ECONOMIC COMMISSION FOR EUROPE
EXECUTIVE BODY FOR THE CONVENTION ON
LONG-RANGE TRANSBOUNDARY AIR POLLUTION

Steering Body to the Cooperative Programme for Monitoring and Evaluation
of the Long-range Transmission of Air Pollutants in Europe (EMEP)
(Twenty-seventh session, Geneva, 8-10 September 2003)
Item 4 (g) of the provisional agenda

PRESENT STATE OF EMISSION DATA

Note by the Meteorological Synthesizing Centre-West
prepared in consultation with the secretariat

Summary

This document summarizes the official emission data (by sector and national totals) on anthropogenic emissions of the main pollutants (SO_2 , NO_x , NH_3 , NMVOC and CO) for 1980-2001; on heavy metals for 1990-2001; on selected persistent organic pollutants for 1990-2001; and on particulate matter (TSP, PM_{10} , $\text{PM}_{2.5}$) for 2000 and 2001. In addition, Parties provided historical and projected activity data (energy consumption, transport, and agricultural activity) for 1990, 1995, 2000, 2010, 2015 and 2020, as well as projected national total emissions for 2010, 2015 and 2020. Gridded data (in the EMEP 50X50 km² grid), including data on large point sources, were requested only for Parties that had not submitted them in 2000. As of 1 June 2003, 36 Parties (74%) of a total 49 had reported their data. They prepared their submissions, to the extent possible, in accordance with the revised Guidelines for Estimating and Reporting Emission Data, adopted by the Steering Body at its twenty-sixth session (EB.AIR/GE.1/2002/7 and Corr.1). Data presented in the annex to this document are also accessible at: <http://webdab.emep.int/>; the database will be updated in autumn 2003.

Documents prepared under the auspices or at the request of the Executive Body for the Convention on Long-range Transboundary Air Pollution for GENERAL circulation should be considered provisional unless APPROVED by the Executive Body.

I. REPORTING EMISSIONS TO UNECE

1. High-quality emission data are essential to assess the state of air pollution in Europe and to determine progress made toward the environmental goals set out in the protocols to the Convention. Parties submit their official emission data and agreed related information to the UNECE secretariat each year. The secretariat checks that each submission is made through the relevant national authority (official data) and then forwards submissions to the Meteorological Synthesizing Centre-West (MSC-W) for storage, management and consistency analysis. MSC-W also works on developing methods for validating emission data in cooperation with the relevant Parties, which have a chance to correct and finalize their data.
2. The goal established during the seventh phase programme for EMEP (EB.AIR/GE.1/1998/3) was for all gaps in the time series of national annual total and sector (level 1) emissions from protocol base years and onwards to be filled using harmonized emission inventory methodologies as early as possible, and at the latest during the 2005 inventory. Moreover, EMEP aims to have a full set of gridded data for national total and sectoral emissions for every five years with updates for the intervening years, if necessary.
3. In a letter inviting Parties to submit data for the 2003 reporting round, the particular importance of reporting projected activity data was highlighted, as this would be crucial for developing the baseline scenario for integrated assessment modelling providing the basis for the review of the Gothenburg Protocol, and would also be used in the European Commission's Clean Air for Europe (CAFE) Programme. The letter also underlined the importance of providing gridded sector data for the Meteorological Synthesizing Centre West (MSC-W) to be able to allocate transboundary transport in modelling and assessments, and in view of the implications for Parties in the design of emission control and abatement options.
4. Parties were encouraged to report according to the revised Guidelines for Estimating and Reporting Emission Data, adopted by the Steering Body at its twenty-sixth session (EB.AIR/GE.1/2002/7 and Corr.1, to be published in the Air Pollution Studies series, No. 15). Some Parties had indicated during the twenty-sixth session of the Steering Body that they would not yet be in a position to use the revised reporting tables annexed to the Guidelines to report emission data in 2003, but would make every effort to use them in 2004.

II. OFFICIAL SUBMISSIONS OF 2001 DATA TO UNECE

5. According to the Guidelines, Parties were to submit 2001 data to the secretariat by 15 February 2003, two weeks later than the previous year. Gridded data were due on 1 March 2003. Final revisions and corrections were due by 15 March 2003. By 1 June 2003, 36 Parties of a total 49 (74%) had transmitted official emission data submissions to the secretariat. Of those reporting, 29 (81%) reported on time, up from only one quarter last year. Twenty-seven Parties (75% of those reporting) reported at least some emission data according to the revised

reporting tables; others used the previous format, their own format, or a combination thereof. Eighteen Parties (50% of those reporting) reported both on time and with the revised reporting tables.

A. Harmonized nomenclatures for reporting

6. The improvement in emission reporting was due, in part, to the use of the revised Guidelines, as well as to Parties' better understanding and greater capacity to provide the data requested. The Guidelines provide general guidance on minimum reporting, as well as information on additional reporting, recalculations, uncertainties and data quality. The reporting tables annexed to the Guidelines aim to harmonize the nomenclatures for reporting under the Convention with those used by the United Nations Framework Convention on Climate Change.

7. The revised reporting tables, as set out in the Guidelines, were made available to Parties as electronic templates on the EMEP homepage: http://www.emep.int/index_data.html. Methodological issues and problems that arose in the first use of the revised Guidelines will be dealt with during the next meeting of the Task Force on Emission Inventories and Projections (22-24 September 2003) in Warsaw. It is expected that many more Parties will report according to the new tables next year.

B. New data validation tool (REPDAB)

8. Official submissions were made electronically, or sent by post to the secretariat, where they were recorded and archived. Initial verification and assessment of submissions was done by the secretariat, in part with the use of a new data validation software tool (REPDAB) developed by MSC-W. REPDAB was run on each submission and, where formatting errors, gaps or inconsistencies were found, Parties were given the opportunity to resubmit data. This procedure facilitated the verification of submissions, and improved the quality of reporting in the 2003 reporting round.

9. The data and results of the REPDAB reports were thereafter transmitted to MSC-W for consistency analysis, storage, maintenance and modelling, as well as to the Meteorological Synthesizing Centre East (MSC-E) for analysis and modelling of data on heavy metals and persistent organic pollutants, and to the Centre for Integrated Assessment Modelling (CIAM). In the context of cooperation with the European Environment Agency (EEA) and its European Topic Centre on Air and Climate Change (ETC/ACC) in the review of emission inventories, submissions were also sent by the Convention's secretariat to EEA. The Task Force on Emission Inventories and Projections will assess the usefulness of this early sharing of data.

10. Since REPDAB was only introduced after reporting was already under way, several

Parties encountered difficulties in using and understanding this new data-checking tool. Problems encountered with the first use of REPDA will be considered by the Task Force. Next year Parties will be in a position to check their submissions with REPDA, and to make any necessary corrections, prior to submitting data to the secretariat. Many more Parties are thus expected to report correctly in the 2004 reporting round.

III. DATA ON PARTICULATE MATTER, HEAVY METALS AND POPs

11. According to paragraph 22 of the Guidelines, Parties should report emission inventory data for the source categories set out in the nomenclature for reporting (NFR), annually from the year 2000 (annex IV, tables IV 1A and IV 1B). Parties outside the EMEP region are encouraged to report similar information. Parties are also encouraged to report data going back to 1990 in an appropriate format. In addition to providing data on the main pollutants, Parties are requested to provide data on: particulate matter (PM) (for 2000 and 2001), heavy metals (for 1990 to 2001) and POPs (for 1990 to 2001). Twenty-five (70%) of the total 36 reporting Parties were able to submit data on at least one type of PM (i.e. PM_{2.5}, PM₁₀ or total suspended particulate (TSP)), while 11 (31%) of those reporting submitted data on all three types of PM. As for heavy metals, 31 (86% of reporting Parties) reported at least one of the priority metals (i.e. lead, cadmium and mercury); 25 reported all three priority metals and 23 reported at least one additional metal (i.e. arsenic, chromium, copper, nickel, selenium or zinc). Ten Parties reported all three priority metals and all three types of PM: Austria, Belgium, Denmark, Finland, France, Hungary, Netherlands, Norway, Poland and Sweden. Twenty-two Parties (61% of those reporting) reported data on at least one persistent organic pollutant.

