Twenty-first session
Kingston, Jamaica
13-24 July 2015

Proposal to enhance the budget presentation for the financial period 2017-2018 in the light of the International Public Sector Accounting Standards

Introduction

1. The purpose of the present document is to identify and put forward alternative proposals for presenting the proposed budget of the International Seabed Authority for the financial period 2017-2018. In conducting this analysis, the practices of a number of United Nations agencies were reviewed, including the United Nations Development Programme (UNDP), the United Nations Population Fund (UNFPA), the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) and the United Nations Entity for Gender Equality and the Empowerment of Women (UN-Women).
2. The present paper builds on the study (ISBA/18/A/4-ISBA/18/C/12, para. 16) initiated by the Finance Committee in 2012 to better describe and account for the use of fees for processing of applications for approval of plans of work for exploration. In 2013, the Finance Committee continued the study (ISBA/19/A/7-ISBA/19/C/11, paras. 25-27) for the purpose of better describing and accounting for these fees and the different sources of income for the Authority. The Committee requested the Secretary-General to include in the income section of the budget proposal for the financial period 2015-2016 a statement of estimated miscellaneous income in the course of the next financial period, in accordance with regulation 6.3 (b) of the Financial Regulations. As a starting point, the Secretary-General was requested to include in that estimate the anticipated income from the annual overhead charges payable by the contractors. This was reflected in the budget for the financial period 2015-2016 (ISBA/20/A/12 and ISBA/20/A/5-ISBA/20/C/19).
3. The quadrennial comprehensive policy review emphasized the call by Member States to sharpen the focus on delivering and demonstrating results. Results-based management is an important tool towards that end. Results-based management is an

integral part of the United Nations reform agenda, which was reiterated in the Five-Year Action Agenda of the Secretary-General.¹

4. The Authority's budget for the 2015-2016 financial period has been prepared using a traditional accounting chart of accounts format (see annex I to the present document), which has not evolved much despite a changing United Nations budget environment and a progressive evolution in the work of the Authority, which now includes work with contractors. Possible alternative budget formats include programme or thematic approaches in accordance with strategic plans. Any changes to the budget presentation format would also require changes to the chart of accounts, where income and expenses are recorded, so that the Authority can report financial results in the same format as the budget.

Budget presentation proposal

5. Typically, the budget and reporting of United Nations agencies follow their strategic plans. In the case of the Authority, the work programme is currently reflected in the annual report of the Secretary-General, which sets out the main focus areas for the Authority. An alternative budget proposal might therefore be organized around the following programme areas (see ISBA/21/A/2):

- (a) Supervisory functions with regard to contracts for exploration;
- (b) Monitoring of trends and developments relating to deep seabed mining activities, including world metal market conditions and metal prices, trends and prospects;
- (c) Development of an appropriate regulatory framework for the future development of the mineral resources of the Area, including standards for the protection and preservation of the marine environment during their development;
- (d) Promotion and encouragement of marine scientific research in the Area through, among other things, an ongoing programme of technical workshops, the dissemination of the results of such research, and collaboration with contractors and the international scientific community;
- (e) Information-gathering and the establishment and development of unique databases of scientific and technical information with a view to obtaining a better understanding of the deep ocean environment;
- (f) Ongoing assessment of available data relating to prospecting and exploration for polymetallic nodules, polymetallic sulphides and cobalt-rich ferromanganese crusts;
- (g) Development of an environmental management plan for relevant areas containing polymetallic nodules, polymetallic sulphides and cobalt-rich ferromanganese crusts.²

¹ See the document "Joint meeting of the Executive Boards of UNDP/UNFPA/UNOPS, UNICEF, UN-Women and WFP: Operationalizing the decisions of the quadrennial comprehensive policy review" of 4 February 2013.

² With the adoption of an environmental management plan for polymetallic nodules in the context of exploitation, such plans will have to be developed for polymetallic sulphides and cobalt-rich ferromanganese crusts.

6. Many costs will be specifically linked to one programme. However, some programme-related costs, which may be linked to two or more of the above programmes, will be prorated to the programmes to which they can be specifically linked. The proposed format is set out in annex II.

