# UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

The United Nations Economic Commission for Europe (UNECE) is one of the five United Nations regional commissions, administered by the Economic and Social Council (ECOSOC). It was established in 1947 with the mandate to help rebuild post-war Europe, develop economic activity and strengthen economic relations among European countries, and between Europe and the rest of the world. During the Cold War, UNECE served as a unique forum for economic dialogue and cooperation between East and West. Despite the complexity of this period, significant achievements were made, with consensus reached on numerous harmonization and standardization agreements.

In the post-Cold War era, UNECE acquired not only many new member States, but also new functions. Since the early 1990s the organization has focused on assisting the countries of Central and Eastern Europe, Caucasus and Central Asia with their transition process and their integration into the global economy.

Today, UNECE supports its 56 member States in Europe, Central Asia and North America in the implementation of the 2030 Agenda for Sustainable Development with its Sustainable Development Goals (SDGs). UNECE provides a multilateral platform for policy dialogue, the development of international legal instruments, norms and standards, the exchange of best practices and economic and technical expertise, as well as technical cooperation for countries with economies in transition.

Offering practical tools to improve people's everyday lives in the areas of environment, transport, trade, statistics, energy, forestry, housing, and land management, many of the norms, standards and conventions developed in UNECE are used worldwide, and a number of countries from outside the region participate in UNECE's work.

UNECE's multisectoral approach helps countries to tackle the interconnected challenges of sustainable development in an integrated manner, with a transboundary focus that helps devise solutions to shared challenges. With its unique convening power, UNECE fosters cooperation among all stakeholders at the country and regional levels.

## TRANSPORT IN UNECE

The UNECE Sustainable Transport Division is the secretariat of the Inland Transport Committee (ITC) and the ECOSOC Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals. The ITC and its 20 working parties, as well as the ECOSOC Committee and its sub-committees are intergovernmental decision-making bodies that work to improve the daily lives of people and businesses around the world, in measurable ways and with concrete actions, to enhance traffic safety, environmental performance, energy efficiency and the competitiveness of the transport sector.

The *ECOSOC Committee* was set up in 1953 by the Secretary-General of the United Nations at the request of the Economic and Social Council to elaborate recommendations on the transport of dangerous goods. Its mandate was extended to the global (multi-sectoral) harmonization of systems of classification and labelling of chemicals in 1999. It is composed of experts from countries which possess the relevant expertise and experience in the international trade and transport of dangerous goods and chemicals. Its membership is restricted in order to reflect a proper geographical balance between all regions of the world and to ensure adequate participation of developing countries. Although the Committee is a subsidiary body of ECOSOC, the Secretary-General decided in 1963 that the secretariat services would be provided by the UNECE Transport Division.

*ITC* is a unique intergovernmental forum that was set up in 1947 to support the reconstruction of transport connections in post-war Europe. Over the years, it has specialized in facilitating the harmonized and sustainable development of inland modes of transport. The main results of this persevering and ongoing work are reflected, among other things, (i) in 58 United Nations conventions and many more technical regulations, which are updated on a regular basis and provide an international legal framework for the sustainable development of national and international road, rail, inland water and intermodal transport, including the transport of dangerous goods, as well as the construction and inspection of road motor vehicles; (ii) in the Trans-European North-south Motorway, Trans-European Railway and the Euro-Asia Transport Links

projects, that facilitate multi-country coordination of transport infrastructure investment programmes; (iii) in the TIR system, which is a global customs transit facilitation solution; (iv) in the tool called **F**or **F**uture **I**nland **T**ransport **S**ystems (ForFITS), which can assist national and local governments to monitor carbon dioxide (CO<sub>2</sub>) emissions coming from inland transport modes and to select and design climate change mitigation policies, based on their impact and adapted to local conditions; (v) in transport statistics – methods and data – that are internationally agreed on; (vi) in studies and reports that help transport policy development by addressing timely issues, based on cutting-edge research and analysis. ITC also devotes special attention to Intelligent Transport Services (ITS), sustainable urban mobility and city logistics, as well as to increasing the resilience of transport networks and services in response to climate change adaptation and security challenges.

In addition, the UNECE Sustainable Transport and Environment Divisions, together with the World Health Organization (WHO) – Europe, co-service the Transport Health and Environment Pan-European Programme (THE PEP).

Finally, since 2015, the UNECE Sustainable Transport Division has provided the secretariat services for the Secretary General's Special Envoy for Road Safety, Mr. Jean Todt.

## 2020 INLAND TRANSPORT STATISTICS FOR EUROPE AND NORTH AMERICA

Transport statistics are fundamental for all transport policy development across the UNECE region and the world. This publication provides data in a tabular format to assist in this policy development. The publication is the result of activities to develop methodologies and gather transport data which are carried out by the Working Party on Transport Statistics (WP.6). It also supplements the online database of transport statistics that is available on the UNECE website.

The 2020 edition provides a series of transport statistics tables for the 56 member States of UNECE. The publication is purely statistical in character. Like the previous issues, it has been prepared by the Sustainable Transport Division of UNECE with the generous cooperation of national statistical offices. It is issued in accordance with the recommendation of the Inland Transport Committee at its first session that the Division should regularly publish the most recent available data on transport for as many countries within the UNECE region as possible.

This publication brings together statistical information on all the modes of transport covered by the Inland Transport Committee (road and road safety, rail and inland waterways) for all member States of the UNECE region. A short summary at the beginning of each chapter provides some key figures on each sector, followed by detailed data on each of the statistics sub-categories.

### Sources

The statistics in this publication are compiled by the secretariat of UNECE based on replies to questionnaires submitted by member countries. The secretariat continues its engagement with member States in order to improve the quality of data provided and to maximise data availability.

To collect transport statistics, the Sustainable Transport Division in coordination with the Statistical Office of the European Union (Eurostat) and the International Transport Forum (ITF) administers a Web Common Questionnaire website where designated country contacts from national statistics offices may send available transport data. The countries are requested to provide the latest available statistics. For this publication, structural adjustments to some tables (notably tables 2, 3, 6, 7, and 8) have been incorporated to reflect changes in the breakdown of data collected in the Web Common Questionnaire and technological change. In addition, the table previously provided on *Oil pipeline infrastructure and volume of transport* is no longer included, but is still published in the online database.

The data provided here are official data provided by national authorities and have been reviewed by the secretariat.

## Comparability of data

Data are given according to commonly agreed upon definitions which are provided in the fifth edition of the Glossary for Transport Statistics (published jointly by UNECE, Eurostat and ITF) and were approved by the Inland Transport Committee (see annex). Footnotes in tables indicate explanations provided by countries as to what their data represent.

The data provided in this publication are also available on the Sustainable Transport Division website at <http://w3.unece.org/PXWeb/en>. Website data are updated on a regular basis and thus may be more recent than data in this publication.

## Rounding of figures

Where necessary, each figure has been rounded off to the nearest digit. For this reason, there may be discrepancies between the sum of the constituent items and the totals shown.

## UNECE member countries and nomenclature

As of 2020, UNECE is composed of the following 56 member countries: Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Canada, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, Turkey, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and Uzbekistan.

## Data inquiries

UNECE welcomes comments and suggestions on its statistical publications. Any comments or enquiries should be addressed to:

## MEASURING THE TRANSPORT IMPACTS OF COVID-19

Transport Statistics for Europe and North America is this year released in the context of unprecedented disruptions to transport in most countries of the ECE region, due to the COVID-19 pandemic. This year's publication, in line with previous years', contains data on a year minus two basis, so up to and including 2018. These data obviously cannot provide context to how transport systems have responded to COVID-19. Indeed, the resulting crisis has reshaped the balance between timeliness and relevance of statistics on the one hand, and credibility and accuracy on the other.

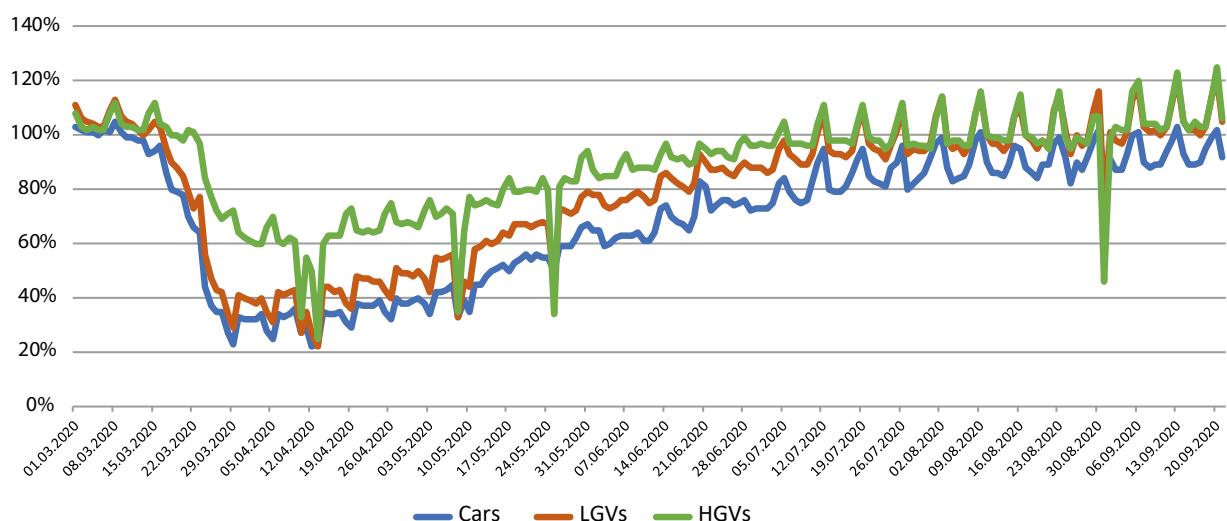

Official annual statistics remain a vital benchmark to track progress over time, but the crisis has also forced policy makers and statisticians alike to consider new types of data sources. With some traditional surveys, censuses and even some administrative data sources either hampered or completely unavailable, statisticians have been forced by events to try to measure transport and mobility in different ways. There has been an emergence of "flash" indicators, often based on either mobile network operator location data or tolling/vehicle measurement sources, to allow reasonably accurate data to be released on a monthly, weekly or even daily basis. These indicators may not always have the label of official statistics, but when produced to a high degree of quality by official statisticians, they provide a useful, trusted source of data in a timely fashion.

Since the crisis began, the ECE secretariat has been monitoring transport impacts through the production and maintenance of a wiki of short-term official statistics sources relevant to transport.<sup>1</sup> At the time of writing, there are more than 150 sources linked to pages from almost every ECE member State. These data cover a wide range of topics relevant to transport statistics. A few of these topics are explored hereafter, in order to give readers some insights into transport in 2020. These examples are only chosen to highlight the continuing great work of transport statisticians across all ECE countries.