12. Data on heavy metals and POPs are increasingly important for the preparations for the reviews of the Protocols on Heavy Metals and POPs. Both the EMEP Steering Body and the Working Group on Strategies and Review, moreover, have recognized the need for better information on particles. Consequently, the Task Force may wish to consider the obstacles to Parties' reporting more comprehensively on emissions of particulate matter, heavy metals and POPs.

IV. GRIDDED DATA, DATA ON LARGE-POINT SOURCES, PROJECTED ACTIVITY DATA AND INVENTORY REPORTS

13. According to paragraph 22 of the Guidelines, Parties should report, on a five-yearly basis, data in the EMEP 50x50 km² grid, including both national totals and sector emissions, for the main pollutants, PM, lead, cadmium and mercury, as well as for the following persistent organic pollutants: polycyclic aromatic hydrocarbons (PAHs), hexachlorobenzene (HCB), dioxins and furans (PCDD/F). By 1 June 2003, the following Parties had submitted such gridded data for the 2003 reporting round: Belgium (preliminary data only), Bulgaria,

Croatia, Finland, Hungary (preliminary data only), Latvia, Serbia and Montenegro (sulphur and nitrogen oxides only), Slovakia, Spain, Sweden and the former Yugoslav Republic of Macedonia. Problems with gridded data submitted by Croatia, Latvia and the former Yugoslav Republic of Macedonia were highlighted to emission data experts from those countries and it is hoped that future submissions will improve.

14. According to paragraph 23 of the Guidelines, for the year 2000 and every fifth year, Parties within the geographic scope of EMEP should provide data on large point sources, including type of source, geographic coordinates (latitude and longitude), emission quantities of pollutants (main pollutants, PM, heavy metals and POPs) and, where appropriate, effective chimney height. Parties in areas outside the geographic scope of EMEP are encouraged to make available similar information. All stationary source facilities discharging more than 500 metric tons per year of sulphur, nitrogen oxides, non-methane volatile organic compounds or total suspended particulate are considered to be large point sources, regardless of the type of emitter or sector, including large airports meeting at least one of these criteria. The following eight Parties included data on large point sources in their submissions: Belgium (preliminary data for 2000, for the Walloon region only), Bulgaria (2000), Cyprus (2000), Estonia (2001, TSP only), Latvia (2001), Slovenia (2001, PM₁₀ only), Spain (90-2001) and the former Yugoslav Republic of Macedonia (2001). Several Parties experienced problems with the definitions of large point sources and the use of the templates. The Task Force will address these issues.

15. According to paragraph 24 of the Guidelines, Parties within the geographic scope of EMEP should report projected activity data on energy consumption, electricity and heat production, energy consumption for the transport sector and agricultural activity data for the years 2010, 2015 and 2020. The following 12 Parties reported projected activity data for at least one of these years: Bulgaria (preliminary data only), Croatia, Cyprus, Denmark, Latvia, Monaco, Norway, Portugal, Slovakia, Slovenia, Sweden and the former Yugoslav Republic of Macedonia.

16. Paragraph 24 of the Guidelines also calls for projected national total emissions for 2010, 2015 and 2020 of: sulphur oxides, nitrogen oxides, non-methane volatile organic compounds and ammonia. Twenty-one Parties reported projections for at least one of these years and at least one of the pollutants: Azerbaijan, Belgium (preliminary data only), Bulgaria, Canada, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Germany, Hungary, Latvia, Liechtenstein, Norway, Poland, Portugal, Slovakia, Slovenia, Switzerland, United Kingdom and United States of America.

17. Paragraph 38 of the Guidelines encourages Parties to submit, no later than three months after submitting emission data reports, an informative inventory report to the secretariat. These reports should contain a description of the methodologies and assumptions used in each

sector, references or sources of information, emission factors, information on recalculations, notation keys, uncertainties and quality control of data. Parties are encouraged, moreover, to publish their emission data and inventory reports and, where possible, to make them available on the Internet. By 1 June 2003, informative inventory reports had been received from three Parties: Finland, Latvia and Sweden. No information was given on the Internet accessibility of the reports.

V. DATA QUALITY AND IMPROVEMENT

18. In accordance with the work plan of the Executive Body, the Task Force on Emission Inventories and Projections should work with Parties to improve the quality and completeness of emission reporting with a focus on validation and good practice (ECE/EB.AIR/77/Add.2, annex XIII, item 2.1). To this end, an EMEP workshop on validation and evaluation of air emission inventories was held at Gothenburg (Sweden) on 14-16 October 2002, in which the need for a more comprehensive inventory improvement programme was identified (EB.AIR/GE.1/2003/5).

19. The Steering Body may wish to consider ways to ensure the quality of overall air emission inventories so as to meet EMEP and policy needs, for instance for the review of protocols and the CAFE programme, including procedures for the review of inventories, taking account of proposals by MSC-W, as well as further harmonization with the reporting and review process of the United Nations Framework Convention on Climate Change.

VI. EMISSION TRENDS IN THE EMEP AREA

20. Provided that all gaps are filled in the time series of reported emission data, it is possible to calculate the development of total emissions over the EMEP area since 1980. Figures I-IV illustrate the emission trends for SO₂, NO_x, NH₃ and NMVOC, respectively.

21. European sulphur dioxide emissions (fig. I) show a clear downward trend. Total SO₂ emissions declined 61% between 1980 and 2001. National total emissions of NO_x reported by the Russian Federation for 1980-1987 included only stationary sources, and this year MSC-W has added the contribution from mobile sources reported by the Russian Federation in 1990. This influenced strongly the NO_x trends in the 1980s in the EMEP area (fig. II). The reduction in NO_x was 25% between 1980 and 2001.

22. European emissions of ammonia (fig. III) dropped by 24% between 1990 and 2001; the almost constant emissions before 1990 is mainly the result of assumptions made to fill in missing data for most countries. The total emission level of ammonia, notably for the late 1990s, has been revised downward compared to last year, as a result of the submission of ammonia emission data from Ukraine and recalculations by Spain.

23. The NMVOC emissions (fig. IV) refer to anthropogenic releases only. The trend between 1980 and 1986 is different from that reported previously, because attempts have been made to complete the emission data from the Russian Federation, which reported an incomplete set of emission sources. The reduction between 1980 and 2001 was 33%, while the decline from 1988, when emissions peaked, to 2001 was 35%.

24. The procedures followed by MSC-W for completing or correcting the time series of emission data will be documented and presented to the Task Force. Projections for 2010, shown in figures I-IV, are provided by CIAM, and the current legislation scenario (CLE) was used for all Parties where available. For other Parties and areas, reported projections or the latest emission figure was used. Although total NH₃ emissions for 2010 reported this year are only 1% higher than those reported last year, there was an increase in emission levels for the EMEP area between 2001 and 2010 (see para. 22 above).

25. Tracking emission reductions achieved by each Party is central to the work of the Convention. Figures V to VIII present the percentage emission reduction ($100 \times E_{year1} - E_{year2}) / E_{year1}$) between 1990 (the Gothenburg Protocol base year) and 2001. The calculated reductions tabulated in table 11 are based on updated emissions officially reported by each Party. Non-Signatories to the Protocol are listed to the right in the figures. The Protocol had 31 Signatories as of 1 May 2003.

26. All data used in the MSC-W model runs will be presented and analysed in the technical report to the Steering Body at its twenty-seventh session (EMEP/MSC-W Note 1/03).