7. Furthermore, these seven programmes would be supported by cross-cutting management, operations and costs, which cannot be allocated to specific programmes.

8. The income of the Authority would include:

- (a) Contributions from Member States;
- (b) Estimated savings (biennium 2015-2016), if any;
- (c) Miscellaneous income.

9. The miscellaneous income of the Authority would include:

(a) Expected overhead charges, 2017. This would include the overhead charges from the contractors that have agreed to the charge;

(b) Expected overhead charges, 2018. This would include the overhead charges from the contractors that have agreed to the charge;

(c) Expected application processing fees from applications received and currently in process, 2017;

(d) Expected application processing fees from applications received and currently in process, 2018;

(e) Expected application processing fees from application fees received, where the application is to be approved, 2017 and 2018.

10. Both the overhead charges and the contractors' application fees are specifically related to programme area 1, Supervisory functions with regard to contracts for exploration.

11. A disadvantage of changing the budget format is that the 2017-2018 budget will not be comparable with the current 2015-2016 budget, since the current budget is not presented in a programmatic format and is not readily convertible to such a format. However, if the 2017-2018 budget is presented in a programmatic manner with accounting codes, it can also be presented in a manner comparable with the 2015-2016 format. Furthermore, it should be noted that the 2015-2016 budget and expenditures cannot be modified for presentation in a programmatic manner. In other words, there will be backward budget compatibility, but not forward compatibility.

Effect of the International Public Sector Accounting Standards on budgets

12. Entities are permitted to adopt different bases of budgeting, which include the cash basis, modified cash basis or the accrual basis. As mentioned below, the United Nations continues, in 2015, to prepare budgets on the modified cash basis, which is the same presentation as that used for the budget of the Authority for the financial period 2015-2016.

13. The International Public Sector Accounting Standard 24 (IPSAS 24) describes the standards for the presentation of budget information in financial statements. The standard, which was updated most recently in October 2011, applies to public sector entities that make their approved budget(s) publicly available to enhance the transparency of their financial reporting. The standard requires these entities to make certain disclosures about budget and actual amounts in their financial statements or other reports. Annex III contains further details and extracts from IPSAS 24 as it applies to the Authority.

14. Compliance with the requirements of this standard will ensure that public sector entities discharge their accountability obligations and enhance the transparency of their financial statements by demonstrating: (a) compliance with the approved budget(s) for which they are held accountable; and (b) where the budget(s) and the financial statements are prepared on the same basis, their financial performance in achieving the budgeted results.

15. The standard does not specify the requirements for the formulation or presentation of approved budgets that are made publicly available. There are two main types of budgets, namely, cash basis budgets and full accrual basis budgets. The United Nations continues, in 2015, to prepare budgets on the modified cash basis.

16. The term “accrual budgeting” is not a term with a generally accepted meaning in accounting literature, which makes accrual budgeting subject to more interpretations. However, in general, “accrual budgeting” means that spending authorities are given budgets that are defined in terms of accrual concepts. In particular, the accrual budget sets quantitative limits on the expenses that they may incur, rather than the cash payments that they may make. A difference between the cash and accrual bases would be the use of annual depreciation in the full accrual basis presentation versus the cost of acquiring a new property less its net proceeds of disposition using the cash basis.

17. The IPSAS standard requires that the financial statements of the entity include:

(a) A comparison of actual amounts with amounts in the original and final budget. This comparison is to be made on the same basis of accounting as adopted for the budget, even if that basis is different from the basis adopted for the financial statements. Hence, it is possible, and it would be in compliance with IPSAS, to present the financial statements in an IPSAS-compliant full accrual manner and to present the budget on the cash basis, as currently done;

(b) An explanation of material differences between budget and actual amounts, unless such explanation is included in other public documents issued in conjunction with the financial statements;

(c) A reconciliation of actual amounts on a budget basis, with actual amounts presented in the financial statements when the accounting and budget bases differ.