### Traffic indicators

The use of vehicle counters and, in some cases, toll data have really increased their prominence during 2020. The number of vehicles per day on key corridors can be a very pertinent proxy for overall traffic levels, and aggregating multiple points with other information can provide a useful index that can be somewhat comparable to vehicle-km. Data can also be obtained from tolling data on main highways, as is the case in Germany. Figure 1 shows an index of different traffic types on roads in Great Britain. The data are an index based upon an equivalent day in the first week of February 2020, for cars, Light Goods Vehicles (LGVs) and Heavy Goods Vehicles (HGVs). Data are not seasonally adjusted, and so public holidays are clearly visible as dips. The graph shows that car traffic was consistently lower than goods vehicles throughout the lockdown period.

**Figure 1: Changes in road traffic levels in Great Britain for different vehicle types compared to first week of February 2020**

Source: UK DfT.

<sup>1</sup> This wiki page can be accessed at <https://wiki.unece.org/display/DSOCIOT/Data+Sources+on+Coronavirus+impact+on+transport>.

These traffic trends are also visible in data for other countries. For example, Germany's truck toll mileage index at its minimum on 30 April 2020 was 15.6 per cent lower than the baseline, whereas an index measuring total land mobility hit a low of 59 per cent below the baseline. Similarly, in the United States of America, the daily passenger Vehicle Miles Travelled index hit a low of 60% below the baseline on 12 April 2020.

## Road Safety

With record falls in road traffic levels in many countries, there has been great interest in the impact on road traffic accidents. The secretariat found relevant monthly data for twenty ECE member States, and in addition data for some sub-national entities such as New York City, Greater London and Northern Ireland. The impact on road traffic accident numbers has varied considerably by country, with some countries seeing record decreases in fatalities while others seeing insignificant changes from the baseline or even small increases. Comparisons across time are challenging as provisional data are typically collated on a different basis to finalized annual numbers. Therefore, data have only been compared with previous years' provisional monthly data. Figure 2 shows the change in fatalities between April-June 2019 and April-June 2020 for all available countries with monthly data, with a negative number indicating a decrease. Users are strongly advised to consult country sites linked to on the online wiki prepared by UNECE in order understand the limitations of these provisional numbers.<sup>2</sup>

**Figure 2: Reductions in road traffic accident fatalities, April-June 2020 versus April-June 2019.  
Available countries only**

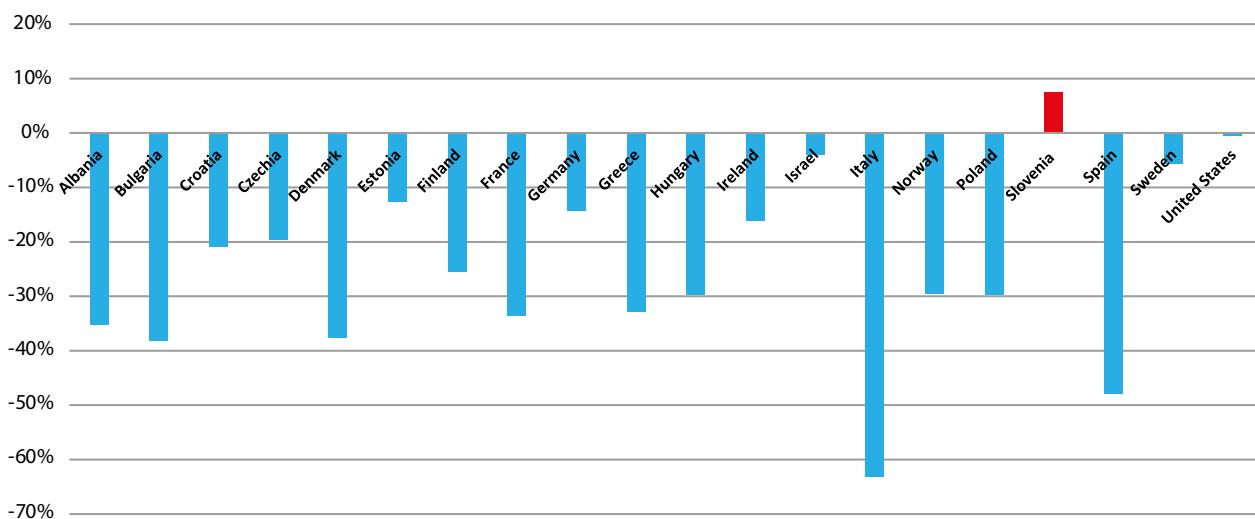

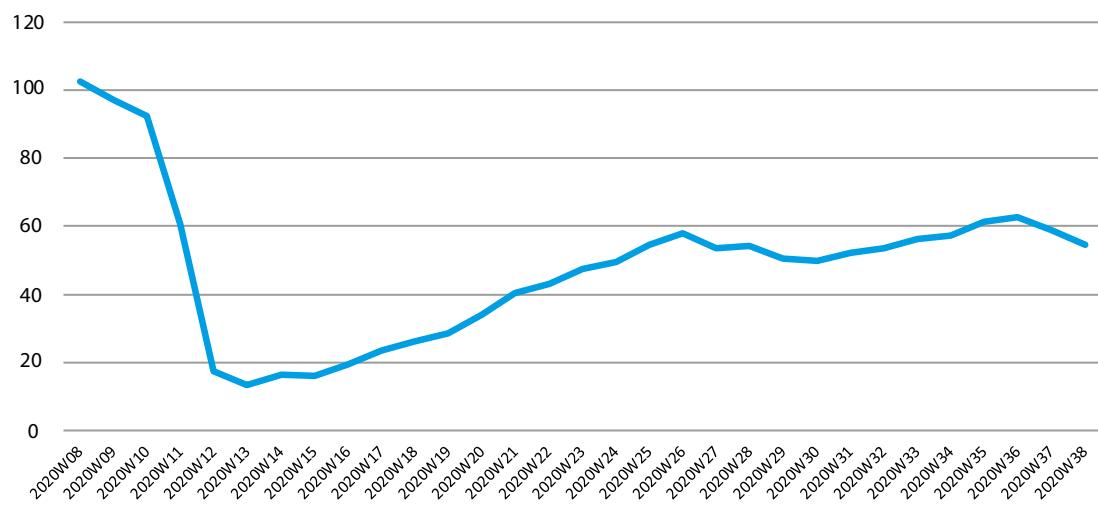

Figure 2 shows that the majority of countries did see a year-on-year decrease in traffic fatalities in the second quarter of 2020, with many experiencing over a 30 per cent reduction. These falls in fatalities are undoubtedly good news, but also need to be considered in the context of record falls in traffic in many countries, which were typically much larger (as evidenced in the traffic data above).

## Public transport

When public transport data are based on ticket or card swipes, or entry/exit sensors, it is often possible to publish weekly or even daily passenger figures with a short time lag. This is the case for countries including Denmark (Copenhagen), Portugal (Lisbon), the United Kingdom of Great Britain and Northern Ireland (London Underground) and United States of America (New York City subway). Figure 3 shows weekly passengers on the Copenhagen metro as an index compared to the average number of passengers on weekdays in the eighth and ninth weeks of 2020.

**Figure 3: Index of Copenhagen Metro usage on a weekly basis, 100=average traffic in eighth and ninth weeks of 2020**

Source: Statistics Denmark.

### Concluding remarks

These examples illustrate that the use of these emerging timely data sources are of particular use during exceptional circumstances such as the current pandemic. Yet they will also prove to be of use to policy makers in more normal times as well. The ECE secretariat and the International Transport Forum have started an informal group of country experts where methodology for these flash indicators can be discussed.<sup>3</sup> The Working Party on Transport Statistics will also continue its work on production of official statistics in parallel to this, including seeking country feedback on how to further modernize this publication.

<sup>3</sup> The first meeting took place virtually in September 2020. Any country statisticians or others working on official statistics in a transport context are welcome to participate in future meetings. Contact the ECE secretariat at Stat.trans@un.org.

# Road Transport

## ROAD TRANSPORT STATISTICS

The data included in this chapter set out road transport statistics for countries where data is available in the ECE region, focusing on road infrastructure, vehicle fleet sizes and vehicle activity. A selection of summary statistics is presented in this introduction.

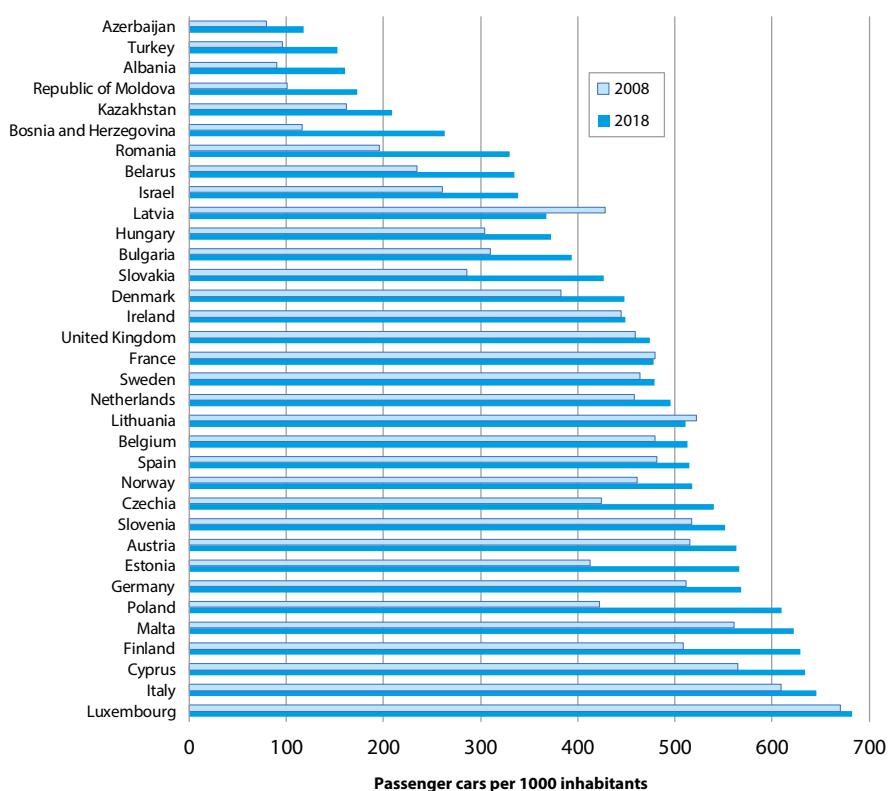

Substantial differences remain between countries in their motorization rates (the numbers of registered passenger cars per 1,000 inhabitants – figure 4). The light-to-dark purple sliding scale highlights different levels across member States.

**Figure 4 Motorization rate for 2018 (or latest year available)**

Notes: Registered vehicles per 1,000 inhabitants. Grey represents countries for which data for 2013 or later were not reported.