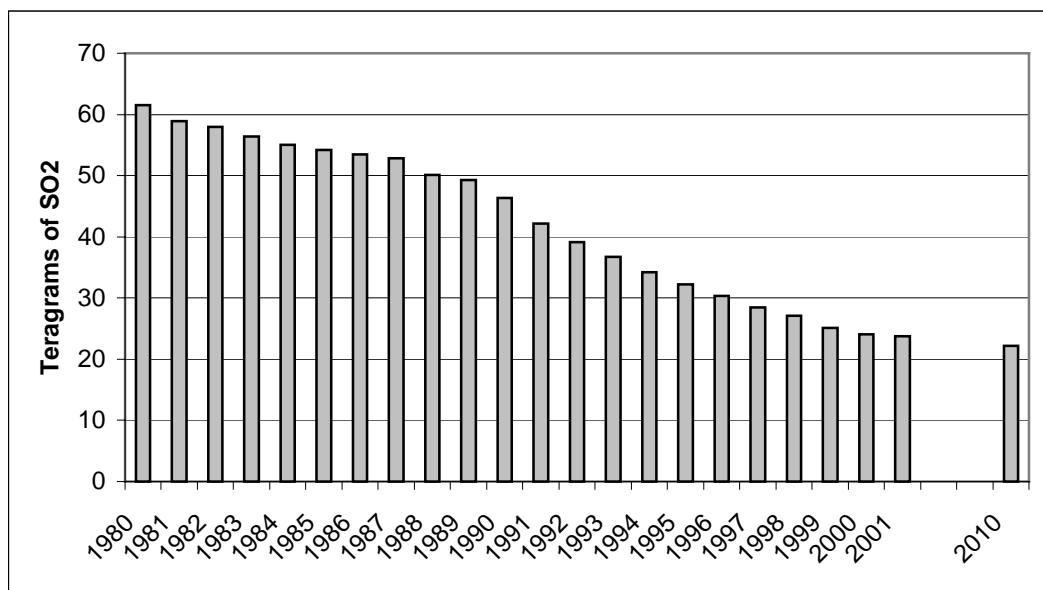

Figure I. Sulphur emission trends in the EMEP area (1980-2001, 2010)

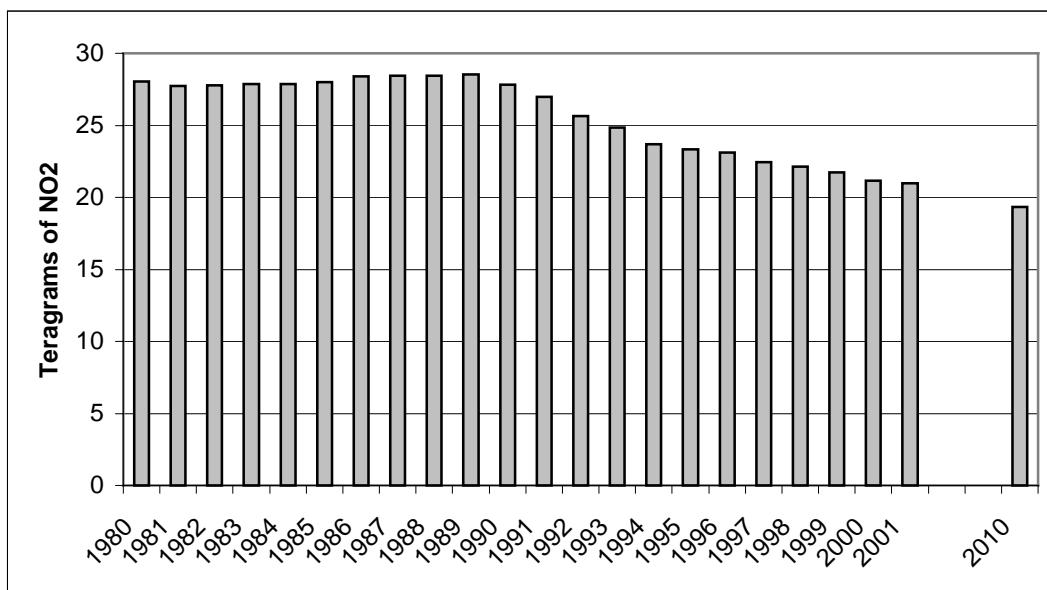

Figure II. Nitrogen oxides emission trends in the EMEP area (1980-2001, 2010)

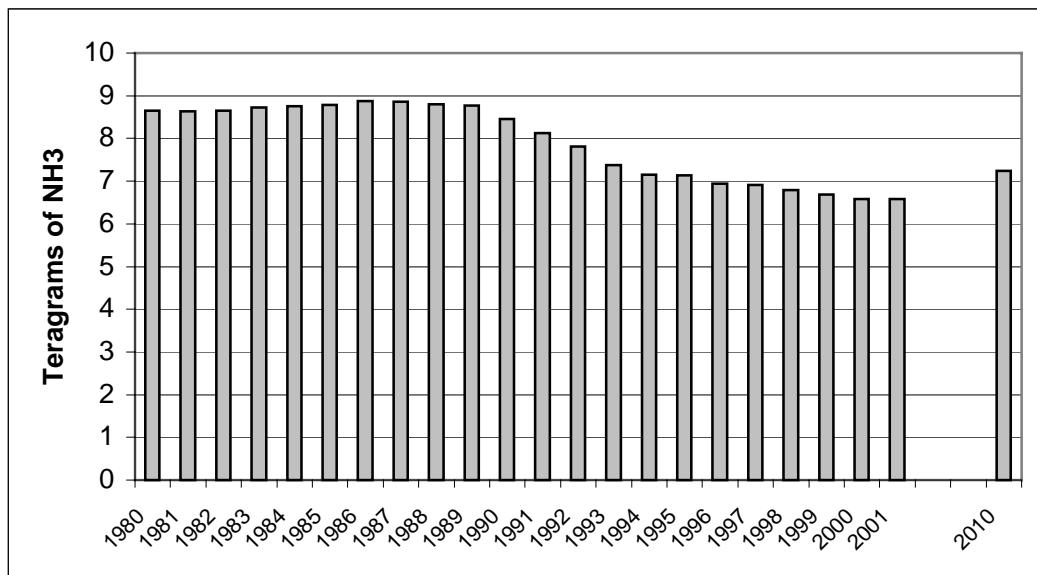

Figure III. Ammonia emissions trends in the EMEP area (1980-2001, 2010)

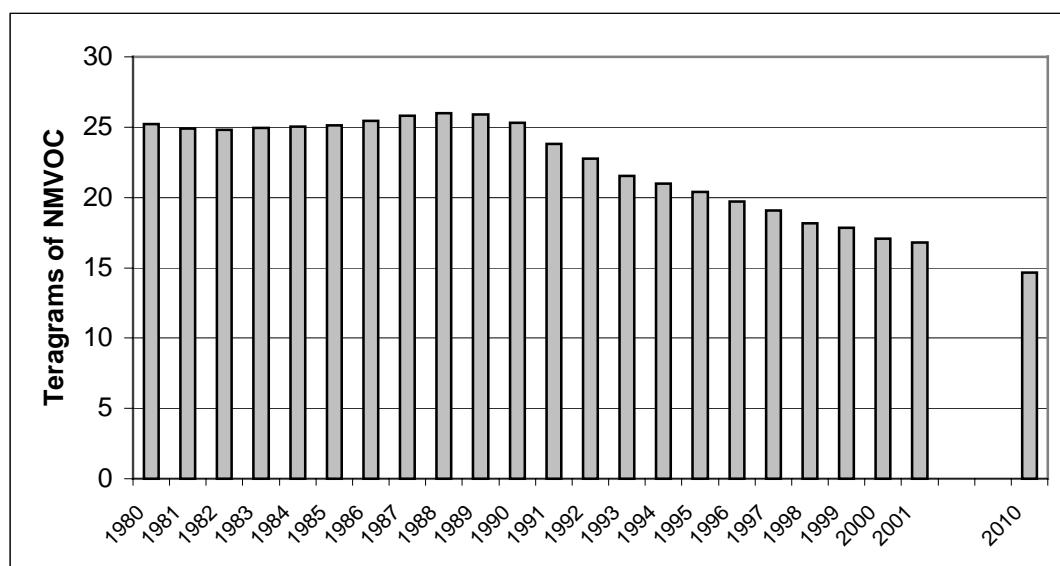

Figure IV. Trends in emissions of volatile organic compounds in the EMEP area (1980-2001, 2010)

