SPECIAL COMMITTEE ON INFORMATION TRANSMITTED UNDER ARTICLE 73 e OF THE CHARTER

First Session

CORRIGENDA TO THE SUMMARY RECORD OF THE TWENTY-SIXTH MEETING

Held at Lake Success, New York,
on Friday, 8 September 1950, at 11 a.m.

Page 4

Paragraph 5

Line 17: Replace the word "Office" by the word "Organization".

Line 23: Replace the words "repetition and overlapping" by the word "proliferation".

Page 5

Paragraph 9: Replace this paragraph by the following:

"9. Mr. FLETCHER-COIKE (United Kingdom) recalled that during the discussions on that point in 1949 his delegation had expressed the view that it was quite unnecessary and inappropriate to expect any of the specialized agencies to submit special reports to the General Assembly on conditions in the Non-Self-Governing Territories and that it would be preferable for them to include such information in their general reports. He therefore felt that the action taken by the ILO in that respect was quite correct."

Page 6

Paragraph 10

Line 2: Replace the word "amendment" by the word "modifications".

Page 9

Paragraph 32: Replace this paragraph by the following:

"32. Mr. FLETCHER-COOKE (United Kingdom) also assumed that the information transmitted to the WHO would include information on the Non-Self-Governing Territories; such information might not be as detailed as that transmitted under Article 73 e but he felt sure that some information relating to the Non-Self-Governing Territories would be included in the comprehensive reports transmitted by members to the WHO."

Page 10

Paragraphs 33-36: Replace these paragraphs by the following:

"33. He then drew the attention of the Special Committee to a particular field in which there might be closer co-operation between the Administering Authorities and certain specialized agencies.

"34. He referred to the production and distribution of food yeast. At the present time food yeast was produced in Jamaica by a company which had started production on a commercial scale in 1946 with the assistance of Colonial Development and Welfare funds. The factory at present produced about 500 tons per year but its capacity could be extended to double that figure or even more. He pointed out that food yeast was extremely rich in proteins and vitamin B and that a small daily dose added to other foods would give, in palatable form the equivalent of such protein foods as milk and eggs. Being easily transportable and relatively inexpensive it was particularly suitable for incorporation in the diets of under-nourished peoples and of special groups such as children, particularly where those diets consisted mainly of bulk cereals.

"35. Recently difficulties had been experienced in extending the marketing of the product and although approaches had been made to the FAO, WHO, IRO and UNICEF, with a view to the extended use of food yeast in countries where the problem of malnutrition occurred, the results of those approaches had so far been disappointing.

/"36. He

"36. He stressed the desire of the United Kingdom Government to collaborate with the specialized agencies in making known the beneficial value of the food yeast and he hoped that it would be possible to work out plans for a wider distribution of that product."