**Figure 5 Motorization rate for 2008 and 2018**

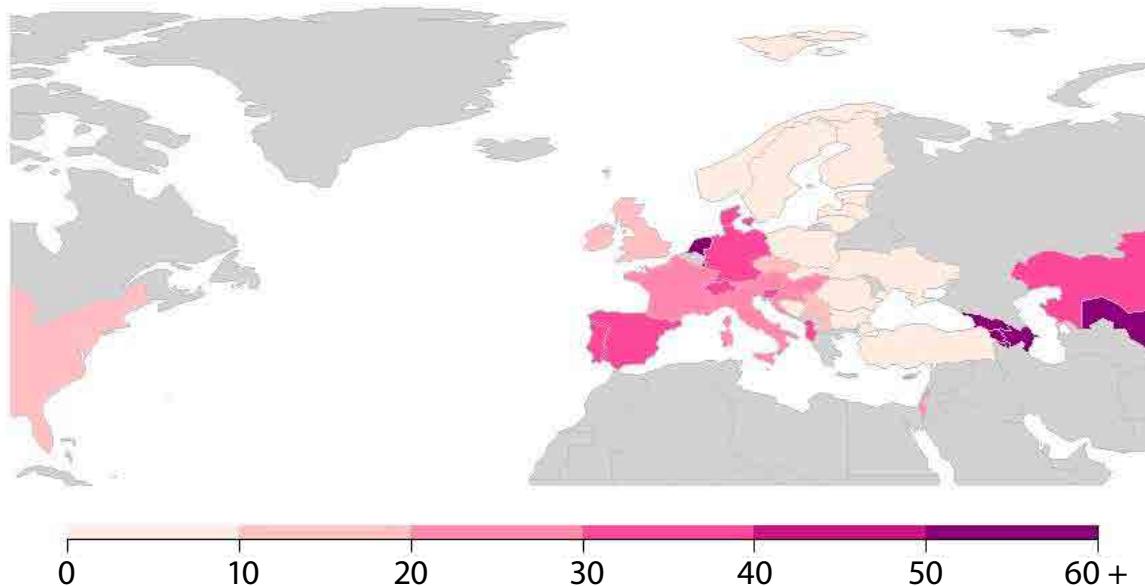

Notes: Total Passenger cars registered per 1,000 inhabitants.

Figure 5 shows that Cyprus, Italy and Luxembourg had the highest motorisation rates in 2018 with Albania, Azerbaijan and Turkey having the lowest rates of countries reporting data in both years.

The figure also shows the large increases in motorisation rate between 2008 and 2018 for many countries, notably Bosnia and Herzegovina where this rate more than doubled. Only Latvia and Lithuania saw their motorisation rates fall over the ten-year period with a 2 per cent decrease reported in Lithuania and 14 per cent in Latvia.

The map in figure 6 shows motorway density (km of motorways per territory of the country) in the ECE region. Among countries reporting data in recent years, the highest motorway density was in Armenia, Azerbaijan and Georgia with the lowest motorway densities in Finland, Norway and Ukraine. These data reflect the overall view of the country and regional differences may be substantial, particularly within countries such as Ukraine with large geographic areas of the country that are sparsely populated.

**Figure 6 Motorway density for 2018 (or latest year available)**

Notes: Kilometres of motorway per 1,000 km<sup>2</sup>. Grey represents countries for which data for 2013 or later were not reported.

**Figure 7 Percentage growth in motorway density (2008-2018)**

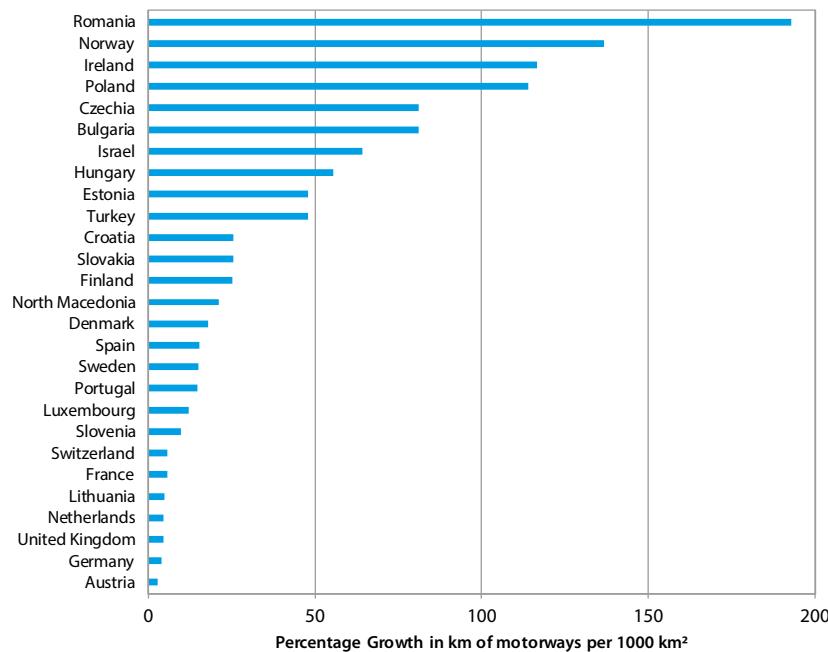

Figure 7 shows the change in motorway density between 2008 and 2018 in those member States providing data. The figure shows that motorway density increased the most in Ireland, Norway and Romania reflecting significant investment in roads over the ten-year period and did not fall in any member States reporting data for these two years.

The remainder of this chapter summarizes road transport data on:

- Road infrastructure;
- Road vehicle fleet; and
- Road vehicle activity.

Notes: Motorway density = Kilometres of motorway per 1,000 km<sup>2</sup>.

## NOTES TO TABLE 1

### Country notes

- <sup>1</sup> "Local roads" included under "Provincial roads".
- <sup>2</sup> In 2012, the Highway Act came into force and unclassified roads are excluded from other roads.
- <sup>3</sup> Road administration system change since 1 January 2016; most of expressways were changed into class II motorways.
- <sup>4</sup> "Motorways" refers to first class roads, "Provincial roads" refers to local roads, "Local roads" refers to forest and private roads.
- <sup>5</sup> "Motorways" includes communal, provincial and state roads. "Local roads" refers to communal and district water board roads. Data are from 1 April.
- <sup>6</sup> Data for state roads and provincial roads from 2010 onward are not comparable with previous years due to the reclassification of approximately 17 000 kilometres of roads.
- <sup>7</sup> Refers to mainland only.
- <sup>8</sup> Data do not cover Kosovo and Metohija.
- <sup>9</sup> "Other roads" excludes private roads without operational grants. "State roads" includes E roads and national roads.
- <sup>10</sup> State roads refer to other national roads. Provincial roads refer to canton roads.
- <sup>11</sup> "Other roads" does not include urban roads.
- <sup>12</sup> Motorways include Puerto Rico.

## NOTES TO TABLE 2

### Country notes

- <sup>1</sup> "Light goods road vehicles" includes road tractors.
- <sup>2</sup> "Trailers" include semi-trailers.
- <sup>3</sup> Light goods road vehicles refer to all lorries.
- <sup>4</sup> Motorcycles include mopeds. Passenger cars refers to all vehicles with at least four wheels weighing less than 4,500 kg.
- <sup>5</sup> "Motor coaches, buses, etc" excludes trolleybuses.
- <sup>6</sup> Light goods road vehicles refers to load capacity up to 2,999 kg.
- <sup>7</sup> "Mopeds" includes mopeds with engines 50 cc or less.
- <sup>8</sup> Excluding mopeds registered in Åland.
- <sup>9</sup> "Trailers" includes only trailers with authorized total weight  $\geq$  6 tons.
- <sup>10</sup> "Lorries" includes special purpose motor vehicles.
- <sup>11</sup> "Trailers" include semi-trailers and caravans.
- <sup>12</sup> "Lorries" includes road tractors.
- <sup>13</sup> "Semi-trailers" includes trailers.
- <sup>14</sup> Mopeds includes quads and all-terrain vehicles ATVs.
- <sup>15</sup> "Mopeds" refer only to class 1 mopeds.
- <sup>16</sup> Great Britain only.
- <sup>17</sup> From 2007, passenger cars refers to "Light duty vehicles, short wheel base". Motor coaches, buses, etc refer to those used on interstates only. "Motorcycles" include mopeds.

**NOTES TO TABLE 2 (a)****Country notes**

- <sup>1</sup> "10-20 years" refers to greater than 10 years.
- <sup>2</sup> Excluding vehicles for which technical characteristics are unknown.
- <sup>3</sup> "Light goods road vehicles" include "Road tractors". "Trailers" include "Semi-trailers".
- <sup>4</sup> Light goods road vehicles refer to all lorries.
- <sup>5</sup> "Motor coaches, Buses, etc." excludes trolleybuses.
- <sup>6</sup> Excluding vehicles registered in Aland.
- <sup>7</sup> "Lorries" includes special purpose motor vehicles.
- <sup>8</sup> 'Lorries" includes road tractors.
- <sup>9</sup> Great Britain only.

**NOTES TO TABLE 2 (b)****Country notes**

- <sup>1</sup> Light goods road vehicles refer to all lorries.
- <sup>2</sup> "Hybrid electric-petrol" and "hybrid electric-diesel" include plug-in hybrids.
- <sup>3</sup> 'Light goods road vehicles" include "Road tractors".
- <sup>4</sup> For passenger cars, "Hybrid electric-petrol" includes plug-in hybrid petrol-electric and "Hybrid electric-diesel" includes plug-in hybrid diesel-electric.
- <sup>5</sup> "Petrol" includes both diesel and petrol hybrid vehicles.
- <sup>6</sup> "Motor coaches, Buses and Trolleybuses" excludes trolleybuses.
- <sup>7</sup> "Electric motor coaches, buses and trolleybuses" refers to trolleybuses only. "Passenger cars", "hybrid electric-diesel" and "hybrid electric-petrol" include plug-in hybrids.
- <sup>8</sup> Excluding vehicles registered in Aland.
- <sup>9</sup> 'Petrol" includes hybrid vehicles.
- <sup>10</sup> "Petrol" and "diesel" vehicles exclude hybrid vehicles.
- <sup>11</sup> "Other sources" includes hybrid vehicles.
- <sup>12</sup> 'Passenger cars", "hybrid electric-petrol" include plug-in hybrids.
- <sup>13</sup> Hybrid includes plug-ins for passenger cars and motor coaches, buses and trolleybuses.
- <sup>14</sup> Great Britain only.