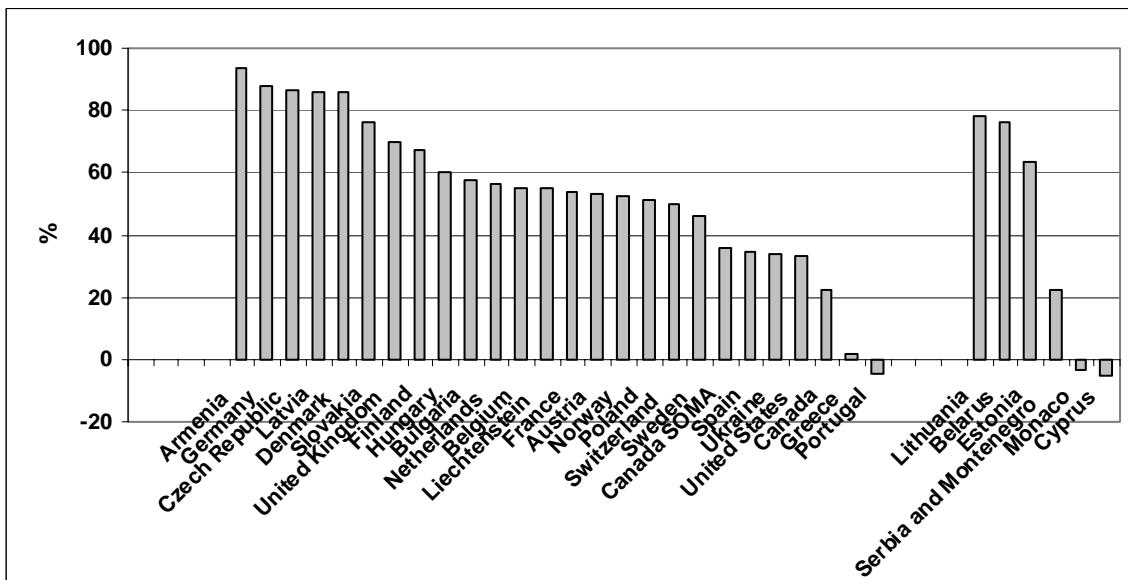

Figure V. Sulphur emissions reductions in the ECE region (1990-2001) (based on the latest data available). Signatories to the 1999 Gothenburg Protocol are on the left. Only countries that have reported national total emission data, including main sources, for both 1990 and 2001 are listed here.

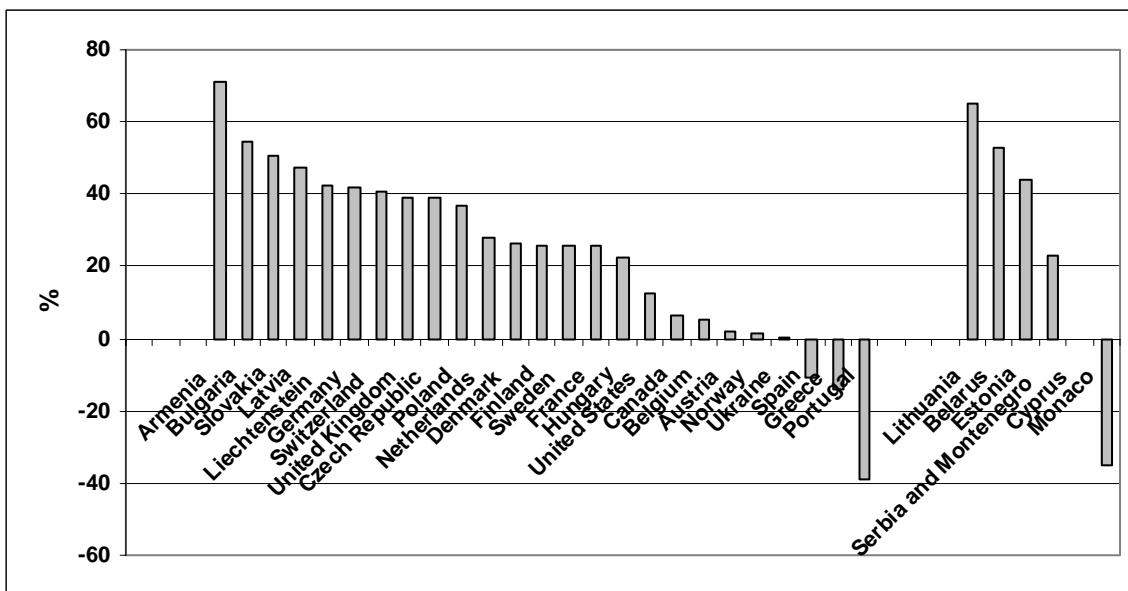

Figure VI. Nitrogen oxides emission reductions in the ECE region (1990-2001) (based on the latest data available). Signatories to the 1999 Gothenburg Protocol are on the left. Only countries that have reported national total emission data, including main sources, for both 1990 and 2001 are listed here.

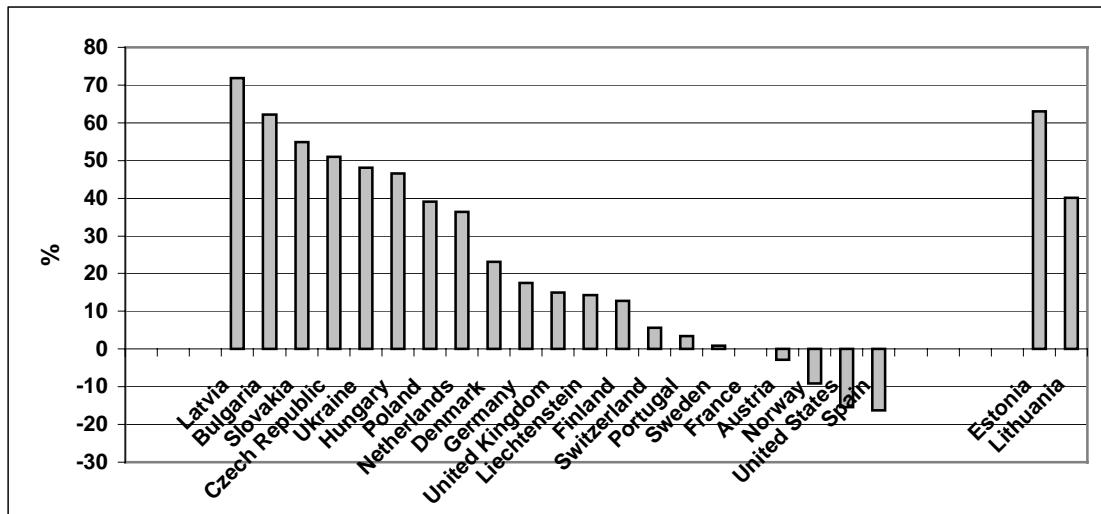

Figure VII. Emission reduction of ammonia in the ECE region 1990-2001 (based on the latest data available, see table 3). Signatories to the 1999 Gothenburg Protocol are on the left. Only countries that have reported national total emission data including main sources for both 1990 and 2001 are listed here.

