# COMMITTEE OF EXPERTS ON THE TRANSPORT OF DANGEROUS GOODS

Sub-Committee of Experts on the Transport of Dangerous Goods (Eighteenth session, 3-14 July 2000, agenda item 5 (a)

# MISCELLANEOUS DRAFT AMENDMENTS TO THE MODEL REGULATIONS ON THE TRANSPORT OF DANGEROUS GOODS

#### Listing and classification

#### Proposal for listing a new self-reactive substance

### Transmitted by the expert from the United States of America

Based on the attached test data, the expert from the United States of America proposes to list 4-Nitrophenylhydrazine, wetted with 25-35% water in the List of Self-Reactive Substance in 2.4.2.3.2.3 as follows:

SELF-REACTIVE SUBSTANCE	Concentration (%)	_	Control temper- ature (°C)	Emergency temper- ature (°C)	UN generic entry	Remarks
4-Nitrophenylhydrazine, water wetted	≤ 71	OP7	None	None	3226	None

#### Annex

## TEST REPORT/SUMMARY FOR (4-NITROPHENYL)HYDRAZINE, 25-35% WATER WET

1. Name of substance : (4-nitrophenyl)hydrazine, 25-35% water wet

General data

2.1 Composition : 65-75% (4-nitrophenyl)hydrazine (70.8%);

25-35% water (27.8%)

2.2 Molecular formula : C6 H7 N3 O2 . x (H2O)

2.3 CAS registry number : 100-16-3 2.4 Physical form : Solid

2.5 Color : Dark orange
2.6 Apparent Density : Not available
2.7 Particle size : Not available

3. Detonation (test series A)

Melting point

2.8

Box 1 of the flow chart : Does the substance propagate a

detonation?

157.5°C

3.1 Method : UN Gap Test (test A.5)
3.2 Sample conditions : Ambient temperature

3.3 Observations : Tube not fully fragmented but average tube

fragmentation is 271.25 mm of length (over 4 trials) which is 1.77X the average inert material (table sugar) fragmentation of 153

mm of length (over 2 trials)

3.4 Result : "Partial"

3.5 Exit : 1.2

4. Deflagration (test series C)

Box 4 of the flow chart : Does the substance propagate a

deflagration?

4.1 Method 1 : Time/pressure test (test C.1)

4.2 Sample conditions : Ambient temperature

4.3 Observations : Did not achieve a pressure rise of 2070

kPa above atmospheric

4.4 Result : "No"

4.5 Method 2 : Deflagration test (test C.2)

4.6 Sample conditions : Preheated to 50°C

page 3 Annex

<b>4</b> .7	Observations Result	:	Preliminary 14 mm and 28 mm tubes - would not sustain ignition without flame source;  Dewar vessel: would not sustain ignition without flame source for 2 trials  "No", no measurable deflagration		
4.9 4.10	Overall result Exit	:	"No" 4.3		
5.	Heating under confinement Box 8 of the flow chart	(test s	eries E) What is the effect of heating it under defined confinement?		
5.1 5.2 5.3	Method 1 Sample conditions Observations	:	Koenen test (test E.1) Mass 49.0 to 49.4 g Limiting diameter 1.5 mm (time to reaction 121 s)		
5.4 5.5 5.6 5.7	Result Method 2 Sample conditions Observations		"Medium" USA pressure vessel test (test E.3) Start at ambient temperature, 5.0 g/trial 1.0 mm: (1) vented, no rupture, (2) Disc rupture; 1.2 mm, 1.5 mm, 2.0 mm, 2.5 mm, 3.0 mm, 3.5 mm: Each of these orifice sizes produced one rupture in one trial; 4.0 mm: (1) vented, no rupture, (2) Disc rupture; 4.5 mm: (1) vented, no rupture, (2) Disc rupture; 5.0 mm: (1) vented, no rupture, (2) vented no rupture, (3) vented, no rupture		
5.8	Result	:	USA-PVT number 5.0; "Medium" - PVT number is between 3.5 - 8.0		
5.9 5.10	Overall result Exit	:	"Medium" 8.2		
6.	Thermal stability (test series H)				
6.1	Method - 77°C	:	Heat accumulation storage test (test H.4) at 77°C		
6.2	Sample conditions	:	250 g of substance in 0.5 liter Dewar vessel run at 77°C		
6.3	Observations	:	77°C trial: Observed temperature rise greater than 6°C in 3 days