18. The standard also requires the disclosure of an explanation of the reasons for differences between the original and final budgets, including whether those differences arise from reallocations within the budget, other factors such as policy shifts, or other unforeseen events. These disclosures may be made in the notes to the financial statements.

19. Comparative information in respect of the previous period is not required for the disclosures specified by IPSAS 24; nor does the standard require that the related explanation of differences between the actuals and the budget of the previous period be disclosed in the financial statements of the current period. The IPSAS Board was concerned that the requirement for the disclosure of comparative information would result in information overload and an over-complex network of reporting requirements and would not be in the interest of the users of the financial statements.

20. Under IPSAS, the Authority will continue to prepare budgets covering a two-year financial period and annual budgets covering each year in the two-year period.

Recommendation

21. The Finance Committee is invited to consider the proposal to present the proposed budget for the financial period 2017-2018 by programme area.

22. Furthermore, the Finance Committee is invited to note that the Authority will continue to prepare budgets on the same basis as the United Nations, namely, on a modified cash basis, which is in compliance with IPSAS 24. To enhance transparency, in accordance with IPSAS 24, the Authority will also present additional required disclosure, including explanations of variances.

Annex I

Traditional accounting: current chart of accounts presentation format for the International Seabed Authority budget

Summary of budgetary requirements for the International Seabed Authority for the period from 1 January 2015 to 31 December 2016^a

Annex III

International Public Sector Accounting Standard 24: Presentation of Budget Information in Financial Statements

Extracts^a

Definitions

23. Annual budget means an approved budget for one year. It does not include published forward estimates or projections beyond the period.
24. Approved budget means the expenditure authority derived from laws, appropriation bills, and other decisions related to the anticipated revenue or receipts for the budgetary period.
25. Appropriation is an authorization granted by an oversight body to allocate funds for purposes specified.
26. Budgetary basis means the accrual, cash, or other basis of accounting adopted in the budget that has been approved by the governing body.
27. Comparable basis means the actual amounts presented on the same accounting basis, same classification basis, for the same entity, and for the same period as the approved budget.
28. Final budget is the original budget, adjusted for all reserves, carry-over amounts, transfers, allocations, supplemental appropriations, and other governing body changes applicable to the budget period.
29. Multi-year budget is an approved budget for more than one year. It does not include published forward estimates or projections for periods beyond the budget period.
30. Original budget is the initial approved budget for the budget period.

Approved Budgets

31. An approved budget reflects the anticipated revenues or receipts expected to arise in the annual or multi-year budget period, based on current plans and the anticipated economic conditions during that budget period, and expenses or expenditures approved by the governing body. An approved budget is not a forward estimate, or a projection based on assumptions about future events and possible management actions that are not necessarily expected to take place. Similarly, an approved budget differs from prospective financial information, which may be in the form of a forecast, a projection, or a combination of both. For example, a one-year forecast plus a five-year projection.

^a Extracts from IPSAS 24 “Presentation of Budget Information in Financial Statements” issued in October 2011. IPSAS are published by the International Federation of Accountants (IFAC).

Original and Final Budget

32. The original budget may include residual appropriated amounts automatically carried over from prior years by law. For example, some governmental budgetary processes require the automatic rolling forward of appropriations to cover prior year commitments. Commitments encompass possible future liabilities based on a current contractual agreement. Commitments may include outstanding purchase orders and contracts where goods or services have not yet been received.

33. Supplemental appropriations may be necessary where the original budget did not adequately envisage expenditure requirements arising from. There may be a shortfall in budgeted revenues during the period, and internal transfers between budget sections or line items may be necessary to changes in priorities during the year. The final budget includes all such authorized changes or amendments.

Presentation of a Comparison of Budget and Actual Amounts

34. An entity shall present a comparison of the budget amounts for which it is held publicly accountable and the actual amounts, either as a separate additional financial statement or as additional budget columns in the financial statements currently presented in accordance with IPSAS. The comparison of budget and actual amounts shall present separately:

- A. The original and final budget amounts;
- B. The actual amounts on a comparable basis; and
- C. By way of note disclosure, an explanation of material differences between the budget and actual amounts.

