

General Assembly

Distr.: General
14 March 2008

Original: English

Sixty-second session

Fifth Committee

Agenda item 140

**Administrative and budgetary aspects of the financing
of the United Nations peacekeeping operations**

**Letter dated 22 February 2008 from the Chairman of the
2008 Working Group on Contingent-Owned Equipment to
the Chairman of the Fifth Committee**

In my capacity as Chairman of the 2008 Working Group on Contingent-Owned Equipment, I have the honour of transmitting to the Fifth Committee of the General Assembly the report of the Working Group, dated 22 February 2008.

(*Signed*) Colonel Eduardo **Devercelli**
Chairman

2008 Working Group on Contingent-Owned Equipment

Contents

	<i>Paragraphs</i>	<i>Page</i>
I. Introduction	1–26	5
II. Summary of discussions in the first plenary	27–32	9
III. Programme of work of the Working Group	33–38	9
A. Election of the Bureau	33	9
B. Adoption of the agenda	34	10
C. Election of the Chairmen of the sub-working groups	35	10
D. Issue papers and focal points	36–38	10
IV. Review of methodology, reimbursement rates and performance standards	39–131	12
A. Major equipment	40–76	12
B. Self-sustainment	77–108	20
C. Medical support	109–131	26
V. Closing remarks	132–133	44
A. Concluding remarks by the Director of the Field Budget and Finance Division, Department of Field Support	132	44
B. Concluding remarks by the Chairman	133	44

Annexes

Major equipment

Annex I.A.1 Comprehensive review of the reimbursement rates for major equipment	45
Annex I.A.2 Reimbursement rates for major equipment for dry and wet lease	48
Annex I.A.3 List of Member States choosing to include Contingent-Owned Equipment Manual data as national cost data	65
Annex I.A.4 Impact of the increase in the major equipment reimbursement rate on the contingent- owned equipment portion of the United Nations peacekeeping budget	68
Annex I.A.5 Sample spreadsheet for the calculation of national cost data for triennial review	77
Annex I.B.1 Model for the classification of armoured personnel carriers in United Nations peacekeeping operations	78
Annex I.B.2 Armoured personnel carrier classification model — explanatory notes	81
Annex I.B.3 Armoured personnel carrier classification model	82
Annex I.C.1 “Special cases” of major equipment	87
Annex I.C.2 “Special cases” to be added to chapter 8 of the Contingent-Owned Equipment Manual as major equipment	89
Annex I.C.3 Special cases to be retained as “special cases” under major equipment (as per the 2008 Working Group on Contingent-Owned Equipment)	90

Annex I.C.4	Special cases to be deleted from the “special cases” list owing to existing equivalent major equipment items (in chapter 8 of the COE Manual) or as part of an existing set, established by the 2004 Working Group on Contingent-Owned Equipment, approved by the General Assembly	96
Annex I.C.5	Special cases to be deleted from the “special cases” list owing to the fact that the threshold of the items is less than \$1,000 or the useful life is less than one year	99
Annex I.C.6	Special cases to be deleted from the “special cases” list owing to the fact that the items are reimbursed under self-sustainment	101
Annex I.D.1	Separate reimbursement rate for HF sets in military pattern vehicles	102
Annex I.E.1	Threshold for loss/damage of major equipment under hostile action/forced abandonment	104
Annex I.F.1	Rotation of major equipment every four to five years	105
Annex I.G.1	Specifications of minimum capabilities of some major equipment.	107
Annex I.H.1	Reimbursement method for wheeled vehicles (wet lease).	108
Annex I.I.1	Training costs prior to deployment	110
Annex I.J.1	Additional reimbursement for deployment of contingents at short notice	111

Self-sustainment

Annex II.A.1	Comprehensive review of the reimbursement rates for self-sustainment	113
Annex II.A.2	Revised reimbursement rates for self-sustainment.	116
Annex II.B.1	Standard for self-sustainment category: accommodation (offices/workspace)	117
Annex II.C.1	Revision of the decision sheet to calculate mission factors.	118
Annex II.D.1	Revision of the number of days of recreational leave allowance paid to members of military contingents and formed police units from 7 to 15 days.	121
Annex II.E.1	Revision of the standard for self-sustainment subcategory “welfare” and the inclusion of the cost of Internet access under “welfare”.	122
Annex II.F.1	Annual leave at United Nations expense for contingent members/police deployed for a one-year tour of duty	125
Annex II.G.1	Higher rates of reimbursement for “accommodation” in difficult missions.	127
Annex II.H.1	Provision of basic firefighting, fire detection and alarm capabilities in field missions. . .	128

Medical Support Services

Annex III.A.1	Comprehensive review of contingent-owned equipment rates for medical equipment and medical categories of self-sustainment	131
Annex III.A.2	Revised reimbursement rates for medical equipment for dry and wet lease	134
Annex III.A.3	Reimbursement rates for medical categories of self-sustainment	135
Annex III.B.1	Proposed reimbursement for level-II and III medical structures.	136
Annex III.C.1	Specifications for definitions and components for basic first aid and high-risk areas . . .	138

Annex III.C.2 Appendix 1 to annexes A and B to chapter 3 of the Contingent-Owned Equipment Manual: United Nations levels of medical support: basic level requirement and standard	140
Annex III.C.3 Appendix 1.1 to annexes A and B to chapter 3 of the Contingent-Owned Equipment Manual: medical level basic first aid kit	141
Annex III.C.4 Appendix to chapter 9, annex A.	142
Annex III.D.1 Definition of “fee-for-service” (medical services).	145
Annex III.D.2 “Fee-for-service” reimbursement for medical support services	148
Annex III.E.1 Medical support facilities (medical modular concept).	149
Annex III.E.2 Aeromedical evacuation module	161
Annex III.E.3 Forward surgery module.	162
Annex III.F.1 Medical services provided to non-United Nations personnel and reimbursement for medical services provided to contingent personnel before and after deployment to United Nations peacekeeping operations	163

I. Introduction

1. In its resolution 47/218 B, the General Assembly requested the Secretary-General to submit a comprehensive report on all issues that affect the successful operation and administration of peacekeeping operations.
2. In his report to the General Assembly dated 25 May 1994 (A/48/945 and Corr.1, para. 82), the Secretary-General indicated that the procedures for determining reimbursement to Member States for contingent-owned equipment provided to peacekeeping missions had become overly cumbersome, both to the United Nations and to equipment-contributing countries. The Secretary-General also suggested that established procedures for compensation to Member States for military contingent personnel could be used as a model.
3. In its resolution 49/233, the General Assembly authorized the Secretary-General to proceed with the project, in accordance with the proposed timetable set out in the annex to the resolution, with a view to setting comprehensive standards for each category of equipment and establishing rates of reimbursement. The Secretary-General was to invite Member States, in particular troop-contributing countries, to participate in the process and to submit proposals for establishing new rates of reimbursement to the Assembly for approval. The basic principles of this contingent-owned equipment system were simplicity, accountability and financial and management control.
4. The Secretariat undertook to identify as part of Phase I of the project, items of contingent-owned equipment for classification as either major or minor equipment by the Phase II Working Group. Under Phase II of the project, a Working Group consisting of technical experts from troop-contributing countries met from 27 March to 7 April 1995 to identify standards for major and minor equipment and consumables for which reimbursement would be authorized. The Working Group reached agreement that a force-leasing concept based on a wet or dry lease arrangement should be adopted for mission budgeting, expenditure control and cost-reimbursement purposes. It extended its review to consider a monthly dollar reimbursement rate linked to troop strength to cover self-sustainment costs and agreed that such costs were exclusive of the reimbursement rates approved by the General Assembly in its resolution 45/258.
5. As recommended by the Phase II Working Group, an ad hoc working group, hosted by the United Kingdom of Great Britain and Northern Ireland and consisting of technical and financial experts from seven troop-contributing countries, met with Secretariat representatives in May 1995 to develop rates that could be considered by the Phase III Working Group.
6. Under Phase III of the project, a Working Group of financial and technical experts met from 10 to 20 July 1995 (see A/C.5/49/70) to consider the recommendations adopted by the Phase II Working Group, in order to review the rates of reimbursement proposed by the ad hoc working group and to make recommendations for comprehensive standards for which reimbursement would be authorized.
7. The results of the work of the Phase III Working Group were confirmed by an ad hoc working group, which met from 31 July to 4 August 1995. The Group compared the cost of the proposed system with the cost of the current one by using

data on 12 contingents from 9 countries participating in peacekeeping operations during 1993 and 1994.

8. In his report dated 8 December 1995 (A/50/807), the Secretary-General recommended approval of most of the recommendations of the Phase II and Phase III Working Groups and, in respect of other items, made alternative recommendations for consideration by the General Assembly.

9. The General Assembly, in its resolution 50/222, approved the report on the reform of the procedures for determining reimbursement to Member States for contingent-owned equipment and decided to review the operation of the revised procedures at its fifty-second session. It requested the Secretary-General to submit for its consideration a report on the first full year of implementation of the revised procedures. In his report (A/53/465), the Secretary-General indicated that the Secretariat believed that the first full year of implementing the revised procedures had, to a large extent, accomplished the goals of simplifying the reimbursement process and providing the Organization with an essential planning and budgetary tool.

10. In its resolution 51/218 E, the General Assembly requested the Secretary-General to convene the Phase IV Working Group.

11. In its report (A/C.5/52/39), the Phase IV Working Group reviewed the rates published in the Phase III report and recommended that reimbursement of loss/damage of major equipment resulting from a single hostile action or force abandonment must meet a threshold of US\$ 250,000 (generic fair market value), and that loss/damage of major equipment resulting from transportation arranged by the Secretariat must be more than 10 per cent of the generic fair market value of the major equipment.

12. By its resolution 54/19, the General Assembly endorsed the recommendations of the Phase IV Working Group (contained in its aforementioned report) and those of the Advisory Committee on Administrative and Budgetary Questions (see A/53/944), with four exceptions, and requested the Secretary-General to take all necessary measures to ensure the full participation of delegations in the work of the Phase V Working Group.

13. As requested by the General Assembly in its decision 53/480, the Secretary-General convened the Phase V Working Group from 24 to 28 January 2000. Pursuant to Assembly resolution 49/233, the mandate of the Phase V Working Group was to conduct a review of the Phase II and Phase III standards. The Secretary-General proposed that a methodology be developed to ensure consistent application in future reviews.

14. In its report (A/C.5/54/49), the Phase V Working Group proposed a methodology for the periodic revision of the rates in major equipment, self-sustainment and special cases, recommended improvements with regard to some performance standards and reimbursement procedures and, with the exception of the amendments in paragraph 86 (a) to (l) of the report, adopted the Secretary-General's proposal on medical support services.

15. By its resolution 54/19 B, the General Assembly endorsed the recommendation of the Phase V Working Group. It decided to convene a post-Phase V Working Group in January and February 2001. The Group would determine an appropriate

average index to be applied to the existing rates of major equipment, self-sustainment and medical support services. To this effect, the Assembly requested Member States to provide data pertaining to major equipment and self-sustainment, including the cost of painting and repainting of major equipment, by 31 October 2000 at the latest, in order for the Secretariat to report to the Assembly in November 2000 on the adequacy, or otherwise, of the data. The Secretary-General in his note dated 29 November 2000 (A/55/650), reported that the Secretariat had received data from 30 Member States and that the Secretariat was of the opinion that the data was sufficient for the post-Phase V Working Group to conduct a further analysis.

16. By its resolution 55/229, the General Assembly, after reviewing the aforementioned note of the Secretary-General, requested the post-Phase V Working Group to consider the current methodology underlying the calculations of standard rates of reimbursement to troop-contributing States, including ways to produce timely and more representative data.

17. The post-Phase V Working Group met from 15 to 26 January 2001 and performed the first triennial reimbursement rate review, based on national cost data from Member States from 1996 to 1999, in accordance with annex I to document A/C.5/54/49. Given variations in the index data received from Member States, calculations were done using a standard deviation as the statistical tool to make it possible to compare averages. The statistical tool led to an increase of 7.426848 per cent, measured on the budgetary impact, in the reimbursement rates of major equipment and self-sustainment. The Working Group also updated the standards of major equipment, self-sustainment and medical support services, as well as provisions on liability for damage to major equipment used by one country and owned by another. In addition, it recommended standard rates for painting and repainting of major equipment and a new self-sustainment rate for the provision of combined level-II and III medical support services. During its deliberations, the post-Phase V Working Group could not reach consensus on a methodology for review of troop-cost reimbursement and recommended that the General Assembly consider all aspects of the methodologies set up in the two proposals in its report.

18. By its resolution 55/274, the General Assembly endorsed the recommendations of the post-Phase V Working Group as contained in its report (A/C.5/55/39), requested the Secretary-General to submit to the Assembly for its approval at its resumed fifty-sixth session a methodology for reimbursement for troop cost, covering troops and formed police units, and a questionnaire to be submitted to troop-contributing countries, and decided to increase, on an interim and ad hoc basis, the standard rate of reimbursement for troop costs to troop-contributing countries by 2 per cent, effective 1 July 2001 and to further increase an additional 2 per cent as of 1 January 2002. The Assembly also requested the Secretary-General to convene in 2004 an open-ended working group of experts to hold a triennial review of reimbursement rates for contingent-owned equipment.

19. By its resolutions 57/314 and 57/321, the General Assembly requested the Working Group to consider the proposed methodology of troop cost contained in the report of the Secretary-General and requested the Secretariat to submit a comprehensive report.

20. In its report (see A/C.5/58/37), the 2004 Working Group on Contingent-Owned Equipment summarized its discussions and key recommendations. The Working Group did not reach consensus on the following major issues: a triennial review of

the reimbursement rates for major equipment and self-sustainment; the modular concept of medical services; and a proposed methodology on reimbursement rates for troop cost. Where consensus was not reached in the Working Group, views of various groups of Member States were issued as annexes.

21. The 2004 Working Group reached consensus on a definition of when a commercial pattern vehicle could be reimbursed as a military pattern vehicle and recommended a checklist of 10 factors to decide whether a commercial pattern support vehicle should be paid as a military pattern equivalent. It also recommended that a threshold value be established for “special case” (the generic fair market value of an item or set should be higher than \$500 and the life expectancy of an item or set should be greater than one year) and that the threshold value should be reviewed by the next Working Group.

22. The 2004 Working Group also recommended that a number of new standard categories/subcategories (explosive ordnance disposal, demining equipment and riot control equipment) should be transferred from “special case” to the list of major equipment in chapter 8 of the Contingent-Owned Equipment Manual. In addition, the Working Group recommended that verification reports be provided by field missions to United Nations Headquarters on a quarterly basis (instead of monthly).

23. By its resolution 59/298, the General Assembly approved the proposal of the Secretary-General that the next Working Group would meet in 2008 to carry out a comprehensive review of the contingent-owned equipment system, in accordance with the formats established by the Phase V Working Group. The Assembly regretted that the 2004 Working Group was unable to reach consensus on a review of the rates of reimbursement for major equipment and self-sustainment as well as on the components for inclusion in the troop-cost reimbursement methodology. It reiterated its request that the Secretary-General submit to the Assembly at its sixtieth session a comprehensive report on the troop-cost reimbursement methodology, addressing all elements.

24. In his report (A/60/725), the Secretary-General presented a review of the methodology for rates of reimbursement review (troop cost) to troop-contributing countries and, in an addendum (A/60/725/Add.1), a rates of reimbursement survey of troop-contributing countries.

25. The 2008 Working Group was presented with 24 issue papers by various Member States and the Secretariat. During its meetings from 4 to 22 February 2008, the Working Group addressed the issues, grouped into three areas (major equipment, self-sustainment and medical support services), each dealt with by a sub-working group. The present report summarizes the discussions and key recommendations of the 2008 Working Group. The information contained in the annexes to the report provided additional rationale and technical considerations and, as such, constitutes essential complementary data upon which the recommendations should be analysed and implemented.

26. The recommendations contained in the present report must be read in conjunction with the recommendations contained in the Phase II, III, IV, V, post-Phase V and 2004 Working Group reports. In some cases, the recommendations in the present report supplement and/or supersede those contained in the previous reports.

II. Summary of discussions in the first plenary

27. An opening statement was made by Phillip Cooper, Director, Department of Field Support. He was delighted at the number of troop contributors participating in the Working Group and urged Member States to achieve consensus on the reimbursement rates and to come to an understanding on a methodology for future triennial reviews.

28. The representatives of Slovenia, Canada/Australia/New Zealand, Indonesia and Bangladesh made statements.

29. The representative of Slovenia, on behalf of the European Union, stated that the European Union was willing to preserve the principles of the current contingent-owned equipment system, that is, reimbursement for services rather than specific pieces of equipment. The European Union was ready to consider modest change in 2008 where a change could be clearly justified. It felt that national cost data in the “comprehensive review” would considerably facilitate the Working Group’s discussions. Moreover, it was of the view that the use of “triennial methodology” at the 2004 Working Group was one of the principal reasons why it was impossible to reach consensus on reimbursement rates. Therefore, while the “comprehensive review format” was itself far from perfect, an agreement that future Working Groups should use the format would be a significant step in the right direction.

30. The representatives of Canada/Australia/New Zealand stated that they were expecting effective, improved and new methodology that was transparent to carry out the reimbursement rate review. They were disappointed that the issue had not been addressed and requested more involvement from the Secretariat.

31. The representative of Indonesia requested that during negotiations on memorandums of understanding, the troop/police contributors and the Secretariat should have the same knowledge of the Contingent-Owned Equipment Manual and that Member States be informed when the 2008 Manual was available.

32. The representative of Bangladesh said that the equipment was getting more expensive. Troop/police contributors were frequently thousands of miles away from the mission area. It was a challenge to maintain major equipment in Africa.

III. Programme of work of the Working Group

A. Election of the Bureau

33. Colonel Eduardo Devercelli (Uruguay) was elected Chairman of the 2008 Working Group on Contingent-Owned Equipment by consensus. On a request for nominations, Colonel Tao Xiangyang (China) and Brigadier General George Ayi-Bonte (Ghana) were elected by acclamation as Vice-Chairman and Rapporteur, respectively.

B. Adoption of the agenda

34. The Working Group adopted the provisional agenda for its session (4 to 22 February 2008) for the three sub-working groups on major equipment, self-sustainment and medical support services.

C. Election of the Chairmen of the sub-working groups

35. After the election of the Bureau, the Chairman announced the election of the following delegates as co-Chairmen of the three sub-working groups:

- (a) Major equipment: Colonel Claus Uttrup (Denmark); Mr. Piet Ekelmans (Netherlands);
- (b) Self-sustainment: Captain (Navy) Charles Ross (South Africa); Brigadier General Ilyas Iftekhhar Rasul (Bangladesh);
- (c) Medical support services: Brigadier General Mohammad I. I Tarawneh (Jordan); Pharmacien principal Jérôme Lacroix (France).

D. Issue papers and focal points

1. Major equipment

36. The sub-working group considered the following issues relating primarily to major equipment and it was decided, by consensus, to nominate the following focal points for coordinating the issues:

- (a) Comprehensive review of reimbursement rates of major equipment and model/procedures for carrying out future reviews. Medical equipment was handled by the sub-working group on medical support services: Denmark, supported by Canada, Jordan, the Netherlands and the United Kingdom;
- (b) Review the reimbursement rates of armoured personnel carriers in concert with the review of the proposed model for classification of armoured personnel carriers into classes 1, 2 and 3. Consider the elimination of the classifications “armed/unarmed” (raised by the Secretariat): Finland, supported by France, Ireland, Mongolia, Romania and Senegal;
- (c) Review the list of “special cases” and recommend additional standard reimbursement rates for major equipment (raised by the Secretariat): Norway, supported by Denmark, Italy and New Zealand;
- (d) Examine the proposal to reimburse separately military pattern vehicles with HF and VHF sets (raised by a Member State): Bangladesh, supported by Indonesia and Senegal;
- (e) Consider the proposal to lower the threshold for reimbursement for damage/loss of major equipment under hostile action/forced abandonment (raised by a Member State): Bangladesh, supported by South Africa and Turkey;
- (f) Review the proposal to rotate major equipment and self-sustainment equipment of troop/police contributors every four to five years (raised by a Member State): Bangladesh, supported by Ghana and Tunisia;

(g) Consider the proposal to establish minimum technical specifications of major equipment (raised by a Member State): Brazil, supported by South Africa;

(h) Examine the proposal to modify the method of calculating the reimbursement rates for vehicles (raised by a Member State): Tunisia, supported by Benin and Côte d'Ivoire;

(i) Review the proposal to reimburse training costs incurred by troop contributors prior to deployment (raised by a Member State): Morocco, supported by Ghana, Mongolia and Sweden;

(j) Consider the proposal to reimburse troop/police contributors for deployment of contingents at short notice (raised by a Member State): India, supported by Argentina and Mongolia.

2. Self-sustainment

37. The sub-working group considered the following issues relating primarily to self-sustainment and it was decided, by consensus, to nominate the following focal points for coordinating the issues:

(a) Comprehensive review of reimbursement rates of self-sustainment and model/procedures for carrying out future reviews. Medical services issues were handled by the sub-working group on medical support services: Brazil, supported by Denmark, India and the United Kingdom;

(b) Review the self-sustainment standard under "accommodation" (raised by the Secretariat): India;

(c) Consider the proposal to revise the decision sheet to calculate mission factors (raised by the Secretariat): Denmark;

(d) Review the proposal to revise the number of days of recreational leave allowance paid to members of military contingents and formed police units from 7 to 15 days (raised by the Secretariat): Argentina;

(e) Consider the proposal to revise the standard for the self-sustainment subcategory "welfare" (raised by the Secretariat) and to include the cost of Internet access under "welfare" in self-sustainment (raised by a Member State): Guatemala;

(f) Examine the proposal on annual leave at United Nations expense for contingent members deployed for a one-year tour of duty (raised by a Member State): Jordan;

(g) Review the proposal on reimbursement to troop/police contributors for "accommodation" in difficult missions (raised by a Member State): Argentina;

(h) Consider the proposal for provision of basic firefighting, fire detection and alarm capabilities in field missions (raised by the Secretariat): Turkey.

3. Medical support

38. The sub-working group considered the following issues relating primarily to medical support services and it was decided, by consensus, to nominate the following focal points for coordinating the issues:

(a) Comprehensive review of the reimbursement rates of medical support services: the United Kingdom and India (major equipment); Brazil, India and the United Kingdom (self-sustainment);

(b) Examine the proposal on accommodation for level-II and III hospitals. Consider the proposal to reimburse troop/police contributors under “tentage/accommodation” for living areas provided to patients (raised by a Member State): Norway, supported by Ghana, India and the United Kingdom;

(c) Examine the proposal to amend self-sustainment standards under basic first aid and high risk areas (raised by the Secretariat): the Netherlands, supported by France, Ireland, Senegal and the United Kingdom;

(d) Consider the inclusion of the “fee-for-service” schedule in the Contingent-Owned Equipment Manual (raised by the Secretariat): Turkey, supported by Argentina, Bangladesh, France, Italy, Nigeria and the United Arab Emirates;

(e) Review the modular medical concept/medical support facilities (raised by the Secretariat): Germany, supported by Argentina, Brazil, Denmark, France, Ghana, India, Jordan, Turkey and the United Arab Emirates;

(f) Consider the provisioning of medical services for non-United Nations personnel and reimbursement for medical services provided to contingent personnel before and after deployment to peacekeeping operations (raised by a Member State): Morocco.

IV. Review of methodology, reimbursement rates and performance standards

39. The overall impact of all changes in reimbursement rates and the addition of new services is estimated to be 2.7 per cent of the contingent-owned equipment portion of the United Nations peacekeeping budget. The impact of the major equipment categories, including medical, is 1.9 per cent and the corresponding impact of self-sustainment is 3.8 per cent.

A. Major equipment

1. Comprehensive review of contingent-owned equipment rates for major equipment and model/procedures for future reviews

40. Many Member States expressed the opinion that the most vital subject for the Working Group was to carry out a comprehensive review of the contingent-owned equipment reimbursement rates and reach consensus. At the same time, the proposed new reimbursement rates should be linked to their impact on the contingent-owned equipment portion of the United Nations peacekeeping budget.

41. The following are highlights of the important issues raised during the discussion on the methodology:

(a) From the beginning, a number of Member States were of the view that only those Member States that provided national cost data should be included in the comprehensive review. Other Member States believed that those Member States that did not provide data meant that reimbursement rates would remain as stated in the

Contingent-Owned Equipment Manual. After a lengthy discussion, a compromise was reached by allowing each Member State to choose whether that Member State would be included in the data with the Contingent-Owned Equipment Manual reimbursement rate;

(b) A calculation model should be based on reviewed data and exclude the extremes of both high and low data. That allowed manipulation of the data using different percentages. It was finally decided that data greater than 100 per cent above or less than 20 per cent below the existing Contingent-Owned Equipment Manual rates would be excluded from the calculations. For example, if the generic fair market value of a major equipment were \$10,000, any national cost data above \$20,000 or below \$8,000 would be excluded;

(c) Some Member States were of the opinion that rates should not decrease or be subject to a minimal increase only. Other Member States were of the opinion that there should be no limitations on rates decreasing or increasing.

42. The 2008 Working Group on Contingent-Owned Equipment used the following method to conduct the review:

- (a) Agree on principles for conducting the review;
- (b) Review data;
- (c) Develop a calculation model;
- (d) Calculate rates;
- (e) Evaluate and adjust rates to ensure an equitable outcome.