**NOTES TO TABLE 2 (c)****Country notes**

- <sup>1</sup> "Lorries" includes road tractors.
- <sup>2</sup> "Trailers" includes semi-trailers.
- <sup>3</sup> Light goods road vehicles refer to all lorries.
- <sup>4</sup> 'Semi-trailers" includes trailers.
- <sup>5</sup> Light goods road vehicles refers to load capacity up to 2,999 kg. Load capacity 3,501 kg - 7,500 kg refers to 3,000 kg - 6,999 kg. Load capacity 7,501 kg - 12,000 kg refers to 7,000 kg - 9,999 kg. Load capacity 12,001 kg - 40,000 kg refers to 10,000 kg - 19,999 kg. Load capacity 40,000 kg and over refers to 20,000 kg and over
- <sup>6</sup> Lorries with load capacity 12,001 kg - 40,000 kg refers to greater than 12,000 kg.
- <sup>7</sup> 'Trailers" includes only trailers with authorized total weight  $\geq$  6 tons.
- <sup>8</sup> Load capacity of "lorries" includes lorries for special purpose.
- <sup>9</sup> Semi-trailers with permissible maximum gross weight 30,001 kg - 40,000 kg refers to permissible maximum gross weight  $>$  30,000 kg. Trailers with permissible maximum gross weight 751 kg - 3,500 kg refers to permissible maximum gross weight up to 3,500 kg.
- <sup>10</sup> Semi-trailers with permissible maximum gross weight up to 20,000 kg refers to permissible maximum gross weight up to 9,999 kg. Semi-trailers with permissible maximum gross weight 20,001 kg - 30,000 kg refers to permissible maximum gross weight 10,000 kg - 14,999 kg. Trailers with permissible maximum gross weight up to 750 kg refers to permissible maximum gross weight up to 4,999 kg. Trailers with permissible maximum gross weight 751 kg - 3,500 kg refers to permissible maximum gross weight 5,000 kg - 9,999 kg.
- <sup>11</sup> Great Britain only

**NOTES TO TABLE 3****Country notes**

- <sup>1</sup> "Light goods vehicles" includes road tractors.
- <sup>2</sup> "Trailers" includes semi-trailers.
- <sup>3</sup> "Light goods vehicles" refers to all lorries.
- <sup>4</sup> "Motor coaches, Buses, etc." excludes trolleybuses.
- <sup>5</sup> Includes both new vehicles and used vehicles from abroad.
- <sup>6</sup> Includes vehicles that have been manufactured in the indicated or previous year only.
- <sup>7</sup> Includes new and re-registered vehicles.
- <sup>8</sup> "Semi-trailers" include trailers. Does not include imported vehicles.
- <sup>9</sup> "Motorcycles" include mopeds. "Light goods road vehicles" refers to lorries up to 2,999 kg.
- <sup>10</sup> Great Britain only.

**NOTES TO TABLE 3 (a)****Country notes**

- <sup>1</sup> "Hybrid electric-petrol" and "hybrid electric-diesel" include plug-in hybrids.
- <sup>2</sup> "Light goods road vehicles" include "Road tractors".
- <sup>3</sup> For passenger cars, "Hybrid electric-petrol" includes plug-in hybrid petrol-electric and "Hybrid electric-diesel" includes plug-in hybrid diesel-electric.
- <sup>4</sup> "Light goods vehicles" refers to all lorries
- <sup>5</sup> "Petrol" includes both diesel and petrol hybrid vehicles.
- <sup>6</sup> "Motor coaches, Buses and Trolleybuses" exclude trolleybuses.
- <sup>7</sup> "Passenger cars", "hybrid electric-diesel" and "hybrid electric-petrol" and "New motor coaches, buses, trolley buses", "hybrid electric-diesel" include plug-in hybrids.
- <sup>8</sup> "Petrol" includes hybrid vehicles.
- <sup>9</sup> Includes both new vehicles and used vehicles from abroad. "Petrol" and "diesel" vehicles exclude hybrid vehicles. "Lorries" include special purpose motor vehicles.
- <sup>10</sup> Petrol and diesel passenger car and light goods road vehicle data excludes hybrids.
- <sup>11</sup> Includes vehicles that have been manufactured in the indicated or previous year only.
- <sup>12</sup> Includes new and re-registered vehicles.
- <sup>13</sup> New road vehicle registrations do not include imported vehicles.
- <sup>14</sup> Great Britain only. For 2015-2016, hybrids include plug-ins.

**NOTES TO TABLE 3 (b)****Country notes**

- <sup>1</sup> "Light goods road vehicles" include "Road tractors".
- <sup>2</sup> "Trailers" includes semi-trailers.
- <sup>3</sup> Light goods road vehicles refers to load capacity up to 2,999 kg. Load capacity 3,501 kg - 7,500 kg refers to 3,000 kg - 6,999 kg. Load capacity 7,501 kg - 12,000 kg refers to 7,000 kg - 9,999 kg. Load capacity 12,001 kg - 40,000 kg refers to 10,000 kg - 19,999 kg. Load capacity 40,000 kg and over refers to 20,000 kg and over.
- <sup>4</sup> By "Trailers" includes only trailers with authorized total weight  $\geq$  6 tons.
- <sup>5</sup> Includes both new vehicles and used vehicles from abroad. "Lorries" include special purpose motor vehicles.
- <sup>6</sup> Includes vehicles that have been manufactured in the indicated or previous year only.
- <sup>7</sup> Includes new and re-registered vehicles.
- <sup>8</sup> "Semi-trailers" include trailers.
- <sup>9</sup> Does not include imported vehicles.
- <sup>10</sup> "Trailers" exclude caravans.
- <sup>11</sup> Great Britain only.

## NOTES TO TABLE 4

### Country notes

- <sup>1</sup> "Vehicle-kilometres" for "Lorries and road tractors" refer to lorries.
- <sup>2</sup> Passenger-kilometres refers to public transport only.
- <sup>3</sup> "Tonnes of goods carried" and "tonne-kilometres" refer to goods carried on a commercial basis.
- <sup>4</sup> "Vehicle-kilometres" refers to only vehicles with national registration. "Vehicles-kilometres" for "Lorries and road tractors" refers to only vehicles above 6 tonnes. "Tonne-kilometres" for "Cross trade transport" include transit transport.
- <sup>5</sup> "Passenger-kilometres" for "Motor coaches, Buses, etc" refers to both national and international transport. "Passenger-kilometres" for 'Motorcycles" includes mopeds.
- <sup>6</sup> "Passenger-kilometres" of "Motor coaches, Buses, etc." refer to public transport only.
- <sup>7</sup> Total passenger kilometers refers to public transportation only. "Passenger-kilometres" of "Motor coaches, Buses, etc" includes buses for national transport and trolley buses.
- <sup>8</sup> Total passenger kilometers refers only to "Motor coaches, Buses, etc."
- <sup>9</sup> "Passenger-kilometres" of "Motor coaches, Buses, etc" excludes international transport and mini buses.
- <sup>10</sup> "Vehicle-kilometres" refers to only vehicles with national registration.
- <sup>11</sup> Tonne kilometres for "International transport - loaded in the territory of the reporting country" includes all international transport. "Vehicle-kilometres" refers to motorway traffic only.
- <sup>12</sup> "Vehicle-kilometres" refers to transport on roads outside built-up areas. "Passenger-kilometres" for 2014-2015 refer to transport on national territory.
- <sup>13</sup> 'International transport - loaded in the territory of the reporting country" refers to all international transport. "Cross-trade transport" includes road cabotage transport.
- <sup>14</sup> "Vehicle-kilometres" excludes foreign motorcycles on national territory and "vehicle-kilometres" of "Lorries and road tractors" includes special purpose vehicles.
- <sup>15</sup> "Tonne-kilometres" refer to only goods carried by Norwegian lorries with carrying capacity of 3.5 tonnes or more. "Passenger-kilometres" of "passenger cars" includes taxis and cars for hire.
- <sup>16</sup> "Vehicle kilometres" includes agricultural tractors. "Vehicle kilometres" for "Motorcycles" and "Motor coaches, Buses, etc" exclude foreign vehicles. "Passenger-kilometres" of "Motor coaches, Buses, etc" includes urban transport.
- <sup>17</sup> "Tonne-kilometres" refers to only goods transported by heavy goods vehicles and road tractors. "Vehicle kilometres" for Lorries and road tractors excludes light goods vehicles. Refers to mainland only. "Vehicle kilometres" of "Motor coaches, Buses, etc." refer to public transport only.
- <sup>18</sup> Total passenger kilometres exclude motorcycles. Motorcycles include mopeds.
- <sup>19</sup> "Tonnes of goods carried" and "tonne-kilometres" refers to heavy goods vehicles.
- <sup>20</sup> "Vehicle-kilometres" of "motorcycles" includes mopeds.
- <sup>21</sup> "Vehicle-kilometres" and "passenger-kilometres" for "Passenger cars" and "Motor coaches, Buses, etc." do not include travel on urban roads. "Tonne-kilometres" refer to freight travel on motorways, state and provincial roads. "Vehicle-kilometres does not include travel on urban roads.
- <sup>22</sup> "Vehicle-kilometres" for "Passenger cars" refers to cars and taxis only. Light vans included in "Lorries and road tractors". Great Britain only.

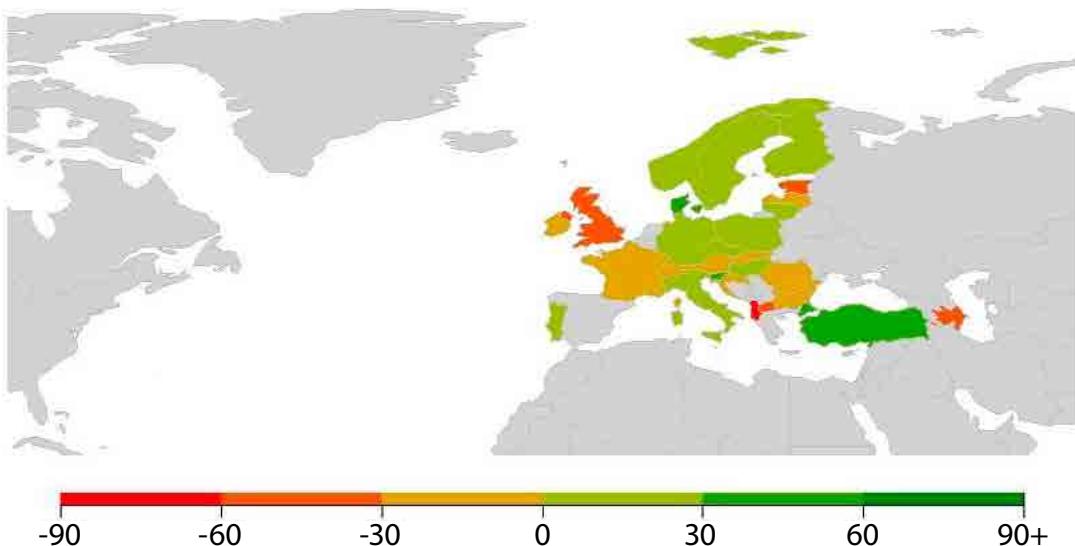

# Railway Transport

## RAILWAY TRANSPORT STATISTICS

This chapter sets out the recent main trends in railway transport in the ECE region in terms of railway infrastructure and activity. A selection of summary statistics is presented in this introduction and detailed data are available in the tables on the following pages.

Figure 8 shows that for those countries with available data, there has been some variation across the region with slightly more countries experiencing increases in rail freight volume between 2008 and 2018 than decreases. Denmark, Slovenia and Turkey reported the largest increases and Albania, Azerbaijan, Estonia, North Macedonia and the United Kingdom experienced the largest decreases in the volume of freight transported over this period.

**Figure 8 Percentage change in rail freight volume (2008-2018)**

Notes: Grey represents countries for which data were not reported in 2008 and in 2018. Measured in tonne-kilometres.

Of countries reporting data in 2018, Belarus, Kazakhstan, Latvia and Ukraine had the largest ratios of tonne-kilometres per unit of gross domestic product (GDP) while Albania, Ireland, Turkey and the United Kingdom had the smallest ratios (data not shown). This reflects the relative importance of freight transport by rail to the economic activity in these countries.