35. Presentation in the financial statements of the original and final budget amounts and actual amounts on a comparable basis with the public budget will complete the accountability cycle by enabling users of the financial statements to identify whether resources were obtained and used in accordance with the approved budget. Differences between the actual amounts, whether original or final budget (i.e. variances), may also be presented in the financial statements for completeness.

36. An explanation of the material differences between actual amounts and the budget amounts will assist users in understanding the reasons for material departures from the approved budget for which the entity is held publicly accountable. Material differences may be determined by reference to, for example, (a) differences between actual and original budget to focus on performance against the original budget, or (b) differences between actual and final budget to focus on compliance with the final budget.

37. In many cases, the final budget and the actual amount will be the same. This is because budget execution is monitored over the reporting period, and the original budget progressively revised to reflect changing conditions and experiences during the reporting period. This standard requires the disclosure of an explanation of the reasons for changes between the original and final budget.

38. The management discussion and analysis, operations review, or other reports that provide commentary on the performance and achievements of the entity during the reporting period, including explanations of any material differences from budget

amounts, are often issued in conjunction with the financial statements. In accordance with this standard, an explanation of material differences between actual and budget amounts will be included in notes to the financial statements, unless (a) included in other public reports or documents issued in conjunction with the financial statements, and (b) the notes to the financial statements.

Presentation and Disclosure

39. An entity shall present a comparison of budget and actual amounts as additional budget columns in the primary financial statements only where the financial statements and the budget are prepared on a comparable basis.

40. Comparisons of budget and actual amounts may be presented in a separate statement (Statement of Comparison of Budget and Actual Amounts, or a similarly titled statement) included in the complete set of financial statements. Alternatively, where the financial statements and the budget are prepared on a comparable basis — that is, on the same basis of accounting for the same entity and reporting period, and adopt the same classification structure — additional columns may be added to the existing primary financial statements presented in accordance with IPSAS. These additional columns will identify original and final budget amounts, and, if the entity so chooses, differences between the budget and actual amounts.

41. When the budget and financial statements are not prepared on a comparable basis, a separate Statement of Comparison of Budget and Actual Amounts is presented. In these cases, to ensure that readers do not misinterpret financial information that is prepared on different bases, the financial statements could usefully clarify that the budget and accounting bases differ, and that the Statement of Comparison of Budget and Actual Amounts is prepared on the budget basis.

42. For entities where budgets are prepared on the accrual basis and encompass the full set of financial statements, additional budget columns can be added to all primary financial statements required by IPSAS. For other entities, budgets prepared on the accrual basis may be presented in the form of only certain of the primary financial statements that comprise the full set of financial statements as specified by IPSAS — for example, the budget may be presented as a statement of financial performance or a cash flow statement, with additional information provided in supporting schedules. In these cases, the additional budget columns can be included in the primary financial statements that are also adopted for presentation of the budget.

Level of Aggregation

43. Budget documents may provide great detail about particular activities, programs, or entities. These details are often aggregated into broad classes under common budget heads, budget classifications, or budget headings for presentation and approval by an oversight body. The disclosure of budget and actual information consistent with those broad classes and budget heads or headings will ensure that comparisons are made at the level of the legislative body identified in the budget documents.

44. IPSAS 3, “Accounting Policies, Changes in Accounting Estimates and Errors”, requires financial statements to provide information that meets a number of qualitative characteristics, including that the information is:

- A. Relevant to the decision-making needs of users; and
- B. Reliable in that the financial statements:
 - i. Represent faithfully the financial position, financial performance, and cash flows of the entity;
 - ii. Reflect the economic substance of transactions, other events, and conditions, and not merely the legal form;
 - iii. Are neutral, that is, free from bias;
 - iv. Are prudent;
 - v. Are complete in all material respects.

45. Additional budget information, including information about service achievements, may be presented in documents other than financial statement. A cross reference from financial statements to such documents is encouraged, particularly to link budget and actual data to nonfinancial budget data and service achievements.

