

Department of Economic and Social Affairs
Statistics Division

NATIONAL ACCOUNTS STATISTICS: MAIN AGGREGATES AND DETAILED TABLES, 2004

PART I

**UNITED NATIONS
NEW YORK, 2005**

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document. The first 14 editions of the National Accounts Yearbook were issued without series symbols.

The designations used in this publication have been provided by the competent authorities. Those designations and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Where the designation “country or area” appears in the headings of tables, it covers countries, territories, cities or areas.

INTRODUCTION

1. This is the forty-sixth issue of *National Accounts Statistics: Main Aggregates and Detailed Tables* 1/ showing detailed national accounts estimates for 176 countries and areas for the reporting years 1993 to 2004. Like the previous issues, it has been prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat with the generous co-operation of national statistical services. It is issued in accordance with the recommendation of the Statistical Commission at its first session 2/ that the Statistics Division of the United Nations should publish regularly the most recent available data on national accounts for as many countries and areas as possible.

THE NEW NATIONAL ACCOUNTS QUESTIONNAIRE 1993 SNA

2. This publication, for the sixth time, is based on the new United Nations National Accounts Questionnaire 1993 SNA (NAQ), which was introduced in October 1999.

3. The *System of National Accounts 1993* (1993 SNA) 3/ was unanimously recommended to the United Nations Economic and Social Council by its Statistical Commission at its 24th session in March 1993. Similar to the recommendation made in 1968 for its predecessor, *A System of National Accounts* (1968 SNA) 4/, the Council in its resolution 1993/5 of 12 July 1993 recommends that member states use the 1993 SNA in the international reporting of comparable national accounting data. However, it should be highlighted that the Council went a few steps further in 1993 and also recommends that member states consider using the 1993 SNA: (a) as the standard for the compilation of their national accounts statistics, (b) to promote the integration of economic and related statistics, and (c) as an analytical tool.

4. Taking into account all the above recommendations the United Nations Statistics Division (UNSD), in cooperation with the UN Regional Commissions, has designed a United Nations National Accounts Questionnaire (NAQ) based on the 1993 SNA with the following objectives in mind:

(a) The tables included are those that provide a data set most relevant for global and regional analysis carried out by the UN Department of Economic and Social Affairs (DESA) and other international and regional organizations. It should be noted that the scope of the 1993 SNA aims at a much more detailed analysis at the national level than what the questionnaire tables represent. The UN Statistical Commission has agreed that the scope and pace of the

implementation of the 1993 SNA must be decided by each country according to its analytic and policy needs, the resources available for implementation, and the current state of basic data.

(b) The tables reflect an equally balanced emphasis between production analysis based on supply and use information by industries on the one hand, and production, income and financial analysis based on integrated accounts for institutional sectors on the other. Thus, the behaviour of economic agents and distributional effects which are very important in explaining differences in economic structures and developments of countries can be identified.

SCOPE OF THE NEW QUESTIONNAIRE

5. The data tables of the questionnaire are divided into five parts. Part I (Tables 1.1 to 1.3) requests summary information on gross domestic product by expenditures in current and constant prices and on the relations among product, income, savings and net lending aggregates.

6. Part II (Tables 2.1 to 2.3) of the questionnaire requests information on kind of activity breakdowns. The data series for this group of tables are requested to be reported according to the International Standard Industrial Classification of all Economic Activities, Rev. 3 (ISIC Rev. 3) 5/ either as a combination of tabulation categories (A+B, G+H, J+K and M+N+O) or as single tabulation categories (A to P) (one-digit level of ISIC). Only in the case of categories A and I information at the two-digit level is requested for divisions 01, 02, 64 and the sum of the divisions 60 to 63. Where appropriate both current and constant prices are specified.

7. Part III (Tables 3.1 and 3.2) of the questionnaire requests information on functional breakdowns in current prices. The data series are requested to be reported according to the Classifications of Expenditure According to Purpose 6/. For the general government final consumption expenditure (including both individual and collective consumption expenditure), data are requested for the 10 divisions of the Classification of the Functions of Government (COFOG). For the individual consumption expenditure of households, data are requested for the first 12 divisions of the Classification of Individual Consumption According to Purpose (COICOP), which is based on the Central Product Classification (CPC) 7/. For the individual consumption expenditure of non-profit institutions serving households, data are requested for groups 13.1 through 13.6 of division 13 of COICOP. For the individual consumption expenditure of general

government, data are requested for groups 14.1 through 14.5 of division 14 of COICOP.

8. Part IV (Tables 4.1 to 4.7) of the questionnaire requests information on the integrated economic accounts. The data requested in this part includes the sequence of accounts for the total economy, rest of the world and the five institutional sectors of the system, i.e. the non-financial corporations, financial corporations, general government, households, and non-profit institutions serving households. For all of the sectors as well as for the total economy data for the uses and resources as well as balancing items are requested for each of the accounts from the production account through the financial account as specified in Annex V, Part II of the 1993 SNA.

9. Part V (Table 5.1) of the questionnaire requests information on the cross-classification of gross value added by industries and institutional sectors. Data are requested to be reported for gross value added of the total economy and the five institutional sectors of the system included in Part IV cross-classified by categories of ISIC Rev. 3 as indicated in Part II above.

10. Countries are requested to update the data tables and complete them to the extent possible. They are the following:

Part I: Main aggregates

- Table 1.1 Gross domestic product by expenditures at current prices
- Table 1.2 Gross domestic product by expenditures at constant prices
- Table 1.3 Relations among product, income, savings and net lending aggregates at current prices

Part II: Domestic production by industries

- Table 2.1 Value added by industries at current prices
- Table 2.2 Value added by industries at constant prices
- Table 2.3 Output, gross value added and fixed assets by industries at current prices

Part III: Classifications of expenditure according to purpose

- Table 3.1 General government final consumption expenditure by function at current prices
- Table 3.2 Individual consumption expenditures at current prices

Part IV: Integrated economic accounts

- Table 4.1 Total economy (S.1)
- Table 4.2 Rest of the world (S.2)

- Table 4.3 Non-financial corporations (S.11)
- Table 4.4 Financial corporations (S.12)
- Table 4.5 General government (S.13)
- Table 4.6 Households (S.14)
- Table 4.7 Non-profit institutions serving households (S.15)

Part V: Cross classification of gross value added by industries and institutional sectors

Table 5.1 Cross classification of gross value added by industries and institutional sectors

11. It should be noted that the new NAQ does not cover the full scope of the accounts and tables that comprise the 1993 SNA since it is mainly geared to collect data needed for global and regional analysis rather than national analysis. Also, it is in certain respects less comprehensive than the previous questionnaire based on the 1968 SNA since, for example, it does not include tables for the other changes in assets accounts and the balance sheets of the total economy and institutional sectors; the data requested on stocks of fixed assets is very limited; the tables requested broken down by kind of economic activity are less detailed, showing mainly the one-digit level of ISIC instead of the two-digit level of ISIC.

COMPILATION OF DATA

12. To compile the large volume of national accounts data, the Statistics Division annually sends a pre-filled SNA questionnaire to countries or areas. The recipients are requested to update the questionnaire with the latest available national accounts estimates and to indicate where the scope and coverage of the country estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA. Data obtained from these replies are supplemented by information gathered from correspondence with the national statistical services and from national source publications.

13. In order to lighten the reporting burden of countries to different international and regional organizations, the United Nations, the Statistical Office of the European Union (EUROSTAT) and the Organisation for Economic Co-operation and Development (OECD) have agreed on an integrated set of national accounts questionnaires. The three organizations exchange data to a maximum extent currently possible. Thanks to the consistency of the 1993 SNA and the European System of Accounts (ESA 1995), all OECD countries submit data either to EUROSTAT or OECD but need not conduct duplicate submissions. Member states of OECD which are not members of the European Community have to complete a sub-set of the ESA 1995 questionnaire. In addition, data for the transition economies are received through the United Nations Economic Commission for Europe

(UNECE). As a result, the UN questionnaire based on the 1993 SNA is sent to less than 160 countries out of the 207 included in the UNSD National Accounts database.

14. The new UN National Accounts Questionnaire (NAQ) based on the 1993 SNA was implemented in October 1999 for the first time. Some countries have just started to familiarize themselves with the new NAQ. Therefore many of them are implementing and reporting data for some tables only. Several countries have also deliberately decided on a phased implementation of the 1993 SNA. In particular, member countries of the EU and OECD have agreed on a phased implementation of the ESA 1995/1993 SNA questionnaire tables whereby a five-year period (from 1999 to 2003) has been allotted to gradually transmit all tables.

15. In order to create a new database based on the new questionnaire, UNSD made a one-time conversion of data from the 1968 SNA format to the 1993 SNA format for all countries included in the UNSD national accounts database. Together with the data, also the footnotes were imported to the new database. These references were adjusted to comply with the new questionnaire.

CONCEPTUAL REFERENCES AND PRESENTATION OF DATA

16. The form and concepts of the statistical tables in the present publication generally conform to the recommendations in the 1993 SNA. A summary of the conceptual framework and definitions of transactions is provided in chapter I of the present publication.

17. It has to be pointed out that the data collected by the new NAQ are in the format of the 1993 SNA but the concepts applied by countries to compile their data may still adhere to the 1968 SNA or even the 1953 SNA. A series of questions focusing on the most important conceptual changes from the 1968 SNA to the 1993 SNA was added to the annual NAQ sent to countries in October 2002 in order to evaluate the status of the conceptual adherence to the 1993 SNA.

18. The Series Note at the top of each table indicates the SNA system used by the given country to compile the displayed data of the given series. Series numbers below 100 are used for 1968 SNA data, series numbers 100 and higher are used for 1993 SNA estimates. Whenever 1968 SNA data are not replaced for all years by a series of 1993 SNA data, the new 1993 SNA data are presented in a new row with one overlapping year in order to allow users to link the two series. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote is attached to the relevant tables.

19. In the tables with constant prices data (Table 1.2 and Table 2.2), the data with a new fixed base year are presented as a new sub-series in a separate row with one overlapping year. The new base year (or reference year) is indicated in the column of the year in which the new sub-series starts. An exception to this rule is data with annually changing base years. Such data are presented as a single series and the respective base year is indicated for every year. For countries, which use annually changing base years but link the data to a uniform reference year, a respective qualification is made in the country note. It has to be noted that constant price data, which are linked or chained in such a way are not additive, i.e. the total is not equivalent to the sum of its components. Also, constant price data, which are scaled up or down to a certain reference year in order to allow international comparison, are not additive.

20. In the present publication, the data for each country or area are presented in separate chapters, as far as possible, under uniform table headings and classifications of the SNA. Differences in definition and coverage of specific items are indicated in footnotes to the relevant tables.

21. Country data are presented in alphabetical order. Unless otherwise stated, the data in the country tables relate to the calendar year against which they are shown. The Series Note at the top of each table indicates the type of fiscal year used for any given series.

COMPARABILITY OF THE NATIONAL ESTIMATES

22. Every effort has been made to present the estimates of the various countries or areas in a form designed to facilitate international comparability. To this end, important differences in concept, scope, coverage and classification have been described in the notes, which precede and accompany the country tables. Such differences should be taken into account if misleading comparison among countries or areas are to be avoided. It should also be noted that the country notes not only refer to the latest data covered in this publication but to the country in general.

REVISIONS

23. The figures shown are the most recent estimates and revisions available at the time of compilation. In general, figures for the most recent year are to be regarded as provisional.

NOMENCLATURE

24. The information for the countries and areas shown in this publication reflect what is available to the Statistics Division of the United Nations as of August 2005.

25. Designations, which have changed in recent years, are as follows:

Hong Kong - Pursuant to a Joint Declaration signed on 19 December 1994, the United Kingdom restored Hong Kong to the People's Republic of China with effect from 1 July 1997; the People's Republic of China resumed the exercise of sovereignty over the territory with effect from that date.

Zaire - All data for the former Zaire are shown under the country name of Democratic Republic of the Congo.

Czech Republic, Slovakia - Data for Czech Republic and Slovakia are shown separately under the appropriate country name. For period prior to 1 January 1993, data for the former Czechoslovakia are shown under the country name Czechoslovakia (Former)

Yugoslavia (Former) - All data for Yugoslavia prior to 1 January 1992 refer to the Socialist Federal Republic of Yugoslavia, which was composed of six republics. After that date, when available, data for the republics, Bosnia and Herzegovina, Croatia, Slovenia, The Former Yugoslav Republic of Macedonia, and Serbia and Montenegro are shown separately.

USSR (Former) - In 1991, the Union of Soviet Socialist Republics formally dissolved into fifteen independent republics (Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Republic of Moldova, Russian Federation, Tajikistan, Turkmenistan, Ukraine and Uzbekistan). When available, data are shown for the individual republics. All data for the former USSR are shown under the country name USSR (Former)

Germany - On October 1990, the Federal Republic of Germany and the German Democratic Republic united to form one sovereign State under the designation Germany.

Yemen - In May 1990, Yemen and Democratic Yemen united to form a single State. Since that date they have been represented as one country with the name "Yemen".

Ethiopia, Eritrea – In 1993 Eritrea separated from Ethiopia to form a new state. Ethiopia refers to Ethiopia excluding Eritrea while Ethiopia (Former) refers to Ethiopia including Eritrea.

SYMBOLS AND DATA DISPLAY

26. The following symbols have been employed:

Data not available..... [..]

Magnitude nil or less than five percent of the unit employed..... [0.0]

Decimal figures are always preceded by a point [.]

27. Each series is presented in a separate row and identified by a series number in the column of the year in which it starts. A new series is introduced if the data displayed differs from preceding data in terms of methodology, fiscal-year type or currency. A Series Note at the top of each table informs about SNA system applied, currency denomination, and fiscal-year type used. The scale used to present the data is displayed at the top right of each table.