**Figure 9 Percentage change in passenger kilometres (2008-2018)**

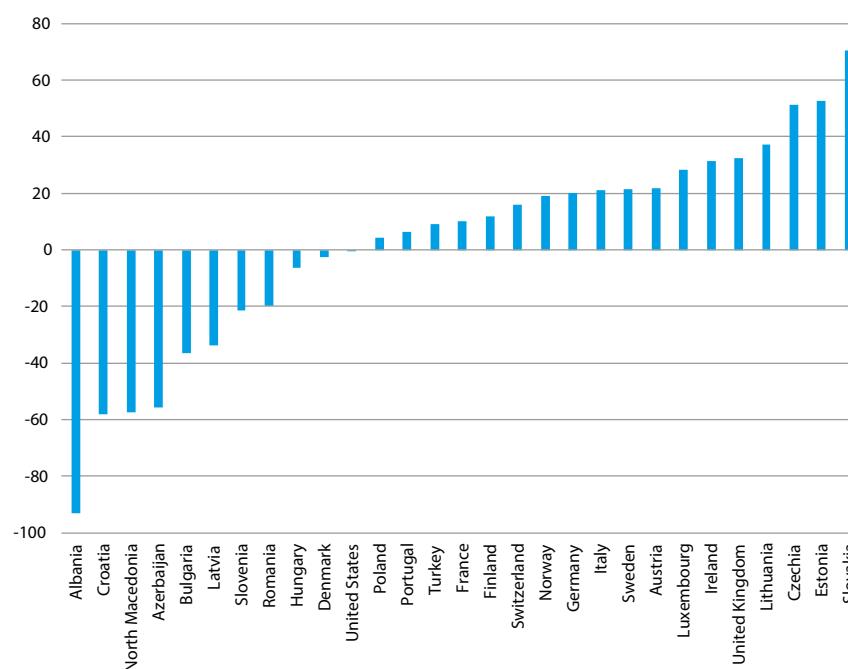

Figure 9 sets out the change in passenger kilometres in the rail sector between 2008 and 2018 for those countries reporting data for these years.

Estonia, Czechia and Slovakia reported the largest increase in passenger rail travel over this period, notably with increases of over 70 per cent in Slovakia. Conversely, Albania, Azerbaijan, Croatia and North Macedonia reported the largest decreases in passenger kilometres.

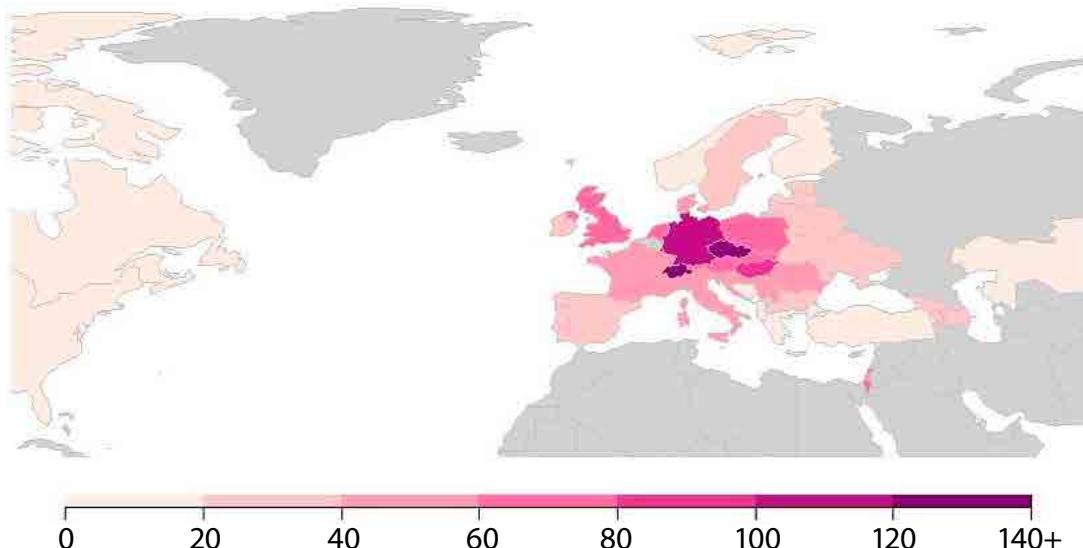

In 2018, Austria, France, Sweden and Switzerland reported the largest ratios of passenger-kilometres per capita while Albania, Bosnia and Herzegovina, North Macedonia and Republic of Moldova each had ratios at least thirty times less than those in the first group (data not shown).

The map in figure 10 illustrates railway density (that is the total length of the railway in kilometres per 1,000 square kilometres) in the ECE region. The light to dark purple sliding scale highlights the differences in density for those member States reporting data.

Czechia, Germany, Luxembourg and Switzerland reported the highest density of railways while the lowest levels of railway density were registered in Canada and Kazakhstan, both countries with low population densities and likely with substantial regional differences in railway density.

More detailed data on railway infrastructure can be found in table 6 later in this chapter.

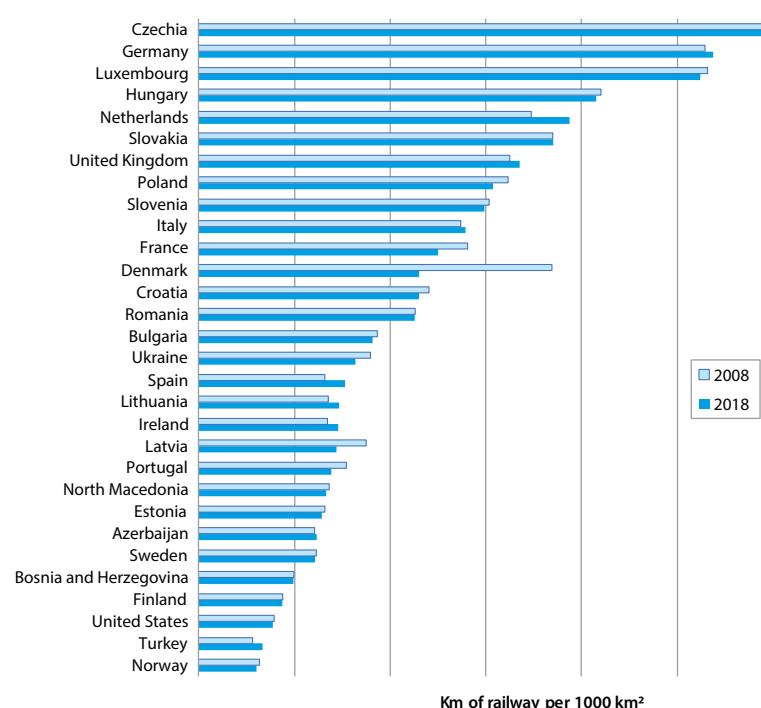

**Figure 10 Railway density (2018 or latest year)**

Notes: Kilometres of railways per 1,000 km<sup>2</sup>. Grey represents countries for which data for 2013 or later were not reported.

Figure 11 elaborates further on the railway density data set out in the figure above to include information on the change in the density between 2008 and 2018.

**Figure 11 Railway density (2008 and 2018)**

Over this period, among countries which reported data in both years, railway density increased the most in Spain and Turkey in terms of percent growth. However, decreases in railway density were also reported over this time period with the largest percentage decreases reported in Denmark and Latvia.

The decreases in railway density over this ten-year period in some countries may demonstrate a general trend towards the closure of less-used lines.

The remainder of this chapter summarises railway transport data in three major categories:

- Rail infrastructure;
- Railway equipment; and
- Railway activity.

Notes: Railway density = Kilometres of railways per 1,000 km<sup>2</sup>.

### NOTES TO TABLE 5

#### Country notes

<sup>1</sup> Passenger only rail traffic includes freight as well.

<sup>2</sup> Lines temporarily closed are not included.

<sup>3</sup> Data are at 1 April.

<sup>4</sup> Refers to Renfe and ADIF only

<sup>5</sup> Excludes branch and station lines.

<sup>6</sup> Includes only Class I freight railroads

## NOTES TO TABLE 6

### Country notes

- <sup>1</sup> Refers to wagons owned by commercial rail operators.
- <sup>2</sup> Vans, Passenger carriages and seats and berths exclude foreign vehicles.
- <sup>3</sup> Includes only Class I freight railroads. Canadian-owned US railroads are excluded.

### NOTES TO TABLE 10

#### Country notes

- <sup>1</sup> Goods partly transported by railway and partly by another mode of transport included in national transport.
- <sup>2</sup> "Goods in transit by rail" includes transition between rail and maritime transport in ports.
- <sup>3</sup> Due to changed collection and processing methods, data from 2018 onward are not comparable with previous years and are estimated at higher levels than before.
- <sup>4</sup> "Tonne-kilometres" includes only Class I freight railroads.

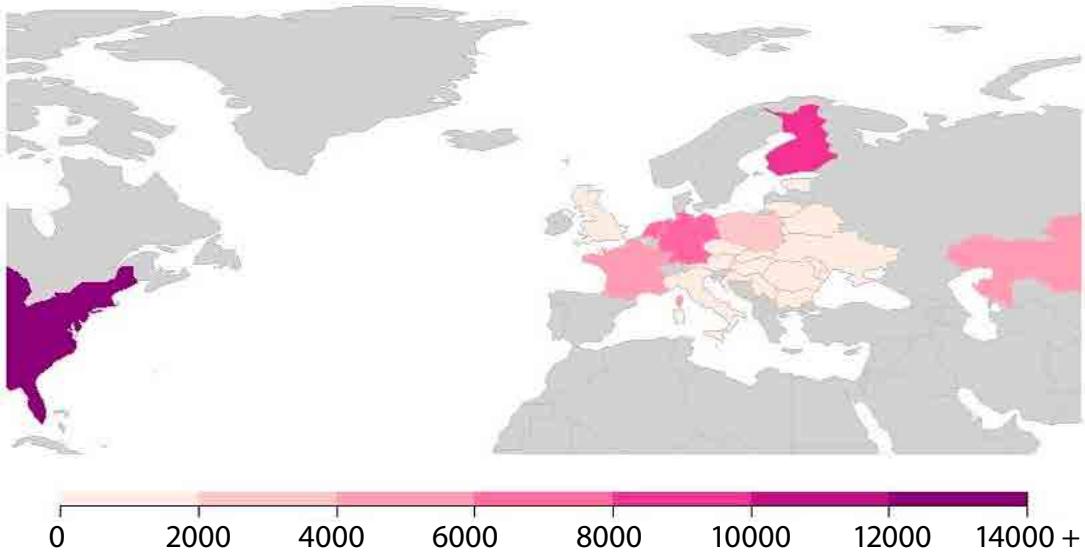

# Inland Waterways

## INLAND WATERWAY TRANSPORT STATISTICS

This chapter sets out the main recent trends in inland waterway transport in the ECE region in both inland waterway infrastructure and activity. The introduction focuses on some of the more significant trends in order to provide a snapshot of some key statistics. The remainder of the chapter provides the detailed statistical tables for each of the main parameters available.

Figure 12 shows the length of the inland waterway network for those member States where data is available on their inland waterway infrastructure (note that not all countries have navigable waterways). The light to dark purple sliding scale highlights the relative differences in the length of navigable waterways for those member States with data.