Changes from Original to Final Budget

46. An entity shall present an explanation of whether changes between original and final budget are a consequence of reallocations within the budget, or other factors:

- A. By way of note disclosure in the financial statements; or
- B. In a report issued before, at the same time as, or in conjunction with, the financial statements, and shall include a cross reference to the report in the notes to the financial statements.

47. The final budget includes all changes approved by legislative body to revise the original budget. Consistent with the requirements of this standard, a public sector entity will include in the notes to the financial statements, an explanation of changes between the original and final budget. That explanation will include whether, for example, changes arise as a consequence of reallocations within the original budget parameters, including changes in policy. Such disclosures are often made in a management discussion and analysis or similar report on operations issued in conjunction with, but not as part of the financial statements. Such disclosures may also be included in budget execution reports, with appropriate cross referencing.

Comparable Basis

48. All comparisons of budget and actual amounts shall be presented on a comparable basis to the budget.

49. The comparison of budget and actual amounts will be presented on the same accounting basis (accrual, cash, or other basis), same classification basis, and for the same entities and period as for the approved budget. This will ensure that the disclosure of information about compliance with the budget in the financial statements is on the same basis as the budget itself. In some cases, this may mean presenting a budget and actual comparison on a different basis of accounting, for a different group of activities, and with a different presentation or classification format than that adopted for the financial statements.

50. Entities may adopt different bases of accounting for the preparation of their financial statements and for their approved budgets. For example, a government may adopt the accrual basis for its financial statements and the cash basis for its budget. In addition, budgets may focus on, or include information about, commitments to expend funds in the future and changes in those commitments, while the financial statement will report assets, liabilities, net assets/equity, revenues, expenses, other changes in net assets/equity, and cash flows. However, the budget entity and financial reporting entity will often be the same. Similarly, the period for which the budget is prepared and the classification basis adopted for the budget will often be reflected in the financial statements. This will ensure that the accounting system records and reports financial information in a manner that facilitates the comparison of budget and actual data for management and for accountability purposes, for example, for monitoring progress of execution of the budget during the budget period and for reporting to users.

51. In some situations, budgets may be prepared on a cash basis or accrual basis consistent with a statistical reporting system that encompasses entities and activities different from those included in the financial statements.

Multi-year Budgets

52. Some entities approve and make publicly available multi-year budgets, rather than separate annual budgets. Conventionally, multi-year budgets comprise a series of annual budgets or annual budget targets. The approved budget for each component annual period reflects the application of the budgetary policies associated with the multi-year budget for that component period. In some cases, the multi-year budget provides for a roll forward of unused appropriations in any single year.

53. Entities with multi-year budgets may take different approaches to determining their original and final budget, depending on how their budget is passed. For example, a government may pass a biennial budget that contains two approved annual budgets, in which case an original and final approved budget for each annual period will be identifiable. If unused appropriations from the first year of the biennial budget and permitted to be spent in the second year, the original budget for the second year period will be increased by these carry over amounts. Where multi-period budgets are adopted, entities are encouraged to provide additional note disclosure about the relationship between budget and actual amounts during the period.

Note Disclosure of Budgetary Basis, Period and Scope

54. An entity shall explain in the notes to the financial statements the budgetary basis and classification basis adopted in the approved budget.

55. There may be differences between the accounting basis (cash, accrual, or some modification thereof) used in preparation and presentation of the budget and the accounting basis used in the financial statements. These differences may occur when the accounting system and the budget system compile information from different perspectives — the budget may focus on cash flows, or cash flows plus certain commitments, while the financial statements report cash flows and accrual information.

56. Formats and classification schemes adopted for presentation of the approved budget may also differ from the formats adopted for the financial statements. An approved budget may classify items on the same basis as is adopted in the financial statements, for example, by economic nature (compensation of employees, use of goods or services, etc.), or function (health, education, etc.). Alternatively, the budget may classify items by specific programs (for example poverty reduction, or control of contagious diseases), or program components linked to performance outcome objectives (for example, students graduating from tertiary education programs, or surgical operations performed by hospital emergency services), which differ from classifications adopted in the financial statements. Further, a recurrent budget for on-going operations (for example, education or health) may be approved separately from a capital budget for capital outlays (for example, infrastructure or buildings).

