services in EBOPS and (as a longer-term goal) for the more detailed EBOPS items. Partner country data for trade in services are not included in this publication, as most countries do not currently compile these data by partner country.

vii. Classification: In 1996, OECD and Eurostat, in consultation with IMF, developed for use by their members a more detailed classification than that presented in the IMF's Balance of Payments Manual (BPM5) for international trade in services between residents and non-residents, by breaking down a number of the BPM5 service items. This more detailed classification is termed the Extended Balance of Payments Services Classification (EBOPS). The EBOPS classification was published in 2002 in the MSITS 2002 and was subsequently revised to the EBOPS 2010 classification, as published in the MSITS 2010. The services data in this Yearbook follow the EBOPS 2002 classification (which corresponds to the BPM5 recommendations) due to the fact that most countries have not yet transitioned to the EBOPS 2010 classification (which corresponds to the BPM6 recommendations).

The 11 main EBOPS 2002 standard services components (as presented in the MSITS 2002) are:<sup>9</sup>

- a) Transportation: covers all transportation services that are performed by residents of one economy for those of another and that involve the carriage of passengers, the movement of goods (freight), rentals (charters) of carriers with crew, and related supporting and auxiliary services. Some related items that are excluded from transportation services are freight insurance (included in insurance services); goods procured in ports by non-resident carriers and repairs of transportation equipment (both are treated as goods, not

services); repairs of railway facilities, harbours and airfield facilities (included in construction services); and rentals or charters of carriers without crew (included in operational leasing services).

- b) Travel: covers primarily the goods and services acquired from an economy by travelers during visits of less than one year to that economy. Includes business and personal travel, which includes health-related expenditure (total expenditure by those travelling for medical reasons), education-related expenditure (i.e., total expenditure by students), and all other personal travel expenditure.
- c) Communications services: covers postal and courier services (which cover the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels and packages, including post office counter and mailbox rental services) and telecommunications services (which cover the transmission of sound, images or other information by telephone, telex, telegram, radio and television cable and broadcasting, satellite, electronic mail, facsimile services etc., including business network services, teleconferencing and support services). It does not include the value of the information transported. Also included are cellular telephone services, Internet backbone services and on-line access services, including provision of access to the Internet.
- d) Construction services: covers work performed on construction projects and installation by employees of an enterprise in locations outside the territory of an enterprise.
- e) Insurance services: covers the provision of various types of insurance to non-residents by resident insurance enterprises, and vice versa. These services are estimated or valued by the service charges included in total premiums rather than by the total value of the premiums.
- f) Financial services: covers financial intermediation and auxiliary services, except those of life insurance enterprises and pension funds (which are included in life insurance and pension funding) and other insurance services that are conducted between residents and non-residents. Such services may be provided by banks, stock exchanges, factoring enterprises, credit card enterprises and other enterprises.
- g) Computer and information services: covers hardware and software-related services and data-processing services; news agency services include the provision of news, photographs, and feature articles to the media; and database services and web search portals (search engine services that find internet addresses for clients who input keyword queries).
- h) Royalties and license fees: covers international payments and receipts of franchising fees and the royalties paid for the use of registered trademarks and international payments and receipts for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights and industrial processes and designs) and with the use, through licensing agreements, of produced originals or prototypes (such as

manuscripts, computer programs, and cinematographic works and sound recordings).

- i) Other business services: covers merchanting, other trade-related services, operational leasing services, legal services, accounting, auditing, bookkeeping and tax consulting services, business and management consulting and public relations services, advertising, market research and public opinion polling, research and development, architectural, engineering and other technical services, waste treatment and de-pollution, agricultural, mining, and other on-site processing services, other business services, and services between related enterprises, not included elsewhere (n.i.e.).
- j) Personal, cultural, and recreational services: covers services and associated fees related to the production of motion pictures (on film or videotape), radio and television programmes (live or on tape) and musical recordings services, as well as those services associated with museums, libraries, archives and other cultural, sporting and recreational activities.
- k) Government services, not included elsewhere (n.i.e.): covers government transactions (including those of international organizations) not contained in the other components of EBOPS as defined above. Included are all transactions (in both goods and services) by embassies, consulates, military units and defence agencies with residents of economies in which the embassies, consulates, military units and defence agencies are located and all transactions with other economies. Excluded are transactions with residents of the home economies represented by the embassies, consulates, military units and defence agencies, and transactions in the commissaries, post exchanges and these embassies and consulates.

### **Description of world trade tables of part 1 (Tables A to K)**

12. Growth of world exports by provenance and destination (Table E): This table shows the growth of world exports in recent years up to the year 2013 by provenance (origin) and destination, for total exports and for a limited set of commodity classes. The annual average rates of change in percentage terms given in this table have been uniformly calculated by the use of the compound interest formula.