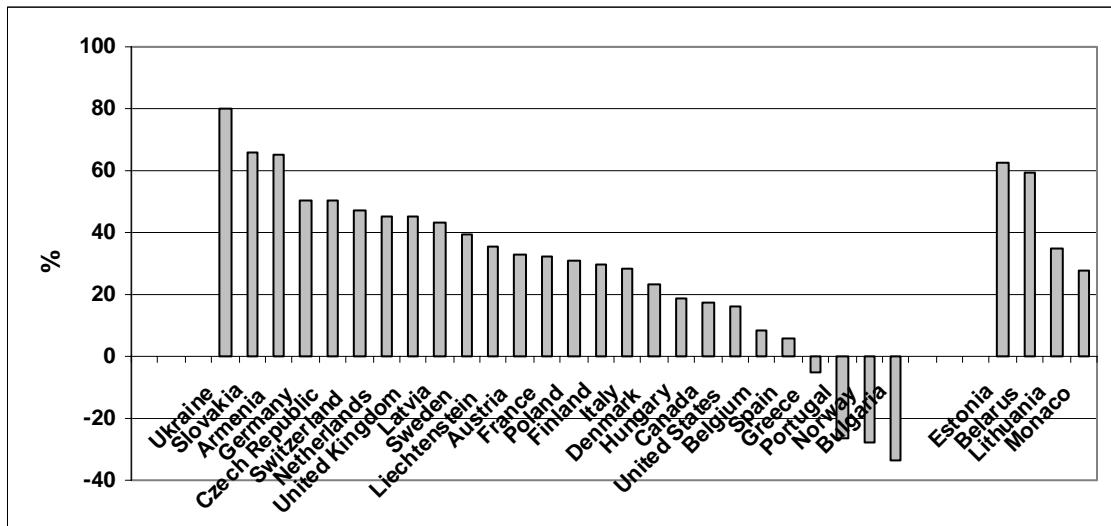

Figure VIII. Reductions in emissions of non-methane volatile organic compounds in the ECE region (1990-2001) (based on the latest data available, see table 4). Signatories to the 1999 Gothenburg Protocol are on the left. Only countries that have reported national total emission data, including main sources, for both 1990 and 2001 are listed here.

Table 1, footnotes: Anthropogenic emissions of sulphur in the ECE region

¹ Reduction from 1993 onwards explained by blockade, followed by decline in energy production. 1999 reduction explained by use of natural gas as fuel.

² 1980-2001: Recalculated due mainly to revision of energy balance.

³ 2010, 2015, 2020: National projections calculated according to 1990 baseline and economic development forecast.

⁴ 2000: NFR 8 emissions included in NFR 7.

⁵ S90: Relevant information lacking for at least one of the three Belgian regions in 1980-89, therefore no sector data given before 1990.

⁶ 2000 S7 S8: Calculated on the basis of total quality of fuels used by sector.

⁷ Emissions of SO₂ for Sulphur Oxides Management Area (SOMA) (year, value)(Gg):

1980:	3245	1988:	2190	1996:	1206
1981:	2819	1989:	2241	1997:	1210
1982:	2373	1990:	1872	1998:	1247
1983:	2382	1991:	1586	1999:	1149
1984:	2598	1992:	1546	2000:	1221
1985:	2343	1993:	1576	2001:	1196
1986:	2053	1994:	1382		
1987:	2111	1995:	1227		

⁸ 1980-1989: Data missing because Croatia was part of Yugoslavia; 1990-1998: Distributed according to SNAP90; 1999-2000: Distributed according to SNAP97.

⁹ Data include emissions within the EMEP area; 1985-2001: For road traffic new method used to estimate fuel balance.

¹⁰ 1980-2010: Data include emissions within the EMEP area only. National totals do not include international air traffic and international sea traffic; 2010: Figures correspond to national emission ceilings (NEC).

¹¹ Calculations based on official statistical data. Due to economic and social difficulties, collection of statistical data inadequate and not of reliable quality.

¹² Two thirds of SO₂ emitted as H₂S; 1980 and 1981 emissions assumed to be similar to 1982 due to lack of data.

¹³ 1996-2000 emissions estimated according to SNAP97.

¹⁴ 2001: Sector 1A4a included in 1A4b; cannot separate emissions from commercial/institutional sectors from emissions from residential sectors.

¹⁵ 1990, 1995, 1998-2001: 1A3e: Other mobile sources such as draglines, building cranes etc; 2G: Emissions from industry not attributable to previous two categories; 3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹⁶ 1980, 1987, 1989-2001: 1A2 other: Manufacturing Industries and Construction: 1A2 f other: All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction; 1 A 3 Transport: 1A3e other: 1A3eii includes machinery except in agriculture/forestry/fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1A4c Agriculture/Forestry/Fishing; 1B1 fugitive emissions from solid fuels: 1B1c other: no emissions reported; 2 A mineral products: 2A7 other including non-fuel mining and construction; manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3; glass, plaster, clay products, rock wool. Mining, crushing plants, sand-pits. Construction; 2B chemical industry: 2B5 other: Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint; 2 Total industrial processes: 2G other: no emissions reported; 3 Total solvent and other product use: including products containing HMs and POPs; In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹⁷ 1990-2001 and 2010, 2020: National totals include emissions in Portuguese territorial areas outside EMEP grid area: Azores and Madeira Islands. 1990-2001: Recalculations reflecting mostly revision of national energy balances by Economy Ministry.

¹⁸ Since 1993 emissions on left bank of Dniester River not included, except emissions from Moldavian electric station; 1991-1992 decline in emissions due to decrease in the national economy. 1990-1999: Emissions calculated according to EMEP/CORINAIR Emission Inventory Guidebook and Greenhouse Gas Inventory Reporting Instructions. SOx emissions for 1980-1989 do not include mobile sources.

¹⁹ Figures apply to European part within EMEP; since 1980, SO₂ emission data updated to reflect emissions from mobile sources (agricultural engineering, road-building machinery and railway transport).

²⁰ 1980-2001: Figures refer to stationary sources only.

²¹ 1990-2000: S4 emissions included in S3; 2000-2020: Main pollutants, particulate matter and heavy metals; 1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

²² 1990-2001: Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

²³ 1990-2000: Mobile sector recalculated.

²⁴ 2010: Emissions correspond to national emission ceiling (NEC) in Gothenburg Protocol.

²⁵ 1997: Refers to Skopje only; 1998: Sectors 1-6 only; data for sectors 7-11 not yet ready; 2000-2001: Includes all sectors.

²⁶ Emissions from fuel combustion in all sectors calculated only for 1999; 2010: Sum of reported sector data.

^{aa} 1990-2000: For 1990-2000, data as compiled for UNFCCC submission used; Time series differ slightly due to different treatment of overseas territories and international bunkers. EC inventory relies on availability and submission of data by Member States. However, to provide more complete picture, emissions of air pollutants reported by EC and Member States under UNFCCC (SO_x, NO_x, CO and NMVOC) have been used.

Table 2, footnotes: Anthropogenic emissions of nitrogen oxides in the ECE region

²⁷ Reduction from 1992 onwards explained by blockade, followed by drop in energy production.

²⁸ 1980-2001: Recalculated due mainly to revision of energy balance.

²⁹ Relevant information lacking for at least one of the three Belgian regions from 1980-89, therefore no sector data given before 1990.

³⁰ 2000: S7 S8 emissions calculated on basis of total quality of fuels used by sector.

³¹ 1980-1989: Data missing because Croatia was part of Yugoslavia; 1990-1998: Distributed according to SNAP90; 1999-2000: Distributed according to SNAP97.

³² Data include emissions within EMEP area; 1985-2001: For road traffic new method used to estimate fuel balance.

³³ Data include emissions within EMEP area. National totals do not include international air traffic and international sea traffic; 2010: figures correspond to National emission ceilings (NEC).

³⁴ Calculations are based on official statistical data. Due to economic and social difficulties, collection of statistical data inadequate and not of reliable quality.

³⁵ 1987: Based on emission figures for 1990-2000.

³⁶ 1996-2000 emissions estimated according to SNAP97.

³⁷ 2001: Sector 1A4a included in 1A4bi because data available at present do not allow for separate emissions from commercial/institutional sectors and emissions from residential sectors.

³⁸ 1990,1995 and 1998-2001: 1A3e: Other mobile sources such as draglines, building cranes etc.; 2G: emissions from industry not attributable to previous two categories; 3D: Emissions from use of consumer products: emissions from cigarettes, foam and (car) service companies.

³⁹ 1980, 1987 and 1989-2001: 1A2 other: Manufacturing Industries and Construction: 1A2f other: All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction; 1A3 Transport: 1A3e Other: 1A3eii includes machinery except in

Agriculture/Forestry/Fishing, military and households. Snow scooters and small watercraft are included under 1A4b Residential and 1A4c Agriculture/Forestry/Fishing; 1B1 Fugitive Emissions from Solid Fuels: 1B1c Other: No emissions reported; 2 A Mineral products: 2A7 Other including Non Fuel Mining and Construction; Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-

2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction; 2 B Chemical industry: 2B5 Other: Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint; 2 total industrial processes: 2G Other: No emissions reported; 3 Total solvent and other product use: 3D Other: including products containing HMs and POPs; In addition to other solvents, this item includes mercury emissions by evaporation from products.

