ECONOMIC AND SOCIAL COMMISSION FOR ASIA AND THE PACIFIC

Committee on Managing Globalization

Fourth session, Part I 12-14 September 2007 Bangkok

PROGRAMME PLANNING AND EVALUATION: PROGRAMME DELIVERY FOR THE BIENNIUM 2006-2007 IN RESPECT OF SUBPROGRAMME 4, TRADE AND INVESTMENT, AND SUBPROGRAMME 5, TRANSPORT AND TOURISM

(Item 7 (b) of the provisional agenda)

PROGRAMME DELIVERY FOR THE BIENNIUM 2006-2007 IN RESPECT SUBPROGRAMME 5, TRANSPORT AND TOURISM*

Note by the secretariat

SUMMARY

The document describes the progress made in the implementation of the programme of work for the biennium 2006-2007 in respect of subprogramme subprogramme 5, Transport and tourism.

The Committee is invited to review the programme delivery status and provide the secretariat with guidance for the future development of the subprogramme.

DMR: A2007-000220 080807 CMG4-I_10E

^{*} Issued without editing owing to late submission.

Introduction

- 1. After the introduction of the new reporting format by United Nations Headquarters in 2003, new methodologies for monitoring the biennial programme of work were adopted. Regular and standardized reporting is now required every six months, to include measurable outputs for demonstrating the implementation of the programme of work, as follows:
- (a) Establishment of baselines for indicators of achievement at the beginning of the biennium;
- (b) Regular data collection with respect to the indicators of achievement to measure the progress achieved against the baselines. (This includes feedback and evidence from the end-users of the secretariat's products and services to substantiate the results achieved during the biennium.);
 - (c) Regular monitoring of progress towards achieving results in the programme of work;
- (d) Identification of lessons learned and areas needing improvement, for future programme planning;
- (e) Formulation of the highlights of results for each programme in the form of an "Accomplishment Account" to reflect the salient programme achievements in the biennium.
- 2. In this respect, each subprogramme is required to submit an Accomplishment Account using data collected at the Expected Accomplishment level, including statistical data and other relevant information, measured against the Indicators of Achievement.
- 3. The Committee is invited to review the progress made so far in the implementation of programme of work in respect of subprogramme 5, Transport and tourism, as embodied in the Accomplishment Account as currently reported to United Nations Headquarters, and provide the secretariat with guidance for the future development of the subprogramme.

PROGRESS MADE IN THE IMPLEMENTATION OF THE PROGRAMME OF WORK FOR THE BIENNIUM 2006-2007 IN RESPECT OF SUBPROGRAMME SUBPROGRAMME 5, TRANSPORT AND TOURISM

4. The following table is extracted from the programme of work for the biennium 2006-2007 as approved by the Commission at its sixty-first session and subsequently by the General Assembly at the sixtieth session held in 2005:

Objective: To improve the movement of goods and people and to strengthen the role of tourism in economic and social development.

Expected Accomplishment	Indicators of Achievement
(a) Strengthened national capacities to formulate	(a) (i) Increased number of national policy
policies on, and to implement initiatives for,	decisions and position papers that reflect
improving logistics efficiency and enhancing	ESCAP-promoted programmes.
participation in regional and subregional	(a) (ii) Increased number of countries and
agreements relating to transport and tourism	organizations using ESCAP
infrastructure and facilitation	methodology to measure reductions in
	the time and cost of transport, in
	particular to landlocked countries and
	through transit countries.
	(a) (iii) Increased number of countries
	participating in regional and subregional
	agreements.
(b) Increased national capacities to develop and	(b) Increased number of national officials
implement policies and programmes to	taking measures to develop and implement
promote transport and tourism as an entry	policy papers and programmes in the
point for poverty reduction	transport and tourism sectors that reflect
	ESCAP-promoted programmes and
	initiatives to reduce poverty.

