LIST OF DANGEROUS GOODS
(Other than explosives)

Introduction

The following list does not include substances which are so dangerous that, in the opinion of the experts, their transport should be excluded by all regulations, except by special authorization.

The experts draw special attention to the fact that certain substances included in the list are not regulated by all countries or for all means of transport or under the particular classes assigned; and they consider that this is justified by the fact that the nature and degree of hazard are not always assessed in the same manner and may vary with the particular mode of transport, the packaging, the quantity and, possibly, the climatic conditions likely to be encountered.

Although the previous list has been considerably enlarged, it should be noted that the present list is not exhaustive.

NOTES:

1. The number at the right of the page indicates the class appropriate to the subsidiary hazard attached to the particular substance or the class in which some regulations classify the substance.
2. Whenever a flash point is mentioned in this list, it refers to the open test.
3. 'n.o.s.', when used herein, means 'not otherwise specified'.
4. Class 5 - Oxidizing substances is divided into Class 5 (a) - Oxidizing substances and Class 5 (b) - Organic peroxides.