13. Structure of world exports by provenance and destination (Table F): This table shows the distribution (in percent) of exports by provenance (origin) and destination for total exports and a limited set of commodity classes as well as the commodity composition (in percent) of total exports by provenance (origin) and destination.

14. Indices of total exports and imports by countries or areas: Quantum and unit value indices and terms of trade in U.S. dollars (2000 = 100) (Table G): This table shows the volume and unit value (or price) indices for total exports and imports as well as the terms of trade and purchasing power of exports for individual countries or areas in U.S. dollars and with the year 2000 as base year.

15. Indices of total exports and imports by regions: Quantum and unit value indices and terms of trade in U.S. dollars (2000 = 100) (Table H): This table shows the volume and unit value indices for total exports and imports as well as the terms of trade by regions in U.S. dollars and with the year 2000 as base year.

Indices and values of fuel imports – Developed economies: Unit value and volume indices (2000 = 100) and value in thousand million U.S. dollars (Table J): This table presents the unit value and the volume indices and the value of fuels imports for most developed economies. Fuel comprises section 3 of the SITC. Unit value indices are presented both in U.S. dollars and in national currency.

18. Some indicators on fuel imports - Developed economies (Table K): This table shows fuel imports as a percentage of total imports and exports, and the ratio of unit value indices of manufactured goods exports and fuel imports.

19. For the general note and footnotes, see the end of the tables. The most recent data for tables B, C, G, I, J and K are published on a monthly or quarterly basis in the *United Nations Monthly Bulletin of Statistics* (MBS).<sup>10</sup> Slightly different versions of Table A containing quarterly and monthly data and table H containing quarterly data are published on a monthly or quarterly basis as table 34 and table 38 in the MBS.<sup>11</sup> Updated, although different versions of Table D, are published as table 40, 41 and 42 in the July, September and November editions of the MBS.

### **Description of tables and graphs of commodity profiles in part 2 and service trade profiles in part 3**

20. Part 2 contains detailed data (commodity trade profiles) for 3-digits groups of the *Standard International Trade Classification, Revision 3* (SITC).<sup>12</sup> All SITC groups are covered except the following groups as these were poorly reported and contain many estimates which are not sufficiently explainable: SITC group 286, Ores and concentrates of uranium and thorium; SITC group 345, Coal, water or other producer gases; SITC group 911, Postal packages not classified according to kind; and SITC group 931, Special transactions and commodities not classified according to kind. At the global level, special transactions and commodities not classified according to kind accounted for 3.0 percent of total world exports of commodities and 3.9 percent of total world imports of commodities in 2013.

21. Part 3 contains detailed data (service trade profiles) for 11 main EBOPS sub-categories. Not all countries reported data for every service category for every year. While such data may reflect the fact that certain countries may not have trade in a particular service category in a given year, it also partially reflects the fact that not all reporters always have sufficient information to allocate all international service transactions to their appropriate service

---

<sup>10</sup> The MBS is available as printed publication and its database can be accessed online at: <http://unstats.un.org/unsd/mbs/app/DataSearchTable.aspx>. In addition the tables are also available online at <http://unstats.un.org/unsd/trade/data/tables.asp>.

<sup>11</sup> The difference between table A in this publication and table 34 in the MBS relates to the calculation of regional aggregations (see paragraph 19). The volume indices in table H are calculated using the values of table A as input. The volume indices for some regions are therefore slightly different than the ones published in table 39 of the MBS.

<sup>12</sup> Standard International Trade Classification, Revision 3, Statistical Papers, Series M No.34/Rev.3, (United Nations publication, Sales No. E.86.XVII.12).

categories. However, world total service trade figures in this Yearbook are not affected by this phenomenon, because they are based on the separately reported Total EBOPS Services category (EBOPS code 200), and are therefore not based on an aggregation of the 11 main EBOPS sub-categories. At the global level, the effect of unallocated services (reported total services minus aggregated main EBOPS sub-categories) is relatively minor (as the reporters that are unable to allocate service transactions generally account for a relatively small share of total world trade); for example, unallocated services in 2012 represented 4.3 percent of total world exports of services and 3.0 percent of total world imports of services.

22. For certain commodities or service categories users will find spikes in growth rates and significant asymmetries between the total values of imports and exports. Reasons for these spikes can often be relatively easily identified (as caused i.e. by changes in the prices or classification changes) but the reasons for the asymmetries between the reported imports and exports are often less apparent.<sup>13</sup> However, it was decided to retain the information on these commodities and service categories as the results shown are a reflection of the data provided by countries (the influence of any estimates contained in the data is not significant) and to leave it to the users to assess the usefulness of this information for their specific purposes.