⁴⁰ 1990-2020: National emission totals include emissions in Portuguese territorial areas that are outside EMEP grid area: Azores and Madeira Islands; 1990-2001: recalculations reflecting mostly the revision of national energy balances under the responsibility of the Economy Ministry.

⁴¹ Since 1993 emissions from the left bank of Dniester River are not included, except for emissions from Moldavian electric station. The drop in emissions between 1991 and 1992 is due to a decrease in the national economy. For 1990-1999 emissions have been calculated according to EMEP/CORINAIR Emission Inventory Guidebook and the Greenhouse Gas Inventory Reporting Instructions. NOx emissions for 1980-1984 do not include mobile sources.

⁴² Figures apply to European part of EMEP. Since 1987, NOx emissions have been updated according to the instruction of the Ministry of Natural Resources for road transport, other mobile sources, etc. NOx emission data for earlier periods (before 1987) have not been corrected; does not include mobile sources.

⁴³ Figures refer to stationary sources only.

⁴⁴ 1990-2000: S4 emissions included in Sector 3; 2000-2020: Main pollutants, particulate matter and heavy metals; 1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at airport.

⁴⁵ 1990-2001: Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

⁴⁶ Mobile sector 1990-2000: recalculated.

⁴⁷ 2010 projections correspond to national emission ceiling (NEC) in Gothenburg Protocol.

⁴⁸ 1997: Refers to Skopje only; 1998: Data for sectors 1-6 only; data for sectors 7-11 not yet ready; 2000 and 2001: For all sectors.

⁴⁹ 2010: Sum of reported sector data.

⁵⁰ 1987-1989: For the time series 1987-1989, data as submitted under the European Environment Information and Observation Network (EIONET) have been used. As no officially agreed data gap filling procedure exists, data gaps were filled by EMEP data and EEA interpolations; 1990-2000: For the time series 1990-2000, data as compiled for the UNFCCC submission; Time series differ slightly due to different treatment of overseas territories and international bunkers. EC inventory relies on availability and submission of data from Member States. However, to provide a more complete picture, emissions of air pollutants reported by EC and its Member States under UNFCCC (SO_x, NO_x, CO and NMVOC) have been used.

Table 3, footnotes: Anthropogenic emissions of ammonia in the ECE region

⁵¹ 1980-2001: Emissions from agriculture was only included in 1990.

⁵² 1980-2001: Recalculations mainly because of revision of energy balance.

⁵³ Without emissions from agriculture.

⁵⁴ As relevant information is lacking for at least one of the three Belgian regions during the period 1980-89, no sector data are given before 1990.

⁵⁵ 2000 S7 S8: Emissions are calculated on the basis of the total quality of the used fuels by sectors.

⁵⁶ 1980-1989: Data are missing because Croatia was part of Yugoslavia.

1990-1998: Distributed according to SNAP90.

1999-2000: Distributed according to SNAP97.

⁵⁷ Data include emissions within the EMEP area only.

1985-2001: Road traffic: New method for estimating the fuel balance.

⁵⁸ Data include emissions within the EMEP area only. National totals do not include international air traffic and international sea traffic.

2010: Emissions correspond to the national emission ceilings (NEC).

⁵⁹ Emissions for 1996-2000 estimated according to SNAP97.

⁶⁰ In 1993 number of livestock decreased compared to 1992.

⁶¹ NH₃ emissions in sector S10 increased in 2001 because for the first time contribution of nitrogen fertilizers was evaluated.

⁶² 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

⁶³ 1990,1995 and 1998-2001:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories.

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

⁶⁴ 1980, 1987 and 1989-2001:

Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other:

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other:

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other:

No emissions reported.

2 A Mineral Products: 2 A 7 Other including Non Fuel Mining and Construction

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry: 2 B 5 Other:

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total Industrial Process: 2 G Other:

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

⁶⁵ National emission totals include emissions in Portuguese territorial areas that are outside EMEP grid area: Azores and Madeira Islands. 1990-2001: Recalculations reflecting mostly the revision of national energy balances under the responsibility of the Economy Ministry.

⁶⁶ 1993 emissions from the left bank of Dniester River are not included, except for emissions from Moldavian electric station. The drop in emissions between 1991 and 1992 is due to a decrease in the national economy. For 1990-1999 emissions have been calculated according to EMEP/CORINAIR Emission Inventory Guidebook and the Greenhouse Gas Inventory Reporting Instructions.

⁶⁷ Figures apply to the European part within EMEP.

NH3 figures for 1980-1986 refer to agricultural sector only. Since 1987 NH3 figures include emissions from industrial sources.

⁶⁸ 2000-2000

Main pollutants, particulate matter and heavy metals.

1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

⁶⁹ 1990-2001 Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

⁷⁰ Mobile sector 1990-2000: recalculated.

⁷¹ Emissions in 2010 correspond to the national emission ceiling (NEC) in the Gothenburg Protocol.

⁷² Sector 4 emissions only.

⁷³ 1990-2000: For the time series 1990-2000, data as compiled for the EC UNFCCC submission were used.

The two time series differ slightly due to different treatment of overseas territories and international bunkers. The EC inventory relies on the availability and submission of Member States' data. However, to provide a more complete picture, the emissions of air pollutants reported by the EC and its Member States under the UNFCCC (SOx, NOx, CO and NMVOC) have been used.

Table 4, footnotes: Anthropogenic emissions of non-methane volatile organic compounds in the ECE region

⁷⁴ Reduction in emissions from 1993 onwards is explained by the blockade, followed by a drop in energy production.

⁷⁵ 1980-2001: Recalculations mainly because of revision of energy balance.

⁷⁶ The NMVOC figure for 1985 includes CH4 emissions. As relevant information is lacking for at least one of the three Belgian regions during the period 1980-89, no sector data are given before 1990.

⁷⁷ 2000 S7 S8: Emissions are calculated on the basis of the total quality of the used fuels by sectors.

⁷⁸ 1980-1989: Data are missing because Croatia was part of Yugoslavia.

1990-1998: Distributed according to SNAP90.

1999-2000: Distributed according to SNAP97.

⁷⁹ Data include emissions within the EMEP area only.

1985-2001: Road traffic: New method for estimating the fuel balance.

⁸⁰ 1990-1999: NMVOC sector 3 emissions are included in sector 8.

⁸¹ 1980-2010: Data include emissions within the EMEP area only. National totals do not include international air traffic and international sea traffic.

2010: Emissions correspond to the national emission ceilings (NEC).

⁸² Calculations are based on official statistical data. Due to economic and social difficulties the collection of statistical data within the country is inadequate. Therefore it can be assumed that data provided here are not reliable.

⁸³ NMVOC emissions by source categories do not include biogenic NMVOC emissions of managed forests since only anthropogenic emissions were requested.

⁸⁴ 1985: Includes CH4.

⁸⁵ There are two main reasons for the considerable NMVOC decrease from 1990 to 1991. One is the change in the calculation methods. Before 1991 a top-down calculation was used, since 1991 a bottom-up method on the basis of a detailed survey has been applied. The second reason is the sudden, rapid recession in the economy including lower industrial production, less fuel and solvent consumption resulting in less VOC emission.

⁸⁶ CH4 included.

⁸⁷ 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

⁸⁸ 1990, 1995 and 1998-2001:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories.

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

⁸⁹ 1980, 1987 and 1989-2001:

Other:

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other:

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other:

No emissions reported.

2 1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other:

A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry: 2 B 5 Other:

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total Industrial Processes: 2 G Other:

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs. In addition to other solvents, this item includes mercury emissions by evaporation from products.