28. Decimals in tables do not necessarily add to totals shown because of rounding.

GENERAL DISCLAIMER

29. The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers and boundaries.

30. Where the designation "country or area" appears in the headings of tables, it covers countries, territories, cities or areas. In prior issues of this publication where the designation "country" appears in the headings of tables, it covers countries, territories, cities or areas

1/ United Nations publication. The first 25 editions of this publication were issued under the title Yearbook of National Accounts Statistics under the following sales number:
1957, 58.XVII.3; 1958, 59.XVII.3; 1959, 60.XVII.3; 1960, 61.XVII.4; 1961, 62.XVII.2; 1962, 63.XVII.2; 1963, 64.XVII.4; 1964, 65.XVII.2; 1965, 66.XVII.2; 1966, 67.XVII.14; 1967, E.69.XV11.6; 1968, vol.I, E.70.XV11.2, vol.II, E.70.XVII.3; 1969, vol.I, E.71.XVII.2, vol.II, E.71.XVII.3; 1970, (2 volumes), E.72.XVII.3; 1971, (3 volumes), E.73.XVII.3; 1972, (3 volumes), E.74.XVII.3; 1973, (3 volumes), E.75.XVII.2; 1974, (3 volumes),

E.75.XVII.5; 1975, (3 volumes), E.76.XVII.2 .1976, (2 volumes), E.77.XVII.2; 1977, (2 volumes), E.78.XVII.2; 1978, (2 volumes), E.79.XVII.8; 1979, (2 volumes), E.80.XVII.11; 1980, (2 volumes), E.82.XVII.6; 1981, (2 volumes), E.83.XV11.3;

Beginning with the twenty-sixth edition, this publication replaced Volume 1. Individual Country Data of the Yearbook and it was issued under the following sales number:

1982, E.85.XVII.3; 1983, E.86.XVII.3; 1984, E.86, XVII.26; 1985, E.87.XVII.10; 1986, E.89.XV11.7 (Parts I and II); 1987, E.90.XVII.2 (Parts I and II); 1988, E.90.XVII.18 (Parts I and II); 1989, E.91 XVII.16 (Parts I and II); 1990, E.93.XIII.3 (Parts I and II); 1991, E.94.XVII.5 (Parts I and II); 1992, E.95.XVII.4 (Parts I and II); 1993, E.96.XVII.5 (Parts I and II); 1994, E.97.XVII.6 (Parts I and II); 1999, E.99.XVII.7 (Parts I and II); 2000, E.00.XVII.11 (Parts I and II); 2001, E.01.XVII.14; 2002, E.02.XVII.6.

I. SYSTEM OF NATIONAL ACCOUNTS (SNA)

1. The System of National Accounts 1993 (1993 SNA) 1/ was unanimously recommended to the United Nations Economic and Social Council by its Statistical Commission at its 24th session in March 1993 2/. Similar to the recommendation made in 1968 for its predecessor, A System of National Accounts (1968 SNA) 3/, the Council in its resolution 1993/5 of 12 July 1993 recommends that members states use the 1993 SNA in the international reporting of comparable national accounting data. However, it should be highlighted that the Council went a few steps further in 1993 and also recommends that member states consider using the 1993 SNA: (a) as the standard for the compilation of their national accounts statistics, (b) to promote the integration of economic and related statistics, and (c) as an analytical tool.

A. THE SNA AS A SYSTEM

2. The System of National Accounts (SNA) consists of a coherent, consistent and integrated set of macroeconomic accounts, balance sheets and tables based on a set of internationally agreed concepts, definitions, classifications and accounting rules. It provides a comprehensive accounting framework within which economic data can be compiled and presented in a format that is designed for purposes of economic analysis, decision-taking and policy-making. The accounts themselves present in a condensed way a great mass of detailed information, organized according to economic principles and perceptions, about the working of an economy. They provide a comprehensive and detailed record of the complex economic activities taking place within an economy and of the interaction between the different economic agents, and groups of agents, that takes place on markets or elsewhere. In practice the accounts are compiled for a succession of time periods, thus providing a continuing flow of information that is indispensable for the monitoring, analysis and evaluation of the performance of an economy over time. The SNA provides information not only about economic activities, but also about the levels of an economy's productive assets and the wealth of its inhabitants at particular points of time. Finally, the SNA includes an external account that displays the links between an economy and the rest of the world.

3. The SNA may be implemented at different levels of aggregation: at the level of individual economic agents, or institutional units as they are called in the System; for groups of such units, or institutional sectors; or at the level of the total economy. Although traditionally described as a system of national accounts, for analytical purposes the SNA has to be implemented at lower levels

of aggregation. In order to understand the workings of the economy, it is essential to be able to observe and analyse the economic interactions taking place between the different sectors of the economy. Certain key aggregate statistics, such as gross domestic Product (GDP), that are widely used as indicators of economic activity at the level of the total economy, are defined within the System, but the calculation of such aggregates has long ceased to be the primary purpose for compiling the accounts.

4. The System is built around a sequence of interconnected flow accounts linked to different types of economic activity taking place within a given period of time, together with balance sheets that record the values of the stocks of assets and liabilities held by institutional units or sectors at the beginning and end of the period. Each flow account relates to a particular kind of activity such as production, or the generation, distribution, redistribution or use of income. Each account is balanced by introducing a balancing item defined residually as the difference between the total resources and uses recorded on the two sides of the account. The balancing item from one account is carried forward as the first item in the following account, thereby making the sequence of accounts an articulated whole. The balancing items typically encapsulate the net result of the activities covered by the accounts in question and are therefore economic constructs of considerable interest and analytical significance - for example, value added, disposable income and saving. There is also a strong link between the flow accounts and the balance sheets, as all the changes occurring over time that affect the assets or liabilities held by institutional units or sectors are systematically recorded in one or another of the flow accounts. The closing balance sheet is fully determined by the opening balance sheet and the transactions or other flows recorded in the sequence of accounts.

B. ACCOUNTS AND THEIR CORRESPONDING ECONOMIC ACTIVITIES

5. The purpose of this section is to give a very brief summary of the main sequence of accounts in order to describe the main features of the System before discussing other related issues. It is impossible to do justice to the wealth of information contained in the System in a short section of this kind, and reference should be made to chapter II of the SNA for a comprehensive overview of the System.

1. The sequence of accounts

Current accounts

6. These accounts record the production of goods and services, the generation of incomes by production, the subsequent distribution and redistribution of incomes among institutional units, and the use of incomes for purposes of consumption or saving.

Production account

7. The production account records the activity of producing goods and services as defined within the System. Its balancing item, gross value added, is defined as the value of output less the value of intermediate consumption and is a measure of the contribution to GDP made by an individual producer, industry or sector. Gross value added is the source from which the primary incomes of the System are generated and is therefore carried forward into the primary distribution of income account. Value added may also be measured net by deducting consumption of fixed capital.

Distribution and use of income accounts

8. These consist of a set of articulated accounts showing how incomes are:

Generated by production

Distributed to institutional units with claims on the value added created by production

Redistributed among institutional units, mainly by government units through social security contributions and benefits and taxes

Eventually used by households, government units or non-profit institutions serving households (NPISHs) for purposes of final consumption or saving.

9. The balancing item emerging from the complete set of income accounts is saving. The income accounts have considerable intrinsic economic interest in themselves. In particular, they are needed to explain the behaviour of institutional units as final consumers - that is, as users of the goods and services emanating from production for the satisfaction of the individual and collective needs and wants of households and the community. The balancing item, saving, is carried forward into the capital account, the first in the System's sequence of accumulation accounts.

Accumulation accounts

10. These are flow accounts that record the acquisition and disposal of financial and non-financial assets and liabilities by institutional units through transactions or as a result of other events:

The capital account records acquisitions and disposals of non-financial assets as a result of transactions with other units or internal bookkeeping transactions linked to production (changes in inventories and consumption of fixed capital).

The financial account records acquisitions and disposals of financial assets and liabilities, also through transactions.

A third account, the other changes in assets account, consists of two sub-accounts. The first, the other changes in volume of assets account, records changes in the amounts of the assets and liabilities held by institutional units or sectors as a result of factors other than transactions; for example, destruction of fixed assets by natural disasters. The second, the revaluation account, records those changes in the values of assets and liabilities that result from changes in their prices.

11. The link between the accumulation accounts and the income accounts is provided by the fact that saving - that is, disposable income that is not spent on consumption goods or services - must be used to acquire financial or non-financial assets of one kind or another, if only cash, the most liquid financial asset. When saving is negative, the excess of consumption over disposable income must be financed by disposing of assets or incurring liabilities. The financial account shows the way in which funds are channelled from one group of units to another, especially through financial intermediaries. Access to finance is a prerequisite for engaging in many types of economic activities.

Balance sheets

12. The balance sheets show the values of the stocks of assets and liabilities held by institutional units or sectors at the beginning and end of an accounting period. As already noted, the values of the assets and liabilities held at any moment in time vary automatically whenever any transactions, price changes or other changes affecting the volume of assets or liabilities held take place. These are all recorded in one or another of the accumulation accounts so that the difference between the values in the opening and closing balance sheets is entirely accounted for within the System, provided, of course, that the assets

and liabilities recorded in the balance sheets are valued consistently with the transactions and other changes - that is, at current prices.

2. Activities and transactions

13. The accounts of the System are designed to provide analytically useful information about the behaviour of institutional units and the activities in which they engage, such as production, consumption and the accumulation of assets. They usually do this by recording the values of the goods, services or assets involved in the transactions between institutional units that are associated with these activities rather than by trying to record or measure the physical processes directly. For example, the accounts do not record the physical consumption of goods and services by households - the eating of food or the burning of fuel within a given time period. Instead, they record the expenditures that households make on final consumption goods and services or, more generally, the values of the goods and services they acquire through transactions with other units, whether purchased or not. Data on transactions provide the basic source material from which the values of the various elements in the accounts are built up or derived. The use of transactions data has important advantages. First, the prices at which goods and services are exchanged in transactions between buyers and sellers on markets provide the information needed for valuing, directly or indirectly, all the items in the accounts. Secondly, a transaction that takes place between two different institutional units has to be recorded for both parties to the transaction and therefore generally appears twice in a system of macroeconomic accounts. This enables important linkages to be established in the System. For example, output is obtained by summing the amounts sold, bartered or transferred to other units plus the amounts entered into, less the amounts withdrawn from inventories. In effect, the value of output is obtained by recording the various uses of that output by means of data on transactions. In this way, flows of goods and services can be traced through the economic system from their producers to their eventual users. Some transactions are only internal bookkeeping transactions that are needed when a single unit engages in two activities, such as the production and consumption of the same good or service, but the great majority of transactions take place between different units on markets.

C. THE INSTITUTIONAL SECTORS OF THE ECONOMY

14. The purpose of this section is to indicate very briefly what are the main sectors of the economy for which it is possible to compile the full sequence of accounts summarized in the previous section. Two main

kinds of institutional units, or transactors, are distinguished in the System - households and legal entities. The latter are either entities created for purposes of production, mainly corporations and non-profit institutions (NPIs), or government units, including social security funds. Institutional units are essentially units that are capable of owning goods and assets, incurring liabilities and engaging in economic activities and transactions with other units in their own right. For the purposes of the System, institutional units that are resident in the economy are grouped together into five mutually exclusive sectors composed of the following types of units:

Non-financial corporations

Financial corporations

Government units, including social security funds

NPIs serving households (NPISHs)

Households.

The five sectors together make up the total economy. Each sector is also divided into sub-sectors. For example, the non-financial and financial corporations sectors are divided to distinguish corporations subject to control by Governments or foreign units from other corporations. The System makes provision for a complete set of flow accounts and balance sheets to be compiled for each sector, and sub-sector if desired, as well as for the total economy. The total number of accounts that may be compiled is therefore potentially quite large, depending upon the level of disaggregation that is required and feasible. Only by disaggregation into sectors and sub-sectors is it possible to observe the interactions between the different parts of the economy that need to be measured and analysed for purposes of policy-making. The complete set of accounts at the level of the five main sectors is shown in annex V at the end of the SNA.

15. Institutional units that are resident abroad form the rest of the world. The System does not require accounts to be compiled in respect of economic activities taking place in the rest of the world, but all transactions between resident and non-resident units have to be recorded in order to obtain a complete accounting for the economic behaviour of resident units. Transactions between residents and non-residents are grouped together in a single account, the rest of the world account.

D. OTHER FEATURES OF THE SYSTEM

16. The SNA is a rich and detailed economic accounting system that extends well beyond the main sequence of accounts to encompass other accounts or tables that either contain information that cannot be included in the main accounts or present information in alternative ways, such as matrices, that may be more appropriate for certain types of analysis. It is not proposed to list all these various elements at this point, as they are described in chapter II of the SNA, but it is useful to draw attention to two specific elements which play a major role in the System.

1. Supply and use tables

17. In addition to the flow accounts and balance sheets described earlier, the central framework of the System also contains detailed supply and use tables in the form of matrices that record how supplies of different kinds of goods and services originate from domestic industries and imports and how those supplies are allocated between various intermediate or final uses, including exports. These tables involve the compilation of a set of integrated production and generation of income accounts for industries - that is, groups of establishments as distinct from institutional units - that are able to draw upon detailed data from industrial censuses or surveys. The supply and use tables provide an accounting framework within which the commodity flow method of compiling national accounts - in which the total supplies and uses of individual types of goods and services have to be balanced with each other - can be systematically exploited. The supply and use tables also provide the basic information for the derivation of detailed input-output tables that are extensively used for purposes of economic analysis and projections.