Each step in the method was finalized before the next step was started.

43. Principles agreed on for conducting the review:

(a) The review related to rates only, not the current contingent-owned equipment system;

(b) The review used the national cost data provided by troop/police contributors. However, where a Member State had not submitted data for a category, it could elect to use existing Contingent-Owned Equipment Manual data as its national data. The only acceptable data are those that have been received by the Secretariat in advance of the first Working Group session;

(c) Rates could only be revised for major equipment if new data had been provided by troop/police contributors;

(d) Data should be validated for mistakes and flaws in advance of the calculation. Only corrected and accepted data should be included in the calculation;

(e) The impact on the major equipment portion of the United Nations peacekeeping budget should be considered at each stage of the calculation;

(f) Differences in generic fair market value and estimated useful life can be reconciled and made comparable by considering monthly depreciation.

44. Review of data:

(a) If data had been incorrectly submitted as zero, the existing Contingent-Owned Equipment Manual should be substituted;

(b) If data had been blank, this should be treated as no data. However, if the market price is submitted and estimated useful life is blank, the existing Contingent-Owned Equipment Manual estimated useful life should be substituted;

(c) If the wet-lease rate had been calculated but no maintenance rate had been submitted, the maintenance rate should be the wet-lease rate minus the dry-lease rate;

(d) If the maintenance rate had been submitted in the wrong format, the existing Contingent-Owned Equipment Manual rate should be used;

(e) If the wet-lease rate equalled the dry-lease rate, the wet-lease rate should be deleted.

In addition, several specific minor corrections were made to data.

45. Development of a calculation model:

(a) A spreadsheet model was developed to undertake calculations;

(b) The model was capable of independently excluding high and low extremes of data. This flexibility enabled several alternative scenarios to be examined;

(c) After excluding agreed extremes, simple averages of monthly depreciation, estimated useful life and maintenance were calculated;

(d) Generic fair market value was calculated as the product of average monthly depreciation and average estimated useful life. This value was then used, with the existing no-fault incident factor, to calculate dry and wet-lease rates;

(e) The impact on the major equipment portion of the United Nations peacekeeping budget calculated by the sum of the products of percentage change in the wet-lease rate and the category's weight.

46. Calculation of reviewed rates:

(a) Where a country has not submitted any new data, it may elect to use the existing Contingent-Owned Equipment Manual data. This includes cost and non-cost data. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment data across all categories and services;

(b) Where a country has submitted data but it is incomplete, it may elect to use the existing Contingent-Owned Equipment Manual data in all incomplete categories. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment Manual data across all incomplete categories and services;

(c) Data above 100 per cent or below 20 per cent of the existing Contingent-Owned Equipment Manual rates is to be excluded from the calculation;

(d) The result of the application of this method will produce an overall outcome for the United Nations contingent-owned equipment budget;

(e) A further review of each category and service may be necessary and may require a further adjustment to the rates of individual categories, but the net effect of all adjustments must not change the overall outcome as calculated above;

(f) This method shall apply to all sub-working groups;

(g) This method shall not necessarily be used as a precedent for the conduct of future contingent-owned equipment deliberations.

A list of the troop/police contributors that elected to use existing Contingent-Owned Equipment Manual data as national data is contained in annex I.A.3.

47. Evaluation and adjustment of rates to ensure an equitable outcome. Where the calculation resulted in a perverse outcome, such as results for heavier equipment being less than that for similar lighter equipment, sensible adjustments were agreed. However, where adjustments were required, they were crafted to ensure that they did not affect the overall contingent-owned equipment portion of the United Nations peacekeeping budget. The revised contingent-owned equipment data for major equipment, including dry and wet-lease reimbursement rates, are contained in annex I.A.2.

48. Impact on the contingent-owned equipment portion of the United Nations peacekeeping budget. The overall impact on the major equipment portion of the United Nations peacekeeping budget is approximately 1.9 per cent. Adding medical equipment to the list does not change the number (see annex I.A.4).

49. Future reviews:

(a) The Working Group discussed procedures for conducting future triennial contingent-owned equipment reimbursement rate reviews. It was agreed that actual cost data rather than indices should be used, as that provided a better basis for the calculation of rates. It was further agreed that troop/police contributors should be required to indicate whether they wanted to substitute existing Contingent-Owned Equipment data as national data either in whole or in part, at the same time;

(b) It was also agreed that the Secretariat should request national cost data in the same format as that contained in chapter 8 of the Contingent-Owned Equipment Manual (see annex I.A.5).

Recommendations

50. It was recommended that:

(a) The revised rates contained in annex I.A.2 should be adopted;

(b) Future triennial reviews should be conducted in the form of a comprehensive review using data provided or elected by troop/police contributors.

2. Model for the classification of armoured personnel carriers in United Nations peacekeeping operations

51. Armoured personnel carriers were widely deployed and had proven to be very useful in United Nations peacekeeping operations. However, troop/police contributors were deploying troop/police-carrying armoured personnel carriers with very different qualities and capabilities. The Secretariat was experiencing difficulties in determining whether carriers were armed or unarmed and whether the carriers belonged to class 1, 2 or 3 (currently determined by the generic fair market value or cost of the carriers). In addition, when the Secretariat had determined the classification of the carriers (armed or unarmed, class 1, 2 or 3), it was frequently contested by the troop/police contributors. That greatly delayed the claim certification process. A classification model based on capabilities in an objective,

consistent and unambiguous manner would assist the Secretariat in facilitating the reimbursement process. The Working Group did not reach consensus on the issue.

Recommendations

52. No recommendations were made.

3. Special cases of major equipment

53. The Working Group examined the data in the list of approved “special cases” submitted by the Secretariat to determine whether the approved “special cases” should be included as major equipment in the Contingent-Owned Equipment manual and recommended a generic fair market value and a standard reimbursement rate for each approved “special case” major equipment. A review of the consolidated national cost data for special cases was also undertaken.

54. The Working Group found that reimbursement rates of “special cases” in existing signed memorandums of understanding should not be affected.

55. To minimize the use of “special cases”, the Working Group discussed whether a new text should be added at the end of the “special case” definition (Contingent-Owned Equipment Manual, chapter 5, para. 3), or the definition should be reworded. The reason for a change of the definition was to clarify that the value of the items alone should not be the reason for creating a “special case”.

56. The Working Group also discussed raising the threshold value of “special cases” to \$1,000 from \$500 and the estimated useful life to more than one year.

Recommendations

57. The Working Group recommended that:

(a) The threshold value should be \$1,000 for major equipment and its useful life must be more than one year;

(b) The following sentence should be added at the end of the “special case” definition (Contingent-Owned Equipment Manual, chapter 5, para. 3): “The value alone should not determine whether equipment is treated as a special case”;

(c) In preparation for the next Contingent-Owned Equipment Working Group, the Secretariat should propose a list of “special case” items for consideration as major equipment.

58. Furthermore, from the above-mentioned findings, the Working Group recommended that the items included in:

(a) The list in annex I.C.2 should be categorized as additional major equipment;

(b) The list in annex I.C.3 should be retained as “special cases” (214 items);

(c) The list in annex I.C.4 should be deleted from the “special case” list owing to existing equivalent major equipment items (Contingent-Owned Equipment Manual, chapter 8) or as part of an existing set, established by 2004 Contingent-Owned Equipment Working Group and approved by the General Assembly;

(d) The list in annex I.C.5 should be deleted from the “special case” list owing to the fact that the threshold of the items was less than \$1,000 or the useful life was less than one year;

(e) The list in annex I.C.6 should be deleted from the “special case” list owing to the fact that the items were reimbursed under self-sustainment.

4. Separate reimbursement rate for HF sets in military pattern vehicles

59. The Working Group considered separate reimbursement rates for inclusion of HF sets in military pattern vehicles. One group of Member States was of the view that HF sets of military pattern vehicles should be reimbursed as major equipment, as it was too expensive, while VHF sets were reimbursed via self-sustainment. Another group of Member States was of the view that troop/police contributors should provide all communication equipment for the contingent in accordance with the standard for communications under the self-sustainment category. The Working Group reached consensus that the provisions of the existing 2005 Contingent-Owned Equipment Manual should be continued.

Recommendations

60. It was recommended that the provisions of the existing 2005 Contingent-Owned Equipment Manual should be continued.

5. Threshold for loss/damage of major equipment under hostile action/forced abandonment

61. For major equipment lost or damaged as a result of single hostile action or forced abandonment, the United Nations will assume liability for each item of major equipment whose generic fair market value equals or exceeds \$250,000, or when the collective generic fair market value of such equipment equals or exceeds \$250,000. One group of Member States was of the view that the threshold for reimbursement of loss/damage of major equipment under hostile action/forced abandonment should be reduced to \$150,000. Another group of Member States was of the view that such loss/damage was reimbursed via the no-fault incident factor and the hostile action/forced abandonment mission factors and that there was no need to change the figure at the current stage.

Recommendations

62. It was recommended that the threshold value in case of damage/loss in single hostile action/forced abandonment of major equipment should continue as \$250,000.

6. Rotate major equipment of troop/police contributors every four to five years

63. One group of Member States was of the view that either the United Nations might make provision for rotating the equipment after every four to five years as mutually agreed between United Nations and troop/police contributors after being duly inspected by a technical team, or the troop/police contributors might make the arrangement and the United Nations might reimburse the troop/police contributors for the transportation costs incurred.

64. Another group of Member States was of the view that rotation of major equipment and self-sustainment was covered by the incremental transportation

factor and the depreciation as part of the reimbursement rates. The group proposed instead that the provision to deploy additional major equipment, in accordance with annex B of the memorandum of understanding, as overstock, should be increased from 10 per cent to 20 per cent. The troop/police contributors would then be able to deploy an overstock of up to 20 per cent of the agreed authorized quantities in annex B of the memorandum of understanding during initial deployment of contingent to the mission areas. That would reduce the maintenance load of the contingent in the mission area and additional equipment and vehicles might be utilized as reserve for the equipment that needed replacement.

Recommendations

65. It was recommended that the provision to deploy additional major equipment in accordance with the authorized quantities in annex B of the memorandum of understanding, as overstock, be increased from 10 per cent to 20 per cent.

7. Specifications of minimum capabilities of some major equipment

66. One group of Member States was of the view that some major equipment was insufficiently described in the Contingent-Owned Equipment Manual to the extent that some troop/police contributors provided equipment with capability below that which was required. The troop/police contributors should know the minimum capability required so that they could decide whether to deploy existing equipment or purchase new equipment.

67. The Working Group discussed the following issues:

(a) The balance between complexity, detail, clarity of understanding and specification;

(b) The Secretariat and the troop/police contributors should suggest major equipment for which a specification of minimum capability was required;

(c) The troop/police contributors must submit to the Secretariat the following national cost data for each item that should be reviewed: a national market value; an estimated useful life; and a monthly maintenance rate;

(d) The best time to review capabilities and their specification was during negotiation of the memorandum of understanding;

(e) The pre-deployment inspection should be the last opportunity to change equipment which did not fulfil United Nations requirements.

Recommendations

68. It was recommended that:

(a) At the request of the troop/police contributors, the Secretariat should specify the minimum capabilities required of major equipment;

(b) United Nations representatives should undertake a reconnaissance in the theatre to inform troop/police contributors of United Nations recommendations on the specification of major equipment;

(c) Troop/police contributors should recommend major equipment for which a minimum specification is required in the Contingent-Owned Equipment Manual to

the Secretariat by 1 September 2010 for consideration at the next Contingent-Owned Equipment Working Group.

8. A reimbursement method for wheeled vehicles

69. A proposed method of reimbursement for vehicles was tabled, consisting of six parameters on usage cost in a very hostile and very severe environment in the mission area and six parameters related to the maintenance of vehicles. One group of Member States recognized that the proposed method could be an alternate method for calculating reimbursement rates for vehicles, as the method referred to the real conditions in the mission area.

70. Another group of Member States was of the view that the proposed method would lead to many calculations that would delay the reimbursement to the troop/police contributors. In addition, the proposed parameters were too extreme and not very realistic. The proposed method applied only to vehicles, not to other major equipment. The group proposed to maintain the current method and to work on the two mission factors: extreme environmental conditions and intensified operational conditions in a mission area.

Recommendations

71. It was recommended that the Working Group should note the proposal and invite the Member State that had raised the issue, together with interested Member States, to consider the matter further with a view to presenting a proposal again at the next Working Group.

9. Training costs prior to deployment

72. Predeployment training was treated as a national responsibility by the Contingent-Owned Equipment Manual. Troop cost did not make separate provision for predeployment training. The Working Group emphasized the importance of training prior to deployment. One group of Member States was of the view that generic training related to peacekeeping operations was a national responsibility. Another group of Member States was of the view that the United Nations should reimburse the training related to specific peacekeeping operations.

Recommendations

73. The Working Group recommended that:

(a) The 2008 Working Group should highlight the United Nations mandate to support mission-specific training prior to deployment;

(b) In that regard, the Integrated Training Service should be proactive and efficient in:

(i) Supporting Member States to ensure their trainers had the appropriate training, information and material to conduct effective national predeployment training;

(ii) Issuing guidelines for training;

(iii) Providing all available documents specific to each mission necessary for training;

(c) Troop/police contributors should assess the impact of Integrated Training Service initiatives on their predeployment training. That assessment, with supporting methodologies and documentation, would be presented by the Member States to the next Working Group.

10. Additional reimbursement for deployment of contingents at short notice

74. The present United Nations guidelines did not provide for additional reimbursements for short notice deployment of troop contingents. The United Nations had established the rapid deployment level under the United Nations Standby Arrangement System, but there were no specific provisions for reimbursement under the rapid deployment level. An additional reimbursement would assist the troop/police contributors to contribute willingly to rapid deployment to urgent United Nations peacekeeping operations.

75. Three viewpoints emerged on the issue:

(a) Certain Member States requested clarification of the equipment and stores that would qualify for additional reimbursement;

(b) One group of Member States supported additional reimbursement for major equipment and self-sustainment for short-notice deployments. It was of the view that additional data regarding enhanced costs incurred by Member States needed to be collated for the specific equipment that would qualify for additional reimbursements for short-notice deployments;

(c) Another group of Member States stated that providing troops and equipment was a national responsibility. As Member States contributed troops with different inventories, it would not be feasible to make special provision for what they might or might not have. The existing rates of reimbursement were calculated based on the average of the item's generic fair market value, estimated useful life and monthly maintenance rate. The contingent-owned equipment reimbursement rates were effectively hire charges for capabilities.

Recommendations

76. There was no consensus and the issue will not be discussed further.

B. Self-sustainment

1. Comprehensive review of self-sustainment rates (excluding the medical subcategories)

77. Most Member States viewed rates as the primary objective of the comprehensive review and it was agreed that a balance between an increase in the rates and the impact on the overall peacekeeping budget of the United Nations would have to be achieved by consensus.

78. A number of models were developed for the Working Group using various permutations of the data that were provided and including data from the Contingent-Owned Equipment Manual for Member States that opted to be included at those rates. Finally, a methodology was developed that would be utilized by the three sub-working groups that excluded extreme high and low data. That paved the way for the acceptance of the methodology (see paras. 42-49 above), where data greater

than 100 per cent above and less than 20 per cent below the existing Contingent-Owned Equipment Manual rates would be excluded from the calculations.

79. Applying the foregoing methodology to the self-sustainment data, revised rates were attained that were accepted by the Working Group. Revised rates presented an average increase of 2.5 per cent over the self-sustainment rates (excluding the medical subcategories) and a 3.0 per cent impact on the overall self-sustainment (excluding the medical subcategories) budget of the United Nations peacekeeping budget. Issues that improved services (see below) increased the impact percentage on the contingent-owned equipment portion of the United Nations peacekeeping budget to 3.9 per cent.

Recommendations

80. It was recommended that:

(a) The revised rates of reimbursement in annex II.A.2 should be adopted;

(b) Future triennial reviews should be conducted in the form of a comprehensive review using data provided by or elected by the troop/police contributors.

2. Review of the self-sustainment standard under “accommodation”

81. The self-sustainment sub-working group only addressed the provision of office/workspace under accommodation, not the provision of office/workspace for level-II and III medical facilities, which was addressed by the medical sub-working group.

82. Following discussions, consensus was reached and the Working Group recommended including the provision of offices/workspace under the self-sustainment category of “accommodation”.

83. The Working Group noted that that inclusion could cause additional costs and therefore the revision of that rate was recommended to be discussed during the next Contingent-Owned Equipment Working Group. The existing rate of accommodation would be applicable until the reimbursement rates were revised at the next Contingent-Owned Equipment Working Group.

Recommendations

84. The Working Group agreed to the addition of the following text under “accommodation” in chapter 3, annex B, paragraph 31 of the Contingent-Owned Equipment Manual: “(d) **Provide offices/workspaces in permanent rigid structures**”.

85. The existing/revised rate of accommodation would be applicable until the reimbursement rates were re-evaluated at the next Contingent-Owned Equipment Working Group.

3. Revision of the decision sheet to calculate mission factors

86. The Working Group reached consensus that attacks on United Nations peacekeepers by unidentified individuals or groups, who might not be part of the

peace process, constituted a threat and that the calculation sheet for hostile engagement should be revised.

Recommendations

87. The Working Group recommended that the title of chapter 7, annex B, section B, of the Contingent-Owned Equipment Manual, should be revised as follows: **“B. Potential for hostile engagement of United Nations forces by identified factions or combatants participating in the peace process”**.

88. The Working Group also recommended that a new section D should be added to annex B of chapter 7 (**“D. Potential for hostile engagement of United Nations forces by unidentified factions, or by individuals or groups other than peace process participants”**) and the text in paragraphs 8 to 10 should be amended, as follows:

“8. Operating in an increasingly complex security environment, the United Nations peacekeepers are exposed to threats from more diversified sources. Individuals or groups identified by the United Nations, and/or groups not party to the peace process, often unidentified, who employ hostile/terrorist methods in the area of operations or other regions of the host nation, might seek to attack civilians or targets of international organizations like the United Nations, constituting threats to United Nations peacekeeping assets.

Is there a presence of the aforementioned individuals or groups in host nation outside the area of operations? If yes, allocate	1
Is there a presence of the aforementioned individuals or groups within the area of operations? If yes, allocate	2
Has there been indiscriminate hostile action against civilians by the aforementioned individuals or groups in regions of the host nation outside the area of operations? If yes, allocate	1
Has there been indiscriminate hostile action against civilians by the aforementioned individuals or groups in regions of the host nation within the area of operations? If yes, allocate	2
Has there been hostile action by the aforementioned individuals or groups on non-governmental organizations and/or international organizations other than the United Nations in the host nation? If yes, allocate	2
Has there been hostile action by the aforementioned individuals or groups on United Nations personnel and agencies in host nation? If yes, allocate	3
Total	

“3. Summary

“9. Enter the points allocated above in this summary table.

<i>Factor</i>	<i>Maximum</i>	<i>Points allocated</i>
Criminal activities	8	
Potential for hostile engagement of United Nations forces by identified factions or combatants participating in the peace process	10	
Distribution of uncontrolled or unmapped mines	6	
Potential for hostile engagement of United Nations forces by unidentified factions, or by individuals or groups other than peace process participants	11	
Total		

“10. The hostile action/forced abandonment factor in per cent equals the total points divided by 7, as it must not exceed 5 per cent. The percentage is to be rounded off to one decimal (i.e. 4.1 per cent).

“Hostile action/forced abandonment factor:

% ”

4. Revision of the number of days of recreational leave allowance paid to members of military contingents and formed police units from 7 to 15 days

89. The Working Group supported the principles.

Recommendations

90. The Working Group recommended that the recreational leave allowance should be 15 days. However, taking into account that the issue fell under the umbrella of troop costs, the Working Group recommended that the Fifth Committee should review the number of days for which the recreational leave allowance should be paid to contingents/formed police units.

91. The Working Group recommended that the Fifth Committee should consider the issue at the second resumed session of the sixty-second session of the General Assembly.

5. Revision of the standard for self-sustainment subcategory, “welfare”, and inclusion of the cost of “internet access” under “welfare”

92. Intense discussions took place on the re-introduction of the 1997 Contingent-Owned Equipment Manual standards for welfare and consensus was reached that an updated version of the standards for welfare should be adopted. Several options with regard to the provision of Internet to troops deployed in peacekeeping missions were discussed and consensus was reached on an interim rate.

Recommendations

93. The Working Group recommended the addition of the following text in chapter 3, annex B, paragraph 57, of the Contingent-Owned Equipment Manual:

“(c) **Welfare:** appropriate levels of equipment and amenities across the spectrum of welfare to include entertainment, fitness, sports, games and communications must be provided in quantities appropriate to the number of troops at their respective locations in the mission area. Verification as to whether appropriate standards have been provided will be based on the agreed troop/police contributor’s welfare arrangements between the troop police contributors and the Secretariat, and detailed in an appendix to annex C to the memorandum of understanding;

“(d) **Internet access:** appropriate levels of equipment and bandwidth in the peacekeeping mission.

(i) Verification as to whether appropriate quantities of equipment have been provided will be based on Internet requirements agreed between the troop/police contributors and the Secretariat, and detailed in an appendix to annex C to the memorandum of understanding;

(ii) Internet is to be established by the troop/police contributors and not linked to the existing United Nations communications system;

(iii) A guide to the standard required for providing Internet access can be found in appendix 10 to the present chapter”.

94. The Working Group recommended the addition of the following appendix 10 in chapter 3, annexes A and B, of the Contingent-Owned Equipment Manual:

“Appendix 10

“Guidelines for Internet access in United Nations peacekeeping operations

“The guide below is based on a battalion of 800 personnel deployed in up to 3 locations.

<i>Equipment</i>	<i>Quantity</i>
Internet access equipment	3
Computers	7
Printers	3
Appropriate levels of maintenance, spare parts and bandwidth for the equipment mentioned above”.	

95. The Working Group also recommended that a review of the outcome of the decision on welfare should be undertaken at the next Contingent-Owned Equipment Working Group.

96. In addition, the Working Group recommended the addition of a monthly per person interim rate for Internet access of \$2.76. The interim rate and verification process should be reviewed as soon as possible and at the latest during the next Working Group.

6. Annual leave at United Nations expense for contingent members/police deployed for a one-year tour of duty

97. During the discussion, Member States requested and obtained a series of detailed costing from the Secretariat for rotations of troops to and from missions, both semi-annually and annually. Many variations were modelled in terms of troop numbers and their associated weight of equipment with a view to identifying possible savings which could then be used to meet the requirement outlined in the issue paper.

98. One group of Member States agreed with the current United Nations policy of six-month troop rotations and indicated that if Member States chose other troop rotation schedules, they should bear the full cost and responsibility for additional transport requirements. Savings realized by the United Nations owing to a Member State not utilizing the full transport capacity required for six-month rotations should not be redirected to other purposes.

Recommendations

99. The Working Group agreed that the leave transportation remained a national responsibility (as national responsibility was generally understood in the Contingent-Owned Equipment Manual).

7. Reimbursement of troop/police contributors for accommodation in difficult missions

100. The Working Group discussed the impact that adverse climatic conditions might have on particular tentage when the United Nations was not able to provide permanent, rigid or semi-rigid accommodation after the initial six months. Consensus was reached that individual categories should not be considered in isolation. The Working Group agreed that the impact of climate conditions was covered by existing mission factors.

Recommendations

101. The Working Group agreed that the existing procedure should remain in place for consideration and review of mission factors at the request of troop/police contributors, as outlined in paragraph 2, chapter 7, of the Contingent-Owned Equipment Manual which stated that any troop/police contributor could request that the Secretariat review relevant mission factors at any time.

102. The Working Group requested the Secretariat to advise all troop/police contributors on how to request such a review, where necessary.

8. Provision of basic firefighting, fire detection and alarm capabilities in field missions

103. The Working Group agreed that the provision of basic firefighting capability was very important with regard to the safety of personnel deployed in field missions. The Working Group reached consensus that the provision should be divided into basic firefighting and fire detection and alarm capabilities. Many troop contributors were already providing the basic firefighting capability.

Recommendations

104. The Working Group recommended the addition of the following text after chapter 3, paragraph 34, of annex B to the Contingent-Owned Equipment Manual, to be numbered as paragraphs 35 and 36, respectively:

“Basic firefighting capability

“35. To receive the ‘basic firefighting’ self-sustainment rate, the contingent must:

“(a) Provide sufficient basic firefighting equipment, i.e., buckets, beaters and fire extinguishers, in accordance with the International Fire Code, as amended;

“(b) Provide all necessary minor equipment and consumables.

“Fire detection and alarm capability

“36. To receive the ‘Fire detection and alarm’ self-sustainment rate the contingent must:

“(a) Provide sufficient fire detection and alarm capability equipment, i.e., smoke detectors and fire alarm systems, in accordance with the International Fire Code, as amended;

“(b) Provide all necessary minor equipment and consumables”.

105. The above-mentioned categories were to be subcategories of “tentage” and “accommodation” and to be calculated and reimbursed separately.

106. The option of providing the said capabilities was to be negotiated at the memorandum of understanding stage and endorsed accordingly.

107. The Working Group recommended the addition of a monthly per person interim rate for basic firefighting capability of \$0.16, and for fire detection and alarm capability of \$0.13. Those rates should be reviewed as soon as possible and at the latest during the next Working Group.

