General Assembly
Sixty-fifth session
Agenda item 36
The situation in the Middle East

Security Council Sixty-fifth year

Identical letters dated 18 December 2010 from the Permanent Representative of Lebanon to the United Nations addressed to the Secretary-General and the President of the Security Council

On instructions from my Government, I transmit to you herewith a complaint about the Israeli enemy, which planted deep within Lebanese territory electronic devices concealed in artificial rocks (see annex).

I should be grateful if you would have the present letter circulated as a document of the sixty-fifth session of the General Assembly, under agenda item 36, and of the Security Council.

(Signed) Nawaf **Salam** Permanent Representative

Annex to the identical letters dated 18 December 2010 from the Permanent Representative of Lebanon to the United Nations addressed to the Secretary-General and the President of the Security Council

Lebanese Republic

Ministry of Foreign Affairs and Emigrants

On 15 December 2010, the technical divisions of the Lebanese Armed Forces inspected and dismantled an electronic device concealed in an artificial rock that had been planted by Israeli enemy forces on a cliff some 1,715 metres above sea level in a rugged mountainous area between Jabal Baruk and Tallat Tumat Niha in the Lebanese Shuf that overlooks most of the towns in the Western and central Bekaa, and from which Syria and many of the towns in southern Lebanon, as far as the borders with Palestine, may be seen. Field investigations carried out by the Lebanese Army discovered two rocks that had been planted in the aforementioned area, each of which was around one cubic metre in size. The first concealed an electronic communications transmitter and receiver device, while the second contained a large number of panels to provide energy for the device in the first rock. The device had seven directive antennas, which were employed as follows: five were directed towards Ruwaysat al-Alam in occupied Palestinian territory, while the other two were directed towards the villages of the Western Bekaa, on a line beginning at the rock, and passing through Lala towards Masna' on the Lebanese-Syrian borders. Inside the electronic device were a number of electronic components for transmitting and receiving, some of which were made in the United States of America, while others were manufactured by Israeli companies. Markings in both Hebrew and English clearly showed that their origin was Israeli. It was evident to the Lebanese Army that the purpose of the device was to effect communication between sites inside Lebanese territory and the Israeli position at Ruwaysat al-Alam, where there are numerous communications and eavesdropping stations.

The technical divisions of the Lebanese Armed Forces also detected and dismantled a second system which the Israeli forces had planted on the heights of `Arid al-Tuwaihan on Jabal Sannin, in a very rugged mountainous area some 2,500 metres above sea level. That device, which was extremely well concealed, was a cylindrical camera hidden in a grey imitation rock made of fibreglass. A second rock, found some 1.5 metres south of the first, was a transmitting and receiving device. The system was powered by three plastic battery packs that were reinforced in order to withstand both atmospheric conditions and heavy weights. Both items were buried in the ground and connected in such a way as to ensure that they would continue to function for a lengthy period. The second device comprised the following components:

• The optic system: this consisted of a sophisticated device for long-distance surveillance which comprised two cameras, one for daylight use and the other with infrared night vision, and a laser device to determine distances and/or coordinates. The device had a complicated and sophisticated mechanical operating system and was linked to its operators by wireless apparatus that governs and operates it and transmits information and pictures.

2 10-70630

- Picture transmission apparatus: comprising a device for transmitting pictures and a patch antenna.
- A system for receiving control signals.
- The system control circuit.
- The power system.

The planting by Israel of those two systems deep within Lebanese territory constitutes a flagrant violation of Lebanese sovereignty, international laws and norms, and Security Council resolution 1701 (2006), and is prejudicial to international peace and security. It also constitutes an act of aggression against Lebanese territory and confirms yet again Israel's contempt for United Nations resolutions. Lebanon demands that the Security Council assume its responsibility to maintain international peace and security and bring pressure to bear on Israel to abandon its aggressive and provocative policies towards Lebanon. The Council should also ensure that Israel complies with resolution 1701 (2006) and withdraws forthwith, unconditionally, from all Lebanese territory.