2. Price and volume measures

18. The System also provides specific guidance about the methodology to be used to compile an integrated set of price and volume indices for flows of goods and services, gross value added and GDP that are consistent with the concepts and accounting principles of the System. It is recommended that annual chain indices should be used where possible, although fixed base indices may also be used when the volume measures for components and aggregates have to be additively consistent for purposes of economic analysis and modeling.

19. Rates of inflation and economic growth appropriately measured by price and volume indices for the main aggregates of the System are key variables both for the evaluation of past economic performance and as

targets for the formulation of economic policy-making. They are an essential part of the System, especially given the emergence of inflation as an endemic economic problem in many countries. The System also recognizes that the growth in the volume of GDP and the growth of an economy's real income are not the same because of trading gains or losses resulting from changes in international terms of trade.

E. CONCEPTS

20. The contents of the SNA depend not only on the accounting structure itself - that is, on the type and format of the accounts - but also on the ways in which the items included in the accounts are defined and classified. The issues involved are not simply of a technical nature but raise fundamental questions of economic theory and principles. The concepts and classifications used in the System have a considerable impact on the ways in which the data may be used and the interpretations placed on them.

1. The production boundary

21. The activity of production is fundamental. In the System, production is understood to be a physical process, carried out under the responsibility, control and management of an institutional unit, in which labour and assets are used to transform inputs of goods and services into outputs of other goods and services. All goods and services produced as outputs must be such that they can be sold on markets or at least be capable of being provided by one unit to another, with or without charge. The System includes within the production boundary all production actually destined for the market, whether for sale or barter. It also includes all goods or services produced and provided free to individual households or collectively to the community by government units or NPISHs.

Household production

22. The main problem for defining the range of activities recorded in the production accounts of the System is to decide upon the treatment of activities that produce goods or services that could have been supplied to others on the market but are actually retained by their producers for their own use. These cover a very wide range of productive activities, in particular:

- (a) The production of agricultural goods by household enterprises for own final consumption;
- (b) The production of other goods for own final use by households: the construction of dwellings, the production of foodstuffs and clothing, etc.;

(c) The production of housing services for own final consumption by owner occupiers;

(d) The production of domestic and personal services for consumption within the same household: the preparation of meals, care and training of children, cleaning, repairs, etc.

All of these activities are productive in an economic sense. However, inclusion in the System is not simply a matter of estimating monetary values for the outputs of these activities. If values are assigned to the outputs, values have also to be assigned to the incomes generated by their production and to the consumption of the output. It is clear that the economic significance of these flows is very different from that of monetary flows. For example, the incomes generated are automatically tied to the consumption of the goods and services produced; they have little relevance for the analysis of inflation or deflation or other disequilibria within the economy. The inclusion of large non-monetary flows of this kind in the accounts together with monetary flows can obscure what is happening on markets and reduce the analytic usefulness of the data.

23. The SNA is a multi-purpose system. It is designed to meet wide a range of analytical and policy needs. A balance has to be struck between the desire for the accounts to be as comprehensive as possible and the need to prevent flows used for the analysis of market behaviour and disequilibria from being swamped by non-monetary values. The System therefore includes all production of goods for own use within its production boundary, as goods can be switched between market and non-market use even after they have been produced, but it excludes all production of services for own final consumption within households (except for the services produced by employing paid domestic staff and the own-account production of housing services by owner occupiers). These services are consumed as they are produced and the links between their production and market activities are more tenuous than for goods production, such as agricultural goods which households may produce partly for own final consumption and partly for sale, or barter, on the market. The location of the production boundary in the System is a compromise, but a deliberate one that takes account of the needs of most users. In this context it may be noted that in labour force statistics economically active persons are defined as those engaged in productive activities as defined in the SNA. If the production boundary were extended to include the production of personal and domestic services by members of households for their own final consumption, all persons engaged in such activities would become self-employed, making unemployment virtually impossible by definition. This illustrates the need to confine the production

boundary in the SNA and other related statistical systems to market activities or fairly close substitutes for market activities.

Other production boundary problems

24. Certain natural processes may or may not be counted as production depending upon the circumstances in which they occur. A necessary condition for an activity to be treated as productive is that it must be carried out under the instigation, control and responsibility of some institutional unit that exercises ownership rights over whatever is produced. For example, the natural growth of stocks of fish in open seas is not counted as production: the process is not managed by any institutional unit and the fish do not belong to any institutional unit. On the other hand, the growth of fish in fish farms is treated as a process of production in much the same way that rearing livestock is a process of production. Similarly, the natural growth of wild, uncultivated forests or wild fruits or berries is not counted as production, whereas the cultivation of crop-bearing trees, or trees grown for timber or other uses, is counted in the same way as the growing of annual crops. However, the deliberate felling of trees in wild forests, and the gathering of wild fruit or berries, and also firewood, counts as production. Similarly, rainfall and the flow of water down natural watercourses are not processes of production, whereas storing water in reservoirs or dams and the piping, or carrying, of water from one location to another all constitute production.

25. These examples show that many activities or processes that may be of benefit to institutional units, both as producers and consumers, are not processes of production in an economic sense. Rainfall may be vital to the agricultural production of a country but it is not a process of production whose output can be included in GDP.

2. The consumption boundary

26. The coverage of production in the System has ramifications that extend considerably beyond the production account itself. The boundary of production determines the amount of value added recorded and hence the total amount of income generated by production. The range of goods and services that are included in household final consumption expenditures, and actual consumption, is similarly governed by the production boundary; for example, these expenditures include the estimated values of the agricultural products consumed by households that they have produced themselves and also the values of the housing services consumed by owner occupiers, but not the values of "do-it-yourself" repairs and maintenance to vehicles or household durables, the

cleaning of dwellings, the care and training of children, or similar domestic or personal services produced for own final consumption. Only the expenditures on goods utilized for these purposes - e.g., cleaning materials - are included in household final consumption expenditures.

3. The asset boundary

27. Balance sheets are compiled for institutional units, or sectors, and record the values of the assets they own or the liabilities they have incurred. Assets as defined in the System are entities that must be owned by some unit, or units, and from which economic benefits are derived by their owner(s) by holding or using them over a period of time. Financial assets and fixed assets are clearly covered by this definition. However, the ownership criterion is important for determining which naturally occurring - i.e., non-produced - assets are included in the System. Naturally occurring assets such as land, mineral deposits, fuel reserves, uncultivated forests or other vegetation and wild animals are included in the balance sheets provided that institutional units are exercising effective ownership rights over them - that is, are actually in a position to be able to benefit from them. Assets need not be privately owned and could be owned by government units exercising ownership rights on behalf of entire communities. Thus, many environmental assets are included within the System. Assets that are not included are those such as the atmosphere or open seas, over which no ownership rights can be exercised, or mineral or fuel deposits that have not been discovered or that are unworkable - i.e., incapable of bringing any benefits to their owners, given the technology and relative prices existing at the time.

28. Changes in the values of naturally occurring assets owned by institutional units between one balance sheet and the next are recorded in the accumulation accounts of the System. For example, the depletion of a natural asset as a result of its use in production is recorded in the other changes in volume of assets account, together with losses of fixed assets due to their destruction by natural disasters (floods, earthquakes, etc.). Conversely, when deposits or reserves of minerals or fuels are discovered or previously unworkable deposits become workable, their appearance is recorded in this account and they enter the balance sheets in this way.

4. National boundaries

29. The accounts of the System are compiled for resident institutional units grouped into institutional sectors and sub-sectors. The concept of residence is the same as that used in the Balance of Payments Manual of the International Monetary Fund (IMF). An institutional unit is said to be resident within the economic territory of

a country when it maintains a centre of economic interest in that territory - that is, when it engages, or intends to engage, in economic activities or transactions on a significant scale either indefinitely or over a long period of time, usually interpreted as one year. As an aggregate measure of production, the GDP of a country is equal to the sum of the gross values added of all resident institutional units engaged in production (plus any taxes, and minus any subsidies, on products not included in the value of their outputs). This is not exactly the same as the sum of the gross values added of all productive activities taking place within the geographical boundaries of the national economy. Some of the production of a resident institutional unit may take place abroad - for example, the installation of some exported machinery or equipment or a consultancy project undertaken by a team of expert advisers working temporarily abroad. Conversely, some of the production taking place within a country may be attributable to foreign institutional units.

F. USES OF THE SNA

30. The SNA is a multi-purpose system, as stated above, designed for economic analysis, decision-taking and policy-making, whatever the industrial structure or stage of economic development reached by a country. The basic concepts and definitions of the System depend upon economic reasoning and principles which should be universally valid and invariant to the particular economic circumstances in which they are applied. Similarly, the classifications and accounting rules are meant to be universally applicable. There is no justification, for example, for seeking to define the components of a production account - output, intermediate consumption and gross value added - differently in less developed than in more developed economies, or in large relatively closed economies than in small open economies, or in high-inflation economies than in low-inflation economies. Certain definitions, or accounting rules, specified in the System may become superfluous in certain circumstances (e.g., when there is no inflation), but it is nevertheless necessary for a general system such as the SNA to include definitions and rules covering as wide a range of circumstances as possible.

31. The fact that data needs and priorities, and also statistical capabilities, may vary considerably between different kinds of countries does not justify the construction of different systems with different concepts, definitions, classifications or accounting rules. Some countries may be able, at least initially, to calculate only a small number of accounts and tables for the total economy with little or no disaggregation into sectors, but a reduced set of accounts or tables does not constitute an alternative system. It is not appropriate to try to lay down general priorities for data collection when economic

circumstances may vary so much from one country to another. In practice, priorities can only be established country by country by economic analysts or policy-makers familiar with the economic situation, needs and problems of the individual countries in question. It is not useful, for example, to try to specify general priorities for developing countries when they constitute a very heterogeneous group of countries at a world level. Data priorities may vary as much between one developing country and another as between a developing and a developed country.

1. Specific uses

32. The main objective of the SNA is to provide a comprehensive conceptual and accounting framework which can be used to create a macroeconomic database suitable for analysing and evaluating the performance of an economy. The existence of such a database is a prerequisite for informed, rational policy-making and decision-taking. Some of the more specific uses of the SNA are described in the following sections.

Monitoring the behaviour of the economy

33. National accounts data provide information covering both different types of economic activities and the different sectors of the economy. It is possible to monitor the movements of major economic flows such as production, household consumption, government consumption, capital formation, exports, imports, wages, profits, taxes, lending, borrowing, etc., the flows of goods and services being recorded at both current and constant prices. Moreover, information is provided about certain key balancing items and ratios which can only be defined and measured within an accounting framework - for example, the budget surplus or deficit, the share of income which is saved, or invested, by individual sectors of the economy or the economy as a whole, the trade balance, etc. National accounts also provide the background against which movements of short-term indicators, such as monthly indices of industrial production or of consumer or producer prices, can be interpreted and evaluated. The monitoring of the behaviour of the economy may be significantly improved if at least some of the main aggregates of the System are compiled quarterly as well as annually, although many of the accounts, tables or balance sheets of the System are not usually compiled more frequently than once a year.

Macroeconomic analysis

34. National accounts are also used to investigate the causal mechanisms at work within an economy. Such analysis usually takes the form of the estimation of the parameters of functional relationships between different

economic variables by applying econometric methods to time series of data at both current and constant prices compiled within a national accounting framework. The types of macroeconomic models used for such investigations may vary according to the school of economic thought of the investigator as well as the objectives of the analysis, but the System is sufficiently flexible to accommodate the requirements of different economic theories or models, provided only that they accept the basic concepts of production, consumption, income, etc. on which the System is based.

35. Advances in computer technology have made it possible for the econometric analysis of large macroeconomic models to be carried out on microcomputers. Many econometric software packages have been developed for this purpose so that this kind of modelling is no longer confined to a few government departments, research institutes or universities with large mainframe computers. It is increasingly being undertaken by private corporations or institutions with only limited resources available for these purposes.

Economic policy-making and decision-taking

36. Economic policy in the short term is formulated on the basis of an assessment of the recent behaviour and current state of the economy and a view, or precise forecast, about likely future developments. Short-term forecasts are typically made using econometric models of the type just described. Over the medium- or long-term, economic policy has to be formulated in the context of a broad economic strategy which may need to be quantified in the form of a plan. Most of the elements which make up a medium- or long-term economic plan consist of national accounts flows, and it may be impossible to draw up such a plan without them. A good macroeconomic model which accurately reflects the past performance of the economy may be indispensable for planning as well as forecasting.

37. Economic policy-making and decision-taking take place at all levels of government and also within public and private corporations. Large corporations such as multinationals have the ability to build their own macroeconomic models tailored to their own requirements, for which they need national accounts data. The investment programmes of major corporations must be based on long-term expectations about future economic developments that require national accounts data. There are also, of course, specialist agencies that provide forecasts for individual clients in return for fees. Such agencies typically require very detailed national accounts data.

International comparisons

38. The SNA is the system used for reporting to international or supranational organizations national accounts data that conform to standard, internationally accepted concepts, definitions and classifications. The resulting data are widely used for international comparisons of the volumes of major aggregates, such as GDP or GDP per head, and also for comparisons of structural statistics, such as ratios of investment, taxes or government expenditures to GDP. Such comparisons are used by economists, journalists or other analysts to evaluate the performance of one economy against that of other similar economies. They can influence popular and political judgements about the relative success of economic programmes in the same way as developments over time within a single country. Databases consisting of sets of national accounts for groups of countries can also be used for econometric analyses in which time-series and cross-section data are pooled to provide a broader range of observations for the estimation of functional relationships.