23. The following tables and graphs appear for each SITC commodity group and EBOPS category:

24. Imports and exports in current US\$ (Table 1): In part 2, this table shows the values of imports and exports from 1999 to 2013 for the commodity group, and the share of the commodity group on the SITC section to which it belongs and its share on world trade. In part 3, this table shows the values of imports and exports from 2000 to 2012 for the EBOPS category and its share of world service trade, which is based on the reported Total EBOPS Services category (EBOPS code 200).

25. Top exporting and importing countries or areas in the latest year available (Tables 2 and 3): These tables present the top 15 exporting and importing countries or areas in the order of magnitude based on exports or imports values for the latest available year. For each country (or area), the tables show the value of exports or imports in current U.S. dollars, the average growth rate over the last five years (calculated using the compound interest formula), the annual growth rate for the latest available year, the share of world trade, and the cumulative share of world trade. In part 2, in preparing these tables estimates were made for countries whose data were not yet available; the estimated values of exports and imports are shown in italic. In part 3, no estimations to reported data were made.

26. Annual growth rates of exports (Graph 1): In part 2, this graph presents the annual growth rate of exports of the commodity group, the annual growth rate of exports of the SITC section to which the commodity group belongs and the annual growth rate of total exports over the last fifteen years. The annual growth rate of total exports comprises all SITC sections. In part 3, this graph presents the annual growth rate of exports of the EBOPS category, and the annual growth

---

<sup>13</sup> In merchandise trade, it should be noted that most countries report their imports valued CIF and their exports valued FOB. Therefore, world trade measured in terms of exports is expected to be lower than world trade measured in terms of imports. This applies to the total of trade as well as all commodities and SITC groups.

rate of total service exports since 2000. The annual growth rate of total exports comprises reported Total EBOPS Services category (EBOPS code 200).

27. Trade balance by MDG Regions (Graph 2): This graph presents, for the latest year available, exports, imports and the trade balance by regions according to the regions used in the Millennium Development Goal (MDG) Indicator Database (for further information on country grouping by MDG regions, see Country Nomenclature and Country Grouping).

All data published in the country profiles is available in UN Comtrade (<http://comtrade.un.org>) and UN ServiceTrade (<http://unstats.un.org/unsd/servicetrade>).

34. In some cases, original countries data are received via international and regional partner organizations, such as the Organization for Economic Co-operation and Development (OECD), the Food and Agriculture Organization of the United Nations (FAO), the International Monetary Fund (IMF), the International Trade Centre (ITC), the Caribbean Community (CARICOM) Secretariat, the Common Market of Eastern and Southern Africa (COMESA), the Economic Community of West African States (ECOWAS) and the UN regional commissions such as the Economic Commission for Latin America and the Caribbean (ECLAC) and the Economic and Social Commission for Western Asia (ESCWA). Data for the European Union (EU-28) is

received from the Statistical Office of the European Union (Eurostat).

35. Tables A to K show data as available by end of November 2014. Part 2 and 3 contain data available in UN Comtrade and UN ServiceTrade by the beginning of December 2014.

### **Method of Estimation**

36. For table A (part 1) estimates for missing data are made in order to arrive to regional totals but are otherwise not shown. The estimation process is automated using quarterly year-on-year growth rates for the extrapolation of missing quarterly data (unless quarterly data can be estimated using available monthly data within the quarter). Regional totals containing estimated data are printed in bold. For world tables D, E and F (part 1) and the commodity tables and graphs in commodity trade profile (part 2) data for missing reporters are estimated either through the extrapolation of the data of the two adjacent years, or, if this is not possible, through the use of the data reported by the trading partners (so called mirror data). Mirror statistics is also used in case the partner distribution or confidential data make it necessary to adjust the reported data. In addition, modifications to the received data are made in cases where the provided data are obviously incomplete, in particular in the case of unreported petroleum oils exports in merchandise data. For tables H, I and J (part 1) the missing data required for the calculation of regional totals are estimated using a variety of methods and additional data sources. All estimates are reviewed and adjusted where necessary.

37. For part 3 (the service trade profiles), only received data are shown and no estimation is undertaken for missing reporters.

### **Conversion of classification**

38. Conversion of classification for merchandise data: All countries follow recommendation to report their detailed merchandise trade data according to the Harmonized Commodity Description and Coding System (HS) (see paragraph 4.C.v). In order to provide comparable time series data in UN Comtrade for all countries, the data reported in the latest HS classification is converted into earlier versions of the HS, and to corresponding or earlier versions of the Standard International Trade Classification (SITC).<sup>14</sup> The latest edition of the HS classification was its fifth and was released in 2012. The commodities in this publication are mostly presented according to the three-digit sections of SITC, Rev.3 as the SITC sections provide a limited set of economically meaningful main categories.<sup>15</sup> In addition, data according to SITC, Rev.3 is available for long time series.