108. The Working Group also recommended that water supply facilities for firefighting should include water source and high pressure water supply systems, including those to be provided for under United Nations arrangements.

C. Medical support

1. Comprehensive review of contingent-owned equipment rates for medical equipment and medical categories of self-sustainment

109. The Working Group discussed procedures for conducting future triennial contingent-owned equipment rate reviews. It was agreed that actual cost data rather than indices should be used, as that provided a better basis for the calculation of rates. It was further agreed that the troop/police contributors should be required to indicate whether they wanted to substitute the existing Contingent-Owned Equipment Manual as national data either in whole or in part, at the same time.

110. The Working Group transposed the data requested by the Secretariat and provided by Member States into the existing contingent-owned equipment format (chapter 3, annexes A and B, appendices 2.1 (level-I), 3.1 (level-II), 4.1 (level-III)). The Working Group then applied the agreed methodology (see paras. 42-49 above) to the rates.

111. The overall impact of the medical major equipment on the contingent-owned equipment portion of the United Nations peacekeeping budget was approximately 3.3 per cent and the corresponding impact of medical self-sustainment was 1.8 per cent.

Recommendations

112. It was recommended that:

(a) The revised rates of reimbursement in annexes III.A.2 and III.A.3 should be adopted;

(b) Future reviews should be conducted in the form of a comprehensive review using data provided or elected by troop/police contributors.

2. Proposed reimbursement for level-II and III medical structures

113. Level-II and III medical structures were normally established in tents during initial deployment. To comply with medical and hygiene requirements, such structures required a more permanent structure to operate within six months. The Contingent-Owned Equipment Manual did not currently cover the reimbursement for troop/police contributors when building rigid or semi-rigid structures to house level-II and III medical structures. It was therefore necessary to consider establishing rules and rates for the rigid and semi-rigid structures for level-II and III medical facilities.

114. The Working Group discussed three options:

(a) *Option 1.* Set the reimbursement rate based on major equipment listed in chapter 8, annex A, for the next three years, then consider a review of the rates methodology at the next Contingent-Owned Equipment Working Group;

(b) *Option 2.* Member States at the current Contingent-Owned Equipment Working Group would be requested to provide cost data relating to the current cost of building rigid structured level-II and III hospitals;

(c) *Option 3.* A combination of options 1 and 2: set a temporary reimbursement rate based on the Contingent-Owned Equipment Manual until a rate could be determined using national cost data.

Recommendations

115. It was recommended that the following text should be added to “medical” under paragraph 35 as a new subparagraph in chapter 3, annex B, of the Contingent-Owned Equipment Manual:

“(a) When troop/police contributors are deployed on United Nations peacekeeping operations and they provide facilities for level-II and/or III medical facilities, semi-rigid or rigid structures, these areas are reimbursed separately as major equipment, i.e., containers and camp units. If the

troop/police contributor builds permanent structures, the United Nations will reimburse the troop/police contributor under major equipment, chapter 8, annex A, Accommodation equipment, Rigid structures, Camp unit (medium and large for level-II and III medical facilities, respectively) refers;

“(b) In the interim, reimbursement for rigid and semi-rigid structures is to be based on major equipment in accordance with chapter 8, annex A, Accommodation equipment, Rigid structures, and Semi-rigid structures, Camp unit (medium and large for level-II and III medical facilities, respectively), respectively. The Secretariat is directed to apply this interim measure based on the breakdown below:

“(i) Semi-rigid structures are for containerized medical facilities:

- Level-II equates to a camp unit, medium
- Level-III equates to one each of a camp unit, medium and large
- Ablution units will be reimbursed as major equipment.

“(ii) Rigid structures are for hard-walled medical facilities:

- Level-II equates to a camp unit, medium
- Level-III equates to one each of a camp unit, medium and large
- Ablution units will be reimbursed as major equipment”.

116. The Working Group agreed with the Secretariat’s proposal to reimburse under self-sustainment for level-II and III medical facilities accommodated in tents. The tentage reimbursement criteria should be based on the bed wards capacity from the first day of deployment.

3. Specifications for definitions and components for basic first aid and high-risk areas

117. The Working Group discussed the following issues:

(a) United Nations peacekeepers must have a basic knowledge of and be trained in basic first aid and in prevention measures for high-risk areas;

(b) A distinction must be made between minimum first aid items for personnel and for United Nations vehicles and certain facilities provided by troop/police contributors;

(c) The minimum standards for high-risk area (epidemiological) under self-sustainment should be based on a determination by the United Nations Secretariat, per region and/or per United Nations mission, based on the risk posed to United Nations peacekeepers.

Recommendations

Basic first aid

118. It was recommended that chapter 3, annex B, paragraph 49, subparagraph (a), be amended to read as follows:

“(a) Basic level (first aid)”

“Comprises the basic immediate first aid provided to a casualty by the nearest person on-site at the point of injury. The following requirements must be met:

“(i) *Training in basic first aid.* United Nations peacekeepers must have basic knowledge of and be trained in basic first aid, in accordance with chapter 3, annexes A and B, appendix 1. The training must, at a minimum, cover (a) cardio-pulmonary resuscitation; (b) bleeding control; (c) fracture immobilization; (d) wound dressing and bandaging (including burns); (e) casualty transport and evacuation; and (f) communication and reporting.

“(ii) *Individual basic first aid kits.* United Nations peacekeepers must carry a personal field or battle dressing and medical disposable gloves. In chapter 9, annex A, appendix (Soldier’s kit/police kit),

reference this requirement under ‘first aid kit’.

In addition, the definition should be incorporated in appendix 1 (annex III.C.2) under notes:

‘Field or battle dressing consists of a large pad of an absorbent cloth, attached to a strip of thin fabric used to bind the pad in place. Field dressings are issued in a sealed waterproof pouch to keep them clean and dry; the pouch can be torn open when required’;

“(iii) *Basic first aid kits for troop/police contributor vehicles and other facilities.* A basic first aid kit must be provided to all troop/police contributor vehicles, workshops and maintenance facilities, all kitchen and cooking facilities, and any other area where the Force Medical Officer deems it necessary. These kits must contain the items set out in chapter 3, annexes A and B, appendix 1.1 (annex III.C.3).”

Member States may opt to augment **the above-mentioned minimum standards**. This is a national prerogative, which must not lead to additional costs to the United Nations.

High-risk areas (epidemiological)

119. It was recommended that chapter 3, annex B, paragraph 49, subparagraph (f), should be amended to read as follows:

“(f) High-risk areas (epidemiological)”

“To be eligible for high-risk area (epidemiological) self-sustainment, troop/police contributors must provide medical supplies, chemoprophylaxis and preventive health measures in areas with a high incidence of endemic infectious disease for which there is no vaccine. The minimum standards for high-risk areas (epidemiological) can vary according to the region in which United Nations peacekeepers are deployed and are based on the risk posed to United Nations peacekeepers.

“(i) The self-sustainment reimbursement covers the provision and sustainment of the following, at a minimum:

“a. Prophylactic pharmaceuticals (anti-malarials). The prophylactic treatment of malaria is a national responsibility, as stipulated in document A/C.5/60/26, chapter 3, annex B, paragraph 50, and chapter 3, annexes A and B, appendix 7, paragraph 6;

“b. Personal preventive health equipment and consumables (head mosquito net, repellent);

“c. Man-portable preventive health equipment and consumables (mosquito foggers, pesticides).The use of pesticides will conform to international environmental law;

“(ii) Other preventive measures, which are covered elsewhere in the Contingent-Owned Equipment Manual, must be taken into account:

“a. Individual mosquito nets (conforms to chapter 9, annex A, soldier’s kit/police kit;

“b. Encouragement of body-covering clothing (conforms to chapter 9, annex A, soldier’s kit/police kit);

“c. Rodent control measures are part of basic hygiene procedures for large amounts of food and waste disposal areas (chapter 3, annex B, catering, paragraph 10, subparagraph (d) refers)”.

4. Definition of “fee-for-service” (medical services)

120. Fee-for-service medical arrangements were currently practiced under memorandums of understanding in some missions where troop/police contributor and/or United Nations clinics provided health care to personnel other than those for which they were reimbursed under self-sustainment. For example, a troop/police contributor might provide services to United Nations police personnel, another contingent, mission substantive staff or United Nations agencies within the area of operations. Under fee-for-service arrangements, a troop/police contributor would invoice the mission for services provided to the individuals.

121. The standard fee schedule used to determine the amount owed to the troop/police contributor was based upon rates agreed between relevant parties when North Atlantic Treaty Organization and Kosovo Force facilities provided services to United Nations Protection Force/United Nations Interim Administration Mission in Kosovo personnel in the 1990s. The situation was such that United Nations facilities and/or civilian facilities were unavailable, or unable to deploy, to support troop and civilian mission staff. Accordingly, the agreed fee schedule had subsequently been adopted in missions where troop/police contributors provided services to personnel for whom they were not routinely reimbursed under self-sustainment arrangements in the memorandum of understanding.

122. During its discussions, the Working Group considered the following issues:

(a) The Working Group agreed on procedures for troop/police contributors providing services to the United Nations and other authorized personnel not covered under self-sustainment reimbursement;

(b) A fee schedule was recommended based on type of services provided which did not include cost already being reimbursed in other areas of the Contingent-Owned Equipment Manual (i.e., personnel and major equipment usage).

Recommendations

123. It was recommended that:

(a) The final sentence should be deleted from chapter 3, annex B, paragraph 36;

(b) A new paragraph should be added, as follows:

“Medical support facilities are often called upon to provide care to United Nations and other authorized personnel by the mission headquarters for whom they are not receiving reimbursement under self-sustainment. In these circumstances, the medical facility is entitled to seek reimbursement for the associated costs by applying a fee-for-service for the medical care provided. The agreed procedures and fee-for-service rates are listed in chapter 3, annex B, appendix 11. Care provided to non-eligible personnel (e.g., local civilian population) by troop/police contributors is not reimbursable by the United Nations”;

(c) The following text should be incorporated as a new appendix 11 to chapter 3, annex B:

“Administrative procedures for “fee-for-services” reimbursement

“1. The mission shall settle fee-for-service claims from the troop/police contributor only upon receipt of a monthly invoice delivered to the mission Chief Medical Officer, who represents the Chief of Mission Support.

“2. Fee-for-service reimbursement shall be accepted on presentation of the invoice from the troop/police contributor to the mission, which includes:

“(a) Full name and United Nations identification number of the patient;

“(b) Dates of treatment;

“(c) Service given according to the attached schedule;

“(d) Individual spreadsheets for patient’s United Nations status/category of employment.

[The template to be used for invoicing is contained in annex III.D.2.]

“3. The documents listed below are to be sealed in an envelope marked ‘medical in confidence’ and addressed to the Chief Medical Officer, who is responsible to the Chief of Mission Support for the appropriate maintenance of confidentiality and record-keeping:

“(a) Diagnosis, according to the World Health Organization’s ICD code system;

“(b) A copy of any associated referral from a United Nations primary care medical officer or health specialist.

“4. The Chief of Mission Support is responsible for all fee-for-service reimbursements to the troop/police contributor, and for reclaiming the fees from United Nations personnel with insurance coverage, where applicable.

Fee schedule

<i>Code</i>	<i>Type of services</i>	
A	General practitioner	\$30
B	Specialist on referral	\$40
C	Nurse (for medical procedures)	\$20
D	Vaccination	Actual cost
E	X-ray (referral, image only)	\$25
F	X-ray with contrast (referral, image only)	\$65
G	Lab (referral, tests only)	\$25
H	Dental consultation, emergency only (includes dental X-rays)	\$65
I	Hospital bed per 24 hours	\$80
J	United Nations personnel entry examination (inclusive of tests and X-ray for pre- and post-deployment)	\$125

Notes:

- “1. The foregoing fees include consumables utilized during the consultation and resultant medication dispensed. In general, the quantity of medication provided to out-patients receiving care under a fee-for-service arrangement should not exceed five days of supply.
- “2. Labs or X-ray services rendered are to be billed separately (with the exception of dental X-rays and United Nations personnel entry examinations).
- “3. There is to be no patient co-payment charged. The troop/police contributor medical facility bills the mission for the full amount and is reimbursed accordingly.
- “4. Actual vaccination cost is the cost the medical facility paid to obtain the vaccine stock”.

5. Medical support facilities (medical modular concept)

124. The Working Group discussed standardization plus minimum capabilities of United Nations level-I, II and III medical support facilities and the medical modular concept.

125. The 2008 Contingent-Owned Equipment Working Group agreed on the capability definition and staffing composition of the level-I, II and III medical support facilities. The Working Group also agreed to the concept of level-I+ and level-II+ medical facilities and provided definitions for inclusion in the Contingent-Owned Equipment Manual. While the overall modular concept was supported by the Working Group, it was unable to finalize the equipment list for all of the modules.

Consensus was reached on the equipment lists for the aeromedical evacuation module and the forward surgery module.

Recommendations

126. The Working Group recommended that the aeromedical evacuation module and the forward surgery module content lists (annexes III.E.2 and III.E.3) should be included as appendices to annex B to chapter 3 of the Contingent-Owned Equipment Manual.

127. The Working Group recommended that interested Member States should get together and further review the equipment lists for the remaining modules of the medical modular concept and forward them as an issue paper for distribution to all Member States prior to the next Contingent-Owned Equipment Working Group. Participation in that Working Group by the Medical Support Section/Department of Field Support was essential to ensure that United Nations medical doctrine was duly considered and updated.

128. The Working Group recommended replacing the text in chapter 3, annex B, of the Contingent-Owned Equipment Manual (A/C.5/60/26), as follows:

“Medical

“35. In implementing the following principles and standards, the following definitions are used:¹

“(a) Medical equipment. Accountable major equipment (identified by # in appendices 2.1, 3.1, 4.1, 5 and 6) for the provision of medical support in United Nations medical facilities;

“(b) Drugs. Drugs produced according to World Health Organization (WHO) standards and consumed in the provision of medical support in United Nations medical facilities;

“(c) Medical supplies. Expendable supplies and minor equipment (identified by @ in appendices 2.1, 3.1, 4.1, 5 and 6) consumed in the provision of medical support in United Nations medical facilities;

“(d) Medical self-sustainment. The supply and resupply of drugs and medical supplies for the provision of medical support in United Nations medical facilities;

“(e) High-risk mission. A mission with high incidence of endemic infectious diseases for which no vaccinations exist. All other missions are considered ‘normal-risk mission’.² This definition is for use in determining eligibility for reimbursement of the self-sustainment rate for ‘high-risk areas (epidemiological)’;

“(f) For the purpose of establishing eligibility to medical care through United Nations missions medical facilities, the following personnel are considered part of a United Nations mission:³

¹ A/C.5/55/39, annex III.B, annex B, para. 31.

² A/C.5/55/39, para. 95.

³ Ibid., para. 97.

“(i) United Nations-formed military police and United Nations-formed police units;

“(ii) United Nations military and United Nations police personnel not members of formed units;

“(iii) United Nations international civilian staff;

“(iv) United Nations Volunteers;

“(v) Locally employed United Nations staff, where applicable.

“36. Medical support and security are essential at all times; therefore, a troop/police contributor cannot be partially self-sustaining in the medical self-sustainment subcategories. Level-I medical care is a troop/police contributor responsibility; however, each level-I facility is to provide medical support and care to all United Nations staff permanently or temporarily in their area of responsibility.⁴ As a matter of principle this occasional level-I care should be provided in an emergency with no fee; however, a troop/police contributor may choose to seek reimbursement for services rendered; therefore there is a requirement to document and register emergency services provided.⁵ All United Nations medical facilities are responsible for emergency medical services for all United Nations troops and United Nations staff in their area of responsibility. Except in emergencies, specialists and level-II and III facilities can request a referral from a level-I facility before accepting a patient.⁶

“37. Medical support facilities are often called upon to provide care to United Nations and other authorized personnel by the mission headquarters for whom they are not receiving reimbursement under self-sustainment. In these circumstances, the medical facility is entitled to seek reimbursement for the associated costs by applying a fee-for-service for the medical care provided. The agreed procedures and fee-for-service rates are listed in appendix 11 to annex B to chapter 3. Care provided to non-eligible personnel (e.g., local civilian population) by troop/police contributors is not reimbursable by the United Nations.

“38. A troop/police contributor that cannot provide all medical capabilities according to the standards listed in annex B to chapter 3 must advise the Secretariat during the negotiation of the memorandum of understanding and in all cases prior to deployment.⁷

“39. A contingent Commander must inform the mission immediately if a troop/police contributor, while deployed, finds that it cannot adequately supply medical equipment, drugs or consumables under self-sustainment. If the troop/police contributor cannot find another contributor to offer resupply on a bilateral basis, the United Nations must take over the resupply of drugs, consumables and medical supplies permanently. The responsibility to provide medical personnel and medical services remains with the troop/police

⁴ A/C.5/55/39, annex III.B, annex B, para. 1.

⁵ A/C.5/55/39, para. 103.

⁶ A/C.5/55/39, annex III.B, annex B, para. 34.

⁷ *Ibid.*, para. 1.

contributor. Medical self-sustainment will not be reimbursed from the day the troop/police contributor cannot provide full self-sustainment resupply.⁸

“40. To ensure that all personnel receive the medical care to which they are entitled and to ensure that there is an effective and equitable system for reimbursement for medical self-sustainment, all uniformed personnel, police and military shall be assigned to medical facilities being responsible for their medical care. The assignment can be as part of a unit (for formed units) or on an individual basis (United Nations police, military observers and Headquarters staff). Each individual shall be assigned to a level-I facility and/or a level-II facility and/or a level-III facility, where applicable.

“41. It is the responsibility of the Force Medical Officer/Chief Medical Officer to ensure that all personnel are informed upon entry into the mission as to the medical facilities responsible for their care and to ensure that all medical facilities are notified as to who is assigned to the facility. The same information/notification must be given whenever individuals and units move from the area of responsibility of one facility to that of another.

“42. On the fifteenth day of each month a list stating the number of uniformed personnel assigned to each medical facility shall be forwarded to the Field Budget and Finance Division/Memorandum of Understanding and Claims Management Section, with a copy to the Logistics Support Division/Medical Support Section.

“43. All United Nations civilian staff shall be assigned to medical facilities in the same manner as uniformed personnel; however, this will not create eligibility for reimbursement under ‘self-sustainment’ unless this is explicitly stated in the memorandum of understanding. Alternatively, ‘fee-for-service’ might apply.⁹

“44. All United Nations level-II and III medical facilities must be equipped and staffed to receive and treat all United Nations personnel regardless of gender, religion or culture, preserving the dignity and individuality of all patients.¹⁰

“45. Medical staff must be at the forefront in promoting HIV awareness, its method of infection and the prevention of spread. No medical staff or patient must be discriminated against owing to verified or suspected HIV. Testing in a United Nations facility must be voluntary and confidential, and no HIV test must be performed without there being a system of counselling.¹¹

“46. The reimbursement for self-sustainment medical services, including medically related minor equipment, tools, supplies and consumables, will be made at the rate of self-sustainment for the level of service provided and be calculated on the total personnel strength of the units/contingents for which a medical facility is responsible, as agreed in the memorandum of understanding (the actual strength numbers will be used for calculation of reimbursement).¹²

⁸ Ibid., para. 4.

⁹ A/C.5/62/26, annex III.D.1, appendix 11.

¹⁰ A/C.5/55/39, annex III.B, annex B, para. 34.

¹¹ Ibid.

¹² A/C.5/54/49, annex VIII, chapter 3, annex, para. 13.

“47. If a troop/police contributor provides medical services to United Nations standards, which includes services of more than one level, these levels shall be accumulated accordingly.¹³ However, when a level-III medical facility covers an area where there is no medical facility providing level-II medical services, the ‘level-II’ and ‘level-III’ self-sustainment rates are not accumulated. The level-II and III combined self-sustainment rate of \$35.36 is to be used and the calculation of the reimbursement is to be based on the actual troop strength of those contingents assigned to the level-III medical facility for both level-II and III medical care.¹⁴

“48. To be eligible for reimbursement for the medical self-sustainment rate, the medical facility must provide medical ‘self-sustainment’, including all related staff, equipment, drugs and supplies (to include ‘epidemiological high-risk-areas’ requirements), for basic, level-I, II, III, storage for blood and blood products, and high-risk areas, as agreed in the memorandum of understanding. The level of equipment must meet United Nations standards as specified in the ‘United Nations Levels of Medical Support’ (A/C.5/54/49, annex VIII, appendices I and II and amended in A/C.5/55/39 and Corr.1, annex III.B, annex B, paras. 31-36) for a medical facility and indicated in the memorandum of understanding. Drugs and consumables must meet WHO standards.¹⁵

“49. In preparing the verification reports for medical self-sustainment, the quality, capacity and capability, as defined in the standards, are the overriding considerations.¹⁶ Therefore, an expert medical opinion concerning the operational impact of any shortfall, discrepancy or corrective action or substitution undertaken will be required before deduction may be made to the reimbursement.

“50. A summary of the United Nations standards for each level of medical service of self-sustainment rates is shown below. Complete details of the United Nations standards of medical services are stipulated in chapter 3, annexes A and B, appendices 1 through 6.¹⁷ Additional information on immunization policy, malaria prophylaxis and vector control, and HIV/AIDS and sexually transmitted diseases is contained in appendix 7 to this chapter”.¹⁸

“(a) Basic level (first aid)

“Comprises the basic immediate first aid provided to a casualty by the nearest person on-site at the point of injury. The following requirements must be met:

“(i) *Training in basic first aid.* United Nations peacekeepers must have basic knowledge of and be trained in basic first aid, in accordance with chapter 3, annexes A and B, appendix 1. The training must, at a minimum, cover (a) cardio-pulmonary resuscitation; (b) bleeding control; (c) fracture immobilization; (d) wound dressing and bandaging

¹³ A/C.5/54/49, annex VIII, sect. B1, remarks, p. 53.

¹⁴ A/C.5/55/39, para. 106.

¹⁵ A/C.5/54/49, sect. B2, chapter 3, annex A, para. 14, p. 53; A/C.5/55/39, annex III.B, annex B, para. 36.

¹⁶ A/C.5/55/39, para. 98 (a).

¹⁷ A/C.5/55/39, annex III.A.

¹⁸ Ibid., annex III.C.

(including burns); (e) casualty transport and evacuation; and (f) communications and reporting;

“(ii) *Individual basic first aid kits*. United Nations peacekeepers must carry a personal field or battle dressing and medical disposable gloves”. In chapter 9, annex A, Appendix (soldier’s kit/police kit), reference this requirement under ‘first aid kits’. In addition, the definition should be incorporated in Appendix 1 (annex III.C.2) under notes: ‘field or battle dressing consists of a large pad of an absorbent cloth, attached to a strip of thin fabric used to bind the pad in place. Field dressings are issued in a sealed waterproof pouch to keep them clean and dry; the pouch can be torn open when required’;

“(iii) *Basic first aid kits for troop/police contributor vehicles and other facilities*. A basic first aid kit must be provided to all troop/police contributor vehicles, workshops and maintenance facilities, all kitchen and cooking facilities, and any other area where the Force Medical Officer deems it necessary. These kits must contain the items set out in chapter 3, annexes A and B, Appendix 1.1 (annex III.C.3).

“Member States may opt to augment **the above-mentioned minimum standards**. This is a national prerogative, which must not lead to additional costs to the United Nations.

“(b) **Level-I medical facility**

“(i) *Definition*. It is the first level of medical care that provides primary health care and immediate lifesaving and resuscitation services. Normally included within basic level-I capabilities are: routine sick call and the management of minor sick and injured personnel for immediate return to duty, as well as casualty collection from the point of injury/wounding and limited triage; stabilization of casualties; preparation of casualties for evacuation to the next level of medical capability or the appropriate level of medical facility depending on the type and gravity of the injuries; limited in-patient services; advice on disease prevention, medical risk assessment and force protection within the area of responsibility. A level-I medical facility is the first level of medical care where a doctor/physician is available. A level-I medical facility may be United Nations-owned (United Nations level-I), contingent-owned (troop/police contributor), or commercially contracted;

“(ii) *Capacity*. Provides treatment to 20 ambulatory patients/day, temporary holding capacity of 5 patients up to 2 days, medical supplies and consumables for 60 days;

“(iii) *Capability*

- Provides casualty collection and evacuation to higher levels of medical care (level-II and/or III)
- Handles routine sick calls and the management of minor sick and injured
- Implements disease, non-battle injury and stress-preventive measures

- Is responsible for education and promotion of awareness and prevention of the spread of HIV in the area of responsibility
- Offers emergency medical services to all United Nations personnel in the area of responsibility
- Provides medical services based on troop/police strength up to battalion level;

“(iv) *Composition.* The minimum composition and number of level-I medical personnel are listed below. The actual composition and number of level-I medical personnel may vary depending on the operational requirements and agreed in the memorandum of understanding. However, basic manpower includes the *capability of splitting the level-I medical support facility into two forward medical teams (FMT).*

- 2x Medical Officer
- 6x Paramedic/Nurse
- 3x support staff

“(c) **Level-I+ medical facility.** In accordance with specific mission requirements, a level-I medical facility can be enhanced to ‘level-I+’ by the addition of supplementary capabilities. Additional capabilities that enhance the medical support facilities are reimbursed separately, in accordance with the Contingent-Owned Equipment Manual and the memorandum of understanding. Examples of additional capabilities include:

- Primary dental care
- Basic laboratory testing
- Preventive medicine
- Surgical capability (forward surgical module) — only in exceptional situations, dictated by the exigencies of medical service support, additional patient holding capacity and deployment should be based only on requirement of the Department of Peacekeeping Operations/Department of Field Support
- Aeromedical evacuation team

“(d) **Level-II medical facility**¹⁹

“(i) *Definition.* Level-II is the next level of medical care and the first level where basic surgical expertise is available, and life support services and hospital and ancillary services are provided within the mission area. A level-II medical facility provides all level-I capabilities and includes capabilities for: emergency surgery, damage control surgery, post-operative services and high-dependency care, intensive care-resuscitation and in-patient services; also basic diagnostic services, laboratory, pharmaceutical, preventive medicine and dental services are provided; patient record maintenance and tracking of evacuated patients are also minimum capabilities required for a level-II medical facility.