39. Levels of GDP or, alternatively, gross national income (GNI) per head in different countries are also used by international organizations to determine eligibility for loans, aid or other funds or to determine the terms or conditions on which such loans, aid or funds are made available. When the objective is to compare the volumes of goods or services produced or consumed per head, data in national currencies must be converted into a common currency by means of purchasing power parities and not exchange rates. It is well known that, in general, neither market nor fixed exchange rates reflect the relative internal purchasing powers of different currencies. When exchange rates are used to convert GDP, or other statistics, into a common currency the prices at which goods and services in high-income countries are valued tend to be higher than in low-income countries, thus exaggerating the differences in real incomes between them. Exchange rate converted data must not, therefore, be interpreted as measures of the relative volumes of goods and services concerned. Levels of GDP, or GDP per head, in different countries are also used to determine, in whole or in part, the size of the contributions which the member countries of an international organization make to finance the operations of the organization.

40. Although international organizations use the SNA in order to be able to collect internationally comparable national accounts data, the SNA has not been created for this purpose. It has become the standard, or universal, system used with little or no modification by most countries in the world for their own national purposes. National statistical offices and government agencies have a strong vested interest in ensuring that the

SNA meets their own analytic and policy requirements and have taken an active part in the development of the System for this reason.

2. Flexibility of implementation and use

41. The SNA is designed to be sufficiently comprehensive that individual countries, whatever their economic structures, institutional arrangements or level of development, can select from within it those parts of the System which are considered to be most relevant and useful to implement in the light of their own needs and capabilities. The SNA is meant to be implemented in a flexible manner and the accounts and tables, classifications and sectoring presented in this volume should not be regarded as fixed. In some cases, the System explicitly insists on flexibility. For example, two alternative methods of sub-sectoring the general government sector are proposed in chapter IV of the SNA without either being assigned priority. Similarly, although the System suggests sub-sectoring the households sector on the basis of the household's principal source of income, it stresses that this is only one possible criterion for sub-sectoring. In some cases, it may be more appropriate to sub-sector on the basis of socio-economic criteria or the type of area in which the household is located or, indeed, to carry the disaggregation of the households sector further by using two or more criteria together in a hierarchical manner.

42. Ways in which the System may be adapted to meet differing circumstances and needs are specifically addressed in chapter XIX of the SNA. For example, classifications of institutional units, transactions and assets may be implemented flexibly in order to adapt them to the data availability and special circumstances of different countries. The flexible use of classifications does not change the basic concepts and definitions of the System. However, as explained in chapter XXI of the SNA, flexibility may be taken a stage further by developing satellite accounts that are closely linked to the main System but are not bound to employ exactly the same concepts or restricted to data expressed in monetary terms. Satellite accounts are intended for special purposes such as monitoring the community's health or the state of environment. They may also be used to explore new methodologies and to work out new accounting procedures that, when fully developed and accepted, may become absorbed into the main System in the course of time, in the way that input-output analysis, for example, has been integrated into the System.

43. Another way in which the System may be implemented flexibly is by rearranging the data in the accounts in the form of a social accounting matrix in order better to serve particular analytical and policy

needs. Such matrices should not be construed as constituting different systems but as alternative ways of presenting the mass of information contained in the System which many users and analysts find more informative and powerful for both monitoring and modelling social and economic development.

3. The SNA as a coordinating framework for statistics

44. The System also has a very important statistical function by serving as a coordinating framework for economic statistics in two different senses: first, as the conceptual framework for ensuring the consistency of the definitions and classifications used in different, but related, fields of statistics, and secondly, as an accounting framework for ensuring the numerical consistency of data drawn from different sources, such as industrial inquiries, household surveys, merchandise trade statistics, VAT returns and other administrative sources.

G. HARMONIZATION BETWEEN DIFFERENT STATISTICAL SYSTEMS

45. The SNA and related statistical systems need to be as consistent as possible in respect of their basic concepts, definitions and classifications. National accounts have always occupied a central position in economic statistics because the data from more specialized systems, such as balance of payments or labour force statistics, typically have to be used in conjunction with national accounts data. Consistency between the different systems enhances the analytical usefulness of all the statistics involved. The harmonization of the SNA and related statistical systems, such as financial statistics or balance of payments statistics, has been one of the driving forces behind the revision of the System.

46. Revisions of other statistical systems have been conducted in parallel with, and in close collaboration with, that of the SNA in order to eliminate conceptual differences between them other than a few exceptions that can be specifically justified in terms of the special characteristics of different kinds of data, or the special requirements of different kinds of users. Harmonization between the SNA and other major systems has been largely successful and has been achieved by making changes to the SNA as well as to the other systems.

47. Because of the active involvement of the IMF in the revision of the SNA, the harmonization process has been particularly effective in respect of balance of payments statistics, government finance statistics and money and banking statistics, for which the IMF has responsibility. Revisions of each of these three systems are being undertaken by the IMF in order not only to

update these systems but also to make them consistent with the SNA to the fullest extent possible. Revised manuals on these systems are being published at about the same time as, or in the years immediately following, the 1993 SNA.

48. Various other revised international guidelines are being issued at about the same time as the revised SNA. These include, the third revision of the United Nations International Standard Industrial Classification of All Economic Activities (ISIC), the industrial classification that is used in the SNA. The establishment as described in ISIC is also the statistical unit used to compile the production accounts by industry that make up supply and use tables of the SNA, the concept of the establishment being the same in both the SNA and ISIC. The International Labour Organisation (ILO) has issued revised standards on labour statistics that define employment in a way that is consistent with the boundary of production in the SNA, as summarized earlier in this chapter. An extract from the resolution of the Fifteenth International Conference of Labour Statisticians concerning the distinction between the formal and informal sectors is reproduced as an annex to chapter IV of the SNA. Another example is provided by the revised Handbook on Agricultural Accounts, prepared by the Food and Agricultural Organization of the United Nations (FAO), which has been brought into line with the treatment of agricultural products and activities in the SNA. It is neither necessary nor feasible to list here all the revisions to international statistical systems and standards that are being undertaken or planned as it is the policy of all the various international agencies involved at a world level to harmonize these systems with each other and with the SNA to the fullest extent possible.

H. IMPLEMENTATION OF CONCEPTS

49. The contents of the accounts are determined not only by the conceptual framework, definitions and classifications of the System but also by the ways in which they are interpreted and implemented in practice. However simple and precise concepts and classifications may appear in principle, there are inevitably difficult borderline cases which cannot easily be fitted into predetermined categories. These points may be illustrated by considering a fundamental distinction in economics and in the System, namely, the distinction between consumption and gross fixed capital formation (or gross fixed investment, as it is often described in other contexts).

1. Final consumption, intermediate consumption and gross fixed capital formation

50. Consumption is an activity in which institutional units use up goods or services. There are two quite different kinds of consumption. Intermediate consumption consists of inputs into processes of production that are used up within the accounting period. Final consumption consists of goods and services used by individual households or the community to satisfy their individual or collective needs or wants. The activity of gross fixed capital formation, on the other hand, is restricted to institutional units in their capacity as producers, being defined as the value of their acquisitions less disposals of fixed assets. Fixed assets are produced assets (mostly machinery, equipment, buildings or other structures but also including some intangible assets) that are used repeatedly or continuously in production over several accounting periods (more than one year).

51. The general nature and purpose of the distinction between gross fixed capital formation and consumption, whether intermediate or final, is clear. The distinction is fundamental for economic analysis and policy-making. Nevertheless, the borderline between consumption and gross fixed capital formation is not always easy to determine in practice. Certain activities contain some elements that appear to be consumption and at the same time others that appear to be capital formation. In order to try to ensure that the System is implemented in a uniform way decisions have to be taken about the ways in which certain difficult, even controversial, items are to be classified. Some examples are given below.

Training, research and development

52. Expenditures by enterprises on activities such as staff training or research and development are not the type of intermediate inputs whose consumption is determined by the level at which production is carried out in the current period but are designed to raise productivity or increase the range of production possibilities in the future, in much the same way as expenditures on machinery, equipment, buildings and other structures. However, expenditures on training and research or development do not lead to the acquisition of assets that can be easily identified, quantified and valued for balance sheet purposes. Such expenditures continue to be classified as intermediate consumption, therefore, even though it is recognized that they may bring future benefits. In fact, many other expenditures undertaken by enterprises may also have impacts in future periods as well as the current period - for example, market research, advertising and expenditures on health and safety that affect the well-being and attitudes of the workforce.

Education

53. It is often proposed that expenditures on education should also be classified as gross fixed capital formation as a form of investment in human capital. The acquisition of knowledge, skills and qualifications increases the productive potential of the individuals concerned and is a source of future economic benefit to them. However, while knowledge, skills and qualifications are clearly assets in a broad sense of the term, they cannot be equated with fixed assets as understood in the System. They are not produced because they are acquired through learning, studying and practising - activities that are not themselves processes of production. The education services produced by schools, colleges, universities, etc. are consumed by students in the process of their acquiring knowledge and skills. Education assets are embodied in individuals as persons. They cannot be transferred to others and cannot be shown in the balance sheets of the enterprises in which the individuals work (except in rare cases when certain highly skilled individuals are under contract to work for particular employers for specified periods). Education assets could possibly be shown in balance sheets for the individuals in which they are embodied, but individuals are not enterprises. They would be difficult to value, bearing in mind that the remuneration received by a skilled worker depends upon the amount of time and effort expended and is not simply a return payable to the owner of an asset.

54. It may also be noted that final consumption consists of the use of goods and services for the direct satisfaction of human needs or wants, individually or collectively. Education services are undoubtedly consumed in this sense. They increase the welfare and improve the general quality of life of those consuming them. Moreover, they are not the only services consumed by individuals to bring long- as well as short-term benefits. For example, the consumption of health services brings long-term benefits and even the consumption of basic items such as food and housing is necessary in order to keep an individual in good health - and good working order.

Repairs, maintenance and gross fixed capital formation

55. Another, less familiar, example of the intrinsic difficulty of trying to draw a dichotomy between consumption and gross fixed capital formation is provided by repairs and maintenance. Ordinary maintenance and repairs undertaken by enterprises to keep fixed assets in good working order are intermediate consumption. However, major improvements, additions or extensions to fixed assets, both machinery and structures, which improve their performance, increase their capacity or

prolong their expected working lives count as gross fixed capital formation. In practice it is not easy to draw the line between ordinary repairs and major improvements, although the System provides certain guidelines for this purpose. Some analysts, however, consider that the distinction between ordinary repairs and maintenance and major improvements and additions is neither operational nor defensible and would favour a more "gross" method of recording in which all such activities are treated as gross fixed capital formation.

2. Interpretation of the distinction between consumption and gross fixed capital formation

56. The examples given above show that a simple dichotomy between consumption and gross fixed capital formation inevitably presents problems when dealing with flows of goods and services that do not fit comfortably under either heading. The issue is not simply how to classify certain flows, but also how to achieve an economically meaningful and feasible set of accounting procedures for the assets acquired through gross fixed capital formation within an integrated, coherent set of accounts encompassing past and future periods as well as the present.

57. Some care and sophistication is needed in using the accounts. For example, goods and services "consumed" by households - i.e., acquired for the satisfaction of their needs or wants - are not suddenly "used up" and do not "vanish" at the moment of acquisition. In particular, households "consuming" services such as health and education may continue to derive benefits over long periods of time. The "consumption" of such services therefore has points of similarity with "investment" in assets. Similarly, enterprises may continue to benefit over long periods of time from the intermediate consumption of services such as maintenance and repairs, training, research and development, market research, etc. Thus, while the acquisition of fixed assets by enterprises - that is, gross fixed capital formation - is undertaken specifically to enhance future production possibilities, they are not the only types of expenditure that may be expected to bring future benefits.

58. The decision whether to classify certain types of expenditure by households or government, such as education or health services, as final consumption expenditures or gross fixed capital formation does not affect the size of GDP, as both are final expenditures. On the other hand, the decision to classify certain expenditures by enterprises as intermediate consumption rather than gross fixed capital formation does reduce the gross value added and operating surplus of the enterprise and hence GDP as a whole. However, treating certain

expenditures as intermediate reduces not only gross fixed capital formation but also consumption of fixed capital in subsequent periods. It is therefore an open question as to how net value added and net domestic product (NDP) are affected in the longer term, depending upon the pattern of the relevant expenditures over time.

I. DEFINITIONS OF IMPORTANT TERMS (GLOSSARY)

Acquisitions

Goods and services are acquired by institutional units when they become the new owners of the goods or when the delivery of services to them is completed.

Actual final consumption of general government

Actual final consumption of general government is measured by the value of the collective (as opposed to individual) consumption services provided to the community, or large sections of the community, by general government; it is derived from their final consumption expenditure by subtracting the value of social transfers in kind payable.

Actual final consumption of households

Actual final consumption of households is the value of the consumption goods acquired by households, whether by purchase in general, or by transfer from government units or NPISHs, and used by them for the satisfaction of their needs and wants; it is derived from their final consumption expenditure by adding the value of social transfers in kind receivable.

Actual final consumption of NPISHs

NPISHs have no actual final consumption because most of the services provided by NPISHs are individual in nature and, for simplicity, all services provided by NPISHs are treated by convention as social transfers.

Additivity

Additivity is a property pertaining to a set of interdependent index numbers related by definition or by accounting constraints under which an aggregate is defined as the sum of its components; additivity requires this identity to be preserved when the values of both an aggregate and its components in some reference period are extrapolated over time using a set of volume index numbers.

Base period

The period that provides the weights for an index is described as the base period.

Basic price

The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable, and plus any subsidy receivable, on that unit as a consequence of its production or sale; it excludes any transport charges invoiced separately by the producer.

C.i.f. price

The c.i.f. price (i.e. cost, insurance and freight price) is the price of a good delivered at the frontier of the importing country, including any insurance and freight charges incurred to that point, or the price of a service delivered to a resident, before the payment of any import duties or other taxes on imports or trade and transport margins within the country.

Capital transfers

Capital transfers are transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realised by the disposal of another asset are transferred.