39. Conversion of classification for trade in services data: For services data, most countries

<sup>15</sup> Standard International Trade Classification, Revision 3, Statistical Papers, Series M No.34/Rev.3, (United Nations publication, Sales No. E.86.XVII.12). SITC, Revision 4 was accepted by the United Nations Statistical Commission at its thirty-seventh session in March 2006 (see Official Records of the Economic and Social Council, 2006, Supplement No. 4, (E/CN.3/2006/32), chapter III, para. 26 (b)). Yet, it will require several years until a time series of data according to SITC, Revision 4 will be sufficiently long for publication.

are still compiling data according to the EBOPS 2002 classification and, therefore, all services data presented in this Yearbook are presented according to this classification. For the cases in which a country has transitioned to the EBOPS 2010 classification (as presented in MSTIS 2010) and did not provide UNSD with data based on EBOPS 2002, and for those countries for which the IMF is the only data source,<sup>16</sup> the data were converted to the EBOPS 2002 classification in order to maintain consistency across countries. The conversion was based on the IMF's BPM5-to-BPM6 Conversion Matrix (available at <http://www.imf.org/external/pubs/ft/bop/2008/08-10b.pdf>). The World Trade Organization (WTO) performed several of the conversions and shared them with UNSD. The countries for which such conversions were made include: Angola; Armenia; Australia; Azerbaijan; Belarus; Canada; China, Hong Kong; China, Macao; El Salvador; Fiji; Gambia; Guinea; Guyana; India; Kazakhstan; Liberia; Nepal; Philippines; Russian Federation; Samoa; Saudi Arabia; Singapore; and Yemen.

### Currency conversion and Period

40. Currency conversion: For both merchandise and trade in services data in this publication, conversion of values from national currencies into United States dollars is done by means of currency conversion factors based on official exchange rates. Values in currencies subject to fluctuation are converted into United States dollars using weighted average exchange rates specially calculated for this purpose. The weighted average exchange rate for a given currency for a given year is the component monthly factors, furnished by the International Monetary Fund in its IFS publication, weighted by the value of the relevant trade in each month; a monthly factor is the exchange rate (or the simple average rate) in effect during that month. These factors are applied to total imports and exports and to the trade in individual commodities with individual countries. The conversion factors applied to the data presented in table A are published quarterly in the *UN Monthly Bulletin of Statistics* (<http://unstats.un.org/unsd/mbs/default.aspx>) and are also available at: <http://unstats.un.org/unsd/trade/data/tables.asp>. For data published on UN Comtrade the applied conversion factors are available in a country's metadata on UN Comtrade.

41. Period: Generally, data refer to calendar years; however, for those countries which report according to some other reference year, the data are presented in the calendar year which covers the majority of the reference year used by the country.

### Country Nomenclature and Country Grouping

42. Country nomenclature: The naming of countries (or areas) in this publication follows in general the *United Nations Standard Country or Area Codes for Statistical Use*.<sup>17</sup> The names and composition of countries as reporter are changing over time. Also, countries rarely follow the identical nomenclature in the recording of partner information. For example when former geographical entities commonly referred to in national statistics have changed, countries may introduce the corresponding changes in their statistics at different times. In this publication,

<sup>16</sup> The IMF is only presenting data on a BPM6 basis (which corresponds to the EBOPS 2010 classification) for data from 2009 onwards.

<sup>17</sup> Standard Country or Area Codes for Statistical Use, Series M No. 49, Rev.4, (United Nations publication, Sales No. M.98.XVII.9). The latest information is available online at: <http://unstats.un.org/unsd/methods/m49/m49.htm>.

wherever possible, areas of the world have been designated the names they currently bear.

It should be noted that, in this publication:

i. Data published for China exclude those for Taiwan Province of China. Data representing the trade with Taiwan Province, which may have been reported by any reporting country or area, are included in the grouping Asia, nes. For statistical purposes, data for China also do not include those for Hong Kong Special Administrative Region and Macao Special Administrative Region.

ii. Beginning 1 January 2000, Botswana, Lesotho, Namibia, South Africa and Swaziland provide their international trade statistics separately.

iii. On 4 February 2003, the official name of the Federal Republic of Yugoslavia has been changed to Serbia and Montenegro.

iv. On 3 June 2006, Serbia and Montenegro formally dissolved into two independent countries: Montenegro and Serbia.

v. On 10 October 2010 the federation of the Netherlands Antilles was formally dissolved. The former Dutch Caribbean dependency ceased to exist with a change of the five islands' constitutional status. Under the new political structure, Curaçao and Sint Maarten (Dutch part) have become autonomous countries within the Kingdom of the Netherlands, joining Aruba, which gained the status in 1986. The islands of the remaining territorial grouping, alternately known as Bonaire, Sint Eustatius and Saba or the BES islands, are special municipalities and part of the country of the Netherlands and overseas territories of the European Union. For statistical purposes, the data for the Netherlands do not include the BES islands. Data referring to Netherlands Antilles (as a partner) prior to 2011 refer to the former territory which included Curaçao, Sint Maarten (Dutch part), Bonaire, Sint Eustatius and Saba.

vi. On 9 July 2011, Sudan formally dissolved into two independent countries: Sudan and South Sudan. Data provided for Sudan prior to 1 January 2012 refer to the former Sudan (including South Sudan). Data referring to Sudan (as a partner) for 2012 are attributed to Sudan excluding South Sudan.