⁹⁰ 2001 and 2010: Other includes: NFR 2 B 5: Carbon black (SNAP 040409) and processes in org. chem. industry (SNAP 0405). NFR 3D: Other use of solvents (SNAP 0604). NFR 7: Nature includes 297 Gg NMVOC from source sector SNAP 11.

⁹¹ 1990-2020: National emission totals include emissions in Portuguese territorial areas that are outside EMEP grid area: Azores and Madeira Islands. 1990-2001: Recalculations reflecting mostly the revision of national energy balances under the responsibility of the Economy Ministry.

⁹² Since 1993 emissions from the left bank of Dniester River are not included, except for emissions from Moldavian electric station. The drop in emissions between 1991 and 1992 is due to a decrease in the national economy.

For 1990-1999 emissions have been calculated according to EMEP/CORINAIR Emission Inventory Guidebook and the Greenhouse Gas Inventory Reporting Instructions.

⁹³ Figures apply to the European part within EMEP.

NMVOC: Natural sources not included. Since 1987 NMVOCs emission data were updated taking into account emissions from railway transport, agricultural engineering and road-building machinery.

⁹⁴ 2000-2020.

Main pollutants, particulate matter and heavy metals.

1A3ai Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

6C Waste incineration - total waste incineration.

7 Other - biomass on-site burning and forest fires.

1A3ai(i) International Aviation (LTO) included in 1A3ai(ii).

1A3ai(ii) International Aviation (cruise) included in 1A3ai(iii).

1A3di International Navigation included in 1A3dii.

⁹⁵ 1990-2001.

Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

⁹⁶ Mobile sector 1990-2000: recalculated.

⁹⁷ Emissions in 2010 correspond to the national emission ceiling (NEC) in the Gothenburg Protocol.

⁹⁸ 2010: Sum of reported sector data.

⁹⁹ 1990-2000: For the time series 1990-2000, data as compiled for the EC UNFCCC submission were used.

The two time series differ slightly due to different treatment of overseas territories and international bunkers. The EC inventory relies on the availability and submission of Member States' data. However, to provide a more complete picture, the emissions of air pollutants reported by the EC and its Member States under the UNFCCC (SO_x, NO_x, CO and NMVOC) have been used.

Table 5, footnotes: Anthropogenic emissions of carbon monoxide in the ECE region

¹⁰⁰ Reduction in emissions from 1992 onwards is explained by the blockade followed by a drop in energy production.

¹⁰¹ Recalculations mainly because of revision of energy balance.

¹⁰² 2000 S7 S8: Emissions are calculated on the basis of the total quality of the used fuels by sectors.

¹⁰³ 1980-1989: Data are missing because Croatia was part of Yugoslavia.

1990-1998: Distributed according to SNAP90.

1999-2000: Distributed according to SNAP97.

¹⁰⁴ Data include emissions within the EMEP area only.

1985-2001 Road traffic: New method for estimating the fuel balance.

¹⁰⁵ Data include emissions within the EMEP area only.

¹⁰⁶ Calculations are based on official statistical data. Due to economic and social difficulties the collection of statistical data within the country is inadequate. Therefore it can be assumed that data provided here are not reliable.

¹⁰⁷ Emissions for 1996-2000 estimated according to SNAP97.

¹⁰⁸ 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹⁰⁹ 1990, 1995 and 1998-2001:

1A3e: Other mobile sources such as draglines, building cranes etc

2G: Emissions from industry not attributable to previous two categories

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹¹⁰ 1980, 1987 and 1989-2001

Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other.

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other.

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing.

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other.

No emissions reported.

2 A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction.

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry: 2 B 5 Other

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total industrial processes: 2 G Other

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs. In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹¹¹ National emission totals include emissions in Portuguese territorial areas that are outside EMEP grid area: Azores and Madeira Islands. 1990-2001: Recalculations reflecting mostly the revision of national energy balances under the responsibility of the Economy Ministry.

¹¹² Since 1993 emissions from the left bank of Dniester River are not included, except for emissions from Moldavian electric station. The drop in emissions between 1991 and 1992 is due to a decrease in the national economy. For 1990-1999 emissions have been calculated according to EMEP/CORINAIR Emission Inventory Guidebook and the Greenhouse Gas Inventory Reporting Instructions.

¹¹³ Figures apply to the European part within EMEP. CO emission data from 1987 onwards were updated taking into account emissions from railroad transport, agricultural engineering and road-building machinery.

¹¹⁴ Sector 4: Emissions included in Sector 3 2000-2020.

Main pollutants, particulate matter and heavy metals.

1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

¹¹⁵ 1990-2001: Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

¹¹⁶ Mobile sector 1990-2000: recalculated.

¹¹⁷ 1997: Refers to Skopje only.

1998: Data are for sectors 1-6 only. Data for sectors 7-11 are not yet ready.

2000 and 2001: All sectors included.

¹¹⁸ 2010: Sum of reported sector data.

¹¹⁹ 1990-2000: For the time series 1990-2000, data as compiled for the EC UNFCCC submission were used.

The two time series differ slightly due to different treatment of overseas territories and international bunkers. The EC inventory relies on the availability and submission of Member States' data. However, to provide a more complete picture, the emissions of air pollutants reported by the EC and its Member States under the UNFCCC (SO_x, NO_x, CO and NMVOC) have been used.

Table 6, footnotes: Anthropogenic emissions of total suspended matter in the ECE region (Mg TSP per year)

¹²⁰ 1980-2001 - Recalculations mainly because of revision of energy balance.

¹²¹ NFR 1A2 - without SNAP 08 08 (a), these emissions are included in NFR 1A3e ii

NFR 1A4b - without SNAP 08 09, these emissions are included in NFR 1A3e ii

NFR1A5a - these emissions are included in NFR 1A4a

NFR1A5b - these emissions are included in NFR 1A3e ii

¹²² Emissions within EMEP area.

1985-2001 Road traffic: New method for estimating the fuel balance. PM emissions: fuels other than diesel are included.

¹²³ 1980-2000 TSP: The TSP emissions are dust only.

¹²⁴ Data include emissions within the EMEP area only.

¹²⁵ TSP: The national total TSP emissions contain transhipments of bulk goods and these emissions are listed in detail in sector 11, other sources and sinks.

¹²⁶ 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹²⁷ Specification of emissions included in the "other" categories:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories.

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹²⁸ Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other.

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing.

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other.

No emissions reported.

2 A Mineral Products: 2 A 7 Other including Non Fuel Mining and Construction Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits.

Construction

2 B Chemical Industry: 2 B 5 Other.

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total Industrial Processes: 2 G Other.

No emissions reported.

3 Total Solvent and other product use: 3 D Other including products containing HMs and POPs

In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹²⁹ 1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

¹³⁰ Mobile sector 1990-2000: recalculated.

Table 7, footnotes: Anthropogenic emissions of particulate matter in the ECE region

(Mg PM10 per year)

¹³¹ Recalculations mainly because of revision of energy balance.

¹³² TABLE IV 1A: National sector emissions: Main pollutants, particulate matter and heavy metals

NFR 1A2 - without SNAP 08 08 (a), these emissions are included in NFR 1A3e ii

NFR 1A4b - without SNAP 08 09, these emissions are included in NFR 1A3e ii

NFR1A5a - these emissions are included in NFR 1A4a

NFR1A5b - these emissions are included in NFR 1A3e ii

¹³³ Emissions within EMEP area.

1985-2001: Road traffic: New method for estimating the fuel balance. Fuels other than diesel are included.

¹³⁴ Data include emissions within the EMEP area only.

¹³⁵ 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹³⁶ Specification of emissions included in the "other" categories:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories.

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹³⁷ Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other

No emissions reported.

2 A Mineral Products: 2 A 7 Other including Non Fuel Mining and Construction.

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry: 2 B 5 Other

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total Industrial processes: 2 G Other

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹³⁸ 1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

¹³⁹ Mobile sector 1990-2000: recalculated.

Table 8, footnotes: Anthropogenic emissions of particulate matter in the ECE region (Mg PM2.5 per year)

¹⁴⁰ Recalculations mainly because of revision of energy balance.