¹⁹ Ibid., annex III.B, annex B, para. 35 (c).

“(ii) *Capacity*. Performs 3 to 4 surgical operations/day and provides hospitalization of 10 to 20 sick or wounded up to 7 days, 40 outpatients/day, 5 to 10 dental consultations per day; will hold medical supplies, fluids and consumables for 60 days;

“(iii) *Capability*.

- Provides advanced specialist medical care to stabilize seriously injured personnel for transport to a level-III medical facility
- Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination
- Provides climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products
- Performs blood testing and grouping
- Can, if agreed in the memorandum of understanding, supply specialist services according to the needs of the mission (e.g., gynaecologist, specialist in tropical medicine, stress counsellor)
- Can provide a specialist team for collecting seriously injured personnel from the site of injury and escort patients in serious condition to higher-level care; the team might be tagged as an aeromedical evacuation team
- Provides medical and dental services based on troop/police strength up to brigade level;

“(iv) *Composition*. The minimum composition and number of level-II medical personnel are listed below. Actual numbers may vary depending on the operational requirements and agreed in the memorandum of understanding.

- 2x Surgeon
- 1x Anaesthetist
- 1x Internist
- 1x General Physician
- 1x Dentist
- 1x Hygiene Officer
- 1x Pharmacist
- 2x Head Nurse
- 2x Intensive Care Nurse
- 1x Operating Room Assistant
- 10x Nurse/Paramedic
- 1x Radiology Assistant

- 1x Laboratory Technician
- 1x Dental Assistant
- 2x Driver
- 8x support staff

“(e) **Level-II+ medical facility.** The level-II capability can be enhanced to ‘level-II+’ by augmentation with additional capabilities. Additional capabilities that enhance the medical support facilities are reimbursed separately, in accordance with the Contingent-Owned Equipment Manual and the memorandum of understanding. Examples of additional capabilities include:

- Orthopaedic capability
- Gynaecology capability
- Additional internal medicine capability
- Additional diagnostic imaging capability (CT scan);

“A level-II medical facility may be a troop/police contributor contribution, a United Nations-owned medical facility, or commercially contracted;

“(f) **Level-III medical facility**²⁰

“(i) *Definition.* It is the third and the highest level of medical care deployed within a mission area. At this level all capabilities of a level-I and II medical facility are provided as are capabilities for multidisciplinary surgical services, specialist services and specialist diagnostic services, increased high dependency care capacity, extended intensive-care services and specialist outpatient services. A level-III medical facility may be contributed by a troop/police contributor, or provided by a national or regional hospital in the mission area or by a commercial contractor;

“(ii) *Capacity.* Able to perform 10 surgical operations/day and provides hospitalization of 50 patients up to 30 days, 60 outpatient consultations/day, 20 dental consultations/day, 20 X-rays and 40 lab tests/day; will hold medical supplies and consumables for 60 days;

“(iii) *Capability.*

- Provides advanced services in surgical, intensive care, dental (emergency dental surgery), laboratory, X-ray, ward and pharmaceutical capabilities
- Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination

²⁰ Ibid., para. 35 (d).

- Provides climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products
- Performs blood testing and grouping
- Can, if agreed in the memorandum of understanding, supply specialist services according to the needs of the mission (e.g., gynaecologist, specialist in tropical medicine, stress counsellor)
- Can provide a specialist team for collecting seriously injured personnel from the site of injury and escort patients in serious condition to higher-level care;

“(iv) *Composition.* The minimum composition and number of level-III medical personnel are listed below. Actual composition and number of level-III medical personnel may vary depending on the operational requirements and agreed in the memorandum of understanding.

- 4 x Surgeon (minimum 1 orthopaedic)
- 2 x Anaesthetist
- 6 x Specialist
- 4 x Physician
- 1 x Dentist
- 2 x Dental Assistant
- 1 x Hygiene Officer
- 1 x Pharmacist
- 1 x Pharmacist Assistant
- 50x Nursing staff (composition as required):
 - 1x Head Nurse
 - 2x Intensive Care Nurse
 - 4x Operating Theatre Nurse
 - 43x Nurse/Medic/Paramedic
- 2 x Radiological Assistant
- 2 x Laboratory Technician
- 14x Maintenance and support staff

“(g) Blood and blood products

“(i) Blood and blood products will be provided by the United Nations in accordance with United Nations standards, including transport, testing, handling and administration unless the level-II or III medical facility troop/police-contributor believes it necessary to negotiate the issue.²¹ In

²¹ A/C.5/54/49, para. 86 (h).

such instances this will be negotiated on a case-by-case basis and reflected in annex C to the memorandum of understanding;

“(ii) The United Nations will provide climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products;

“(iii) Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination;

“(iv) Performs blood testing and grouping;

“(h) High-risk areas (epidemiological)

“To be eligible for high-risk area (epidemiological) self-sustainment, troop/police contributors must provide medical supplies, chemoprophylaxis and preventive health measures in areas with a high incidence of endemic infectious disease for which there is no vaccine. The minimum standards for high-risk areas (epidemiological) can vary according to the region in which United Nations peacekeepers are deployed and are based on the risk posed to United Nations peacekeepers.

“(i) The self-sustainment reimbursement covers the provision and sustainment of the following, at a minimum:

a. Prophylactic pharmaceuticals (anti-malarials). The prophylactic treatment of malaria is a national responsibility, as stipulated in document A/C.5/60/26, chapter 3, annex B, paragraph 50, and chapter 3, annexes A and B, appendix 7, paragraph 6;

b. Personal preventive health equipment and consumables (head mosquito net, repellent);

c. Man-portable preventive health equipment and consumables (foggers, pesticides). The use of pesticides will conform to international environmental law.

“(ii) Other preventive measures, which are covered elsewhere in the Contingent-Owned Equipment Manual, must be taken into account:

a. Individual mosquito nets; conforms to chapter 9, annex A (soldier’s kit/police kit);

b. Encouragement of body-covering clothing (conforms to chapter 9, annex A (soldier’s kit/police kit));

c. Rodent control measures are part of basic hygiene procedures for large amounts of food and waste disposal areas (chapter 3, annex B, Catering, para. 10 d refers.

“(i) Dental

“(i) Provides dental care to maintain the dental health of unit personnel;

“(ii) Provide basic or emergency dental procedures;

“(iii) Maintains a sterilization capability;

“(iv) Conducts minor prophylactic procedures;

“(v) Provides oral hygiene education to mission personnel.

“51. The administration of vaccinations, as recommended by the United Nations, is a national responsibility. The United Nations will provide necessary information on what kind of vaccination and preventive measures will be given to all United Nations personnel prior to deployment. If any United Nations personnel deploy without proper vaccinations and prophylaxes, the United Nations will provide necessary booster shots and prophylaxes. In this case, the United Nations will deduct any expenses for initial vaccinations which could have been initiated prior to deployment from the self-sustainment payment of troop/police-contributors.”²²

6. Provision of medical services for non-United Nations personnel and reimbursement for medical services provided to contingent personnel before and after deployment to United Nations peacekeeping operations

129. The Working Group discussed the provision of medical services for non-United Nations personnel during its deliberations on definition of fee-for-service. In the relevant paper it was proposed that troop/police contributors providing care to local civilian populations while deployed on United Nations missions should be reimbursed for the care provided. Several Member States were of the view that owing to professional, civil-military cooperation and other factors, in many cases the contingent medical facilities were unable to refuse the provision of such services and that they should therefore be reimbursed by the United Nations. While the Working Group recognized the difficulties faced by those contingent medical facilities, several Member States believed that the provision of such services was not a United Nations responsibility, but was rather a national prerogative and, as such, should not be reimbursed out of the peacekeeping budget. One delegation suggested that the Chief Medical Officer and the Civil-Military Cooperation Officer in the mission headquarters should evaluate the local situation in the mission area to potentially identify alternative solutions (e.g., funding from other sources, non-governmental organization support). The Working Group was unable to reach consensus on the issue.

130. The Working Group briefly considered the issue of reimbursement for medical services provided to contingent personnel before and after deployment to peacekeeping operations during its deliberations on standards required for medical self-sustainment — basic first aid and high risk (epidemiological) subcategories. It did not reach consensus on the issue.

Recommendations

131. No recommendations were made.

²² A/C.5/54/49, annex VIII, sect. B.14, p. 58.

V. Closing remarks

A. Concluding remarks by the Director of the Field Budget and Finance Division, Department of Field Support

132. The Director of the Field Budget and Finance Division, Department of Field Support thanked the delegations for their participation and contribution to the deliberations of the 2008 Working Group. He noted that some progress had been made since the last Working Group, as Member States had been able to agree by consensus on the reimbursement rate review, as well as on a number of recommendations providing guidance to the Secretariat on the contingent-owned equipment system.

B. Concluding remarks by the Chairman

133. The Chairman of the 2008 Working Group on Contingent-Owned Equipment stated that the Working Group had achieved its primary goal of reimbursement rate review since the post-phase V Working Group on Contingent-Owned Equipment in 2001. Consensus had been reached on a variety of technical issues that should enhance the contingent-owned equipment system. The Chairman thanked the participants of the Working Group for the results achieved at the current session of the Working Group and thanked the Secretariat for the support provided.

Annex I.A.1

Comprehensive review of the reimbursement rates for major equipment

Background

1. In his report dated 24 August 2004 (A/59/292), the Secretary-General recommended that the next Contingent-Owned Equipment Working Group should be held in 2008 and that it should be mandated to carry out a comprehensive review of the contingent-owned equipment reimbursement rates. By its resolution 59/298, the General Assembly approved the proposal of the Secretary-General.

2. Accordingly, by note verbale, Member States were requested to submit standard cost data for generic categories of major equipment, using 2006 as the base year, to carry out a comprehensive review of contingent-owned equipment reimbursement rates.

Comprehensive review of rates

3. The 2008 Contingent-Owned Equipment Working Group used the following method to conduct the review:

- (a) Agree on principles for conducting the review;
- (b) Review data;
- (c) Develop a calculation model;
- (d) Calculate rates;
- (e) Evaluate and adjust rates to ensure an equitable outcome.

Each step in the method was finalized before the next step was started.

4. Principles agreed on for conducting the review:

(a) The review related to reimbursement rates only, not the current contingent-owned equipment system;

(b) The review used the national cost data provided by troop-contributing countries/police-contributing countries. However, where a Member State had not submitted data for a category, it could elect to use existing Contingent-Owned Equipment Manual data as its national data. The only acceptable data are those that have been received by the Secretariat in advance of the first Working Group session;

(c) Rates could only be revised for major equipment if new data had been provided by troop-contributing countries/police-contributing countries;

(d) Data should be validated for mistakes and flaws in advance of the calculation. Only corrected and accepted data should be included in the calculation;

(e) The impact on the major equipment portion of the United Nations peacekeeping budget should be considered at each stage of the calculation;

(f) Differences in generic fair market value and estimated useful life can be reconciled and made comparable by considering monthly depreciation.

5. Review of data:

(a) If data had been incorrectly submitted as zero, the existing Contingent-Owned Equipment Manual should be substituted;

(b) If data had been blank, this should be treated as no data. However, if the market price is submitted and the estimated useful life is blank, the existing Contingent-Owned Equipment Manual estimated useful life should be substituted;

(c) If the wet-lease rate had been calculated but no maintenance rate had been submitted, the maintenance rate should be the wet-lease rate minus the dry-lease rate;

(d) If the maintenance rate had been submitted in the wrong format, the existing Contingent-Owned Equipment Manual rate should be used;

(e) If the wet-lease rate equalled the dry-lease rate, the wet-lease rate should be deleted.

In addition, several specific minor corrections were made to data.

6. Development of a calculation model:

(a) A spreadsheet model was developed to undertake calculations;

(b) The model was capable of independently excluding high and low extremes of data. This flexibility enabled several alternative scenarios to be examined;

(c) After excluding agreed extremes, simple averages of monthly depreciation, estimated useful life and maintenance were calculated;

(d) Generic fair market value was calculated as the product of average monthly depreciation and average estimated useful life. These values were then used, with the existing no-fault incident factor, to calculate dry and wet-lease rates;

(e) The impact on the major equipment portion of the United Nations peacekeeping budget calculated by the sum of the products of percentage change in the wet-lease rate and the category's weight.

7. Calculation of reviewed rates:

(a) Where a country has not submitted any new data, it may elect to use the existing Contingent-Owned Equipment Manual data. This includes cost and non-cost data. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment data across all categories and services;

(b) Where a country has submitted data but it is incomplete, it may elect to use the existing Contingent-Owned Equipment Manual data in all incomplete categories. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment Manual data across all incomplete categories and services;

(c) Data above 100 per cent or below 20 per cent of the existing Contingent-Owned Equipment Manual rates is to be excluded from the calculation;

(d) The result of the application of this method will produce an overall outcome for the United Nations contingent-owned equipment budget;

(e) A further review of each category and service may be necessary and may require a further adjustment to the rates of individual categories, but the net effect of all adjustments must not change the overall outcome as calculated above;

(f) This method shall apply to all sub-working groups;

(g) This method shall not necessarily be used as a precedent for the conduct of future contingent-owned equipment deliberations.

A list of the troop-contributing countries/police-contributing countries that elected to use existing Contingent-Owned Equipment Manual data as national data is contained in annex I.A.3.

8. Evaluation and adjustment of rates to ensure an equitable outcome. Where the calculation resulted in a perverse outcome, such as results for heavier equipment being less than that for similar lighter equipment, sensible adjustments were agreed. However, where adjustments were required, they were crafted to ensure that they did not affect the overall contingent-owned equipment portion of the United Nations peacekeeping budget. The revised Contingent-Owned Equipment data for major equipment, including dry and wet-lease reimbursement rates, are contained in annex I.A.2.

9. Impact on the contingent-owned equipment portion of the United Nations peacekeeping budget. The overall impact on the major equipment portion of the United Nations peacekeeping budget is approximately 1.9 per cent. Adding medical equipment to the list does not change the number (see annex I.A.4).

10. Future reviews:

(a) The Working Group discussed procedures for conducting future triennial contingent-owned equipment reimbursement rate reviews. It was agreed that actual cost data rather than indices should be used, as that provided a better basis for the calculation of rates. It was further agreed that troop-contributing countries/police-contributing countries should be required to indicate whether they wanted to substitute existing Contingent-Owned Equipment data as national data either in whole or in part, at the same time;

(b) It was also agreed that the Secretariat should request national cost data in the same format as that contained in chapter 8 of the Contingent-Owned Equipment Manual (see annex I.A.5).

Recommendations

11. It was recommended that:

(a) The revised rates contained in annex I.A.2 should be adopted;

(b) Future triennial reviews should be conducted in the form of a comprehensive review using data provided or elected by troop /police-contributors.

Annex I.A.2

Reimbursement rates for major equipment for dry and wet lease

<i>Category of equipment</i>	<i>Generic fair market value</i>	<i>Estimated useful life in years</i>	<i>Maintenance rate</i>	<i>Monthly dry lease</i>	<i>Monthly wet lease</i>	<i>No-fault incident factor (percentage)</i>	<i>Monthly non-United Nations Police</i>
Communications equipment							
VHF/UHF — FM transceivers							
Air-ground base station transceivers AM/FM	33 187	7	279	401	680	0.2	
Microwave links	80 085	10	550	681	1 231	0.2	
Mobile stations for trunking systems	534	9	5	5	10	0.2

Bridging system	Special case						
Trackway surfacing outfit	60 587	18	35	321	356	0.8	1
Trailer, Floodlight set with generators (4 lights, 9 m pole, 7 kw generator) (note 10)	22 774	10	171	199	370	0.5	
Pallet loading system	5 209	15	238	32	270	0.8	12

Note 1: All rates above are effective 1 July 2008 (A/C.5/62/...para ..., page ...)

Note 2: The GFMV for medical hospital equipment, determined by Phase V Working Group, was amended by post-Phase V Working Group by extracting non-medical major equipment, which will now be listed as separate major equipment in Annex B of the MOU. Except for the amendments for non-medical items and minor clerical adjustments, the GFMV for medical facility module recommended by post-Phase V Working Group remain the same as those recommended by Phase V Working Group. There is no increase in GFMV and the rates of reimbursement.(A/C.5/55/39 paragraphs 100 to 102, page 20).

Note 3: The GFMV for "Laboratory only" is determined as a Laboratory for a Level 2 hospital at A/C.5/55/39, Annex III.A, page 60.

Note 4: The maintenance rate for medical equipment in Levels 1, 2 and 3 facilities is calculated at 0.5% of the GFMV as per A/C.5/55/39, paragraph 118(c), page 22.

Note 5: New major equipment items recommended by post-Phase V Working Group (A/C.5/55/39 pages 28-30) have been included as approved. The GFMV and rates for new major equipment have been determined in January 2001, therefore no adjustment is required. The GFMV of items listed as "new", which had a GFMV originally determined at Phase III Working Group (1996) but for which post-Phase V provided a new or amended name/category, e.g. from APC Tracked - Infantry Carrier unarmed/dozer to APC Tracked - Infantry Carrier unarmed/dozer (Class I), have been increased by the % for that major equipment category in recognition that the original GFMV was calculated in 1996.

Note 6: The increases (indices) approved by the GA have been applied to the GFMV and the maintenance rates, from which the dry lease and wet lease rates are derived by the formula established by Phase III Working Group. This allows for clarity and transparency of calculations in future reviews.

Note 7: The rates for the new categories for armoured personnel carriers (APC) and tanks are to be regarded as interim until the next GFMV review. To determine in which class an APC or tanks are to be placed, the GFMV of the class of APCs or tank closest to the actual value of the APC or tank from the TC will be used (A/C.5/55/39 paragraph 40, page 9).

Note 8: The formulas for calculating the dry and wet lease rates are as follows: Monthly Dry Lease rate: $(\text{GFMV}/\text{useful life}/12) + (\text{GFMV} * \text{no-fault incident factor}/12)$ and Monthly Wet Lease rate: $(\text{GFMV}/\text{useful life}/12) + (\text{GFMV} * \text{no-fault incident factor}/12) + \text{Monthly maintenance rate}$ (A/C.5/49/70 Notes to Appendix II.B, page 37).

Note 9: New major equipment recommended by the 2004 Working Group in pages 55-57 of A/C.5/58/37 have been included as approved.

Note 10: New major equipment recommended by the 2008 Working Group in Annex I.C.3 of A/C.5/62/... page... have been included as recommended.

Note 11: New reimbursement rates for these items recommended by 2008 Working Group in Annex I.C.2 of A/C.5/62...pages ... have been amended as recommended.

Annex I.A.3

List of Member States choosing to include Contingent-Owned Equipment Manual data as national cost data

Annex I.B.1

Model for the classification of armoured personnel carriers in United Nations peacekeeping operations

Background

1. On paragraph 40 of its report (A/C.5/55/39), the post-Phase V Working Group stated that the rates for the new categories for armoured personnel carriers should be regarded as interim until a proper collection of data had been done (or until the next generic fair market value review). To determine in which class an armoured personnel carrier or tank should be placed, the closest value to the generic fair market value of the class of the equipment will be used. As the 2008 Working Group on Contingent-Owned Equipment will be carrying out a comprehensive review of the contingent-owned equipment system, it will also review the reimbursement rates of armoured personnel carriers.

2. Armoured personnel carriers are widely deployed and have proven to be very useful in the United Nations peacekeeping operations. However, troop/police contributors are deploying troop/police-carrying vehicles with very different qualities and capabilities. The Secretariat is experiencing difficulties in determining whether armoured personnel carriers are armed or unarmed and whether they belong to class 1, 2 or 3 — currently determined by the generic fair market value or cost of the armoured personnel carriers. In addition, when the Secretariat has determined the classification of armoured personnel carriers (armed/unarmed, class 1, 2 or 3), it is frequently contested by the troop/police contributors. This greatly delays the claim certification process. A standard procedure, universally agreed, would greatly assist the Secretariat in facilitating the reimbursement process.

Issue

3. The classification of armed/unarmed armoured personnel carriers based on generic fair market value has been in place since 1 July 1997. Troop/police contributors, when negotiating memorandums of understanding, cannot normally provide evidence on the costs for acquisition. Therefore, contingent-owned equipment verification teams in the field must make a subjective guess about their classification, which is frequently disputed. There is therefore a need for armoured personnel carriers to be classified, for United Nations peacekeeping operations, in a simple, consistent and unambiguous manner.

Model

4. A model has been developed, and is proposed, to provide a globally acceptable solution to this complex problem. An additional explanatory note is contained in annex I.B.2 and a calculation model is contained in annex I.B.3.

5. Lists of parameters, which can be simply verified and agreed, form the basis of the model. Such parameters include protection, mobility, weapons, personnel capacity, manufacturing year and night vision. Weight is presented only as minimum requirement. A vehicle must weigh a minimum of 5 tons to be considered as an armoured personnel carrier.

6. The model allows for a range of “values” to be allocated within each parameter according to agreed criteria. For instance, within mobility, an armoured personnel carrier having 8 x 8 wheels would be “valued” higher than one having 6 x 6 wheels. The model works by calculating whether an armoured personnel carrier should be in class 1, 2 or 3, for reimbursement purposes, having summed the allocated “values” of the parameters for the armoured personnel carrier being inspected. The model does not address the reimbursement rates.

7. The model is built up as follows:

- Determination of parameters (attributes which are simple to verify)
- Assignment of value/worth for all parameters (most desirable to minimum acceptable) within each parameter
- Determination of a coefficient to give a relative weight to parameters. Summation of coefficients = 1
- Determination of the best armoured personnel carrier. Maximum score is 1
- Determination of the value of the least acceptable armoured personnel carrier in United Nations peacekeeping operations
- Division of the range of values between the best armoured personnel carrier and the least acceptable armoured personnel carrier in three equal parts, that is, the three classes currently included in the Contingent-Owned Equipment Manual.

Reimbursement rates

8. The reimbursement rates for the three classes of armoured personnel carriers were not calculated, as consensus was not reached on the classification model of armoured personnel carriers.

Discussion

9. One group of Member States supported the armoured personnel carrier classification model and worked on improving the model while maintaining the three classes of armoured personnel carriers. The model contained in annex I.B.3 was tested on the available armoured personnel carriers in the mission area and produced the following percentages:

- Class 1 17 per cent
- Class 2 65 per cent
- Class 3 18 per cent

The current classification of armoured personnel carriers in the mission area according to the memorandums of understanding was as follows:

- Class 1 18 per cent
- Class 2 57 per cent
- Class 3 25 per cent

10. Several Member States stated that the following parameters should be changed for the model to be acceptable: protection — blast and mine protection should not

be included; mobility — wheeled armoured personnel carriers should rate lower than tracked armoured personnel carriers; weapons — weapons above 12.7 mm were not required; personnel — maximum personnel should be commander, driver, plus 10 troops. However, changing those parameters in the model resulted in only one class of armoured personnel carriers: class 2. One Member State emphasized that it was not able to get the level of protection from the manufacturer of its armoured personnel carriers and opposed that model.

11. In conclusion, it is recommended that the baseline data compiled by the Secretariat during the period of testing should be reviewed at the 2011 Contingent-Owned Equipment Working Group in the context of the revised classification system. If then required, the model will be adjusted and then approved to the Contingent-Owned Equipment Manual. Furthermore, if the model is not a working tool, other options should also be considered.