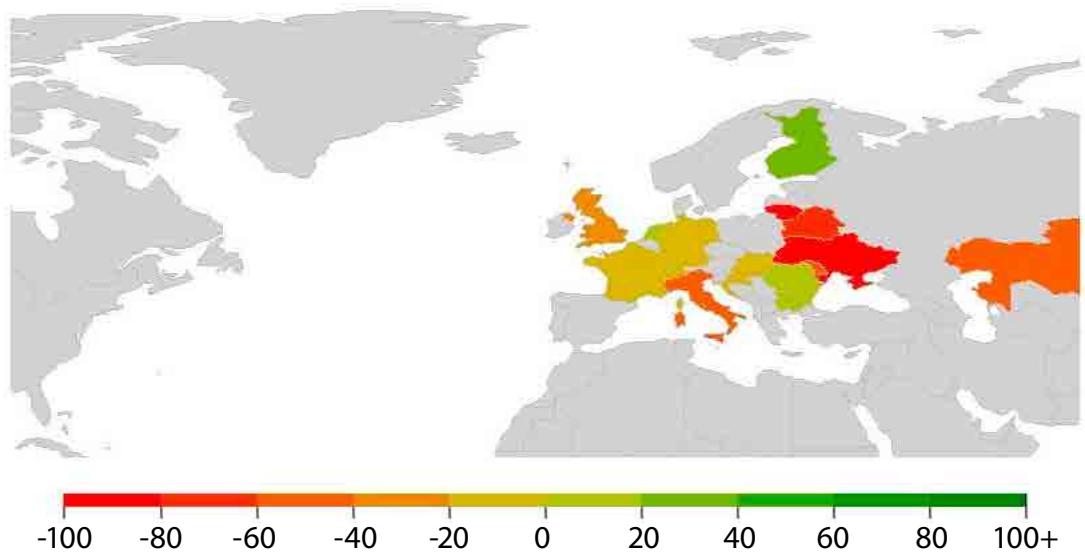

**Figure 12 Total length of navigable inland waterways (2018 or latest year)**

Notes: Grey represents countries without navigable inland waterways or for which data were not reported for 2013 or later. Measured in kilometres of waterways.

Figure 13 shows the growth in inland waterway freight volume as measured by reported tonne-kilometres in member States. This figure shows that the total volume has fluctuated across the region with the biggest variations (for example the decreases in Belarus, Lithuania and Ukraine) being due to, among other things, the relatively small size of their inland waterway networks.

**Figure 13 Percentage change in inland waterway freight volume (2013 to 2018)**

Notes: Grey represents countries for which data were not reported in 2013 and 2018. Measured in tonne-kilometres.

The remainder of this chapter summarizes inland waterway transport data on:

- Length of navigable waterways;
- Registered vessels; and
- Inland waterway activity.

## 11. Navigable inland waterway regularly used for transport at 31 December (Unit: km)

### NOTES TO TABLE 13

#### Country notes

- <sup>1</sup> The split between push/tow and self-propelled vessels is provided for vessel types 1 to 4.
- <sup>2</sup> Self-propelled vessels includes transport by seagoing vessels.
- <sup>3</sup> "Push/tow vessels" refers to all non-self-propelled vessels.

# Annex

## SELECTED DEFINITIONS FROM THE GLOSSARY FOR TRANSPORT STATISTICS

### INTRODUCTION

The *Glossary for Transport Statistics* was published for the first time in 1994 with the purpose of assisting member countries during the collection of data on transport made by the UNECE, the European Conference of Ministers of Transport (ECMT, which became the International Transport Forum in 2006) and Eurostat through the Common Questionnaire.

The 2019 edition, (<http://www.unece.org/index.php?id=52120>) is the result of the valuable cooperation between the three organizations, that – through the action of the Intersecretariat Working Group (IWG.Trans) – put a constant effort into meeting the need to harmonize transport statistics at the international level. The *Glossary* now comprises 744 definitions and represents a point of reference for all those involved in transport statistics. By following the guidance expressed in these definitions, a considerable contribution will be given to the improvement in quality of data and their comparability.

Notice: The explanatory notes in italics, given in some cases below the definitions, were intended to assist countries in filling in questionnaires and are not part of the definitions themselves.

### RAILWAY TRANSPORT

#### Infrastructure

**Track:** A pair of rails over which rail borne vehicles can run maintained by an infrastructure manager. Metro, Tram and Light rail urban lines are excluded. In the context of the EU reporting, the cumulative length of railway tracks excludes also the following:

- Lines solely used for operating touristic trains and heritage trains;
- Lines constructed solely to serve mines, forests or other industrial or agricultural installations and which are not open to public traffic;
- Private lines closed to public traffic and functionally separated (i.e. stand-alone) networks;
- Private lines used for own freight transport activities or for non-commercial passenger services and light rail tracks occasionally used by heavy rail vehicles for connectivity or transit purposes.

**Track gauge:** The smallest distance between a pair of rails measured between the inside surfaces of the rail heads.

*It is distinguished between broad/large (more than 1,435 mm), standard (1,435 mm) and narrow (less than 1,435 mm) gauge railway track.*

**Electrified track:** Track provided with an overhead catenary or a conductor rail to permit electric traction. The following types of electric current are in use:

- AC 25 000 Volts, 50 Hz
- 15 000 Volts, 16 2/3 Hz
- DC 3 000 Volts; 1 500 Volts
- 750 Volts
- 660 Volts
- 630 Volts.

**Sidings:** Tracks branching off running tracks/lines.

*The length of sidings is included in the length of tracks if the sidings are publicly accessible and managed by the infrastructure manager, private sidings being excluded.*

**Railway line:** Line of transportation made up by rail exclusively for the use of railway vehicles and maintained for running trains. A line is made up of one or more tracks, according to the definition A.I-01 Track and the corresponding exclusion criteria. Excluded are:

- Stretches of road or water even if rolling stock is conveyed over such routes, e.g. by wagon-carrying trailers or ferries.

**Electrified line:** An electrified line with at least one track electrified.

## Transport equipment (vehicle)

**Railway vehicle:** Mobile equipment running exclusively on rails, moving either under its own power (tractive vehicles) or hauled by another vehicle (coaches, railcar trailers, vans and wagons).

*The following vehicles are included in the statistics for a railway enterprise:*

- (a) All railway vehicles belonging to the railway enterprise and hired by it and actually at its disposal, including those under or waiting for repair, or stored in working or non-working order, and foreign vehicles at the disposal of the enterprise and vehicles of the enterprise temporarily abroad and engaged in the normal course of running.
- (b) Private owners' wagon, i.e. those not belonging to the railway enterprise but authorized to be operated by it under specified conditions, together with wagons hired out by the railway enterprise to third parties and being operated as private owners' wagons.

*Statistics for a railway enterprise exclude vehicles not at its disposal, i.e.*

- (a) Foreign vehicles or vehicles not belonging to the railway enterprise circulating on the railway network.
- (b) Vehicles which are on hire to, or otherwise at the disposal of, other railway bodies.
- (c) Vehicles reserved exclusively for service transport condemned or intended for sale or, breaking-up.

**Tractive vehicle:** A vehicle equipped with prime mover and motor, or with motor only, intended either for hauling other vehicles (a "locomotive") or for hauling other vehicles and/or for the carriage of passengers and/or goods (a "railcar").

**Locomotive:** A tractive vehicle used for hauling railway vehicles but not intended to carry a payload and has the ability to be uncoupled in normal operation.

**Electric locomotive:** Locomotive with one or more electric motors, deriving current primarily from overhead wires or conductor rails or from accumulators carried on the locomotive.

*A locomotive so equipped which also has an engine (diesel or other) to supply current to the electric motor when it cannot be obtained from an overhead wire or from a conductor rail is classed as an electric locomotive.*

**Diesel locomotive:** Locomotive, the main source of power of which is a diesel engine, irrespective of the type of transmission installed.

*However, electro-diesel locomotives which are equipped to derive power from an overhead wire or from a conductor rail but are also equipped with a diesel engine (bi-mode-locomotives) are classed as electric locomotives.*

*Diesel-electric locomotives which are propelled by electric motors and derive energy from a diesel generator are classed as diesel locomotives.*

**Railcar:** Tractive railway vehicle with motor constructed for the conveyance of passengers or goods by rail.

*The definition of the various categories of locomotives (electric, diesel) applies, similarly to railcar categories.*

A block composed of railcars and railcar trailers can be referred to as:

- "Multiple unit" if it is modular;
- "Trainset" if it is fixed.

*In tractive vehicle statistics, each railcar in an indivisible set is counted separately; in statistics of passenger vehicles and goods vehicles, each body fitted to carry passengers or goods (tractive and non-tractive) is counted as one unit. Independent of drivers' compartments installed or not, any unit with tractive power must be considered as a tractive vehicle. When two railcar units have a common tractive bogie, both units are considered as a tractive vehicle.*

**Passenger railway vehicle:** Railway vehicle for the conveyance of passengers, even if it comprises one or more compartments with spaces specially reserved for luggage, parcels, mail, etc.

*These vehicles include special vehicles such as sleeping cars, saloon cars, dining cars, ambulance cars and vans carrying accompanied road passenger vehicles. Each separate vehicle of an indivisible set for the conveyance of passengers is counted as a passenger railway vehicle. Included are railcars if they are designed for passenger transport.*

**Rail coach:** Passenger railway vehicle other than a railcar or a railcar trailer.

**Railcar trailer:** Non-tractive passenger railway vehicle coupled to one or more railcars.

*Vehicles for the transport of goods, even when pulled by a railcar, are referred to as wagons.*

**Passenger carrying capacity: Seats and berths:** The number of seats and/or berths available in a passenger vehicle when performing the service for which it is intended.

*Seats in dining coaches and buffet compartment places are excluded.*

**Passenger carrying capacity: Standing places:** The number of authorised standing places available in a passenger vehicle when performing the service for which it is intended.

**Rail van:** Non-tractive railway vehicle forming part of a passenger or goods train and used by the train crew as well as for the conveyance of luggage, parcels, bicycles, accompanied road passenger vehicles etc.

*Vehicles possessing one or more passenger compartments are not counted as vans but as passenger railway vehicles. Mail vans are included under vans when they do not have a passenger compartment.*

*Sometimes also referred to as baggage car.*

**Freight wagon or wagon:** Railway vehicle normally intended for the transport of goods.

*Sometimes also referred to as freight car.*

**Covered wagon:** Wagon characterised by its closed construction with a roof and fully enclosed sides, capable of being locked and/or sealed.

*Wagons with an opening roof as well as those insulated, heated and refrigerated are included.*

*Sometimes also referred to as enclosed car.*

**High sided wagon:** Wagon with no roof and with rigid sides higher than 60 cm.

*Sometimes also referred to as high-sided gondola car.*

**Flat wagon:** Wagon without roof or sides, or wagon without roof but with sides not higher than 60 cm, or swing-bolster wagon, of ordinary or special type.