5. Presented below is the 18-month report reflecting the Accomplishment Accounts for the subprogramme.

PROGRAMME OF WORK, 2006-2007 - Accomplishment (a)

(Accomplishment Accounts for 2006-2007 with the most recent progress achieved in attaining the desired results)

Expected	(a) Strengthened national capacity to formulate policies on and
Accomplishment	implement initiatives for improving the efficiency of logistics and
	enhancing participation in regional and subregional agreements
	relating to transport and tourism infrastructure and facilitation.
Indicator of achievement	(a)(i) Increased number of national policy decisions and position
	papers that reflect ESCAP-promoted programmes
1. Setting:	Over the last few decades, many countries in the Asia and Pacific
	region have experienced substantial growth in output, trade and
	investment. This growth is largely attributed to the "globalization
	process". Two of the principal driving forces behind this process have
	been developments in transport and communications, which have in
	turn supported international production networks and provided the
	opportunity for increased international tourism.
2. End-Users:	Policy-makers in ministries of transport, railways, finance and foreign
	relations; logistics and freight forwarders associations.
3. Intermediaries:	ESCAP will work closely with other United Nations and multilateral
	agencies as well as subregional organizations.
4. Challenge:	Much of the growth in economies of the region has occurred in coastal
	areas that have well-developed regional and interregional maritime
	transport linkages. The principal challenge in the transport sector is to
	develop an international integrated intermodal network that provides
	access to landlocked countries and wider domestic hinterlands as well
	as the potential for inland intermodal transfer points (or "dry ports") to
	become centers for economic development (in a similar manner to their
	maritime equivalents – seaports).
	The major challenges in the tourism sector are reflected in the five
	theme areas of the Commission's Regional Action Programme for
	Sustainable Tourism Development, namely: enhancing the role of
	tourism in socio-economic development and poverty reduction;
	facilitation of travel and development of other tourism-related
	infrastructure; socio-cultural and environmental management of
	tourism; crisis and risk management in tourism; and human resources
	development in the tourism sector through regional networking.

5. Events/Actions:	Ministerial Conference on Transport convened in Busan, Republic of
	Korea, 10-11 November 2006
	The Commission adopted resolution 62/3: Implementation of the Plan
	of Action for Sustainable Tourism Development in Asia and the
	Pacific, phase II (2006-2012) and the Regional Action Programme for
	Sustainable Tourism Development. This resolution embodied the
	outcome of the High-level Intergovernmental Meeting on Sustainable
	Tourism Development, held in Bali, Indonesia, in December 2005,
	which adopted the Bali Declaration on Sustainable Development and
	the Plan of Action for Sustainable Tourism Development in Asia and
	the Pacific (PASTA), phase II (2006-2012) including its Regional
	Action Programme for Sustainable Tourism Development (2006-2012).
Results:	Highlights of the Ministerial Conference on Transport included: (a)
	Ministerial Declaration on Improving Road Safety in Asia and the
	Pacific; (b) Busan Declaration on Transport Development in Asia and
	the Pacific, including the Regional Action Programme for Transport
	Development in Asia and the Pacific, 2007-2011. Subsequently, the
	contents of the Ministerial declarations of Busan were approved by the
	Commission through Commission resolution 63/9 of 23 May 2007 on
	"Implementation of the Busan Declaration on Transport Development
	in Asia and the Pacific and the Regional Action Programme for
	Transport Development in Asia and the Pacific, phase I (2007-2011)".
	Country reports submitted by member states to the ESCAP Secretariat
	(e.g., on the Asian Highway development, road safety, as well as on
	public-private partnerships for infrastructure development) and
	statements made by delegates in various ESCAP meetings indicated
	that a number of countries had already started to address the
	aforementioned Declarations, see for example the documentation for
	the Regional Workshop on Upgrading of the Asian Highway Priority
	Routes (19-21 June 2007) and the Expert Group Meeting on Improving
	Road Safety on the Asian Highway (21-22 June 2007).
	PASTA phase II (2006-2012) represents a set of policies and actions to
	be undertaken principally at the national level. At the Committee on
	Managing Globalization, Bangkok, 12-14 September 2006, eight
	countries reported on significant activities and initiatives that they had
	undertaken within PASTA (E/ESCAP/CMG(3/I)/Rep, paras. 48-54).
Learning:	