12. The Working Group did not reach consensus.

Recommendations

13. No recommendations were made.

Annex I.B.2

Armoured personnel carrier classification model — explanatory notes

1. As mentioned in annex I.B.1, there has been some difficulty at the field level in agreeing on the basis upon which armoured personnel carriers can be classified for reimbursement.
2. The armoured personnel carrier classification issue paper introduces a concept that uses a model to assist in this process with the intention of removing causes for disagreement. The present note attempts to explain the intentions behind the use of the model and the selection of the parameters used to provide input to the model.
3. There are two principles to be considered. First is the need to reimburse the troop/police contributors for what they provide on a basis that recognizes quality and performance. Second is the requirement for the Secretariat to provide advice and a system that reimburses troop/police contributors on the basis of what is required by the mission and not necessarily on the basis of what is actually supplied. These principles are sometimes in conflict.
4. A model has been designed to assist in this process. It is most important to understand the overall output of the model and not necessarily to question the detail of the mechanism or inputs that make it work. Providing that the output is valid and reimbursement is paid based on recognizable quality, the model should be acceptable.
5. In assessing an armoured personnel carrier, parameters have been selected that can be easily measured or verified by the inspecting team in the field. Detail available in the manufacturer's handbook, or that is obvious to the naked eye, is considered acceptable. Parameters that are not easily verifiable or measurable, such as the protection provided against improvised explosive devices have not been included, but that does not deny the fact that this capability is extremely valuable — it simply cannot be easily measurable or verified and so does not play a part in the assessment for repayment. A vehicle that has this additional protection will be designated the higher reimbursement value as a result of consideration of the more measurable parameters in any case. The selected parameters do, if taken collectively (not individually) and with their relevant coefficients applied, tend to reward the better, newer, more effective armoured personnel carriers over the less effective ones and so do provide a basis for reimbursement based on quality, as required.
6. There is no doubt that the importance of protection, mobility and firepower are the main attributes of a military armoured personnel carrier and this is not denied. However, the contingent-owned equipment process is not necessarily designed to reimburse on the basis of the relevance of any one of those factors, especially if the better capabilities are in fact not required in the mission areas. The proposed model will take into consideration a number of relevant parameters which, when taken together and in total, will provide a fair indication of quality and, hence, the basis for justifiable reimbursement.
7. It is important that the full quality and capability of the model is understood to avoid specific criticism of its parts, thus causing misunderstanding.

Annex I.B.3

Armoured personnel carrier classification model

Parameter No. 1 - Protection

Type	Protection	Value
1	Provide protection against heavy machine gun (14.5mm x 114AP / B32) at a distance of 200 meters at 911m/sec and 10 kg (explosive mass) Blast AT Mine: a - Mine Explosion pressure activated under any wheel or track location or b - Mine Explosion under center.	1
2	Provide protection against medium machine gun (12.7mm AP) at 850m/sec at a distance of 200 meters and 8 kg (explosive mass) Blast AT Mine: a - Mine Explosion pressure activated under any wheel or track location or b - Mine Explosion under center.	0.9
3	Provide protection against small arms (7.62 mm x 51 AP (WC core)) at a distance of 30 meters at 930m/sec and 8 kg (explosive mass) Blast AT Mine: a - Mine Explosion pressure activated under any wheel or track location or b - Mine Explosion under center.	0.75
4	Provide protection against small arms (7.62mm x 39 API BZ) at a distance of 30 meters at 695m/sec and 6 kg (explosive mass) Blast AT Mine: a - Mine Explosion pressure activated under any wheel or track location or b - Mine Explosion under center.	0.25
5	Provide protection against small arms (7.62mm x 51 Ball (Ball M80)) at a distance of 30 meters with velocity 833m/sec and protection to hand grenades, unexploded artillery fragmenting submunitions, and other small anti personnel explosive devices detonated under the vehicle.	0.1

NOTES:

1. If a vehicle does not meet minimum type 5 level above, it is not an APC.
2. If a vehicle has windows they have to be protected minimum in type 5 above.
3. TCCs will confirm levels of protection associated with their APCs to be used in theatre of operation by way of certified data from manufacturing contracts or owner/user manuals.

Ball Model of the 7.62mm cartridge, normal cartridge, not Armour Piercing

AP= Armour Piercing

API= Armour Piercing Incendiary

Parameter No. 2 - Mobility

Type	Description	Value
1	Tracked or 8 x 8 with run flat tyres	1
2	6 x 6 with run flat tyres	0.75
3	4 x 4 with run flat tyres	0.33

Parameter No. 3 - Weapons

Type	Weapons	Value
1	Fully automated, stabilised crew served weapon above 15 mm	1.00
2	Fully automated, stabilised crew served machine gun 11 up to 15 mm	0.80
3	Crew served weapon (above 15 mm) and an additional crew served machine gun	0.70
4	Crew served weapon (above 15 mm)	0.60
5	Crew served machine gun (11 up to 15 mm) and an additional crew served machine gun	0.40
6	Crew served machine gun (11 up to 15 mm)	0.30
7	Crew served machine gun (up to 10 mm)	0.10
8	No weapons	0.00

NOTES:

1. APC gets the value of highest valued weapon.
2. Fully automated means that the gunner is protected in a turret and that the weapon system is controlled from inside.
3. Stabilised means that the APC can fire with accuracy while moving.

Parameter No. 4 - Personnel - Crew and troops (Persons)

Type	Description	Value
1	Commander, Driver and 12 troops and above (14 persons and above)	1
2	Commander, Driver and 10 - 11 troops (12 - 13 persons)	0.8
3	Commander, Driver and 8 - 9 troops (10 - 11 persons)	0.4
4	Commander, Driver and 6 - 7 troops (8 - 9 persons)	0.2
5	Commander, Driver and 4 - 5 troops (6 - 7 persons)	0.1

NOTES:

1. Armoured vehicles carrying less than 6 people (crew + troops) do not qualify as APCs.

**Parameter No. 6 - Manufacturer Year
MANUFACTURING YEAR**

Type	Age	Value
1	Less than 10 years	1.00
2	11 to 15 years	0.80
3	16 to 20 years	0.40
4	21 to 25 years	0.20
5	26 to 30 years	0.10

Over 30 years old APC's are not rated.

REMARKS

1. Major overhaul/Re-fit of the APC, whereby the Estimated Useful Life (EUL) of the APC is extended, will result in the re-determination of the manufacturing year.
2. At mission force generation stage, outline documentation on the APCs to be deployed by the TCCs will be supported by way of certified data from manufacturing contracts or owner/user manuals, together with TCC certified data on major overhauls or re-fits (where appropriate/applicable).
3. APC manufacture year is valued using the year when MOU is signed and will remain the same during the mission.

SWG MEQ Issue Paper No. 2 - Classification of APCs

Parameter No. 7 - Night Vision

Type	Description	Value
1	Yes	1.00
2	No	0.00

NOTES:

1. Yes = The Crew (Commander, gunner and driver if APC is armed. Commander and driver if the APC is unarmed.)
2. Night vision devices should be mounted to the APC or be part of the crew allotment.

Classification of APCs

GENERAL NOTES OF APC CLASSIFICATION:

1. This classification calculation system divides the APCs to three different classes:

Armoured Personnel Carriers

- Infantry Carrier Class I
- Infantry Carrier Class II
- Infantry Carrier Class III

2. COE Unit in the field verifies that the data used for classification of APCs in UNHQ refers to the TCCs assets which are deployed in theatre.

3. Weight is a minimum parameter, Armoured Personnel Carrier must weigh minimum 5 tons to be regarded as an APC. Vehicles weighing under 5 tons are not APCs.

Annex I.C.1

“Special cases” of major equipment

Background

1. In the past, the United Nations faced a number of challenges related to “special cases” of major equipment. A “special cases” reimbursement rate for major equipment occurs when a peacekeeping operation requires an item of major equipment that is not listed as a category in the Contingent-Owned Equipment Manual. The Secretariat is of the opinion that the current “special cases” list is extensive and this contributes partly to a delay in signing memorandums of understanding with troop-contributing countries.

2. The Secretariat proposed that the approved “special cases” list from 1 July 1996 to 30 November 2007 should be reviewed by the 2008 Working Group on Contingent-Owned Equipment and that additional standard reimbursement rates for new major equipment should be agreed.

3. In addition, the Secretariat stated that, in accordance with the 2004 Contingent-Owned Equipment Working Group approved by the General Assembly, major equipment should have a threshold value of \$500 and a useful life of more than one year.

4. It was also stated by the Secretariat, regardless of any issues resolved in the 2008 Contingent-Owned Equipment Working Group, that items already covered by “special cases” in existing signed memorandums of understanding should not be affected/changed.

Discussion

5. The Working Group examined the data in the list of approved “special case” submitted by the Secretariat to determine whether the approved cases should be included as major equipment in the Contingent-Owned Equipment Manual. The Working Group recommended a generic fair market value and a standard reimbursement rate for each approved “special case” major equipment.

6. The focal point also conducted a survey of the consolidated national cost data for “special cases” and gathered the available information from the Secretariat and the delegations represented in the Working Group.

7. The approved “special case” list contained equipment which was not new and for which a generic group was defined in the Contingent-Owned Equipment Manual. The equipment appeared to have been treated as “special cases” on the basis of its value. Such equipment should be treated in accordance with normal Contingent-Owned Equipment Manual practice, according to which the approved reimbursement rate for the major equipment should be applied.

8. To minimize the use of “special cases”, the Working Group discussed whether a new text should be added at the end of the “special case” definition (Contingent-Owned Equipment Manual, chapter 5, para. 3), or the definition should be reworded. The reason for a change of the definition was to clarify that the item’s value alone should not be the reason for creating a “special case”.

Findings

9. The Working Group established that a total of 371 line items were categorized as approved “special cases”.

Recommendations

10. The Working Group recommended that:

(a) The threshold value of \$1,000 for major equipment and its useful life must be more than one year;

(b) The following sentence should be added at the end of the “special case” definition (Contingent-Owned Equipment Manual, chapter 5, para. 3):

“The value alone should not determine whether an equipment is treated as a ‘special case’”;

(c) In preparation for the next Contingent-Owned Equipment Working Group, the Secretariat should propose a list of “special case” items that should be considered as major equipment.

11. Furthermore, the 2008 Contingent-Owned Equipment Working Group recommended that the items included in:

(a) The list contained in annex I.C.2 should be categorized as additional major equipment;

(b) The list contained in annex I.C.3 should be retained as “special cases” (214 items);

(c) The list contained in annex I.C.4 should be deleted from the “special cases” list, owing to existing equivalent major equipment items (in chapter 8 of the Contingent-Owned Equipment Manual) or as part of an existing set, established by the 2004 Contingent-Owned Equipment Working Group, approved by the General Assembly;

(d) The list contained in annex I.C.5 should be deleted from the “special cases” list owing to the fact that the threshold of the items is less than \$1,000, or the useful life is less than one year;

(e) The list contained in annex I.C.6 should be deleted from the “special cases” list, owing to the fact that the items are reimbursed under self-sustainment.

Annex I.C.2

Annex I.D.1

Separate reimbursement rate for HF sets in military pattern vehicles

Background

1. As per the 2005 Contingent-Owned Equipment Manual, military pattern vehicles must have VHF/HF wireless sets. Practically, the generic fair market value of a Jeep (4x4) with an HF set is much higher than that of a Jeep with a VHF set. However, no additional reimbursement has been intended for an HF set (military standard), which is much costlier than a VHF set, even costlier than the Jeep itself. Against this backdrop, the original issue paper proposed the following:

(a) *Option 1.* Separate reimbursement may be mentioned for military pattern vehicles with HF sets or HF sets may be considered as major equipment. These HF sets should not be considered under the self-containment category;

(b) *Option 2.* Only limited numbers (15 per cent to 20 per cent) of military pattern vehicles may have HF sets and reimbursement may be made as proposed in option 1. However, any HF sets additional to this requirement may be drawn from HF sets of self-sustainment capability;

(c) *Option 3.* All military pattern vehicles may have VHF sets. Vehicles may have HF sets, which will be used from contingent self-sustainment stock as per the requirement.

2. The issue was discussed by the Working Group. Based on the discussions, focal points recommended the following in versions 1, 2 and 3 of the issue paper:

(a) *Version 1.* Consider Jeeps with VHF/HF sets as two separate categories of vehicles with different reimbursement rates;

(b) *Version 2.* The United Nations should determine the requirement of HF sets under self-sustainment for various types of contingents in all missions. If additional HF sets are required for vehicles, they may be considered as major equipment only and reimbursed accordingly;

(c) *Version 3.* All military pattern vehicles may have VHF sets. HF sets required for any vehicles may be used from contingent self-sustainment stock to conform to the operational requirement. However, for future deployment and to assist troop/police contributors, the United Nations should determine and quantify the number of HF sets required under self-sustainment capability to conform to all operational requirements.

Discussion

3. During the discussion on the issue paper, general consensus was reached by the Working Group on version 3 above made by the focal points. However, some Member States were of the view that quantifying the number of HF sets in the self-sustainment category by the United Nations for future deployment might not remain as part of the recommendation.

Recommendations

4. The Working Group recommended that the provisions of the existing 2005 Contingent-Owned Equipment Manual should continue.

Annex I.E.1

Threshold for loss/damage of major equipment under hostile action/forced abandonment

Issue

1. Damage/loss caused by hostile action or forced abandonment is possible in United Nations peacekeeping operations where troop/police contributors are deployed under Chapter VII. It is proposed that the threshold value for such cases should be reduced to \$100,000.

Background

2. The 2005 Contingent-Owned Equipment Manual, chapter 2, page 9, paragraph 17 (b) states that:

(a) In case of loss or damage resulting from a single hostile action or forced abandonment, troop contributors will assume liability for each item of equipment when the collective generic fair market value (GFMV) is below the threshold value of \$250,000;

(b) For major equipment lost or damaged as a result of single hostile action or forced abandonment, the United Nations will assume liability for each item of major equipment whose GFMV equals or exceeds \$250,000 or for major equipment lost or damaged when the collective GFMV of such equipment equals or exceeds \$250,000. The value of the loss or damage is determined using the GFMV. The reimbursement is made at the GFMV rates less the equipment use charge and any other environmental and intensified operational use payment made by the United Nations for the equipment.

Discussion

3. Discussion ranged over several threshold values (\$100,000, \$150,000, \$250,000 and above). The possibility of establishing a cumulative threshold over the course of a year was also discussed but dismissed.

4. Some Member States pointed out that such loss/damage was taken care of by the mission factor and no-fault incident factor. Therefore, it was not necessary to change the figure at the current stage.

Recommendations

5. The Working Group recommended that the threshold value in case of damage/loss in single hostile action/forced abandonment of major equipment should continue as \$250,000.

Annex I.F.1

Rotation of major equipment every four to five years

Background

1. Considering terrain, weather and road conditions in most of the current mission areas, there is more wear and tear on equipment. Replacement and rotation of dysfunctional equipment involve huge expenditure owing to the geographical remoteness of mission areas like Africa. Because of the extensive use of equipment in rugged operational areas, the performance level of most of the major equipment goes down over a period of time. It has been experienced that maximum equipment remains operational for four to five years with regular maintenance. After this period most of such equipment warrants overhauling or major repair work. Owing to the absence of major repair organization in the mission area, this task cannot be performed to an acceptable level. The functional capabilities of the equipment ultimately reduce the operational capabilities of the contingents.

Discussion

2. The Working Group considered the provision of rotating major and self-sustainment equipment of troop/police contributors every four to five years either under United Nations arrangements or that the United Nations should provide reimbursement if the same rotation was accomplished by the troop/police contributor.

3. In the first version of the issue paper, it was recommended as follows:

(a) *Option 1.* The United Nations may make provisions for rotating the equipment after every four to five years that are mutually agreed between the United Nations and the troop/police contributors after it is duly inspected by a technical team;

(b) *Option 2.* The same (as stated in option 1) may be arranged by respective troop/police contributors. The United Nations may provide reimbursement separately to troop/police contributors for the transportation costs incurred.

4. In the second version of the issue paper, it was recommended as follows:

(a) The United Nations should arrange rotation of vehicles and equipment that complete their useful life;

(b) When troop/police contributors provide an additional 10 per cent as national support element and thereafter require major overhaul or replacement of some vehicles and equipment duly inspected by appropriate technical teams and mutually agreed by the United Nations and the troop/police contributor, the United Nations should arrange rotation of those vehicles and equipment.

5. In the third version of the issue paper, it was recommended that the Working Group should consider the increase of the provision of the national support element for equipment from 10 per cent to 20 per cent and request the United Nations to study the following, to be confirmed during the next Contingent-Owned Equipment Working Group:

(a) Requirement of rotating/replacing equipment and vehicles during the period of mission tenure;

(b) Impact of increasing the provision of the national support element for equipment to 20 per cent.

6. Consensus was reached by the Working Group to increase the provision of the national support element for major equipment from 10 per cent to 20 per cent. However, some Member States and the Secretariat were of the view that it would be difficult to study the rest of the recommendations made by the focal points.

Recommendations

7. The Working Group recommended that the provision to deploy additional major equipment as per authorized quantities in annex B of the memorandum of understanding, as overstock, be increased from 10 per cent to 20 per cent.

Annex I.G.1

Specifications of minimum capabilities of some major equipment

Background

1. Some major equipment is insufficiently described in the Contingent-Owned Equipment Manual to the extent that some troop/police contributors provide equipment with capability below that which is required. Troop/police contributors should know the minimum capability required so that they can decide whether to deploy existing or purchase new equipment.

Discussion

2. The following matters were discussed:

(a) The balance between complexity, detail, clarity of understanding and specification;

(b) The Secretariat and troop/police contributors should suggest major equipment for which a specification of minimum capability was required;

(c) The troop/police contributors must submit to the Secretariat the following national cost data, for each item that should be reviewed: a national market value; an estimated useful life; and a monthly maintenance rate;

(d) The best time to review capabilities and their specification was during negotiation of the memorandum of understanding;

(e) The pre-deployment inspection should be the last opportunity to change equipment which did not fulfil United Nations requirements.

Recommendations

3. The Working Group recommended that:

(a) At the request of the troop/police contributor, the Secretariat should specify the minimum capabilities required of major equipment;

(b) United Nations representatives should undertake a reconnaissance in the theatre to inform troop/police contributors of United Nations recommendations on the specification of major equipment;

(c) Troop/police contributors should recommend major equipment for which a minimum specification is required in the Contingent-Owned Equipment Manual to the Secretariat by September 2010 for consideration at the next Contingent-Owned Equipment Working Group.

Annex I.H.1

Reimbursement method for wheeled vehicles (wet lease)

Background

1. The proposed method of reimbursement for vehicles is intended to help to find a compromise between the troop/police contributors and the Secretariat based on a realistic mechanism that is equitable. This method consists of two different tables:

(a) The first table consists of six parameters in a very hostile and very severe environment in the mission area with a maximum total additional reimbursement of 24 per cent (i.e., 2 per cent per month) and in a more favourable environment, 10 per cent (i.e., 0.83 per cent). The useful life of vehicles varies from 4 to 5 years in difficult operational conditions and from 10 to 11 years in more favourable operational conditions;

(b) The second table has six parameters related to the maintenance of vehicles that vary from 13 per cent (i.e., 1.08 per cent per month) in a difficult environment and 4.5 per cent (i.e., 0.37 per cent per month) in a normal environment.

2. The proposed method is different from the current method in the following points:

(a) The useful life is fixed under the current method, but in the proposed method the useful life is variable, based on the specific functions in the mission area;

(b) The maintenance rate varies based on the specific conditions and terrain of the mission area.

Discussion

3. Several discussions took place concerning the proposed methodology and three different viewpoints were noted as follows:

(a) Recognize that the proposed method should be an alternate method for calculating reimbursement for vehicles under wet lease, as that method referred to the real conditions in the mission area and merited a close re-examination of the parameters, to be applied to all major equipment;

(b) The proposed method led to many calculations that might delay the reimbursement to the troop/police contributors. In addition, the proposed parameters were complex and subjective and the proposed method applied only to vehicles, not to other major equipment. The Group proposed to maintain the current method as it suited many Member States;

(c) The proposed method contained many useful ideas that could serve as a basis to set up a new reimbursement method that would be more realistic and fair, but supported the idea that that method needed to be reviewed in detail in another forum to evaluate all the parameters according to the actual conditions in the various mission areas as well as its impact on the peacekeeping budget.

Recommendations

4. The Working Group noted the proposal and invited the Member States that had raised the issue, together with the interested Member States, to consider the matter further with a view to presenting a proposal again at the next Working Group.

Annex I.I.1

Training costs prior to deployment

Background

1. Predeployment training is treated as a national responsibility by the Contingent-Owned Equipment Manual. Similarly, troop cost does not make separate provision for predeployment training.

Discussion

2. Discussions between delegates achieved consensus in two areas:

(a) The importance of training prior to deployment;

(b) Generic training related to United Nations peacekeeping operations was a national responsibility. However, the United Nations should support mission-specific training. In particular, full use should be made of the facilities of the Integrated Training Service.

3. On the issue of mission-specific training costs, two different opinions were expressed:

(a) Various delegations thought that the costs for predeployment training were too heavy to be assumed by troop/police contributors, therefore the United Nations should reimburse them;

(b) Other delegations suggested that the United Nations should only support troop/police contributors through the Integrated Training Service.

Recommendations

4. The Working Group recommended that:

(a) The 2008 Working Group report should highlight the United Nations mandate to support mission-specific training prior to deployment;

(b) In that regard, the Integrated Training Service should be proactive and efficient in:

(i) Supporting Member States to ensure their trainers had the appropriate training, information and material to conduct effective national predeployment training;

(ii) Issuing guidelines for training;

(iii) Providing all available documents specific to each mission necessary for training;

(c) Troop/police contributors assess the impact of Integrated Training Service initiatives on their predeployment training. That assessment, with supporting methodologies and documentation, would be presented by Member States to the next Working Group.

Annex I.J.1

Additional reimbursement for deployment of contingents at short notice

Background

1. The present United Nations guidelines do not provide for additional reimbursements for short-notice deployment of contingents/police units. The United Nations caters for short-notice deployments under the rapid deployment level (RDL) of the United Nations Standby Arrangement System (UNSAS), but there are no specific provisions for troop/police contributors not signatory to RDL.

Issue

2. Additional troops may be required to deploy at a very short notice owing to exigencies in the field. Mobilization may necessitate urgent procurement of specific equipment. An additional reimbursement will assist troop/police contributors in willingly contributing to emergent deployments to urgent United Nations field missions.

Discussion

3. The matter was discussed in the Working Group. Based on a request by Member States, a presentation on UNSAS was given by the Secretariat. The following emerged:

(a) UNSAS had three levels of readiness and troop/police contributors could choose the level of readiness;

(b) There were some troop/police contributors that were signatories to RDL;

(c) The troop/police contributors in RDL had a pre-drafted memorandum of understanding and a loadlist ready in consultation with the Department of Peacekeeping Operations for deployments within 30 to 90 days.

4. Though there were arrangements for rapid deployment under UNSAS RDL, the Force Generation Service had accepted that troop/police contributors in the RDL might not be available/capable of providing troops for a specific mission. Therefore, other troop-contributing countries might be requested to contribute troops at short notice, i.e., 30 to 60 days. Since urgent deployment required immediate procurement of equipment in certain categories, the troop/police contributor agreeing to provide troops at short notice on United Nations request incurred additional expenditure not in tune with normal procurement procedures.

5. Three viewpoints emerged, as follows:

(a) Certain Member States requested clarification of the equipment/stores that would qualify for additional reimbursement;

(b) One group of Member States supported additional reimbursement for major equipment/self-sustainment for short-notice deployments. That group was of the view that additional data regarding enhanced costs incurred by Member States needed to be collated for the specific equipment that would qualify for additional reimbursements for short-notice deployments;

(c) Another group of Member States stated providing police with different inventories it would not be feasible to make special provision for what they might or might not have. The existing rules for reimbursement took account of the generic fair market value, the estimated useful life, etc. That was effectively a hire charge for a capability. That principle underpinned the Contingent-Owned Equipment Manual and therefore the issue should not be discussed further.

6. The Secretariat also clarified that only certain equipment/stores were available for immediate deployment at the United Nations Logistics Base at Brindisi, Italy. Procurement of other items would take a minimum of three to six months.

7. It is apparent from the foregoing that a group of Member States deploying troops/police were concerned about the additional costs incurred during the short-notice deployments. Those Member States were more concerned about the cost of equipment (major equipment and self-sustainment stores) that had been procured for short-notice deployments rather than transportation and training.

8. Further discussions were held on the issue. A number of Member States were of the opinion that additional data regarding enhanced costs incurred by Member States needed to be collated for the specific equipment that would qualify for additional reimbursements for short-notice deployments.

Recommendations

9. There was no consensus and the issue will not be discussed further.

Annex II.A.1

Comprehensive review of the reimbursement rates for self-sustainment

Background

1. In his report of 24 August 2004 (A/59/292), the Secretary-General recommended that the next Contingent-Owned Equipment Working Group should be held in 2008 and that it should be mandated to carry out a comprehensive review of the contingent-owned equipment reimbursement rates. By its resolution 59/298, the General Assembly approved the proposal of the Secretary-General.

2. Accordingly, by note verbale Member States were asked to submit standard cost data for generic categories of self-sustainment using 2006 as the base year to carry out a comprehensive review of contingent-owned equipment reimbursement rates.

Comprehensive review of rates

3. The 2008 Contingent-Owned Equipment Working Group used the following method to conduct the review:

- (a) Agree on principles for conducting the review;
- (b) Review data;
- (c) Develop a calculation model;
- (d) Calculate rates;
- (e) Evaluate and adjust rates to ensure an equitable outcome.

Each step in the method was finalized before the next step was started.

4. Principles agreed on for conducting the review:

(a) The review related to reimbursement rates only, not the current contingent-owned equipment system;

(b) The review used the national cost data provided by troop/police contributors. However, where a Member State had not submitted data for a category, it could elect to use existing Contingent-Owned Equipment Manual data as its national data. The only acceptable data are those that have been received by the Secretariat in advance of the first Working Group session;

(c) Rates could only be revised for self-sustainment if new data had been provided by troop/police contributors;

(d) Data should be validated for mistakes and flaws in advance of the calculation. Only corrected and accepted data should be included in the calculation;

(e) The impact on the self-sustainment portion of the United Nations peacekeeping budget should be considered at each stage of the calculation.