*Sometimes also referred to as flat car.*

## Traffic

**Railway traffic:** Any movement of a railway vehicle on lines operated.

*When a railway vehicle is being carried on another vehicle only the movement of the carrying vehicle (active mode) is considered.*

**Train:** One or more railway vehicles hauled by one or more locomotives or railcars, or one railcar travelling alone, running under a given number or specific designation from an initial fixed point to a terminal fixed point, including a light engine, i.e. a locomotive travelling on its own.

**Types of train:** The main categories being considered are:

- Freight (Goods) train: Train for the carriage of goods composed of one or more wagons and, possibly, vans moving either empty or under load.
- Passenger train: Train for the carriage of passengers composed of one or more passenger railway vehicles and, possibly, vans moving either empty or under load.
- Mixed train: Train composed of passenger railway vehicles and of wagons.
- Other trains: Trains moving solely for the requirements of the railway enterprise, which involve no payments to third parties.

**Train-kilometre:** Unit of measure representing the movement of a train over one kilometre.

*The distance to be considered is the distance actually travelled.*

**Gross tonne-kilometre hauled:** Unit of measurement representing the movement over a distance of one kilometre of one tonne of hauled vehicles (and railcars) and contents.

*The weight of railcars is included, whereas the weight of locomotives is excluded. Passengers and their luggage are excluded. Shunting and other similar movements are excluded.*

## Transport measurement

**Rail transport:** Any movement of goods and/or passengers using a railway vehicle on a given railway network.

*When a railway vehicle is being carried on another rail vehicle only the movement of the carrying vehicle (active mode) is being considered.*

**National railway transport:** Railway transport between two places (a place of loading/embarkation and a place of unloading/disembarkation) located in the same country.

*It may involve transit through a second country.*

*Sometimes referred to as domestic railway transport.*

**International railway transport:** Railway transport between a place (of loading/embarkation or of unloading/disembarkation) in one country and a place (of loading/embarkation or of unloading/disembarkation) in another country.

*It may involve transit through one or more additional countries. To avoid double counting, each country only counts the pkm or tkm performed on its territory. The number of passengers or the weight of the freight transported is counted in each country.*

**Rail passenger:** Any person, excluding members of train crew, who makes a journey by rail.

*Passengers making a journey solely by railway-operated ferry or bus services are excluded.*

*Passengers for whose transportation a rail enterprise does not receive commercial remuneration are included as well.*

*Stowaways or unauthorized users on freight trains and train surfers on passenger trains are excluded.*

**Rail passenger-kilometre (PKM):** Unit of measurement representing the transport of one rail passenger by rail over a distance of one kilometre.

*The distance to be taken into consideration should be the distance actually travelled by the passenger on the network. To avoid double counting each country should count only the pkm performed on its territory. If this is not available, then the distance charged or estimated should be used.*

**Goods carried by rail:** Any goods moved by rail vehicles.

*This includes all packaging and equipment, such as intermodal transport units (ITU) and pallets as well as road goods vehicles carried by rail.*

*Sometimes also referred to as rail freight.*

**Tonne-kilometre (TKM):** Unit of measure of goods transport which represents the transport of one tonne of goods by rail over a distance of one kilometre.

*The distance to be covered is the distance actually travelled on the considered network. To avoid double counting each country should count only the tkm performed on its territory. If it is not available, then the distance charged or estimated should be taken into account.*

**Goods loaded:** Goods placed on a railway vehicle and dispatched by rail.

*Unlike in road and inland waterway transport, transhipments from one railway vehicle directly to another and change of tractive vehicle are not regarded as unloading/loading. However, if the goods are unloaded from a railway vehicle, loaded on another mode of transport and, again loaded on another railway vehicle, this is considered as unloading from the first railway vehicle followed by loading on the second railway vehicle.*

**Goods unloaded:** Goods taken off a railway vehicle after transport by rail.

*Unlike in road and inland waterway transport, transhipments from one railway vehicle directly to another and change of tractive vehicle are not regarded as unloading/loading. However, if the goods are unloaded from a railway vehicle, loaded on another mode of transport and, again loaded on another railway vehicle, this is considered as unloading from the first railway vehicle followed by loading on the second railway vehicle.*

**International goods transport by rail- loaded (outgoing):** Goods carried by rail between a place of loading (on a railway vehicle) located in the declaring country and a place of unloading from a railway vehicle in another country.

*Goods in transit throughout are not included. Wagons loaded on a railway network and carried by ferry to a foreign network are included.*

**International goods transport by rail – unloaded (incoming):** Goods carried by rail between a place of loading (on a railway vehicle) located in a foreign country and a place of unloading from a railway vehicle in the declaring country.

*Goods in transit throughout are not included. Wagons loaded on a foreign railway network and carried by ferry to the reporting network are included.*

**Goods in transit by rail throughout:** Goods carried by rail through the reporting country between two places (place of loading/unloading) outside the declaring country.

*Wagons entering and/or leaving the reporting network by ferry are included.*

## ROAD TRANSPORT

### Infrastructure

**Road:** Line of communication (travelled way) open to public traffic, primarily for the use of road motor vehicles, using a stabilized base other than rails or air strips.

*Included are paved roads and other roads with a stabilized base, e.g. gravel roads. Roads also cover streets, bridges, tunnels, supporting structures, junctions, crossings and interchanges. Toll roads are also included. Excluded are dedicated cycle lanes.*

**Category of road:** Roads are categorised according to three internationally comparable types:

- (a) Motorway;
- (b) Road inside a built-up area;
- (c) Road outside a built-up area (express roads, 2+1 roads and others).

**Motorway/Freeway:** Road, specially designed and built for motor traffic, which does not serve properties bordering on it, and which:

- (a) Is provided, except at special points or temporarily, with separate carriageways for traffic in two directions, separated from each other, either by a dividing strip not intended for traffic, or exceptionally by other means;
- (b) Has no crossings at the same level with any road, railway or tramway track, or footpath;
- (c) Is especially sign-posted as a motorway and is reserved for specific categories of road motor vehicles.

*Entry and exit lanes of motorways are included irrespectively of the location of the sign-posts. Urban motorways are also included.*

**E road:** The international "E" network consists of a system of reference roads as laid down in the European Agreement on Main International Arteries, Geneva, 15 November 1975 and its amendments.

*Reference roads and intermediate roads (Class-A roads) have two-digit numbers; branch, link and connecting roads (Class-B roads) have three-digit numbers.*

### Transport equipment (vehicles)

**Road motor vehicle:** A road vehicle fitted with an engine whence it derives its sole means of propulsion, which is normally used for carrying persons or goods by road, or for hauling, on the road, vehicles used for the carriage of persons or goods.

*The statistics exclude motor vehicles running on rails.*

**Stock of road vehicles:** Number of road vehicles registered at a given date in a country and licensed to use roads open to public traffic.

*This includes road vehicles exempted from annual taxes or license fees; it also includes imported second-hand vehicles and other road vehicles according to national practice. The statistics should exclude military vehicles.*

**New registration of road vehicle:** The registration of a road vehicle for the first time in the reporting country.

*This includes both new road vehicles and imported second-hand vehicles registered in the reporting country for the first time.*

**Age of vehicle:** Length of time after the first registration of the road vehicle, irrespective of the registering country.

**National road vehicle:** A road vehicle registered in the reporting country and bearing registration plates of that country, or having been separately registered (trams, trolleybuses, etc.).

*Where registration of a road vehicle does not apply in a specific country, a national road vehicle is a vehicle owned or leased by a company tax resident in that country.*

## Passenger transport

**Passenger road vehicle:** A road vehicle designed, exclusively or primarily, to carry one or more persons.

*Vehicles designed for the transport of both passengers and goods should be classified either among the passenger road vehicles or among the goods road vehicles, depending on their primary purpose, as determined either by their technical characteristics or by their category for tax purposes.*

**Moped:** Two, three or four-wheeled road motor vehicle which is fitted with an engine having a cylinder capacity of less than 50cc and a maximum authorized design speed in accordance with national regulations. Where limitations concerning the engine displacement are not applicable a restriction in terms of motor power may be in force. Refers to categories L1 and L2 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3)

*Registered and non-registered mopeds in use are included, whether or not they have a number plate. Some countries do not register all mopeds.*

**Motorcycle:** Two-, three- or four-wheeled road motor vehicle not exceeding 400 kg of unladen weight. All such vehicles with a cylinder capacity of 50 cc or over are included, as are those under 50 cc which do not meet the definition of moped. Refers to categories L3, L4 , L5 , L6 and L7 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

**Passenger car:** Road motor vehicle, other than a moped or a motorcycle intended for the carriage of passengers and designed to seat no more than nine persons (including the driver). Refers to category M1 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*Included are:*

- (a) Passenger cars;
- (b) Vans designed and used primarily for transport of passengers;
- (c) Taxis;
- (d) Hire cars;
- (e) Ambulances;
- (f) Motor homes;
- (g) Special passenger cars (police cars, firefighter's cars).

*Excluded are light goods road vehicles, cf. definition B.II-21, as well as motor-coaches and buses, cf. definitions B.II-14 and B.II-15, and mini-buses/mini-coaches, cf. definitions B.II-16.*

*"Passenger car" includes microcars (needing no permit or having the same requirements as mopeds to be driven), taxis and passenger hire cars, provided that they have fewer than ten seats.*

**Motor-coach:** Passenger road motor vehicle designed to seat 24 or more persons (including the driver) and constructed exclusively for the carriage of seated passengers. Refers to class III of categories M2 and M3 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*Excludes trolleybuses.*

**Bus:** Passenger road motor vehicle designed to carry more than 24 persons (including the driver), and with provision to carry seated as well as standing passengers. Refers to class I and class II of categories M2 and M3 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*The vehicles may be constructed with areas for standing passengers, to allow frequent passenger movement, or designed to allow the carriage of standing passengers in the gangway.*

*Excludes trolleybuses.*

*Statistics also include mini-buses designed to seat more than 9 persons (including the driver).*

**Trolleybus:** Passenger road vehicle designed to seat more than nine persons (including the driver), which is connected to electric conductors and which is not rail-born.

*This term covers vehicles that may be used either as trolleybuses or as buses, if they have a motor independent of the main electric power supply.*

**Passenger carrying capacity of motor coaches, buses and trolleybuses:** Number of seats/berths, including the driver's, available in the vehicle when it is performing the service for which it is primarily intended.

*In case of doubt, the highest number of seats/berths available should be taken into account.*

**Tram (street-car):** Passenger or freight road vehicle designed to seat more than nine persons (including the driver) or to transport freight, which is rail borne and connected to electric conductors or powered by diesel engine. The tramway is generally integrated into the urban road system.

## Goods road transport

**Goods road vehicle:** Road vehicle designed, exclusively or primarily, to carry goods. Includes categories N and O of the UN Consolidated Resolution on the Construction of Vehicles (R.E. 3).

*Included are:*

- (a) Light goods road vehicles with a gross vehicle weight of not more than 3 500 kg, designed exclusively or primarily, to carry goods or to be used by craftsmen, e.g. vans, pick-ups, and two- or three-wheeled vehicles;
- (b) Heavy goods road vehicles with a gross vehicle weight above 3 500 kg, designed, exclusively or primarily, to carry goods;
- (c) Road tractors;
- (d) Trailers and semi-trailers;
- (e) Agricultural tractors permitted to use roads open to public traffic.