¹⁴¹ Emissions within EMEP area.

1985-2001 Road traffic: New method for estimating the fuel balance. Fuels other than diesel are included.

¹⁴² 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹⁴³ Specification of emissions included in the "other" categories:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹⁴⁴ Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other.

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other.

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing.

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other.

No emissions reported.

2 A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry: 2 B 5 Other.

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total Industrial processes: 2 G Other.

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹⁴⁵ 1A3aii Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

¹⁴⁶ Mobile sector 1990-2000: recalculated.

Table 9, footnotes: Anthropogenic emissions of persistent organic pollutants in the ECE region

¹⁴⁷ 1985-2001: Recalculations mainly because of revision of energy balance.

¹⁴⁸ 1990 DIOX and PAH: Refer to Flanders only.

1993 PAH: Refer to Flanders only.

1995-1998 HCH: Refer to Wallonia only.

1994 1996-1998 HCB: Refer to Wallonia only.

1996-1998 PCP: Refer to Wallonia only.

1994 DIOX: Refer to Brussels and Wallonia only.

¹⁴⁹ 1990 and 1996: SCCP includes TCM, TRI, PER, TCE.

1980-1989: Data are missing because Croatia was part of Yugoslavia.

1990-1998: Distributed according to SNAP90.

1999-2000: Distributed according to SNAP97.

¹⁵⁰ NFR 1A2 includes SNAP 03 01(a), 03 03 01, 03 03 02, 03 03 03, 03 03 10, without SNAP 08 08 (a), these emissions are included in NFR 1A3e ii.

NFR 1A4b - without SNAP 08 09, these emissions are included in NFR 1A3e ii.

NFR1A5a - these emissions are included in NFR 1A4a.

NFR1A5b - these emissions are included in NFR 1A3e ii.

NFR 2C - these emissions are included in NFR 1A2.

NFR 6C - include SNAP 09 02 01, 09 02 02, 09 02 08 only.

¹⁵¹ 1990-2000 PAH S7 S8: Emissions are calculated with COPERT. Data include emissions within the EMEP area only.

All other compounds: 1985-2001 Road traffic: New method for estimating the fuel balance.

¹⁵² Data include emissions within the EMEP area only.

¹⁵³ PAH: Figures include only benzo(ghi)perylene and fluoranthene.

S6 SCCP: Very rough estimate.

S8 POP: Emissions included in Table 3-G Road transport.

S11 PCB: Rough estimation (electrical equipment).

S11 PCP: Very rough estimation (import of treated leather clothing).

¹⁵⁴ 2001: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹⁵⁵ 1990, 1995, 1998-2001

Specification of emissions included in the "other" categories:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹⁵⁶ 1996 SCCP

TRI only

1990-2001:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other

No emissions reported.

2 A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical industry: 2 B 5 Other.

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total industrial processes: 2 G Other.

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

1990-1999:

1992-1999 HCB: Only data for sector 4: Production processes, no data for other sectors. ECE-4 is used for the PAH data.

¹⁵⁷ All figures apply to the European part within EMEP.

¹⁵⁸ 2000 and 2001: (except for PAH total (1-4)).

Other:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other.

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other

No emissions reported.

2 A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction.

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry. 2 B 5 Other.

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total industrial processes: 2 G Other.

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹⁵⁹ Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

¹⁶⁰ Mobile sector 1990-2000: recalculated.

¹⁶¹ PAH: PAHs are defined as the sum of 16 PAH: benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, acenaphthene, acenaphthylene, anthracene, benzo(ghi)perylene, fluoranthene, fluorene, naphthalene, phenanthrene, pyrene.

The 1990 dioxin and furan inventory was developed using national methodologies. Data development for subsequent years includes application of facility-specific information and is expected to include additional sources.

DIOX: The dioxin and furan inventory data and estimation methodologies are being reassessed. Data developed since the 1990 inventory include facility-specific information and are expected to include more sources.

The PCB 1996 national value reflects that reported to the United States Environmental Protection Agency's Toxic Release Inventory (TRI) and is suspected to contain an error in industry reporting.

Table 10, footnotes: Anthropogenic emissions of heavy metals in the ECE region

¹⁶² 1999 - 2000, Pb: Road transport not included.

¹⁶³ 1980-2001: Recalculations mainly because of revision of energy balance.

¹⁶⁴ 2000: NFR 8 emissions included in NFR 7

¹⁶⁵ 2000: S7 S8: Emissions are calculated on the basis of the total quality of the used fuels by sectors.

¹⁶⁶ 1980-1989: Data are missing because Croatia was part of Yugoslavia.

1990-1998: Distributed according to SNAP90.

1999: Distributed according to SNAP97.

NFR 1A2 - includes SNAP 03 01(a), 03 03 01, 03 03 02, 03 03 03, 03 03 10, 03 03 11, 03 03 12, 03 03 17, without SNAP 08 08 (a), as these emissions are included in NFR 1A3e ii.

NFR 1A4b - without SNAP 08 09, these emissions are included in NFR 1A3e ii.

NFR1A5a - these emissions are included in NFR 1A4a.

NFR1A5b - these emissions are included in NFR 1A3e ii.

NFR 2C - these emissions are included in NFR 1A2.

NFR 6C - includes SNAP 09 02 01, 09 02 02, 09 02 08 only.

¹⁶⁸ Data include emissions within the EMEP area.

1985-2001 Road traffic: New method for estimating the fuel balance.

¹⁶⁹ Data include emissions within the EMEP area.

¹⁷⁰ 2001: Table 1a: Sector 1A4a has been included in 1A4bi because data available at present do not allow separating emissions from commercial/institutional sectors and emissions from residential sectors.

¹⁷¹ 1990, 1995 and 1998-2001:

1A3e: Other mobile sources such as draglines, building cranes etc.

2G: Emissions from industry not attributable to previous two categories.

3D: Emissions from use of consumer products: cigarettes, foam and (car) service companies.

¹⁷² 1990-2001:

1 A 2 Manufacturing Industries and Construction: 1 A 2 f Other:

All mining, extraction and manufacturing industries (NACE 10-37) not included in 1A1. Construction.

1 A 3 Transport: 1 A 3 e Other:

1 A 3 e ii includes machinery except in Agriculture / Forestry / Fishing, military and households. Snow scooters and small watercraft are included under 1 A 4 b Residential and 1 A 4 c Agriculture / Forestry / Fishing.

1 B 1 Fugitive Emissions from Solid Fuels: 1 B 1 c Other:

No emissions reported.

2 A Mineral products: 2 A 7 Other including Non Fuel Mining and Construction

Manufacturing of other non-metallic mineral products (NACE 26) not included in 2A1-2A3: glass, plaster, clay products, rock wool. Mining, crushing plants, sandpits. Construction.

2 B Chemical Industry. 2 B 5 Other:

Manufacturing of methanol, basic plastics, sulphuric acid, chlorine, explosives, soap, pigments and paint.

2 Total industrial processes: 2 G Other:

No emissions reported.

3 Total solvent and other product use: 3 D Other including products containing HMs and POPs.

In addition to other solvents, this item includes mercury emissions by evaporation from products.

¹⁷³ Figures apply to the European part within EMEP.

¹⁷⁴ 2000-2001

Main pollutants, particulate matter and heavy metals.

1A3ai Civil aviation (domestic, LTO) includes emissions from civil aviation (domestic, LTO) and surface operations at the airport.

¹⁷⁵ Geographical coverage of non-gridded data is for the whole Spanish territory (including Canary Islands, Ceuta and Melilla).

¹⁷⁶ 1990-2001 Mobile sector: recalculated.

Table 11, footnotes: Percentage reduction (1990-2001) of 1990 level

¹⁷⁷ Only Parties reporting emissions including main sources both for 1990 and for 2001 for at least one component are listed here.

¹⁷⁸ Special notes for NH₃ and NMVOC are stated in the Gothenburg Protocol.

¹⁷⁹ The NH₃ reduction (increase) is not included in the NH₃ reduction histogram.