5. Review of data:

(a) If data had been incorrectly submitted as zero, existing Contingent-Owned Equipment Manual data should be substituted;

(b) If data had been blank, this should be treated as no data and the existing Contingent-Owned Equipment Manual should be used.

In addition, several specific minor corrections were made to data. All corrections were presented to and accepted by the troop/police contributor concerned before they were included in the calculation.

6. Development of a calculation model:

(a) A spreadsheet model was developed to undertake calculations;

(b) The model was capable of independently excluding high and low extremes of data. This flexibility enabled several alternative scenarios to be examined;

(c) After excluding agreed extremes, simple averages of the remaining troop/police contributor data were calculated for each subcategory.

7. Calculation of reviewed rates:

(a) Where a country has not submitted any new data, it may elect to use the existing Contingent-Owned Equipment Manual data. This includes cost and non-cost data. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment data across all categories and services;

(b) Where a country has submitted data but it is incomplete, it may elect to use the existing Contingent-Owned Equipment Manual data in all incomplete categories. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment Manual data across all incomplete categories and services;

(c) Data above 100 per cent or below 20 per cent of the existing Contingent-Owned Equipment Manual rates is to be excluded from the calculation;

(d) The result of the application of this method will produce an overall outcome for the United Nations contingent-owned equipment budget;

(e) A further review of each category and service may be necessary and may require a further adjustment to the rates of individual categories, but the net effect of all adjustments must not change the overall outcome as calculated above;

(f) This method shall apply to all sub-working groups;

(g) This method shall not necessarily be used as a precedent for the conduct of future contingent-owned equipment deliberations.

A list of the troop/police contributors that elected to use existing Contingent-Owned Equipment Manual data as national data is contained in annex I.A.3.

8. Evaluation and adjustment of rates to ensure an equitable outcome. Where the calculation resulted in a perverse outcome, such as results for heavier equipment being less than those for similar lighter equipment, sensible adjustments were agreed. However, where adjustments were required, they were crafted to ensure that they did not affect the overall contingent-owned equipment portion of the United Nations peacekeeping budget. In the self-sustainment categories, the Working Group found no such odd outcomes and therefore the reviewed reimbursement rates required no further adjustment.

9. Impact on the contingent-owned equipment portion of United Nations peacekeeping budget. The overall impact of the reviewed rates of reimbursement on the self-sustainment portion (excluding medical) of the United Nations peacekeeping budget is approximately 3.0 per cent.

10. Future reviews:

(a) The Working Group discussed procedures for conducting future triennial contingent-owned equipment reimbursement rate reviews. It was agreed that actual cost data rather than indices should be used, as that provided a better basis for the calculation of rates. It was further agreed that troop/police contributors should be required to indicate whether they wanted to substitute existing Contingent-Owned Equipment Manual data as national data either in whole or in part, at the same time;

(b) It was also agreed that the Secretariat should request national cost data in the same format as that contained in chapter 8, annex B, page 147, of the Contingent-Owned Equipment Manual.

Recommendations

11. It was recommended that:

(a) The revised rates in annex II.A.2 should be adopted;

(b) Future triennial reviews should be conducted in the form of a comprehensive review using data provided or elected by troop/police contributors.

Annex II.B.1

Standard for self-sustainment category: accommodation (offices/workspace)

Background

1. Accommodations are currently provided (deployed or built) by troop/police contributors in the United Nations peacekeeping operations or are provided by the United Nations, usually after contingents have been living in tentage for over six months. However, experience indicates that verification teams in the peacekeeping operations are unable to assess the offices/workspace part of the accommodation as the present definition does not cater for the offices/workspace. If additional standards are recommended by the 2008 Working Group on Contingent-Owned Equipment, this would assist the Secretariat in facilitating the reimbursement process.

2. On 15 February 2008, the Secretariat provided the Working Group with additional information by referring to the memory of some participants of the Phases II and III Working Groups on Contingent-Owned Equipment in 1995 on the issue of including “provision of offices/workspace”. This issue was discussed and agreed to but, unfortunately, it was not reflected in the written Contingent-Owned Equipment Manual.

Issue

3. In the 2005 Contingent-Owned Equipment Manual, page 45, paragraph 28 (c), it is stated that under the tentage self-sustainment category, troop/police contributors or the United Nations “provides temporary offices/workspace in tentage”, while there is no similar provision under accommodation, although the implication is that it applies. The Secretariat suggested that that provision be added as a standard to the accommodation category.

Discussion

4. Following discussions, a consensus was reached on the issue, which was then reconsidered. The Working Group recommended the inclusion of the provision of offices/workspace under the self-sustainment category “accommodation”.

5. Furthermore, the Working Group noted that that inclusion could cause additional costs and therefore the revision of that rate was recommended during the next Working Group on Contingent-Owned Equipment. The existing rate of accommodation would be applicable until the reimbursement rates were revised at the next COE Working Group session.

Recommendations

6. The Working Group agreed to the addition of the following text under “accommodation” in paragraph 31, chapter 3, annex B, of the Contingent-Owned Equipment Manual: “(d) Provide offices/workspaces in permanent rigid structures”.

7. The existing/revised rate of accommodation would be applicable until the reimbursement rates were re-evaluated at the next Working Group on Contingent-Owned Equipment.

Annex II.C.1

Revision of the decision sheet to calculate mission factors

Background

1. The 2005 Contingent-Owned Equipment Manual, in chapter 7, annex B, contains a decision sheet which is used to assist the evaluator in determining a factor in mission areas to compensate troop/police contributors for the impact of hostile action and/or forced abandonment. This factor, not to exceed 5 per cent, is to be applied to the spare parts element of the wet-lease rate (or half the estimated monthly maintenance cost when the spare parts cost cannot be calculated separately) and to the self-sustainment rate, to compensate for losses.
2. The Contingent-Owned Equipment Manual, in chapter 7, annex B, section B, addresses three types of threats to United Nations forces:
 - (a) Criminal activities;
 - (b) Potential hostile engagement of United Nations forces;
 - (c) Minefields.
3. Section B, paragraph 6, describes a post-conflict scenario in which parties' or local warlords' non-compliance with the peace process, their possession of heavy weapons and the habit of indiscriminate use of weapons pose threats to the peacekeepers. Hence, it is necessary to compensate the troop/police contributors for the risk of potential hostile engagement of United Nations forces. The design of the decision sheet in paragraph 6 is based on the foregoing assumption.
4. A resurgence of United Nations peacekeeping operations and a more complex security situation in the mission areas is currently being experienced. In addition to above-mentioned threats, United Nations peacekeepers have been targets of direct attacks from unidentified individuals or groups who may not be part of the peace process, sometimes using non-conventional means. On 24 June 2007, six Spanish peacekeepers were killed and one United Nations armoured personnel carrier was destroyed by a roadside car bomb in the area of operations in the United Nations Interim Force in Lebanon. Incidents like these are evident also in such other peacekeeping operations as the United Nations Organization Mission in the Democratic Republic of the Congo, the United Nations Transitional Administration in East Timor, the United Nations Assistance Mission for Iraq, the United Nations Assistance Mission in Afghanistan, the United Nations Mission in Liberia, the United Nations Mission in the Sudan, etc., constituting a new type of threat that is substantially different from the previous ones in terms of the intention and status of the attackers, the methods and means of the attacks, etc.
5. The calculation sheet for potential hostile engagement of United Nations forces currently does not address the aforementioned new threats.

Discussion

6. There was general agreement among Member States that if criminal activities like robbery and theft, as well as the threat from known combatants and participants in the peace process, were all considered legitimate security concerns to peacekeeping assets, it was necessary to give due consideration to those new threats.

To include the potential threat from unidentified factions, or by individuals or groups other than peace process participants in the decision sheet, would bring the Contingent-Owned Equipment Manual in line with recent developments.

7. Considering the proposed changes to the decision sheet of the Contingent-Owned Equipment Manual, the Working Group agreed that owing to the inherently different nature of the two parties mentioned above, it would be difficult to revise the text in paragraph 6 of the decision sheet to address two types of threats simultaneously. It would be better to introduce a new category (D) specially targeted towards the new threats.

Recommendations

8. The Working Group recommended that the title of section B, annex B to chapter 7 of the Contingent-Owned Equipment Manual, should be revised as follows: “B. Potential for hostile engagement of United Nations forces by identified factions or combatants participating in the peace process”.

9. The Working Group also recommended that a new section D should be added to annex B to chapter 7 and the text in the last paragraphs (8-10) should be changed, as follows:

“D. Potential for hostile engagement of United Nations forces by unidentified factions, or by individuals or groups other than peace process participants

“8. Operating in an increasingly complex security environment, the United Nations peacekeepers are exposed to threats from more diversified sources. Individuals or groups identified by the United Nations, and/or groups not party to the peace process often unidentified, who employ hostile/terrorist methods in the area of operations (AO) or other regions of the host nation, might seek to attack civilians or targets of international organizations like the United Nations, constituting threats to United Nations peacekeeping assets.

Is there a presence of the aforementioned individuals or groups in the host nation outside the area of operations? If yes, allocate	1
Is there a presence of the aforementioned individuals or groups within the area of operations? If yes, allocate	2
Has there been indiscriminate hostile action against civilians by the aforementioned individuals or groups in regions of the host nation outside the area of operations? If yes, allocate	1
Has there been indiscriminate hostile action against civilians by the aforementioned individuals or groups in regions of the host nation within the area of operations? If yes, allocate	2
Has there been hostile action by the aforementioned individuals or groups on non-governmental organizations and/or international organizations other than the United Nations in the host nation? If yes, allocate	2
Has there been hostile action by the aforementioned individuals or groups on United Nations personnel and agencies in the host nation? If yes, allocate	3
Total	

“3. Summary

“9. Enter the points allocated above in this summary table.

<i>Factor</i>	<i>Maximum</i>	<i>Points allocated</i>
Criminal activities	8	
Potential for hostile engagement of United Nations forces by identified factions or combatants participating in the peace process	10	
Distribution of uncontrolled or unmapped mines ¹	6	
Potential for hostile engagement of United Nations forces by unidentified factions, or by individuals or groups other than peace process participants	11	
Total		

¹ Chapter 7, annex B.

“10. The hostile action/forced abandonment factor in per cent equals the total points divided by 7, as it must not exceed 5 per cent. The percentage is to be rounded off to one decimal, (i.e., 4.1 per cent).

Hostile action/forced abandonment factor: % ”

Annex II.D.1

Revision of the number of days of recreational leave allowance paid to members of military contingents and formed police units from 7 to 15 days

Background

1. By its report (A/59/19/Rev.1), which was endorsed by the General Assembly in its resolution 59/300, the Special Committee on Peacekeeping Operations adopted in outline a comprehensive strategy for eradication of serious misconduct (including sexual exploitation and abuse) on the part of peacekeeping personnel. Taking the view that inadequate opportunities of rest and recreation in the high-stress milieu of the peacekeeping missions might undermine personnel morale and result in “aberrant behaviour”, the Special Committee requested the Secretary-General to, inter alia, carry out a comprehensive review of the various aspects of the welfare and recreation needs of peacekeeping personnel, including the rules on rest and recreation.
2. The present issue paper is based on the proposals emerging from this comprehensive review, and derives from the Office of Internal Oversight Services audit report No. AP2006/600/5 dated 24 August 2007, which recommended that the rules on recreational leave allowance should be revised to make the allowance admissible for the entirety of 15 days of leave available to members of military contingents and formed police units during their six-months’ assignment.

Issue

3. Under the current rules, while the members of military contingents and formed police units earn annual leave of 2.5 days per month, i.e., a total of 15 days during six months’ assignment to peacekeeping missions, they are entitled to recreational leave allowance of \$10.50 per day, for a maximum number of only 7 days of leave (\$73.50). The non-provision of recreational leave allowance for the balance of eight days of earned leave impairs the ability of such personnel to engage in recreational activities and benefit from the break offered.

Discussion

4. The 2008 Working Group on Contingent-Owned Equipment supported the foregoing principles.

Recommendations

5. The Working Group recommended that the recreational leave allowance should be for 15 days. However, taking into account that that issue falls under the umbrella of troop costs, the Working Group recommended that the Fifth Committee should review the number of days for which the recreational leave allowance should be paid to contingents/formed police units.
6. The Working Group recommended that the Fifth Committee should consider the issue at the second resumed session of the sixty-second session of the General Assembly.

Annex II.E.1

Revision of the standard for self-sustainment subcategory “welfare” and the inclusion of the cost of Internet access under “welfare”

Background

1. By its report (A/59/19/Rev.1), which was endorsed by the General Assembly in its resolution 59/300, the Special Committee on Peacekeeping Operations adopted in outline a comprehensive strategy for eradication of serious misconduct (including sexual exploitation and abuse) on the part of peacekeeping personnel. Taking the view that inadequate attention to their welfare in the high-stress milieu of the peacekeeping missions might undermine the morale of the peacekeeping personnel and result in “aberrant behaviour”, the Special Committee reiterated the primary responsibility of the troop/police contributors to provide their contingent members with welfare and recreation facilities.

2. In its report on the global review of discipline in field missions led by the Department of Peacekeeping Operations (A/60/713), the Office of Internal Oversight Services observed in paragraph 48, that “most contingents deployed without any form of or very few welfare and recreational facilities” and urged the missions to “regularly review the extent to which contingents used funds paid for welfare self-sustainment”.

3. In its report (A/61/19 (Part III)), endorsed by the General Assembly in its resolution 61/267, the Special Committee recommended a set of new provisions relating to enforcement of United Nations standards of conduct, for incorporation into the revised draft model memorandum of understanding. One of the new provisions (article 7 ter, para. 5), states that “the Government shall use its welfare payments to provide adequate welfare and recreation facilities to its contingent members in the mission”. These provisions have been included in the current memorandums of understanding under negotiation with troop/police contributors.

Issue

4. In its report of 20 July 1995 (A/C.5/49/70), the Phase III Working Group on Contingent-Owned Equipment recommended the following standard for the subcategory “welfare”: “recreational equipment such as video cassette recorders (VCRs), televisions, stereos, sports and fitness equipment, games and reading library”. This standard was duly included in the 1997 Contingent-Owned Equipment Manual.

5. In its report of 16 February 2000 (A/C.5/54/49), the Phase V Working Group on Contingent-Owned Equipment recommended a revision of the standard on welfare to “appropriate levels of equipment and amenities for the morale and well-being of troop contributor’s personnel” and this revised standard was duly reflected in the 2002 and 2005 Contingent-Owned Equipment Manuals. The Contingent-Owned Equipment inspection teams in various peacekeeping operations have queried what is considered “appropriate levels of equipment and amenities” without reaching a satisfactory answer. This proposal is intended to clarify the self-sustainment standards of “welfare” to be provided to contingent members, e.g., readopting the standards in the 1997 Contingent-Owned Equipment Manual. In view

of the effect of welfare on the morale, discipline and conduct of the contingent personnel, there is a vital need to establish minimum standards of welfare for all contingents.

Discussion

6. The Working Group discussed the re-introduction of the 1997 Contingent-Owned Equipment Manual standard for welfare and proposed that an updated version of the said standard should be adopted.

7. The Working Group discussed several options, provided by the Secretariat, for the provision of Internet to troops in peacekeeping missions. The Working Group supported an interim rate of \$2.76 per person per month, based on an 800 troop battalion, in up to three locations with seven computers.

Recommendations

8. The Working Group recommended the addition of the following text into paragraph 57 in chapter 3, annex B, of the Contingent-Owned Equipment Manual:

“(c) **Welfare:** appropriate levels of equipment and amenities across the spectrum of welfare to include entertainment, fitness, sports, games and communications must be provided in quantities appropriate to the number of troops at their respective locations in the mission area. Verification as to whether appropriate standards have been provided will be based on the agreed troop/police contributor welfare arrangements between the troop/police contributor and the Secretariat, and detailed in an appendix to annex C to the memorandum of understanding;

“(d) **Internet access:** appropriate levels of equipment and bandwidth in the peacekeeping mission;

“(i) Verification as to whether appropriate quantities of equipment have been provided will be based on Internet requirements agreed between the troop/police contributors and the Secretariat, and detailed in an appendix to annex C to the memorandums of understanding;

“(ii) Internet is to be established by the troop/police contributors and not linked to the existing United Nations communications system;

“(iii) A guide to the standard required for providing Internet access can be found in appendix 10 to the present chapter”.

9. The Working Group also recommended the addition of the following appendix 10 in chapter 3, annexes A and B, after appendix 9 of the Contingent-Owned Equipment Manual:

“Appendix 10

“Guidelines for Internet access in United Nations peacekeeping operations

“The guide below is based on a battalion of 800 personnel deployed in up to three locations.

<i>Equipment</i>	<i>Quantity</i>
Internet access equipment	3
Computers	7
Printers	3
Appropriate levels of maintenance, spare parts and bandwidth for the equipment mentioned above".	

10. The Working Group further recommended that a review of the impact of the decision on welfare should be undertaken at the next Contingent-Owned Equipment Working Group.

11. Finally, the Working Group recommended the addition of a monthly rate per person, interim rate for Internet access of \$2.76. That interim rate and verification process should be reviewed as soon as possible and at the latest in the next Contingent-Owned Equipment Working Group.

Annex II.F.1

Annual leave at United Nations expense for contingent members/police deployed for a one-year tour of duty

Background

1. A few Governments rotate contingent/formed police units on a yearly basis instead of six months, as practised by most of the troop/police contributors.
2. Most of the troops/police do not avail transfers of leave within one year for the following reasons:
 - (a) If the bulk of the troops/police is sent together on leave, it may affect operational readiness owing to the shortage of personnel;
 - (b) If leave is granted, maximum troops/police may want to avail themselves of leave in the mid-phase of their tours of duty, which may create an operational vacuum in the mission area;
 - (c) Troops/police do not feel comfortable travelling alone;
 - (d) Travel costs are very high, amounting to almost 10 per cent to 15 per cent of yearly reimbursement for an individual.
3. Staying detached from family, peers and relatives for one year may cause mental deprivation, stress and moral idleness, and occasionally leads to unwanted incidents or misconduct affecting the reputation of the United Nations and troop/police contributors as a whole.

Issue

4. When a contingent/formed police unit stays for one year in the mission area, the United Nations saves the cost of rotation after six months. This unexpended airfare can be reimbursed to respective troop/police contributors or spent by the United Nations for the annual leave of the contingent/formed police unit.

Proposed courses of action

5. The Working Group may include the proposed issue in the Contingent-Owned Equipment Manual (preferably in chapter 4, under “deployment and redeployment of personnel”) with the following options:
 - (a) *Option 1.* Contingent members may be sent on leave in four cycles in four quarters of a year by United Nations-hired aircraft;
 - (b) *Option 2.* The United Nations may hand over two-way tickets or fares to troops in the mission area. Contingent commanders will approve leave at their discretion, keeping operational readiness in mind;
 - (c) *Option 3.* The United Nations may reimburse to troop-contributing country the equivalent cost of rotation due after six months and the troop-contributing country will be responsible to arrange leave flight in four cycles and/or pay the cost/fare to troops whose leave cannot be sanctioned by the Contingent Commander on the ground of operational exigency in the mission area (if any).

Elements of analysis

6. The movement Control Section, Department of Field Support, provided clarification on the cost involved for 6 versus 12-month rotations based on different scenarios. These scenarios allowed for different combinations of baggage allowance. It was noted by the Working Group that there were no significant savings when conducting 12-month rotations to offset the costs required for leave flights for an entire unit.

7. If any saving in flight costs can be realized, this has to be achieved by reducing the amount of luggage allowed per person.

8. The United Nations recommends 6-month rotations, but accepts 12-month tours of duty.

Discussion

9. There were many hours of discussion on this issue and the positions can be summarized as follows:

(a) The troop contributor requesting the change and similar other countries requested and obtained a series of detailed costings from the Secretariat for rotations of troops to and from missions, both semi-annually and annually. Many variations were modelled in terms of troop numbers and their associated weight of equipment with a view to identifying possible savings which could then be used to meet the requirement outlined in the issue paper;

(b) A group of Member States agreed with the United Nations current policy of six-month troop/police rotations. If Member States choose other troop-rotation schedules, they should bear the full cost and responsibility for additional transport requirements. Savings realized by the United Nations owing to a Member State not utilizing the full transport capacity required for six-month rotations should not be redirected to other purposes.

Recommendations

10. The Working Group recommended that leave transportation should remain a national responsibility (as national responsibility is generally understood in the Contingent-Owned Equipment Manual).

Annex II.G.1

Higher rates of reimbursement for “accommodation” in difficult missions

Background

1. As per the present Contingent-Owned Equipment Manual, the responsibility of accommodation in the mission area initially for six months lies with the troop/police contributor, for which the United Nations reimburses the cost (chapter 9, annex E, para. 29). Thereafter, the United Nations takes over the responsibility to provide accommodation. When the United Nations is not able to provide suitable (permanent, semi-rigid or rigid) accommodation after the lapse of six months in tents, the troop/police contributor will be reimbursed at both the tentage and accommodation self-sustainment rates. This combined rate will continue until personnel are housed to the standard specified under the accommodation rate (chapter 9, annex E, para. 30).

Issue

2. In keeping with the United Nations guidelines, Governments have been making self-arrangement for tentage for its new missions for the first six months. However, it has been observed that in missions such as UNMIS, UNAMID and MONUC, the adverse climatic conditions compel extra investments in the tentage owing to heavy wear and tear costs. The costs of these temporary accommodations have been quite high vis-à-vis the reimbursement rates, thus leading to extra costs to various Governments.

3. Therefore, the revision of reimbursement rates for accommodation to troops in the mission area, in particular when the troop/police contributors are required to provide accommodation beyond six months in difficult missions such as UNMIS, UNAMID and MONUC, is essential.

Discussion

4. The Working Group reached consensus on the issue and agreed that individual categories might not be considered in isolation; instead, a comprehensive review of mission factors should be carried out on the request of the concerned troop/police contributor.

Recommendations

5. The Working Group agreed that the existing procedure should remain in place for consideration and review of mission factors on the request of the troop/police contributor, as outlined in the 2005 Contingent-Owned Equipment Manual, chapter 7, paragraph 2, which states that any troop/police contributor can request that the Secretariat review relevant mission factors at any time.

6. The Working Group requested the Secretariat to advise all troop/police contributors on how to request such a review, where necessary.

Annex II.H.1

Provision of basic firefighting, fire detection and alarm capabilities in field missions

Background

1. The Contingent-Owned Equipment Manual does not include a basic firefighting or fire detection and alarm requirement in either the “tentage” or “accommodation” self-sustainment categories, or mention the capability in any other category or elsewhere in the Manual. Experience has shown that while some contingents provide basic capabilities, that is, fire extinguishers and fire buckets for sand/water and some also provide alarms and detectors or firefighting trucks as major equipment on their memorandum of understanding, many do not. This results in confusion in the field missions as to who is responsible for the initial provision and maintenance of equipment in order to provide this essential capability, including recharging of extinguishers or batteries for fire detectors, if required. Furthermore, troop/police contributors that do provide basic capabilities receive no additional reimbursement other than troop/police contributors that receive reimbursement under major equipment for providing firefighting vehicles.

Issue

2. Basic firefighting, fire detection and alarm capabilities are considered essential to enhance the safety and security of contingent personnel and it is necessary to clearly assign responsibility for the provision of the capabilities.

Discussion

Basic firefighting capability standard

3. An expected minimum level of capability would be:

(a) Two x 15 litre (3 gallon) red painted galvanized steel buckets (for water and/or sand) per tent (based on six persons per tent)/or equivalent accommodation space, plus a 5 per cent reserve;

(b) One rechargeable 9 kg (20 lb) multi-purpose ABC fire extinguisher (or equivalents in quantity and size of water and chemical extinguishers) per four tents/or equivalent accommodation space, a 10 per cent reserve and relevant equipment and personnel to check and recharge pressures, as necessary;

(c) One fire beater per four tents (based on six persons per tent) and a 5 per cent reserve.

Basic fire detection and alarm capability standard

4. An expected minimum level of capability would be:

(a) Sufficient automatic smoke detectors in accommodation spaces in accordance with the International Fire Code (2006);

(b) A minimum of three alarm sirens (minimum 100 db at 30 m (100 ft)), with all electrical requirements and controls per battalion size contingent or one per contingent if company size or smaller.

5. Details of the provisioning requirements to meet the self-sustainment standards for specific missions and details of the applicable International Fire Code requirements in respect of fire extinguishers, fire detectors and fire alarms would be listed in the mission Guidelines to Troop/Police-Contributing Countries.

6. It was envisaged that if troop/police contributors were providing one or both capabilities under “tentage” and were subsequently provided with United Nations hard-wall accommodation, the troop/police contributors could become responsible for providing the basic capabilities in “accommodation”. If the United Nations were to assume responsibility under such circumstances, a duplication of firefighting capabilities and resources available to the mission would result and additional costs incurred.

7. Based on costs incurred by the United Nations when providing the capability, it was proposed that troop/police contributors should be reimbursed at a rate of:

(a) Basic firefighting capability — \$0.16 per person/month for each subcategory. It was further proposed that troop/police contributors that provided firefighting vehicles at the request of the United Nations should continue to be reimbursed for them as major equipment;

(b) Basic fire detection and alarm capability — \$0.13 per person/month.