Expected	(a) Strengthened national capacity to formulate policies on and
Accomplishment	implement initiatives for improving the efficiency of logistics and
	enhancing participation in regional and subregional agreements
	relating to transport and tourism infrastructure and facilitation
Indicator of achievement	(a)(ii) Increased number of countries and organizations using ESCAP
	methodology to measure reductions in the time and cost of transport, in
	particular to landlocked countries and through transit countries
1. Setting:	The entry into force of the Intergovernmental Agreement on the Asian
	Highway Network and the signing ceremony for the Intergovernmental
	Agreement on the Trans-Asian Railway Network provide a sound basis
	for the development of an international integrated intermodal transport
	system. They do however only formalize the road and rail
	infrastructure systems; much needs to be done to operationalize the
	system. Currently there are "a small number of "missing links" and
	when there are intercountry movements of goods, vehicles and people,
	there are considerable delays at border-crossing and in transiting
	countries.
2. End-Users:	Policy-makers in ministries of transport, railways, finance and foreign
	relations; logistics and freight forwarders associations.
3. Intermediaries:	ESCAP will work closely with other United Nations and multilateral
	agencies as well as subregional organizations.
4. Challenge:	The central challenge is to improve efficiency and reduce the cost of
	intra and interregional transport logistics services. This challenge is
	especially important for landlocked and transit countries. In this
	respect, landlocked countries are becoming "landlinking" and transit
	countries with maritime coastlines are looking towards transit
	opportunities through landlocked neighbours to third markets.
5. Events/Actions:	During 2006, the secretariat has undertaken desk research and
	conducted workshops that use and promote the "time/cost
	methodology" as a tool to identify and highlight inefficiencies in the
	international logistics system. These have included:
	The interdivisional project "Institutional capacity-building for
	facilitation of international trade and transport in the landlocked and
	transit countries" under which the secretariat organized; (a) national
	workshop and advisory services on trade and transport facilitation
L	

	(Ulaanbaatar, 17-19 April 2006) and undertook a fact-finding mission
	on border-crossing facilities and formalities; (b) national workshops-
	cum-advisory services on the facilitation of interregional transport
	along Euro-Asian transport linkages (Baku, Azerbaijan, 11-12 May
	2006) and Tbilisi, Georgia, 15-16 May 2006); (c) national workshops-
	cum-advisory services on trade and transport facilitation (Astana, 24-26
	July 2006); (d) Expert group meeting on evaluation study on legal
	regimes for transport facilitation (Bangkok, 26-27 October 2006); (e)
	Second regional meeting on trade and transport facilitation for
	landlocked and transit countries (Bangkok, 30 October-1 November
	2006).
	The project "Logistics Planning Models for Enterprises and Logistics
	Cluster" under which the secretariat (1) conducted desk research; (2)
	organized: (a) Expert group meeting on logistics services centres and
	cluster development (Bangkok, 7-8 December 2006); (b)
	UNESCAP/UNCTAD Third Cluster Development Meeting on
	Transport Facilitation (Nong Khai, Thailand, 3-4 May 2007); (c)
	UNESCAP Meeting of Executives of National Freight Forwarders and
	Logistics Association and UNESCAP Regional Forum of Freight
	Forwarders, Multimodal Transport Operators and Logistics Service
	Providers (Bangkok, 20-22 June 2007); and (3) preparing a publication
	on logistics planning models for enterprises and logistics clusters.
	11th session of the SPECA Project Working Group on Transport and
	Border Crossing (Almaty, 29-30 March 2006); and 12 th session of the
	SPECA Project Working Group-Transport and Border Crossing
	(Dushanbe, 13-14 March 2007).
Results:	Under the interdivisional project "Institutional Capacity Building for
	Facilitation of International Trade and Transport in Landlocked and
	Transit Countries", the following countries have completed or are in the
	process of applying the model: Lao, PDR; Mongolia; Kazakhstan;
	Kyrgyzstan; Tajikistan and Thailand. Under the SPECA programme,
	data for the time/cost model has been supplied for Kyrgyzstan and by
	USAID for routes in SPECA countries. The Kazakh institute NIITK
	has also applied the model for studies in the projects "Identification and
	Analysis of Routes in the TRACECA Transport Corridor" and "Routes
Î.	1