Chain indices

Chain indices are obtained by linking price (or volume) indices for consecutive periods by using weighting patterns appropriate to those periods.

Changes in inventories (including work-in-progress)

Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.

Compensation of employees

Compensation of employees is the total remuneration, in cash or in kind, payable by enterprises to employees in return for work done by the latter during the accounting period.

Constant prices

Constant prices are obtained by directly factoring changes over time in the values of flows of goods and services into two components reflecting changes in the prices of the goods and services concerned and changes in their volumes (i.e. changes in “constant price terms”).

Consumption good or service

A consumption good or service is one that is used (without further transformation in production) by households, NPISHs or government units for the direct satisfaction of individual needs or wants or the collective needs of members of the community.

Consumption of fixed capital

Consumption of fixed capital represents the reduction in the value of the fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or normal accidental damage.

Current transfers

Current transfers consist of all transfers that are not transfers of capital; they directly affect the level of disposable income and should influence the consumption of goods or services.

Deductible VAT

Deductible VAT is the amount of VAT payable on purchases of goods or services intended for intermediate consumption, gross fixed capital formation or for resale which a producer is permitted to deduct from his own VAT liability to the government in respect of VAT invoiced to his customers.

Disposals

Disposals of assets (inventories, fixed assets or land or other non-produced assets) by institutional units occur when one of those units sells any of the assets to another institutional unit.

Export subsidies

Export subsidies consist of all subsidies on goods and services that become payable to resident producers when the goods leave the economic territory or when the services are delivered to non-resident units; they include direct subsidies on exports, losses of government trading enterprises in respect of trade with non-residents, and subsidies resulting from multiple exchange rates.

Export taxes

Export taxes are taxes on goods or services that become payable when the goods leave the economic territory or when the services are delivered to non-residents; they include export duties, profits of export monopolies and taxes resulting from multiple exchange rates.

Exports of goods

Exports of goods consist of exports of the following items from residents to non-residents, generally with a change of ownership being involved: general merchandise, goods for processing, goods procured in domestic ports by non-resident carriers, and non-monetary gold.

Exports of services

Exports of services consist of the following services provided by residents to non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.

F.o.b. price

The f.o.b. price (free on board price) is the c.i.f. price less the costs of transportation and insurance charges, between the customs frontier of the exporting (importing) country and that of the importing (exporting) country.

Factor cost

Gross value added at factor cost is not a concept used explicitly in the System but it can easily be derived by subtracting the value of any taxes, less subsidies, on production payable out of gross value added.

Final consumption

Final consumption consists of goods and services used up by individual households or the community to satisfy their individual or collective needs or wants.

Final consumption expenditure of government

Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.

Final consumption expenditure of households

Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by

resident households on individual consumption goods and services, including those sold at prices that are not economically significant.

Final consumption expenditure of NPISHs

Final consumption expenditure of NPISHs consists of the expenditure, including imputed expenditure, incurred by resident NPISHs on individual consumption goods and services.

Financial intermediation services indirectly measured (FISIM)

Financial intermediation services indirectly measured (FISIM) is an indirect measure of the value of financial intermediation services provided but for which financial institutions do not charge explicitly.

Fixed assets

Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly or continuously in other processes of production for more than one year.

Goods

Goods are physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets.

Gross

The term “gross” is a common means of referring to values before deducting consumption of fixed capital (generally used as in “gross capital stock” or “gross domestic product”).

Gross capital formation

Gross capital formation is measured by the total value of the gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables for a unit or sector.

Gross domestic product - expenditure based

Expenditure-based gross domestic product is total final expenditures at purchasers’ prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.

Gross domestic product - income based

Income-based gross domestic product is compensation of employees, plus taxes less subsidies on production and imports, plus gross mixed income, plus gross operating surplus.

Gross domestic product - output based

Output-based gross domestic product is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).

Gross domestic product at market prices

Gross domestic product at market prices is the sum of the gross values added of all resident producers at producers' prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).

Gross fixed capital formation

Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units.

Gross national disposable income

Gross national disposable income may be derived from gross national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.

Gross national income (GNI)

Gross national income (GNI) is GDP less net taxes on production and imports, less compensation of employees less property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units); an alternative approach to measuring GNI at market prices is as the aggregate value of the balances of gross primary incomes for all sectors; (note that gross national income is identical to gross national product (GNP) as previously used in national accounts generally).

Gross saving

Gross saving is gross disposable income less final consumption expenditure.

Gross value added

Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.

Gross value added at basic prices

Gross value added at basic prices is output valued at basic prices less intermediate consumption valued at purchasers' prices.

Gross value added at producers' prices

Gross value added at producers' prices is output valued at producers' prices less intermediate consumption valued at purchasers' prices.

Import duties

Import duties consist of customs duties, or other import charges, which are payable on goods of a particular type when they enter the economic territory.

Import subsidies

Import subsidies consist of subsidies on goods and services that become payable to resident producers when the goods cross the frontier of the economic territory or when the services are delivered to resident institutional units.

Imports of goods

Imports of goods consist of imports of the following items from non-residents to residents, generally with a change of ownership being involved: general merchandise, goods for processing, goods procured in foreign ports by domestic carriers, and non-monetary gold.

Imports of services

Imports of services consist of the following services purchased by residents from non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.

Indirect taxes

As traditionally understood, indirect taxes are taxes that supposedly can be passed on, in whole or in part, to other institutional units by increasing the prices of the goods or services sold but the term “indirect taxes” is not used in 1993 SNA; rather, taxes are specifically identified by their purpose (e.g. taxes on products).

Intermediate consumption

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets whose consumption is recorded as consumption of fixed capital; the goods or services may be either transformed or used up by the production process.

Inventories

Inventories consist of stocks of outputs that are still held by the units that produced them prior to their being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units that are intended to be used for intermediate consumption or for resale without further processing.

Invoiced VAT

Invoiced VAT is the VAT payable on the sales of a producer; it is shown separately on the invoice which the producer presents to the purchaser.

Market prices

Market prices for transactions are the amounts of money willing buyers pay to acquire something from willing sellers.

Mixed income

Mixed income is the surplus or deficit accruing from production by unincorporated enterprises owned by households; it implicitly contains an element of remuneration for work done by the owner, or other members of the household, that cannot be separately identified from the return to the owner as entrepreneur but it excludes the operating surplus coming from owner-occupied dwellings.

Net

The term “net” is a common means of referring to values after deducting consumption of fixed capital (generally used as in “net capital stock” or “net domestic product”); it should be noted, however, that the term “net” can be

used in different contexts in the national accounts, such as “net income from abroad” which is the difference between two income flows.

Net income from abroad

The difference between the total values of the primary incomes receivable from, and payable to, non-residents is often described as net income from abroad.

Net lending

Net lending is the net amount a unit or a sector has available to finance, directly or indirectly, other units or other sectors; it is the balancing item in the capital account and is defined as: (Net saving plus capital transfers receivable minus capital transfers payable) minus (the value of acquisitions less disposals of non-financial assets, less consumption of fixed capital); negative net lending may also be described as “net borrowing”.

Net national disposable income

Net national disposable income may be derived from net national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.

Net national income

The aggregate value of the balances of net primary incomes summed over all sectors is described as net national income.

Net saving

Net saving is net disposable income less final consumption expenditure.

Net value added

Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.

Non-deductible VAT

Non-deductible VAT is the VAT payable by a purchaser which is not deductible from his own VAT liability, if any.

Non-financial assets

Non-financial assets are entities, over which ownership rights are enforced by institutional units, individually or collectively, and from which economic benefits may be derived by their owners by holding them, or using them over a period of time, that consist of tangible assets, both produced and non-produced, and most intangible assets for which no corresponding liabilities are recorded.

Non-produced assets

Non-produced assets are non-financial assets that come into existence other than through processes of production.

Non-profit institutions serving households (NPISHs)

Non-profit institutions serving households (NPISHs) consist of NPIs which are not financed and controlled by government and which provide goods or services to households free or at prices that are not economically significant.

Non-resident

A unit is non-resident if its centre of economic interest is not in the domestic economic territory.

Operating surplus

The operating surplus measures the surplus or deficit accruing from production before taking account of any interest, rent or similar charges payable on financial or tangible non-produced assets borrowed or rented by the enterprise, or any interest, rent or similar receipts receivable on financial or tangible non-produced assets owned by the enterprise; (note: for unincorporated enterprises owned by households, this component is called “mixed income”).

Other subsidies on production

Other subsidies on production consist of subsidies, except subsidies on products, which resident enterprises may receive as a consequence of engaging in production (eg, subsidies on payroll or workforce or subsidies to reduce pollution).

Other subsidies on products

Other subsidies on products consist of subsidies on goods or services produced as the outputs of resident enterprises that become payable as a result of the production, sale, transfer, leasing or delivery of those goods or services, or as a result of their use for own consumption or own capital formation; there are three broad categories: (1)

subsidies on products used domestically, (2) losses of government trading organisations, and (3) subsidies to public corporations and quasi-corporations.

Output

Output consists of those goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.

Producer's price

The producer's price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser; it excludes any transport charges invoiced separately by the producer.

Property income

Property income is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds to or putting the tangible non-produced asset at the disposal of, another institutional unit; it consists of interest, the distributed income of corporations (i.e., dividends and withdrawals from income of quasi-corporations), reinvested earnings on direct foreign investment, property income attributed to insurance policy holders, and rent.

Purchaser's price

The purchaser's price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser; the purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.

Resident

An institutional unit is resident in a country when it has a centre of economic interest in the economic territory of that country.

Services

Services are outputs produced to order and typically consist of changes in the conditions of the consuming units realised by the activities of producers at the demand of the consumers; by the time their production is completed they must have been provided to the consumers.

Stocks

Stocks are a position in, or holdings of, assets and liabilities at a point in time and the System records stocks in accounts, usually referred to as balance sheets, and tables at the beginning and end of the accounting period; stocks result from the accumulation of prior transactions and other flows, and they are changed by transactions and other flows in the period (note that stocks of goods are referred to as “inventories” in the System).

Subsidies

Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or the quantities or values of the goods or services which they produce, sell or import.

Taxes and duties on imports

Taxes and duties on imports, excluding VAT, consist of taxes on goods and services that become payable at the moment when the goods cross the national or customs frontiers of the economic territory or when the services are delivered by non-resident producers to resident institutional units.

Taxes on production and imports

Taxes on production consist of taxes payable on goods and services when they are produced, delivered, sold, transferred or otherwise disposed of by their producers plus other taxes on production, consisting mainly of taxes on the ownership or use of land, buildings or other assets used in production or on the labour employed, or compensation of employees paid.

Taxes on products

Taxes on products, excluding VAT, import and export taxes, consist of taxes on goods and services that become payable as a result of the production, sale, transfer, leasing or delivery of those goods or services, or as a

result of their use for own consumption or own capital formation.

Transfer

A transfer is a transaction in which one institutional unit provides a good, service or asset to another unit without receiving from the latter any good, service or asset in return as counterpart.

Valuables

Valuables are produced assets that are not used primarily for production or consumption, that are expected to appreciate or at least not to decline in real value, that do not deteriorate over time under normal conditions and that are acquired and held primarily as stores of value.

Value added - gross

Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.

Value added - net

Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.

Value added tax (VAT)

A value added tax (VAT) is a tax on products collected in stages by enterprises; it is a wide-ranging tax usually designed to cover most or all goods and services but producers are obliged to pay to government only the difference between the VAT on their sales and the VAT on their purchases for intermediate consumption or capital formation, while VAT is not usually charged on sales to non-residents (i.e., exports).

Albania

Source

Reply to the United Nations national accounts questionnaire from the Statistical Directory of the Ministry of Economy, Tirana. The latest data for Albania was received through the United Nations Economic Commission for Europe (UN/ECE).

General

The estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). Most transition economies went directly from the Material Product System (MPS) to the 1993 SNA and did not implement the System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

Algeria

Source

Reply to the United Nations national accounts questionnaire from the Office National des Statistiques (ONS), Alger. Official estimates are published in "Comptes Economiques" by the Direction des Statistiques et de la Comptabilite Nationale, Secretariat d'Etat au Plan, and in the "Annuaire Statistique de L'Algerie" by ONS.

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Andorra

Source

The preparation of national accounts statistics in Andorra is undertaken by the "Servei d'Estudis" at Andorra's Ministry of Finance. The data displayed have been submitted directly to the United Nations Statistics Division through the UN national accounts questionnaire.

General

Methodology:

Overview of GDP Compilation

Gross domestic product is estimated only by production approach.

Production Approach

Gross value added of the economy is valued at basic prices and defined as the total productive activity of the resident units of production as measurable in monetary transactions. Since information enabling a direct computation of value added is not available for the majority of economic sectors, the "Servei d'Estudis" has made an estimation of this macroeconomic aggregate by means of an indirect method, which has been applied to all the economic sectors with exception of the tobacco industry and the banking sector. The indirect method multiplies the compensation of employees declared for each economic activity with the Andorran Social Security Fund "Caixa of Seguretat Social (CASS)" with a technical coefficient "VAB" (Value Added Bruto/Compensation of Employees at basic current prices) for each activity. This coefficient is calculated by the National Institute of Statistics of Spain (INE) for Catalonia when estimating the regional accounts of Spain. The value added for the tobacco industry is estimated from tobacco imports data provided by the Customs Department of the Government of Andorra. Value added for the financial sector is estimated on the basis of balance sheets and profit-and-loss statements of the banking organizations that operate in Andorra. The GDP value is computed by adding indirect taxes collected by the central administration to the Value Added. Computation of integrated institutional sector accounts has not been implemented since currently only rudimentary information is available, i.e. on the government sector and the household sector but not on the other sectors. GNI cannot be computed since data on transactions of the domestic sectors with the Rest of the World is not available.