43. Regional groupings: This publication uses the regional groupings of the Millennium Development Goal (MDG) Indicator Database which are shown below (for their composition, see table A and <http://unstats.un.org/unsd/mdg/default.aspx>). The category ‘Other’ applies only to the presentation of data by trading partner and consists of Antarctica, Bunkers, Free Zones, ‘Special Categories’ (confidential partner) and Areas nes.:

This also includes the regional and world totals presented in table A (in bold) which, up to the 2007 edition of this yearbook and in the tables currently published in the *United Nations Monthly Bulletin of Statistics*, are calculated by subtracting re-exports from the imports and exports.

### General note:

Table A is based on data as available at the end of November 2014. An earlier version of this table has been published in Volume I of the 2013 ITSY which has been produced earlier this year. The totals of imports and exports presented in world trade table A and D are not necessarily identical as table A is mainly based on data of the IMF's International Financial Statistics (IFS) which is a different data collection system with different aims, procedures, timetable and sources for update and maintenance than UN Comtrade on which table D is based (see the introduction for details). Nevertheless, discrepancies between both tables are in general minor and usually do not affect the overall information provided. A systematic comparison of the figures from both sources (which includes the description of known and relevant conceptual differences) is available at <http://unstats.un.org/unsd/trade/imts/annual%20totals.htm>. Overall, the discrepancies in the world total or world aggregate of exports in table A and table D is around 1.0 percent for all years shown, which is minor, given the differences between the two sources.

Column "G/S" indicates the trade system: G = General Trade System; S = Special Trade System. For further information on sources and presentation of table A as well as for a brief table description please see the introduction.

- 1 This classification is intended for statistical convenience and does not, necessarily, express a judgement about the stage reached by a particular country in the development process.
- 2 Developed Economies of America, Europe, and the Asia-Pacific region.
- 3 Imports FOB.
- 4 Including the trade of the U.S. Virgin Islands and Puerto Rico but excluding shipments of merchandise between the United States and its other possessions (Guam and American Samoa). Data include imports and exports of non-monetary gold.
- 5 Beginning 2006, data for Serbia and Montenegro is reported separately.
- 6 Prior to 2008, special trade.
- 7 Imports exclude petroleum imported without stated value. Exports cover domestic exports.
- 8 Year ending 31 March of the following year.
- 9 Exports include gold.
- 10 Including South Sudan.
- 11 Trade statistics exclude certain oil and chemical products.
- 12 Export and import values exclude trade in the processing zone.

### Remarque générale:

Tableau A est basé sur les données telles que disponible fin novembre 2014. Une version antérieure de ce tableau est publiée dans le volume I de l'annuaire 2013 ITSY qui a été produit plus tôt cette année. Les importations et exportations totales présentées dans les tableaux A et D ne sont pas nécessairement identiques du fait que le tableau A est basé principalement sur les données des Statistiques Financières Internationales (IFS) du FMI qui est un différent système de collecte des données avec des objectifs, des procédures, un calendrier et des sources de mise à jour et de maintenance différents de ceux de UN Comtrade sur lequel le tableau D est basé (voir l'introduction pour les détails). Toutefois, les écarts entre les deux tableaux sont en général mineurs et n'affectent pas substantiellement l'information fournie. Une comparaison systématique des données de ces deux sources (incluant une description des différences conceptuelles pertinentes connues) est disponible à <http://unstats.un.org/unsd/trade/imts/annual%20totals.htm>. En général, la différence entre les totaux des exportations mondiales présentés dans les tableaux A et D est d'environ 1,0 pour cent pour chacune des années publiées, ce qui est mineur étant donné les différences entre les deux sources.

La colonne "G/S" indique le système commercial : G= Système du Commerce Général ; S= Système du Commerce Spécial. Pour plus d'information sur les sources et la présentation du tableau A ainsi qu'une brève description, se il vous plaît se référer à l'introduction.