Republic of Iran)". Mongolia used ESCAP methodology for analysis of international routes of importance to Mongolia (Brest-Ulaanbaatar, Port of Tianjin-Ulaanbaatar and Port of Nakhodka-Ulaanbaatar) under the joint UNESCAP-OSJD project "Operationalization of Euro-Asian Rail Routes with Particular Reference to Landlocked Countries in Asia and the Caucasus (Phase I)".

The present reporting period saw a major revision of the UNESCAP "Time/Cost-Distance Methodology". Firstly, the model itself and the templates for the users were revised to increase ease of use and to respond to the feedback of countries that already used the UNESCAP methodology. updated UNESCAP "Time/Cost-Distance The Methodology" allows for improved analysis of time and cost of transport, especially a detailed analysis of activities in terms of time and cost at stops (e.g. border crossings). Secondly, detailed user manuals that accompany the model were developed, so that the countries can build their capacities to use UNESCAP methodologies more independently. The revised UNESCAP "Time/Cost-Distance Methodology" and the additional user guides were combined into a tool kit, which was distributed to countries participating under the UN Development Account Project "Capacity-building in developing interregional land and land-cum-sea transport linkages" and agreeing to apply the model (Afghanistan, Armenia, Azerbaijan, China, Iran, Kazakhstan, Kyrgyzstan, Russian Federation, Tajikistan, Turkmenistan and Uzbekistan). In addition the tool kit was shared with organizations (IRU, ADB).

Learning:

Expected Accomplishment	(a) Strengthened national capacity to formulate policies on and
	implement initiatives for improving the efficiency of logistics and
	enhancing participation in regional and subregional agreements
	relating to transport and tourism infrastructure and facilitation
Indicator of achievement	(a)(iii) Increased number of countries participating in regional and
	subregional agreements
1. Setting:	With the exception of Central Asia, intercountry transport networks in
	Asia tend to be oriented towards each country's seaports and maritime
	transport. As a result intercountry land transport flows of goods tend to
	be relatively small and routing of goods tends to be circuitous.
2. End-Users:	Policy-makers in ministries of transport, railways, finance and foreign
	relations; logistics and freight forwarders associations.
3. Intermediaries:	ESCAP will work closely with other United Nations and multilateral
	agencies as well as subregional organizations.
4. Challenge:	Logistics systems are networks, consisting of physical and nonphysical
	links and nodes. As such, the efficiency of any individual link or node
	affects the efficiency of the system as a whole. Further, a logistics
	system consists of sub-networks including transport, communications,
	banking, customs authorities, freight forwarding etc: these networks
	need to be melded and meshed together in order to provide efficient
	logistics services. The central challenge is to build and meld these
	networks. Formalization, completing "missing links" and upgrading of
	the Asian Highway and Trans-Asian Railway Networks is a major
	component of this process.
5. Events/Actions:	Entry into force, on 4 July 2005, of Intergovernmental Agreement on
	the Asian Highway Network Agreement.
	The signing ceremony for the Intergovernmental Agreement on the
	Trans-Asian Railway Network was held during the Ministerial
	Conference on Transport, Busan, Republic of Korea, 10-11 November
	2006.
Results:	Five additional countries ratified or approved the Intergovernmental
	Agreement on the Asian Highway Network Agreement in 2006
	(Afghanistan, India, Kyrgyzstan, Tajikistan and Thailand). This
	brought the total to 28 signatories and 20 accessions, ratifications or
	approvals.

	Eighteen member States signed the Intergovernmental Agreement on
	the Trans-Asian Railway Network during the Ministerial Conference
	on Transport, Busan, Republic of Korea, 10-11 November 2006. To
	date, nineteen countries have signed the Agreement, and one country
	(Cambodia) has "accepted" the Agreement (see http://untreaty.un.org/
	ENGLISH/bible/englishinternetbible/partI/chapterXI/subchapC/
	treaty5.asp).