**Lorry/truck:** Rigid road motor vehicle designed, exclusively or primarily, to carry goods.

**Light goods road vehicle:** Goods road vehicle with a gross vehicle weight of not more than 3 500 kg, designed, exclusively or primarily, to carry goods. Includes category N1 of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*Included are vans designed for and used primarily for transport of goods, pick-ups and small lorries, and two- or threewheeled vehicles with a gross vehicle weight of not more than 3 500 kg..*

**Road tractor (semi-trailer tractor):** Road motor vehicle designed, exclusively or primarily, to haul other road vehicles which are not power-driven (mainly semi-trailers).

*Agricultural tractors are excluded.*

**Trailer:** Goods road vehicle designed to be hauled by a road motor vehicle. With semi-trailers refers to category O of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

*This category excludes agricultural trailers and caravans.*

**Semi-trailer:** Goods road vehicle with no front axle designed in such way that part of the vehicle and a substantial part of its loaded weight rests on the road tractor. With trailers refers to category O of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

**Load capacity:** Maximum weight of goods declared permissible by the competent authority of the country of registration of the vehicle.

*When the goods road vehicle is a road train made up of a lorry with trailer, the load capacity of the road train is the sum of the load capacities of the lorry and the trailer.*

## Traffic and transport

**Road traffic:** Any movement of a road vehicle on a given network.

*When a road vehicle is being carried on another vehicle, only the movement of the carrying vehicle (active mode) is considered.*

**Road traffic on national territory:** Any movement of road vehicles within a national territory irrespective of the country in which these vehicles are registered.

**Vehicle-kilometre:** Unit of measurement representing the movement of a road vehicle over one kilometre.

*The distance to be considered is the distance actually run. It includes movements of empty road motor vehicles. Units made up of a tractor and a semi-trailer or a lorry and a trailer are counted as one vehicle.*

**Road transport:** Any movements of goods and/or passengers using a road vehicle on a given road network.

*When a road vehicle is being carried on another vehicle, only the movement of the carrying vehicle (active mode) is considered.*

**National road transport:** Road transport between two places (a place of loading/embarkation and a place of unloading/disembarkation) located in the same country irrespective of the country in which the road motor vehicle is registered. It may involve transit through a second country.

*Uncoupling of a trailer/semi-trailer from a road motor vehicle and coupling of the trailer/semi-trailer to another road motor vehicle is considered as unloading and loading of the goods in the trailer/semi-trailer.*

**International road transport:** Road transport between a place of loading/embarkation or unloading/disembarkation in the declaring country and a place of loading/embarkation or unloading/disembarkation in another country.

*Such transport may involve transit through one or more additional countries.*

**Road passenger-kilometre:** Unit of measure representing the transport of one passenger by road over one kilometre.

*The distance to be taken into consideration is the distance actually travelled by the passenger.*

**Goods carried by road:** Any goods moved by road goods vehicles.

*This includes all packaging and equipment such as containers, swap-bodies or pallets.*

**Tonne-kilometre by road:** Unit of measurement of goods transport which represents the transport of one tonne by road over one kilometre.

The distance to be taken into consideration is the distance actually run.

**Goods loaded:** Goods placed on a road vehicle and dispatched by road.

*Transshipment from one goods road vehicle to another or change of the road tractor are regarded as loading after unloading.*

**Goods unloaded:** Goods taken off a road vehicle after transport by road.

*Transshipment from one goods road vehicle to another or change of the road tractor are regarded as unloading before reloading.*

## International – loaded

**Goods having left the country by road (other than goods in transit by road throughout):** Goods which having been loaded on a road vehicle in the country, left the country by road and were unloaded in another country.

## International – unloaded

**Goods having entered the country by road (other than goods in transit by road throughout):** Goods which, having been loaded on a road vehicle in another country, entered the country by road and were unloaded there.

**Road cabotage transport:** Road transport within a country other than the registration country, performed by a road motor vehicle registered in the reporting country.

**Cross-trade road transport:** Road transport performed by a road motor vehicle registered in one country between a place of loading/embarkation in a second country and a place of unloading/disembarkation in a third country.

*Such transport may involve transit through one or more additional countries.*

## INLAND WATERWAY TRANSPORT

### Infrastructure

**Navigable inland waterway:** A stretch of water, not part of the sea, which by natural or man-made features is suitable for navigation, primarily by inland waterway vessels. This term covers navigable rivers, lakes, canals and estuaries.

*The length of rivers and canals is measured in mid-channel. The length of lakes and lagoons is measured along the shortest navigable route between the most distant points to and from which transport operations are performed. A waterway forming a common frontier between two countries is reported by both.*

**Navigable river:** Natural waterway open for navigation, irrespective of whether it has been improved for that purpose.

**Navigable lake:** Natural expanse of water open for navigation.

*Lagoons (brackish water area separated from the sea by a coastal bank) are included.*

**Navigable canal:** Waterway built primarily for navigation.

### Transport equipment (vessel)

**Inland waterways vessel:** A floating craft designed for the carriage of goods, public transport of passengers or specially fitted out for a specific commercial duty which navigates predominantly in navigable inland waterways or in waters within, or closely adjacent to sheltered waters or areas where port regulations apply.

*Vessels under repair are included. Vessels suitable for inland navigation but which are authorized to navigate at sea (mixed seagoing and inland waterways vessels) are included. This category excludes: harbour craft, seaport lighters and seaport tugs, ferries, fishery vessels, dredgers, vessels performing hydraulic work and vessels used exclusively for storage, floating workshops, houseboats and pleasure craft.*

**National inland waterways vessel:** Inland waterway transport (IWT) vessel which is registered at a given date in the declaring country.

*Where registration of IWT vessels does not apply in a specific country, a national IWT vessel is a vessel owned by a company tax resident in that country.*

**Inland waterways freight vessel:** Vessel with the carrying capacity of not less than 20 tonnes designed for the carriage of freight by navigable inland waterways.

**Self-propelled barge:** IWT freight vessel having its own means of mechanical propulsion.

*Towed barges, pushed barges and pushed-towed barges which have an auxiliary engine only must be regarded as towed barges, pushed barges or pushed-towed barges as the case may be. The fact that a self-propelled barge can be used for towing does not change its nature.*

**Self-propelled vessel for river-sea navigation:** IWT freight vessel having a carrying capacity of at least 20 tonnes also designed for the transport of goods by sea and equipped with their own means of propulsion developing at least 37 Kw.

**Towed (dumb) barge:** Inland waterway freight vessel designed to be towed which does not have its own means of mechanical propulsion.

*The fact that a dumb barge is fitted with an auxiliary engine does not change its nature.*

**Pushed barge:** IWT freight vessel which is designed to be pushed and does not have its own means of mechanical propulsion.

*The fact that a pushed barge is fitted with the auxiliary engine does not change its nature.*

**Pushed-towed barge:** An inland waterways freight vessel which is designed to be either pushed or towed and does not have its own means of mechanical propulsion.

*The fact that a pushed-towed barge is fitted with an auxiliary engine does not change its nature.*

**River tug:** Powered vessel developing not less than 37 kW and designed for the manoeuvring of vessels and barges and the towing of dumb barges and rafts, but not for the carriage of cargo.

*Also known as a tugboat. Port and sea tugs are excluded.*

**Pusher vessel:** Powered vessel developing not less than 37 kW and designed or fitted for the pushing of pushed or pushed-towed barges but not for the carriage of goods.

*Port pusher vessels are excluded.*

**River pusher tug:** Powered vessel developing not less than 37 kW and designed or fitted for pushing barges but not for the carriage of cargo.

*Also known as a towboat or pushboat.*

*Port and sea tugs are excluded.*

**Carrying capacity of an IWT freight vessel:** Maximum authorised weight of goods, expressed in tonnes, which a vessel may carry.

**Power (kW):** Mechanical force developed by the motive power installation in a vessel.

*This power should be measured in effective kilowatts (power transmitted to the propeller). 1 kW = 1.36 h.p.; 1 h.p.= 0.735 kW.*

**Year of construction of vessel:** Year of original construction of the hull.

## Transport measurement

**Inland waterway transport (IWT):** Any movement of goods and/or passengers using IWT vessels which is undertaken wholly or partly on navigable inland waterways.

*Bunkers and stores supplied to vessels in port are excluded. When an IWT vessel is being carried on another vehicle, only the movement of the carrying vehicle (active mode) is taken into account.*

**National inland waterway transport:** Any movement of goods and/or passengers using an Inland Waterways Transport (IWT) vessel between two places (a place of loading/embarkation and a place of unloading/disembarkation) within a national territory irrespective of the country in which the IWT vessel is registered. It may involve transit through a second country, although for this country this transport has to be reported as transit.

**International inland waterway transport:** Inland waterway transport between two places (a place of loading/embarkation and a place of unloading/disembarkation) located in two different countries. It may involve transit through one or more additional countries. For the latter countries this transport has to be reported as transit.

**Goods carried by inland waterways:** Any goods moved by IWT freight vessel.

*This includes all packaging and equipment such as containers, swap-bodies or pallets.*

**Tonne-kilometre by inland waterways:** Unit of measure of goods transport which represents the transport of one tonne by inland waterways over one kilometre.

*The distance taken into account is the distance actually travelled in the declaring country.*

**Goods loaded:** Goods placed on an IWT vessel and dispatched by inland waterways.

*Transshipment from one IWT vessel to another is regarded as loading after unloading. The same applies to changes of pusher tugs or tugs.*

**Goods unloaded:** Goods taken off an IWT vessel after transport by inland waterways.

*Transshipment from one IWT vessel to another is regarded as unloading before reloading. The same applies to changes of pusher tugs or tugs.*

## International – loaded

**Goods having left the country by inland waterways (other than goods in transit by inland waterways throughout):** Goods which, having been loaded on an IWT vessel in the country, left the country by inland waterways and were unloaded in another country.

## International – unloaded

**Goods having entered the country by inland waterways (other than goods in transit by inland waterways throughout):** Goods which, having been loaded on an IWT vessel in another country, entered the country by inland waterways and were unloaded there.

**Goods in transit by inland waterways throughout:** Goods which entered the country by inland waterways and left the country by inland waterways at a point different from the point of entry, after having been carried across the country solely by inland waterways in the same IWT freight vessel.

*Transshipments from one IWT vessel to another and changes of pusher tugs or tugs are regarded as loading/unloading.*

# 2020 Inland Transport Statistics FOR EUROPE AND NORTH AMERICA

This publication (volume LX) provides a series of transport statistics tables for the 56 member States of UNECE. The publication brings together statistical information on road, rail and inland waterways, and has been prepared by the Sustainable Transport Division of UNECE with the cooperation of national statistical offices. A short summary at the beginning of each chapter provides some key figures on each sector, followed by detailed data on each of the statistics sub-categories. Harmonised data make cross-country comparisons possible and allow evidence-based policy making to achieve the transport-related Sustainable Development Goals.