- 1 Cette classification est utilisée pour plus de commodité dans la présentation des statistiques et n'implique pas nécessairement un jugement quant au stade de développement auquel est parvenu un pays donné.
- 2 Économies développées de l'Amérique, de l'Europe, et de la région Asie-Pacifique.
- 3 Importations FOB.
- 4 Y compris le commerce des Iles Vierges américaines et de Porto Rico mais non compris les échanges de marchandise, entre les Etats-Unis et leurs autres possessions (Guam et Samoa américaines). Les données comprennent les importations et exportations d'or non-monnaire.
- 5 Depuis début 2006, les données relatives à la Serbie et au Monténégro sont déclarées séparément.
- 6 Avant 2008, commerce special.
- 7 Non compris le pétrole brute dont la valeur des importations ne sont pas stipulée. Les exportations sont les exportations d'intérieur.
- 8 Année finissant le 31 mars de l'année suivante.
- 9 Les exportations comprennent l'or.
- 10 Y compris Soudan du Sud.
- 11 Les statistiques commerciales font exclusion de certains produits pétroliers et chimiques.
- 12 Les valeurs à l'exportation et à l'importation excluent le commerce de la zone de transformation.

## World exports by provenance and destination (Table D)

### General Note

Table D is based on data of UN Comtrade as of mid November 2014. An earlier version of this table has been published in Volume I of the 2013 ITSY which has been produced earlier this year. The totals of imports and exports presented in table A and D are not necessarily identical as table A is mainly based on the data of the IMF's International Financial Statistics (IFS) which is a different data collection system with different aims, procedures, timetable and sources for update and maintenance than UN Comtrade (see the introduction for details). Nevertheless, discrepancies between both tables are in general minor and usually do not affect the overall information provided. A systematic comparison of the figures from both sources (which includes the description of known and relevant conceptual differences) is available at <http://unstats.un.org/unsd/trade/imts/annual%20totals.htm>.

Overall, the discrepancies in the world total or world aggregate of exports in table A and table D is around 1.0 percent for all years shown, which is minor, given the differences between the two sources. For further information on sources and presentation of table D as well as for a brief table description please see the introduction.

1/ Exports for which country of destination is not available are included in the totals for the 'World' and in region "Others" (see footnote number 4 for further explanation).

2/ This classification is intended for statistical convenience and does not, necessarily, express a judgment about the stage reached by a particular country in the development process.

3/ Section 9 of the SITC, which comprises commodities and transactions not classified elsewhere, is included in the total trade but is not shown.

4/ The region "Others" as destination for exports contains the following trading partners: Antarctica, bunkers, free zones, confidential and not elsewhere specified countries

## Exportations mondiales par provenance et destination (Tableau D)

### Remarque générale

Tableau D est basée sur les données de UN Comtrade telles que disponible mi-novembre 2014. Une version antérieure de cette table est publiée dans le volume I de l'annuaire 2013 ITSY qui a été produit plus tôt cette année. Les importations et exportations totales présentées dans les tableaux A et D ne sont pas nécessairement identiques du fait que le tableau A est basé principalement sur les données des Statistiques Financières Internationales (IFS) du FMI qui est un différent système de collecte des données avec des objectifs, des procédures, un calendrier et des sources de mise à jour et de maintenance différents de ceux de UN Comtrade sur lequel le tableau D est basé (voir l'introduction pour les détails). Toutefois, les écarts entre les deux tableaux sont en général mineurs et n'affectent pas substantiellement l'information fournie. Une comparaison systématique des données de ces deux sources (incluant une description des différences conceptuelles pertinentes connues) est disponible à <http://unstats.un.org/unsd/trade/imts/annual%20totals.htm>.

En général, la différence entre les totaux des exportations mondiales présentés dans les tableaux A et D est d'environ 1,0 pour cent par chacune des années publiées, ce qui est mineur étant donné les différences entre les deux sources. Pour plus d'information sur les sources et la présentation du tableau D ainsi qu'une brève description, se il vous plaît se référer à l'introduction.

1/ Pour la composition des régions géographiques, se

référer à <http://unstats.un.org/unsd/mdg/default.aspx>

2/ Cette classification est utilisée pour plus de commodité dans la présentation des statistiques et n'implique pas nécessairement un jugement quant au stade de développement auquel est parvenu un pays donné.

3/ Section 9 de la CTCl, qui représente les articles et transactions non classés ailleurs est comprise dans le commerce total mais n'est pas présentée séparément dans ce tableau.

4/ La région "Autres" comme destination des exportations comprend les partenaires commerciaux suivants: Antarctique, combustibles de soute, zones franches, partenaires confidentiels ou non spécifiés ailleurs

## Growth and structure of world exports by provenance and destination (Tables E and F)

### Croissance et structure des exportations mondiales par provenance et destination (Tableaux E et F)

#### General note

The figures in tables E and F are derived from the data in Special Table D.

The commodity classification is in accordance with the United Nations' Standard International Trade Classification (SITC), Revision 3, except for countries which report trade data only in terms of the SITC, Revision 2, or the SITC, Revised.

The data approximate total exports of all countries and areas of the world. They are based on official export figures converted, where necessary, to U.S. dollars according to conversion factors published in Table C for each country in this volume. Where official figures are not available, estimates based on the imports reported by partner countries and on other subsidiary data are used. Some official national data have been adjusted (a) to approximate the commodity groupings of the SITC and (b) to approximate calendar years.