Anguilla

Source

Reply to the United Nations national accounts questionnaire from the Development Planning Unit, Ministry of Finance and Economic Development, Anguilla. The official estimates were published in "Anguilla - National Accounts Statistics, 1984-1987" by the Ministry, May 1988.

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Argentina

Source

The preparation of national accounts statistics in Argentina is undertaken by Dirección Nacional de Cuentas Nacionales (DNCN) INDEC. The official estimates are published by the DNCN in "Economic Activity Press Release" and by the Ministerio de Economía in "Economic Report". In 1999, the publication "Sistema de Cuentas Nacionales, Año Base 1993" was presented and contains detailed description of the sources and methods used for the national accounts estimation, in accordance with the United Nations System of National Accounts 1993 (1993 SNA). The following tables have been prepared from successive replies to the United Nations national accounts questionnaire.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA) so far as the data would permit. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Methodology:

Overview of GDP Compilation

Gross domestic product is estimated mainly through the production approach.

Expenditure Approach

The expenditure approach is used to estimate government final consumption expenditure, government final consumption expenditure, gross investment in construction and machinery and exports and imports of goods and services. The commodity-flow approach is used to estimate the current value of private final consumption expenditure and the gross investment in machinery and equipment by sector of origin, using indices of prices and quantities for sectors producing domestic and imported goods. Coefficients for the allocation of economic use are determined on the basis of the nature of the goods involved. Government final consumption expenditure is estimated in accordance with budgetary information from national, provincial and municipal government. Investment in construction is estimated with a physical volume index prepared as a weighted average of labor (data from the social security system) and material inputs into the construction industry. The estimation of domestically produced capital goods is done on the basis of the industrial censuses. For the years between censuses, the data are updated through a combination of indexes of physical output and price indexes. Data on exports and imports of goods and services are obtained from the balance of payments accounts. Constant values of government consumption expenditure are obtained through deflating purchases of goods and services by the average of the wholesale and the consumer prices. Private consumption expenditure at constant prices is obtained with a commodity flow method. Construction cost is used by multiplying the price index with the constant values for construction to obtain current values. Domestic machinery and equipment products are deflated by the price index of producer prices or extrapolated by volume of production. Imported machinery and equipment are deflated by capital goods import price index. Price deflation is used for exports and imports of goods and services.

Income Approach

The estimates of compensation of employees are based on employment data and remuneration data (sources: social security system and Permanent Household Survey). Operating surplus is, in general, obtained as a residual.

Production Approach

The production approach is used to estimate value added of most industries. The basic statistics on agricultural production are obtained from the Secretaría de Agricultura y Ganadería, Pesca y Alimentación (SAGPyA), producers' associations and other relevant institutions. Livestock quantity estimates output are based on information provided by SAGPyA and other relevant institutions on the basis of surveys, administrative records and estimates on production and stocks for different species. Prices of outputs and inputs are collected within the framework of the INDEC prices indices system. For fishing and related services the data used is based on the deep-sea catches on quantities by species and by type of vessel, provided by the SAGPyA. Monthly data on prices by species are available from the INDEC system of wholesale price indices. The data needed to calculate the value added of mines and quarries is provided by the SubSecretaría de Energía (quantities produced and prices of oil and gas) and the Secretaría de Minería (other minerals). The main data sources used in estimating industrial production are the monthly and annual surveys for the manufacturing industry and the industrialists' chambers and administrative data sources for some industries. Data on production at current prices as well as volume indices at the level of five digits of the industrial classification are obtained from the surveys. The other data sources vary according to the activity, although they are mainly data on quantities produced. The value added of supply of electricity, gas and water are provided by the enterprises, covering 100% of the industry in electricity and gas and the relevant enterprise in water. Prices are obtained from wholesale price index system of the INDEC. Data on the physical volume index is prepared as a weighted average of labor (social security system) and material inputs into the construction industry are used to estimate the value of construction. Information on prices from the INDEC system of construction cost indices. Gross output of the trade sector is estimated through applying gross percentage mark-up rates to the value of goods recorded as entering the various marketing channels. The main sources are economic census of 1984, production from monthly industrial surveys and foreign trade statistics. Other data sources include the stocks of vehicles used to estimate vehicle repairs. The value of hotels at constant prices are based on trend movements of this industry estimated from press information, tourism flow data and the travel category in the balance of payments (Dirección Nacional de Cuentas Internacionales). The value of restaurants at constant prices is derived from a demand corresponding to hotels and restaurants in the consumer price index. Different kinds of indicators are used for the estimates of land transport services depending of the type of service. Thus, indicators used include: the number of passengers and tons transported by railways, commodity flow data for road transport of goods, number of passengers transported by buses, demand functions for expenditure on taxis, etc. Relevant price indices for the corresponding items of transportation are available from the wholesale and consumer prices indexes compiled by the INDEC. Quarterly estimates for air transport are based on information (transported passengers and cargo) from Aerolíneas Argentinas (the largest airline) and consumer price indices compiled by the INDEC. Quarterly information from all airlines is used for the revised quarterly estimates. The indicator used for the water transport industry is the income from freight by resident producers. Related services are estimated on the basis of a variety of indicators such as hotels and air transport (travel agencies), the commodity flow method (warehousing), export and import cargoes (port activities), number of crossing vehicles (tolls), etc. Prices indices from the wholesale and consumer price indices as well as tariffs for specific services are available. For communications the data used is based on financial information of the enterprises belonging to this sector and are available quarterly as a basis for the current price estimates. Volume indicators are calculated for telephone services based on the data reported by the telephone companies on the number of telephone lines in service, invoiced impulses, and minutes of international calls (incoming and outgoing). Relevant price indices from the system of wholesale price indices of the INDEC and specific tariff price indices for some of the communication services are available to deflate current price data. The value added of financial intermediation is based on financial and quantity data of the banking system. Quantity data, and in some cases, also financial data, are available for others producers of financial services. Monthly data on insurance premiums and quarterly financial statements are available for insurance companies. Value added in the real estate, renting and business activities, is estimated from the stock of dwellings and different indicators for each of the business services: number of deeds in Buenos Aires (real estate) or yield of the judicial tax (judicial activities). The value added of public administration and defense is based on compensation of employees on accrual basis from the execution of the national budget and are available from the integrated system of financial information (SIDIF). Data on the execution of the budget by the provincial and municipal governments are supplied by the Dirección Nacional de Coordinación Fiscal con las Provincias (Ministerio de Economía). Volume indices of

employment (based on number of persons) for each of the government levels are available for the estimates at constant prices. The value of public education is the same as for public administration plus full coverage financial and physical data from extra budgetary educational institutions. Estimates for the private educational are compiled on the basis of labor (social security system). The value of public health is the same as for public administration. Volume indices are compiled based on quantities of services provided based on administrative records. Quantity indicators related to outpatient consultations, emergency rooms and hospitalization are obtained from a sample of medical centers in Buenos Aires and major cities are the basis for the estimates for the private health industry. Price indices of drugs, wages and medical services are available from INDEC and SIJP. For other activities involving community, social and personal services, services are estimated on the basis of demand functions. The value of the domestic services is estimated on the basis of labor (Encuesta Permanente de Hogares of INDEC).

Armenia

Source

Reply to the United Nations national accounts questionnaire from the State Department of Statistics. The latest data for Armenia was received through the United Nations Economic Commission for Europe (UN/ECE).

General

The estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables. Most transition economies went directly from the Material Product System (MPS) to the 1993 SNA and did not implement the System of National Accounts 1968 (1968 SNA). Please note that the official currency of Armenia has changed in 1994 from the Russian ruble to Armenian dram. One dram equals 200 Russian rubles (see World Bank, "Statistical Handbook for the States of the FSU, 1996").

Source

Reply to the United Nations national accounts questionnaire from the Central Bureau of Statistics, Aruba. Official estimates are published by the Central Bureau of Statistics in the "National Accounts of Aruba, provisional estimates for 1994" and the "Statistical Yearbook".

General

The estimates shown in the following tables have been prepared in accordance with the System of National Accounts 1993 (1993 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Australia

Source

Reply to the United Nations national accounts questionnaire from the Australian Bureau of Statistics (ABS), Canberra. The official estimates are published in the "Australian System of National Accounts", ABS, catalogue 5204.0. The data for Australia was received through the Organization for Economic Co-operation and Development (OECD), Paris.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts (1993 SNA). Previously, the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). Not all of the tables were updated and only contain data following the 1968 SNA which therefore often show small differences to the new data compiled in accordance to the 1993 SNA. The Australian National Accounts System corresponds closely to the United Nations SNA. Detailed descriptions of the concepts, definitions, sources and methods used are published in "Australian National Accounts, Concepts, Sources and Methods". Preliminary annual estimates for the latest financial year are published about 6 to 7 weeks after the end of the financial year in the Commonwealth Budget Paper "National Income and Expenditure" while quarterly estimates are released usually about 8 weeks after the end of the quarter in the quarterly publication "Australian National Accounts, National Income and Expenditure" (5206.0). The most comprehensive national accounts publication is "Australian National Accounts, National Income and Expenditure" (5204.0) which is released annually. In addition to these National Income and Expenditure publications, input-output tables have been published for the years 1958-59, 1962-63, 1968-69, 1974-75, 1986-87 and annually from 1977-78 to 1983-84 in "Australian National Accounts, Input-Output Tables" (5209.0). Annual estimates of gross product at constant prices and indexes of gross product at constant prices per person employed and per hour worked, by industry, are published in "Australian National Accounts, Gross Product, Employment and Hours Worked" (5211.0) until 1989-90. From 1990-91 these estimates are included in 5204.0. Quarterly estimates of gross product at constant prices, by industry, are published in "Australian National Accounts: Gross Product, Employment and Hours Worked" (5222.0). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is placed on the relevant tables. Estimates relate to the fiscal year beginning 1 July. Original chain constant prices are based on the reference year 2000-2001 and have been scaled up to the price levels of 1995 in order to allow international comparisons. The resulting chain constant prices are not additive.

Methodology:

Overview of GDP Compilation

Gross domestic product is estimated using both the income and expenditure approaches. The difference between the two approaches is shown as statistical discrepancy and by convention, recorded on the expenditure side of the account.

Expenditure Approach

Government final consumption expenditure and public gross fixed capital formation are estimated from the accounting records of the government sector. Private final consumption expenditure on goods is mainly derived from information collected in retail censuses (held every five years) as well as data on production, imports and exports, and motor vehicle registrations. The results of a monthly survey of retail sales are used to interpolate between census benchmarks and to extrapolate for the period since the last retail census. Benchmarks for dwellings rent are derived from population census data collected every five years. The consumer price index is used in conjunction with a perpetual inventory model of the stock of dwellings to interpolate between census year estimates and extrapolate from the most recent census. Estimates of expenditure on other services are based mainly on revenue or earnings data. Increase in stocks is based on book value levels of stocks reported in ABS economic censuses, taxation statistics and quarterly ABS surveys of stocks (less the stock valuation adjustment).

Estimates of private gross fixed capital expenditure are obtained from a quarterly collections of building and engineering construction statistics and from a quarterly survey of new capital expenditure by private businesses on plant and equipment. Exports and imports of goods are estimated from customs data while exports and imports of services are derived from transportation survey data and from data obtained as a by-product of the administration of foreign exchange transactions. Constant price estimates are derived quarterly with annual estimates obtained by summing the quarterly series. Government consumption expenditures are deflated by composite wage rate and material price indexes. Substantial use is made of data from consumer price index in the revaluation of private final consumption expenditure. Estimates of gross fixed capital expenditure are revalued using (output) building price indexes for building; composite wage material price indexes for engineering construction; domestic and overseas producer price indexes (including the computer equipment price index produced by the United States Bureau of Economic Analysis) and import price indexes for equipment; and quantity revaluation for real estate transfer expenses. For exports and imports, considerable use is made of the quantity revaluation technique with the remainder deflated using price indexes (including the BEA index). Increase in stocks estimates are derived using detailed price indexes to revalue book value levels.

Income Approach

The components of indirect taxes (net) are estimated from government accounting records. Estimates of gross operating surplus are mainly based on taxation statistics. Estimates of the consumption of fixed capital are derived at current replacement cost using the perpetual inventory method. Since December quarter 1981, the compensation of employees data have been based on a quarterly survey of employers - prior to that quarter, estimates were mainly based on payroll tax data.

Production Approach

The table of gross domestic product by kind of economic activity is prepared at market prices. Constant price estimates of gross product for agriculture, mining and gas industries are derived using double deflation. Estimates for finance, property and business services, and public administration and defence are derived by extrapolating the base year value of gross product using hours worked estimates. Estimates for the community services are derived by extrapolating the base year value of gross product using the sum of the relevant components of government and private final consumption expenditure. Estimates for the remaining industries are derived using the gross output method.

^a Refers to Net Operating Surplus plus total Consumption of Fixed Capital of the sector.

^b Mixed income, net. Excludes consumption of fixed capital.