PROGRAMME OF WORK, 2006-2007 – Accomplishment (b)

(Accomplishment Accounts for 2006-2007 with the most recent progress achieved in attaining the desired results)

Accomplishment Indicator of achievement (b) Increased number of national officials taking measures to develop and implement policy papers and programmes in the transport and tourism sectors that reflect ESCAP-promoted programmes and initiatives to reduce poverty 1. Setting: The decade prior to the turn of the millennium was one where increasing emphasis and recognition was placed upon poverty reduction, the distribution of income and participation of relevant stakeholders in the mainstream of economic activities. At the global level this culminated in the United Nations Millennium Declaration and the associated Millennium Development Goals (MDGs). Surprisingly, there is little mention of how development of transport, logistics and tourism could contribute towards achieving the MDGs. Consequently there was a danger that the role of transport and logistics interventions in poverty reduction was neglected by omission. In a paper submitted to the Meeting of Senior Government Officials in preparation for the Ministerial Conference on Transport, 6-8 November 2006, Busan, Republic of Korea on "Transport and the Millennium Development Goals" (E/ESCAP/MCT/SGO/7) the secretariat went through each of the eight Goals and highlighted the contribution that transport could make to their achievement. In its conclusion it effectively inverted the question "what is the contribution of transport to the achievement of the MDGs?" and asked "can the MDGs be achieved without transport interventions?". For the tourism sector there is also considerable potential for sectoral interventions to contribute towards the achievement of the Millennium Development Goals.	Expected	(b) Increased national capacity to develop and implement policies

In a paper submitted to the Meeting of Senior Government Officials in preparation for the Ministerial Conference on Transport, 6-8 November 2006, Busan, Republic of Korea on "Transport and the Millennium Development Goals" (E/ESCAP/MCT/SGO/7) the secretariat went through each of the eight Goals and highlighted the contribution that transport could make to their achievement. In its conclusion it effectively inverted the question "what is the contribution of transport to the achievement of the MDGs?" and asked "can the MDGs be achieved without transport interventions?". For the tourism sector there is also considerable potential for sectoral interventions to contribute towards the achievement of the Millennium		logistics and tourism could contribute towards achieving the MDGs.

3. Intermediaries:	ESCAP will work closely with other United Nations and multilateral
	agencies as well as subregional organizations.
4. Challenge:	While the importance of micro, meso and macro-level interventions are
	being increasingly recognized, the transmission mechanisms by which
	they reach the poor and the supportive interventions and policy
	measures necessary to increase the effectiveness of the interventions
	are less well understood.
5. Events/Actions:	The Regional Action Programme for Transport Development in Asia
	and the Pacific, 2007-2011 adopted at the Ministerial Conference on
	Transport, Busan, 10-11 November 2006 has eight theme areas, the
	eighth of which is "Transport and the Millennium Development
	Goals".
	The objective of the Plan of Action for Sustainable Tourism
	Development in Asia and the Pacific, phase II (2006-2012) is to foster
	the sound and sustainable development of tourism and enhance its
	contribution to socio-economic development and poverty reduction,
	including the Millennium Development Goals. The first of five themes
	of the Plan is "Enhancing the Role of Tourism in Socio-economic
	Development and Poverty Reduction".
Results:	It is anticipated that countries will be reporting activities under Theme
	8 (Transport and the Millennium Development Goals) of the Regional
	Action Programme for Transport Development in Asia and the Pacific,
	2007-2011 at legislative and other meetings during 2007.
	Under Theme 5 of PASTA (Enhancing the Role of Tourism in Socio-
	economic Development and Poverty Reduction), a number of countries
	reported activities at the Committee on Managing Globalization,
	Bangkok, 12-14 September 2006 including: (i) the implementation of a
	number of pro-poor community-based tourism initiatives; (b) the
	establishment of theme-based tourism zones; (iii) the implementation
	of awareness campaigns for indigenous people, women and
	disadvantaged groups to share in the benefits of tourism; (iv) the
	promotion of products from local communities within the framework of
	the "One Village One Product" projects.