The data include special category (confidential) exports, ships' stores and bunkers and exports of minor importance, the destination of which cannot be determined. These data are included in the world totals for each commodity group and in total exports, and are available separately in region "Others"

- 1/ For the country composition of geographical regions, please refer to <http://mdgs.un.org/unsd/mdg/Host.aspx?Content=Data/RegionalGroupings.htm>
- 2/ This classification is intended for statistical convenience and does not, necessarily, express a judgment about the stage reached by a particular country in the development process.
- 3/ Section 9 of the SITC, which comprises commodities and transactions not classified elsewhere, is included in the total trade but is not shown separately in this table.
- 4/ The region "Others" as destination for exports contains the following trading partners: Antarctica, bunkers, free zones, confidential and not elsewhere specified countries

#### Remarque générale

Les données des tables E et F sont dérivées de celles publiées dans le Tableau Spécial D.

La classification par marchandise utilisée est la Classification Type pour le Commerce International (CTCI), Revision 3, en dehors des pays qui rapportent exclusivement les données du commerce en accord avec la CTCI, Revision 2, ou la CTCI, Révisée.

Les données sont une estimation des exportations totales de tous les pays et régions du monde. Elles sont basées sur les chiffres des exportations officielles nationales convertis en dollars E.-U. selon les facteurs de conversion pour chaque pays publiés dans le Tableau C de ce volume. Quand les chiffres officiels ne sont pas disponibles, des estimations basées sur les importations rapportées par les pays partenaires ou sur d'autres données subsidiaires sont utilisées. Quelques données officielles nationales ont été ajustées afin (a) qu'elles correspondent aux groupes des marchandises de la CTCI et (b) qu'elles correspondent aux années civiles.

Les données comprennent les exportations de 'special category' (confidentielles), les approvisionnements des navires et combustible de soute et autres exportations de moindre importance dont la destination n'a pu être déterminée. Ces données sont comprises dans le total pour chaque groupe de marchandise et dans les exportations totales, et sont disponibles séparément dans la région "Autres".

- 1/ Pour la composition des régions géographiques, se référer à <http://mdgs.un.org/unsd/mdg/Host.aspx?Content=Data/RegionalGroupings.htm>
- 2/ Cette classification est utilisée pour plus de commodité dans la présentation des statistiques et n'implique pas nécessairement un jugement quant au stade de développement auquel est parvenu un pays donné.
- 3/ Section 9 de la CTCI, qui représente les articles et transactions non ailleurs est comprise dans le commerce total mais n'est pas présentée séparément dans ce tableau.
- 4/ La région "Autres" comme destination des exportations comprend les partenaires commerciaux suivants: Antarctique, combustibles de soute, zones franches, partenaires confidentiels ou non spécifiés ailleurs.

### General Note:

The volume and unit value/price indices are as compiled by countries. They show the changes in the volume (volume index) and the average price (unit value/price index) of total imports and exports. Using these indices UNSD calculates the terms of trade indices (export unit value/price indices divided by the corresponding import unit value/price indices), and the index of the purchasing power of exports (the terms of trade multiplied by the volume index of exports). Country footnotes which appear in Special Table B of this volume also apply to the country indices published in this table.

For further information on sources and presentation as well as for a brief table description please see the introduction.

- 1 Price indices.
- 2 Index numbers exclude ships.
- 3 Excluding military goods.

### Remarque générale :

Les indices du volume et les indices de la valeur unitaire/prix sont comme compilées par les pays. Ils indiquent les variations des quantités (indice du volume) et des prix moyens (indice de la valeur unitaire/prix) des importations ou exportations totales. Utilisant ces indices la Division de Statistique des Nations Unies calcule les indices des termes de l'échange (sont obtenus en divisant les indices de la valeur unitaire à l'exportation par ceux à l'importation), et l'indice du pouvoir d'achat des exportations (sont obtenu en multipliant l'indice des termes de l'échange du volume des exportations). Les notes se rapportant aux pays qui apparaissent dans le Tableau Spécial B de ce tome s'appliquent aussi aux indices de ce tableau.

Pour plus d'information sur les sources et la présentation ainsi qu'une brève description du tableau, se il vous plaît se référer à l'introduction.

- 1 Les indices des prix.
- 2 Les indices ne comprennent pas de navires.
- 3 Non compris les importations des économats militaires.

- 1 Regional aggregates are current period weighted.
- 2 This classification is intended for statistical convenience and does not, necessarily, express a judgement about the stage reached by a particular country in the development process.
- 3 Index does not include data of the major oil producing countries.
- 4 Unit value index of exports divided by unit value index of imports.
- 5 Volume indices are derived from value data and unit value indices. They are base period weighted.