Recommendations

8. The Working Group recommended the addition of the following text after paragraph 34, chapter 3, annex B, of the Contingent-Owned Equipment Manual, to be inserted as paragraphs 35 and 36, respectively:

“Basic firefighting capability

“35. To receive the basic firefighting self-sustainment rate, the contingent must:

“(a) Provide sufficient basic firefighting equipment, that is, buckets, beaters and fire extinguishers, in accordance with the International Fire Code, as amended;

“(b) Provide all necessary minor equipment and consumables.

“Fire detection and alarm capability

“36. To receive the Fire Detection and Alarm Self-Sustainment rate, the contingent must:

“(a) Provide sufficient fire detection and alarm capability equipment, that is, smoke detectors and fire alarm systems, in accordance with the International Fire Code, as amended;

“(b) Provide all necessary minor equipment and consumables”.

9. The above-mentioned categories are to be subcategories of “tentage” and “Accommodation” and to be calculated and reimbursed separately.

10. The option of providing the said capabilities is to be discussed during memorandum of understanding negotiations and endorsed accordingly.

11. The Working Group also recommended the addition of a monthly per person interim rate for “basic firefighting capability” of \$0.16, and for “fire detection and alarm capability” of \$0.13. Those interim rates should be reviewed as soon as possible and at the latest in the next Working Group.

12. Water-supply facilities for firefighting are to include water source and high pressure water supply systems, including hoses to be provided for under United Nations arrangements.

Annex III.A.1

Comprehensive review of contingent-owned equipment rates for medical equipment and medical categories of self-sustainment

Background

1. In his report of 24 August 2004 (A/59/292), the Secretary-General recommended that the next Contingent-Owned Equipment Working Group should be held in 2008 and that it should be mandated to carry out a comprehensive review of the contingent-owned equipment reimbursement rates. By its resolution 59/298, the General Assembly approved the proposal of the Secretary-General.

2. Accordingly, by note verbale Member States were asked to submit standard cost data for generic categories contained in the Contingent-Owned Equipment Manual using 2006 as the base year to carry out a comprehensive review of contingent-owned equipment reimbursement rates.

Comprehensive review of rates

3. The 2008 Contingent-Owned Equipment Working Group used the following method to conduct the review:

- (a) Agree on principles for conducting the review;
- (b) Review data;
- (c) Develop a calculation model;
- (d) Calculate rates;
- (e) Evaluate and adjust rates to ensure an equitable outcome.

Each step in the method was finalized before the next step was started.

4. Principles agreed on for conducting the review:

(a) The review related to reimbursement rates only, not the current contingent-owned equipment system;

(b) The review used the national cost data provided by troop/police contributors. However, where a Member State had not submitted data for a category, it could elect to use existing Contingent-Owned Equipment Manual data as its national data. The only acceptable data are those that have been received by the Secretariat in advance of the first Working Group session;

(c) Rates could only be revised for medical equipment if new data had been provided by troop/police contributors;

(d) Data should be validated for mistakes and flaws in advance of the calculation. Only corrected and accepted data should be included in the calculation;

(e) The impact on the medical equipment portion of the United Nations peacekeeping budget should be considered at each stage of the calculation.

5. Review of data:

(a) If data had been incorrectly submitted as zero, the existing Contingent-Owned Equipment Manual should be substituted;

(b) If data had been blank, this should be treated as no data and the existing Contingent-Owned Equipment Manual could be used;

(c) The following equation was used to calculate dry-lease costs: $((Gmfv \times \text{no-fault incident factor})/12) + ((Gmfv/\text{estimated useful life})/12)$;

(d) There is no maintenance rate for all categories. Where Contingent-Owned Equipment data exists, it was used. When there is no Contingent-Owned Equipment data, a factor of 30 per cent was applied to the dry-lease rate to determine the maintenance rate, based on historical data;

(e) The wet-lease rate is the addition of the dry-lease rate and maintenance rate.

All corrections were presented to and accepted by the troop/police contributor concerned before they were included in the calculation.

6. Development of a calculation model:

(a) A spreadsheet model was developed to undertake calculations;

(b) The model was capable of independently excluding high and low extremes of data. This flexibility enabled several alternative scenarios to be examined;

(c) After excluding agreed extremes, simple averages of the remaining troop/police contributor data were calculated for each equipment and medical subcategory of self-sustainment;

(d) Gfmv was calculated as the product of average monthly depreciation and average estimated useful life. These values were then used, with the existing no-fault incident factor, to calculate dry and wet-lease rates;

(e) The impact on the medical equipment portion of the United Nations peacekeeping budget calculated by the sum of the products of percentage change in the wet-lease rate and the category's weight.

7. Calculation of reviewed rates:

(a) Where a country has not submitted any new data, it may elect to use the existing Contingent-Owned Equipment Manual data. This includes cost and non-cost data. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment data across all categories and services;

(b) Where a country has submitted data but it is incomplete, it may elect to use the existing Contingent-Owned Equipment Manual data in all incomplete categories. If a country elects to use Contingent-Owned Equipment Manual data, it must use Contingent-Owned Equipment Manual data across all incomplete categories and services;

(c) Data above 100 per cent or below 20 per cent of the existing Contingent-Owned Equipment Manual rates is to be excluded from the calculation;

(d) The result of the application of this method will produce an overall outcome for the United Nations contingent-owned equipment budget;

(e) A further review of each category and service may be necessary and may require a further adjustment to the rates of individual categories, but the net effect of all adjustments must not change the overall outcome as calculated above;

(f) This method shall apply to all sub-working groups;

(g) This method shall not necessarily be used as a precedent for the conduct of future Contingent-Owned Equipment deliberations.

A list of the troop/police contributors that elected to use existing Contingent-Owned Equipment Manual data as national data is contained in annex I.A.3.

8. Evaluation and adjustment of rates to ensure an equitable outcome. Where the calculation resulted in a perverse outcome, such as results for heavier equipment being less than that for similar lighter equipment, sensible adjustments were agreed. However, where adjustments were required, they were crafted to ensure that they did not affect the overall contingent-owned equipment portion of the United Nations peacekeeping budget.

- The revised Contingent-Owned Equipment data, including dry and wet-lease reimbursement rates are contained in annex III.A.2
- In the medical categories of self-sustainment, the Working Group found no such odd outcomes, therefore the reviewed rates required no further adjustment. The revised Contingent-Owned Equipment data for the medical category of self-sustainment are contained in annex III.A.3.

9. Impact on the contingent-owned equipment portion of the United Nations peacekeeping budget. The overall impact on the medical portion of the United Nations peacekeeping budget is listed below:

Medical equipment:	3.3 per cent
Medical categories, self-sustainment:	1.8 per cent

10. Future reviews. The Working Group discussed procedures for conducting future triennial contingent-owned equipment reimbursement rate reviews. It was agreed that actual cost data rather than indices should be used, as that provided a better basis for the calculation of rates. It was further agreed that troop/police contributors should be required to indicate whether they wanted to substitute existing Contingent-Owned Equipment data as national data either in whole or in part, at the same time.

Recommendations

11. The Working Group recommended that:

- (a) The revised rates in annex III.A.2 and annex III.A.3 should be adopted;
- (b) Future triennial reviews should be conducted in the form of a comprehensive review using data provided or elected by troop/police contributors.

Annex III.A.2

Revised reimbursement rates for medical equipment for dry and wet lease

(United States dollars)

<i>Category of equipment</i>	<i>Generic fair market value</i>	<i>Estimated useful life in years</i>	<i>Maintenance rate</i>	<i>Monthly dry lease</i>	<i>Monthly wet lease</i>	<i>No-fault incident factor (Percentage)</i>	<i>Monthly non-United Nations POL</i>

* New modules

Annex III.B.1

Proposed reimbursement for level-II and III medical structures

Background

1. Level-II and III medical structures are normally established in tents when being deployed. To comply with medical and hygiene requirements, level-II and III medical structures require a more permanent structure to operate in as soon as possible (recommended no later than six months). The Contingent-Owned Equipment Manual does not currently cover the reimbursement for troop/police contributors when building rigid or semi-rigid structures to house level-II and III medical structures. It is therefore necessary to consider establishing rules and rates for the rigid and semi-rigid structures for level-II and III medical facilities.

Discussion

2. The following matters were discussed:

(a) The Working Group considered the Secretariat proposal to reimburse under self-sustainability, but determined that there was a risk that countries could be disadvantaged. The sub-working group therefore concluded that reimbursement under major equipment was the best course of action;

(b) The Working Group then considered options for setting a level of reimbursement for building rigid-structured level-II and III medical facilities. There were three options:

(i) *Option 1.* Set the reimbursement rate based on major equipment listed in chapter 8, annex A, for the next three years, then consider a review of the rates methodology at the next Contingent-Owned Equipment Working Group;

(ii) *Option 2.* Member States at the current Contingent-Owned Equipment Working Group could be requested to provide cost data relating to the current cost of building rigid-structured level-II and III hospitals;

(iii) *Option 3.* A combination of options 1 and 2, set a temporary reimbursement rate based on the Contingent-Owned Equipment Manual until a rate could be determined using national cost data;

(c) The Working Group reached consensus on option 1 as the preferred option on the basis that it could be implemented immediately. It was unlikely that national cost data could be provided in the time available in the current Contingent-Owned Equipment Working Group session for option 2 to be enacted. As a result, there was a high probability that implementation would not occur until 2011. Option 3 could be implemented because the Secretariat did not have the power to change rates between Contingent-Owned Equipment Working Groups.

Recommendations

3. The Working Group recommended that:

(a) The following text needs to be added to “medical” under paragraph 35 as a new subparagraph in chapter 3, annex B, of the Contingent-Owned Equipment Manual:

“(a) When troop/police contributors are deployed on United Nations peacekeeping operations and they provide facilities for a level-II and/or III medical facilities, semi-rigid or rigid structures, these areas are reimbursed separately as major equipment, i.e., containers and camp units. If the troop/police contributor builds permanent structures, the United Nations will reimburse the troop/police contributor under major equipment, chapter 8, annex A, Accommodation equipment, rigid structures, camp unit (medium and large for level-II and III medical facilities, respectively) refers;

“(b) In the interim, reimbursement for rigid and semi-rigid structures is to be based on major equipment in accordance with chapter 8, annex A, Accommodation equipment, rigid structures and semi-rigid structures, camp unit (medium and large for levels-II and III medical facilities, respectively), respectively. The Secretariat is directed to apply this interim measure based on the breakdown below:

“(i) Semi-rigid structures are for containerized medical facilities:

- Level II equates to a camp unit medium
- Level III equates to one each of a camp unit medium and large
- Ablution units will be reimbursed as major equipment

“(ii) Rigid structures are for hard-walled medical facilities:

- Level-II equates to a camp unit, medium
- Level-III equates to one each of a camp unit, medium and large
- Ablution units will be reimbursed as major equipment”

(b) The Working Group agreed with the Secretariat’s proposal to reimburse under self-sustainment for level-II and III medical facilities accommodated in tents. The tentage reimbursement criteria should be based on the bed wards capacity from the first day of deployment.

Annex III.C.1

Specifications for definitions and components for basic first aid and high-risk areas

Background

1. The definition and components for the “basic first aid” and “high-risk areas (epidemiological)” subcategories of medical services is insufficient in the Contingent-Owned Equipment Manual and needs to be redefined to assist troop/police contributors to deploy with the minimum requirements.

Discussion

2. A basic definition for both basic first aid and high-risk areas related to training and resources was required to assist troop/police contributors deploying to mission areas:

(a) United Nations peacekeepers must have a basic knowledge of and be trained in basic first aid and in prevention measures for high-risk areas;

(b) A distinction must be made between minimum first aid items for personnel and for United Nations vehicles and certain facilities provided by troop/police contributors.

3. The minimum components for both categories were defined for reimbursement purposes.

4. The minimum standard for receipt of high-risk area (epidemiological) under self-sustainment should be based on a determination by the United Nations Secretariat, per region and/or per United Nation mission, based on the risk posed to United Nations peacekeepers.

Recommendations

5. The Working Group recommended that chapter 3, annex B, paragraph 49, subparagraph (a), should be amended to read:

“(a) **Basic level (first aid)**

“Comprises the basic immediate first aid provided to a casualty by the nearest person on-site at the point of injury. The following requirements must be met:

“(i) *Training in basic first aid.* United Nations peacekeepers must have basic knowledge of and be trained in basic first aid, in accordance with chapter 3, annexes A and B, appendix 1. The training must, at a minimum, cover (a) cardiopulmonary resuscitation; (b) bleeding control; (c) fracture immobilization; (d) wound dressing and bandaging (including burns); (e) casualty transport and evacuation; and (f) communications and reporting;

“(ii) *Individual basic first aid kits.* United Nations peacekeepers must carry a personal field or battle dressing and medical disposable gloves. In chapter 9, annex A, appendix (Soldier’s kit/police kit), reference this requirement under ‘first aid kits’. In addition, the definition should be incorporated in appendix 1 (annex III.C.2) under notes: ‘Field or battle dressing consists of a large pad of

an absorbent cloth, attached to a strip of thin fabric used to bind the pad in place. Field dressings are issued in a sealed waterproof pouch to keep them clean and dry; the pouch can be torn open when required’;

“(iii) *Basic first aid kits for troop/police contributor vehicles and other facilities.* A basic first aid kit must be provided to all troop/police contributor vehicles, workshops and maintenance facilities, all kitchen and cooking facilities, and any other area where the Force Medical Officer deems it necessary. These kits must contain the items set out in chapter 3, annexes A and B, appendix 1.1 (annex III.C.3).

“Member States may opt to augment **the above-mentioned minimum standards**. This is a national prerogative, which must not lead to additional costs to the United Nations”.

6. Chapter 3, annex B, paragraph 49, subparagraph (f), should be amended to read:

“(f) **High-risk areas (epidemiological)**

“To be eligible for high-risk area (epidemiological) self-sustainment, troop/police contributors must provide medical supplies, chemoprophylaxis and preventive health measures in areas with a high incidence of endemic infectious disease for which there is no vaccine. The minimum standards for high-risk areas (epidemiological) can vary according to the region in which United Nations peacekeepers are deployed and are based on the risk posed to United Nations peacekeepers.

“(i) The self-sustainment reimbursement covers the provision and sustainment of the following, at a minimum:

- “a. Prophylactic pharmaceuticals (anti-malarials). The prophylactic treatment of malaria is a national responsibility, as stipulated in document A/C.5/60/26, chapter 3, annex B, paragraph 50, and chapter 3, annexes A and B, appendix 7, paragraph 6;
- “b. Personal preventive health equipment and consumables (head mosquito net, repellent);
- “c. Man-portable preventive health equipment and consumables (foggers, pesticides). The use of pesticides will conform to international environmental law;

“(ii) Other preventive measures, which are covered elsewhere in the Contingent-Owned Equipment Manual, must be taken into account:

- “a. Individual mosquito nets (conforms to chapter 9, annex A (soldier’s kit/police kit));
- “b. Encouragement of body-covering clothing (conforms to chapter 9, annex A (soldier’s kit/police kit)).

“(c) Rodent control measures are part of basic hygiene procedures for large amounts of food and waste disposal areas (chapter 3, annex B, Catering, para. 10, subparagraph (d) refers.”

Annex III.C.2

**Appendix 1 to annexes A and B to chapter 3 of the Contingent-Owned
Equipment Manual: United Nations levels of medical support: basic level
requirement and standard**

MEDICAL LEVEL	TREATMENT CAPABILITY	TREATMENT CAPACITY	STAFFING REQUIREMENT	EQUIPMENT REQUIREMENT	INFRASTRUCTURE EQUIPMENT	REIMBURSEMENT RATE (per capita per month)	REMARKS

- a. "Soldier" level or "Buddy" Aid, "Basic First Aid Skills which every peacekeeper should have;
- b. See appendix 1.1 for a detailed list of items in the first-aid kit;
- c. Field or Battle Dressing consists of a large pad of an absorbent cloth, attached to a strip of thin fabric used to bind the pad in place. Field dressings are issued in sealed waterproof pouch to keep them clean and dry; the pouch can be torn open when required.

Annex III.C.3

Appendix 1.1 to annexes A and B to chapter 3 of the Contingent-Owned Equipment Manual: medical level basic first aid kit

<i>Serial No.</i>	<i>Item</i>	<i>Quantity</i>
1	First aid pouch or box	1
2	Field dressing (small)	5
3	Field dressing (large)	1
4	Burns dressing	1
5	Triangular bandages	5
6	Sterile gauze pads	10
7	Roller bandages/gauze (roll)	5
8	Sterile cotton wool (100g pack)	1
9	Wound cleansing solution (bottle)	1
10	Adhesive tape (roll)	2
11	Safety scissors (super shear)	1
12	Pocket mask	1
13	Gloves; size 7 1/2-8 (pairs)	2
14	Arterial tourniquet	1

1. The following facilities are required to have at least one first aid kit:
 - (a) All vehicles;
 - (b) All workshops and maintenance facilities;
 - (c) All kitchens and cooking facilities;
 - (d) Any other area where the Force Medical Officer deems it necessary.
2. Replenishing used and expired items within first aid kits is the responsibility of the personnel using the above facilities. New supplies may be obtained from the medical unit supporting the facility, with the authorization of the respective medical unit commander.
3. Member States may opt to augment the above-mentioned minimum standards. This is a national prerogative, which must not lead to additional costs to the United Nations.

Annex III.C.4

Appendix to chapter 9, annex A

Soldier's kit

1. In order to meet the minimum operational requirements, the following is a list of required items. The actual mission-specific requirements will be discussed and agreed upon during memorandum of understanding negotiations.

Example of requirements for infantry contingent

<i>Description</i>	<i>Quantity</i>
Personal safety and security items	
Combat helmet	1
Basic flak jacket (fragmentation vest)	1
Uniform items	
Combat jacket, light weight	2
Shirt, long sleeves	2
Undershirts	4
Combat trousers, light weight	2
Pocket handkerchief	6
Boot, desert combat	1
Summer socks	4
Raincoat	1
Shorts	2
Underpants	4
Suspenders	1
Hand towel	2
Equipment items	
Sleeping bag	1
Travelling bag	1
Toothbrush	1
Dining knife	1
Spoon	1
Fork	1
Mess tin	1
Drinking mug	1
Cleaning brush	2
Water canteen	1
Individual mosquito net	1
Flashlight	1
Survival kit	1

<i>Description</i>	<i>Quantity</i>
First aid kit	1
– Field or battle dressing	1
– Medical disposable gloves	1
Compass	1
Additional items	
As required and negotiated	1

Police kit

2. In order to meet the minimum operational requirements, the following is a list of required items. The actual mission-specific requirements will be discussed and agreed upon during memorandum of understanding negotiations.

<i>Description</i>	<i>Quantity</i>
Uniform items	
Police jacket, light weight	2
Shirt, long sleeves	2
Undershirts	4
Police trousers, light weight	2
Pocket handkerchief	6
Boot desert	1
Summer socks	4
Shorts	2
Underpants	4
Hand towel	2
Whistle	1
Suspenders	1
Raincoat	1
Personal equipment items	
Sleeping bag	1
Travelling bag	1
Toothbrush	1
Dining knife	1
Spoon	1
Fork	1
Personal safety and security items	
Helmet with facial protector	1
Level 4 body armour	1
Mess tin	1
Drinking mug	1
Cleaning brush	2

<i>Description</i>	<i>Quantity</i>
Water canteen	1
Individual mosquito net	1
Compass	1
Flashlight	1
Survival kit	1
First aid kit	1
– Field or battle dressing	1
– Medical disposable gloves	1
Equipment items	
Baton	1
Shield	1
Gas mask	1
Leg/arms protector	1
Handcuffs	1
Hearing protection	1
Reflector jacket	1

Annex III.D.1

Definition of “fee-for-service” (medical services)

Background

1. Fee-for-service medical arrangements are currently practised under memorandums of understanding in some missions where troop/police contributor and/or United Nations clinics provide health care to personnel other than those for which they are reimbursed under self-sustainment. For example, a troop/police contributor may provide services to United Nations Police personnel, another contingent, mission substantive staff or United Nations agencies within the area of operations. Under fee-for-service arrangements, a troop/police contributor will invoice the mission for services provided to the individuals.

2. The standard fee schedule used to determine the amount owed to troop/police contributors is based upon rates agreed between relevant parties when the North Atlantic Treaty Organization and Kosovo Force facilities provided services to United Nations Protection Force/United Nations Interim Administration Mission in Kosovo personnel in the 1990s. The situation was such that United Nations facilities and/or civilian facilities were unavailable, or unable to deploy, to support troop and civilian mission staff. Accordingly, the agreed fee schedule has subsequently been adopted in missions where troop/police contributors provide services to personnel for whom they are not routinely reimbursed under self-sustainment arrangements in the memorandum of understanding.

Discussion

3. The following matters were discussed:

(a) The Working Group agreed on procedures for troop/police contributors providing services to United Nations and other authorized personnel not covered under self-sustainment reimbursement;

(b) A fee schedule was designed based on type of services provided, which did not include costs already being reimbursed in other areas of the Contingent-Owned Equipment Manual (i.e., personnel and major equipment usage).

Recommendations

4. The Working Group recommended that:

(a) The final sentence in paragraph 36, chapter 3, annex B should be deleted;

(b) A new paragraph should be added, as follows:

“Medical support facilities are often called upon to provide care to United Nations and other authorized personnel by the mission headquarters for whom they are not receiving reimbursement under self-sustainment. In these circumstances, the medical facility is entitled to seek reimbursement for the associated costs by applying a fee-for-service for the medical care provided. The agreed procedures and fee-for-service rates are listed in appendix 11 to annex B to chapter 3. Care provided to non-eligible personnel (e.g., local civilian population) by troop/police contributors is not reimbursable by the United Nations.”

(c) The following text should be incorporated as a new appendix 11 to annex B to chapter 3:

“Administrative procedures for ‘fee-for-service’ reimbursement

“1. The mission shall settle fee-for-service claims from the troop/police contributor only upon receipt of a monthly invoice delivered to the Mission Chief Medical Officer (CMO), who represents the Chief of Mission Support (CMS).

“2. Fee-for-service reimbursement shall be accepted on presentation of the invoice from the troop/police contributor to the mission, which includes:

“(a) Full name and United Nations identification number of the patient;

“(b) Dates of treatment;

“(c) Service given according to the attached schedule;

“(d) Individual spreadsheets for patient’s United Nations status/category of employment”.

[The template to be used for invoicing is contained in annex III.D.2.]

“3. The documents listed below are to be sealed in an envelope marked ‘Medical in confidence’ and addressed to the CMO, who is responsible to the CMS for the appropriate maintenance of confidentiality and record-keeping.

“(a) Diagnosis, according to the World Health Organization ICD code system;

“(b) A copy of any associated referral from a United Nations primary care Medical Officer or health specialist.

“4. The CMS is responsible for all fee-for-service reimbursements to the troop/police contributor, and is responsible for reclaiming the fees from United Nations personnel with insurance coverage (where applicable).

“Fee schedule

<i>Code</i>	<i>Type of services*</i>	
A	General practitioner	\$30
B	Specialist on referral	\$40
C	Nurse (for medical procedures)	\$20
D	Vaccination	Actual cost
E	X-ray (referral, image only)	\$25
F	X-ray with contrast (referral, image only)	\$65
G	Lab (referral, tests only)	\$25
H	Dental consultation, emergency only (includes dental X-rays)	\$65
I	Hospital bed per 24 hours	\$80
J	United Nations personnel entry examination (inclusive tests and X-ray for pre- and post-deployment)	\$125

** Notes:*

“1. The fees above include consumables utilized during the consultation and resultant medication dispensed. In general, the quantity of medication provided to out-patients receiving care under a fee-for-service arrangement should not exceed five days of supply.

“2. Labs or X-ray services rendered are to be billed separately (with the exception of dental X-rays and United Nations personnel entry examinations).

“3. There is to be no patient co-payment charged. The troop/police contributor medical facility bills the mission for the full amount and is reimbursed accordingly.

“4. Actual vaccination cost is the cost the medical facility paid to obtain the vaccine stock.”

Annex III.E.1

Medical support facilities (medical modular concept)

Proposal

1. A proposal by the Secretariat to adopt a medical support concept in the field based on “medical support modules” was considered by the 2004 Contingent-Owned Equipment Working Group but was deferred.
2. The Secretariat considers that changing the nomenclature of the medical facilities would not result in a simplified and clearer terminology and will generate considerable turmoil and confusion in the field. Consequently, the Secretariat requested the 2008 Contingent-Owned Equipment Working Group to maintain the nomenclature of medical support facilities deployed in the peacekeeping operations missions as “level-I, II, III”, as this clearly identifies the level of medical treatment capability.
3. The Secretariat also suggested that the 2008 Working Group adopt the generic terminology, “medical facility”, for all three levels.