Austria

Source

The preparation of annual national accounts statistics in Austria is undertaken by the Directorate of Macroeconomic Statistics at STATISTICS AUSTRIA, the Austrian National Statistical Office located in Vienna. The official estimates are published annually on the internet (www.statistik.at), as well as in the Statistical Yearbook. In November 2002, Statistics Austria published consistent national accounts time series back to 1977 in "Volkswirtschaftliche Gesamtrechnungen 1977-2001". In May 2001, a comprehensive methodological inventory on GDP compilation was submitted to EUROSTAT. This inventory describes in detail all methods applied in compiling the SNA accounts and exhibits numerical results. The data provided to UNSD were received through the Organisation for Economic Co-operation and Development (OECD), Paris.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of System of National Accounts 1993 (1993 SNA). Previously the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). Input-output tables have been published for the years 1961, 1964, 1976, 1995, and 2000. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables. On 1 January 1999 the conversion rate of the national currencies to the new currency euro was irrevocably fixed and the euro became the single currency of the 11 member countries of the European Monetary Union (EMU). For these 11 countries all data starting 1999 is in euro. - The newly submitted data for the years before 1999 were reported in national currency but were converted to 'euro' using the fixed exchange rates to allow for easy comparison of national time series data. In this publication the currency name of this data consists of the year of accession plus the ISO currency code of the national currency and the word 'euro'. In the case of Austria the currency name for the data before 1999 is "1999 ATS euro". For international comparisons, like for example when converting national data into US dollar the data before the euro introduction has first to be converted back into national currency using the fixed 6-digit Euro conversion rate of 1 Euro = 13.7603 Austrian schilling. - The name of the currency of the newly submitted data is "1999 ATS euro" for the data before 1999 and "euro" for the data from 1999 on. In the database this newly submitted data is stored as a new series of data and will be shown in this yearbook as a new row of data if in the same table there is also previously submitted data. Previously submitted data for Austria, like for example all old data following the 1968 SNA is still in "Austrian schilling", although this is not specifically indicated in the tables.

Methodology:

Overview of GDP Compilation

Gross domestic product is estimated mainly through the production approach. Expenditure and income approach are also compiled. Input-Output tables are currently not compiled annually but at a lower frequency and depart from the benchmark values derived by GDP compilation.

Expenditure Approach

The estimates of government final consumption expenditure are derived from production accounts compiled on the basis of the accounting records of the various authorities. The values of private expenditure on goods are mostly obtained by means of the commodity flow method, either by multiplying the quantity data by average consumer prices or by adding distributive margins and turnover tax and indirect taxes to the value of goods produced domestically or imported. The sources of data include statistics on agricultural produce, industrial output data by commodities, data on energy and foreign trade by commodities, motor vehicle registration statistics, closed accounts for public transportation enterprises, communication, insurance and others. For price data the consumer price index is largely referred to. In addition, decennial household surveys provide benchmark information on average prices. Own-account consumption is valued at producers' prices, for use of owner-occupied dwellings the corresponding market rents are imputed. For private expenditure on services, the

estimates are mostly based on value added tax statistics. The data on increase in stocks are based on regular stock surveys covering almost all branches, those that are not covered are included in statistical discrepancy. For gross fixed capital formation in machinery and electrical equipment, the value of domestic production plus imports minus exports is adjusted to include transport costs, trade margins, customs duties, etc. The estimates of transport equipment are based on registration statistics and are obtained by multiplying the quantity by the current prices. For construction, the gross value is derived from data on characteristic gross output, with additions for material supplied, non-characteristic construction (including own-account construction, e.g. residential buildings). The estimates of exports and imports of goods and services are based on foreign trade statistics and the balance of payments. Constant price estimates of government final consumption expenditure are based on deflation for intermediate consumption and non-commodity sales. Compensation of employees is in certain activities also deflated, for others quantum indicators are used. For private consumption expenditure, direct revaluation at base-year prices is used where information is available on quantities of commodities consumed. Otherwise, the current estimates are deflated by appropriate price indexes. This same method is used for increase in stocks, exports and imports of goods and services and for gross fixed capital formation.

Income Approach

Estimates of compensation of employees are based on contributions paid by employers to government funds and wage statistics. Direct information is available on compensation of government employees. Operating surplus is basically derived as a residual item. Further breakdown is based on income tax statistics for unincorporated enterprises, independent professions and property. Corporate balance sheets and tax statistics are used for undistributed profits of corporations: for agriculture and forestry income is derived from the production account. In the case of the public sector, data are obtained from the accounting records of public bodies. Depreciation estimates of stocks are obtained either by using the perpetual inventory concept or, in some instances, are extrapolated by net output at constant prices and inflated by national accounts' price index for fixed capital formation. Indirect taxes and subsidies are obtained directly from the records of the various governments.

Production Approach

The table of gross domestic product by kind of economic activity is prepared at market prices, i.e. producers' values. The production approach is used to estimate value added of nearly all industries. The income approach is used to estimate value added of public administration and defence. The value added of agriculture is obtained by deducting the cost of all non-factor inputs from the gross value of production, which include an imputation for produce consumed on the farms. The calculations are based on production statistics for quantities, and on agricultural price surveys. Mining and quarrying, electricity, gas and water as well as large-scale manufacturing are surveyed by annual overall censuses while small-scale manufacturing is surveyed annually by samples. Benchmark estimates have been prepared for 1964, 1971, 1976 and 1983. When necessary extrapolation is based on output statistics, sample survey and turnover statistics. For construction, census type data on gross output and input have been available annually since 1968, own-account construction is imputed for housing and agriculture. The estimates of turnover in retail and wholesale trade are based on the 1964, 1976 and 1983 census of non-agricultural establishments, the 1971 census of turnover and, since 1973, an annual sample survey. Estimates of restaurants and hotels are based on the 1964 industrial census and on a special survey in 1972, and 1976 and 1983 censuses. For the intermediate years, value added tax and turnover tax statistics as well as other suitable indicators (private accommodation) are used. For railways and air transportation and communication, value added is derived from the accounts of concerned enterprises. For the other activities of the transport sector, benchmark data have been provided by the 1964, 1976 and 1983 industrial censuses, extrapolated by various indicators. From 1973 onward, value added tax statistics provide the output indicators for most transportation other than large enterprises mentioned before. For the financial institutions, value added is derived from accounting records for banking, and other financial institutions from statistics of the supervisory board for insurance. Data on real estate are obtained from decennial housing censuses and micro-census data on housing and rents. In the case of owner-occupied dwellings, rents paid for comparable dwellings are applied. The value added of government services is estimated by adding the cost items obtained from accounting records. The estimates of other services are based on annual turnover statistics, value added tax statistics and various net to gross ratios obtained from the 1964 and 1976 census of non-agricultural establishments. The value of domestic and health services is calculated by means of VAT, social security and wage statistics. For the constant price

estimates, double deflation is used, but not invariably, for agriculture, electricity, gas and water, construction, transportation and ownership of dwellings. In manufacturing, a combination of double deflation and fixed net ratios is applied. The turnover of wholesale and retail trade is deflated by appropriate price indexes. For the producers of government services, partly quantum indicators, partly suitable price (wage) indexes are used. For most of the remaining activities, value added is mostly calculated by deflation.

^a Includes Gross mixed income and FISIM.

^b Includes Net mixed income and FISIM.

^c Statistical discrepancy with equivalent item in Table 1.1 Gross domestic product by expenditures at current prices. As different methods are used for accounting gross capital formation by activity and gross capital formation for the whole economy, results differ.

^d As different methods are used for accounting gross capital formation by activity and gross capital formation for the whole economy, results differ.

^e Data in terms of jobs instead of persons.

^a Discrepancy with equivalent item in Table 2.3 Output, gross value added and fixed assets by industries.

^b Statistical discrepancy with the equivalent item in table 2.1 Value Added by Industries.

^c Refers to Net Operating Surplus plus total Consumption of Fixed Capital of the sector.

^d Mixed income, net. Excludes consumption of fixed capital.

^e Statistical discrepancy with equivalent item in Table 1.1 Gross domestic product by expenditures at current prices. As different methods are used for accounting gross capital formation by activity and gross capital formation for the whole economy, results differ.

^f Statistical discrepancy between Net lending in the financial account and Net lending in the capital account.

^a Refers to Net Operating Surplus plus total Consumption of Fixed Capital of the sector.

^b Mixed income, net. Excludes consumption of fixed capital.

Azerbaijan

Source

Reply to the United Nations national accounts questionnaire from the State Committee of Republic of Azerbaijan on Statistics. The latest data for Azerbaijan was received through the United Nations Economic Commission for Europe (UN/ECE).

General

The estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables. Most transition economies went directly from the Material Product System (MPS) to the 1993 SNA and did not implement the System of National Accounts 1968 (1968 SNA).

Bahamas

Source

Latest data is compiled on the basis of Bahamas National Accounts Report for 2004, published by the Department of Statistics of the Ministry of Finance of Bahamas. Previous data was based on replies to the United Nations national accounts questionnaire from the Department of Statistics, Nassau.

General

The latest estimates shown in the following tables are considered to be prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA), based on the response to a conceptual questionnaire and/or other available information. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Methodology:

Overview of GDP Compilation

The national accounts estimates are primarily based on the production approach.

Expenditure Approach

Government Final Consumption Expenditure was derived from an analysis of the Treasury. Private Final Consumption Expenditure of Residents has many constituent elements. A major part of the total was derived from the establishment survey and consists of revenue in retail trade - adjusted for sales made for purposes of Gross Fixed Capital Formation and sales made to other businesses. The revenues of hotels, restaurants and service establishments and revenues derived from medical and dental practices as well as revenues derived from personal expenditure on the services of accountants, lawyers and architects and the expenditure of charitable organizations as well as associations of individuals such as labor unions were all included. Gross paid and imputed residential rents for household accommodation was derived mainly from the census of population and labor force surveys. Paid and imputed service charges for personal banking and insurance services were also included. An estimate for expenditure in the informal economy was made. The Change in Stocks were obtained from records of public corporations and the establishment survey in retail and wholesale trade. Since, at the moment, no knowledge of inventory accounting practices exists nor are there any price indexes measuring the change in the value of inventories, these estimates must be considered rough approximations to the true change in the value of inventories. Presently no data exist in areas other than outlined above. The values of Residential Building Construction and of Other Construction were based on the establishment surveys in the construction industry. Purchases of Machinery and Equipment were derived from detailed import data adjusted for custom duties and mark-ups. The value of Exports and Imports of Goods and Services are anchored to the balance of trade and balance of payment data estimated by the Department of Statistics and the Central Bank of the Bahamas respectively. The Tourism data is based on Ministry of Tourism figures.

Production Approach

GDP is estimated excluding other taxes on production ("at factor cost") based on the aggregate estimate of gross revenue and intermediate consumption for each economic activity as defined by ISIC. Unless otherwise stated these data were derived from questionnaires asking for such detail as gross revenue, salaries and wages, expenses incurred in carrying out the business etc. These questionnaires were sent out to all commercial establishments. An establishment is defined as a unit of business that can give information on its gross revenue and specified items of cost. Most industries are covered by the Department of Statistics (DOS) "Business Establishment Survey". For the largest entities in the various industries the survey is a census, while for the smaller entities a scientifically constructed sample survey is used. Data in the Agriculture and Fishing industries were constructed from information obtained from the Departments of Fisheries and Agriculture. The Financial

Industry data is obtained mainly from the Registrar of Insurance and from the Central Bank of the Bahamas. For Public Administration, Public Education, and Public Health the major portion of the information came from the treasury accounts of the government of the Bahamas. The industrial total thus derived yielded GDP at factor cost to which were added all indirect taxes less subsidies to obtain GDP at market prices.

^a Discrepancy between components and total.

^b Includes financial intermediation services indirectly measured (FISIM).

^c Account does not balance.

^d Refers to Net Domestic Product. Excludes consumption of fixed capital.

^e Net Operating Surplus.

^f Net National Income. Statistical discrepancy with equivalent item in Table 1.3.

Bahrain

Source

The estimates are published by the Ministry of Finance and National Economy in the "National Accounts of Bahrain". The following tables have been prepared from replies to the UN National Accounts Questionnaire in 1987 and 2002 by the Ministry of Finance and National Economy.

General

The estimates shown in the following tables have been prepared by the Statistics Department in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). Previously, the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

Barbados

Source

Reply to the United Nations national accounts questionnaire from the Barbados Statistical Service, Bridgetown, St. Michael. Official estimates are provided by the Statistical Service and published in the "Annual Statistical Digest" of the Central Bank of Barbados.

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Belarus

Source

Reply to the United Nations national accounts questionnaire from the State Committee of the Republic of Belarus on Statistics and Analysis. The latest data for Belarus was received through the United Nations Economic Commission for Europe (UN/ECE).

General

The estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables. Most transition economies went directly from the Material Product System (MPS) to the 1993 SNA and did not implement the System of National Accounts 1968 (1968 SNA). The currency of Belarus changed in the reporting year 1993 from Russian rouble to Belarussian rouble (1 Belarussian rouble equals 10 Russian roubles). Series 300 is expressed in re-denominated format, with 1 re-denominated Belarussian rouble equaling 1000 Belarussian roubles.

Belgium

Source

Reply to the United Nations national accounts questionnaire from the Institut des Comptes Nationaux, Banque nationale de Belgique, Brussels. The official estimates are published in "Comptes nationaux". The data was received through the Organization for Economic Co-operation and Development (OECD), Paris.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). Previously the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). The estimates prepared according to the 1968 SNA are provided in the former national currency Belgian franc. On 1 January 1999 the conversion rate of the national currencies to the new currency euro was irrevocably fixed and the euro became the single currency of the 11 member countries of the European Monetary Union (EMU). For these 11 countries all data starting 1999 is in euro. - The newly submitted data for the years before 1999 were reported in national currency but were converted to 'euro' using the fixed exchange rates to allow for easy comparison of national time series data. In this publication the currency name of this data consists of the year of accession plus the ISO currency code of the national currency and the word 'euro'. In the case of Belgium the currency name for the data before 1999 is "1999 BEF euro". For international comparisons, like for example when converting national data into US dollar the data before the euro introduction has first to be converted back into national currency using the fixed 6-digit Euro conversion rate of 1 Euro = 40.3399 Belgian franc. - The name of the currency of the newly submitted data is "1999 BEF euro" for the data before 1999 and "euro" for the data from 1999 on. In the database this newly submitted data is stored as a new series of data and will be shown in this yearbook as a new row of data if in the same table there is also previously submitted data. Previously submitted data for Belgium, like for example all old data following the 1968 SNA is still in "Belgian franc", although this is not specifically indicated in the tables.