57. IPSAS 1 requires entities to present, in notes to the financial statements information about the basis of preparation of the financial statements and the significant accounting policies adopted. Disclosure of the budgetary basis and classification basis adopted for the preparation and presentation of approved budgets will assist users to better understand the relationship between the budget and accounting information disclosed in the financial statements.

58. An entity shall disclose in notes to the financial statements the period of the approved budget.

59. Financial statements are presented at least annually. Entities may approve budgets for an annual period or for multi-year periods. Disclosure of the period covered by the approved budget, where that period differs from the reporting period adopted for the financial statements, will assist the users of those financial statements to better understand the relationship of the budget data and budget comparison to the financial statements. Disclosure of the period covered by the approved budget, where that period is the same as the period covered by the financial statements, will also serve a useful confirmation role, particularly in jurisdictions where interim budgets and financial statements and reports are also prepared.

Reconciliation of Actual Amounts on a Comparable Basis and Actual Amounts in the Financial Statements

60. The actual amounts presented on a comparable basis to the budget shall, where the financial statements and the budget are not prepared on a comparable basis, be reconciled to the following actual amounts presented in the financial statements, identifying separately any basis, timing, and entity differences.

A. If the accrual basis is adopted for the budget, total revenues, total expenses, and net cash flows from operating activities, investing activities, and financing activities; or

B. If a basis other than the accrual basis is adopted for the budget, net cash flows, from operating activities, investing activities, and financing activities.

61. The reconciliation shall be disclosed on the face of the statement of comparison of budget and actual amounts, or in the notes to the financial statements.

62. Differences between the actual amounts identified consistent with the comparable basis, and the amounts recognized in the financial statements, can usefully be classified into the following:

A. Basis differences, which occur when the approved budget is prepared on a basis other than the accounting basis. For example, where the budget is prepared on the cash basis or modified cash basis and the financial statements are prepared on the accrual basis;

B. Timing differences, which occur when the budget period differs from the reporting period reflected in the financial statements; and

C. Entity differences, which occur when the budget omits programs or entities that are part of the entity for which the financial statements are prepared.

63. There may be differences in formats and classification schemes adopted for presentation of financial statements and the budget.

64. The reconciliation required by this Standard will enable the entity to better discharge its accountability obligations, by identifying major sources of difference between the actual amounts on a budget basis and the amounts recognized in the financial statements. This Standard does not preclude reconciliation of each major total and subtotal, or each class of items, presented in a comparison of budget and actual amounts with the equivalent amounts in the financial statements.

65. For some entities adopting the same basis of accounting for preparation of both the budget documents and the financial statements, only the identification of differences between the actual amounts in the budget and the equivalent amounts in the financial statements will be required. This will occur where the budget (a) is prepared for the same period, (b) encompasses the same entities, and (c) adopts the same presentation as the financial statements. In these cases, a reconciliation is not required.

66. For other entities adopting the same basis of accounting for the budget and the financial statements, there may be a difference in presentation format, reporting entity, or reporting period. For example, the approved budget may adopt a different classification or presentation format to the financial statements, may include only non-commercial activities of the entity, or maybe a multi-year budget. A reconciliation would be necessary where there are presentation, timing, or entity differences between the budget and the financial statements prepared on the same accounting basis.

67. For those entities using the cash basis (or a modified cash or modified accrual basis) of accounting for the presentation of the approved budget and the accrual basis for their financial statements, the major totals presented in the statement of budget and actual comparison will be reconciled to net cash flows from operating

activities, net cash flows from investing activities, and net cash flows from financing activities as presented in the cash flow statement prepared in accordance with IPSAS 2, Cash Flow Statements.

68. The disclosure of comparative information in respect of the previous period in accordance with the requirements of IPSAS 24 is not required.

69. This standard requires a comparison of budget and actual amounts to be included in the financial statements of entities that make publicly available their approved budget(s). It does not require the disclosure of a comparison of actuals of the previous period with the budget of that previous period, nor does it require that the related explanations of differences between the actuals and budget of that previous period be disclosed in the financial statements of the current period.