Background

4. Operational medical support will never be an exact science and each United Nations mission requires a specific medical support plan. This plan may require the deployment of a combination of levels of medical support facilities. While similarities do exist between many troop/police contributor, most have their own country/military specific categories and definitions of medical support and medical facilities. Both terminology and capabilities will differ, possibly significantly, from one troop/police contributor to another.
5. Therefore, minimum capabilities of United Nations levels-I, II and III medical support facilities should be standardized and outlined within the Contingent-Owned Equipment Manual. However, clear definitions do not exist and explanations of United Nations levels of medical support facilities are normally presented as a list of capabilities rather than clearly describing the type and capability of services available/provided at each level.
6. The Secretariat recommended that in recognition of the different operational situations and requirements, options for additional capabilities should also be outlined in the Contingent-Owned Equipment Manual. Such additions to the standard capabilities — additional capabilities — can be considered as capability building-blocks and may include, for example, extra ambulances, laboratory and radiography units, pharmaceutical facilities and/or dental sections. Troop/police-contributing countries are reimbursed under a combination of self-sustainment and major equipment for the additional capabilities.

Discussion

7. The multinational nature of United Nations peacekeeping operations dictated that the definition of medical facilities must be clear and unambiguous. The current absence of a clear definition for each United Nations level of medical facility was often confusing for both troop/police contributor and peacekeeping operations. The rapid correlation between United Nations level and country-specific medical support

facilities was not always easily achieved by planners, commanders and peacekeepers alike.

8. Furthermore, a clear understanding of the minimum requirements and the limitations of a particular level of medical facility would give more consistency to the memorandum of understanding negotiations and to the predeployment preparedness.

9. Within United Nations peacekeeping operations, the medical resources were usually distributed into three levels, on an incremental basis, to conduct treatment, evacuation and other functions essential to the maintenance of the health of the peacekeepers. The United Nations medical support facilities were also categorized into three levels (level-I, II and III) according to their capabilities to conduct treatment. (However, it should be noted that the level of medical facility could be limited by the professional competencies of the medical staff.)

10. As a principle, the minimum capabilities of each level must include the capabilities of the lower level(s) as well as those specific capabilities that defined the level being considered. For example, a level-II medical facility must have the ability to carry out all level-I capabilities/functions as well as its own specific capabilities/functions. A medical facility could not be reduced below the minimum capabilities required/described in the Contingent-Owned Equipment Manual.

11. Based on the requirements, or specific situation in each peacekeeping operation mission, minimum capabilities of each level of medical facility might be “enhanced”. The presence of additional capabilities was indicated by the “+” sign (e.g., level-I+). That nomenclature helped to describe more accurately the deployed medical facilities and facilitated accurate reimbursement. Additional capabilities that enhanced the medical support facilities were reimbursed separately, in accordance with the Contingent-Owned Equipment Manual and the memorandum of understanding.

Findings

12. The 2008 Contingent-Owned Equipment Working Group agreed on the capability definition and staffing composition of the level-I, II and III medical support facilities. The Working Group also agreed to the concept of level-I+ and level-II+ medical facilities and provided definitions for inclusion in the Contingent-Owned Equipment Manual. While the overall modular concept was supported by the Working Group, it was unable to finalize the equipment list for all of the modules. Consensus was reached on the equipment lists for the aeromedical evacuation module and the forward surgery module.

Recommendations

13. The Working Group recommends that the aeromedical evacuation module and the forward surgery module content lists (annexes III.E.2 and III.E.3) should be included as appendices to annex B to chapter 3 to the Contingent-Owned Equipment Manual.

14. The Working Group also recommends that interested Member States should get together and further review the equipment lists for the remaining modules of the modular medical concept and forward them as an issue paper for distribution to all Member States ahead of the next Contingent-Owned Equipment Working Group.

Participation in this Working Group by the Medical Support Section, Department of Field Support, is essential to ensure that United Nations medical doctrine is duly considered and updated.

15. In addition, the Working Group recommends replacing the text in chapter 3, annex B, to the Contingent-Owned Equipment Manual, as follows:

“Medical

“35. In implementing the following principles and standards, the following definitions are used:¹

“(a) Medical equipment. Accountable major equipment (identified by # in appendices 2.1, 3.1, 4.1, 5 and 6) for the provision of medical support in United Nations medical facilities;

“(b) Drugs. Drugs produced according to World Health Organization (WHO) standards and consumed in the provision of medical support in United Nations medical facilities;

“(c) Medical supplies. Expendable supplies and minor equipment (identified by @ in appendices 2.1, 3.1, 4.1, 5 and 6) consumed in the provision of medical support in United Nations medical facilities;

“(d) Medical self-sustainment. The supply and resupply of drugs and medical supplies for the provision of medical support in United Nations medical facilities;

“(e) High-risk mission. A mission with high incidence of endemic infectious diseases for which no vaccinations exist. All other missions are considered ‘normal-risk mission’.² This definition is for use in determining eligibility for reimbursement of the self-sustainment rate for ‘high-risk areas (epidemiological)’.

“(f) For the purpose of establishing eligibility to medical care through United Nations mission medical facilities, the following personnel are considered part of a United Nations mission:³

“(i) United Nations-formed military police and United Nations-formed police units;

“(ii) United Nations military and United Nations police personnel not members of formed units;

“(iii) United Nations international civilian staff;

“(iv) United Nations Volunteers;

“(v) Locally employed United Nations staff, where applicable.

“36. Medical support and security are essential at all times; therefore, a troop/police contributor cannot be partially self-sustaining in the medical self-sustainment subcategories. Level-I medical care is a troop/police contributor responsibility; however, each level-I facility is to provide medical support and

¹ A/C.5/55/39, annex III.B, annex B, para. 31.

² A/C.5/55/39, para. 95.

³ Ibid., para. 97.

care to all United Nations staff permanently or temporarily in their area of responsibility.⁴ As a matter of principle this occasional level-I care should be provided in an emergency with no fee; however, a troop/police contributor may choose to seek reimbursement for services rendered; therefore there is a requirement to document and register emergency services provided.⁵ All United Nations medical facilities are responsible for emergency medical services for all United Nations troops and United Nations staff in their area of responsibility. Except in emergencies, specialists and level-II and III facilities can request a referral from a level-I facility before accepting a patient.⁶

“37. Medical support facilities are often called upon to provide care to United Nations and other authorized personnel by the mission headquarters for whom they are not receiving reimbursement under self-sustainment. In these circumstances, the medical facility is entitled to seek reimbursement for the associated costs by applying a fee-for-service for the medical care provided. The agreed procedures and fee-for-service rates are listed in appendix 11 to annex B to chapter 3. Care provided to non-eligible personnel (e.g., local civilian population) by troop/police contributors is not reimbursable by the United Nations.

“38. A troop/police contributor that cannot provide all medical capabilities according to the standards listed in annex B to chapter 3 must advise the Secretariat during the negotiation of the memorandum of understanding and in all cases prior to deployment.⁷

“39. A contingent Commander must inform the mission immediately if a troop/police contributor, while deployed, finds that it cannot adequately supply medical equipment, drugs or consumables under self-sustainment. If the troop/police contributor cannot find another contributor to offer resupply on a bilateral basis, the United Nations must take over the resupply of drugs, consumables and medical supplies permanently. The responsibility to provide medical personnel and medical services remains with the troop/police contributor. Medical self-sustainment will not be reimbursed from the day the troop/police contributor cannot provide full self-sustainment resupply.⁸

“40. To ensure that all personnel receive the medical care to which they are entitled and to ensure that there is an effective and equitable system for reimbursement for medical self-sustainment, all uniformed personnel, police and military shall be assigned to medical facilities being responsible for their medical care. The assignment can be as part of a unit (for formed units) or on an individual basis (United Nations police, military observers and Headquarters staff). Each individual shall be assigned to a level-I facility and/or a level-II facility and/or a level-III facility, where applicable.

“41. It is the responsibility of the Force Medical Officer/Chief Medical Officer to ensure that all personnel are informed upon entry into the mission as to the medical facilities responsible for their care and to ensure that all medical

⁶ A/C.5/55/39, annex III.B, annex B, para. 34.

⁷ *Ibid.*, para. 1.

⁸ *Ibid.*, para. 4.

facilities are notified as to who is assigned to the facility. The same information/notification must be given whenever individuals and units move from the area of responsibility of one facility to that of another.

“42. On the fifteenth day of each month a list stating the number of uniformed personnel assigned to each medical facility shall be forwarded to the Field Budget and Finance Division/memorandum of understanding and Claims Management Section, with a copy to the Logistics Support Division/Medical Support Section.

“43. All United Nations civilian staff shall be assigned to medical facilities in the same manner as uniformed personnel, however, this will not create eligibility for reimbursement under ‘self-sustainment’ unless this is explicitly stated in the memorandum of understanding. Alternatively ‘fee-for-service’ might apply.⁹

“44. All United Nations level-II and III medical facilities must be equipped and staffed to receive and treat all United Nations personnel regardless of gender, religion or culture, preserving the dignity and individuality of all patients.¹⁰

“45. Medical staff must be at the forefront in promoting HIV awareness, its method of infection and the prevention of spread. No medical staff or patient must be discriminated against owing to verified or suspected HIV. Testing in a United Nations facility must be voluntary and confidential, and no HIV test must be performed without there being a system of counselling.¹¹

“46. The reimbursement for self-sustainment medical services, including medically related minor equipment, tools, supplies and consumables, will be made at the rate of self-sustainment for the level of service provided and be calculated on the total personnel strength of the units/contingents for which a medical facility is responsible, as agreed in the memorandum of understanding (the actual strength numbers will be used for calculation of reimbursement).¹²

“47. If a troop/police contributor provides medical services to United Nations standards, which includes services of more than one level, these levels shall be accumulated accordingly.¹³ However, when a level-III medical facility covers an area where there is no medical facility providing level-II medical services, the ‘level-II’ and ‘level-III’ self-sustainment rates are not accumulated. The level-II and III combined self-sustainment rate of \$35.36 is to be used and the calculation of the reimbursement is to be based on the actual troop strength of those contingents assigned to the level-III medical facility for both level-II and III medical care.¹⁴

“48. To be eligible for reimbursement for the medical self-sustainment rate, the medical facility must provide medical ‘self-sustainment’, including all related staff, equipment, drugs and supplies (to include ‘epidemiological high-

risk-areas' requirements), for basic, level-I, level-II, level-III, storage for blood and blood products, and high-risk areas, as agreed in the memorandum of understanding. The level of equipment must meet United Nations standards as specified in the 'United Nations Levels of Medical Support' (A/C.5/54/49, annex VIII, appendices I and II, and amended in A/C.5/55/39 and Corr.1, annex III.B, annex B, paras. 31-36) for a medical facility and indicated in the memorandum of understanding. Drugs and consumables must meet WHO standards.¹⁵

“49. In preparing the verification reports for medical self-sustainment, the quality, capacity and capability, as defined in the standards, are the overriding considerations.¹⁶ Therefore, an expert medical opinion concerning the operational impact of any shortfall, discrepancy or corrective action or substitution undertaken will be required before deduction may be made to the reimbursement.

“50. A summary of the United Nations standards for each level of medical service of self-sustainment rates is shown below. Complete details of the United Nations standards of medical services are stipulated in chapter 3, annexes A and B, appendices 1 through 6.¹⁷ Additional information on immunization policy, malaria prophylaxis and vector control, and HIV/AIDS and sexually transmitted diseases is contained in appendix 7 to this chapter.¹⁸

“(a) **Basic level (first aid)**

“Comprises the basic immediate first aid provided to a casualty by the nearest person on-site at the point of injury. The following requirements must be met:

“(i) *Training in basic first aid.* United Nations peacekeepers must have basic knowledge of and be trained in basic first aid, in accordance with chapter 3, annexes A and B, appendix 1. The training must, at a minimum, cover (a) cardiopulmonary resuscitation; (b) bleeding control; (c) fracture immobilization; (d) wound dressing and bandaging (including burns); (e) casualty transport and evacuation; and (f) communications and reporting;

“(ii) *Individual basic first aid kits.* United Nations peacekeepers must carry a personal field or battle dressing and medical disposable gloves. In chapter 9, annex A, appendix (soldier's kit/police kit), reference this requirement under 'first aid kits'. In addition, the definition should be incorporated in appendix 1 (annex III.C.2) under notes: 'Field or battle dressing consists of a large pad of an absorbent cloth, attached to a strip of thin fabric used to bind the pad in place. Field dressings are issued in a sealed waterproof pouch to keep them clean and dry; the pouch can be torn open when required';

¹⁵ A/C.5/54/49, sect. B2, “Chapter 3, annex A, para. 14”, p. 53; and A/C.5/55/39, annex III.B, annex B, para. 36.

¹⁶ A/C.5/55/39, para. 98 (a).

¹⁷ A/C.5/55/39, annex III.A.

¹⁸ Ibid., annex III.C.

“(iii) *Basic first aid kits for troop/police contributor vehicles and other facilities.* A basic first aid kit must be provided to all troop/police contributor vehicles, workshops and maintenance facilities, all kitchen and cooking facilities, and any other area where the Force Medical Officer deems it necessary. These kits must contain the items set out in chapter 3, annexes A and B, appendix 1.1 (annex III.C.3).

“Member States may opt to augment **the above-mentioned minimum standards.** This is a national prerogative, which must not lead to additional costs to the United Nations.

“(b) **Level-I medical facility**

“(i) *Definition.* It is the first level of medical care that provides primary health care and immediate lifesaving and resuscitation services. Normally included within basic level-I capabilities are: routine sick call and the management of minor sick and injured personnel for immediate return to duty, as well as casualty collection from the point of injury/wounding and limited triage; stabilization of casualties; preparation of casualties for evacuation to the next level of medical capability or the appropriate level of medical facility depending on the type and gravity of the injuries; limited in-patient services; advice on disease prevention, medical risk assessment and force protection within the area of responsibility. A level-I medical facility is the first level of medical care where a doctor/physician is available. A level-I medical facility may be United Nations-owned (United Nations level-I), contingent-owned (troop/police contributor), or commercially contracted;

“(ii) *Capacity.* Provides treatment to 20 ambulatory patients/day, temporary holding capacity of 5 patients up to 2 days, medical supplies and consumables for 60 days;

“(iii) *Capability*

- Provides casualty collection and evacuation to higher levels of medical care (level-II and/or level-III)
- Handles routine sick calls and the management of minor sick and injured
- Implements disease, non-battle injury and stress-preventive measures
- Is responsible for education and promotion of awareness and prevention of the spread of HIV in the area of responsibility
- Offers emergency medical services to all United Nations personnel in the area of responsibility
- Provides medical services based on troop/police strength up to battalion level;

“(iv) *Composition.* The minimum composition and number of level-I medical personnel are listed below. Actual composition and number of level-I medical personnel may vary depending on the operational requirements and agreed in the memorandum of understanding. However,

basic manpower includes the *capability of splitting the level-I medical support facility into two forward medical teams (FMT)*.

- 2x Medical Officer
- 6x Paramedic/Nurse
- 3x Support staff

“(c) **Level-I+ medical facility.** In accordance with specific mission requirements, a level-I medical facility can be enhanced to ‘level-I+’ by the addition of supplementary capabilities. Additional capabilities that enhance the medical support facilities are reimbursed separately, in accordance with the Contingent-Owned Equipment Manual and the memorandum of understanding. Examples of additional capabilities include:

- Primary dental care
- Basic laboratory testing
- Preventive medicine
- Surgical capability (forward surgical module) — only in exceptional situations, dictated by the exigencies of medical service support, additional patient holding capacity and deployment should be based only on requirement of the Department of Peacekeeping Operations/Department of Field Support
- Aeromedical evacuation team

“(d) **Level-II medical facility**¹⁹

“(i) *Definition.* Level-II is the next level of medical care and the first level where basic surgical expertise is available, and life support services and hospital and ancillary services are provided within the mission area. A level-II medical facility provides all level-I capabilities and includes capabilities for: emergency surgery, damage control surgery (DCS), post-operative services and high dependency care, intensive care-resuscitation and in-patient services; also basic diagnostic services, laboratory, pharmaceutical, preventive medicine and dental services are provided; patient record maintenance and tracking of evacuated patients are also minimum capabilities required for a level-II medical facility;

“(ii) *Capacity.* Performs 3 to 4 surgical operations/day and provides hospitalization of 10 to 20 sick or wounded up to 7 days, 40 outpatients/day, 5 to 10 dental consultations/day; will hold medical supplies, fluids and consumables for 60 days;

“(iii) *Capability*

- Provides advanced specialist medical care to stabilize seriously injured personnel for transport to a level-III medical facility
- Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination

¹⁹ Ibid., annex III.B, annex B, para. 35 (c).

- Provides climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products
- Performs blood testing and grouping
- Can, if agreed in the memorandum of understanding, supply specialist services according to the needs of the mission (e.g., gynaecologist, specialist in tropical medicine, stress counsellor)
- Can provide a specialist team for collecting seriously injured personnel from the site of injury and escort patients in serious condition to higher-level care; the team might be tagged as an aeromedical evacuation team
- Provides medical and dental services based on troop/police strength up to brigade level

“(iv) *Composition.* The minimum composition and number of level-II medical personnel are listed below. Actual numbers may vary depending on the operational requirements and agreed in the memorandum of understanding.

- 2x Surgeons
- 1x Anaesthetist
- 1x Internist
- 1x General Physician
- 1x Dentist
- 1x Hygiene Officer
- 1x Pharmacist
- 2x Head Nurse
- 2x Intensive Care Nurse
- 1x Operating Room Assistant
- 10x Nurse/Paramedic
- 1x Radiology Assistant
- 1x Laboratory Technician
- 1x Dental Assistant
- 2x Driver
- 8x Support staff

“(e) **Level-II+ medical facility.** The level-II capability can be enhanced to ‘level-II+’ by augmentation with additional capabilities. Additional capabilities that enhance the medical support facilities are reimbursed separately, in accordance with the Contingent-Owned Equipment Manual and the memorandum of understanding. Examples of additional capabilities include:

- Orthopaedic capability
- Gynaecology capability
- Additional internal medicine capability
- Additional diagnostic imaging capability (CT scan)

“A level-II medical facility may be a troop/police-contributing country contribution, a United Nations-owned medical facility, or commercially contracted.

“(f) **Level-III medical facility**²⁰

“(i) *Definition.* It is the third and the highest level of medical care deployed within a mission area. At this level all capabilities of a level-I and II medical facility are provided as are capabilities for multidisciplinary surgical services, specialist services and specialist diagnostic services, increased high dependency care capacity, extended intensive care services and specialist outpatient services. A level-III medical facility may be contributed by a troop/police-contributing country, or provided by a national or regional hospital in the mission area or by a commercial contractor;

“(ii) *Capacity.* Able to perform 10 surgical operations/day and provides hospitalization of 50 patients up to 30 days, 60 outpatient consultations/day, 20 dental consultations/day, 20 X-rays and 40 lab tests/day; will hold medical supplies and consumables for 60 days;

“(iii) *Capability*

- Provides advanced services in surgical, intensive care, dental (emergency dental surgery), laboratory, X-ray, ward and pharmaceutical capabilities
- Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination
- Provides climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products
- Performs blood testing and grouping
- Can, if agreed in the memorandum of understanding, supply specialist services according to the needs of the mission (e.g., gynaecologist, specialist in tropical medicine, stress counsellor)
- Can provide a specialist team for collecting seriously injured personnel from the site of injury and escort patients in serious condition to higher-level care

“(iv) *Composition.* The minimum composition and number of level-III medical personnel are listed below. Actual composition and number of

²⁰ Ibid., para. 35 (d).

level-III medical personnel may vary depending on the operational requirements and agreed in the memorandum of understanding.

- 4x Surgeon (minimum 1 orthopaedic)
- 2x Anaesthetist
- 6x Specialist
- 4x Physician
- 1x Dentist
- 2x Dental Assistant
- 1x Hygiene Officer
- 1x Pharmacist
- 1x Pharmacist Assistant
- 50x Nursing staff (composition as required)
 - 1x Head Nurse
 - 2x Intensive Care
 - 4x Operating Theatre Nurse
 - 43x Nurse/Medic/Paramedic
- 2x Radiological Assistant
- 2x Laboratory Technician
- 14x Maintenance and support staff

“(g) **Blood and blood products**

“(i) Blood and blood products will be provided by the United Nations in accordance with United Nations standards, including transport, testing, handling and administration unless the level-II or III medical facility troop/police contributor believes it necessary to negotiate the issue.²¹ In such instances this will be negotiated on a case-by-case basis and reflected in annex C to the memorandum of understanding;

“(ii) The United Nations will provide climate-controlled storage and transport capability (cold chain) to prevent the deterioration or contamination of blood and blood products;

“(iii) Administers blood and blood products according to the compatibility of blood groups and rhesus factors using approved hygiene to prevent contamination;

(iv) Performs blood testing and grouping;

“(h) **High-risk areas (epidemiological)**

“To be eligible for high-risk area (epidemiological) self-sustainment, troop/police contributors must provide medical supplies, chemoprophylaxis

²¹ A/C.5/54/49, para. 86 (h).

and preventive health measures in areas with a high incidence of endemic infectious disease for which there is no vaccine. The minimum standards for high-risk areas (epidemiological) can vary according to the region in which United Nations peacekeepers are deployed and are based on the risk posed to United Nations peacekeepers.

“(i) The self-sustainment reimbursement covers the provision and sustainment of the following, at a minimum:

“a. Prophylactic pharmaceuticals (anti-malarials). The prophylactic treatment of malaria is a national responsibility, as stipulated in document A/C.5/60/26, chapter 3, annex B, paragraph 50, and chapter 3, annexes A and B, appendix 7, paragraph 6;

“b. Personal preventive health equipment and consumables (head mosquito net, repellent);

“c. Man-portable preventive health equipment and consumables (foggers, pesticides). The use of pesticides will conform to international environmental law.

“(ii) Other preventive measures, which are covered elsewhere in the Contingent-Owned Equipment Manual, must be taken into account:

“a. Individual mosquito nets (conforms to chapter 9, annex A (soldier’s kit/police kit));

“b. Encouragement of body-covering clothing (conforms to chapter 9, annex A (soldier’s kit/police kit));

“c. Rodent control measures are part of basic hygiene procedures for large amounts of food and waste disposal areas (chapter 3, annex B, Catering, para. 10, subparagraph (d) refers).

“(i) **Dental facility**

“(i) Provides dental care to maintain the dental health of unit personnel;

“(ii) Provides basic or emergency dental procedures;

“(iii) Maintains a sterilization capability;

“(iv) Conducts minor prophylactic procedures;

“(v) Provides oral hygiene education to mission personnel.

“51. The administration of vaccinations, as recommended by the United Nations, is a national responsibility. The United Nations will provide necessary information on what kind of vaccination and preventive measures will be given to all United Nations personnel prior to deployment. If any United Nations personnel deploy without proper vaccinations and prophylaxes, the United Nations will provide necessary booster shots and prophylaxes. In this case, the United Nations will deduct any expenses for initial vaccinations which could have been initiated prior to deployment from the self-sustainment payment of troop/police contributors.”²²

²² A/C.5/54/49, annex VIII, sect. B14, p. 58.

Annex III.E.2

Aeromedical evacuation module

(United States dollars)

<i>Facility</i>	<i>GFMV (sum)</i>	<i>Item</i>	<i>Quantity</i>	<i>GFMV (unit)</i>
Aero - Medical Evacuation Module	40 116	Ventilator	1	6 500
		Defibrillator	1	8 360
		Intubation equipment set (1)	1 set	3 000
		Nasogastric tubes set	1 set	200
		Suction equipment	1	2 000

	129,092			129,092	

Staffing: The Forward Surgery team should consist of one general surgeon, one anesthetist and three nurses.

Annex III.F.1

Medical services provided to non-United Nations personnel and reimbursement for medical services provided to contingent personnel before and after deployment to United Nations peacekeeping operations

Proposal

1. The 2008 Working Group should consider expanding the definition of arrangements in annex III.D.1 (Definition of “fee-for-service”), to include services provided to non-United Nations personnel at health-care facilities deployed by troop/police contributors. The Working Group should also consider the issue of reimbursement for medical services provided to contingents before and after deployment to United Nations peacekeeping operations.

Background

2. Medical facilities deployed by contingents are sometimes asked to provide local residents with medical services owing to the absence of local health infrastructure. Troop/police contributors are also required to keep drug supplies on hand and to maintain their health-care facilities at the level of readiness required by the United Nations. Troop/police contributors experienced the following problems:

(a) The provision, by the medical facilities of troop/police contributors, of services to non-United Nations personnel can result in rapid stock-outs and wear and tear on equipment;

(b) The additional costs are borne by the troop/police contributors.

Discussion

4. The Working Group discussed the provision of medical services for non-United Nations personnel during its deliberations on definition of fee-for-service. Several Member States were of the view that owing to professional, CIMIC and other factors, in many cases the contingent medical facilities were unable to refuse the provision of such services and that they should therefore be reimbursed by the United Nations. While the Working Group recognized the difficulties faced by those contingent medical facilities, several Member States held the position that the provision of such services was not a United Nations responsibility but rather a national prerogative and, as such, should not be reimbursed out of the peacekeeping budget. One delegation suggested that the Chief Medical Officer and the CIMIC Officer in the mission headquarters should evaluate the local situation in the mission area to potentially identify alternative solutions (funding from other sources, non-governmental organization support, etc). The Working Group was unable to reach consensus on the issue.

5. The Working Group briefly considered the issue of reimbursement for medical services provided to contingent personnel before and after deployment to peacekeeping operations during its deliberations on standards required for medical self-sustainment — basic first aid and high-risk (epidemiological) sub-categories. The Working Group did not reach consensus on the issue.

Recommendations

6. No recommendations were made.