## Tables I, J and K

### General note:

Manufactured goods are here defined to comprise sections 5 through 8 of the Standard International Trade Classification (SITC). These sections are: chemicals and related products, manufactured goods classified chiefly by material, machinery and transport equipment and miscellaneous manufactured articles. Fuels are here defined to comprise all the products in section 3 of the SITC. These products are: coal, coke and briquettes, petroleum, petroleum products and related materials gas and electric current. The unit value indices are obtained from national sources, except those of a few countries which the United Nations Statistics Division compiles using their quantity and value figures. For countries that do not compile indices for manufactured goods exports and fuel imports conforming to the above definition, sub-indices are aggregated to approximate an index of SITC sections 5-8 and SITC section 3 respectively. Unit value indices obtained from national indices are rebased, where necessary, so that 2000=100. Indices in national currency are converted into U.S. dollars using conversion factors obtained by dividing the weighted average exchange rate of a given currency in the current period by the weighted average exchange rate in the base period. All aggregate unit value indices are current period weighted. The indices in SDRs are calculated by multiplying the equivalent aggregate indices in U.S. dollars by conversion factors obtained by dividing the SDR/\$US exchange rate in the current period by the rate in the base period. The quantum indices are derived from the value data and the unit value indices. All aggregate quantum indices are base period weighted. The figures in Table K are calculated from those prepared for Tables I and J. Total imports and exports used in the calculations are, in general, those published in Table A.

### Remarque générale:

Les produits manufacturés comprennent les sections 5 à 8 de la Classification type pour le commerce international (CTCI). Ces sections sont produits chimiques et produits connexes, articles manufacturés classés principalement d'après la matière première, machines et matériel de transport et articles manufacturés divers. Les produits énergétiques comprennent tous les produits appartenant à la section 3 de la CTCI. Ces produits sont huiles, coques et briquettes, pétrole, produits dérivés du pétrole et produits connexes, gaz et énergie électrique. Les indices de la valeur unitaire sont obtenus de sources nationales, à l'exception de quelques pays pour lesquels la Division de Statistique des Nations Unies calcule ces indices en utilisant les chiffres de la valeur et du volume fournis par ces pays. Pour les pays ne calculant pas leurs indices des exportations des produits manufacturés et importations des produits énergétiques selon la définition décrite ci-dessus les sous-indices sont agrégés en un indice qui se rapproche les sections 5 à 8 de la CTCI et la section 3 de la CTCI respectivement. Les indices en monnaie nationale sont convertis en dollars des E.-U. en les multipliant par un facteur de conversion obtenu en divisant le taux de change courant, moyennement pondéré, d'une monnaie donnée par celui de la période de base. Tous les agrégés des indices de la valeur unitaire, sont à coefficients de pondération correspondant à la période indiquée. Les indices en DTS sont calculés en multipliant les indices totaux équivalents en dollars E.-U. par un facteur de conversion obtenu en divisant le taux de change courant du DTS/\$E-U d'une monnaie donnée par celui de la période de base. Les indices du quantum sont calculés à partir de chiffres de la valeur et les indices de la valeur unitaire. Tous les agrégés des indices du quantum sont à coefficients de pondération correspondant à la période en base. Les chiffres dans le tableau K sont calculés selon des données préparées pour les tableaux I et J. Les totaux des importations et exportations utilisées dans les calculs sont, en général, celles publiées dans le Tableau A.

### Tableau J:

- 1/ A partir de 1989, calculés à partir des indices des prix; l'indice de valeur unitaire national est discontinué.

## Petroleum oils and oils obtained from bituminous minerals, crude 333

"Petroleum oils and oils obtained from bituminous minerals, crude" (SITC group 333) is the top exported commodities in 2013 with 8.5 percent of total exports (see table 1). The value (in current US\$) of exports of this commodity decreased by 5.2 percent (compared to 16.6 percent average growth rate from 2009-2013) to reach 1579.3 bln US\$ (see table 2), while imports decreased by 5.9 percent to reach 1626.4 bln US\$ (see table 3). One contributing factor is the increased oil production in USA, which reduced imports to USA by 13.3 percent in 2013. Another factor is the fall in crude oil prices of around 3.0 percent in 2013. Saudi Arabia, Russian Federation and United Arab Emirates were the top exporters in 2013 (see table 2). They accounted for 18.6, 11.0 and 8.4 percent of world exports, respectively. USA, China and India were the top destinations, with respectively 17.2, 13.5 and 9.1 percent of world imports (see table 3).

The top 15 countries/areas accounted for 84.1 and 81.9 percent of total world exports and imports, respectively (see tables 2 and 3). In 2013, Saudi Arabia was the country/area with the highest value of net exports (+294.0 bln US\$), followed by Russian Federation (+173.5 bln US\$). By MDG regions (see graph 2), the largest surplus in this product group was recorded by Western Asia (+613.6 bln US\$). The largest trade deficit was recorded by Eastern Asia (-350.8 bln US\$).