^a Refers to Net Operating Surplus plus total Consumption of Fixed Capital of the sector.

^b Statistical discrepancy between data for this year(s) and the sum of the corresponding items of Sectors S.14 and S.15 as one or both of the items have not been revised.

^c Mixed income, net. Excludes consumption of fixed capital.

^d Discrepancy with equivalent item in Table 4.6 Households.

Belize

Source

Reply to the United Nations national accounts questionnaire from the Central Planning Unit, Ministry of Finance and Economic Planning, Belize. Official estimates are published in "National Accounts Statistics". Information on sources and methods of estimation are published in "National Accounts Statistics - Sources and Methods" and in "Economic Accounts of the Public Sector".

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA) so far as the data would permit. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). Not all the tables were updated. Some contain data following the 1968 SNA which usually show small differences compared to the new data compiled in accordance with the 1993 SNA. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Source

Reply to the United Nations national accounts questionnaire from the Institut National de la Statistique et de l'Analyse Economique, Direction Generale, Cotonou. Official estimates are published in "Comptes de la Nation 1974-1975 et les Estimations des Aggregats de Comptes Nationaux a Prix Courants et a Prix Constants de 1970 a 1977".

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Bermuda

Source

Reply to the United Nations national accounts questionnaire from the Statistics Department of Bermuda, Hamilton.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). The data from 1996 on have been completely revised and therefore, a new series was introduced. Previously, the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Bhutan

Source

Reply to the United Nations national accounts questionnaire from the Central Statistical Office, Bhutan. The official estimates are published in "Revised Series on Gross Domestic Product of Bhutan" and "National Accounts Statistics".

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

Bolivia

Source

The preparation of national accounts statistics in Bolivia is undertaken by the Instituto Nacional de Estadística, La Paz. From 1970 to 1982, they were prepared by the Central Bank of Bolivia. The official estimates and methodological notes are published in a series of publications entitled "Boletín de Cuentas Nacionales". The most detailed description of the sources and methods used for the national accounts estimation is found in "Cuentas Nacionales, 1958-1966, Planeamiento". The Input-output table for 1958 has been published in "La Matriz de Transacciones Intersectoriales de Bienes Nacionales e Importados". The following tables have been prepared from successive replies to the United Nations national accounts questionnaire. On 1 January 1987, the Bolivian peso was re-denominated from pesos to bolivianos. One boliviano is equivalent to one million pesos.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the United Nations System of National Accounts 1968 (1968 SNA) so far as the data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Methodology:

Overview of GDP Compilation

Gross domestic product is estimated mainly through the production approach.

Expenditure Approach

All components of gross domestic product by expenditure type are estimated through the expenditure approach except private final consumption expenditure which is obtained as a residual. The estimates of the government final consumption expenditure are based on the annual government accounts furnished by the respective government agencies. Increase in stocks estimates are based on information obtained from the enterprises. For public capital information, estimates are obtained from financial statements of the public institutions. The estimates are classified by type of goods and subdivisions of the public sector. For the estimates of private capital formation, the Instituto Nacional de Estadística requests detailed information from the enterprises. The estimates of imported machinery and equipment are based on c.i.f. import values classified by use or economic destination. Trade margins and transport expenses are then added. The estimation of domestically produced capital goods is done on the basis of annual industrial statistics. Data on exports of goods and services are obtained from the balance of payments accounts. The value of non-monetary gold export is added to the f.o.b. figures while imports are estimated by the Banco Central. For the constant price estimates, government expenditure on wages and salaries are revalued at base-year prices while purchases of goods and services are deflated by implicit price or cost-of-living indexes. The estimates of private consumption expenditure is obtained as a residual. For the remaining items, price deflation is used.

Income Approach

The cost structure of the gross domestic product has not been estimated since 1969.

Production Approach

The table of gross domestic product by kind of economic activity is prepared at market prices, i.e. producers' values. The production approach is used to estimate value added of most industries, but due to lack of information on intermediate consumption, value added coefficients established from the input-output table of 1958 have been utilized. The income approach is used to estimate value added of public administration and defence and some private industries. For agriculture, information relating to production volume is used, estimated on the basis of information on areas sown and production yields prepared by the Ministerio de Asuntos Campesinos y

Agropecuarios and by special institutions. The gross value of production is estimated by using data on physical volumes and producer prices. Estimates of livestock production is based on existing livestock, information on meat cutting for domestic consumption and export data. The mining sector consists of the Corporacion Minera de Bolivia (COMIBOL), and of medium and small mines. The basic statistics are obtained from the accounts of COMIBOL, from Ministerio de Minera, from financial statements of medium-sized mines and from export statistics for small mines. The estimates for the manufacturing sector are based on information obtained from the annual industrial statistics published by the Instituto Nacional de Estadística supplemented by statistics from private and public institutions and other studies. Information on electricity is obtained from the Direccion Nacional de Electricidad which controls all the public and private enterprises. The sources used for the construction estimates are the accounts of public institutions permits issued by municipalities and financial statements submitted by the construction enterprises. The value of production of private construction, which is based on permits issued and classified by surface area, is adjusted by a percentage for planned unfulfilled work. Information on trade margins and trade volumes is furnished by various concerned institutions. The gross trade margins are estimated from the price differences between the wholesale and producers prices as well as the consumer and wholesale prices for all the agricultural products and a sample of manufactured and imported goods entering the distribution channels. Restaurants and hotels estimates are based on a sample survey of the principal establishments in La Paz, blown-up to cover the whole country by using the number of establishments as indicators. The estimates of railway transport are based on the accounts of the public railway enterprise. The gross value of production for urban passenger transport is estimated on the basis of the number of buses in operation, mileage, passenger volumes and average tariffs. Air transport estimates are based on the accounting statements of the national airline as well as taxes charged on foreign airlines. The accounting statements of the financial institutions are used for the financial sector. For ownership of dwellings, census information on population and housing is used supplemented by statistics on real estate. For public administration and defense, the main source is the annual financial statement requested by the Banco Central de Bolivia. Estimates for private services are obtained from concerned entities and institutions. For constant price estimates, value added for agriculture, mining and quarrying, manufacturing and transport sectors is extrapolated by quantity index for output. Value added of construction is estimated by multiplying the annual authorized construction volume by the base year prices. For the remaining industries, value added is deflated by appropriate price indexes.

Botswana

Source

The national accounts Statistics in Botswana are prepared by the National Accounts Statistics Unit (NASU), which is a unit within the Economic Statistics Division of the Central Statistics Office (CSO) of the Ministry of Finance and Development Planning, Gaborone. Official estimates together with methodological notes are published in a series of reports entitled "National Accounts of Botswana". The following statistical sources are used to compile the National Accounts Statistics of Botswana: Census of Production and Distribution (CPD) - annually, Census of Construction and Manufacturing (CMC) - annually, Survey of Recent Trends (SRT) - quarterly, Agriculture Statistics - annually, Government Accounts (Central and local), External Trade Statistics - quarterly, Balance of Payments Statistics - annually, Household Income and Expenditure, Survey (HIES)-1993/94 (every 10 years), Price Statistics - quarterly, Employment Statistics - twice a year, Transport Statistics - quarterly, Mine Statistics - quarterly, Population Projections (every 10 years). The following tables have been prepared from the successive replies to the United Nations national accounts questionnaire.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). The previous estimates are generally in accordance with the classifications and definitions recommended in the United Nations System of National Accounts 1968 (1968 SNA). The most detailed description of the sources and methods used for the national accounts estimation is found in the twenty-first edition of the report published in March 2000 for the fiscal year 1994/95. Data starting 1989 is reported with fiscal year beginning on 1st of July of the previous year to the 30th June of the current year. Previously, data was reported with fiscal year beginning on 1st July of the current year to the 30th June of the preceding year. This data was adjusted to conform with the new fiscal year. The new data is indicated by the start of new series. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

Methodology:

Overview of GDP Compilation

The GDP by kind of economic activity is prepared at market prices. The production approach is used to estimate value of almost all industries. The income approach is used for some sub-groups of private services and for producers of government services.

Expenditure Approach

Estimate of final expenditure on GDP may be obtained in two ways. First output of goods and services can be traced through the economy from the original producer to final uses, this is known as commodity flow approach. Alternatively, the receipt and expenditure of the various economic transactions of the system can be looked at directly in order to identify the expenditures that are final and this is referred to as direct estimation of final expenditure. In Botswana national accounts, direct estimation is used for most of the expenditure components. All components of gross domestic product by expenditure type are estimated through the expenditure approach except private final consumption expenditure which is obtained as a residual. The estimates of the government final consumption expenditure are based on annual statements of the accounts of central and local governments. Changes in stocks is estimated on the basis of Census of Production & Distribution (CPD) for all the sectors of the economy. Gross fixed capital formation of the government sector is estimated from the government accounts and of the private sector from the CPD. Included in the capital formation estimates are the cost of land clearings and imputed values of new huts. The estimates of imports and exports of goods and services are based on balance-of-payments data. Exports and imports of goods have to be adjusted for duty content, in accordance with the Southern African Customs Union agreement.

Income Approach

Estimates of compensation of employees are obtained from the Census of Production and Distribution (CPD). Data on payment of wages and salaries are distinguished whether paid to residents or to non-residents and are also classified by type. The main source for estimating consumption of fixed capital formation in the private sector is the CPD. For government assets, straight - line depreciation is applied, the constant percentage varying for different types of assets. Indirect taxes are extracted from the Accountant General's annual statements of accounts, the CPD and the Trade Statistics Unit.

Production Approach

The table of gross domestic product by kind of economic activity is prepared at market prices, i.e. producers' values. The production approach is used to estimate value added of almost all industries. The income approach is used for some sub-groups of private services and for producers of government services. For the traditional farming of the agricultural sector, the main source used for crops is the annual agricultural sample survey and for cattle, the sources used include Household Income and Expenditures Surveys (HIESs) and annual reports of Botswana Meat Commission. The method has been to obtain quantities of production from the above mentioned sources and apply unit values. Data from the 1985/86 and 1993/94 HIESes also provided information on milk production for own use and the value of meat consumed. From the two surveys, detailed input-output activity analysis of the traditional farming sector has been conducted. For the freehold farmers, the main source has been the CPD and to some extent the annual agricultural survey. For the non-respondents, a grossing-up is made by reference to other farms of the same type. The estimates for the mining sector is obtained from the Census of Manufacturing and Construction (CMC) which covers all the primary industries. For the manufacturing sector which is dominated by about three sub-industries, the source is the CMC and quarterly survey of Industrial Production. The two above mentioned sources cover all the primary industries, whilst the rest of the sectors are covered by the CPD. This came into effect in 1989. Both the CMC and the CPD gives information for estimating the cost of intermediate consumption. All the government industries go to their respective sectors. For construction, the private contractors and brigades are covered by the CMC. Estimates of construction outlays for sites and services are supplied by city and town councils whilst rural huts construction estimates are imputed on the basis of the HIES data. Estimates of construction carried out by the government departments are derived from the analysis of government accounts. The main source of information for the trade sector is the CPD. The data obtained from this source is grossed-up to allow for under-coverage. Gross margins are estimated as the difference between sales and purchases of goods for resale. Taxes levied on imported goods are treated as indirect taxes collected by the trade sector. As far as the transport sector is concerned, the source of data is the CPD. The major contributor is post and telecommunication (30 to 40 percent of value added). Gross output of financial institutions is made up of the actual sales of services and an imputed service charge. Estimates for producers of government services are based on the Annual Statements of Accounts of the central and local governments. For the constant price estimates, the CPD data are deflated by a cost-of-living index.

Brazil

Source

Reply to the United Nations national accounts questionnaire from the Instituto Brasileiro de Geografia e Estatística, Departamento de Contas Nacionais (DECNA), Rio de Janeiro. The official estimates are published by DECNA in a series of entitled "Conjuntura Economica" and Sistema de Contas Nacionais Brasil". Data are in units of real before 1991 and real from 1991 onwards.

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA) so far as the data would permit. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

British Virgin Islands

Source

Reply to the United Nations national accounts questionnaire from the Development Planning Unit, Ministry of Finance, Economy and Development Planning, Tortola. The official estimates are published in "National Accounts Statistics", by the Development Planning Unit.

General

The latest estimates shown in the following tables are considered to be prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA), based on the response to a conceptual questionnaire and/or other available information. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

Methodology:

Expenditure Approach

GDP by expenditure is the sum of final consumption at purchasers' prices, gross capital formation (acquisition less disposals of fixed assets and valuables at purchasers' prices plus the net change in inventories) and net exports of goods and services (exports of goods and services at purchasers' prices less imports of goods and services at purchasers' prices).

Income Approach

GDP by income paid to the factors of production, which equals labour, capital and taxes on production and imports.

Production Approach

Value added is calculated separately for each activity at basic prices. The sum of the values added by activity (at basic prices) and taxes on products is equal to GDP at producers' prices for the entire economy. GDP is thus the sum of the values added produced by resident productive units in a given time period, adjusted for the relevant taxes. Value added is defined as the difference between output at basic prices and intermediate consumption, plus taxes on products. In the British Virgin Islands, the only taxes on products are import duties and hotel accommodation taxes. In addition, there are no value added taxes which implies that GDP at producers' prices equals GDP at market prices.

General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

Source

Reply to the United Nations national accounts questionnaire from the National Statistical Institute, Sofia. Official estimates and descriptions are published annually by the same Institute in "Stisticheski Godishnik" (Statistical Yearbook).

General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). Most transition economies went directly from the Material Product System (MPS) to the 1993 SNA and did not implement the System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables. In the reporting year 1999, the official currency has changed to denominated lev (1 denominated lev equals 1000 lev).
